Note: The product of the American team of eminent biologists of the United States of America and Canada, this volume is a synthesis of accumulated knowledge bearing on the principles and mechanisms of embryological development. Fundamental concepts, basic problems, and recent and current lines of investigation are emphasized. Experimental results are introduced as illustrations, but none of the chapter authors has attempted to discuss all of the experiments relevant to his topic. Numerous experiments, techniques are described in passing. Each of the monographic chapters contains an extensive bibliography of the pertinent international literature. Illustrative matter is not emphasized; nevertheless, there are 1 figures. The index covers 21 pp.

Contents Introduction. The ertebrate pedigree. Who s who among the vertebrates. Cells and tissues. The early development f vertebrates. The skin. The skeleton The sk II. Muscular system. Body cavities. Mouth, pharynx respiratory organs. Digestive system. Excretory and reproductive systems. Circulatory system. Sense or gans. The nervous system. Appendices. Index

Note A standard textbook designed for use in i troductory courses in comparative anatomy offered to premedical students and others with more than cultural interests in the subject. The presentation is truly comparative without special emphasis on man. The first edition appeared in 1949 In this second edition, the scope and organization are the same. However umerous minor changes have been made throughout the book and several sections have been rewritten. A selection f recent literature has been added to the references in the appendix.

SHUMWAY, WALDO, AND F B ADAMSTONE

Introduction to vertebrate embryology Fifth edition New York John Wiley & Sons Inc., 1954 389 p illus 23 cm. $6 00 2660

Contents The study of embryology Reproductive habits and vertebrate lif histories. The germ cells—their structure, origin, and development. Fertilization. The mechanism of heredity Cleavage and formation of the blastula. Gastrulation and neurulation. Embryonic form and extraembryonic membranes. The reproductive cycle and placenta of the mammal. Experimental embryology Digestive system and related structures. Respiratory organs. Coelom and mesenteries. The urogenital system. Blood vascular system. The skeleton. Muscles. I tegument. Nervous system. Nerve terminations. Atlas of vertebrate embryos. Embryological technique. Glossary Bibliography Index.

Note Designed for the instruction of undergraduate college students who are taking their first courses in vertebrate embryology after completion of courses in basic biology this book has enjoyed for several decades the status of standard text. It is simple and straightforward treatment giving first brief general view of the types of vertebrate development, then more detailed discussions of the development of various systems. The approach is comparative with many examples drawn from human embryology but no marked emphasis on it. Due attention is given both to morphologic and physiologic aspects of development. The first four editions, published from 1927 to 1942 were written by Dr Shumway alone. As would be expected in view of lapse of 12 years and the addition of co-author the fifth edition exhibits considerable reorganization and revision. The comparative viewpoint has been retained, but there is somewhat less emphasis on experimental biology Numerous sections of the text have been rewritten and the illustrations have been revised and considerably improved. There are now 256 figures.

TAYLOR, WILLIAM T, AND RICHARD J WEBER

Functional mammalian anatomy (with special reference to the cat) Illustrated by Thomas Courtney Lee New York D Van Nostrand Company Inc 1951 575 p illus 24 cm $7 50 2661

Contents Introduction. The mammalian integument. The skeletal system. The muscular system. The ervous system. Special sense organs. Blood circulatory system The lymphatic system. The respiratory system. The digestive system. The urinary system The reproductive system. The endocrine system Manual for the regional dissection of the cat. Appendix. Index.

Note In this introductory text the anatomical descriptions include some description of function For instance, in the chapter on the blood circulatory system, in addition t the expected anatomical matter there is material on such points as the nervous regulation of the heart rate. The purpose of this dynamic or functional approach is to encourage the student to correlate form and function and thus void thinking of anatomy as mere catalogue f body parts. The book is both classroom text and laboratory manual It includes, as noted in the table f contents, manual for dissection. Another unusual feature is detailed treatment f the nervous system.

WALTER, HERBERT EUGENE, AND LEONARD P SAYLES

Biology of the vertebrates a comparative study of man and his animal allies Third edition New York The Macmillan Company 1949 875 p illus 24 cm. $7.25 2662

Content Part I, The background Chordate characters. Kinds f vertebrates (classification) The distribution of animals in space (chorology and ecology) The distribution of animals in time (paleontology) Man in the making (anthropology) Units of structure (cytology) Division of labor in tissues (histology) The development of the individual (embryology) Biological descent (genetology) Part II, The mechanism of metabolism and reproduction A jack f all trades (the integument) Intake apparatus (digestive system) Internal transportation (circulatory system) The release f energy (respiratory system) Outgo apparatus (excretory system) The preservation of species (reproductive system) Involuntary regulation (glands of internal secretion) Part III, The mechanism of motion and locomotion The skeleton. Production of motion and locomotion (muscles) The dominating factor (nervous system) Ports of entry (sense organs) Bibliography Index.

Note A standard introduction to comparative anatomy and physiology It is characterized by a clear sometimes humorous style and by apt comparisons. In this edition, prepared by Professor Sayles, five chapters have been rewritten and minor changes made in other chapters. A considerable number of the illustrations are new or have been redrawn.

WEICHERT, CHARLES KIPP

Anatomy of the chordates New York Mc Graw Hill Book Company Inc. 1951 921 p. illus 24 cm. (McGraw Hill publications in the zoological sciences, E J Boell, consulting editor) $8 00 2663

Contents Part I, Review of phylum Chordata Introduction. Classification and natural history Development of the individual. Part II, Organ systems of vertebrates Integumentary system. Digestive system. Respiratory system and related structures. Excretory system. Reproductive system. Endocrine system. Skeletal system. Muscular system. Circulatory system. Nervous system. Receptor organs Part III, Representative animals The marine lamprey The spiny dogfish The mud puppy The cat. Summary Characteristics and advances. Index.

Note Most f this introductory textbook is devoted to comparative discussions f the various organ systems of vertebrates. In these discussions the main emphasis is on function, but developmental and structural differences are noted also. The third part of the work presents in considerable detail the anatomy of four animals that are widely used for dissection and study in introductory laboratory courses in biology The book contains about 500 illustrations of excellent quality and an exceptionally detailed index.

WEISS, PAUL

Principles of development a text in experimental embryology New York Henry Holt and Company, 1939 601 p illus. 22 cm. $7 50 2664

Contents Part I, The phenomena of development: A definition of development. An inventory f development. The problems of development. Part II, The methods of studying development History of the embryological methods. Descriptive methods Experimental analysis. Model experiments Part III, Principles of development The initiation f development. Preformed organization Progressing organization. Gradual determination and the field concept. Reintegration. Regeneration. Malformations. Part IV The development of the nervous system (neurogenesis) A description of the development of behavior of the nervous system. Neurogenesis. The development of behavior

Note This book is suitable for use in advanced premedical and medical school courses. Also, it is of interest to pathologists for its extensive treatment of differentiation, regeneration, and cell potency and to psychologists and physiologists for material on the development of the nervous system and the development of behavior The illustrations include many reproductions of original diagrams and drawings.

WILLIER, BENJAMIN H., AND OTHERS editors

Analysis of development. Edited by Benjamin H Willier Paul A. Weiss and Viktor

and his work, edited in 1954 by Professor Robert Taft of the University of Kansas, is included.

SCHEINFELD AMRAM
Women and men. Illustrated by the author New York Harcourt Brace and Company 1944 453 p. illus. 21 cm $4 75 2671

Contents Myths and muddles. The seeds. The two roads. The boy-girl odds. Growing at odds. The weaker sex males. First steps. Basic aspects. Building personalities. Puberty: the female. Puberty: the male. Crossing the bridge. The two machines. The sick bed. Women without men. Trait division. Of mice and women. Sex life. Crime and punishment. Fine feathers. Division of labor. Finding the best. Achievement and genius. Dominance. Equality for women. The [illegible] experiment. Pitfalls of the past. Marriage of [illegible]. Appendix. Bibliography. Index

Note A well-written and scientifically accurate book for the general reader and nonspecialist. It describes in nontechnical language the development of the sexes from the conception of the child through the prenatal stages and then from birth through infancy, childhood, adolescence, and maturity. The biological differences between the sexes are emphasized throughout, with less attention paid to cultural factors. The text is keyed to an extensive bibliography of books and periodical articles. Numerous cartoon-type graphs are used as illustrations.

SHELDON WILLIAM HERBERT
Atlas of men a guide for somatotyping the adult male at all ages. With the collaboration of C. Wesley Dupertuis and Eugene McDermott. New York Harper & Brothers 1954 357 p. illus. 31 cm. $10 00 2672

Contents (abridged) Part i. The nature of the somatotype. Toward [illegible] biological identification [illegible]. A preliminary explanation. A pilot study—the sex factor—the age factor—effect of nutrition on the somatotype—the problem of normal leg weight. Individual differences [illegible] the somatotype. Part ii. Atlas for somatotyping men. Appendices. Glossary. Tables for the distribution of the somatotypes on the criterion height over the cube root of weight at different age levels. Equipment and procedures in somatotyping. Index

Note One of [illegible] series of works on constitutional psychology written by the author. The titles of the other volumes so far published are *Varieties of delinquent youth*, 1949. *The varieties of human physique*, 1940, and *The varieties of temperament*, 1942. A fifth volume similar to the present one but devoted to women, is scheduled for future publication. *Atlas of men* provides pictures of somatotypes [illegible] are as distinct on the basis of the author's scheme of classification that they are offered as standards in somatotyping. The atlas consists of reproductions of full-length photographs of nude, adult men [illegible] front, rear and side view being shown. The material is organized according to [illegible] classification, the basis of which [illegible] numerical ranking of the endomorphic, mesomorphic, and ectomorphic components of each man's physique. Each group of pictures [illegible] based on this basis and [illegible] discussed in terms of physical and personality characteristics, rarity in the population, etc. A table giving for the type weights for age and height [illegible] also included. The book is [illegible] product of an extended research program during which 46,000 men were studied. The [illegible] was conducted at the College of Physicians and Surgeons of Columbia University and the Medical School of the University of Oregon. Equipment, techniques, and organization of the research are fully described.

SHELDON WILLIAM HERBERT
The varieties of human physique an introduction to constitutional psychology With the collaboration of S. S Stevens and W B Tucker New York Harper & Brothers 1940 347 p illus. 24 cm. $3.50 2673

Contents Introduction and summary. The main historical thread. Development of the technique of somatotyping. How to proceed in somatotyping. Some theoretical considerations. Description of the somatotypes. Toward [illegible] constitutional psychology. Appendices. Tables for somatotyping. Nine somatotypes of women. Bibliography. Index

Note The author's [illegible] in this scientific study is to establish criteria and procedures for [illegible] practical method for segregating and classifying the human physique. The three criteria adopted are endomorphy which means relative predominance of soft roundness throughout the various regions of the body, mesomorphy which means relative predominance of muscle, bone and connective tissue, and ectomorphy which means relative predominance of linearity and fragility. The author presents the results of his classification of a large number of cases but his main object is to establish [illegible] scientific technique for further study of the subject. The [illegible] bibliography is restricted to [illegible] relatively small number of titles, but these titles are annotated.

TALLMADGE GUY KASTEN
Basic biology of man New York Random House 1952 244 p illus 21 cm. $3.00 2674

Contents The cell. Tissues. Basic structure and organization. The common integument. The locomotor apparatus. The digestive system. The reproductive system. The circulatory system. The respiratory system. The urinary system. Index of subject. Index of names.

Note An introduction designed for general reading rather than textbook use. The author has presented [illegible] factual outline of the main biological processes, and has avoided emphasis on spectacular aspects. There are only [illegible] few illustrations, and these are the plainest kind of drawing. The book is suitable for mature lay readers who desire a reliable rather than [illegible] "fascinating" account.

THOMAS WILLIAM L. JR editor
Man's role in changing the face of the earth. Edited by William L. Thomas Jr., with the collaboration of Carl O Sauer Marston Bates and Lewis Mumford Chicago Published for the Wenner-Gren Foundation for Anthropological Research and the National Science Foundation by the University of Chicago Press 1956 1 193 p. illus 25 cm. $12.50 2675

Contents (abridged) Part [illegible] Retrospect. Man [illegible] of the earth. Through the corridors of time. Symposium discussion—retrospect. Part ii. Process. Introductory. Man [illegible] effects on the seas and [illegible] of the land. Alterations of climate. Vegetation. [illegible] and soil changes through human use. Modifications of biotic communities. Ecology of [illegible]. Urban-industrial demands upon the land. Symposium discussion—process. Part iii. Prospect. Limits of man and the earth. The role of man. Symposium discussion—prospect. Part iv. Summary remarks. Summary remarks. Indexes.

Note The International Symposium on Man's Role in Changing the Face of the Earth was held in June 1955 in Princeton, New Jersey. The more than 50 papers read at it have been published in this volume together [illegible] transcripts of the discussions at the symposium and concluding remarks by three of the participants. This material is organized under the headings and subheadings listed above. Experts from several nations participated in the symposium and authored the papers. The collective result is [illegible] broad and diffuse but interesting survey of the interactions between man's endeavors as [illegible] social creature and the earth [illegible] surface including both the landscape shapes and materials of the earth [illegible] crust, and the other forms of life inhabiting the earth. Literature references are given and the book is well indexed.

WECHSLER, DAVID
The range of human capacities. Second edition. Baltimore The Williams & Wilkins Company 1952 190 p illus 23 cm. $4.00 2676

Contents Introduction. The problem. The measurement of human capacities. The distribution of traits and ability. The range of human capacities. Natural constants and the limits of human variability. Range in productive operations. Length of life and the chances of survival. Exceptions. The effect and the burden of age. Genius and deficiency. The meaning of differences. Appendices. The measurement of mental ability. Tables of means, standard deviations and range ratios. Distribution of total range ratios. References. Index

Note The thesis of this work is that human variability with respect to any measurable trait or ability is extremely limited when compared to that of other phenomena in nature and that the differences which separate human beings from one another with respect to any trait or ability are far smaller than is ordinarily supposed. The author suggests that the reader in considering the

MAN

GENERAL

DICE, LEE R

Man's nature and nature's man, the ecology of human communities Ann Arbor University of Michigan Press, 1955 329 p 21 cm $5 00 2666

Contents Introduction—the frame of reference. Essentials of human existence. Man and his plant and animal associates. Man as a social animal. The dynamics of human populations. Evolution of human heredity Man's effects on natural communities. Community regulatory mechanisms. Regulatory mechanisms in human communities. Limits of human population density The human society and its habitat and resources. Evolution of human communities. The deterioration of human communities. Interrelations among communities. Human ecosystems. Philosophy of the human community Moral codes. Epilogue—what lies before us. Literature cited. Index.

Note The author of this book is Professor of Zoology and Director of the Institute of Human Biology at the University of Michigan, and is widely known as an authority on ecology In this book, he has applied ecological thinking to the problems of man as a co-inhabitant with plants and other animals of the earth Some unexpected topics are included, for example a discussion of moral codes. *However the author relates them all to the general* ecological picture. Selected literature references designed as guides to further reading are included in the chapters, while the list of literature cited at the end of the volume includes books and articles mentioned in the text.

DUBLIN, LOUIS ISRAEL

The facts of life from birth to death In collaboration with Mortimer Spiegelman. New York The Macmillan Company, 1951 461 p illus 22 cm $3 95 2667

Contents. Who we are—the population. The pattern of reproduction. The pattern of marriage. The average American family Marital dissolution by divorce, separation, and death. The sick and their care Mortality—in general. The conquest of tuberculosis The mystery of cancer The control of diabetes. A diminishing burden—pneumonia and influenza An increasing burden—the circulatory diseases. The problem of the rheumatic diseases. The hazards of infancy and childhood. Our old people. The accident toll. Suicide and homicide The labor force and the hazards of occupation. Human impairments. Mental health. Other diseases of public interest. Our body build. The public health and its administration. How long we live. The effects of war Selected references. Index.

Note A reference book of answers and statistical data on such questions as "What is the most popular age for brides?" and "What are the grades of mental deficiency?" It is cast in readable form and is addressed not only to people with serious interests in the data but also to those who like to browse for curious information. The senior author was Statistician for the Metropolitan Life Insurance Company and an internationally known authority on the vital statistics of living and dying. The bibliography does not list all of the sources used but is primarily a selected one for those readers who wish to pursue further information on specific topics.

DUBLIN LOUIS ISRAEL AND OTHERS

Length of life a study of the life table By Louis I Dublin Alfred P Lotka and Mortimer Spiegelman. Revised edition New York The Ronald Press Company 1949 379 p illus 24 cm $7 00 2668

Contents. The life span and the life table. The life table as record of progress in the end of the nineteenth century The gain in longevity in the United States *in recent years.* Geographic variations in longevity Biological aspects of the life table. The inheritance of longevity Biological factors influencing longevity and mortality The contribution of medical and sanitary science to health and longevity Forecasts of mortality and longevity Longevity and mortality in relation to physical condition Longevity and mortality in relation to occupation. Application of the life table to population problems. Application of the life table to economic problems. Life tables based on the experience of life insurance companies. Life table construction. Appendix Life tables. List of sources to life tables. Name index. Subject index.

Note A standard work written by statisticians associated with the Metropolitan Life Insurance Company Although based on life expectancy tables such as are used by insurance companies, it covers more than the purely quantitative aspects of the subject. Biological and social circumstances which affect the duration of human lives also are discussed hence, the work is of interest not only in the life insurance field but in medicine, public health, and sociology as well. The chapter on biological factors influencing longevity and mortality and that on *forecasts of mortality and longevity* have been added in this edition. Changes have been made in other parts of the book where advances in knowledge required them. Literature references have been revised. The book now contains 94 tables of data on mortality rates, life expectancies, etc.

MORTON, DUDLEY JOY

Human locomotion and body form, a study of gravity and man, by Dudley J Morton, with the collaboration of Dudley Dean Fuller. Baltimore The Williams & Wilkins Company, 1952 285 p illus 24 cm. $5 00. 2669

Content (abridged) Part one, Underlying principles of adaptation *Organic interaction with gravity Gravity* a designing factor Specialization of the human foot. Gravity and organic change. Mechanism of foot balance. Weight distribution in locomotion. The foot in walking. Gravity and muscle action. Structural factors. Physiological summary—Canadian Army foot survey Postural and locomotor habits. Part two, Analysis of the walking stride: foot contact and synchronized actions. Weight division during foot contact. The leverage interval. Horizontal components of force. Metabolism and locomotion. Histological and chemical aspects. Metabolic economy in muscle function Human mentality and bipedal... Bibliographical references. Index.

Note. Anatomical, metabolic, postural and mechanical considerations are co-ordinated in this comprehensive study Some attention has been given also to the evolutionary aspects.

MUYBRIDGE, EADWEARD

The human figure in motion. New York Dover Publications Inc., 1955 195 p. illus 28 cm $10 00 2670

Contents (abridged) Men Walking Running Jumping Lifting and heaving Throwing and catching. Kicking, batting, and ... Various acting. Boxing and wrestling. Acrobatics and fencing. Various ... Standing, sitting, and lying down. Women Walking Picking up Standing ... Sitting Kneeling and putting down. Standing. Dancing and turning. Sitting Kneeling. Lying down rising. Children Walking and running Crawling and climbing. Picking up and carrying.

Note. Reprinted in this volume are a selection of plates from Muybridge's 11-volume *Animal locomotion,* originally published in 1887 There are 196 plates, most of them occupying two pages each. Each of the plates reproduces a series of photographs—usually as many as 36 but usually fewer—of a nude human being, man, woman, or child, carrying out some such act as throwing a ball, walking downstairs. The photographs are arranged to show the natural sequence of motions, viewed from two or three angles. The original work, done before the invention of the moving picture camera, was a landmark in the scientific use of photography as well as in the study of human motion The studies are still of interest to artists, kinesiologists, etc. An introduction on Muybridge...

analysis. Nitrogen, carbon, and water analyses. Further investigations at the Scharbauer site. Literature cited. Index.

Note: The partial human skeleton which is the subject of this book was discovered in June, 1953, near Midland, Texas. Anthropological and archaeological interest in the find was due to the fact that apparently the human remains are older than Folsom man, hitherto supposed to be the oldest human inhabitants of the North American continent. The book is a detailed report of the find, and the subsequent studies. The illustrations include photographs of the site excavations and artifacts, as well as of the skeletal remains.

HUMAN GENETICS

Association for Research in Nervous and Mental Disease

Genetics and the inheritance of integrated neurological and psychiatric patterns. Proceedings of the Association, December 11 and 12 1953 New York, N. Y. Editors Davenport Hooker and Clarence C. Hare. With 77 illustrations and 30 tables. Baltimore. The Williams & Wilkins Company 1954. 425 p. illus. 24 cm. (Its Research Publications Vol. xxxiii) $10.00 2683

Contents: Part I. Genetics, human inheritance, and environmental effects: Principles of human genetics, by F. R. David and L. H. Snyder. Genetic and environmental control of enzyme formation and activity, by B. D. Davis. Genetics and the physiology of the nervous system, by H. C. [illegible]. Genetic factors affecting susceptibility and resistance to virus diseases of the nervous system, by A. B. Sabin. The inherited and acquired components of behavior, by A. Anastasi. The prenatal effects of [illegible], by J. Warkany and J. G. Wilson. Part II. Neurological and mental patterns and their inheritance: The phylogenetic development of behavior patterns, by L. Carmichael. Early human fetal behavior with a preliminary note on double simultaneous fetal stimulation, by D. Hooker. The development of behavior patterns in the infant and child, by A. Gesell. The trigeminal nerve in relation to early human fetal activity, by T. Humphrey. The histogenesis of the spinal cord and the early development of behavior, by D. H. Barron. The phylogenetic continuity of neural mechanisms, by E. C. Crosby and R. E. Yoss. The inheritance and development of intelligence, by W. R. Thompson. Research and personality development of the child, by M. J. E. Senn. Genetics of the epilepsies, by C. H. [illegible]. Phenylpyruvic oligophrenia (phenylketonuria), by G. A. Jervis. The inheritance of neuromuscular disorders, by F. H. Tyler. The hereditary ataxias, by J. W. Schut. [illegible], brain waves and intelligence scores of epileptic twins, by W. G. Lennox and D. E. Jolly. The familial occurrence of [illegible] study of heredity, by E. [illegible] and others. The genetics of psychotic behavior patterns, by F. J. Kallmann. The genetic aspects of [illegible], by H. B. Glass. To what extent early behavior patterns determined by constitutional inadequacies, by L. Kanner. The clinical applications of genetics, by J. V. Neel. List of members. Index.

Note: Scientists working at the research level in such fields as physiology, psychology, anatomy, medical genetics, pediatrics, and psychiatry are the authors of the papers published in this volume. The papers are technical in nature, and many of them describe research in progress or concluded not many years before the meeting. Some of them survey a considerable body of knowledge previously published in the literature and related to recent research.

Dobzhansky Theodosius

The biological basis of human freedom. New York Columbia University Press 1956 139 p. 21 cm. $2.95 2684

Contents: Man's kinship with nature. Heredity as basis of culture. Who is the fittest? Human and natural selection. Necessity and freedom. Bibliography.

Note: In the lectures collected in this book—which were originally delivered as the Page-Barbour Lectures for 1954 at the University of Virginia—the author was concerned with the special nature of human evolution, stating [illegible] human evolution is, in major respects, singular and unique in the living world. He argues that man's biological heredity and culture operate on one another in ways that have no parallel among the lower forms of life. He states, "Human genes have accomplished [illegible] but no other genes succeeded in doing" and further "The very fact that man knows that he has evolved and that he is evolving means that he is able to contemplate speeding up his evolution, slowing it down, stopping it altogether or changing its direction. [illegible] Despite any exhortations to the contrary man will not permanently deny himself the right to question the wisdom of anything [illegible] including the wisdom of his evolutionary direction." The book contains stimulating and provocative reading, not only for biologists but for all who are interested in the large outlines of biology, particularly evolutionary theory for man.

Gates Reginald Ruggles

Human genetics. New York The Macmillan Company 1946 2 v. illus 24 cm $22.50 2685

Contents: Volume I. Introduction. General principles of heredity in man. Human cytology. Linkage. Eye color and hair color. The inheritance of [illegible]. Hereditary variations and abnormalities of the eye. Hereditary variations and abnormalities of the ear. Albinism. Abnormalities and diseases of the skin, hair, nails and teeth. Anatomical abnormalities of the hands, feet and limbs. Anomalies of the skeleton and of bone structure. Metabolic defects and derangements. Hemophilia and related hereditary conditions. Other inherited diseases and abnormalities of the blood system. The blood groups—genetical and racial aspects. Volume II. Allergy. Hereditary syndromes. Inherited abnormalities of the alimentary canal and others. Inheritance of various [illegible] conditions. Twins and twinning. Inherited muscular and neuromuscular abnormalities. Hereditary variations, defects and diseases of the nervous system. The inheritance of mental defects. The inheritance of normal mental differences. Cancer: the genetic aspects. Constitution, body-build and neuropathy. Consanguineous marriages. Inheritance of stature and size. Anthropological characters. Odds and ends. Index.

Note: A reference book of the current knowledge of human heredity. It is based on a comprehensive review of the international literature. The material included has been selected from the standpoint of significance but the author disclaims any attempt at an exhaustive presentation. However, the scope is broad in the sense that a wide range of biological variations is covered. In such chapters as that on eye abnormalities it is also very detailed. The subject is treated from the biological rather than the purely genetic viewpoint, and the book is therefore of value not only to geneticists but to physical anthropologists and the medical profession as well. Extensive lists of the literature accompany each chapter.

Glass Bentley

Genes and the man New York Teachers College Columbia University 1943 386 p illus 22 cm (The science in modern living series basic science material for use in modern education) $3.50 2686

Content (abridged): Life begins—the fertilized cell. The origin of differences in hereditary patterns. The genetic basis of sex. The basis of growth and development. From potentialities to realization. On growing old. Index.

Note: A concept of life in genetic terms which aims to provide a basis for understanding the growth and development of the human individual from birth to maturity and through the subsequent slow decline of old age, with an appreciation of the physical bonds which link previous and succeeding generations. The work is not intended as a textbook in the strict sense but is well adapted for college courses as collateral reading, at the same time affording a new introduction to genetics for the intelligent layman. The volume attempts to present a new outlook in genetics, cytology and embryology by describing the operation and interaction of those biological factors which make the physical man. References are given in footnotes.

Kallmann Franz J

Heredity in health and mental disorder principles of psychiatric genetics in the light of comparative twin studies. With a foreword by Nolan D. C. Lewis. New York W. W. Norton & Company Inc., 1953 315 p. illus. 21 cm. $6.75 2687

data which support the thesis, lay aside any previous opinion he may have held in the matter since the conclusions have important bearings on number of social questions. The bibliography of 174 references indicates the sources from which the presented facts are drawn. The book was first published in 1935 and has been out of print for some years. In preparing this edition the author added two chapters and substantially revised some of the material carried over from the first edition

PREHISTORIC MAN

ANDREWS, ROY CHAPMAN

Meet your ancestors, a biography of primitive man New York The Viking Press, 1945 280 p illus 22 cm $3 50 2677

Contents Relatives and ancestors. The human story in brief. Searching for Adam and Eve. The ape that almost became man. The man of the Java jungles. The giants of Java. The romance of Peking man's discovery A cave in the western hills. Piltdown, Rhodesian and Heidelberg man. Enter the cave man. The picture of thousand centuries. The wise man appears. Drama and adventure in cave exploration The first Americans. *Aftermath of the* stone age. Man of the future. Bibliography Index.

Note A popular account of what is known about modern man's *prehistoric forbears. It is written in a lively style and makes the* subject fascinating even for readers who have little inclination toward science. The author who himself took part in some of the important explorations and discoveries that are recounted in the book, was, until his retirement in 1941 director of the American Museum of Natural History

MACGOWAN, KENNETH

Early man in the New World With drawings by Campbell Grant. New York The Macmillan Company 1950 260 p illus 22 cm. $5 00 2678

Content This sudden New World The road of early man. The dead hand of the ages. The great ice age. Early man in the Old World. What the bones have to say The artifacts of early man Early man and the great extinction. Pygmies, australoids, and negroids—before Indians? Did the Indian invent or borrow his culture? The Indian in agriculture. Puzzles, problems, and half answers References in the text. References as to illustrations. Index.

Note A readable summation of present-day knowledge concerning the origin of man in America. Besides presenting the various facts and theories regarding the first appearance of men in the New World, the book offers the interested layman good account of the techniques and methods of the professional archeologist. An extensive bibliography is included.

TERRA, HELLMUT DE, AND HALLAM LEONARD MOVIUS, JR.

Research on early man in Burma. With supplementary reports upon the Pleistocene vertebrates and mollusks of the region by Edwin Harris Colbert and Joseph Charles Bequaert, and on Pleistocene geology and early man in Java by Hellmut de Terra. Philadelphia The American Philosophical Society 1943 200 p illus 30 cm. (American Philosophical Society Transactions New series Vol 32 part III) $3 00 2679

Content (abridged) Part I, The Pleistocene of Burma, by H. de Terra Geographical elements of the region. Geological observations in the Irrawaddy basin In the Northern Shan Highlands. The Pleistocene history of Burma in relation to that of neighboring regions. Cyclic nature of Pleistocene stratigraphy Part II, The stone age of Burma, by H. L. Movius, Jr The Paleolithic period. The Neolithic period. Reconnaissance in the Southern Shan States Part III, Pleistocene vertebrates collected in Burma by the American Southeast Asiatic Expedition for Early Man by E. H. Colbert The Pleistocene fossil beds of Burma. *The Pleistocene vertebrate faunas* of Burma. Post Pleistocene fossils. Fossils of unknown age. Relationships and correlation of the Pleistocene mammalian faunas of Burma. *Part IV Fresh-water shells* from cave deposits in the Southern Shan States, by J Bequaert. Part V Pleistocene geology and early man in Java, by H. de Terra Review of the discoveries. Summary of the data. *Beginning of the Pleistocene* in Java. The Lower Pleistocene site of Modjokerto in eastern Java. The Middle Pleistocene site of *Pithecanthropus* in central Java. The Upper Pleistocene terraces and the age of Solo man. The stratigraphic position of the Paleolithic cultures of Java. Java and the question of land bridges Summary of prehistoric migrations to Java.

Note In this paper are recorded the results of the American Southeast Asiatic Expedition for Early Man, sponsored by the *Academy of Natural Sciences of Philadelphia and the Peabody* Museum of Harvard University with assistance from the American Philosophical Society the Carnegie Institution of Washington, and *the Museum of Comparative Zoology* Harvard University

WEIDENREICH, FRANZ

Apes, giants, and man. Chicago University of Chicago Press, 1946 122 p. illus. 23 cm. $3 50 2680

Contents. Man and his simian ancestry The development of the specifically human form. Giants as earliest ancestors. The human *races principles of their classification and origin. Face and* qualities of the human brain and skull in the light of evolution Bibliography Index.

Note A masterly study of the evolution of man, which was presented originally as series of lectures at the University of California in 1945 It is based chiefly on the author's own study of the fossil material available up to the time of writing (early 1945) and concludes that modern man's immediate ancestors were probably giants, whose remains we now possess in *Gigantopithecus blacki* and related recent discoveries The fourth lecture examines the concept of distinct human races and finds it is largely unrealistic

WEIDENREICH, FRANZ

Giant early man from Java and South China. New York The American Museum of Natural History, 1946 134 p. illus. 27 cm. (The American Museum of Natural History Anthropological papers. Vol. 40, part I) $2 00 2681

Contents The new finds in Java Von Koenigswald's earlier discoveries. Von Koenigswald's latest discoveries. *Pithecanthropus* dubius (*Pithecanthropus robustus* Weidenreich) Morphological character of the Sangiran mandible of 1941 *Meganthropus palaeojavanicus* von Koenigswald. Morphology of the Sangiran mandible of 1941 *Gigantopithecus blacki* von Koenigswald. The *Pithecanthropus* problem. *Gigantopithecus, Meganthropus,* and *Pithecanthropus.* The giant hominids and their bearing on the problem of human evolution Summary Literature cited. Explanation of illustrations.

Note A detailed, technical study of the pre-hominid and hominid remains discovered in South China and in Java by Dr. G. H. R. von Koenigswald The discoveries are described minutely and their significance to the knowledge of prehistoric man, particularly its evolution, is discussed. There are 12 plates that contain many reproductions of photographs of the remains.

WENDORF, FRED, AND OTHERS

The Midland discovery a report on the Pleistocene human remains from Midland, Texas. By Fred Wendorf Alex D Krieger and Claude C Albritton with a description of the skull by T D Stewart. Published in co-operation with the Museum of New Mexico Austin University of Texas Press, 1955. 139 p illus 24 cm $3 50 2682

Content Geographic description of the Midland area. Geology of the Scharbauer site. Localities and their associated artifacts. Reconstructed history of the site. Some tentative correlations. Reconstructed history of the site. Chemical analyses. Description of the human skeletal remains Chemical analyses. Conclusions about the Midland discovery Tables. Appendices: Report on the horse remains from the Scharbauer site. Identification of vertebrate fossil material, Scharbauer site. Memorandum on a sample from the right temporal bone (human) Scharbauer site. Method of chemical analysis of fluorine, ash, calcium, and phosphorus.

Freeman and Company 1949 617 p illus. 24 cm. (A series of biology texts editors George W Beadle and others) $6.50 2693

Contents: Introduction. The biological basis of man's inheritance. Genic action. The formation of germ cells with 24 chromosomes. Probability. Simple [illegible] inheritance. Lethal and [illegible] genes. Problems of genetic [illegible]. Genetic ratios. The Hardy-Weinberg law. Multiple alleles. Medicolegal applications of genetics. Sex-linkage. Linkage and crossing over. [illegible] in the [illegible] of genes. [illegible] interactions. Multifactor inheritance. [illegible] Sex determination. The sex ratio. The occurrence of mutations. The production and significance of mutations. Heredity and environment. Selection and eugenics. Genetic aspects of race. Genetic aspects of race mixture. The origin of human diversity. Index.

Note: This book is designed primarily for use in college courses. A course in general genetics is not [illegible] prerequisite, but the level of [illegible] implies at least [illegible] previous course in general biology. The authoritative discussions on such topics of general interest as the genetic aspects of race make the book useful in general library collections. Selected lists of references accompany the chapters. The author is [illegible] member of the faculty of the University of California.

GROWTH

Boyd Edith

The growth of the surface area of the human body With a foreword by Richard E. Scammon. Minneapolis University of Minnesota Press, 1935 145 p illus 26 cm (University of Minnesota. Institute of Child Welfare. Monograph series No 10) $5.00 2694

Contents: Methods of measuring surface area. Coating methods. Methods of surface integration. Method of triangulation. Experimental error in measuring surface area. Methods of estimating surface area. Photographic methods. Linear methods. Experimental error in estimating surface area. Formulas for the relation of surface area to the major dimensions of the body. Formulas based on the [illegible] of [illegible] dimensions of [illegible]. Formulas based on the proportionality of the human body to regular geometric solids. Miscellaneous groups of equations. Formulas obtained by empirical methods. Growth of the surface area of the body and its parts in the prenatal and postnatal periods of life. Absolute and relative increment of surface area. Proportionate parts. Multiples of birth size. Rates of growth. Summary. Bibliography. Index.

Note: An extensive analysis of the surface area of the body [illegible] its development as [illegible] whole. Graphic and numerical methods are used to present findings. The bibliography lists 145 references.

Count Earl Wendel

Brain and body weight in man their antecedents in growth and evolution. A study in dynamic somatometry New York The New York Academy of Sciences, 194 130 p. illus. 23 cm. (New York Academy of Sciences. Annals. Vol. 46 p 993–1122 1947) $2 00 2695

Contents (abridged): Section I, Introduction. Orientation. Standpoint and method. Principles and terminology. Section II, Ontogeny. Character of the data. Range of the materials. Reliability of the [illegible]. Behavior of the growth curves. Section III, Comparative anatomy. Part I, Range of the materials. Adults. Part [illegible] The "phylogeny" of brain body weight expressed as [illegible]. Von Bonin's correlation coefficient and regression formula for the mammals as class. The exponent of cephalization. A statistical anatomy of the mammalian class, assuming the validity of the exponent of cephalization. The [illegible] [illegible]. The statistical anatomy of the Mammalia, continued. The statistical anatomy of the Mammalia, concluded. Section IV, Ontogeny and comparative anatomy. Section [illegible] Summary. Conclusions. References consulted.

Note: A specialized and technical study wherein the author presents the results of his investigations regarding the relationship between brain weight and body weight in man. His primary purpose was to determine whether this relationship is peculiar to man, or whether [illegible] applies to all mammals. Mathematical and statistical methods are employed, and data and graphs utilized in the study are tabulated in the appendix. There [illegible] no index.

Scammon Richard E. and Leroy A Calkins

The development and growth of the external dimensions of the human body in the fetal period. Minneapolis University of Minnesota Press 1929 367 p. illus 30 cm. $6.00 2696

Contents (abridged): The general plan of the [illegible]. A summary of previous studies of external dimensions of the fetus and newborn. Summary of findings on the major external dimensions of the body—the head and neck—the trunk—the pelvis—the upper extremity—the lower extremity. General discussion. General summary. Bibliography. Tables of empirical [illegible] and their residuals. Tables of data of other investigators on the external dimensions of the body in the fetal period. General graphs and figures. Field graphs.

Note: The results of [illegible] quantitative study of the external dimensions of human fetuses [illegible] lengths ranging from approximately two centimeters to 51 centimeters in total or crown heel length are presented and interpreted in this work. The study covered 31 external dimensions of the body each of which was measured by the metric system on over 300 specimens. In addition 10,000 measurements [illegible] were made in connection with the study of effect of artifacts, including block [illegible] and the effect of formalin preservation on the material. The techniques of measuring and the steps taken to reduce experimental error are explained in detail. The related studies of other investigators are abstracted in the second part of the volume. [illegible] the chapters [illegible] "Summary of findings" [illegible] the results of the measurements are summarized statistically and in many instances compared with the relevant findings of other investigators. The study established [illegible] new principle [illegible] that in general the linear growth of the various parts of the body is in uniform [illegible] during the fetal period.

Shuttleworth Frank Kayley

The adolescent period a pictorial atlas Evanston Child Development Publications 1951 69 p. illus. 24 cm (Society for Research in Child Development Inc. Monographs. Vol. XIV no. 2) $2.00 2697

Contents: Physical growth and sexual maturation of girls. Stages of sexual maturation among girls. Sexual maturation of boys. Individual differences in the sexual maturity of boys. Stages of sexual maturation among boys. Types of obesity. Variations in body builds at age fifteen. [illegible] somatotypes. Effects of partial starvation on somatotypes. Asthenic. References.

Note: A monograph that consists largely of photographs [illegible] descriptive legends and brief explanatory text. The monograph is designed and the photographs selected to illustrate the processes of physical growth, sexual maturation, and differences in body builds among normal adolescents. The work is [illegible] companion volume to the author's *The adolescent period*, [illegible] graphic atlas published as Vol. XIV no. 1 in the same series (see index).

Stolz Herbert Rowell and Lois Meek Stolz

Somatic development of adolescent boys a study of the growth of boys during the second decade of life. New York The Macmillan Company 1951 557 p. illus. 24 cm. $9.00 2698

Contents: The study of human development. The California adolescent study. Description of the study of somatic development of boys. The period of pubertal growth in height. Growth in height during adolescence. Growth in stem length and leg length during adolescence. Growth in body width during adolescence. Timing relationships among phenomena of skeletal growth during adolescence. Skeletal age in relation to height growth. Changes in thickness of subcutaneous tissue during adolescence. Growth in thigh circumference during adolescence. Changes in weight during adolescence. Growth in strength during adolescence. The development of pubic hair and external genitalia during adolescence. Increase in [illegible] tissue during early adolescence. The rhythm of growth during adolescence. General summary and conclusions. Relation of somatic changes to other developmental phenomena during adolescence—

Contents (abridged) Part I Heredity in relation to mental health Modern history of genetics. General principles of genetics Methods of genetic investigation. Comparative twin observations on the genetic aspects of physical and mental health. Part II, Heredity in relation to mental disorder Psychoneurotic and delinquent forms of behavior deficient resistance to stress and infection pathological sex variants. Psychotic reaction types. Convulsive disease, gene-controlled neurological disorders, and various types of mental defect. Specific human vulnerabilities versus mysterious species vulnerability Part III, Contributions of genetics to mental health planning Correction of common misconceptions regarding heredity Present and potential contributions to clinical psychiatry Educational, consultatory and specialized guidance contributions to preventive medicine. Contributions to interprofessional co-operation and public health planning. Guiding principles of human genetics as applied to mental health. Bibliography Index.

Note Written by an eminent authority on medical genetics, this book marshals a wide array of information on the relationships between heredity and mental disease. It is based on a study extending over many years of hundreds of pairs of twins and their families. Many of the cases that were studied are discussed in detail and pictures of the subjects are included. The author found strong evidence that there is a hereditary factor in schizophrenia and some other kinds of mental disorder

NEEL, JAMES V, AND WILLIAM J SCHULL

Human heredity Chicago University of Chicago Press 1954 361 p illus 22 cm. (The University of Chicago Committee on publications in biology and medicine Emmet B Bay and others) $7 50 2688

Content Man as an object of genetic study The physical basis of heredity in man. Man's genetic diversity Nature and nurture. Probability The dominant gene in man. The recessive gene in man Genes neither dominant nor recessive. More complex genetic situations. Linkage. Mutation. Physiological genetics. The estimation of genetic parameters and tests of genetic hypotheses. The analysis of family data. Population genetics Twins. Genetics and epidemiology The applications of genetic knowledge to man—I, Counseling—II, Medicolegal aspects—III, Eugenics. Author index. Subject index.

Note A scientific survey of human genetics in which the primary emphasis is on methodology A considerable range of data on the facts of human heredity is included also, but the book is not intended as a reference book of such information. It is addressed to graduate scientists active in genetics or related fields and to graduate students of biology with interests in the field.

PEARL, RAYMOND, AND RUTH DEWITT PEARL

The ancestry of the long lived Baltimore The Johns Hopkins Press 1934 168 p illus 23 cm. $3 00 2689

Content The problem. The material. Characteristics of the compared groups. *The effect of certain types of selection of the* immediate ancestry on the age characteristics of the progeny Birthplace, race stocks, and alcohol habits of the group of nonagenarians and centenarians. Variation in TIAL. Paternal and maternal male and female, and generational contributions to TIAL. Individual contributions to TIAL. Living age and TIAL. Biometric comparisons. *Actuarial comparisons. Siblings of the longevous.* Correlations. Matings that produced the longevous. Summary and discussion. Index.

Note This book represents one stage in the development of the general program of investigation of human life duration in the Department of Biology of the School of Hygiene and Public Health of the Johns Hopkins University Some of the material appeared previously as No. VI of the series of *Studies on human longevity* in the journal *Human biology* The material on ancestry and age characteristics, and the chapter on ancestral longevity and living age, are new as are the bibliographic references and much of the statistical data. The symbol TIAL used in the Contents is an abbreviation for the "total immediate ancestral longevity" taken to mean the sum of the ages at death of the six immediate ancestors of an individual.

REED SHELDON C

Counseling in medical genetics. Philadelphia W B Saunders Company 1955 268 p 21 cm. $4 00 2690

Contents "In the beginning." What are the problems A philosophy for counseling. A *few laws.* Twins. Don't marry a relative The ubiquitous heterozygote (or The common carrier) Mongolism Nervous system malformations. Clubfoot. Harelip and cleft palate (of mice and men) Congenital heart disease Mental retardation String beans and chubbies. Pyloric stenosis. Congenital dislocation of the hip Fibrocystic disease of the pancreas. Blood groups. Disputed *paternity* Skin color *Convulsive seizures* Rheumatic fever Tuberculosis. Allergies. Diabetes. Schizophrenia. Manic depressive psychosis. Genetic effects of radiation. Putting the puzzle together Appendix Type of inheritance and frequency of various diseases. Literature cited. Index

Note A concise reference book designed to aid physicians, particularly *general practitioners, in giving advice to their patients* on problems concerning heredity The kinds of problems dealt with are indicated by the chapter titles listed above The typical chapter consists of short, to-the-point discussions of the genetics of a particular characteristic or disorder such as skin color or epilepsy, followed by one to three case histories. Rare genetic traits are *not covered in the body of the book, but are listed in the appendix.* The author is Director of the Dight Institute for Human Genetics of the University of Minnesota.

SCHEINFELD, AMRAM

The human heredity handbook. Illustrated by the author Philadelphia J B Lippincott Company, 1956 276 p illus. 21 cm. $3 95 2691

Contents Heredity and environment. The new baby The workings of heredity The baby's sex. Twins, "trips," "quads," "quints." Predicting children's looks. Coloring: eyes and hair Skin color The features. Shape and stature. The "bad" genes Inheritance in major organic diseases. Outer defects and abnormalities. Defects in senses and body functions. Blood types and conditions *Mental diseases. Feeble-mindedness and idiocy* Length of life. Intelligence. Talent and genius. Behavior Personality and temperament. Criminal behavior Sex and sexual behavior. Human evolution. The human races, I Physical differences—II Quality Ancestors and relatives. Parenthood problems. Eugenics. Appendix Glossary Suggestions for further reading. Where to get advice *Where to study human heredity* Index.

Note A popular handbook of information on all phases of human genetics, inheritance, breeding, and related matters. The information, which is arranged for quick reference rather than consecutive reading, is presented clearly and concisely The book provides direct and uncomplicated answers to questions which frequently arise. The drawings add to the effectiveness of the presentation.

SCHEINFELD, AMRAM

The new You and heredity With special editing in the medical genetics sections by Dr Morton D Schweitzer and additional aid by others herein mentioned Illustrated by the author Philadelphia J B Lippincott Company 1950 616 p illus. 22 cm $6.00 2692

Contents (abridged) The science of genetics. The eternal germ plasm. What we don't inherit. The perilous road to birth. "Boy or girl?" Coloring—eyes. Hair color Skin color What will your child look like? "Trips," "quads" and "quints." The "black" genes The poor males. Sick minds. Slow minds. The blood types How long will you live? "Black gene" roll-call. The battle of the "IQ." Genius. Behavior Sex life (sex and sexual behavior) Race Ancestry Eugenics and the "unfit." Suggestions for further reading. Index.

Note The modern knowledge pertaining to human heredity is, in this book, described and explained for the nonspecialist The book is outstanding for its inclusiveness and for the author's unique style whereby he manages to convey scientific information in a way that makes it vital to every reader The book is packed with facts and, without "crying alarm," these facts are directly related to the reader's own life and person and to those of his fellow men. The first edition was published in 1939 In this edition, there is so much newly added material that the book is essentially a new work as indicated by the title.

STERN CURT

Principles of human genetics Illustrations by Aloha M Hannah. San Francisco W H

COON CARLETON STEVENS

The races of Europe New York The Macmillan Company 1939 739 p. illus. 24 cm. $15.00 2704

Contents: Introduction to the historical study of the white race. Pleistocene white men. The neolithic period. The neolithic invasion. The bronze age. The iron age. Introduction to the study of the living. The North. The British Isles. The Mediterranean world. The central zone. [illegible] study in convergence. Conclusion. Appendix—means of principal cranial series used in chapters [illegible]. Glossary. List of serials and their abbreviations. List of books. Indexes.

Note: A text and reference book for students of physical anthropology. It traces the racial history of the white division of *Homo sapiens* from its Pleistocene beginnings to the present. Six chapters are devoted to [illegible] study of the skeletal material by consecutive cultural periods, but the main emphasis is placed upon the racial identification and classification of living white peoples. A consistent theme is that physical anthropology cannot be divorced from cultural and historical considerations, and that there is no such thing as "pure" biology in reference to human beings.

FIELD HENRY

Ancient and modern man in southwestern Asia. Coral Gables University of Miami Press 1956 342 p. illus. 28 cm $8.50 2705

Contents: The land. Saudi Arabia. Israel. Jordan. Lebanon. Syria. Turkey. Caucasus. Iraq. Arabian peninsula. Iran. Afghanistan. Baluchistan. Comparative data on living peoples. The survey of modern man. Appendices: Statistical data on southwestern Asia. Anthropometric data, by W. B. Thomas. Anthropometric data, by C. U. Ariëns Kappers. List of archeological sites in the Arabian peninsula and adjoining areas. Abbreviations. Footnotes.

Note: This book [illegible] combination of anthropogeography and physical anthropometry. The titles of the chapters and of the appendices are listed above. In the chapters devoted to individual countries information is included on the geography, climate, flora, fauna, contemporary land use, and living peoples. This information is followed by [illegible] summary of information on Stone Age sites and their cultures in the same regions, notes on the racial elements among the living peoples based on anthropometric data, and references to literature. The appendices occupy more than 150 pages and contain, among other things, 15 tables of anthropometric data pertaining to the peoples of the region covered. References to literature are given throughout the volume.

FIELD HENRY

The anthropology of Iraq Chicago Chicago Museum of Natural History 1940 1949 426 p. illus. 24 cm. (Chicago Natural History museum. Fieldiana Anthropology Vol. 30 part 1, nos. 1–2) Pt. 1, no. 1 $5.00 pt. 1, no 2 $5.00 2706

Contents: Part [illegible] no. 1, The upper Euphrates. Introduction. The land and the people. The physical anthropology of the Dulaim and the Anaiza. Additional anthropometric data from Iraq. The tribes and sub-tribes of the upper Euphrates. Appendices. Glossary. Bibliography. Indexes. Part [illegible] no. 2, The lower Euphrates—Tigris region. Introduction. The land and the people. The physical anthropology of the Al bu Muhammad, the Al Sawaad, and the Subba. Anthropometric data from Az Nasiriya Liwa, by W. [illegible]. Arabs of the Hor al Hawiza, by E. S. Drower. Appendix: Notes on the date palm, by [illegible] H. V. Dunham. Bibliography. Indexes.

Note: Presented in this work are the results of an anthropometric survey of Iraq made in 1934 by the Field Museum Anthropological Expedition to the Near East. Measurements and other data of interest to physical anthropology concerning the inhabitants of Iraq are presented in detail and are summarized in tables and an interpretive text. Also included [illegible] some information of interest to cultural anthropology. Photographs, front and side views, of representative men of Iraq are reproduced in [illegible] series of 135 plates.

FIELD HENRY

Arabs of central Iraq their history ethnology and physical characters with introduction by Sir Arthur Keith. Chicago Field Museum of Natural History 1935 474 p. illus 31 cm. (Field Museum of Natural History Anthropology Memoirs. Vol IV) $7.50 2707

Contents: List of illustrations. Preface. Introduction by Sir Arthur Keith. Arabs of the Kish area. Anthropometric [illegible]. Appendix: Field Museum Anthropological Expedition to the Near East, 1934. Bibliography. Glossary. Index.

Note: This study of the physical characteristics of Arabian people and of their relationship to races both past and present is based on data collected by an expedition to the Kish area of Iraq in 1928. The greater part of the report consists of tabulation of data relating to the stature and dimensions of head and face of [illegible] Arab men. The discussion and interpretation of findings is given by Sir Arthur Keith in his introduction. There is [illegible] glossary of colloquial words used by Arabs of the Kish area, and [illegible] collection of 156 plates show photographs of 311 individuals.

FIELD HENRY

Contributions to the anthropology of Iran. Chicago Chicago Natural History Museum, 1939 706 p. illus. 24 cm. (Chicago Natural History Museum. Publication 455–459 Anthropological series. Vol 29 nos. 1–2) $12.00 2708

Contents: Preface. Introduction. The land and the people. Historical references to peoples of Iran ([illegible] B.C.–A.D. [illegible]). The peoples of Iran. The physical anthropology of Iran. Appendices. Glossary. Bibliography. Indexes. Plates.

Note: This work by the Curator of Physical Anthropology at the Chicago Natural History Museum [illegible] of the anthropological findings of the Field Museum Anthropological Expedition to the Near East in [illegible]. The primary concern of the report is with the physical characteristics of the modern inhabitants of Iran. Detailed measurements and front and profile portraits of Iranian men illustrate the work.

FIELD HENRY compiler

Contributions to the anthropology of the Soviet Union (with five plates) Washington, D. C. The Smithsonian Institution, 1948 244 p. illus. 24 cm. (Smithsonian miscellaneous collections. Vol. 110 no 13 Publication 3947) $2.00. 2709

Contents: All-Union Conference on Archeology. Recent work in anthropology. Ancient peoples and their origins. Modern races and their history. Variations in the structure of human bodies. Paleolithic [illegible] Introduction. Primitive Mousterian and Clactonian sites. Mousterian sites. Upper Paleolithic and Epipaleolithic sites. Mesolithic archeology. Introduction. Ukraine. Crimea. Black Sea coast. North Caucasus. South Caucasus. Armenia. Don region. Volga region. Central Asia. Siberia. Miscellaneous anthropological. Introduction. Anthropology of the western Pamirs. Iranian tribes of the western Pamirs. Mountain Tajiks. Peoples of Uzbekistan. Uzbek of Khorezm. Kazakhs of the Altai. Western Kazakhs. Turkomans of the Khorezm and the North Caucasus. A study of the Turkish peoples, 1920–1938. Paleoanthropology of the lower Volga area. Craniology of the Tatars of the Golden Horde. Craniology of the Kalmyks. The Uchil ("Ural") cranial type. Two types of Yakut crania. Craniology of the Orochi of the maritime area. Craniology of the Aleuts. Origin of the Mongol. Origin of the Eskimo. Observations on the tibia. Hairiness and growth in stature. A study in blood groups in the Caucasus. Israel'zikoction of the Turkmenes. The Turkmenian children from [illegible] Kobe, Crimea.

Note: This study is divided into two main sections, one dealing with archeology the other [illegible] with physical anthropology. It presents summaries of the work of Soviet Russian anthropologists for the benefit of persons not able to read the Russian language, based upon Soviet published and unpublished materials. There is no bibliography the references being given in footnotes. The second half of the work includes statistics on pigmentation, stature, cephalic index, head breadth, facial index, nasal index, etc., for different Soviet peoples.

HAMBLY WILFRID D

Cranial capacities a study in methods. Chicago Chicago Natural History Museum,

the case of Ben. Appendixes (abridged) Subcutaneous tissue index. Muscle strength index. Index.

Note. As a part of the California Adolescent Study frequent and detailed measurements were made of the body changes of 112 boys and 121 girls over approximately seven years. The data on the boys are presented and interpreted in this book. A considerable part of the presentation is made in tables—of which there are more than 100—and graphs, of which there are nearly as many However the data are also discussed fully Perhaps the most noteworthy feature is the inclusion f many photographs which portray stages in male adolescent development. The final chapter is a 63-page study of one boy in which somatic development is correlated with changes in personality and social behavior. The book is of interest to graduate psychologists, pediatricians and other scientists with professional interests in the subject.

WATSON, ERNEST H., AND GEORGE H LOWREY

Growth and development of children Second edition Chicago The Year Book Publishers, Inc. 1954 296 p illus 23 cm. $7 00
2699

Contents Introduction Heredity and environmental factors. Fetal growth and development. Normal physical measurements. The premature child. Behavioral development. Organ development. Osseous development. Role of the endocrine glands in normal growth and development. Energy metabolism. Nutrition in normal growth Facial growth and dentition. An outline of abnormal growth Index.

Note An inclusive survey of the current knowledge pertaining to growth during childhood and compendium of data pertaining to normal physical measurements, normal behavioral development, normal values of blood t various ages, average weights of organs t different ages, etc. The arrangement of the material adapts the book for study and for use as reference manual. Extensive use is made of tables, graphs, and charts in presenting information. References to source literature are appended t each chapter The book was developed in the Department of Pediatrics f the University f Michigan. The first edition was published in 1951 The principal change in this second edition is the addition f the 24-page chapter on facial growth and dentition Other chapters and sections have been revised to some extent, but the greatest revisions are to be found in the discussions and data on physical growth.

ANTHROPOMETRY AND PHYSICAL ANTHROPOLOGY

ASHLEY MONTAGU, MONTAGU FRANCIS

An introduction to physical anthropology A revised second edition. Springfield Ill Charles C Thomas 1951 555 p illus 24 cm $8 75
2700

Contents I troduction The primates as zoological group. The origin and evolution of the primates. The origin and evolution of man. The criteria and mechanism of ethnic differentiation. The divisions and ethnic groups f man The significance of isolate differences or the relation between body mind, and culture. Heredity and the influence f the environment upon man. Appendix A practical synopsis f methods f measurement in physical anthropology Bibliography Index.

Note An excellent inclusive introduction addressed both to general readers and to those with some professional interest in the field, such as students of medicine or sociology It illustrates the scope of physical anthropology and outlines the background knowledge, but is mainly description from the standpoint of physical anthropology of the various groups and divisions of man. Th appendix contains an informative and rather full outline of accepted methods of making anthropological measurements f man. The first edition was published in 1945 This edition shows revisions in many sections of the text, although no major changes have been made. Additions and revisions have been made in the illustrative matter and there are now 159 figures Literature published since 1945 has been added t the bibliographies

BATES, MARSTON

Where winter never comes a study of man and nature in the tropics. New York Charles Scribner's Sons, 1952 310 p. illus. 22 cm. $3 50
2701

Contents The point of view The element of history The varieties f tropical man. The varieties of tropical culture. The hidden [illegible] of civilization. On tropical climates. Clothes make the man. The white man's burden. Tropical diseases Food and drink. Tropical nature. Th rain forest. Tropical seas. The resources of the tropics. The varieties f tropical government. The planetary [illegible] Notes and documentation. A note on the illustrations [illegible] Index.

Note. A very readable book by naturalist who has had much experience with living in the tropics and has observed at first hand the white man's adaptation (and lack of it) to the tropical climate and living conditions. One thesis is that the white man's [illegible] derive mainly to his unwillingness to go far enough in adapting his living habits, particularly in suitable clothing. Much of the content f the book consists of discussions of tropical foods, tropical diseases, tropical resources, etc., and the net result is a picture of the tropics as region of vast potentialities once civilized man has learned t adapt himself to it.

BOYD, WILLIAM CLOUSER

Genetics and the races of man, an introduction to modern physical anthropology With illustrations. Boston Little, Brown [illegible] Company, 1950 453 p illus. 21 cm. $6.50
2702

Content Possible approaches t study of man. Genes. Heredity and environment. Gene equilibrium without selection Factors modifying gene frequencies (evolution) The influence of [illegible] geography on racial distribution. The concept of race. Blood groups. Use of blood groups in human classification. Other human genes. Incompletely analyzed genetic characteristics. Man's past. The future. Appendixes Statistical methods. Mathematical treatment of problems. Index.

Note. In this book modern physical anthropology the scientific basis of genetics upon which it rests, and the way in which genetic knowledge can be applied to the study of mankind are presented and explained. It is intended as an introduction for the general reader and as summary for the specialist. The technical survey of statistical and mathematical aspects in the appendix runs [illegible] pages.

BROZEK, JOSEF, editor

Body measurements and human nutrition. Detroit Wayne University Press, 1956. 167 p illus. 24 cm $3 50
2703

Contents Preface, by J Brožek. Introduction, by W W Howells. Recommendations concerning body measurements for the characterization f nutritional status, by Committee on Nutritional Anthropometry Food and Nutrition Board, National Research Council, A. Keys, chairman. Physique and nutritional status of adult men by J Brožek. Body build and body weight in [illegible] old army men by R. M. White. Variable factors in [illegible] weight, by M. Trotter Skinfold measurements in young American males, by R W Newman. Correlations between thickness of skinfolds and body density in 88 soldiers, by L. E. Pascale and others. The Canadian weight-height survey by L. B. Pett and O. F Ogilvie. Anthropometry and nutritional status of adult [illegible] by M. A. Ohlson and others. Obesity and disease, by A. B. Kurlander and others. Body weight—facts from life insurance records, by H. H. Marks. Fat thickness and growth progress during infancy by S. M. Garn and others Allometric growth f body composition in man and other mammals by E. E. Hunt, Jr and E. Giles. Index.

Note Published in this volume are the papers and the preliminary matter that constitute the proceedings f the Conference on the Role of Body Measurements in the Evaluation of Human Nutrition, sponsored by the Committee on Nutritional Anthropometry Food and Nutrition Board, National Research Council, and held at Harvard University Cambridge, Massachusetts, June 17 and 18 1955 The underlying theme [illegible] all the papers is the scientific study and evaluation of nutritional status by data gathered in body measurements The first article is not contributed paper but is statement, together with discussion, of recommendations which were agreed upon at the conference Recommendations are made both in regard t the minimum body measurements necessary for scientific study f nutritional status and in regard t the techniques of making and recording the measurements on adults. Measurements on children are not covered thoroughly but suggestions in regard to them are made Literature references are included in all f the contributed papers.

tribution and correlations. Percentage distributions by types of school equipment. Appendix: Measurements and methods of taking them. Copy of recording sheet. Bibliography.

Note: Prepared specifically for use by school officials and architects, this handbook presents, in a series of tables and graphs, information on 139 different measurements for boys and for girls distributed by school grade and by age. Included are measurements for writing and reading postures, standing and working at laboratory and shop benches, and reaching for stored material in bookcases and shelves. The measuring of the sample (1,[illegible] Michigan school children of 1954) and the analysis of data were done by the staff of the Laboratory of Physical Anthropology of the University of Michigan.

MINER, ROY WALDO editor

Dynamic anthropometry. Conference chairman and consulting editor: Earl W. Count. New York: Published by the Academy, 1955. 433–636 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 63, art. 4) $3.50 2716

Contents: Statement of general objectives, by E. W. Count. Organic form as determined by function, by N. Rashevsky. Entropy and growth of an organism, by L. Bertalanffy. D'Arcy W. Thompson's mathematical transformations and the analysis of growth, by O. W. Richards. An experimental excursion into anthropometry, by D. Maldonado. Geometry and anthropometry, by A. E. Hooton. Role of anthropometry in the study of body construction—toward synthesis of methods, by J. Brožek. Toward an anthropology of the brain, by G. von Bonin. Longitudinal anthropometric data in the study of individual growth, by H. V. Meredith. Relative growth of the human fetal skeleton, cranial and postcranial, by M. L. Moss. Applications of pattern analysis to anthropometric data, by S. M. Garn. Body dynamics and dynamic anthropometry, by H. Dupertuis. The anthropometry of body action, by W. T. Dempster. Studies in human biomechanics, by F. G. Evans. Some contributions of applied physical anthropology to human engineering, by H. T. E. Hertzberg. Anthropometric data in the design of anthropomorphic test dummies, by L. K. Alt.

Note: Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in April, 1955, are made available in this publication. The titles and authors of all are listed above. The objectives and areas of interest of contemporary anthropometry are expertly surveyed in the first paper. The papers that follow are excellent illustrations of research techniques, interests and applications of modern anthropometry. Literature references and transcripts of the conference discussion are included for most of them.

PRYOR, HELEN (BRENTON)

Width-weight tables for boys and girls from 1 to 17 years—for men and women from 18 to 41 years. Second revised edition. Stanford: Stanford University Press, 1940. 15 p. illus. 28 cm. $0.[illegible]5 2717

Contents: List of tables. Conversion table—inches to centimeters. For boys 1 to 5 years of age. For girls 1 to 5 years of age. For boys [illegible] to [illegible] years of age. For men 18 to [illegible] years of age. For girls 6 to [illegible] years of age. For women 18 to 41 years of age.

Note: Tables for determining proper body weight based, not on the old height-age-sex basis only, but also on body build as represented by the hip and the lateral chest measurement.

STEWART, T. D. AND MILDRED TROTTER, editors

Basic readings on the identification of human skeletons: estimation of age. New York: Wenner-Gren Foundation for Anthropological Research, Inc., 1954. 347 p. illus. 28 cm. 2718

Contents: Development and eruption of teeth: Critical comments. Reprinted articles—Development and calcification of the human deciduous and permanent dentition, by R. Kronfeld—Order and time of eruption for the deciduous dentition, by R. V. Meredith—Standards of variation in the eruption of the first six permanent teeth, by V. O. Hurme. Appearance and fusion of epiphyses, centers: Critical comments. Reprinted articles—Age order of epiphyseal union in man, by P. H. Stevenson—Time of appearance and fusion of ossification centers as observed by roentgenographic methods, by R. Flecker—The clavicular epiphyses, by T. W. Todd and J. d'Errico, Jr.—Metamorphosis of human pubic and shoulder girdles. Critical comments. Reprinted articles—Age changes in the pubic bone. [illegible] The male pubis, by T. W. Todd—Observations on age changes in the pubis [illegible] preliminary note, by W. W. Graves. Cranial suture closure: Critical comments. Reprinted articles—Endocranial suture closure, its progress and age relationship [illegible] Adult males of white stock, by T. W. Todd and D. W. Lyon, Jr.—Cranial suture closure, its progress and age relationship [illegible] Ectocranial closure in adult males of white stock, by T. W. Todd and D. W. Lyon, Jr.

Note: Contained in this volume are 13 carefully selected articles bearing on various indications of age in the human skeleton. All of the articles are reprinted from journals, and the reasons for collecting and reproducing them are the convenience of having them assembled and the added value of the material due to the complementary effects of the papers when brought together in juxtaposition. Each group of articles is preceded by an editorial comment in which references are sometimes made to other publications of interest. The volume is one of a planned series that will cover fully the basic literature on [illegible] aspects of skeletal identification.

WISSLER, CLARK

Observations on the face and teeth of the North American Indians. New York: American Museum of Natural History, 1931. 32 p. illus. 24 cm. (American Museum of Natural History. Anthropological papers. Vol. XXXIII, part 1) $0.40 2719

Contents: Introduction. Interorbital distance. Nasal bridge. The epicanthic eyefold. The palpebral fissure. The everted jaw. Carabelli cusps. The number of molar cusps. Skin color. Tribal similarities.

Note: This paper records measurements of various physical characteristics among Indians of North America. There are included some comparative figures for Hawaiians and other groups. The data used were collected by Louis R. Sullivan among Indian school populations. Separate figures are given for [illegible] dozen tribes.

1947 25–75 p 24 cm. (Chicago Natural History Museum Fieldiana Anthropology Vol 36 no 3) $0 75 2710

Note Presented in this research paper are the results of study of large collection of Melanesian skulls in the Chicago N tural History Museum and a critical review f the literature. The author' primary object was to arrive at formula for the quick calculation of cranial capacities. His conclusion "On the whole, the evidence indicates that the formula of Isserlis may be cautiously used as time-saving device and at least the formula can, sometimes with amendment, be safely employed as a check on experimental work. But no formula can be so trustworthy as careful measurement, and there is great need for extensive application of well-standardized technique in order to provide more eliable data relating to cranical capacities. A 11-page bibliography is included.

HAMBLY, WILFRID D

Craniometry of New Guinea. Chicago Chicago Natural History Museum, 1940 290 p illus 24 cm (Chicago Natural History Museum Fieldiana Anthropology Vol xxv no 3) $2 50 2711

Contents Nature and provenance of the Field Museum collection. Techniqu of measurement. Age and sex in the collection. Grouping of the data. Frequency distributions and sex differences. Contours of skulls from New Guinea and other regions. Comparative study of craniometry of New Guinea and adjacent regions. Tables giving coefficients of racial likeness. Bibliography Index.

Not A study of the craniometrical characters of the natives of the northern and southern coasts of New Guinea, based on an examination of 222 skulls collected by the Joseph N Field Anthropological Expedition to the South Sea Islands, 1909–13 The bulk of the work consists of compilation of statistical data relating to skull measurements, grouped according to locality age, and sex. Photographs of natives from the districts visited, and of several of the skulls examined are included.

HOOTON, EARNEST A, AND C WESLEY DUPERTUIS

The physical anthropology of Ireland With a section on the West Coast Irish females by Helen Dawson Cambridge Mass Published by the Museum 1955 v p illus 27 cm. (Harvard University Peabody Museum of Archaeology and Ethnology Papers Vol xxx nos 1–2) $10 00 2712

Content (abridged) I troduction. Part Catholics by county subgroups Sociological observations. Measurements and indices. Morphological observations. Analysis and summary Geo-ethnographical regions of Ireland. Part II, Comparison of Catholics and Protestants Introduction. Sociological observations Measurements. Morphological observations. Summary Part III, Morphological (subracial) types. Distribution of morphological types by county subgroups Geological and geographical correspondences of morphological types. Sociological observations. Measurements and indices. Morphological observations Summary of types. Correlation of morphological types with archaeological finds, especially of skeletal material. Correlation of morphological types ith legendary historical and linguistic data. Correlation of historical events ith present distribution of morphological types The relationship of the Anglo-Norman Conquest and of subsequent historical events in Ireland to the present distribution of morphological types. Comparison of the present distribution of morphological types in Ireland with similar types in Wales and in the Isle of Man Carleton S. Coon's preview of the data of this survey Summary of morphological type sequences and correlations in Ireland. Part IV West Coast Irish females, by H. Dawson Measurements and indices. Morphological observations. Morphological (subracial) types. Age changes in West Coast Irish females. List of line-cut figures. List of tables Catholics by county subgroups. Comparison of Catholics and Protestants. Morphological (subracial) types. West Coast Irish females. List of half-tone figures.

Note The results of an extensive anthropometric survey of Ireland are presented in these publications. The study as an exceptionally thorough one of region and people possessing special interest from the standpoint of physical anthropology As noted in the contents, some information is included on sociology However, the sections entitled Sociological observations" are brief and most of the space is devoted to the anthropometric findings. Some 10,000 men and 1,800 women were measured. The results are discussed and summarized in the 304-page first number They are presented in detail in the second number in an extensive series of tables. Finally, there is section of portraits, all of them being reproductions of subjects of the study

HOOTON, EARNEST A.

Up from the ape. Revised edition New York The Macmillan Company, 1946. 788 p illus. 25 cm $7.25 2713

Content (abridged) Part I, Man's relations: Why man is primate. Part II, The primate life cycle Tracing evolutionary stages. Getting a backbone—the vertebrate stage. Climbing the family tree—arboreal preprimate stage. Becoming erect—gibbonoid stage. Getting up and walking—the bipedal humanoid stage. Were man's ancestors arboreal arm-swingers or pronograde ground apes Physiognomy Part III, The individual life cycle: Being born—growth development. Getting married and having a baby Getting old and dying. Part IV Fossil ancestors and collaterals' Why we lost his ancestors. Toothy mementos of fossil apes. The South African man-apes. Neanderthal man—Darwin's first witness. Precocious advent of Homo sapiens in England. Making a family tree. Part Race and race Genetics and racial classification. The physical tests of race The physiological tests of race. Racial history Racial geography Part VI, The anthropology f the individual The problem of classification. The Sheldon system f somatotyping. The stages and rates of human evolution. Bibliography Appendix—Elementary anthropometry Index.

Note An interpretative account, written largely from the viewpoint of physical anthropology of the scientific knowledge that bears on the evolution f man together with survey of the physical characteristics of present-day man. It is written in lively style that embraces many technical terms but is very readable nevertheless. Originally designed for educated general readers, the work is read and respected by college students and scientists as well. Compared to the first edition published in 1931 the second edition has been extensively rewritten, and much new material—including the appendix on anthropometry—has been added.

LA BARRE WESTON

The human animal. Chicago University of Chicago Press 1954 372 p. 23 cm. $6.00 2714

Content From amoebas to mammals The primates take to the trees. The anthropoids climb half ay down. Man stands alone. He hands himself a ew kind of evolution. Father comes home to stay And makes it legal People are different. Man climbs back up his evolutionary tree Man starts talking. And gets all balled up in his grammar Why man is human. And people get sick. Superstition and the soul. Three minutes to midnight References and reading. Index.

Note A semipopular book on man's biological and cultural history and, by implication his future prospects. It is not only an exposition of modern physical anthropology but it draws heavily on this science. The author maintains that man's nature is directly related to the kind of body he has, and he discusses the evolution and special characteristics of this body at some length. Building on this thesis, the author goes on to consider human culture and morality The book can be read by physical anthropologists as discourse on the implications of their science, or by sociologists as an exploration of the biological bases of man nature and behavior as well as by general readers.

MARTIN W EDGAR

Children s body measurements for planning and equipping schools A handbook for school officials and architects. Washington, D C. Government Printing Office, 1955 113 p. illus 20×26 cm. (United States. Office of Education Special publication no. 4) $0.50 2715

Contents Need for scientific measurements. Survey of research on body measurements. Background of the Functional measurements study Equipment used. How the measurements were taken. Measurements made. Nature of the sample. Using the measurements. Distribution f measurements by school grade, age and sex. De-

Contents (abridged) Introduction. Part one, General anatomy: General microscopic and developmental anatomy. General osteology. General arthrology. General myology. General neurology. General angiology. General dermatology. Part two, The superior extremity: Osteology of the superior extremity. Musculature of the superior extremity. Articulations of the superior extremity. Vessels and nerves of the superior extremity. Part three, The inferior extremity. Part four, Anatomy of the head: The skull. Musculature of the head. Nervous system of the head. Vessels of the head. Part five, Anatomy of the neck and trunk. Part six, Splanchnology: Respiratory system. Digestive system. Urogenital system. Endocrine system. Vessels and nerves of the thorax and abdominal viscera. Bibliography. Index.

Note This book [illegible] not intended to replace more comprehensive treatises on human anatomy but is designed to meet the need of students of physical education, occupational therapy, nursing and others who require [illegible] less detailed knowledge of human anatomy than is required by medical students. The matter on each region includes [illegible] section on applied anatomy. The first edition was published in 1947. In this second edition, the scope of the book is unchanged, but there has been some reorganization and minor revision of several chapters.

The fourth edition was published in 1948. In preparing this edition the author corrected [illegible] errors and added [illegible] material in several sections. [illegible] illustrations were redrawn or improved in some [illegible] and [illegible] illustrations were added.

Grant J C Boileau

An atlas of anatomy By regions. Fourth edition. Baltimore The Williams & Wilkins Company 1956 556 p. illus. (part col d) 29 cm. $15.00. 2726

Contents The upper limb. The abdomen. The perineum and pelvis. The lower limb. The vertebrae and the vertebral column. The thorax. The head and neck. The cranial nerves and the dermatomes. Index.

Note An outstanding work of its kind. It consists entirely of illustrations [illegible] accompanying descriptive legends. The illustrations are arranged by region and in sequence within regions. [illegible] the artists [illegible] prepared the drawings worked with the dissected specimens before them and built up their drawings on tracings made from photographs of the same specimens.

Grant J C. Boileau and H. A. Cates

A handbook for dissectors. Fourth edition. Baltimore The Williams & Wilkins Company 1953 425 p. illus. 19 cm. $3.50 2727

Contents Introduction. The upper limb. The abdomen. The lower limb. The thorax. The head and neck. The brain. Index.

Note A standard guide to the dissection of the human body. It is addressed to medical [illegible] students of gross anatomy and its purpose [illegible] to guide such students in orderly dissections that will systematically display the structures that the student should see and understand. The more important structures are distinguished by printing their names in bold type. [illegible] are used for structures of lesser importance. Most of the directions and explanations are verbal; there are only [illegible] figures in the entire volume. The first edition was published in 1940 and the third edition in May 1948. Comparing the fourth edition to the third, there [illegible] no change in scope or organization and not [illegible] great deal of change in the text. However the chapter on the thorax has been reorganized and considerably revised.

Grant J C Boileau

A method of anatomy descriptive and deductive. Fifth edition. Baltimore The Williams and Wilkins Company 1952 8 0 p. illus 26 cm. $9 00 2728

Contents Section [illegible] General. Bone and cartilage. Digestive system. Section [illegible] The upper limb: Introduction. Cutaneous nerves and veins. Front region of the forearm. Section [illegible] The abdomen: Anterior abdominal wall. Abdominopelvic cavity. The three paired glands. Section [illegible] The perineum and pelvis: Perineum. Male pelvis. Female pelvis. Section [illegible] The lower limb: Introduction. Leg and dorsum of foot. Hip joint. Section vi, The thorax: Bony thorax. Pericardium and contents. Section vii, The head and neck: Front of the skull and the face. Posterior triangle of the neck. Contents of the cranium. Anterior triangle of the neck. Cervical vertebrae and the prevertebral region. Pharynx. Larynx. Section viii, Miscellaneous: Autonomic nervous system. Bones of the skull. Index.

Note [illegible] successful textbook for first-year students in medical schools. It [illegible] less voluminous than some larger texts, and the brevity has been achieved partly by the use of small diagrammatic figures instead of pictorial drawings and partly by [illegible] and [illegible] text. The understanding of regions [illegible] stressed.

Gray Henry

Anatomy of the human body Twenty sixth edition, edited by Charles Mayo Goss 1202 illustrations mostly in color Philadelphia Lea & Febiger 1954 1 480 p. illus (part col d) 2[illegible] cm. $16 00 2729

Contents (abridged) Embryology. Surface and topographic anatomy. Osteology. Joints and ligaments. Muscles and fasciae. The blood-vascular system. The lymphatic system. The nervous system. The integument (skin). The respiratory system. The digestive system. The urogenital system. The ductless glands. Index. Bibliographic. Subject index.

Note A classic work, the first edition of which was published in 1858. A [illegible] have been edited by American anatomists for many years [illegible] illustrations [illegible] in editions that appeared during Gray's lifetime [illegible]. The book is [illegible] of the most [illegible] textbooks on anatomy in the English language. The [illegible] though [illegible] of the text on general anatomy are remarkably [illegible]. The 26th edition [illegible] published in [illegible] extensive revision of the chapter on the peripheral nervous system in the [illegible] edition [illegible] toward the supplying of [illegible] references throughout the book. [illegible] extensive bibliographies have been [illegible] to [illegible] chapters, including those on embryology, osteology, muscles and the peripheral nervous system.

Hollinshead W Henry

Anatomy for surgeons Volume 1 The head and neck. With 3[illegible]6 illustrations. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brother 1954 560 p illus 26 cm $1[illegible] 00 2730

Contents The cranium. The orbit. The ear. The nose and paranasal sinuses. The [illegible] and facial spaces of the head and neck. The face. The jaws, palate and tongue. The pharynx and larynx. The neck. Index.

—— Volume 2 The thorax, abdomen and pelvis With 1 109 illustration. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brother 1956 934 p illus. 26 cm. $[illegible]0 00 2731

Contents The thorax in general. The trachea and lungs. The heart and great vessels. The posterior mediastinum. The abdominal wall and inguinal region. The abdominal viscera and peritoneum in general. The liver and gallbladder. The stomach, duodenum, pancreas, and spleen. The jejunum, ileum, and colon. The kidneys, ureters, and suprarenal glands. Vessels and nerves associated with the posterior abdominal wall. General features of the pelvis. The rectum and anal canal. The pelvic portion of the urinary system. The genital system in the pelvis. The perineum. Index.

Note A textbook designed for the instruction of medical school graduates [illegible] are preparing for the specialty of surgery. It covers both basic anatomy and surgical anatomy that is [illegible] the anatomical details [illegible] are important in surgery. The emphasis is, of course, upon the latter. Full descriptions of regional vascular, nervous, and lymphatic systems are included. The style is outstanding for readability. Extensive references to the original literature are included in all of the chapters. The work is planned for completion in three volumes. The third volume [illegible] be devoted to the anatomy of the back and limbs.

Marshall, Clyde

An introduction to human anatomy Fourth edition. Revised by Edgar L. Lazier 329 illustrations 15 in color Philadelphia W B Saunders Company 1955 420 p. illus (part col d) 22 cm. $4.50 2732

HUMAN ANATOMY

GENERAL

ANSON, BARRY JOSEPH

An atlas of human anatomy *Philadelphia* W B Saunders Company, 1950 *518 p illus* (part col d) 28 cm $11 50 2720

Content (abridged) The head. The neck. Upper extremity The back and thorax. Abdomen. The pelvis and perineum Lower extremity Index.

Note A new atlas of gross human anatomy in which most of the illustrations are original and were made directly from new dissections. The exceptions are certain illustrations previously published with articles by the author in professional journals. Also there are a few plates of generalized drawings based on statistical study of laboratory specimens. Generally speaking, however the book can be described as a wholly new work based on direct study rather than on previous publications. The quality of the drawings and of their reproduction is excellent. The book is suitable for use both as text in first year courses in medical colleges and as an office reference book for graduate physicians and surgeons.

BAILLIF, RALPH NORMAN, AND DONALD L KIMMEL

Structure and function of the human body 158 illustrations Philadelphia J B Lippincott Company 1945 *328 p illus 21 cm* $3 50 2721

Contents Unit one Survey of the fields to be considered and method of study Protoplasm and cells Physical organization of the animal body Organ systems of the body Unit two, Skeletal muscular and circulatory systems The skeletal system. The muscular system. The circulatory system. Unit three, Digestive and respiratory systems The digestive system. The respiratory system. Unit four Urogenital, endocrine and nervous systems The urogenital system Prenatal development. The endocrine system. The nervous system. Glossary Index.

Note The particular value of this work lies in its compactness. It provides illustrations and descriptions of the various systems of the human body in a small fraction of the space that is used in the typical book on human anatomy The illustrations are clear and adequately detailed The descriptions cover structure and function. The glossary is an extra feature of considerable value. The book is suitable for use in courses offered to students of nursing, biology and general science, and as a desk reference book.

BELT, ELMER

Leonardo the anatomist. Lawrence University of Kansas Press 1955 76 p illus *22 cm. (Logan Clendening lectures on the* history and philosophy of medicine. Fourth *series) $2 00* *2722*

Content Leonardo da Vinci technical innovations and discoveries in anatomy Leonardo da Vinci studies of the genito-urinary system. Notes. Index.

Note. The first lecture printed in this book outlines the history of the records of Leonardo's anatomic studies, describes his methods of study and evaluates his discoveries and contributions to anatomy The second lecture is a rather detailed discussion of Leonardo studies of the anatomy and physiology of the genito-urinary system. Eleven reproductions of Leonardo anatomical drawings are included. Literature references are given The author a physician, is an internationally known authority on Leonardo da Vinci.

BOWEN, WILBUR PARDON, AND HENRY A STONE

Applied anatomy and kinesiology, the mechanism of muscular movement Seventh edition, revised, by Henry A. Stone Illustrated with 261 engravings, 18 in color Philadelphia Lea & Febiger, 1953 462 p illus. (part col d) *24 cm* $5 50 *2723*

Contents (abridged) Part I General principles Kinesiology history and present day use. Mechanical principles. Simple machines. The framework and joints of the body Muscular structure and action. Muscular control. Team work among muscles The chemistry of muscular action. Part II, The upper limb Movements of the shoulder girdle. Movements of the shoulder-joint. Movements of elbow and radio-ulnar joints. Movements of the wrist and hand. Part III, The lower limb Movements of the pelvic girdle and the hip-joint. Movements of the knee-joint. Movements of the ankle and foot. Part IV The trunk Movements of the spinal column. Muscles of the thorax and respiration. Part General kinesiology Erect posture. Walking, running and jumping Games and sports. Body mechanics of occupations and of everyday life. Appendix Areas of muscular attachment. Index.

Note In this long-established text, muscular movement and the related anatomy are taught from the standpoint of their applications to athletics and the activities of daily life. In the 10 chapters of the first part, basic information on the mechanics of simple machines, nervous control of muscles, and co-operation and antagonism among muscles and groups of muscles is covered. In this part and in the parts that follow the exposition is on a more elementary level than the usual expositions of anatomy designed for students of medicine. In the four chapters of the fifth part, the basic anatomical knowledge is applied to the understanding of posture, to the kinesiology of athletic activities, and to such standard activities as stooping and lifting, carrying, and pushing The appendix contains a series of drawings of skeletal bones with the areas of muscular attachments distinctly shown in color

CATES, H A., AND J V BASMAJIAN

Primary anatomy Third edition. Baltimore The Williams & Wilkins Company, 1955 339 p illus. 26 cm. $5 75 2724

Contents Introduction. Skeletal system. Articular system. Muscular system. Digestive system. Respiratory system. Urinary system. Generative or reproductive system. Circulatory system. Nervous system. The eye. The ear Skin and endocrine glands. Index.

Note A standard textbook on human anatomy for readers such as student nurses, physiotherapists, and occupational therapists whose interests in the subject are professional but not medical. With such an audience in mind, the author has written from the functional standpoint rather than from the topographical, and he has written longer and more detailed chapters on the skeletal, muscular nervous, and circulatory systems than on other systems The style is less technical than that of most introductory books on anatomy In fact, in this third edition, revised by Professor Basmajian after the death of Cates, the style of many passages has been made even more readable. Many more headings and subheadings have been inserted throughout the text as aids to study and reference. Many new illustrations have been added or substituted for older ones. Plates of reproductions of photographs, the purpose of these being to illustrate surface anatomy are a new feature

EDWARDS, LINDEN F

Concise anatomy Second edition New York McGraw Hill Book Company Inc. 1956 502 p illus (part col d) 26 cm. $7.50. [illegible]

Contents (abridged) Introduction. Part one, General anatomy: General structure and developmental anatomy. General osteology. General arthrology. General myology. General neurology. General angiology. General dermatology. Part two, The superior extremity. Osteology of the superior extremity. Musculature of the superior extremity. Articulations of the superior extremity. Vessels and nerves of the superior extremity. Part three, The inferior extremity. Part four, Anatomy of the head. The skull. Musculature of the head. Nervous system of the head. Vessels of the head. Part five. Anatomy of the head and trunk. Part six. Splanchnology. Respiratory system. Digestive system. Urogenital system. Endocrine system. Vessels and nerves of the thoracic and abdominal viscera. Bibliography. Index.

Note: This book is not intended to replace more comprehensive treatises on human anatomy but is designed to meet the need of students of physical education, occupational therapy, nursing and others who require less detailed knowledge of human anatomy than is required by medical students. The matter on each region includes [illegible] notes on applied anatomy. The first edition was published in 1947. In this second edition, the scope of the book is unchanged, but there has been some reorganization and minor revision of several chapters.

GRANT J C BOILEAU

An atlas of anatomy. By regions. Fourth edition. Baltimore The Williams & Wilkins Company 1956 556 p illus. (part col d) 29 cm. $15.00 2726

Contents: The upper limb. The abdomen. The perineum and pelvis. The lower limb. The vertebrae and the vertebral column. The thorax. The head and neck. The cranial nerves and the dermatomes. Index.

Note: An outstanding work of its kind. It consists entirely of illustrations with accompanying descriptive legends. The illustrations are arranged by regions and in sequence within regions. [illegible] the artists who prepared the drawings worked with the dissected specimens before them and built up their drawings on tracings made from photographs of the same specimens.

GRANT J C BOILEAU AND H A. CATES

A handbook for dissectors. Fourth edition. Baltimore The Williams & Wilkins Company 1953 425 p. illus. 19 cm. $3.50. 2727

Contents: Introduction. The upper limb. The abdomen. The lower limb. The thorax. The head and neck. The brain. Index.

Note: A standard guide to the dissection of the human body. It is addressed to medical students of gross anatomy and its purpose is to guide such students in orderly dissections that will systematically display the structures that the students should see and understand. The more important structures are distinguished by printing their names in bold type while italics are used for structures of lesser importance. Most of the dissections and explanations are concise; there are only 24 figures in the entire volume. The first edition was published in 1940 and the third edition in May 1949. Comparing the fourth edition to the third, there [illegible] no change in scope or organization and [illegible] great deal of change in the text. However the chapter on the thorax has been reorganized and considerably revised.

GRANT J C BOILEAU

A method of anatomy descriptive and deductive. Fifth edition. Baltimore The Williams and Wilkins Company 1952 8?0 p. illus. 26 cm. $9.00 2728

Contents: Section [illegible] General. Bone and cartilage. Digestive system. Section [illegible] The upper limb. Introduction. Cutaneous nerves and veins. Flexor region of the forearm. Section [illegible] The abdomen. Anterior abdominal wall. Abdomino-pelvic cavity. The three paired glands. Section [illegible] The perineum and pelvis. Perineum. Male pelvis. Female pelvis. Section [illegible] The lower limb. Introduction. Leg and dorsum of foot. Hip joint. Section vi, The thorax. Bony thorax. Pericardium and contents. Section vii, The head and neck. Front of the skull and the face. Posterior triangle of the neck. Contents of the cranium. Anterior triangle of the neck. Cervical vertebrae and the prevertebral region. Pharynx. Larynx. Section viii, Mouth. [illegible] Autonomic nervous system. Bones of the skull. Index.

Note: A successful textbook for first year students in medical colleges. It [illegible] less voluminous than some basic texts, and the brevity has been achieved partly by the use of small diagrammatic figures instead of photo-type drawings and partly by [illegible] compact and [illegible] written text. The understanding of regions is stressed. The fourth edition was published in 19[illegible]. In preparing this ed. the author corrected minor errors and added material in several sections. Fifty-nine illustrations were redrawn or improved in some [illegible] and 73 illustrations were added.

GRAY HENRY

Anatomy of the human body. Twenty-sixth edition edited by Charles Mayo Goss. 1202 illustrations mostly in color. Philadelphia Lea & Febiger 1954 1 450 p. illus. (part col d) 27 cm $16.00 2729

Contents (abridged) Embryology. Surface and topographic anatomy. Osteology. Joints and ligaments. Muscles and fasciae. The blood-vascular system. The lymphatic system. The nervous system. The integument (skin). The respiratory system. The digestive system. The urogenital system. The ductless glands. Index. [illegible] Bibliographies. Subject index.

Note: A classic work, the first ed. [illegible] was published in 1858. Although revisions have been ed[illegible] by American [illegible] for many years, some earlier [illegible] early illustrations, published in editions that appeared during Gray's lifetime, are still retained. The book is undoubtedly the most widely used, general textbook on anatomy in the English language. The [illegible] though some of them [illegible] on regional anatomy are remarkably clear. The [illegible] was published in [illegible]. An extensive revision of the chapter on the peripheral nervous system is the most noteworthy feature in the [illegible] ed. [illegible] emphasis toward the [illegible] bibliographical references throughout the book, fairly extensive bibliographies have been added to several chapters, including those on embryology, osteology, muscles and the peripheral nervous system.

HOLLINSHEAD W HENRY

Anatomy for surgeons. Volume 1. The head and neck. With 326 illustrations. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers 1954 560 p. illus 26 cm. $12.00 2730

Contents: The cranium. The orbit. The ear. The nose and paranasal sinuses. The fascia and fascial spaces of the head and neck. The face. The jaws, palate and tongue. The pharynx and larynx. The neck. Index.

—— Volume 2. The thorax, abdomen and pelvis. With 1 109 illustrations. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brother 1956 934 p illus. 26 cm. $20.00 2731

Contents: The thorax in general. The trachea and lungs. The heart and great vessels. The posterior mediastinum. The abdominal wall and inguinal region. The abdominal viscera and peritoneum in general. The liver and gallbladder. The stomach, duodenum, pancreas, and spleen. The jejunum, ileum, and colon. The kidneys, ureters, and suprarenal glands. Vessels and nerves associated with the posterior abdominal wall. General features of the pelvis. The rectum and anal canal. The pelvic portion of the urinary system. The genital system in the pelvis. The perineum. Index.

Note: A textbook designed for the instruction of medical school graduates who are preparing for the specialty of surgery. It covers both basic anatomy and surgical anatomy, that is to say the anatomical details which are important in surgery. The emphasis is, of course, upon the latter. Full descriptions of regional vascular, nervous, and lymphatic systems are included. The style is outstanding for readability. Extensive references to the related literature are included in all of the chapters. The work is planned for completion in three volumes. The third volume will be devoted to the anatomy of the back and limbs.

MARSHALL, CLYDE

An introduction to human anatomy. Fourth edition. Revised by Edgar L. Lazier. 329 illustrations 15 in color. Philadelphia W B Saunders Company 1955 420 p illus. (part col d) 22 cm $4.50 2732

Contents Introduction. The tissues of the skeleton. Bones and joints. Muscular tissue. Muscles and fasciae. Epithelium epithelial membranes and skin Digestive system. Respiratory system. Urinary system. Reproductive system of the male. Reproductive system of the female. Circulatory system. Neuro-sensory system. Organs of special sense. Ductless glands. Developmental anatomy References. Index.

Note An elementary text not slanted toward nursing or medicine but designed for use in undergraduate courses in liberal arts colleges. Except for the chapter entitled, "Tissues of the skeleton, it is concerned with gross anatomy In most chapters, the first few paragraphs are devoted to defining terms and the remainder to describing structures. The illustrations have been selected from various sources, and are of good quality even though the scale of some is small. The first edition was published in 1935 and the third edition in 1946. In preparing this fourth edition the revising author who is Professor of Zoology in the University of California at Los Angeles, made some rearrangements of the material and extensively rewrote several of the chapters but did not change the book's scope.

MORTON, DUDLEY JOY

Manual of human cross section anatomy Second edition Baltimore The Williams and Wilkins Company 1944 211 p illus 27 cm $6 00 2733

Contents Vertebral levels with anatomical structures. Head and neck. Thorax and abdomen. Female abdomen and pelvis Upper extremity Thigh and leg Ankle and foot.

Note. The main purpose of this book for graduate and undergraduate medical students is to eliminate the need for making time-consuming tracings from wet specimens. It is adapted for use with regular laboratory directions, or with lantern slides. In this edition, blood vessels and nerves have been added to the drawings, and there are other changes. The first edition, Baltimore 1941 was by the present author and R. C. Truex and C. E. Kellner

SCHAEFFER, J PARSONS, editor

Morris' human anatomy a complete systematic treatise Eleventh edition. New York The Blakiston Division McGraw Hill Book Company, Inc 1953 1 718 p illus (part col'd) 27 cm $16 50 2734

Contents (abridged) Section I, Developmental anatomy by R E. Scammon Section II, The skin and mammary glands, by H Cummins. Section III Osteology by R. J Terry and M Trotter Section IV The articulations, by R J Terry and M Trotter Section The musculature, by J C. B. Grant and C. G. Smith. Section VI The cardiovascular system by B. M Patten Section VII, The lymphatic system and the spleen, by E. R Clark Section VIII The nervous system, by O Larsell Section IX The sense organs by L. B. Arey Section X, The digestive system by R. F Blount and E. Lachman. Section XI, The respiratory system by J P Schaeffer Section XII, The urogenital system by J E. Markee Section XIII I, The endocrine glands—II Miscellaneous organs by P Gudernatsch. Index.

Note. The lineage of this book traces back to *Human anatomy* which was the work of several British anatomists and surgeons was edited by Sir Henry Morris and published in London in 1893 With the second edition in 1905 the place of publication became Philadelphia. However both the second and third editions were still edited by Morris and written by British authors Beginning with the fifth edition the editorship passed to an American. Since then the authors have been drawn from Great Britain, Canada and the United States of America and, in the present edition the authorship is entirely U S A and Canadian The book is well established as one of the leading comprehensive introductory texts in the English language It is used primarily as a textbook for students in medical college The 10th edition was published in 1942 Although the organization of this 11th edition is similar there are many important changes in both text and illustration New rules are followed for the spelling and compounding of anatomical terms several of the sections were extensively rewritten new illustrations added, and new literature added to the bibliography There are four new contributors.

SHEARER, EDWIN M

Shearer's manual of human dissection Third edition Edited by Charles E Tobin New York The McGraw Hill Book Company, Inc , 1955 287 p illus 26 cm. $6 00 2735

Contents Pectoral region. Axilla. Triangles of neck Structures under sternomastoid. Root of neck. Back. Head and neck. Larynx Thorax. Abdomen. Penis, scrotum and testes. Inguinal region—inguinal hernia. Abdominal cavity Diaphragm and posterior abdominal wall. Perineum Pelvis minor. Superior extremity Inferior extremity Index.

Note A standard manual designed to guide medical students in the dissection of the human body It is organized according to the regional method of dissection in which all organs and tissues to be studied in a specific region are dissected out and observed before the student moves on to another region. The directions are detailed and clear The names of structures to be observed are printed in heavier type than the surrounding text. The book's scope is limited in recognition of the fact that in American medical colleges the time now given to the study of gross anatomy has been shortened. In other words, attention is not called to all of the structures in which a specialist in human anatomy would be interested. There are 79 figures. The first edition was published in 1937 and the second edition in 1949 The second edition, also edited by Professor Tobin, contained numerous changes. The changes in this third edition in comparison to the second edition are less extensive. However changes have been made in the procedures for certain regions and some structures not mentioned in the second edition have been added. Dr Shearer's original illustrations have been retained except for minor changes

THOREK, PHILIP

Anatomy in surgery 720 illustrations 211 in color drawn by Carl T Linden Philadelphia J B Lippincott Company 1951 970 p. illus 26 cm $22 50 2736

Contents (abridged) Section one The head. Section two, The neck. Section three The thorax. Section four The abdomen. Section five, The pelvis. Section six, Male perineum and external genitalia. Section seven, Female perineum and external genitalia. Section eight, The superior extremity Section nine The inferior extremity Section ten, Vertebral column vertebral (spinal) canal, spinal cord Index

Note In this textbook for students in medical colleges, anatomy is presented from the surgeon's viewpoint. The material is organized in 49 chapters arranged by regions of the body as indicated by the section titles. The exposition is conducted in a clear direct style, and the illustrations are of high quality The author is Professor of Surgery at the Cook County Graduate School of Medicine

SPECIAL REGIONS AND ORGANS

BAST, THEODORE HIERONYMUS, AND BARRY J ANSON

The temporal bone and the ear Springfield Ill Charles C Thomas, 1949 478 p. illus. 24 cm $12 00 2737

Contents The temporal bone and the ear The otic labyrinth The periotic labyrinth The otic capsule Histological relations and pathological processes. Bone dystrophies. The origin and development of the middle ear and related air spaces. The auditory ossicles. A historical survey of the structure and function of the internal ear Index of authors. Index of subjects.

Note A substantial monograph on the morphology and embryological development of the temporal bone and the ear It is based mainly on direct studies of more than 330 series of sections. It is illustrated with a remarkable series of microphotographs, drawings of reconstructions, and drawings from projection tracings of actual sections Thirty of the illustrations are reproduced in color The final chapter is an outline of outstanding studies of the inner ear from 550 B. C. to 1939 A. and it is supplemented by a selected bibliography

BIRNBAUM GEORGE L

Anatomy of the bronchovascular system Its application to surgery Chicago The Year Book Publishers Inc. 1954 300 p illus. 26 cm $15 00 2738

Contents: Embryology of the bronchovascular system. Anatomy of the bronchovascular system. Anomalies of the pulmonary vessels. Surgery of the pulmonary vessels. Tracheobronchial surgery. Excision of pulmonary tumors. Appendix: Selected drawings from an original Atlas of pulmonary arteries and veins. Bibliography. Subject index. Author index.

Note: The title of this book [illegible] as chosen well. The main subject is anatomy, not only the normal anatomy but also the many anomalies. The chapter on embryology is [illegible] brief but essential outline. Surgical techniques are discussed, and the terminal chapter covers in [illegible] convenient outline form the various pulmonary resection techniques, discusses their advantages and disadvantages, and lists progressively the steps in excision for pneumonectomy, lobectomy, segmental resection, intrapericardial dissection, pneumonectomy and radical pneumonectomy. Nevertheless the book is not [illegible] manual of surgical techniques. Its purpose is to elucidate the anatomy, and to this end it summarizes the techniques and results reported in the recent literature, including that on experimental surgery. The bibliography contains well over 300 references. The author, chief of the Surgical Unit of the Veterans Administration Regional Office in Portland, Oregon, has himself made important contributions in the field.

BOYDEN, EDWARD A.

Segmental anatomy of the lungs: a study of the patterns of the segmental bronchi and related pulmonary vessels. New York: The Blakiston Division, McGraw-Hill Book Company, Inc. 1955. 276 p. illus. (part col'd) 28 cm. $15.00 2739

Contents: Historical review. General survey of bronchial [illegible] patterns and terminology. The right upper lobe. The [illegible] patterns of the [illegible]. The middle lobe. The left upper lobe. The right lower lobe—[illegible], [illegible] and [illegible]. The left lower lobe. The development of the lungs and the formation of gross congenital anomalies. The lungs as [illegible] whole. Bibliography. Index.

Note: A contribution of primary importance to the understanding of lung anatomy. It was based on [illegible], and [illegible] by the author and associates at the University of Minnesota Medical School. Large numbers of lungs were dissected in order to determine statistically the prevailing patterns and variations. In each of the five chapters on the individual lobes, the prevailing patterns and the variations found in this [illegible] and reported by other [illegible], [illegible], segmental arteries and [illegible] are described in detail. The book [illegible] rounded out by discussions of the historical development of lung anatomy, of terminology and of embryological development and congenital anomalies. Some of the 135 text figures are colored and all but one of the 11 plates are in color. Most of the illustrations are diagrammatic.

CUMMINS, HAROLD AND CHARLES MIDLO

Finger prints, palms and soles: an introduction to dermatoglyphics. New York: McGraw-Hill Book Company, Inc., 1943. 309 p. illus. 23 cm. $4.00 2740

Contents: History. General considerations. Methods of printing fingers, palms, soles, toes. Elements of finger-print identification. Comparative dermatoglyphics. Embryology. Symmetry and other aspects of special morphology. Inheritance. Twin diagnosis. Questioned paternity. Racial variations. Constitution. Bibliography.

Note: In addition to its interest in connection with identification of persons, this book [illegible] importance in the [illegible] of differential trends [illegible] races, between the sexes, and among constitutional types. These phases of the subject are of interest to anatomists, anthropologists, geneticists, and zoologists.

DUBRUL, E. LLOYD AND HARRY SICHER

The adaptive chin. Springfield, Ill.: Charles C Thomas, 1954. 97 p. illus. 22 cm. (A monograph in American lectures in anatomy, edited by Otto F. Kampmeier. Publication no. 180) $3.50 2741

Contents: Historical. Critical. Observational. Interpretational. Bibliography.

Note: A critical study from the comparative standpoint, of the evolution of the human chin. It was based upon [illegible] review of the literature and upon an examination of skulls in the Museum of Oral Anatomy of the College of Dentistry of the University of Illinois, The Chicago Natural History Museum, and the American Museum of Natural History. Among the conclusions are [illegible] the trend toward brachycephaly as well as the reduction of the masticatory elements are all [illegible] part of the same general processes of cranial adaptation to erect posture and locomotion. There are 93 citations to the international literature in the bibliography.

FRANCIS, CARL C.

The human pelvis. With 61 illustrations including 3 in color. St. Louis: The C. V. Mosby Company, 1952. 210 p. illus. (part col'd) $3.50 2742

Contents: Bones of the pelvis. Ossification of the pelvic bones. Pelvic articulations. Pelvic [illegible]. Muscles and fasciae. Vessels of the pelvis. Pelvic nerves. Intestine within the pelvis. Urinary system within the pelvis. Female genitalia. Male genitalia. Embryology. Index.

Note: A detailed description of the [illegible] structure of the human pelvis, [illegible] some attention to the embryology. It is based partly on the literature and partly on original studies made by the author and his colleagues at Western Reserve University. Some of the text and some of the illustrations are based on original dissections. The book is the development of [illegible] course in applied anatomy at the graduate level and is intended for the instruction of practicing surgeons and for medical school graduates preparing for surgery. Carefully selected literature references are included.

FRIEDMAN, SYDNEY M.

Visual anatomy—head and neck. Springfield, Ill.: Charles C Thomas, 1950. 217 p. illus. 25 cm. $7.50 2743

Contents: Anterior aspect of the neck. Lateral aspect of the neck. The suprahyoid region. The submandibular region. The [illegible]. The infratemporal region. The continuity of temporal and infratemporal regions. The parotid region. The face and scalp. The skull. The orbit. The nose. The auditory apparatus. The [illegible]. The back of neck. The cervical viscera. Lymphatics. Index.

Note: Not [illegible] conventional atlas but [illegible] selective compact treatment designed for use by physicians [illegible] in medical courses and graduates in need of [illegible] review or as the other forms [illegible] text. It is organized so that [illegible] drawing on the right hand page faces the verbal description on the left hand page. The sequence of dissection is from the inside out, or the reverse of the traditional arrangement of anatomic atlases. The drawings are diagrammatic rather than literal renderings.

GORSCH, R. V.

Proctologic anatomy. Second edition. Baltimore: The Williams & Wilkins Company, 1955. 310 p. illus. (part col'd) 24 cm. $8.00 2744

Contents: The pelvis, pelvic floor and perineal triangles. The anal canal. The anorectal musculature. The levator ani muscle. The rectum and sigmoid. The perirectal spaces. The pelvic fascia. The pararectal lymphatics. Nerve supply to the colon, rectum, and anal canal. Index.

Note: A specialized anatomy, designed for the instruction of student surgeons who are preparing for the specialty of proctology. It is useful also as [illegible] reference book for general surgeons. The author is one of the established leaders in this field, and the book is based partly on the literature and partly on his own dissections. In this edition, there are 133 figures. These are accompanied by an explicit, concisely written text. The first edition of the book was published in 1941 under the title, *Perineopelvic anatomy*. [illegible] comparison, this edition has been very extensively revised and several chapters largely or entirely rewritten. Recent literature has been added to the bibliographies.

HOLLINSHEAD, WILLIAM HENRY

Functional anatomy of the limbs and back: a text for students of physical therapy and others interested in the locomotor apparatus. Philadelphia: W. B. Saunders Company, 1951. 341 p. illus. 24 cm. $6.00 2745

Contents Introduction. The tissues of the skeleton Bones and joints. Muscular tissue. Muscles and fasciae. Epithelium, epithelial membranes and skin Digestive system. Respiratory system. Urinary system. Reproductive system of the male. Reproductive system of the female. Circulatory system. Neuro-sensory system. Organs of special sense. Ductless glands. Developmental anatomy References. Index.

Note An elementary text not slanted toward nursing or medicine but designed for use in undergraduate courses in liberal arts colleges. Except for the chapter entitled, "Tissues of the skeleton it is concerned with gross anatomy In most chapters, the first few paragraphs are devoted to defining terms and the remainder to describing structures. The *illustrations have been* selected from various sources, and are of good quality even though the scale of some is small. The first edition was published in 1933 and the third edition in 1946. In preparing this fourth edition the revising author who is Professor of Zoology in the University of California at Los Angeles, made some rearrangements of the material and *extensively* rewrote several of the chapters but did not change the book's scope.

MORTON, DUDLEY JOY

Manual of human cross section anatomy Second edition. Baltimore The Williams and Wilkins Company 1944 211 p illus 27 cm. $6 00 2733

Content Vertebral levels with anatomical structures. Head and neck. Thorax and abdomen. Female abdomen and pelvis. Upper extremity Thigh and leg. Ankle and foot.

Note. The main purpose of this book for graduate and under *graduate medical students is to eliminate the need for making* time-consuming tracings from et specimens. It is adapted for use with regular laboratory directions, or with lantern slides. In this edition blood vessels and nerves ha been added to the drawings, and there are other changes. The first edition Baltimore 1941 was by th present author and R. C. Truex and C. E Kellner

SCHAEFFER, J PARSONS, editor

Morris human anatomy a complete systematic treatise Eleventh edition New York The Blakiston Division McGraw Hill Book Company Inc 1953 1 718 p illus (part col d) 27 cm $16 50 2734

Contents (abridged) Section I, Developmental anatomy by R E. Scammon. Section II The skin and mammary glands, by H Cummins. Section III, Osteology by R. J Terry and M Trotter Section IV The articulations, by R. J Terry and M. Trotter Section V The musculature, by J C. B Grant and C. G Smith Section VI The cardiovascular system, by B M Patten Section VII, The lymphatic system and the spleen, by E. R. Clark. Section III The nervous system, by O Larsell. Section IX, The sense organs by L B Arey Section X, The digestive system, by R. F Blount and E. Lachman. SPECIAL REGIONS AND ORGANS

BAST THEODORE HIERONYMUS AND BARRY J ANSON

The temporal bone and the ear Springfield, Ill Charles C Thomas 1949 478 p. illus. 24 cm $12 00 2737

Content The temporal bone and the ear The otic labyrinth The periotic labyrinth The otic capsule Histological ariations and pathological processes Bone dystrophies. The origin and development f the middle ear and related air spaces. The auditory ossicles. A historical survey of the structure and function of the internal ear. Index of uthors. Index of subjects.

Note A substantial monograph on the morphology and embryological development of the temporal bone and the ear It is based mainly on direct studies of more than 350 series of sections. It is illustrated with remarkable series of microphotographs, drawings of reconstructions, and drawings from projection tracings of actual sections. Thirty of the illustrations are reproduced in color The final chapter is an outline f outstanding studies of the inner ear from 350 B. to 1939 and it is supplemented by selecte bibliography

BIRNBAUM GEORGE L

Anatomy of the bronchovascular system its application to surgery Chicago The Year Book Publishers Inc. 1954 300 p illus. 26 cm $15 00 2738

Contents: Embryology of the bronchovascular system. Anatomy of the bronchovascular system. Anomalies of the pulmonary vessels. Surgery of the pulmonary vessels. Tracheobronchial surgery. Excision of pulmonary tissue. Appendix: Selected drawings from an original Atlas of pulmonary arteries and veins. Bibliography. Subject Index. Author Index.

Note. The title of this book [illegible] been well. The main subject is surgery not only the normal anatomy but also the many anomalies. The chapter on embryology is [illegible] brief but essential outline. Surgical techniques are discussed, and the terminal chapter covers in [illegible] convenient outline form the various pulmonary resection techniques, discusses their advantages and disadvantages, and lists progressively the steps in excision for pneumonectomy, lobectomy, segmental resection, intrapericardial dissection, pneumonectomy and radical pneumonectomy. Nevertheless the book is not [illegible] manual of surgical techniques. Its purpose is to elucidate the anatomy and to this end it summarizes the techniques and results reported in the recent literature including that on experimental surgery. The bibliography contains well over 300 references. The author, chief of the Surgical Unit of the Veterans Administration Regional Office at Portland, Oregon, has himself made important contributions to the field.

Boyden Edward A.

Segmental anatomy of the lungs a study of the patterns of the segmental bronchi and related pulmonary vessels. New York The Blakiston Division McGraw Hill Book Company Inc., 1955 276 p. illus. (part col d) 28 cm. $15.00 2739

Contents: Historical review. General survey of bronchial tree—[illegible] patterns and terminology. The right upper lobe. The hilar portions of the interlobar fissures. The middle lobe. The left upper lobe. The right lower lobe—surfaces, margins and crests. The left lower lobe. The development of the lungs and the formation of some congenital anomalies. The lungs as [illegible] Bibliography. Index.

Note. A contribution of primary importance to the understanding of lung anatomy. It was based on an extensive and intensive study by the author and associates at the University of Minnesota Medical School. Large numbers of lungs were dissected in order to determine statistically the prevailing patterns and variations. In each of the five chapters on the individual lobes, the prevailing pattern and the variations found in this study and reported by other anatomists, in the surfaces and crests, segmental arteries and veins are described in detail. The book [illegible] rounded out by discussions of the historical development of lung anatomy of terminology and of embryological development and congenital anomalies. Some of the 113 text figures are colored and all but one of the 11 plates are in color. Most of the illustrations are diagrammatic.

Cummins Harold and Charles Midlo

Finger prints palms and soles an introduction to dermatoglyphics. New York McGraw Hill Book Company Inc 1943 309 p. illus. 23 cm $4.00 2740

Contents: History. General considerations. Methods of printing fingers, palms, soles, toes. Elements of finger-print identification. Comparative dermatoglyphics. Embryology. Symmetry and other aspects of special morphology. Inheritance. Twin diagnosis. Questioned paternity. Racial variation. Constitution. Bibliography.

Note. In addition to its interest in connection with identification of persons, this book [illegible] importance in the study of differential trends among races, between the sexes, and among constitutional types. These phases of the subject are of interest to students of anthropologists, geneticists, and zoologists.

DuBrul E Lloyd and Harry Sicher

The adaptive chin. Springfield, Ill Charles C Thomas 1954 97 p. illus. 22 cm. (A monograph in American lectures in anatomy edited by Otto F Kampmeier Publication no 180) $3 50 2741

Contents: Historical. Critical. Observational. Functional. Bibliography.

Note. A critical study from the comparative standpoint, of the evolution of the human chin. It was based upon [illegible] survey of the literature and upon an examination of skulls in the Museum of Oral Anatomy of the College of Dentistry of the University of Illinois, The Chicago Natural History Museum, and the American Museum of Natural History. Among the conclusions are [illegible] the trend toward brachycephaly as [illegible] as the reduction of the masticatory elements are all [illegible] part of the more general processes of cranial adaptation to erect posture and locomotion. There are 93 citations to the international literature in the bibliography.

Francis Carl C.

The human pelvis With 61 illustrations including 3 in color St Louis The C. V Mosby Company 1952 210 p. illus (part col d) $3.50 2742

Contents: Bones of the pelvis. Ossification of the pelvic bones. Pelvic articulations. Pelvic girdle. Muscles and fasciae. Vessels [illegible] the pelvis. Pelvic nerves. Structures within the pelvis. [illegible] system [illegible] the pelvis. Female genitalia. [illegible] Embryology. Index.

Note. A detailed description of the [illegible] structures of the human pelvis, with some attention to the embryology. It is based partly on the literature and partly on original studies made by the author and his co-workers at Western Reserve [illegible] Some of the text and some of the illustrations are based on original dissections. The book is the development of [illegible] course in [illegible] at the graduate level and is intended for the instruction of practicing surgeons and for medical [illegible] graduate [illegible] Carefully selected literature references are included.

Friedman Sydney M

Visual anatomy—head and neck Springfield, Ill. Charles C Thomas 1950 217 p illus 25 cm $7.50 2743

Contents: Anterior aspect of the neck. Lateral aspect of the neck. The suprahyoid region. The submandibular region. The skull. The infratemporal region. The continuity of temporal and infratemporal regions. The parotid region. The face and scalp. The skull. The orbit. The nose. The auditory apparatus. The skull. The back of the neck. The cervical viscera. [illegible] Index.

Note. Not [illegible] conventional atlas but [illegible] compact text designed for use by [illegible] student in medical or [illegible] graduates in need of [illegible] review or as [illegible] reference [illegible] It is arranged so that [illegible] drawing on the right hand page faces the verbal description on the left hand page. The sequence of drawings is from the inside out or the reverse of the traditional arrangement of anatomic atlases. The drawings are diagrammatic rather than literal renderings.

Gorsch R. V

Proctologic anatomy Second edition. Baltimore The Williams & Wilkins Company 1955 310 p. illus. (part col d) 24 cm. $8.00 2744

Contents: The pelvis, pelvic floor and perineal triangles. The anal canal. The anorectal musculature. The levator ani muscle. The rectum and sigmoid. The perirectal spaces. The pelvic fascia. The perirectal lymphatics. Nerve supply to the colon, rectum, and anal canal. Index.

Note. A specialized anatomy designed for the instruction of student surgeons who are preparing for the specialty of proctology. It is useful also as [illegible] reference book for general surgeons. The author is one of the established leaders in this field, and the book is based partly on the literature and partly on his own dissections. In this edition, there are 133 figures. These are accompanied by an explicit, concisely written text. The first edition of the book was published in 1941 under the title, *Perineopelvic anatomy*. In comparison, this edition has been very extensively revised and several chapters largely or entirely rewritten. Recent literature has been added to the bibliographies.

Hollinshead William Henry

Functional anatomy of the limbs and back a text for students of physical therapy and others interested in the locomotor apparatus. Philadelphia W B Saunders Company 1951 341 p illus. 24 cm. $6 00 2745

Contents (abridged) Section I, The organization of the body Anatomical terminology The tissues of the body The organs and organ systems. Section II Th upper limb The shoulder The arm. Forearm and hand. Actions of forearm muscles. The hand. Movements of the fingers. Section IV The lower limb The pelvis, buttocks and hip. The thigh and knee. The leg. The foot. Index.

Note An introductory textbook for the use of students who are preparing for careers as physical therapists, physical education instructors, etc. The author is Head of the Section on Anatomy of the Mayo Clinic.

KAPLAN, EMANUEL B

Functional and surgical anatomy of the hand. 132 figure numbers Philadelphia J B Lippincott Company, 1953 288 p illus 26 cm. $10 00 2746

Contents Part I The hand as an organ Part II, Structure and function The fingers. The thumb. The wrist. The blood and the nerve supply of the hand. The retinacular system of the hand. Mechanism of action of the fingers, the thumb and the wrist. Part III, Surgical anatomy Surface anatomy of the hand and the wrist. Surgical approaches. Amputations and reconstruction operations. Bibliography Index.

Note. An important contribution to the knowledge of the anatomy of the human hand. The illustrations are the predominant feature. Most of them are based on original dissections made by the author They are clearly reproduced in large scale Some comparative material is included, for instance dissections of hands of gorillas and chimpanzees but this material is introduced only to elucidate structure or function of the human hand. The illustrations are accompanied by a detailed text. In a learned introduction the author discusses some of the landmark books on the human hand, and some of the entries in the bibliography at the end of the volume are annotated. The book is of interest to anatomists and surgeons.

KRONFELD, PETER CLEMENS, AND OTHERS

The human eye in anatomical transparencies, explanatory text by Peter C Kronfeld anatomical transparencies by Gladys Mc Hugh historical appendix by Stephen L Polyak. Rochester N Y Bausch & Lomb Press, 1943 99 p illus (part col d) 29 cm $6 50 2747

Contents (abridged) Part I, Anatomical transparencies Stereographic paintings of the human eye. II Explanatory text Anatomy of the human eye and its adnexa Systematic anatomy the eyeball and its blood vessels, nerves, protective apparatus, motor and supporting apparatus the blood vessels and nerves of the orbit and lids. Topographic anatomy the eyeball. III, Historical appendix History of our knowledge of the structure and functioning of the eye. Bibliography Index

Note The first part of this book consists of topographic atlas of the eye and orbit, three-dimensional presentation of the gross anatomy of this region The anatomic relations, presented in a sequence of colored drawings printed on transparent acetate are taken partly from preparations of anatomic layers and partly from arbitrary dissections of slices of varying thickness. The transparencies are twice the size of the adult eye and represent surface and posterior views of sections on frontal and on temporal plane, the sheets fitting over each other in such way as to present all serial layers in proper sequence Th second portion of the book is descriptive text, consisting of systematic account of ocular anatomy which takes up the various structures in functionally logical order and topographic treatment of the anatomy as it is show in the paintings in the atlas. In the third portion of the book the roots of ophthalmology are traced through Greek, Greco-Roman Arabian early European medicine, up to and including modern discoveries in this field The book is intended for teachers and students of ophthalmology as well as for practitioners

LERCHE WILLIAM

The esophagus and pharynx in action a study of structure in relation to function Springfield Ill Charles C Thomas 1950 222 p illus. 24 cm $6 50 2748

Contents. Introduction. The muscular coat of the esophagus. The mucosa and the musculature of the alimentary canal from cardia to mesopharynx, as observed in specimens in which characteristic markings pertaining to the act of regurgitation had survived. The ampulla. The phreno-esophageal elastic membrane. Rumination—merycism. The movement of regurgitated contents through the lower esophagus. The movement of regurgitated contents through the middle and upper esophagus. The cricopharyngeus muscle. Mechanism of deglutition. The cardia. The mechanism of the gastro-esophageal segment of expulsion during the act of deglutition in man. Appendix. Bibliographical index. Author index. Subject index

Note An original work based chiefly on the study of 100 specimens obtained in dissecting rooms. On the basis of these studies, the author elucidates the relations of structure and function in the portion of the alimentary canal that extends from the cardia to pharynx and includes these organs. Pertinent material from published literature is also included. There are 93 illustrations of which a considerable number are reproduced from photographs of specimens. The book is of interest to anatomists and a wide range of medical practitioners.

MICHELS, NICHOLAS A

Blood supply and anatomy of the upper abdominal organs With a descriptive atlas. 172 illustrations, including 166 in color Philadelphia J B Lippincott Company, 1955 581 p illus (part col'd) 26 cm. $24 00 2749

Contents Arterial variations. Review of the literature. Embryology topographic relations and developmental anomalies Material methods and terminology Observ tions on the blood supply of the liver and the gallbladder (200 dissections) The gallbladder the biliary ducts and their arterial relations. The human liver The spleen, the splenic artery and the intrasplenic (segmentary) circulation. Blood supply of the pancreas and the duodenum. Blood supply of the stomach and the esophagus. Blood supply of the great omentum and the transverse mesocolon Blood supply of the small and the large intestines. Review of collateral circulation in the upper abdominal organs. Collateral arterial pathways to the liver after ligation of the hepatic artery and removal of the celiac axis. Bibliography Descripti atlas. Bibliographic index. Subject index.

Note A treatise and an atlas are combined in this volume, with 351 of the pages devoted to the former and 197 to the latter. The ork was based on the dissection of three series of 200 bodies each and on supplementary literature search. It is the first comprehensive treatment of the subject in English, if not in any language The chapters of the treatise constitute a detailed verbal description of the topographic relations and blood supply—especially the latter—of the organs of the upper abdomen. The bibliography included in this part of the volume covers the international literature and is 27 pages long The treatise and atlas complement one another and references are given in the text of the first to the illustrations in the second The atlas consists of six plates and 165 figures, most of which are reproductions of schematic drawings in which color is used to distinguish arious elements of the blood supply and related systems Long, explanatory captions are included adjacent to the illustrations in the atlas.

MILLER, WILLIAM SNOW

The lung Second edition. Springfield Ill. Charles C Thomas 1947 222 p. illus (part col d) 25 cm. $10 00 2750

Contents The lungs. The trachea and bronchi. Intrapulmonary bronchi and bronchioli. The air spaces. The blood vessels. The lymphatics. The pulmonary lymphoid tissue. The nerves. The pleura. Key points. Historical sketch. The atlas. Bibliography Index.

Note An uthoritative monograph on the microscopic and gross anatomy of the lung, based on the author's lifetime study of this subject Brief reviews of the ork of other anatomists, from Malpighi to the present time, and discussions of their concepts of lung structure are included in the chapter entitled "Historical sketch This edition is little changed from the first. The number of excellent illustrations has been increased by 15 and the chapter on the pleura has been revised in the light of new research. As with the previous edition, the book is intended for use as text and reference manual for students and practitioners.

MONTAGNA WILLIAM

The structure and function of skin New York Academic Press, Inc., 1956 356 p. illus (part col d) 23 cm. $8 80 2751

Contents: The general anatomy of skin. The epidermis. The eccrine sweat glands. The apocrine sweat glands. The pilary system. The sebaceous glands. The dermis. References. Author index. Subject index.

Note: A well-written survey of the accumulated knowledge of skin, particularly human skin. It deals primarily with the microscopic anatomy and includes not only the pertinent knowledge in the published literature, but also original results from laboratory research at Brown University. The illustrations include not only many microphotographs made with the optical microscope but also [illegible] made with the electron microscope. The functional significance of the various structural details of skin is [illegible] secondary but prominent topic. Long lists of literature references are included in the chapters, and the author index is arranged so that the cited paper can be found easily in these chapter lists.

MORTON, DUDLEY JOY

The human foot: its evolution, physiology and functional disorders. New York: Columbia University Press, 1935. 244 p. illus. 23 cm. $4.00 2752

Contents: Preface. Part I, The evolutionary development of the human foot. The origin of vertebrate limbs. Amphibian and reptilian feet. Mammalian and early primate feet. [illegible] and [illegible] changes. Terrestrial modifications of [illegible] and early prehuman feet. The course of human evolution. The development of the human foot. The evolution of foot [illegible]. The muscles of the leg. The intrinsic muscles of the foot. Gravity and [illegible] as [illegible] factors in evolutionary development. Part II, The physiology of the human foot. The center of body weight: its relation to foot function. The foot in stance. Foot balance. Locomotion: [illegible] and propulsion [illegible] of gait. The mechanics of the foot in walking. The mechanics of the foot in running. [illegible] and [illegible]. Part III, The functional disorders of the human foot. Primary cause of disorder. Analysis of cases. General etiology. Shortness of the first metatarsal bone. Dorsal hypermobility of the first metatarsal segment. Discussion of [illegible] factors. Examination and diagnosis. The treatment of clinical features. The treatment of [illegible] function. The general problem of foot welfare. Reference books. Index.

Note: This treatise is intended for both professional and nonprofessional reading and reference. Emphasis has been placed on the evolutionary background of the human foot and on its physiology in order to provide [illegible] basis for evaluating normal structure and function, and for analysis of functional disorders.

POLYAK, STEPHEN L.

The human ear in anatomical transparencies. Anatomical transparencies and illustrations by Gladys McHugh. Anatomic preparations by Delbert K. Judd. Elmsford, N. Y. Published under the auspices of Sonotone Corporation, distributed by T. H. McKenna, Inc., New York, N. Y. 1946. 136 p. illus. (part col'd) 31 cm. $10.50 2753

Contents: Part [illegible] Gross anatomy of the auditory apparatus and of the organs of speech. What the ear [illegible] and how [illegible] came about. Constituent parts of the auditory system. Anatomical transparencies of the auditory system in relation to the structures of the head. Topographical anatomy of the auditory system. Speech: its anatomical, physiological, and biological foundations. Anatomy and physiology of the external ear. Part II, Structure and function of the middle and the inner ear. Anatomical transparencies of the middle and the inner ear. Topographical anatomy of the middle and the inner ear. Minute structure of the middle and the inner ear. Function of the middle and the inner ear. Bibliography. Index.

Note: The main illustrations in this important work are done similar to the illustrations in Kronfeld, *The human eye in anatomical transparencies*, Rochester, N. Y. 1943, that [illegible] is, they are printed on sheets of transparent material which are fitted over one another in the same sequence as the layers represented occur in the body. The scale of the drawings reproduced in the transparencies in Part [illegible] actual size; in Part II, [illegible] is three times actual size. The drawings were made from [illegible] long series of actual dissections, and are reproduced in full color. For the most part the text [illegible] explanatory of the drawings and [illegible] directly related to them by key numbers. The greater part of the book, therefore, is of interest to students of anatomy and to specialists in otolaryngology. However, the first chapter and the chapters on speech are of general interest.

SHAPIRO, HARRY H

Maxillofacial anatomy: with practical applications. 314 illustrations, 46 in color. Philadelphia: J. B. Lippincott Company, 1954. 392 p. illus. (part col'd) 26 cm. $12.00 2754

Contents: Early development. Skeletal framework. Vascular anatomy. The face. Air chambers and paranasal sinuses. Oral cavity and pharynx. Glands. Musculature. Temporomandibular joint. Vascular supply and drainage. Neuroanatomic considerations. Anatomic considerations in wounds of the face. Cephalometric determinations in maxillofacial asymmetry. References. Index.

Note: Both normal anatomy and selected cases of anomaly and abnormality are covered in this outstanding text. The basic anatomy is the principal topic; typical applications in [illegible] surgery and corrective dentistry are discussed. The book is not, however, [illegible] manual of technique for either of these specialties. Illustrations are numerous and in most instances [illegible] reproduced in large scale. The author is [illegible] member of the faculty of the College of Physicians and Surgeons of Columbia University.

TRUEX, RAYMOND CARL, AND CARL E. KELLNER

Detailed atlas of the head and neck. New York: Oxford University Press, 1948. 162 p. illus. (part col'd) 31 cm. (Oxford medical publications) $19.75 2755

Contents (abridged): Foreword, by [illegible]. Introduction, by E. A. [illegible]. Regional anatomy. [illegible] structures. Frontal sections. Transverse sections. Index.

Note: An exceptionally thorough and highly original work. The drawings were made from original dissections and are large and clear. They are arranged so that topographical relationships are emphasized. The [illegible] of the neck is carried down into the thorax to give relations of vessels, nerves, trachea, and to show the origin of the brachial plexus and the cervical and upper thoracic sympathetic trunk. The dissection of the head includes the brain, the cranial and cervical nerve [illegible], some interesting [illegible] drawings of these relations, and detailed analyses of especially complex regions. There are special studies of the larynx, nasal region, pharynx and skull, and [illegible] series of frontal and transverse sections of the head. There are 134 plates in [illegible] in black and white, with color used to indicate specific structures such as vessels and nerves.

UHLENHUTH, EDUARD AND OTHERS

Problems in the anatomy of the pelvis: an atlas. With the assistance of DeWitt T. Hunter. Illustrated by William E. Loechel. 82 illustrations. Philadelphia: J. B. Lippincott Company, 1953. 206 p. illus. 26 cm. $10.00. 2756

Contents: The [illegible] space in the male. The vesical plexus and the urinary sphincters. The layering of the levator ani. References.

Note: An atlas of selected aspects of the anatomy of the pelvis. It is addressed particularly to specialists such as anatomists, urologists, and surgeons and to graduate medical students preparing for those specialties. The [illegible] space is given primary emphasis because of [illegible] importance. This material is followed by specialized studies of pelvic [illegible] as noted in the contents. The plates, which are based on original dissections, are arranged in 11 series, one of which is [illegible] series. The illustrations are reproduced in large scale, and in each instance there is an indication of the scale of the drawing in relation to the natural size.

NERVOUS SYSTEM

BAILEY, PERCIVAL, AND GERHARDT VON BONIN

The isocortex of man. Urbana: University of Illinois Press, 1951. 301 p. illus. (part col'd) 27 cm. $6.00. 2757

Contents. Historical introduction. Growth and weight of the brain. Fissures of the brain. Cortical types. Serial sections. The brain map. Intercortical connections. Afferent and efferent connections. Functional significance. Bibliography. Plates.

Note A fresh study of the isocortex of the human brain based mainly on an unusually good specimen that was fixed within one hour of death. The findings of this particular study are correlated with the findings of other workers in the field. As a result of this study and a study of the published writings of other workers, the authors state, "after long and careful study of the human isocortex, the main impression that we have retained is that vast areas are so closely similar in structure as to make any attempt at sub-divisions unprofitable if not impossible." Nevertheless, in their chapter on the brain map and in subsequent chapters they discuss critically the findings and conclusions of others and state certain tentative conclusions of their own on this aspect of brain study. The bibliography is extensive but not exhaustive. There are more than 120 figures—many of which bear reproductions of more than one drawing—and 15 plates.

BUCHANAN, ARCHIBALD RAY

Functional neuro-anatomy, including an atlas of the brain stem. Second edition, thoroughly revised. With 273 illustrations, 19 in color. Philadelphia Lea & Febiger, 1951 323 p illus (part col'd) 27 cm. 2758

Content (abridged) Development and histogenesis of the nervous system. Divisions of the nervous system. The spinal cord. The tactile, pain, and thermal pathways. The proprioceptive pathways. External and internal configurations of the brain stem. Relations within the brain stem of the general sensory pathways. The pathways concerned in the conduction of general afferent impulses from the head region to the thalamus. The special senses of taste, hearing, equilibrium, sight, and smell. The internal capsule. The cerebrum. The sensory areas of the cortex. The cyto-architecture of the parietal, temporal and occipital lobes. The motor cortex and its projections. The lower motor neurons. The cerebellum—its afferent and efferent connections. Extrapyramidal areas of the cerebral cortex and extrapyramidal fibers. The hypothalamus. The visceral efferent (autonomic) system. The basal ganglia. The rhinencephalon. The ventricles of the brain. The cerebrospinal fluid. The blood supply of the central nervous system. The interstitial tissue of the central nervous system. Bibliography. Index.

Note A relatively brief text, written primarily for medical college students. As the title and chapter organization indicate, the subject is presented from the standpoint of function rather than "level." The first edition appeared in 1949. The major change made in this edition was the adding of a 73-page atlas of the brain stem. The author is Professor of Anatomy and assistant dean at the University of Colorado School of Medicine. A third edition was published in 1957 362 p., $7.50.

BUCY, PAUL CLANCY, editor

The precentral motor cortex. Second edition. Urbana University of Illinois Press, 1949 615 p illus. 28 cm. $6 00 2759

Contents Foreword, by J F Fulton. Introduction, by P C. Bucy. Architecture of the precentral motor cortex and some adjacent areas, by G. von Bonin. The role of architectonics in deciphering the electrical activity of the cortex, by J L. O'Leary. Afferent connections, by A. E. Walker. Efferent fibers, by P M Levin. The pyramidal tract, by S. S. Tower. On excitatory and inhibitory processes within the motor centers of the brain, by N Bubnoff and R. Heidenhain, translated by G. von Bonin and W S. McCulloch. Cortico-cortical connections, by W S. McCulloch. Somatic functions, by M. A. Kennard. Relationship to the cerebellum, by P Bailey. Autonomic function, by M. A Kennard. The frontal eye fields, by W K. Smith. Electrical excitability in man, by T C. Erickson. Effects of extirpation in man, by P C. Bucy. Relation to abnormal involuntary movements, by P C. Bucy. Clinical symptomatology, by C. D Aring. Pathology, by C. Davison. Significance of the precentral motor cortex, by M. Hines. Bibliography. Index.

Note When the first edition of this work appeared in 1944 it was widely recognized as a valuable critical evaluation of the field at that time. In the present edition the titles and authors of the monographs that constitute the chapters are the same. However changes, some of which amount to complete rewriting of paragraphs and others as small as the change of a single reference, are scattered throughout the work. The bibliography has been revised to include literature published as late as 1948.

CONEL, J LEROY

The postnatal development of the human cerebral cortex. Cambridge, Mass. Harvard University Press 1939–51 4 v illus. 31 cm. Vol I, $8 00 vol II, $8 00, vol. III, $12.50 vol IV, $12.50 2760

Content (abridged) Volume I, The cortex of the newborn. Volume II, The cortex of the one-month infant. Volume III, the cortex of the three-month infant. Volume IV The cortex of the six-month infant. Lobus frontalis. Lobus parietalis. Lobus occipitalis. Lobus temporalis. Lobus insulae. Rhinencephalon. Comments. Tables. Literature. Explanation of plates.

Note The results of an intensive study of the development of the cerebral cortex of the human infant beginning at birth and extending to six months of age are presented in these volumes. In order to follow changes in the microscopic structure of the cortex, the author used the following criteria with only minor modifications throughout the study (1) width of the entire cortex and of each horizontal layer (2) the number of nerve cells, (3) size of nerve cells, (4) condition of the chromophil substance, (5) neurofibrils, (6) size, compactness of structure and length of the processes of nerve cells, (7) pedunculated bulbs, (8) size and number of exogenous fibers, and (9) the state of myelination. Changes in these features are described in detail in the text and are illustrated in the plates. Conclusions such as the following are drawn: "The uniformity of the microscopical structure suggests that the cells in any one area have no specificity of function." The table of contents given above for the fourth volume is typical of each volume and indicates the organization of the volumes. In the fourth volume there are 191 text pages and 108 plates.

CONNOLLY, CORNELIUS JOSEPH

External morphology of the primate brain. Springfield Ill. Charles C Thomas, 1950. 378 p illus 25 cm $10 00 2761

Contents. The fissural pattern of the primate brain. Encephalometry. Development of the cerebral sulci. The brain of the newborn and of children. The fissural pattern of the human brain (Negroes and Whites). Brain and race. The relation of the sulci to the cortical areas. Endocranial casts and brain formation. Some sulcal relations in the anthropoid and in the human brain. The fissural impressions on the endocranial casts of prehistoric man. On homologies and the origin of sulci. Bibliography. Index.

Note A new study based on material in the Hrdlicka Collection of the United States National Museum. Particular brains in this collection are identified and described. Descriptions of individual brains are then synthesized in summary descriptions of the brain characteristics of families and other zoological groups. The author stresses the importance of the sulci in brain mapping and finally discusses the origin and the relations of these features to cortical areas. There are 337 figures and an extensive bibliography.

ELLIOTT, H CHANDLER

Textbook of the nervous system a foundation for clinical neurology. With an introduction by Wilder Penfield. Second edition. 158 illustrations and an atlas of 50 plates. Philadelphia J B Lippincott Company, 1954 437 p illus (part col'd) 26 cm. $10.00 2762

Contents Part I, The nervous system in outline. Neurology and the medical student. Origin and function of nerve cells. The ground plan of the central nervous system. Development of the ground plan. Suprasegmental structures—the sensory system—the motor system. The external and internal form of the human brain. Part II, The nervous system in detail. Nervous conduction. The neurons. Nerve fibers and end-organs. The spinal cord, outer and inner form. Sensory tracts and motor centers of the cord. The cranial nerves. The auditory, vestibular, and gustatory systems. The visual system. The thalamus. The corpus striatum and allied structures. The form of the hemispheres. The cerebral cortex. The cerebellum. The autonomic system. Higher centers influencing the autonomic nervous system. The coverings of the brain. The circulation of the central nervous system. Appendices. Bibliography. Atlas. Index.

Note A book designed for the instruction of medical college students. Assuming no anatomical preparation other than the usual basic course in gross anatomy, it serves to introduce the reader to the structure and function of the human nervous system. The

author recognizes the fact that neurology is a difficult subject for undergraduate students, and he has organized the book so as to aid the student as much as possible in studying it. The first part, which is 91 pages long, is very elementary and is concerned primarily with defining terms and describing the chief structures. In the second part, the elementary approach is [illegible] maintained, although the descriptions are much more detailed. A rather extensive bibliography in which the most important works are especially marked is included. The first edition was published in 1947. In this second edition the chapter on the neurons has been extended by the addition of eight pages. Three pages of new matter have been added at the end of Chapter [illegible], and the atlas section has been much increased in size.

FAVILL, JOHN

Outline of the spinal nerves Springfield, Ill. Charles C Thomas 1947 190 p. illus 23 cm. $4.50 2763

Contents Alphabetical key to muscle numbers. Part I, Roots—nerves—muscles. Part II, Nerves—muscles—roots (clinical and [illegible]) Part III, Muscles—roots—nerves (origins, insertions, functions, tests, paralytic effects) Part IV Movements—muscles—nerves—roots. Part [illegible] Supplementary data. Bibliography Numerical list of muscles.

Note A companion volume to the author's Outline of the cranial nerves, Chicago, University of Chicago Press, 1933. As indicated above, motor functions are related to the spinal nerves from five [illegible]. The information is simply tabulated with no discussion, or very brief discussion in some cases. The book is intended as reference tool for medical students and for medical practitioners in [illegible] neurological diagnosis.

KRIEG, WENDELL J S

Functional neuroanatomy With illustrations and decorations by the author Second edition, revised and augmented. New York McGraw Hill Book Company Inc., 1953 659 p illus. 27 cm. $9.00 2764

Contents Fundamentals. Development of central nervous system. Reflex mechanisms of the spinal cord. Introduction to the brain. The somatic motor system. Branchial motor system. The visceral motor system. The visceral sensory system. The vestibular system. The auditory system. The visual system. The somesthetic system. The pyramidal system. The extrapyramidal system. The rhinencephalon. The cerebral cortex. Non-neural [illegible] with the nervous system. The cerebellum. The autonomic system. Laboratory study of the central nervous system. Atlas of sections and [illegible] reconstructions. Suggestions for further study. Index.

Note A medical college textbook distinguished by a text that is comparatively easy to read and by excellent illustrations. Although the anatomy of the nervous system is the main subject, function runs throughout the text as a prominent secondary theme. The atlas at the end of the volume is 97 pages long. In addition to it, there are 774 figures in the text. A considerable number of the drawings are three-dimensional. The first edition was published in 1942. Many new drawings have been added in this second edition, and some revisions have been made in the text.

KUNTZ, ALBERT

The autonomic nervous system. Fourth edition, thoroughly revised, with 94 illustrations. Philadelphia Lea & Febiger 1953 605 p. illus. 24 cm. $10.00 2765

Contents (abridged) Morphology and distribution of the autonomic nervous system. Central autonomic centers and conduction pathways. General physiology. Development. Innervation of the heart. Innervation of the blood vessels. Innervation of the respiratory system. Innervation of the digestive tube. Innervation of the biliary system. Innervation of the pancreas, spleen, thyroid, adrenals and bone marrow. Innervation of the urinary organs. Innervation of the sex organs. Innervation of the skin and its appendages. Innervation of cephalic autonomic effectors. Histopathology. Visceral sensitivity and referred pain. The autonomic nervous system in clinical [illegible]. Bibliography. Index.

Note A comprehensive survey of the knowledge of the autonomic nervous system. It covers not only the anatomy but also the function and physiological relationships of the autonomic nervous system. It is widely used as a textbook in medical schools, and has established as an authoritative and useful reference book and guide to the literature. The third edition was published in 1945. In preparation of this fourth edition, fairly extensive changes were made in the text and illustrations. A considerable range of recent literature including some published as recently as 1953 was added to the bibliography.

KUNTZ, ALBERT

A text-book of neuro-anatomy Fifth edition thoroughly revised with 331 illustrations. Philadelphia Lea & Febiger 1950 524 p. illus 24 cm. $8.00 2766

Contents Evolution and comparative anatomy of the nervous system. Development of the nervous system. Nerve and supporting tissue. Anatomy of the central nervous system. The cerebrospinal pathways and the blood vessels of the central nervous system. Myoneurons. Reflex and integrating mechanisms. The cerebrospinal nerves. Internal structure of the spinal cord. Peripheral and central conduction pathways. The medulla oblongata. The pons. The mesencephalon. Central connections of the cranial nerves connected with the cord, medulla oblongata, the pons and the mesencephalon. The cerebellum. The diencephalon. The visual apparatus. The olfactory apparatus. The telencephalon. The autonomic nervous system. Conditioned responses. Laboratory outline. Index.

Note A [illegible] introductory text for medical courses. Although the structural emphasis is on anatomical aspects, the author stresses the importance of understanding the nervous system as a dynamic organization. Particular attention is called to scientific knowledge on the architecture and functioning of the nervous system which has been derived from experiments in recent decades. Changes made in preparing this edition were not extensive, but important information derived from recent experiments has been added, some changes have been made in the illustrations, and few recent articles have been added to the bibliographies.

KUNTZ, ALBERT

Visceral innervation and its relation to personality Springfield, Ill Charles C Thomas, 1951 152 p illus 23 cm. (American lecture series. Publication no 115 A monograph in American lectures in anatomy edited by Otto F Kampmeier) $4.50. 2767

Contents General plan of somatic and visceral innervation. The autonomic nerves. Reflex and integrating centers and central conduction pathways concerned in visceral function. General physiology. Innervation of specific organs. Visceral neural factors in personality. Bibliography. Index.

Note The first five chapters, which account for 111 of the book pages, are devoted largely to describing the nervous systems of the visceral organs and organs including the innervation of specific organs. Only in the final chapter does the author discuss the relations between this innervation and the personality. Here the author reviews the published work, including his own, and reaches such conclusions as "The visceral nerves [illegible] the [illegible] of conduct but to [illegible] the control of conduct, in large measure is carried out through cortical mechanisms of the [illegible]." There [illegible] bibliography. The author is Professor of Anatomy in the St. Louis University School of Medicine.

LARSELL, OLOF

Anatomy of the nervous system. Introduction by A. T Rasmussen Second edition. New York Appleton-Century-Crofts, Inc., 1951 520 p. illus. 25 cm. $9.00 2768

Contents The gross anatomy of the brain and spinal cord. The meninges and choroid plexus. Development of the nervous system. Structural elements. Receptors and effectors. Functional arrangement of neurons. Peripheral nerves and ganglia. The visceral system. The internal structure of the spinal cord. The cranial nerves. Internal structure of the medulla oblongata and tegmentum. The cerebellum and the pons. The mesencephalon. The diencephalon. The cerebral hemispheres. The cerebral cortex. The rhinencephalon and the olfactory pathways. The lobes of the cerebral cortex with reference to structural features and functional localization. Cortical efferent paths. Blood supply of the nervous system. Index.

Note An introductory textbook addressed to medical college students. Although primarily a descriptive treatment, the interrelations between form and function are frequently pointed out. References

are made directly in the text to important studies that established specific points of knowledge. The first edition was published in 1942. For this edition the work was extensively reorganized. The separate atlas that appeared at the end of the book has been abandoned, and the material formerly contained in it has been inserted at appropriate places throughout the text. Numerous other changes of pedagogical interest have been made. The final chapter on the blood supply of the nervous system is new. There are now 181 illustrations.

PEELE, TALMAGE L

The neuroanatomical basis for clinical neurology. New York. The Blakiston Division, McGraw-Hill Book Company, Inc. 1954. 564 p. illus. 26 cm. $12.50 2769

Contents: Nerve cells and fibers. Neuroglia and microglia—neurohistological methods. Development of the nervous system. *Gross anatomy of the brain—its blood supply* and meninges. Spinal cord and spinal pathways. Peripheral nerves. Autonomic nervous system. Brain stem. Cranial nerves. Vestibular system. Reticular system. Cerebellum. Thalamus. Hypothalamus. Cortex and fiber systems of cerebral hemispheres. Precentral cortex and motor pathways. Extrapyramidal motor system. Prefrontal region of the frontal lobes. Sensory pathways and the parietal cortex. Taste and taste pathways. Visual pathways and occipital lobe. Auditory pathways and the temporal lobe. Olfactory system. Bibliography. Visual aids. Index.

Note: Neuroanatomy is presented in some detail in this work, which is designed primarily for use as a textbook in medical schools but is of some interest also as a reference book. While anatomy is the primary subject, much related information on neurophysiology is included and, in addition, most of the chapters are concluded with concise descriptions of clinical disorders. There are 313 figures, and the bibliography contains 870 references to the *international literature*. The author is a *member of the faculty of* Duke University School of Medicine.

PENFIELD, WILDER, AND THEODORE RASMUSSEN

The cerebral cortex of man: a clinical study of localization of function. New York. The Macmillan Company. 1950. 248 p. illus. 24 cm. $7.00 2770

Contents: Historical note and methods. Sensorimotor representation of the body. Head and eye movement. Representation of autonomic systems. Vocalization and arrest of speech. Secondary sensory and motor representation. Vision. Hearing and equilibration. Memory, sensory perception and dreams. *Excision of cortical regions. General* conclusion. Bibliography. Case index. General index.

Note: This book is based on a long series of brain operations carried out under local anesthesia on human beings. It contains mainly the authors' observations and analyses of the results of removing areas of the cortex. The effects of *direct stimulation* of selected areas of the cortex during the course of operations, and postoperative effects observable in patients' behavior are both reported. Also, observations on the play of epileptic discharge in the cerebral cortex are included. In their final chapters the authors draw tentative conclusions which *are compared and correlated with the work* of other researchers. The 121 illustrations include a number of photographs taken during brain operations.

PFEIFFER, JOHN

The human brain. New York. Harper & Brothers. 1955. 273 p. 21 cm. $3.75 2771

Contents: Introducing the brain. Man, evolving brain. From birth to old age. Pathways to emotion. The brain in focus. Remembrances of things past. Memory and the higher faculties. Cells in rhythm. *Sick brains. How we feel pain. The sacred disease.* The riddle of neurosis. A visit to Manteno. The rise of psychosurgery. Brain operations with needles. Chemistry and mental disease. The most complicated machines. The thinking machine. Bibliography. Index.

Note: *A popular book written by an eminent interpreter of science for nonspecialists and laymen.* It embraces a wide range of accumulated knowledge on the human brain—its structure, development, physiology, *disorders, reactions to psychosurgery and many* other aspects. In the terminal chapter there is even some comparison between the brain and electronic computers. There is considerable emphasis on facts that appear marvelous to the lay man and on incidents from the case-history material of neurology and psychiatry. However, the book is not a sensational treatment. Such disorders as epilepsy and neurosis are discussed in a sympathetic and informative manner. *Literature citations are not given* to support specific statements in the text, but there is a short bibliography of popular semitechnical and technical books on neurology and psychiatry for the guidance of readers who wish more solid information.

RANSON, STEPHEN WALTER

The anatomy of the nervous system: its development and function. Revised by Sam Lillard Clark. Ninth edition with 434 illustrations, 18 in color. Philadelphia. W. B. Saunders Company, 1953. 581 p. illus. (part col'd) 26 cm. $8.50 2772

Contents: Origin and function of the nervous system. Gross anatomy of the nervous system. Meninges and blood vessels of the central nervous system. Histogenesis of the nervous system. Neurons and neuroglia. The spinal nerves. The autonomic nervous system. *The spinal cord. Fiber tracts of the spinal cord. The structure of* the medulla oblongata. Internal structure of the pons. The internal structure of the mesencephalon. The cranial nerves and their nuclei. The cerebellum. The diencephalon. The internal structure of the cerebral hemispheres. The rhinencephalon. The cerebral cortex. The *great afferent and efferent systems. Reflexes and reflex arcs.* Clinical illustrations. Bibliography. Index.

Note: A standard text for more than three decades. It is used primarily for the instruction of medical college students, but is useful to biologists and others who need a basic knowledge of *neuroanatomy. It is not limited to morphology, but as the title indicates, it integrates anatomy with embryological development and* function. The eighth edition was published in 1947. In this ninth edition, the purpose and scope of previous editions have been retained. Although the chapter titles are identical, new sections have been inserted in several of them, and some other sections have been revised to include the results of recent research. A selection of the literature published subsequently to the writing of the eighth edition has been added to the bibliography, which is now 19 pages long.

RASMUSSEN, ANDREW THEODORE

The principal nervous pathways, neurological charts and schemas with explanatory notes. Fourth edition. New York. The Macmillan Company. 1952. 73 p. illus. 29 cm. $4.50 2773

Contents: Relations of the meninges to the brain, spinal cord and cerebrospinal fluid. Neurological methods. Pain, temperature and light touch conduction. Tactile discrimination and deep sensibility. Vestibular or equilibratory system. Auditory system. Binocular vision and reflexes through the midbrain. Localization of fibers from the retina to the visual cortex. *Innervation of the eye.* General visceral afferent system. Respiratory system. Gustatory system. Olfactory system. Corticobulbar and corticospinal (pyramidal) system. Fiber connections of the corpus striatum (an extra pyramidal system). Chief efferent tracts, their relations to lower motor neurons and the final common path. *Cranio-sacral* division of the general visceral efferent system (parasympathetic). Thoracico-lumbar division of the general visceral efferent system (sympathetic). Innervation of blood vessels. Index.

Note: In this textbook for medical students, 28 four-page diagrams, each with an accompanying page of explanatory text, portray and describe the principal neural structures and systems of the human body. The book is designed for the instruction of medical students, and its arrangement into functional units is *for the purpose* of making this difficult subject both easier to comprehend and *to retain. The first edition* was published in 1932 and the third edition in 1945. In preparing the fourth edition the author made changes in nine of the diagrams and corresponding changes in the descriptive text in order to bring the book *up to date* with advances in neuroanatomy.

SCHMIDT, CARL FREDERIC

The cerebral circulation in health and disease. Springfield, Ill. Charles C Thomas. 1950. 78 p. illus. 22 cm. (American lecture series. *Publication no. 68.* A monograph in

American lectures in physiology edited by Robert F Pitts) $7.25 2 4

[illegible]

[illegible]

GREEP ROY O., editor

Histology New York McGraw Hill Book Company Inc., 1954 933 p. illus (part col d) 24 cm. $12.50 2 9

[illegible]

E. H. Leduc. Alimentary tract, by H. W. Deane. Liver and gall bladder, by H. W. Deane. Pancreas, by H. W. Deane. Urinary system, by R. O. Greep. Female reproductive system, by R. O. Greep. Placentation, by G. B. Wislocki. Mammary glands, by E. W. Dempsey. Male reproductive system, by R. O. Greep. Hypophysis, by R. O. Greep. Pineal body, by R. O. Greep. Thyroid gland, by E. W. Dempsey. Parathyroid glands, by R. O. Greep. Adrenal glands, by R. O. Greep. Eye, by R. L. Carpenter. Ear by M. H. Lurie. Index.

Note A modern and authoritative text on the microscopic anatomy of the human body. It is organized as shown above in 35 signed chapters. All of the authors have been, or still are, members of the faculty or research fellows in the Medical School of Harvard University. The book is directed primarily to students in medical schools. Descriptions of the histology of the various organs and systems named in the chapter titles are given primary emphasis, but related topics, such as the histochemical reaction of the tissues under discussion, are also discussed. Extensive bibliographies are included for most of the chapters. There are 645 figures, a considerable number of which contain reproductions of more than one drawing or microphotograph. The book is a successor to J. L. Bremer and H. L. Weatherford, *A textbook of histology*, sixth edition, 1944, and contains some illustrations that were published in that work.

HAM, ARTHUR WORTH

Histology. 518 figure numbers, including 7 plates in color. Second edition. Philadelphia, J. B. Lippincott Company, 1953. 866 p. illus. (part col'd) 26 cm. 2780

Contents Part I What histology is and how it is studied. Histology and its relationship to other subjects. How histology is studied by ordinary histologic methods. How histology is studied by special histologic technics. How histology is studied—the study and the interpretation of sections. Part II, Cells. Intercellular substances and fluids. Cells. Intercellular substances. Tissue fluid. The cells of blood. Platelets and fibrin. Part III The four primary tissues and their subdivisions. The four primary tissues of the body. Epithelial tissue. Connective tissue. Cartilage. Bone. Hemopoietic tissue. Muscular tissue. Nervous tissue. Part IV The histology of the systems. The circulatory system. The integumentary system. The digestive system. The respiratory system. The urinary system. The endocrine system. The female reproductive system. The male reproductive system. The system of sensory receptors. The system of articulations. Index.

Note A standard textbook designed primarily for the instruction of medical college students. The approach is medical rather than biological, although the book does contain information of interest to biologists. More space is given to those tissues in which degenerative diseases are common at the present time than to other tissues. The illustrations, which are adequately reproduced in large scale, are a special feature. The expository text is written in a full and comparatively readable style. Long lists of references are appended to most chapters. The first edition was published in 1950. Although only three years passed before publication of this second edition many changes were made. These include some rearrangement of chapters, the rewriting of a number of chapters, and important additions to text and illustrations in others. A new edition was published in 1957. 894 p., $11.00.

JORDAN, HARVEY ERNEST

A textbook of histology. Ninth edition. New York, Apple-Century-Crofts, Inc., 1952. 687 p. illus. 24 cm. $9.00 2781

Contents The protoplasm and the cell. Tissues. Connective tissue, cartilage and bone. Muscular tissue. Nervous tissue. Peripheral nerve terminations: end-organs. The blood vascular system. Blood. The lymphatic system. Mucous membranes and glands. The skin. The respiratory system. The digestive system. The urinary system. The reproductive system. The ductless glands, endocrine glands. The nervous system. The eye. The ear. List of references. Index.

Note An established textbook for introductory courses offered to pre-medical and medical students. It is used also as an office reference book by practitioners of medicine. The presentation is from a functional point of view with some data from comparative anatomy included. This edition represents a fair revision. Advances of recent years, including results of tissue culture and electron microscopy, have been incorporated. Less essential material is now set in smaller type. There are now 609 figures. The 11-page bibliography contains a few references to recent material, but it consists mainly of publications issued before 1934.

LILLIE, R. D.

Histopathologic technic and practical histochemistry. Second edition. New York, The McGraw-Hill Book Company, Inc., 1954. 501 p. illus. 24 cm. $7.50 2782

Contents Microscopy. Equipment. Fixation. Sectioning. Stains and staining. General staining and mounting procedures. General oversight methods. Nuclei and nucleic acids. Amino acids, end groups, etc. Cytoplasmic granules. Enzymes. Endogenous pigments. Exogenous pigments and minerals. Various cell products. Fats and lipoids. Connective tissue fibers. Bacteria, protozoa, and other parasites. Cilia and nerve cells and fibers. Hard tissues, decalcification. Various special procedures. Buffers, buffer tables, normal acids, and alkalies. Index.

Note A standard reference manual of techniques and supplementary information pertaining to the investigation of normal and pathological tissues. The field is covered from the standpoint of professional laboratory work. Techniques are described explicitly and in adequate detail. Formulas are given for mounting media, reagents, stains, etc. Literature references are supplied to source papers. The first edition was published in 1948 under the title *Histopathologic technic*. A considerable number of methods not in the first edition have been added in this one.

MAXIMOW, ALEXANDER A., AND WILLIAM BLOOM

A textbook of histology. Sixth edition. With 986 illustrations, 257 in color, on 580 figures. Philadelphia, W. B. Saunders Company, 1952. 616 p. illus. (part col'd) 26 cm. 2783

Contents Introduction. Epithelium. Blood. The connective tissue proper. Blood cell formation and destruction. Cartilage. Bone. Muscular tissue. The nervous tissue. The blood vascular system. The lymphatic system. The spleen. Thymus. Glands. Hypophysis. Thyroid gland. Parathyroid glands. Adrenal glands and paraganglia. The pineal body. The skin. The oral cavity and associated structures. The teeth. Esophagus and stomach. The intestines. The liver, bile ducts and gallbladder. Pancreas. The respiratory system. Urinary system. Male genital system. Female genital system. The mammary gland. The eye. The ear. Index.

Note The sixth edition of this standard and encyclopedic textbook of histology for medical students has been considerably revised from the fifth edition of 1948, but the intent of the authors remains the same as when the first edition was published in 1930, namely to present a morphological and functional description of all the cells and tissues of the human body with as full details as possible both in text and in illustration. A new edition was published in 1957. $11.00.

NONIDEZ, JOSÉ F., AND WILLIAM F. WINDLE

Textbook of histology. With 326 illustrations, composed of 214 drawings and diagrams and 233 photomicrographs. Second edition. New York, McGraw-Hill Book Company, Inc., 1953. 528 p. illus. 23 cm. $9.50 2784

Contents Tissues and methods for their study. Cells, living components of tissues. Epithelium. Blood and lymph. Bone marrow and hemopoiesis. Connective tissue. Cartilage, bone, and joints. Muscular tissue. Heart. Blood vessels and lymphatic vessels. Lymphatic tissue and organs. Nervous tissue. The peripheral nervous system. Brain and spinal cord. Membranes of the brain and other organs. Visual and auditory organs. Integument. Mouth and pharynx. Tubular digestive organs. Liver and pancreas. Endocrine organs. Respiratory organs. Excretory organs. Male reproductory organs. Female reproductory organs. Mammary glands. Appendices. Index.

Note A successful textbook for first courses in histology in medical and dental schools. It is briefer than most of the long established textbooks in the field; nevertheless, it contains material on not only the major tissues but also on the specialized tissues of various organs. The illustrations are numerous and they include a substantial number of microphotographs reproduced in large scale. The first edition was published in 1949. The book is longer in this

edition, but the characteristic of relative brevity has been successfully retained. There has been rather extensive revision of the explanatory text and a fair amount of revision in the illustrations. Forty-one of the microphotographs included in the 316 figures are new in this edition.

SMITH, PHILIP E AND WILFRED M COPENHAVER

Bailey's Textbook of histology Revised by Philip E. Smith and Wilfred M Copenhaver with the assistance of Dorothy D Johnson. Thirteenth edition. Baltimore The Williams & Wilkins Company 1953 775 p illus. (part col d) 23 cm. $9 00. 2785

Contents The cell. The living cell. General features of vertebrate development—morphogenesis. Epithelium. The connective tissues. Blood and lymph. Muscle. Organization of nervous tissue. Nervous tissue. The spinal cord, cerebellar cortex and cerebral cortex. The circulatory system. Lymphoid organs. The integument. Glands. The digestive system. The respiratory system. The urinary system. The male reproductive system. The female reproductive system. The endocrine glands. The organs of special senses. References. Index.

Note A long-established textbook, the first edition of which was published in 1904 and the 12th edition in 1948. It is designed for first-year students of medical and dental colleges and for use in other colleges where a fairly comprehensive course in histology is given. A considerable amount of material from physiology is incorporated in order to give students a conception of tissues as parts of living organisms. The illustrations are numerous and outstanding in quality. As would be expected, most of them show microscopic anatomy but a few examples of gross anatomy, for example drawing of the whole tongue, are included. Selected literature references are included in the chapters, and in this 13th edition some publications issued since the 12th edition was written have been added. Although the total length of the volume has been reduced slightly, new material has been added to many chapters, while the reduction in length has been accomplished by rewriting extensive sections. There are now 443 figures, of which 30 are new in this edition. Six color plates also have been added to the illustrations.

HUMAN REPRODUCTION AND EMBRYOLOGY

ABERLE, SOPHIE D AND GEORGE W CORNER

Twenty five years of sex research. History of the National Research Council Committee for Research in Problems of Sex 1922–1947 Philadelphia W B Saunders Company 1953 248 p. 22 cm. $4.00 2786

Contents Background of the Committee's history. Formation and activities of the Committee. Contributions to knowledge of sex biology. Contributions to knowledge of neural and psychological aspects of sex behavior. Administrative policies of the Committee. General principles of Committee administration. Appendices: Chronology of the Committees' program. A classification of subjects in the biology of sex. List of Committee members (1921–1947). Chairmen of the Division of Medical Sciences of the National Research Council. Meetings of the Committee for Research in Problems of Sex. Appropriations and expenditures. List of grants. Bibliography. Index to authors of published reports of investigations supported by the Committee for Research in Problems of Sex, 1922–1952. Index to unreported investigations.

Note An "official" account of the experiences of the National Research Council Committee for Research in Problems of Sex both from the standpoint of administrative problems confronted and from the standpoint of the scientific contributions which resulted from its efforts. It is of interest not only to those concerned with the administrative problems of such committees sponsoring scientific research. The Committee made grants to investigators in a wide area of fields, including medicine, psychology, anthropology, sociology, zoology and veterinary science. The period covered coincides with the chairmanship of Robert M. Yerkes, who served from the inception of the Committee in 1922 to his retirement in 1947.

AREY LESLIE BRAINERD

Developmental anatomy a textbook and laboratory manual of embryology Sixth edition With 630 illustrations some in color Philadelphia W B Saunders Company 1954 680 p. illus. (part col d) 26 cm. $9.50 2787

Content Part I, General development. Fundamental concepts. General features of development. The reproductive organs and sex cells. The discharge and union of sex cells. Cleavage and gastrulation. Embryonic and fetal stages. The fetal membranes. Placentation. Reproductive cycles and their hormonal control. Experimental embryology and teratology. Part II, Special development. External body form. A. Entodermal derivatives. The mouth and pharynx. The digestive tube and associated glands. The respiratory system. B. Mesodermal derivatives. The mesenteries and coelom. The urinary system. The genital system. The heart and blood. The vascular system. The skeletal system. The muscular system. C. Ectodermal derivatives. The integumentary system. The histogenesis of nervous tissues. The central nervous system. The peripheral nervous system. The sense organs. Part III, A laboratory manual of embryology. The study of chick embryos. The study of pig embryos. Index.

Note A standard textbook for use in courses offered to premedical and medical students and others who are preparing for professions where a thorough knowledge of embryology will be useful. The exposition centers around the development of mammals, particularly man, comparative material being introduced chiefly where it emphasizes or explains better those conditions found in mammals. Functional and structural aspects of development are not dealt with separately but are handled together. Both normal and abnormal development are covered. The first edition was published in 1924 and the fifth edition in 1946. This sixth edition is a result of a very extensive reorganization and revision. Both text and illustrations have been revised, and the book has been printed from new type and given a new format. A selection of recent literature has been added to the literature citations. The text proper now ends on page 532 and the laboratory manual runs from page 533 to 647. The 630 figures contain 1,513 illustrations.

ASHLEY MONTAGU, MONTAGU FRANCIS

Adolescent sterility a study in the comparative physiology of the infecundity of the adolescent organism in mammals and man Springfield Ill. Charles C Thomas 1946 148 p. illus. 23 cm. $3 50 2788

Contents Introduction. Adolescent sterility in lower mammals. The rhesus monkey. The chimpanzee. Adolescent sterility in man. The history of adolescent sterility. Conclusions. Appendix. Bibliography. Index.

Note In this work, the author assembles, examines, and appraises the contributions of many investigators and observers to the present knowledge of adolescent infertility in female mammals. An allied subject on which data are also included is the effect of conceptions upon the health and mortality of mothers and offspring. Further references are given to a wide range of literature in anthropology, sociology, history and medicine. The book is intended for scientifically minded laymen as well as for physicians and scientists.

BARBER AELETA NICHOLS

Embryology of the human eye. With 193 illustrations. St Louis The C. V Mosby Company 1955 236 p. illus. 26 cm. $7.00 2789

Content Embryogenesis. Organogenesis. Differentiation. Agenesis correlations. Glossary. Index.

Note A textbook and reference manual of the embryology of the normal human eye and of the common abnormalities. It is intended for the instruction of medical-college students who are preparing for the specialty of ophthalmology and has some value also for graduate specialists in embryology, anatomy, etc. The arrangement is approximately chronological in accordance with the development of a normal embryo. Abnormalities in development are discussed at the points where they would occur in the development of the embryo. Most of the illustrations are reproductions of microphotographs made especially for this book. The author is a member of the faculty of the Louisiana State University's School of Medicine.

DICKINSON, ROBERT LATOU

Human sex anatomy, a topographical hand atlas Second edition Baltimore The Williams & Wilkins Company, 1949 145 p illus 31 cm. (National Committee on Maternal Health Inc. Medical aspects of human fertility) $10 00 2790

Contents (abridged) Text and commentary Purpose and methods. The bony pelvis. Uterus, ovaries and tubes. The vagina. The vulva and breast. Male genital anatomy The anatomy of coitus. The anatomy of the control of conception Conclusion and program. *Bibliography* The atlas proper. Index.

Note A very detailed work containing 175 figures, some of which contain more than ten drawings and few of which contain only one. The drawings are original, but some are based on illustrative matter which has appeared elsewhere. Most of them are sketches rather than fully developed anatomical studies. The drawings are preceded by a text in which they are described and discussed with references to an extensive bibliography This text accounts for the pagination given above the illustrations are printed on unnumbered pages of which there are approximately 200. The presentation is slanted toward the general practitioner of medicine whose practice includes sex education and advice to married couples. However it is the fullest treatment of the subject available and therefore is potentially of value to any medical school graduate in need of information on the subject.

ENGLE, EARL T, editor

Pregnancy wastage. Proceedings of a conference sponsored by the Committee on Human Reproduction, National Research Council, in behalf of the National Committee on Maternal Health, Inc. Springfield, Ill Charles C Thomas, 1953 254 p illus 23 cm $8 50 2791

Content Early abnormal embryos of the rhesus monkey by G. W Corner and G. W Bartelmez. Fertilization failure and embryonic death in domestic animals, by L. E. Casida. Gamete age at the time of fertilization and the course of gestation in mammals, by W C. Young The role of the endometrium in implantation and fetal growth, by E. C. Hughes and others. The in vitro metabolism of placental and fetal tissues, by C. A. Villee. Participation of vasoactive factors of renal and hepatic origin in essential hypertension and toxemia of pregnancy by E. Shorr and B. W Zweifach. The pathologic aspects of fetal death in utero, by R. E. L. Nesbitt, Jr and G. W Anderson ACTH and cortisone in pregnancy by J W Jailer Introduction to the statistics of abortion, by C Tietze. Some observations on the factors in the incidence of prematurity and fetal death, by L. Baumgartner and C. Erhardt. The role of heteroagglutination in pregnancy wastage, by P Levine. Contractility of the uterus, by A. Csapo. Indices of fetal maturity by S. H. Clifford and others. Pertinent factors in the declining perinatal death rate at the Chicago Lying-in Hospital by M. E. Davis and others. The relation of premature delivery to death in the neonatal period, by E. L. Potter

Note The conference of which this volume is product was concerned with various aspects of the sometime failure of fertilized mammalian eggs to develop into living individuals. Man was the mammal under consideration in most of the papers, but as the titles show some of the studies pertain to other mammals. In some of the papers, results of animal experimentation are recorded, but most are based on cases observed in medical practice. Some of the papers, such as that of Nesbitt and Anderson, "The pathologic aspects of fetal death in utero," are based on very extensive series of cases. The papers are accompanied by transcripts of the discussion at the conference and often by literature references.

FARRIS, EDMOND J

Human ovulation and fertility Philadelphia J B Lippincott Company 1956 159 p illus. 24 cm $6 50 2792

Content Activity at the time of ovulation. Rat hyperemia test for determination of ovulation time. Dating of ovulation by direct observation. Conception by isolated coitus following prediction of the day of ovulation by the rat test. Successful conceptions by homologous insemination. The day of ovulation as indicated by 100 conceptions (donor) Three hundred and sixty-four conceptions in relation to length of menstrual cycle. Prediction of day of 761 ovulations. The menstrual cycle. The days of ovulation—consecutive months. A formula for selecting the optimum time for conception. Control of conception. Temperature—compared with the rat test for prediction of human ovulation, and records of temperature change during pregnancy Period of gestation—114 primiparae and 15 multiparae. Improving the pattern of ovulation. Pregnancy testing in relation to ovulation. Information of use to the barren couple Literature cited. Index.

Note An important study of human ovulation written by the originator of the rat hyperemia test (also known as the Farris test) The primary purpose is to provide the basic information on the subject which physicians need in treating cases of infertility However the book contains wide range of information on ovulation and conception that is potentially of interest, not only to physicians but also to biologists in general. It is based on an extensive program of research, much of which was carried out under the author's direction. There are 55 tables of data and 12 figures. The book complements the author's Human fertility and problems of the male, White Plains, N Y Author's Press, 1950

HOOKER, DAVENPORT

The prenatal origin of behavior Porter lectures, series 18 Lawrence University of Kansas Press, 1952 143 p illus. 22 cm. (Physiological and morphological studies on human prenatal development. Publication no. 20) $2 50 2793

Content Fetal activity in infrahuman vertebrates. The sequence in human fetal activity The significance of structural and functional interrelationships in prenatal activity Notes. Acknowledgments. Reference list. Index of names. Subject index.

Note In the three lectures printed in this book the author, who is Chairman of the Department of Anatomy of the School of Medicine of the University of Pittsburgh, outlines what is known about the reflex actions and other activity of embryos and fetuses. The first two lectures are devoted chiefly to the responses elicited by definite stimuli such as stroking. In the third lecture, the author has covered interrelationships among such organ systems as the circulatory system, nervous system, and endocrine glands Some descriptions of the research methods by which the information has been obtained have been included There is a 14-page bibliography

NATIONAL RESEARCH COUNCIL COMMITTEE ON HUMAN REPRODUCTION

Studies on testis and ovary eggs and sperm Proceedings of a conference sponsored by the Committee on Human Reproduction, National Research Council, in behalf of the National Committee on Maternal Health, Inc. Edited by Earl T Engle. Springfield, Ill. Charles C Thomas, 1952 237 p. illus. 24 cm. $7 75 2794

Contents. Spermatogenesis in testes of men with blocked or absent efferent ducts, by W O. Nelson. Cytochemistry of human spermatogenesis, by H. Elftman. The Sertoli cell, by W W Scott and ... Semen quality in fertile marriage, by J. MacLeod ... M. Lynch, Jr. ... The metabolic machinery of sperm activity by D. W Bishop. The ... metabolic regulator in mammalian spermatozoa, by H. A Lardy ... New aspects of the relationship between the metabolism and motility of human spermatozoa, by J MacLeod. The morphological basis of ovarian function, by H. C Taylor Jr and others ... new estrogens, by R. Courrier Investigations into the transport of ... the ovary, by A. Westman. A cytochemical study of lipids in the ovaries of the rat and sow during the estrous cycle, by H. W Deane and W L. Barker The embryonic nature of the adult ovary, by B ... W Mossman. Semi-sterility in the mouse caused by radiation-induced chromosome changes, by G. D Snell. Genetically determined variations in male fertility in the house mouse, by L. C. Dunn List of members of the Conference

Note: A collection of original papers based chiefly on investigations made in recent years. Each paper is supplemented by excerpts from the discussion at the conference and, in most instances, by illustrations, tables, and literature references.

PATTEN BRADLEY M

Human embryology Second edition. With over 1400 drawings and photographs grouped as 453 illustrations and 2 plates, many in color New York The Blakiston Division McGraw Hill Book Company Inc., 1953 798 p. illus. (part col d) 26 cm $12 00 2795

Contents Introduction Reproductive organs' gametogenesis Sexual cycle and fertilization Cleavage germ layers, and establishment of embryonic body Early differentiation of the body and establishing of organ systems Fetal membranes and placenta Age, growth, and changes in external form of body Twins double monsters and teratology Integumentary system. Connective tissues and skeletal system The muscular system. Development of the nervous system The sense organs. Development of the face and jaws and the teeth. Development of the digestive and respiratory systems. Body cavities and mesenteries. Ductless glands and pharyngeal derivatives. Development of the urogenital system. Development of the circulatory system Bibliography Supplement to bibliography 1945–1952. Index

Note. A well-organized and fully illustrated presentation specifically written for physicians and medical students. Relatively little space is given to theoretical and comparative aspects. Instead, fuller than usual treatments are given to aspects that are of special interest in medicine, such as ovulation, formulation of the embryo, change in the female's reproductive organs during pregnancy development of systems of organs—with emphasis on the later stages—in the embryo, twinning, double monsters and other abnormalities Many of the illustrations show sequences of developmental stages of organs and systems The first edition was published in 1946. The chapter entitled "Cleavage, germ layers, and establishment of embryonic body" was rewritten for the second edition so as to incorporate information on the very early stages of human embryos that has become available since the first edition was written. Also, the section on the development of the heart in the last chapter has been expanded. Most chapters have been carried over without change The number of illustrations has been greatly increased The supplementary bibliography also new in this edition, runs to 13 pages.

ROMMER, JACK JAY

Sterility—its cause and its treatment. Springfield, Ill Charles C Thomas 1952 424 p illus. (part col d) 26 cm. $12.50 2796

Contents: Part I, The infertile female: Historical background to sterility Physiology of coitus, orgasm, libido and fertilization. Anatomy and embryology Psychic trauma and fertility Causes of sterility—a summary and check-list. Other factors associated with fertility Fertility in relation to the size and structure of the sex organs. Gynecologic pathology and sterility The history and physical examination of sterile patients. Means of investigation of the infertile female. Sterility and the endocrines. Review of the female sex hormones. Menstruation and the menstrual cycle The medical treatment of infertility Office treatment of gynecologic conditions. Mechanical and other special means for treating sterility Surgery in the treatment of sterility Part II, The infertile male: The infertile male Male endocrinology The history and examination of the male. Therapy of male's infertility Index.

Note A comprehensive treatise into which the author has gathered information on such facets of the problem as the relation of economic status to fertility in addition to full coverage of anatomical, physiological, and clinical aspects. Diagnostic and therapeutic techniques are well described, and abundant literature references are supplied. There are 133 figures.

DICKINSON, ROBERT LATOU

Human sex anatomy a topographical hand atlas *Second edition* Baltimore The Williams & Wilkins Company, 1949 145 p illus 31 cm (National Committee on Maternal Health, Inc. Medical aspects of human fertility) $10 00 *2790*

Contents (abridged) Text and commentary Purpose and methods. The bony pelvis. Uterus, ovaries and tubes. The vagina. The vulva and breast. Mal genital anatomy The anatomy of coitus. The anatomy of the control of conception. Conclusion and program. Bibliography The atlas proper Index.

Note. A very detailed work containing 175 figures, some of which contain more than ten drawings and few of which contain only one. The drawings are original, but some are based on illustrative matter which has appeared elsewhere. Most of them are sketches rather than fully developed anatomical studies. The drawings are preceded by a text in which they are described and discussed with references to an *extensive bibliography* This text accounts for the pagination given above the illustrations are printed on unnumbered pages of which there are approximately 200. The presentation is slanted toward the general practitioner of medicine whose practice includes sex education and advice to married couples. However it is the fullest treatment of the subject vailable and therefore is potentially of value to any medical school graduat in need of information on the subject.

ENGLE, EARL T , editor

Pregnancy wastage. Proceedings of a conference sponsored by the Committee on Human Reproduction, National Research Council, in behalf of the National Committee on Maternal Health, Inc. Springfield Ill Charles C Thomas, 1953 254 p illus 23 cm. $8 50 *2791*

Content Early abnormal embryos f the rhesus monkey by G. W Corner and G. W Bartelmez. Fertilization failure and *embryonic death in domestic animals, by L. E. Casida. Gametogenesis* at the time of fertilization and the course of gestation in mammals, by W C. Young. The role f the endometrium in implantation and fetal growth, by E. C. Hughes and others. The *in vitro* metabolism of placental and fetal tissues, by C. A. Villee. Participation of vasoactive factors f renal and hepatic origin in essential hypertension and toxemia of pregnancy by E. Shorr and B. W Zweifach. The pathologic aspects of fetal death in utero, by R. E. L. Nesbitt, Jr and G. W Anderson. ACTH and cortisone in pregnancy by J W Jailer Introduction to the statistics f abortion, by C. Tietze. Some observations on the factors in the incidence of prematurity and fetal death, by L. Baumgartner and C. Erhardt. The rol of isoimmunization in pregnancy wastage, by *P Levine. Contractility of the uterus, by A. Csapo.* Indices of fetal maturity by S. H. Clifford and others. Pertinent factors in the declining perinatal death rate at the Chicago Lying-in Hospital, by M. E. Davis and others. The relation of premature delivery to death in the neonatal period, by E. L. Potter

Note. The conference of which this volume is product was concerned with various aspects f the sometime failure of fertilized mammalian eggs to develop into living individuals. Man was the mammal under consideration in most of the papers, but as the titles show some of the studies pertain to other mammals. In some of the papers, results of animal experimentation are recorded, but most are based on cases observed in medical practice. Some f the papers, such as that of Nesbitt and Anderson, "The pathologic aspects *of fetal death in utero are based on* very *extensive* series of cases. The papers are accompanied by transcripts f the discussion at the conference and often by literature references.

FARRIS, EDMOND J

Human ovulation and fertility Philadelphia J B Lippincott Company 1956 159 p illus. 24 cm. $6 50 *2792*

Contents Activity at the time of ovulation. Rat hyperemia test for determination of ovulation time. Dating of ovulation by direct observation. Conception by isolated coitus following prediction of the day of ovulation by the rat test. Successful conceptions by homologous insemination. The day of ovulation as indicated by 100 conceptions (donor) Three hundred and sixty-four conceptions in relation to length f menstrual cycle. Prediction of day f 761 ovulations. The menstrual cycle The days of ovulation —consecutive months. A form is for selecting the optimum time for conception. Control of conception Temperature—compared th the rat test for prediction of human ovulation, and records of temperature change during pregnancy Period of gestation—114 primiparae and 13 multiparae. Improving the pattern of ovulation. Pregnancy testing in relation to ovulation. Information of value to the barren couple. Literature cited. Index.

Note. An important study of human ovulation written by the originator of the rat hyperemia test (also known as the Farris test") The primary purpose is to provide the basic information on the subject which physicians need in treating cases of infertility However the book contains a wide range of information on *ovulation and conception* that is potentially of interest, not only to physicians but also to biologists in general. It is based on an extensive program of research, much of which was carried out under the uthor's direction. There are 53 tables of data and 12 figures. The book complements the author's *Human fertility and problems f the male.* White Plains, N Y Authors' Press, 1950

HOOKER, DAVENPORT

The prenatal origin of behavior Porter lectures, series 18 Lawrence University of Kansas Press, 1952 143 p illus. 22 cm. (Physiological and morphological studies on human prenatal development. Publication no. 20) $2 50 2793

Contents Fetal activity in infrahuman vertebrates. The sequence in human fetal activity The significance of structural and functional interrelationships in prenatal activity Notes. Acknowledgments. Reference list. Index of names. Subject index.

Note In the three lectures printed in this book the author who is Chairman of the Department of Anatomy f the School of Medicine of the *University of Pittsburgh*, outlines what is known about the reflex actions and other activity of embryos and fetuses. The first two lectures are devoted chiefly to the responses elicited by definite stimuli such as stroking. In the third lecture, the author has covered interrelationships among such organ systems as the circulatory system, ervous system, and endocrine glands. Some descriptions f the research methods by which the information has been obtained have been included. There is 14-page bibliography

NATIONAL RESEARCH COUNCIL. COMMITTEE ON HUMAN REPRODUCTION

Studies on testis and ovary eggs and sperm Proceedings of a conference sponsored by the Committee on Human Reproduction, National Research Council, in behalf of the National Committee on Maternal Health, Inc Edited by Earl T Engle. Springfield, Ill. Charles C Thomas 1952 237 p illus 24 cm. $7 75 2794

Contents Spermatogenesis in testes of men with blocked or absent efferent ducts, by W O. Nelson. Cytochemistry of human spermatogenesis, by H. Elftman. The Sertoli cell, by W W Scott and F M. Lynch, Jr. Semen quality in fertile marriage, by J MacLeod. The metabolic machinery of sperm activity by D W Bishop. The metabolic regulator in mammalian spermatozoa, by H. A. Lardy New aspects of the relationship between the metabolism and motility of human spermatozoa, by J MacLeod. The morphological base of ovarian function, by H. C. Taylor Jr and others. Allenolic acid, new estrogen, by R. Courrier Investigations into the transport of the ovum, by A. Westman. A cytochemical study of lipids in the ovaries of the rat and sow during the estrous cycle, by H. W Deane and W L. Barker The embryonic nature of the adult ovary by H W Mossman. Semi-sterility in the mouse caused by radiation induced chromosome changes, by G. D. Snell. Genetically determined variations in male fertility in the house mouse, by L. C. Dunn List of members of the Conference.

Note. A collection of original papers based chiefly on investigations made in recent years. Each paper is supplemented by excerpts from the discussion at the *conference* and, in most instances, by illustrations, tables, and literature references.

PHYSIOLOGY

GENERAL

AMBERSON, WILLIAM RUTHRAUFF, AND DIETRICH C SMITH

Outline of physiology Illustrations by the late Norris Jones and William Loechel Second edition Baltimore The Williams & Wilkins Company, 1948 502 p illus (part col'd) 26 cm $5 00 2797

Contents (abridged) Section I, The living cell The method and scope of physiology The electrolytes of living cells and tissues. Organic constituents of living cells and tissues. Section II, Basic phenomena of life Catalysis and enzymes. Oxidation and reduction Organic synthesis. The vitamins. Animal electricity Muscular contraction Section III Nervous integration of physiological function The nerve impulse. Sensations of the body Reflex pathways in the brain. Nervous control of posture and movement. Section IV Circulation, respiration and metabolism The heart. Nervous and chemical control of circulation. The transport of the respiratory gases. Metabolism and temperature regulation. Section V Digestion and excretion Chemical regulation Secretion of digestive juices Absorption in the digestive tract. The functions of the kidney Section VI, The endocrine glands and reproduction Index.

Note A textbook for introductory courses offered to college students. The authors have endeavored to make the subject interesting and easy to understand, and to these ends have included considerable historical material and have made their discussions of phenomena relatively full. However their treatment is not an over simplification. The book is suitable for students who are planning to prepare for professional work in physiology medicine, or general biology This edition contains several new chapters on topics that were not covered in the original edition, and there are other significant changes. No references to the literature are included.

AMERICAN PHYSIOLOGICAL SOCIETY

Perspectives in physiology an international symposium 1953 Edited by Ilza Veith Washington D C American Physiological Society 1954 171 p illus 21 cm $3 00 2798

Content Introduction by I. Veith. Limitations and future Summing up, by E. D Adrian Development and limitations of physiological research, by A. von Muralt. The organization of physiology by C. H. Best. A Russian view by K. M. Bykov The philosophic limitations of physiology by H. W Smith. The survey of physiological science, by R. W Gerard The present scene Argentina, by B A. Houssay Austria, by H. F H uter Denmark by K. Lundsgaard. Germany by P Hoffmann Italy by G. Stella. Japan by Y Kuno Mexico, by A. Rosenblueth. Sweden by G Liljestrand. Switzerland, by A von Muralt. United Kingdom, by R. A. Peters. The U ited States, by R W Gerard Yugoslavia, by A. Seliskar

Note I this book which is related to the comprehensive Survey of Physiological Sciences conducted by the American Physiological Society the current stat of the study of physiology is surveyed generally and also nation by nation The national papers outline the historical developments of physiological study within each nation as well as describe its contemporary organization, current state and prospects. Some outstanding physiologists are mentioned by name and leading journals, professional organizations, etc. are sometimes mentioned.

ANNUAL REVIEW OF PHYSIOLOGY Volume 18 Victor E Hall editor Frederick A Fuhrman and Arthur C Giese associate editor Palo Alto Annual Reviews, Inc. 1956 591 p 23 cm. $7 00 2799

Contents Prefatory chapter (trends in physiology as seen from South America) by B A. Houssay Neoplastic growth, by G Klein. Energy metabolism, by M. Kleiber Physiological aspects of genetics, by E. L. Tatum and S. R. Gross. The physiology of connective tissue, by A. Dorfman and M. B. Mathews. Muscle, by G. A. Feigen Respiration, by H Hermstra. Digestion, by B. Uvnäs. Peripheral circulation by B. Folkow Heart, by R. Schaefer The kidney by F R. Winton. Liver by R. W Brauer Central and synaptic transmission (pharmacological aspects) by W L. M Perry Somatic functions of the nervous system, by P Dell and M. Bonvallet. Visceral functions of the nervous system, by R. P Ahlquist. Higher functions of the nervous system, by H. Jasper and others. Visceral receptors, by C. Heymans and G R. de Vleeschhouwer Pituitary-adrenal relationships, by C. N. H Long. Reproduction, by R. O Greep Thyroid, by R. Michel Effects of radiation on mammals, by E. P Cronkite and V P Bond. Comparative physiology (behavior) by D S. Lehrman Author index. Subject index.

Note The volumes in this series usually follow an established pattern. Each one consists of monographic reviews of the recent international literature pertinent to a topic in physiology All are addressed to graduate physiologists and to scientists in related fields and are means whereby a worker in one area can keep abreast of developments in tangential areas. The present volume was planned during the nineteenth International Congress of Physiology at Montreal and has more of an international flavor than usual. Only 10 of the chapter authors are resident in the United States of America. Other authors are from Sweden, England, France Argentina, Belgium, Canada, Germany and the Netherlands. Furthermore the first paper written by Dr B A. Houssay of Argentina, is not a literature survey although it does include a bibliography it is an outline of the historical development and current status of research in physiology in South America, and the relation of South American activity to that of the rest of the world. Of the 21 other papers in the volume some, such as Klein's "Neoplastic growth, review the literature of a considerable span of years while others, such as Schaefer's "Heart, cover the literature of only a single year.

BARD, PHILIP, editor

Medical physiology With 438 illustrations, five in color Tenth edition. Collaborators Henry C Bazett and others. St. Louis The C V Mosby Company, 1956 1 421 p illus. (part col d) 26 cm $14 00 2800

Content (abridged) Part I, The circulation, by H. C. Bazett and P Bard The blood. The heart. Cardiac output. Pressure and flow in the arteries. Vasomotor control of the arteries and arterioles. The regulation of the systemic circulation. Lymph. The blood supply of special regions. Blood volume, hemorrhage and shock, by M. I. Gregersen Part II, The respiration, by C. F Schmidt Gas exchange in the lungs. Transport of the respiratory gases by the blood. The respiratory center The interplay between nervous and chemical factors in the regulation of respiration. Abnormal types of respiration. Poisonous effects of nitrogen, oxygen, and carbon dioxide. Part III, The physiology of the alimentary tract, by E. S. Nasset Digestion in the mouth Digestion in the stomach. Secretions in the small intestine. Absorption from the small intestine The movements of the small intestine. The colon Part IV Metabolism and nutrition, by C. L. Gemmill Energy metabolism. Tissue metabolism. The metabolism of carbohydrates The chemistry of muscular contraction. General protein metabolism The metabolism of lipids. Vitamins. The physiology of muscular exercise. Body temperature regulation, by P Bard. Part The distribution and regulation of body fluids, by M. I. Gregersen Total body water and the fluid compartments. The kidney Part VI, The endocrine glands, by R. G. Hoskins. Part VII, The neuromuscular system, by H J Curtis Electrical excitation and the relation of stimulus to response. Conduction in nerve and muscle Transmission of excitation at the neuromyal junction. Part VIII, The central nervous system, by P Bard Receptor organs and their changes in sensory nerves. Discharges in motor neurons. Synaptic transmission, by V B Mountcastle. The reflex activity of the spinal cord, by V B Mountcastle. Postural coordination, brain

Contents (abridged). Section I, Principles of nervous activity, by D. P. C. Lloyd: The nerve membrane, excitation, and impulse conduction. Nerve [illegible] and metabolism. Special physiology of nerves and tracts. Special properties of the [illegible] and [illegible]. [illegible] mechanisms. Principles of spinal reflex [illegible]. Section II, Muscle. Functional activity of muscle, by S. Gelfan. Section III, Energy transformations in muscle, by A. E. [illegible]. Section IV, Central nervous system—[illegible] functions, by J. F. [illegible]. [illegible] and energy transformations in nerve cells, by D. [illegible]. The human spinal cord—spinal [illegible], by J. F. Fulton. [illegible] rigidity and the posture. [illegible] and nervous [illegible], by J. F. Fulton. Hypothalamus—[illegible] and [illegible] functions, by J. F. Fulton. Cerebral cortex—structure and motor functions, by J. F. Fulton. Basal ganglia and cerebellum, by J. F. Fulton. Section V, The nervous system—sensory functions, by T. C. Ruch. [illegible], by T. C. Ruch. Pathophysiology of pain, by T. C. Ruch. Taste, olfaction, and visceral sensation, by H. D. Patton. The eye as an optical instrument, by F. W. Weymouth. Vision, by T. C. Ruch. [illegible] and [illegible] pathways, by T. C. Ruch. [illegible] and the cerebral cortex in primates, by T. C. Ruch. Section VI, Properties and constituents of the blood, by D. L. [illegible]. General properties of blood—the formed elements, by H. P. Wright. Coagulation of blood, by R. [illegible]. Section VII, Physiology of the organs of circulation of the blood and lymph, by D. H. Barron. The capillaries and the lymphatics, by E. [illegible]. Hemodynamics, by R. [illegible]. Mechanical events of the cardiac cycle, by H. E. Hoff. Electrical correlates of the cardiac cycle, by L. H. Nahum. Nutrition of the heart, by H. E. Hoff. The pressure gradient in the vascular system—its establishment and maintenance, by D. H. Patton. Vasomotor regulation, by D. H. Barron. Section VIII, Respiration, by H. E. Hoff. Anatomy and physics of respiration, by L. F. Nims. The [illegible] of respiration, by H. E. Hoff and C. G. Breckenridge. Section IX, Body fluids and kidney function, by W. D. Wallace. Physiology of body fluids, by R. [illegible]. The kidney, by W. D. [illegible]. [illegible] fluid, by R. B. [illegible]. Section X, Physiology of the digestive system, by P. F. Fenton, and G. R. Cowgill. The mouth and esophagus. The stomach. The [illegible]. Section XI, Metabolism and nutrition, by J. R. Brobeck. Energy exchange. Intermediary metabolism. Nutrition. Section XII, The endocrine system, by J. A. Russell. The hormones. The hypophysis. The pancreas. The adrenals. The thyroid gland. Section XIII, Physiology of reproduction, by T. R. Forbes. Reproduction in the female, by T. R. Forbes. Reproduction in the male, by C. W. Hooker. Index.

Note. Formerly [illegible] textbook of medicine, students and advanced students of biology, this classic work is useful to any [illegible] whose interests or profession require a detailed [illegible] of the current knowledge of physiology. It is organized, as shown above, in 13 sections, each of which was, in this edition, the responsibility under the general editor of the [illegible] [illegible] given in the section title. The sections are composed of 64 chapters, each one signed with the name of an eminent authority. The treatment of specific topics is [illegible] but detailed. Selected references to the literature are given in all chapters. The first edition of the book was written by W. H. Howell and published in 1905. The [illegible] edition under the same editorship as the [illegible] edition was published in [illegible]. In comparison to the [illegible] edition, the [illegible] edition contains one new chapter and seven chapters carried over have been [illegible] rewritten. Less extensive changes have been made in some of the chapters, and recent literature has been added to the bibliographies. The number of figures is 602.

GUYTON, ARTHUR C.

Textbook of medical physiology. Illustrated. Philadelphia, W. B. Saunders Company, 1956. 1030 p. illus. 26 cm. $13.50 2811

Contents (abridged). Part I, [illegible] physiology and [illegible] to human physiology. Part II, Nerve and muscle physiology. Part III, The circulation. Part IV, Body fluids and the kidneys. Part V, The blood cells, immunity, [illegible], and blood types. Part VI, Respiration. Part VII, Neurophysiology. Part VIII, The special senses. Part IX, Digestion, metabolism, and energy. Part X, Endocrinology. Part XI, Radiation. Index.

Note. The author of this relatively new textbook of physiology is Chairman of the Department of Physiology and Biophysics, the School of Medicine of the University of Mississippi, and the work is based on many years of teaching experience. The treatment is less [illegible] than some texts written for medical students, but the book is [illegible] and, nevertheless, [illegible] physiology and pathologic physiology are covered. The [illegible] is concise but is nevertheless readable. Two sizes of type have been used to distinguish the most important material from that of lesser importance. Extensive illustrations are included, and there are 575 figures.

HAMILTON, WILLIAM FERGUSON

Textbook of human physiology. With 139 illustrations. Second edition. Philadelphia, F. A. Davis Company, 1949. 675 p. illus. 24 cm. $7.00 2812

Contents (abridged). The process of excitation. The organization of reflex pathways. [illegible] pathways in man. The efferent pathways. General functions of the central nervous system. General functions of [illegible]. Cutaneous sensibility and pain. The sensations of taste and smell. Posture and equilibrium. Hearing. Radiation and vision. Hunger, thirst, [illegible], and the emotional [illegible]. [illegible] The [illegible] of the [illegible]. Respiratory functions of the blood. Abnormal [illegible] in respiration. The blood. The pumping action of the heart. The [illegible] of the heart. Arterial pressure [illegible]. Measurement and [illegible] of the circulation rate. The [illegible] of the mean blood pressure. [illegible] of the [illegible]. [illegible]. The digestive movements. Digestion, absorption, and secretion. The fluids of the body. The functions of the kidney. Metabolism. The endocrine system. Index.

Note. This book is the result of [illegible] effort on the part of the author to produce a [illegible] of the main physiological principles. [illegible] the traditional [illegible] and detailed type of textbook. The typical chapter is an outline in which only the main facts are stated, but the discussion is supplemented by a selected list of references to lengthier treatments. Discussions are fewer than in the traditional large type of text, and there are no colored plates. The book is well adapted for use in introductory courses [illegible] text [illegible] and to supplementary reading by students in other fields than physiology who find themselves in need of a survey of physiology. The author is Professor of Physiology in the School of Medicine of the University of Georgia.

GERARD, RALPH WALDO

The body functions: physiology. New York, John Wiley & Sons, Inc., 1941. 289 p. illus. 22 cm. (The sciences: a survey course for colleges, edited by Gerald Wendt) $3.50. 2810

Contents. Part [illegible] Muscle and other effectors. Nerves and the nerve impulse. Stimulus and response. [illegible] Part [illegible] Circulation. Gas exchange. Foods and wastes. Protection and [illegible] Behavior and mind. Appendix. Bibliography. Glossary. Index.

Note. This work is a [illegible] survey of physiology on the basis of the modern [illegible], in line with the present-day emphasis upon function rather than anatomy. Respiration, nutrition, and reproduction are analyzed into their simple component processes, and are established as the basis of [illegible]. The informal, [illegible] style makes the book suitable for the layman, as well as [illegible] beginning study of the subject.

JOSIAH MACY, JR., FOUNDATION

Problems of aging. Transactions of the fifteenth conference, January 20, 21 and 22, 1953, Princeton, N. J. Edited by Nathan W. Shock. New York. Sponsored by the Josiah Macy, Jr., Foundation, 1954. 213 p. illus. 24 cm. $4.25 2813

Contents. Introductory remarks, by [illegible]. [illegible] structure, by W. Andrew. Group interchange. References. Some biochemical studies on the process of aging, by B. F. Chow. Group interchange. References. The role of comparative physiology in studies of aging, by F. Bourlière. Group interchange. References. A student of aging looks at the Macy Foundation for [illegible] years, by C. M. McCay. Cumulative index 1949 through 1953.

Note. Participants in this conference were drawn from a number of scientific disciplines, including anatomy, pathology, surgery, physiology and biochemistry. The [illegible] [illegible] discussed (and [illegible] in this volume) are named in the above Contents. However, the conference was an informal one in which the participants questions and remarks ran to several times more [illegible] than the reports upon which the discussion were focused. In short, the pattern of

cm (Experimental biology monographs) $6 90 2804

Contents Part I, Introduction Historical development of the concept. Supersensitivity—definitions and examples. Part II, Supersensitivity to chemical agents Smooth muscle—sympathetic stimulation—sympathetic inhibition—parasympathetic stimulation and inhibition. Melanophores. Glands. The heart. Striated muscle Sympathetic ganglia. Spinal neurons. Coordinating centers. Part III, Supersensitivity to nerve impulses Smooth muscle. Submaxillary gland. Adrenal medulla. Sympathetic ganglia. Striated muscle. Spinal neurons. Part IV Possibly related phenomena The spontaneous activity of denervated structures. The crossed phrenic phenomenon. The deficiency of the discharges of the cut phrenic. Part V Theories and implications A law of denervation. Theories of sensitization—the determinism—the mechanism. Some implications of the law of denervation. References. Author index. Subject index.

Note A monograph on the physiological phenomenon of increased sensitivity to adrenalin and certain other chemicals that is exhibited by muscles and glands which have been denervated. Both the experimental results obtained by the authors in their investigations and the results of other research workers have been incorporated. The different types of supersensitivity are described and the clinical and pharmacological implications of vicarious chemical control are pointed out. The book is of fundamental interest in several areas of experimental biology and medicine. The list of references is 30 pages in length.

CANNON, WALTER BRADFORD

The wisdom of the body Revised and enlarged edition New York W W Norton and Company, Inc. 1939 333 p illus 22 cm $5 00 2805

Contents Preface. Preface to the second edition. Introduction. The fluid matrix of the body The safe-guarding of an effective fluid matrix. Thirst and hunger as means of assuring supplies. The constancy of the water content of the blood. The homeostasis of blood sugar The homeostasis of blood proteins. The homeostasis of blood fat. The homeostasis of blood calcium. The maintenance of an adequate oxygen supply The homeostasis of neutrality in the blood. The constancy of body temperature. The aging of homeostatic mechanisms. Natural defenses of the organism. The margin of safety in bodily structure and functions. The general functions of the two grand divisions of the nervous system. The role of the sympathico-adrenal system in homeostasis. The general features of bodily stabilization. Epilogue Relations of biological and social homeostasis. A list of publications from the physiological laboratory in Harvard University on which the present account is based. Index.

Note The first presentation for the general reader of the stabilizing devices by which our bodies are kept normal—a process the author calls homeostasis. This revised and enlarged edition incorporates new facts and developments in the seven years since the publication of the first edition Also the chapter on the effects of age on homeostatic mechanisms has been added.

CARLSON, ANTON J, AND VICTOR JOHNSON

The machinery of the body Fourth edition Chicago University of Chicago Press 1953 663 p illus 24 cm $5 50 2806

Contents The science of physiology The organization of protoplasm. Blood and the internal environment The work of the heart. Blood flow and blood pressure. Mechanisms and functions of breathing. The work of the alimentary canal. The history of foods in the body The action of muscle and nerve Mechanisms of correlation—the spinal cord and brain. Sensory mechanisms. Chemical correlation—the glands of internal secretion. Body defenses against disease Reproduction and early development. Selected references. The authors. Index.

Note An exceptionally good introductory book in physiology It is written at the college level and the first edition published in 1937 was one of the "new plan" textbooks developed by the University of Chicago. Although elementary the treatment is not superficial. The reader is afforded a fairly detailed view of the biochemistry and mechanisms of the human body Some of the gaps in the knowledge are also indicated. The book has an attractive format and is well indexed. The third edition was published in 1948. In this fourth edition the former chapter on the cell has been eliminated and much of its contents incorporated in other chapters. The division of the material in the various chapters into elementary and advanced has been discontinued. Otherwise the organization of the book is the same However many changes have been made both in the revision of older material and the addition of new topics. There are 323 figures in the fourth edition.

CURETON, THOMAS KIRK, JR.

Physical fitness of champion athletes. Assisted by Floyd Boys Norris L. Brookens Richard V Ganslen Maxwell R. Garret, Alfred W Hubbard, Paul Hunsicker, Frederick W Kasch William Kastrinos Benjamin H. Massey Henry J Montoye Nicolaas Strydom, Jacob G Wolf Herbert S Wolf Urbana University of Illinois Press 1951 458 p illus 28 cm $10 00 2807

Contents List of athletes tested. Additional data used for comparative purposes. Part I, Research objectives: The plan for physical fitness. Part II, The physique studies Body types of athletic champions. Anatomical proportions related to athletic performance. Analysis of the weight of champions. Part III, The motor fitness studies General motor fitness characteristics and strength of champions. Flexibility measurements of champions. Vertical jump reaction times of champions. Part IV Cardiac, vascular and metabolic studies *Measurements of heart size related to athletic performance.* The electrocardiogram as a test of fitness. The brachial pulse wave test of cardiovascular condition. Results of the cardiovascular tests. Breath-holding as a test of cardiovascular condition The lying basal metabolism test of fitness. The quiet sitting metabolic rate test and determination of cardiac output. Treadmill tests of maximal physical efficiency Metabolic variations—a control experiment. Appendices. Index.

Note This book is a report in detail of tests of various aspects of physical fitness carried out in the *Physical Fitness Research* Laboratory of the School of Physical Education of the University of Illinois. The subjects were United States Olympic athletes, national champion athletes, members of college athletic teams, and healthy young men not accomplished in athletics. The wide range of the study is apparent in the titles of the parts and chapters listed above. Techniques are explicitly described. Results are presented in an extensive series of charts and tables, and are interpreted in a lengthy text. Literature references are given. Photographs of and data on individual athletes including their somatic measurements and calculated organic efficiencies are included in the appendix

DRINKER, CECIL K

The clinical physiology of the lungs. Springfield, Ill Charles C Thomas, 1954 84 p. illus (part col d) 24 cm. $5 50 2808

Content The pulmonary artery and arterioles The pulmonary veins and capillaries. The bronchi and bronchioles. The nerves in the lungs and their effects on breathing and circulation. The lymphatics of the lungs and pleural surfaces

Note A short, easily readable study of the basic structural components of the lung and of their roles in the adaptation of the lung to breathing and to the circulation of the blood. It was developed from a course of lectures given by the author in 1950 at the Medical College of the State of South Carolina. Although it is an independent study it complements the author's *Pulmonary edema and inflammation* 1945 It incorporates much knowledge from experimental psychology including both the author's own work in this field and the work of others. The title notwithstanding, applications to clinical medicine are not stressed.

FULTON, JOHN F, editor

A textbook of physiology Edited by John F Fulton with the collaboration of Donald H. Barron William D Blake, John R. Brobeck George R. Cowgill Paul F Fenton Thomas R Forbes Samuel Gelfan David I. Hitchcock Hebbel E. Hoff David P C. Lloyd, Theodore C Ruch and Jane A. Russell Seventeenth edition illustrated Philadelphia W B Saunders Company 1955 1 275 p illus 26 cm $13 50 2809

studies during hypothermia, by J. W. Severinghaus and M. Stupfel. The gas transport system in hypothermia, by F. F. Kao. Hypothermia in the unanesthetized poikilothermic dog, by A. D. Keller. Physiology of hibernation in mammals, by C. P. Lyman and P. O. Chatfield. Rewarming and recovery of hypothermic, supercooled, and frozen mammals, by R. K. Andjus and others. Part II, The effects of hypothermia on specific systems. A. Cardiovascular: Cardiovascular function in deep hypothermia, by H. E. D'Amato. The circulation during rewarming, by R. Berne. Coronary blood flow during hypothermia, by R. M. Berne. B, Endocrine: The effect of hypothermia on pituitary ACTH release and on adrenal cortical and medullary secretion in the dog, by D. M. Hume and others. The effect of hypothermia on the peripheral serum levels of free 17-hydroxycorticoids in the dog, and in man, by W. F. Bernhard. C, Hematology: Some problems of hematology in hypothermia—an introduction, by W. H. Crosby Jr. The effect of hypothermia on platelets and white cells in dogs, by T. J. Villalobos and others. D, Kidney: Renal functional response to hypothermia and ischemia in man and dog, by J. H. Moyer and others. Effect of hypothermia on the kidney, by R. K. Andjus. E, Liver: Hypothermia and temporary occlusion of the hepatic circulation, by K. E. Fineberg and F. J. Lewis. Effect of hypothermia on metabolism and drug detoxication in the isolated perfused rabbit liver, by I. Gray and others. The effect of hypothermia on the isolated perfused rat liver, by R. W. Brauer. F, Nervous system: Effects of cold on the nervous system, by J. D. McQueen. Effects of changes in arterial pCO_2 on cerebral blood flow and metabolism during hypothermia, by J. Kleinerman. Hypothermia and the central nervous system, by H. L. Rosomoff. Hypothermia and the nervous system, by C. McC. Brooks. Experimental and clinical observations on the use of hypothermia to prevent ischemic damage to the central nervous system, by R. G. Parrish and M. E. De Bakey. Fibrillation and fibrillation of ... during cooling in dogs, by J. M. Jensen and others. Review and appraisal of Parts I and II, by J. W. Severinghaus. Review and appraisal of Parts I and II, by S. M. Horvath. Part III, Myocardial irritability and hypothermia. Hypothermia and the physiology of cardiac excitability, by C. McC. Brooks. Temperature effects on cardiac transmembrane potentials, by B. F. Hoffman. Myocardial irritability in experimental immersion hypothermia, by R. H. Fasquez and R. G. Covino. Review and appraisal of Part III, by C. McC. Brooks and B. F. Hoffman. Part IV, Clinical application of induced hypothermia. Hypothermia in neurosurgery, by L. H. Botterell and W. M. Lougheed. Effect of hypothermia on tolerance to hemorrhagic shock, by E. W. Frankson and others. Experimental observations on the influence of hypothermia and autonomic blocking agents on hemorrhagic shock, by R. C. Overton and M. E. De Bakey. Hypothermia and experimental myocardial infarction, by C. Hagerty. Treatment of the severely ill, febrile patient with surface cooling, by F. J. Lewis and others. The use of hypothermia in cardiac surgery, by H. Swan. Review and appraisal of Part IV, by R. D. Dripps. Part V, Techniques of inducing hypothermia. Problems in methods of inducing hypothermia by use of external cooling, by W. H. Moffat Jr. and J. F. Dammann. Problems in methods of inducing hypothermia by use of drugs and internal cooling, by J. F. Dammann and W. H. Moffat. Review and appraisal of Part V, by R. D. Dripps. Summary. Index of authors and discussants.

Note A wide range of knowledge from the laboratory, from animal experimentation, and from clinical experience is presented in this volume. Some of the papers, for instance, Lyman and Chatfield's "Physiology of hibernation in mammals," are primarily literature surveys. Others, such as Swan's "The use of hypothermia in cardiac surgery," are summaries of clinical experience. Most of the papers include literature references, and many are accompanied by transcripts of the discussion during the symposium. The evaluatory articles which appear after each part of the symposium are most useful that the discussants. The authors of these articles both criticize the papers which were presented and summarize some of the findings. Unfortunately no index to the contents of the volume has been included.

Pace, Donald M., and Benjamin W. McCashland

College physiology. New York, Thomas Y. Crowell Company, 1956. 615 p. illus. 23 cm. $6.00 2819

Contents (Abridged): Part I, General: Basic phenomena of living organisms. The organization of animals. Part II, Structure and movement: The skeleton of mammals. Skeletal muscle. The chemistry of muscle contraction. Part III, Nervous coordination: Structure and function of the neuron. The spinal reflex system. The brain and its functions. The autonomic nervous system. Part IV, Receptors: Cutaneous and internal receptors. Chemoreceptors. Light receptors. The ear. Part V, The transport system: The fluid media of animals. Blood volume and problems in transfusion. The spleen. Lymph, blood coagulation. The heart. Shock and vasomotor activity. Part VI, Respiration: The regulation of breathing movements. The heat regulatory system. Part VII, Nutrition and elimination: The vitamins. The digestive system. Metabolism. Physiology of excretion. Part VIII, Endocrine glands and reproduction. Glossary-index.

Note A broad introduction designed for use in introductory courses. It is not comparative physiology, though the physiological processes discussed are, for the most part, presented as being common to animals in general. However, there is emphasis on human physiology, and chapters such as that on the heart are devoted exclusively to the human aspect. The authors' style reads well. There are 311 figures. The "glossary-index" combines definitions of terms with page references to where the terms are discussed in the volume. The authors are members of the faculty of the Department of Physiology of the University of Nebraska.

Prosser, Clifford Ladd, editor

Comparative animal physiology. By David W. Bishop, Frank A. Brown Jr., Theodore L. Jahn, C. Ladd Prosser, and Verner J. Wulff. Philadelphia, W. B. Saunders Company, 1950. 888 p. illus. 24 cm. $13.00 2819A

Contents: Introduction. Water. Inorganic ions. Protein specificity. Nutrition. Feeding and digestion. Nitrogen excretion. Respiration and metabolism. Respiratory functions of body fluids. Temperature: metabolic aspects and perception. Photoreception. Chemoreception. Phonoreception. Mechano- and equilibrium-reception. Circulation of body fluids. Muscle and electric organs. Ameboid movement. Cilia. Trichocysts and nematocysts. Bioluminescence. Chromatophores and color change. Endocrine mechanisms. Nervous systems. Index.

Note This book is both a textbook and a manual of reference. When used as a textbook it is suitable for upperclass undergraduate science students and first-year graduate students. Its usefulness as a reference book derives from its relatively full discussions of specific topics and its lengthy bibliographies. The reference value is enhanced by numbered cross-references from statements in the text to the bibliographies. Although the material is arranged by function and organ systems, the index includes the names of animals, for example "Echinoderms." Thus, the book can be used as a guide to the main facts and the literature pertinent to physiological functions in specific animals.

Rahn, Hermann, and Wallace O. Fenn

A graphical analysis of the respiratory gas exchange: the O_2-CO_2 diagram. Washington, D. C., The American Physiological Society, 1955. 38 p. illus. 27 cm. $4.00 2820

Contents: Introduction. Lung gases on the O_2-CO_2 diagram. Representation of blood gases on O_2-CO_2 diagram. Alveolar pathways. Special notes. Alveolar gas composition at altitude. Oxygen transport and cardiac output. Gas exchange in closed spaces. Bibliography. Appendix.

Note An important work for physiologists and scientists in other fields who are concerned with the study of respiration. It presents an original graphic approach to the solution of problems pertaining to oxygen-carbon dioxide quantities in tissues, lungs and blood under many conditions of breathing, including breathing at high altitudes and in enclosed spaces such as submarines. Seven folded charts and two transparent charts for overlaying them in the solution of specific problems are included.

Rogers, Charles Gardner

Textbook of comparative physiology. Second edition. New York, McGraw-Hill Book Company, Inc., 1938. 715 p. illus. (part col'd) 23 cm. (McGraw-Hill publications in the zoological sciences, A. F. Shull, consulting editor) $10.00 2821

Contents: Introduction. Solutions. Diffusion and osmosis. Protoplasm. The cell. The general phenomena of life. The transport system. Circulation of body fluids. Respiration. Enzymes and digestion. Secretion. The nutrition of animals. Absorption. Utilization of food materials in the body. Physiology of movement. Excretion. The physiology of coordination, adjustment, and regulation. The physiology of reproduction.

Note: A comparative survey of the principal physiological functions of animals of all groups, especially of the invertebrates. In the second edition the text was rearranged and rewritten to facilitate its use as a textbook as well as a handbook for technicians.

the conference was the same as of other conferences sponsored by the Josiah Macy Jr Foundation. Bibliographies organized on the standard pattern are included. Transactions of the first through sixth conferences were not published, and transactions of the 10th and 11th conferences are out of print. Those of the 12th, 13th, 14th, and 15th conferences are still available. The 15th conference was the final one on problems of aging.

Lee, Douglas Harry Kedgwin

The physiology of tissues and organs Springfield, Ill Charles C Thomas, 1950 159 p illus 23 cm $4 00 2814

Contents (abridged) Part i, Physiology of tissues Chemical factors in living processes. Physical factors in living processes. Cell multiplication and differentiation Nervous tissue. Muscular tissue. Epithelial tissues. Connective tissue cartilage and bone Blood. Endothelial tissues and the fibroblastic reaction. Part ii, Physiology of organs: Absorptive organs. Transferror organs. Storage organs. Mechanical effector organs. Chemical effector organs. Excretory organs. Organs of special sensation Organs of reproduction. Embryo, considered as an organ. Conclusion.

Note Essentially an outline of the physiological functions of specific tissues and tissue systems. Not only are the chapters short, but the style is very concise. Nevertheless, the fundamentals of physiology are well presented. The book is suitable for use in instruction or review for examinations and also as a source of quick reference in both personal and institutional libraries. The first edition was published in Australia and was designed for use by students in the University of Queensland. The author is a member of the faculty of the Johns Hopkins University

McMaster, Philip Duryee and others

Lymph. New York New York Academy of Sciences, 1946 203 p illus 23 cm (New York Academy of Sciences Annals Vol 46, p 679–882 1946) $2 75 2815

Contents Introduction, by P D McMaster Functional activity of the blood capillary bed, with special reference to visceral tissue by R. Chambers and B W Zweifach. Blood circulation in the subcutaneous tissue of the living bat's wing, by P A. Nicoll and R. L. Webb. Capillary permeability and the factors affecting the composition of capillary filtrate by E. M Landis. Intercellular substance in relation to tissue growth, by E. R. Clark. Conditions in the skin influencing interstitial fluid movement, lymph formation and lymph flow by P D McMaster The significance of lymphatic blockade in immunity by V Menkin Extravascular protein and the lymphatic system, by C. K. Drinker The role of the lymphocyte in the circulation of the lymph, by W E. Ehrich. The role of lymphocytes in normal and immune globulin production, and the mode of release of globulin from lymphocytes, by A. White and T F Dougherty

Note The papers comprising this volume were presented at a conference held under the auspices of the New York Academy of Sciences in April, 1945 Each paper discusses an aspect of the subject which is currently of interest and in which, in most cases, the paper's author has conducted original research. Each paper is supplemented by a bibliography and in some cases, a discussion by members of the conference There is no index.

Mitchell, Philip H

A textbook of general physiology Fifth edition New York McGraw Hill Book Company Inc. 1956 885 p illus 23 cm. (McGraw Hill publications in the zoological sciences E J Boell consulting editor) $10 50 2816

Content Excitation and inhibition. Physiology of contraction Functional units of nervous systems—neurons and protoneurons Reflexes and tropisms. Correlating action of the nervous system Receptors. Organic constituents of living matter Inorganic constituents of living matter Biological significance of water and other electrolytes. Physiological significance of hydrogen and hydroxyl ions. Surface action. The colloidal state Physicochemical structure of living matter Diffusion and osmosis, osmotic pressure Permeability of membranes and living cells. Synthetic processes in plants and animals. Catalysis and enzymes. Digestion. Chemistry of the blood and lymph. Circulation of the blood. Respiration. Physiological oxidations. Intermediary metabolism. Excretion. Nutritional requirements. Chemical regulation by internal secretions Index.

Note A standard textbook which has been used in American colleges since 1923 It is designed for students beginning the study of the subject and who have had introductory courses in college biology physics, and general chemistry The word "general" in the title has been taken literally and topics from both animal and plant physiology are included. Emphasis is placed on physiological processes rather than on the physiology of organs. The fourth edition was published in 1948. This edition the manuscript of which was completed before the author's death, contains many revisions and additions. It has been printed from re-set type and given a new attractive format

Nash, Joseph

The new second edition of Nash's Surgical physiology The first edition was written by Joseph Nash The second edition was revised and edited by Brian Blades With the collaboration of *Edward J Beattie, jr and others.* Springfield, Ill Charles C Thomas 1953 686 p illus 25 cm. $12 50 2817

Contents General physiology of the circulation, by E. J. Beattie, jr Recent advances in the surgery of the cardiovascular system, by E. J Beattie, jr Blood vessels, by L. Gerber Circulatory disturbances in surgery Physiology of burns and tissue repair, by F C Meloy and G. Letterman Mechanics of respiration, by B. Blades Control of respiration. The salivary glands, esophagus and stomach, by W S. McCune The intestines. The pancreas, by V M. Levine The liver by V M. Levine. Vitamins in surgery by V M. Levine General physiology of the body fluids, by J J Weinstein. Acid base balance. The kidney The endocrine glands, by W H. Gerwig, Jr The thyroid, by E. A. Gould. Afferent functions of the nervous system—the reflex arc. Efferent functions of the nervous system—control of the skeletal muscle. Nerve degeneration and regeneration—the cerebrospinal fluid. Physiology of the autonomic nervous system, by H. V Rizzoli. Autonomic control of certain systems, by H. V Rizzoli. Physiological considerations in autonomic system surgery by H. V Rizzoli. Bibliography References. Subject index. Author index.

Note Physiological knowledge is directly related to surgery in this book. As the chapter titles listed in full above show the material is arranged largely according to systems and organs, but chapters are also included on general physiological phenomena such as the control of respiration the autonomic control of the circulatory system, the alimentary system, and the urinary system. The style is direct and readable. The first edition was published in 1942 and [w]as reprinted five times. Some of the chapters have been carried over t[o] this second edition [w]ithout change except for revisions of their bibliographies. However the contributed chapters, those with authors' names [a]ttached in the above contents, are new The length of the volume has been increased by more than 200 pages.

National Research Council Division of Medical Sciences

The physiology of induced hypothermia. Proceedings of a symposium, 28–29 October 1955, convened by the Division of Medical Sciences, National Academy of Sciences—National Research Council with the sponsorship of the United States Army Navy and Air Force. Robert D Dripps, chairman and editor Washington, D C. National Academy of Sciences—National Research Council, 1956 447 p illus 26 cm (National Academy of Sciences—National Research Council Publication 451) $3 50 2818

Content Part i, General physicochemical and physiologic considerations of hypothermia Some considerations of physicochemical factors in hypothermia, by D E. S. Brown. Effects of hypothermia on general metabolism by S. M. Horvath and G. B. Spurr. The effect of low temperatures upon intracellular potassium in isolated mammalian tissues, by I. M Taylor Potassium exchange in perfused mammalian skeletal muscle, by E. M Renkin. Electrolyte transfer during hypothermia, by F Gollan. Myocardial balance of potassium, by H S ... Effects of low body temperature on tissue oxygen utilization, by E. F Adolph Oxygen consumption of mammalian tissues at reduced temperatures, by F A. Fuhrman. Respiratory physiology

Contents: Introduction, by E. D. Churchill. Internal state of severely wounded men on entry to the most forward hospital. Liver function in the severely wounded. Renal function in the severely wounded. Diagnosis of lower nephron nephrosis resulting from traumatic wounds and shock ("shock kidney"). Clinical, physiologic, and biochemic correlation in lower nephron nephrosis. Treatment of lower nephron nephrosis. Effect of alkalis in treatment of traumatic shock. Pigment excretion in severely wounded men. Pathology of the kidney in traumatic shock. Sulfonamides in relation to "shock kidney". The crush syndrome in battle casualties. General pathology of traumatic shock. Appendixes: Organization and operation of the Board for the Study of the Severely Wounded. The field laboratory. Biochemic methods. Survey of case records. Index.

Note: The data for this clinical study were collected chiefly in Italy during 1944–1945. It had been found by the Surgical Service that recovery of some of the severely wounded was handicapped by renal lesions complicating the original lesion. A special clinical study of the resuscitation of the wounded was therefore initiated for the boards of Medical Service both in the Mediterranean Theater and elsewhere. Based upon studies of scores of wounded personnel, the results as published in this volume form a contribution to medical knowledge which is especially significant because severe surgical shock following trauma is not commonly encountered in the medical practice of any group during peacetime.

Van Liere, Edward Jerald

Anoxia, its effect on the body. Chicago University of Chicago Press 1942 269 p. illus. 23 cm. $6.00 2828

Contents: Historical. Definition of terms. Classification of anoxia. Expression of the degree of anoxia. Experimental methods of producing anoxia. General considerations. Effect of anoxia on the blood. Chemical changes in the blood during anoxia. Effect of anoxia on the heart and circulation, on blood pressure, on the lymph, on respiration. Mountain sickness and altitude sickness. Acclimatization. Effect of anoxia on the alimentary tract. Anoxia and the secretion of urine. Effect of anoxia on the endocrine glands. Metabolism and anoxia. Anoxia and heat regulation. Anoxia and exercise. Effect of anoxia on water distribution in the body. Effect of anoxia on the nervous system. Index.

Note: Lack of oxygen, a subject of increasing importance due to aviation, is here considered systematically in connection with all the physiologic processes of the body. Anoxemia is also recognized more and more as a concomitant symptom of many diseases.

Wiggers, Carl John

Physiology in health and disease. Fifth edition, thoroughly revised. Illustrated with 2/9 engravings. Philadelphia Lea & Febiger 1949 1,242 p. illus. 24 cm. $10.00 2829

Contents (abridged): Section I, Muscular contraction and associated phenomena. Physiology of skeletal muscle. Functions of cardiac and smooth muscle. Bioenergetics. Bioelectric phenomena. Section II, The physiology of the peripheral and central nervous systems. Physiology of nerve. Physiological purposes of reflex actions and their disturbances in disease. Control of voluntary and involuntary movements. Somatic sensibilities and their disturbances. Special sense functions. Associatory functions of the cerebral cortex. The physiological basis for psychosomatic reactions. Section III, The blood. Section IV, Respiration. Respiratory movements and mechanics of lung ventilation. Interchange of gases in the lungs and tissues and their transportation by the blood. Chemical disturbances of respiration. Aviation physiology. Section V, Heart and circulation. Excitation of the mammalian heart and its nervous control. Electrocardiography. Hemodynamic principles. Nervous and chemical control of blood pressure. Dynamics of the heart beat. Hypertension. The pulmonary circulation. Coronary circulation. Dynamics of valvular lesions. Hemorrhage and shock. Section VI, Physiology of the alimentary tract. Section VII, Metabolism and nutrition. Digestion, absorption and assimilation. The nutritional and energy balances of the body. Hyperthermia and hypothermia. Vitamins in nutrition. Section VIII, Excretion and body fluids. Section IX, Endocrine organs. Humoral control of functions by hormones. Pituitary hormones and disorders. Diabetes, insulin, and other hormones. Hormones of the adrenal medulla and cortex. The thyroid gland and its hormone. Sexual functions and their hormonal control. Physiology of pregnancy, labor and lactation. Index.

Note: A standard textbook of the medium type. Its special purpose is to correlate physiology and clinical medicine for medical students, internes, and investigators in both medicine and physiology. A wide range of information is presented rather concisely with citations of fuller discussion in published books and papers. There is more emphasis on physiological experiments which demonstrate natural reactions. This ed. has represents an extensive revision of much of the text overtaken, 60 new illustrations, and approximately 1,000 new literature references.

Winslow, Charles Edward Amory and L. P. Herrington

Temperature and human life. Princeton Princeton University Press 1949 272 p. illus. 23 cm. $4.00 2830

Contents: Production of heat in the life process. Avenues of heat loss from the body. The adjustments of the human body to varying thermal conditions. The thermal protective influence of clothing. The objectives of air conditioning. Methods of air conditioning. The influence of climate and season upon health. Glossary. References. Index.

Note: An inclusive presentation of current knowledge pertaining to the effects of temperature and related environmental conditions on life processes in human beings. Although it is based on an extensive literature survey and is written mainly from the physiological viewpoint, it is easy to read. This quality makes it a suitable book for such readers as medical practitioners, heating and ventilating engineers, and persons concerned with the design of military clothing. Engineers and physiologists in need of a reliable well-documented survey of the subject will also find it useful.

Wolf, Stewart and Harold G. Wolff

Human gastric function, an experimental study of a man and his stomach. With a foreword by Walter B. Cannon. Second edition revised and enlarged. New York Oxford University Press 1947 262 p. illus. (part col'd) 24 cm. $5.00 2831

Contents: The appearance and behavior of a stomach after forty-seven years of feeding through a gastric fistula. The study of gastric function, method of collection and interpretation of data. Correlation of motor activity, secretion, and blood flow. The influence of common physical and chemical agents on gastric function. Further data on the effects of chemical agents and other influences on gastric function and on the gastric mucosa. The background and personality of the subject. Changes in gastric function in relation to various situations and accompanying emotional states. Further correlation of gastric function with life situations. Gastric emptying time. Sensation in the stomach and the mechanisms underlying gastric symptoms. The gastric mucosa, gastritis, and ulcer. The effect of emotions on gastric function (with the collaboration of W. De W. Andrus). Formulation. Appendix. Index.

Note: A famous study of interrelations between emotional states and gastric activity. It was based on observations and experiments on a patient with gastric fistula. This man, who first came under the observation of the authors at the age of 57, had had a gastrostomy at the age of nine and during approximately 47 years had fed himself by means of a funnel inserted into the fistula. The authors' studies extended over a period of years. While the patient was an employee of New York Hospital and at the same time lived at home and maintained his position as the head of a family. The effects of the emotional crises of family living were studied as well as the reaction to planned experiments in the hospital. The findings are correlated with the findings of other researchers as published in the literature. Other noted cases of gastric fistula, including William Beaumont's famous observations on Alexis St. Martin, are outlined in the appendix. The first edition was published in 1943. Three new chapters were added in this second edition, and some changes were made to chapters carried over from the first edition, the augmentations and revisions being based on further observations on the principal subject and upon several other subjects.

Youmans, William Barton

Basic medical physiology. Chicago The Year Book Publishers, Inc., 1952 436 p. illus. 24 cm. $7.50 2832

Contents (abridged): Section I, Excitation, conduction and response. Stimulation and response of muscle and nerve. Transmission of excitation at the skeletal neuromuscular junction. Transmission of neural influences to visceral effector cells. Receptors, reflex arc conduction and reflex action. Section II, Circulation. General plan of the circulatory system. Physiology of the heart. Control of circulation. Arterial blood pressure. Cardiac output. Venous pressure and venous pulse. Blood. Section III, Respiration. Uptake

ROTHMAN, STEPHEN

Physiology and biochemistry of the skin Chicago University of Chicago Press, 1954 741 p illus 25 cm (The University of Chicago Committee on Publications in Biology and Medicine, Emmet R Bay and others) $19 50 2822

Content Mechanical properties. Electrical behavior Percutaneous absorption. Circulation and vascular reactions. Sensory functions. Sweat secretion. Composition of eccrine sweat and aqueous surface film. pH of sweat and skin surface. Insensible water loss. The role of the skin in thermoregulation. The sweat-retention syndrome. Sebaceous-gland excretion Composition of the lipid surface film Nitrogenous constituents general data. Epidermal proteins. The keratinization process. Collagen reticulin, and elastin by Z. Fetcher Connective-tissue ground substance, by O C. Wells. Carbohydrates. Lipid constituents. Water and electrolytes. Pigmentation, by A. L. Lorincz. Enzymes, by A. B Lerner Carbon dioxide delivery Biology of epidermal cells, by H Pinkus. Hair growth, by P Flesch. Nutritional influences, by A. L. Lorincz. Pathophysiology of blister formation. Subject index. Author index.

Note Designed "to serve dermatological research, this book is a fairly comprehensive survey of basic physiological and biochemical knowledge pertaining to the skin and particularly to its unique functions, such as sweat secretion, sebum formation and melanin production. Each of the chapters is compactly written and is accompanied by a long bibliography The bibliography appended to the chapter on sweat secretion—to take an example—contains 701 citations of the international literature and it is not the longest chapter bibliography in the volume. The subject index is very detailed, and the author index includes the names of all of the authors of cited literature.

SCHEER, BRADLEY TITUS

Comparative physiology New York John Wiley & Sons, Inc. 1948 563 p illus 22 cm $7 95 2823

Content The physiology of animals. Protozoa. Multicellular acoelomate animals. Mollusca. Annelida. Arthropoda (Crustacea and Limulus) Arthropoda (Insecta) Echinodermata. Vertebrata (vegetative functions) Vertebrata (animal functions) Summary Appendix. Species index. Subject index.

Note A compact survey of the physiology of the animal phyla named in the contents Designed for use in advanced college courses in comparative physiology It is also useful as a reference manual and guide to the literature. The author states that more than 1 000 original papers were consulted in the course of the book's preparation. Keyed references to the literature are included in the text.

SCHEER, BRADLEY TITUS

General physiology New York John Wiley & Sons Inc 1953 613 p illus. 23 cm $7 00 2824

Contents Part I, The physicochemical foundations of life The physical basis of vital activity The chemical basis of life. Colloidal systems. Physicochemical structure of cells. Part II, The chemical dynamics of life Biocatalysis. Catabolism. Anabolism and biosynthesis Metabolism—a dynamic picture of life. Part III, Energy transformation in cells and organisms Permeability Bioelectric potentials. Conversion of chemical to mechanical energy Physiological aspects of radiant energy Physiological aspects of radiant energy Part IV The development of organisms The physiology of fertilization Growth. Control of development. Mechanism of differentiation. Part The integration of the organism Excitation and conduction Nervous integration. Humoral integration. Bibliography Index.

Note Although an introduction to physiology this book is a more thorough and advanced treatment than is common in textbooks for first courses. It is designed for the instruction of college students who are preparing for careers in biology or medicine and who have completed basic courses in general biology physics and chemistry It condenses a wide range of experimental knowledge pertaining to the physics and chemistry of living organisms, and interprets its significance. The elementary descriptive matter sometimes found in introductory texts is subordinated to discussions of such matters as the effects of radiation on living cells and the mechanism of differentiation Throughout the volume statements and data are referenced to a bibliography containing 1 488 citations.

SHILLING, CHARLES W

The human machine, biological science for the armed services Annapolis United States Naval Institute 1955 292 p. illus. 27 cm. $5 00 2825

Content Part I, The construction and operation of the human machine The living organism. Mechanics of movement. Production of energy Mechanisms of temperature control. Information receptors. The reproductive mechanism. The communication system The potential of human performance. Part II Preventive maintenance and repair of the human machine Malfunction of the human machine. Alcohol tobacco, and drugs. Personal hygiene. Oral health. Preventive medicine. First-aid and emergency treatment. Part III The human machine as part of the war machine The physical world. Marine biology Underwater activity Aviation medicine. Twentieth century warfare. Military medical organization. Bibliography Index.

Note Although termed "biological science this book deals chiefly with the fundamentals of man physiology their applications in the maintenance of health, and the implications for military activity It was first designed for the instruction of midshipmen enrolled in the United States Naval Academy then was developed into text for courses offered to other military personnel as well. Fundamentals of human physiology are discussed in an elementary but mature fashion in the first part. In the second part, considerable space is devoted to applications of physiological knowledge in preventive medicine and emergency treatment. This section includes both diagrams and discussion of sanitary devices for military use. In the third part some aspects of modern warfare, such as life in submarines, are discussed from the standpoint of the adaptability and limitations of the human body

SYMPOSIUM ON PROBLEMS OF GERONTOLOGY

Proceedings of a symposium held under the auspices of The Johns Hopkins University School of Hygiene and Public Health and The National Vitamin Foundation Incorporated, New York City March 2 1954. New York The National Vitamin Foundation Inc. 1954 141 p illus 23 cm (Nutrition symposium series No 9) $2.50 2826

Contents Some physiological and biochemical aspects of aging, by N W Shock. Senescence as a sequel to adolescence, by A. I. Lansing F t metabolism—with particular reference to problems of aging, by H. J Deuel, jr Protein metabolism—with particular reference to problems of aging, by C. S. Davidson. Vitamin B₁₂ and aging, by B F Chow Blood and urine vitamin levels in the aged, by J E. Kirk Hemopoietic factors with reference to aging, by F H. Bethell. The hormones and metabolism, by C. N H. Long Endocrine stress and aging, by D J Ingle. Special nutritional problems of the aged, by H. A. Rafsky

Not The symposium of which this book is product was devoted to discussion of aging from a biological viewpoint; that is to say to the physiological and biochemical aspects, rather than to the social and psychological. Aging in man was the primary subject, but results from several studies on animals are included, and, in fact, Lansing's paper does not deal with man at all. A number of problems requiring further study are mentioned in the papers and discussions.

UNITED STATES ARMY BOARD FOR THE STUDY OF THE SEVERELY WOUNDED

The physiologic effects of wounds, by the Board for the Study of the Severely Wounded, North African-Mediterranean Theater of Operations Office of the Surgeon General, Department of the Army Washington D C. Government Printing Office 1952 376 p. illus (part col d) 26 cm (United States. Army Medical Service Office of the Surgeon General The Medical Department of the United States Army Surgery in World War II) $3 50 2827

[illegible]

UNIVERSITY OF CINCINNATI COLLEGE OF MEDICINE

Symposium on nutritional aspects of blood formation. Proceedings of the Nutrition Symposium held at the University of Cincinnati, College of Medicine Cincinnati, Ohio October 22 1954 New York The National Vitamin Foundation Inc., 1955 4 p. illus. 2 cm. (Nutrition symposium series. No. 10) $2.50. 2841

[illegible]

[illegible]

and transport of respiratory gases by the blood. The control of breathing. Section IV Digestion Motility of the digestive tract. Secretion and actions of digestive juices. Section V Nutrition and intermediary metabolism. Section VI, The endocrine system, by J B. Traber Section VII Kidney and urinary tract. Section VIII Nervous system and senses The afferent systems. The motor system *A tonomic system and hypothalamus. Physiologic optics.* Neurophysiology of the eye. Audition taste and olfaction. The cerebral cortex. Index.

Note A comparatively short introduction written for use in premedical and medical college courses. In the words of the author "brevity has been achieved largely by assuming knowledge of those subjects which are prerequisite for the study of human physiology by restricting discussions of controversial questions and by presenting the current state of information without giving detailed evidence and without discussing the historical background. Each of the sections includes a selected bibliography for the guidance of those readers who wish to pursue particular topics further The author is Professor of Physiology at the University of Wisconsin.

YOUMANS, WILLIAM BARTON

Human physiology New York The Macmillan Company, 1954 481 p illus 24 cm $6 00 2833

Contents (abridged) Section I, General principles Composition of protoplasm. Movement of materials through cell walls. Characteristics of tissues. Section II, Muscle, nerve and reflex action Stimulation and response of nerves and skeletal muscle Transmission of excitation at the skeletal neuromuscular junction. Neural control of smooth muscle and secretory cells. Transmission of excitation at synapses. Section III, Blood and circulation Blood. Heart muscle and the heart beat. Blood pressure and blood flow The capillaries and the venous system. Section IV Respiration. Section V Digestion. Section VI Nutrition, metabolism and excretion. Section VII Central nervous system and senses Posture and sense of position Mechanisms for voluntary movements. Physiology of vision Physiology of hearing—taste and olfaction Higher functions of the cerebral cortex. Section VIII, Endocrine glands and reproduction The pituitary body The thyroid and parathyroid glands. The adrenal glands and pancreatic islets. Reproduction. Appendix. Index.

Note A textbook designed for introductory college courses offered to students who have completed courses in basic biology and preferably also in chemistry and physics. There is more emphasis on the essential physical and chemical nature of physiological processes. However much of the exposition consists of factual descriptions in terms of physiology and mechanics of what goes on in such processes as digestion circulation of the blood, hearing, etc There are 126 figures. The author is Professor of Physiology in the University of Wisconsin.

YOUMANS WILLIAM BARTON

Nervous and neurohumoral regulation of intestinal motility New York Interscience Publishers, Inc. 1949 129 p illus 24 cm (Monographs in the physiological sciences, editorial board Maurice B Visscher and others) $5 75 2834

Contents Introduction. Recording of intestinal motility and the interpretation of records Extrinsic innervation of the intestine and methods of denervation. Sensitization of the intestinal musculature to adrenaline by denervation. Denervated intestinal segment as an indicator for adrenaline and sympathin Summary References.

Note A review with literature references of the accumulated knowledge pertaining to the regulation of the motility of the small intestine by the extrinsic nerves and also by adrenaline and related compounds. Particular attention is given to the various experiments on which this knowledge is based The author himself has carried on experimental studies of this subject since 1935 and in this book has correlated his results with the findings of other investigators.

ZOETHOUT WILLIAM D AND W W TUTTLE

Textbook of physiology Twelfth edition With 300 text illustrations and 5 color plates St. Louis The C V Mosby Company 1955 703 p illus. (part col'd) 23 cm $5 25 2835

Contents Protoplasm and life processes. The tissues. The translocation of materials. Enzymes or catalysts—fermentation Control of tissue activity Contractility—muscle physiology Conductivity—nerve physiology Blood—the middleman. The mechanical factors of blood circulation The heart. Vasomotor control. Capillaries and tissue fluid formation. Gas exchange respiration. The foodstuffs. Digestion Absorption. The movements of the alimentary canal Metabolism—introductory remarks. Protein metabolism. Carbohydrate metabolism Lipid or fat metabolism. Water and mineral metabolism. Energy metabolism. Regulation of body temperature Nutrition. Hormones or internal secretions. Renal secretion. The skin The receptors, or sense organs. Reflex action—the spinal cord. The autonomic nervous system. The brain. Reproduction. Glossary Selected readings. Index.

Note A long-established textbook, the first edition of which was published in 1916 and the eleventh edition in 1952. It is used in introductory college courses offered to students who are preparing for professional work in such fields as dentistry and pharmacy and is intermediate in comprehensiveness and difficulty between the elementary texts designed for general college courses and the full treatments written primarily for medical students. In this twelfth edition there has been some reorganization of the chapters, very extensive revision of the three chapters on protein, carbohydrate and lipid metabolism. One new chapter has been added.

BLOOD

DIGGS, L W , AND OTHERS

The morphology of human blood cells, by L W Diggs, Dorothy Sturm and Ann Bell. Philadelphia W B Saunders Company 1956 181 p illus (part col'd) 28 cm. $12.00. 2836

Contents. Normal blood cells and their progenitors. Fixed tissue cells of the bone marrow Normal and abnormal plasma Abnormalities in the morphology of erythrocytes. Pathologic leukocytes. The lupus erythematosus cell. Pathologic megakaryocytes and thrombocytes. Pathologic cells Miscellaneous. Techniques and methods. Suggested collateral reading Index.

Note An atlas designed for study and reference use by medical college students, laboratory technicians, and graduate physicians who are not specialists in hematology There are 31 plates, all reproduced in color from original water-color paintings by Dorothy Sturm Each of these plates contains illustrations for a number of forms of cells The accompanying text accounts for 110 of the pages in the volume It is introductory to the study of human blood cell morphology although, as could be expected, considerable previous education in biology and physiology is assumed. Interspersed throughout the expository text are 54 figures reproduced in monochrome. The majority of these are reproductions of microphotographs of normal and abnormal blood cells.

GLYNN JOHN H

The story of blood. New York A. A. Wyn, Inc. 1948 285 p. 21 cm. $3 00 2837

Contents History of blood. The anatomy and physiology of blood vessels. The formed elements in blood. The white blood corpuscles. The immune properties of blood. The blood groups Food and the blood. Blood, the chemical regulator Blood the purifier Blood and allergy Diseases of the blood and blood vessels. Index.

Note A well-written popular account of the accumulated knowledge on blood. The author is a bacteriologist and doctor of medicine. The presentation follows the history of the successive discoveries in the field of hematology from the earliest times to the date of publication, and demonstrates the importance to human welfare of the advancing knowledge in this field.

KABAT ELVIN A

Plasma proteins Springfield, Ill Charles C Thomas, 1950 352 p illus 24 cm (Symposia on nutrition of The Robert Gould Research Foundation, Inc, Volume II) $6 50 2842

Contents Fractionation and properties of the proteins of normal human plasma by J L. Oncley Equilibrium treatments of the binding of ions to proteins illustrated by serum albumin, chloride, and thiocyanate by S. H Armstrong Jr Plasma protein formation in disease states by S. C. Madden Studies on the rates of formation of serum proteins in man by J M. London Some aspects of the biosynthesis of amino acids, by D Shemin Use of C^{14}-labeled amino acids in the study of peptide bond synthesis, by L D Frantz, Jr and P C. Zamecnik The role of dietary proteins on plasma protein regeneration by B F Chow Some relationships between diet, protein stores, and plasma proteins, by J B. Allison Clinical problems in hypoproteinemia due to protein deprivation by R. Elman Studies on the fate of intravenously administered human plasma proteins in idiopathic hypoproteinemia and in osteoporosis, by F Albright and others. Studies concerning nutritional edema and proteins, by H Gounelle Studies on protein deficiency and temperature in relation to edema, by D M Hegsted and others. Physiological properties of amino acid antagonists, by K Dittmer Studies on liver protein, by P P Cohen and S Sorof The metabolism of human serum albumin administered to man, by R D Eckhardt and C. S. Davidson. Protein metabolism in relation to resistance to infection by P R. Cannon. Quantitative immunochemical studies of antibody-containing serum fractions obtained by salt precipitation alcohol precipitation, or delipidation by M Heidelberger and R. C. Krueger Influence of the adrenal cortex on plasma protein formation and utilization, by A White and S. Roberts.

Note Original papers presented at a symposium held in Chicago in September 1949 under the auspices of the University of Illinois, form the contents of this volume They are addressed to graduate scientists and medical men Several of the papers describe the results of recent investigations. All of them were written by eminent specialists in medicine or biochemistry Literature references are included for the individual papers, but there is no general index in the volume.

FLUIDS AND ELECTROLYTES

BLAND, JOHN H

Clinical recognition and management of disturbances of body fluids Second edition Philadelphia W B Saunders Company 1956 522 p illus 26 cm $11 50 2843

Contents Introduction. Basic physiologic considerations of body water and electrolyte Basic physiologic considerations of hydrogen ion control Pure and mixed water and sodium depletion—clinical concept of acidosis and alkalosis—edema—correlation of clinical and chemical pictures, bedside observation Water and electrolyte metabolism in congestive failure of the circulation Body water and electrolyte deviations in diseases of the liver Water and electrolyte metabolism in pediatric patient in health and disease. Water electrolyte and hydrogen ion alterations in pulmonary disease Metabolic changes peculiar to the aging and aged—diagnosis and treatment Surgical metabolism Metabolic aspects of renal disease Adverse effects of heat on body water and electrolyte Water electrolyte and hydrogen ion abnormalities in diabetes mellitus Water and electrolyte metabolism in acute and chronic adrenal cortical insufficiency ACTH cortisone hydrocortisone DOCA, aldosterone metacortandracin—metabolic effect Metabolic consequences of head injury and central nervous system disease Behavior of body water and electrolyte in shock burns, crush and blast injury Roentgen irradiation and exposure to cold and other physical stress Normal and abnormal potassium and magnesium metabolism Index

Note In this carefully authoritative treatise the accumulated knowledge of the interrelationships of the body fluid and electrolyte is summarized and interpreted for the benefit of surgeons, general practitioners of medicine internists, etc The basic physiological knowledge and the experimental and clinical observations on which it is based are adequately covered however the emphasis is on aspects that have practical applications in diagnosis and treatment. The importance of old-fashioned bedside observation is stressed. Literature is cited in extensive bibliographies included in most of the chapters. The first edition was published in 1952 and was entitled *The clinical use of fluid and electrolyte* In this second edition, the book has been approximately doubled in size and obviously contains a wide range of additional information.

ELKINTON, J RUSSELL, AND T S DANOWSKI

The body fluids, basic physiology and practical therapeutics Baltimore The Williams & Wilkins Company, 1955 626 p illus. 24 cm $10 00 2844

Contents (abridged) Part I, Basic physiology Body fluid dynamics. Paleochemistry evolution and comparative physiology of the body fluids. Methods of studying body fluid distribution. Part II Basic principles as common denominators in clinical disorders The water and the electrolytes of the body in health. The physiologic effects of water and electrolyte deficits and their treatment Therapy of excesses of water or of the chief electrolytes. Anion-cation balance and pH—physicochemical and physiological mechanisms—clinical disturbances and their treatment. Part III, Disease entities Renal failure. Congestive heart failure—a new steady state. Cirrhosis and ascites. Diabetic ketosis and coma. Familial periodic paralysis. Water and electrolyte changes in relation to the anterior pituitary thyroid, gonads, and the pancreatic islets. Hypo- and hyperfunction of the adrenal cortex. Diabetes insipidus and other disorders of the antidiuretic system. Pediatric fluid disorders and their therapy Body fluid problems in surgical patients. Part IV Clinical dicta and practical therapeutics: Clinical and laboratory assessment of body fluid disturbances. Range of requirement of individual fluid constituents and their homeostatic limitations. Technics and solutions in replacement therapy Viscodialysis in the therapy of excesses or deficits. Appendix The balance technic Index.

Note. A fairly comprehensive monograph addressed to advanced students of medicine and graduate practitioners. The basic physiology is covered in the first two parts, which taken together account for almost half the length of the book. In these parts, there is some correlation with the clinical aspects of disturbances in the body fluids. In the third part, body fluid disturbances in specific disorders are considered. Here the clinical aspects predominate, and there is some discussion of therapy In the fourth part the problems of assessing deficits and excesses in body fluids, and the techniques of treating them are dealt with concretely and specifically from the viewpoint of practicing physicians The discussions of most topics are full enough to enable the practicing physician to use the book without resort to the source literature. Nevertheless, references to sources are given and all of the chapters include extensive bibliographies. The first-named author is a member of the faculty of the School of Medicine of the University of Pennsylvania, and his co-author is a member of the faculty of the School of Medicine of the University of Pittsburgh.

SMITH, HOMER W

Principles of renal physiology New York Oxford University Press, 1956 237 p illus. (part col'd) 21 cm $5 00 2845

Contents Anatomy Historical notes on theories of renal function Measurement of the rate of glomerular filtration. Tubular reabsorption Tubular excretion (qualitative considerations and measurement of renal plasma flow) Tubular excretion (quantitative considerations) Clearances involving neither tubular reabsorption nor excretion. Urea. Proteins. Fluid compartments of the body Secretion. Electrolytes. Water diuresis. Antidiuresis Integration of sodium and electrolytes. Water excretion Hydrogen ion balance Acid-base equilibria in water excretion Hydrogen ion balance Acid-base equilibrium of blood and urine Reabsorption of bicarbonate and excretion of acid. Ammonia. Control of the renal circulation. Appendices Bibliography Index.

Note A compact presentation of basic knowledge pertinent to the study of renal function addressed primarily to advanced students of physiology Its organization is indicated by the section titles noted above Within the sections, the pertinent basic knowledge is discussed and data from a wide range of experiments are presented Some gaps in the existing knowledge are indicated Among the topics covered in the six appendices are study of the nephron with the electron microscope history of the development of the Henderson-Hasselbalch approximation equation, and concise descriptions of techniques in the study of renal physiology such as techniques of measuring the secretion of urine The bi-

[illegible] selected and is arranged to conform with the topics of the sections.

clearly. However partly because of the selectivity the book is interesting and not difficult to read. The literary bibliography is classified in accordance with the chapter arrangement.

WHIPPLE, GEORGE H.

The dynamic equilibrium of body proteins hemoglobin, plasma proteins organ and tissue proteins. Springfield, Ill. Charles C Thomas, 1956. 68 p. illus 23 cm. $3.25 2546

Contents: Introduction. Proteins, plasma and supply of body protein requirements. [illegible] Reserve store contributes to blood proteins. [illegible] The dynamic equilibrium of body proteins. [illegible] plasma proteins. [illegible] Bibliography.

Note: An extensive series of experiments on dogs carried out in the laboratory of the School of Medicine of the University of Rochester during a period of 35 years are summarized in this short monograph. Some results of experimental investigations made elsewhere and published in the literature are incorporated also. References to the original journal publications are given in the bibliography.

BONE AND MUSCLE

JONES, HAROLD ELLIS

Motor performance and growth a developmental study of static dynamometric strength. Berkeley and Los Angeles University of California Press 1949 181 p. illus. 24 cm. $3.00 2547

Contents: The program of measurement. Factors related to strength. Growth in strength. Strength and physiological maturing. The influence of [illegible] on growth. Some incidental findings. Individual case studies. Implications and conclusions. Bibliography.

Note: The results of a [illegible] study of the development of muscular strength in adolescent boys and girls of school age are presented in this work. The number of subjects was 183 ([illegible] boys and [illegible] girls) at the beginning of the study and [illegible] decreased to [illegible] six and one-half years later when the study was concluded. Measurements of body growth in the same group were made collaterally and are co-ordinated with the development of strength. Observations were made and are analyzed on relationships among growth, strength, and personality characteristics.

MCLEAN, FRANKLIN C., AND MARSHALL R. URIST

Bone an introduction to the physiology of skeletal tissue. Chicago University of Chicago Press 1955 182 p. illus. 23 cm. (The University of Chicago Committee on Publications in Biology and Medicine Emmet B Bay and others) $6.00 2548

Contents: Introduction. Bone as a tissue. Histogenesis of bone. Structure and chemical composition of the bone matrix. Chemistry and crystal structure of the bone mineral. Dynamics of calcification. Enzymes and bone. Resorption of bone. Hormones and bone. Mineral metabolism. Radiation, isotopes, and bone. [illegible] The biology of fractures. Pathologic physiology of bone. Bibliography. Index.

Note: An introductory account of bone as a tissue. The principal topic is the normal physiology and biochemistry of bone even though the terminal chapter is devoted to pathologic physiology and other chapters contain discussions of topics, such as the healing of bone, of interest to the pathologist. The topics discussed have been carefully selected and are treated rather

MINER, ROY WALDO editor

Recent advances in the study of the structure composition and growth of mineralized tissues. Conference co-chairmen Roy O Greep and Albert E. Sobel. Consulting editor Roy O Greep New York Published by the Academy 1955 541–806 p. illus. 22 cm. (New York Academy of Sciences Annals Vol. 60 art 5) $4.00 2548A

Contents: Introduction, by R. O. Greep. Microstructure and [illegible] characteristics of the mineralized tissues, by R. F. Sognnaes. The electron microscopy of enamel and dentin, by D. B. Scott. The chemical nature of the organic matrix of bone, dentin, and enamel, by M. V. Stack. [illegible] in bone as observed in the electron microscope. Crystal and [illegible] morphology [illegible], by R. A. Robinson and M. L. Watson. Formation of bones and teeth as visualized by radioautography, by C. P. Leblond and others. The [illegible] of the bone salt, by S. B. Hendricks. Some achievements and problems in studying the [illegible] of the mineral of the hard tissues, by H. C. Hodge. Radioisotope studies of hard tissues, by W. D. Armstrong. [illegible] to bone [illegible], by W. F. Neuman and J. H. [illegible]. X-ray diffraction of biological and synthetic apatites, by O. R. Trautz. Local factors in the mechanism of calcification, by A. E. Sobel. Effect of nutritional factors on bones and teeth, by J. H. Shaw. Hormonal influences on skeletal growth, by L. Wilkins. Studies on the role of the parathyroids in calcium and phosphorus metabolism, by P. L. Munson. Panel discussion—moderator A. E. Sobel.

Note: Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in January 195[illegible] have been made available in this monograph. Although bones and teeth are the topics, they are studied as mineralized tissues rather than as structural elements of the skeleton. The papers are based on both research and the pertinent modern literature. The illustrations include many reproductions of microphotographs. Literature references are supplied in all of the papers. The panel discussion at the end of the volume assesses the present status of knowledge in the area covered by the conference and indicates avenues for further research.

MOMMAERTS, W. F. H. M.

Muscular contraction a topic in molecular physiology New York Interscience Publishers Inc., 1950. 191 p illus 24 cm. (Monographs in the physiological sciences editorial board, Maurice B Visscher and others) $5.75 2549

Contents: Introduction. An outline of the metabolism of muscle. A quantitative picture of muscle metabolism. The sequence of events in muscular activity. The muscle proteins. Myosin, actin and actomyosin. Myosin and adenosinetriphosphatase. The structure of the muscle fiber—the myosin thread. Contractile threads and fibrils. Crystalline myosin. Actin—the second structure protein. Actomyosin—the myosin-actin complex. Molecular mass and shapes of muscle proteins. Viscosity and birefringence of flow. Reaction between ATP and myosin. Problems and interpretations. Bibliography. Index.

Note: A condensed review of present-day knowledge regarding the biochemical mechanisms of muscular contraction. It is based on a survey of the literature of the subject and draws heavily on the writings of Banga, Dubuisson, Meyerhof, Szent-Györgyi, and other workers in the field. Throughout the book, emphasis is on experimental methods and discoveries rather than on theory. The text is keyed to the bibliography consisting of 33[illegible] references.

RIEDMAN, SARAH REGAL

The physiology of work and play a textbook in muscular activity. Original illustrations by Ida Scheib New York The Dryden Press 1950. 554 p illus 21 cm. (The Dry

field of relationships between nutrition and hematology Instead, the attention of the symposium was mainly on what is known about the relationships among blood formation and iron, folic acid, and vitamin B_{12}. The papers are accompanied by literature references and transcripts of discussion. All of the material in the volume was first printed in the *American journal of clinical nutrition* January/February 1953

YOUMANS, JOHN BARTON, editor
Plasma proteins Springfield Ill Charles C Thomas *1950 352* p illus *24* cm. (Symposia on nutrition of The Robert Gould Research Foundation, Inc, Volume II) $6.50 *2842*

Content Fractionation and properties of the proteins of normal human plasma, by J L. Oncley Equilibrium treatments of the binding of ions to proteins illustrated by serum albumin, chloride, and thiocyanate, by S. H. Armstrong, Jr Plasma protein formation in disease states by S. C. Madden. *Studies on the rates of formation of serum proteins in man*, by I. M London Some aspects of the biosynthesis of amino acids, by D Shemin. Use of C^{14}-labeled amino acids in the study of peptide bond synthesis, by I. D Frantz, Jr., and P C. Zamecnik. The role of dietary proteins on plasma protein regeneration, by B F Chow Some relationships between diet, protein stores, and plasma proteins, by J B. Allison. Clinical problems in hypoproteinemia due to protein deprivation, by R. Elman Studies on the fate of intravenously administered human plasma proteins in idiopathic hypoproteinemia and in osteoporosis, by F Albright and others. Studies concerning nutritional edema and proteins, by H. Gounelle. Studies on protein deficiency and temperature in relation to edema, by D M. Hegsted and others. Physiological properties of amino acid antagonists, by K. Dittmer Studies on liver proteins, by P P Cohen and S Sorof The metabolism of human serum albumin administered to man, by R. D Eckhardt and C. S. Davidson. *Protein metabolism in relation to resistance to infection*, by P R. Cannon. Quantitative immunochemical studies of antibody-containing serum fractions obtained by salt precipitation, alcohol precipitation, or delipidation by M. Heidelberger and R. C Krueger Influence of the adrenal cortex on plasma protein formation and utilization, by A. White and R. Roberts.

Note Original papers presented at a symposium held in Chicago in September 1949 under the auspices of the University of Illinois, form the contents of this volume. They are addressed to graduate scientists and medical men. Several of the papers describe the results of recent investigations. All of them were written by eminent specialists in medicine or biochemistry Literature references are included for the individual papers, but there is no general index to the volume.

FLUIDS AND ELECTROLYTES

BLAND, JOHN H
Clinical recognition and management of disturbances of *body fluids Second edition* Philadelphia W B Saunders Company 1956 *522* p illus *26 cm* $11 50 2843

Contents Introduction Basic physiologic considerations of body water and electrolyte Basic physiologic considerations of hydrogen ion control Pure and mixed water and sodium depletion—clinical concepts of acidosis and alkalosis—edema—correlation of clinical and chemical pictures, bedside observations Water and electrolyte metabolism in congestive failure of the circulation Body water and electrolyte deviations in diseases of the liver Water and electrolyte metabolism in pediatric patients in health and disease Water electrolyte and hydrogen ion alterations in pulmonary disease. Metabolic changes peculiar to the aging and aged—diagnosis and treatment. Surgical metabolism. Metabolic aspects of renal disease Adverse effects of heat on body water and electrolyte Water electrolyte and hydrogen ion abnormalities in diabetes mellitus. *Water and electrolyte metabolism* in acute and chronic adrenal cortical insufficiency ACTH, cortisone hydrocortisone DOCA, aldosterone metacortandracin—metabolic effects Metabolic consequences of head injury and central nervous system disease Behavior of body water and electrolyte in shock, burns, crush and blast injury Roentgen irradiation and exposure to cold and other physical stress. Normal and abnormal potassium and magnesium metabolism Index.

Note. In this useful and authoritative treatise, the accumulated knowledge of the interrelationships of the body fluid and electrolyte is summarized and interpreted for the benefit of surgeons, general practitioners of medicine internists, etc The basic physiological knowledge and the experimental and clinical observations on which it is based are adequately covered however the emphasis is on aspects that have practical applications in diagnosis and treatment. The importance of old-fashioned bedside observation is stressed. Literature is cited in extensive bibliographies included in most of the chapters. The first edition was published in 1952 and was entitled *The clinical use of fluid and electrolyte*. In this second edition, the book has been approximately doubled in size and similarly contains a wide range of additional information.

ELKINTON, J RUSSELL, AND T S. DANOWSKI
The body fluids, basic physiology and practical therapeutics. Baltimore The Williams & Wilkins Company 1955 *626* p. illus. 24 cm. $10 00 2844

Contents (abridged) Part I, Basic physiology Body fluid dynamics. Paleochemistry evolution, and composition physiology of the body fluids. Methods of studying body fluid distribution. Part II, Basic principles as common denominators in clinical studies The water and the electrolytes of the body in health. The physiologic effects of water and electrolyte deficits and their treatment Therapy of excesses of water or of the chief electrolytes. Anion-cation balance and pH—physicochemical and physiological mechanisms—*clinical disturbances and their treatment*. Part III, Disease entities Renal failure. Congestive heart failure—a new steady state. Cirrhosis and ascites. Diabetic acidosis and coma. Familial periodic paralysis. Water and electrolyte changes in relation to the anterior pituitary thyroid, gonads, and the pancreatic islets. Hypo- and hyperfunction of the adrenal cortex. Diabetes insipidus and other disorders of the antidiuretic system. Pediatric fluid disorders and their therapy Body fluid problems in surgical patients. Part IV Clinical data and practical therapeutics. Clinical and laboratory assessment of body fluid disturbances. Range of requirement of individual fluid constituents and their homeostatic limitation. Technics and solutions in replacement therapy Hemodialysis in the therapy of excesses or deficits. Appendix. The balance table Index.

Note A fairly comprehensive monograph addressed to advanced students of medicine and graduate practitioners. The basic physiology is covered in the first two parts, which taken together account for almost half the length of the book. In these parts, there is much correlation with the clinical aspects of disturbances in the body fluids. In the third part, body fluid disturbances in specific disorders are considered. Here the clinical aspects predominate, and there is some discussion of therapy In the fourth part the problems of assessing deficits and excesses in body fluids, and the techniques of treating them are dealt with concretely and specifically from the viewpoint of practicing physicians. The discussions of most topics are full enough to enable the practicing physician to use the book without resort to the source literature. Nevertheless, references to sources are given and all of the chapters include extensive bibliographies. The first-named author is a member of the faculty of the School of Medicine of the University of Pennsylvania, and his co-author is a member of the faculty of the School of Medicine of the University of Pittsburgh.

SMITH, HOMER W
Principles of renal physiology New York Oxford University Press, 1956 237 p illus. (part col'd) 21 cm $5 00 *2845*

Contents. Anatomy Historical note on theories of renal function. Measurement of the rate of glomerular filtration Tubular reabsorption. Tubular excretion (qualitative considerations and measurement of renal plasma flow) Tubular excretion (quantitative considerations) Clearances involving neither tubular reabsorption nor excretion. Urea. Proteins. Fluid compartments of the body Integration of sodium and electrolytes. Water diuresis. Antidiuresis. Acid-base equilibria and water excretion. Hydrogen ion balance Reabsorption of bicarbonate and excretion of blood and urine Ammonia. Control of the renal circulation Appendices. Bibliography Index.

Note A compact presentation of basic knowledge pertaining to the study of renal function, addressed primarily to advanced students of physiology Its organization is indicated by the section titles noted above Within the sections, the pertinent basic knowledge is discussed and data from a wide range of experiments are presented. Some gaps in the existing knowledge are indicated. Among the topics covered in the six appendices are a study of the nephron with the electron microscope a history of the development of the Henderson-Hasselbalch approximation equation, and concise descriptions of techniques in the study of renal physiology such as techniques of measuring the secretion of urine. The bi-

descriptive [illegible]. Many languages are represented in the [illegible], but [illegible] of abstracts [illegible] in English. Cross references are numerous, and an additional approach to the contents is provided by the author index.

WEINMANN, JOSEPH P., AND HARRY SICHER

Bone and bones: fundamentals of bone biology. Second edition. With 307 illustrations. St. Louis: The C. V. Mosby Company, 1955. 508 p. illus. 26 cm. $13.75 2556

Contents: Introduction. Part I: Tissues, structure and growth of bone and bones: Bone tissue. Bones. Part II: Pathology of bone and bones: Developmental disturbances of the skeleton. [illegible] deformation of the skeleton. The influence of endocrine glands on bone and bones. The influence of vitamins on bone and bones. The effect of minerals on bone and bones. Healing of bones. Necrosis of bone and inflammation of bone. Tumors of the skeleton. [illegible] lesions of the skeleton. References. Index.

Note: Written with the intention to bridge the gap between the biology of bone and osteopathology, this book has [illegible] purpose: to stimulate further research and to serve as [illegible] guide for orthopedists, dentists, radiologists and other specialists and teachers [illegible] work [illegible] knowledge of bone. The first edition was published in 1947. In this second edition, the scope of [illegible] are the same and much of the text is unchanged. [illegible], the discussion of the [illegible] has been expanded [illegible] extended discussion of fibrous dysplasia of bone has been [illegible], among other changes.

VASCULAR SYSTEM

AKAY, LOUIS

The blood-brain barrier: with special regard to the use of radioactive isotopes. Springfield, Ill.: Charles C Thomas, 1959. 154 p. illus. 22 cm. (American lecture series. Publication no. 2 [illegible]. Bannerstone division of American lectures in surgery; edited by Michael E. DeBakey and R. Glen Spurling. Neurosurgery division; editor: Barnes Woodhall) $5.50. 255[illegible]

Contents: History. Introduction. Anatomical features of the blood-brain barrier. Physiology of the blood-brain barrier. Experimental techniques with radioactive phosphorus. Studies on the [illegible] blood-brain barrier with radioactive isotopes. [illegible] of [illegible] increased permeability. Development of the blood-brain barrier. [illegible]. Artificial changes in the permeability of the blood-brain barrier. The effect of brain trauma on the blood-brain barrier. [illegible] effect of cerebral thrombosis, embolism, and hemorrhage on [illegible] blood-brain barrier. Infections and the blood-brain barrier. [illegible] tumors and the blood-brain barrier. Bibliography. Index.

[illegible] A survey of the accumulated knowledge of the blood-brain barrier, [illegible] physiological mechanism that prevents the passage [illegible] in the blood stream to the central nervous system many substances [illegible] present in the blood and which easily penetrate other [illegible]. The author is one of the earliest researchers in this area of [illegible] and the book is based on his own work as well as on [illegible] experimental literature. The incomplete state of the knowledge [illegible] mechanism or processes [illegible] clearly shown in each chapter [illegible] on the discussion of the various theories and the experimental evidence pertaining to [illegible] unidentified mechanisms. [illegible]. The results of [illegible] number of studies made in recent years [illegible] the use of radioactive isotopes are the subject of one chapter [illegible] the primary purpose of the book [illegible] physiologists. However, the [illegible] for clinical [illegible] of the knowledge gained [illegible] set forth in the last four chapters. The author [illegible] of the faculty of Harvard Medical School.

[illegible]ER, GERHARD A.

[illegible] venous return. New York: Grune & Stratton, 1956. 145 p. illus. 26 cm. $6.5[illegible] 2558

[illegible] Historical commentary. Elementary hemodynamics [illegible] venous return. Present methods of venous return [illegible]. Methods for venous flow measurement. Venous [illegible]. The respiratory pump. Effect of cardiac operations on venous return. Effect of the heart [illegible] on venous return. Venous hemodynamics of cardiac valve lesions. Venous return during cardiac surgery. Bibliography. Index.

Note: An important study of the flow of the blood in the veins. The author is an eminent physiologist. He has made substantial contributions to the knowledge of this subject, and the book [illegible] based partly on the literature and partly on his work and that of his associates. The first chapter is [illegible] condensed review of earlier thought and experimental results. However, there [illegible] no attempt here at [illegible] in the remainder of the book to review systematically [illegible] of the literature on the venous circulation. Experiments, methods are described concisely and in detail. [illegible] on the types and principles of flowmeters. The results of experiments are interpreted and integrated. Implications for clinical medicine and surgery are discussed briefly. The bibliography [illegible] 12 pages long.

BURCH, GEORGE E.

Digital plethysmography: introducing a method for recording simultaneously the time course of the rate of blood flow into and out of the finger tip. New York: Grune & Stratton, 1954. 134 p. illus. 23 cm. (Modern medical monographs, No. 11) $5.00. 2559

Contents: Theoretical considerations. Materials and methods. Studies of the [illegible] flow curves. An evaluation of the procedure of recording. Factors which influence the time course of the rate of blood flow through the finger tip. Time course of the first, second, third, and fourth derivatives of the [illegible] time curves of the blood flow in the finger tip. [illegible] curves of rate and volume before and [illegible] of man. General discussion. Summary. References. Index.

Note: "It is the purpose of this report to present the venous occlusion method, [illegible] which the [illegible] part are [illegible], and the rate at which blood accumulates in the part from the artery [illegible] measured. It is the purpose of this report to evaluate the venous occlusion method for measuring [illegible] the rate of blood flow into the finger tip of man, to report [illegible] method for recording the time course of the rate of blood flow out [illegible] the finger tip of man, which [illegible] modification of one developed by Turner and to describe for the first time [illegible] method for recording the time course of the rate of blood flow into and of the finger tip of man simultaneously with the recording of the time course of the rate of outflow of blood. The new method is described very carefully and [illegible], [illegible] the flow [illegible] of two [illegible] constructed [illegible] used in the [illegible] [illegible] that are the basis of the book, are described and [illegible]. The illustrations include [illegible] reproductions of [illegible] and plots of blood flow rate.

JACOBSON, EDMUND

Progressive relaxation: a physiological and clinical investigation of muscular states and their significance in psychology and medical practice. Second edition. Chicago: University of Chicago Press, 1938. 493 p. illus. 23 cm. (The University of Chicago monographs in medicine) $12.00. 2560

Contents: Rest and relaxation in the practice of medicine. General features of neuromuscular hypertension. Neuromuscular hypertension in various diseases. General features of progressive relaxation. The technique of progressive relaxation. [illegible] and technique of [illegible]. [illegible]. Early history of present method. Influence of relaxation upon [illegible], [illegible], [illegible] reaction. Tested psychological [illegible]. Emotions and the neuromuscular element. Tonus and nervous regulation of muscular contraction. Angiospasm and neural phenomena. Relationship [illegible] of relaxation. Electrical measurements of muscle contraction and relaxation. [illegible] of [illegible]. Clinical [illegible]. Differential [illegible] and of [illegible]. Progressive relaxation in [illegible] [illegible]. Therapeutic use of [illegible]. Bibliography. Author index. Subject index.

Note: A systematic analysis of neuromuscular states in man and their significance in medical diagnosis and practice. It includes the author's method of training the [illegible] and his physiological method of quieting the nervous system, including the mind. In this edition, three chapters have been added concerning the electrical measurement of nervous and muscular states. There [illegible] an excellent bibliography.

den Press publications in the biological sciences, general editor, L V Heilbrunn) $5 50 2850

Contents (abridged) Part I The physiology of motion Contraction in excited muscles. The structural basis of voluntary motion Intrinsic properties of muscle. The chemical basis of motion. Chemical dynamics in muscular work. Muscles as work machines. Fatigue. Coordination of motion and of adjustments to exercise. Part II Organic adjustments to the needs of exercise Circulatory adjustments in exercise. Cardiac response to exercise. The heart as work organ. Respiration Pulmonary ventilation. Transport of oxygen and carbon dioxide. Respiratory regulation Part IV Adaptations to special conditions of work Work under limiting environmental conditions. Work under extremes of temperature and humidity Work under conditions of modern industry Part V The adaptive capacity of the organism: Bodily changes during regular adaptational adjustments. Convalescence and reconditioning. Physical fitness. Effects of mental and emotional activity Index.

Note. Although this book is intended as an introduction especially for the instruction of such students as physical education majors, it contains a rather detailed treatment. Such topics as the buffer systems of the blood and blood changes during muscular activity are discussed in chemical terms. Furthermore, each chapter is supplemented by bibliography of pertinent technical literature. The book contains enough detailed technical information to make it useful for reference or reading by scientifically trained persons in need of survey of the physiology of physical activity

SANDOW, ALEXANDER

The effect of activity on the latent period of muscular contraction New York New York Academy of Sciences, 1945 32 p illus 23 cm (*New York Academy of Sciences Annals* Vol 46 p 153–184 1945) $0 50 2851

Content Introduction. Method. Results Effect of single tetanus. Effect of series of tetani. Effect of series of twitches. Localization of the source of the latency response changes. Correlation of the L_r with pH changes caused by activity Discussion Summary Literature cited.

Note. The research reported in this monograph deals with the effect of muscular activity on that phase of the contractile response which occurs between the instant of application of the stimulus and the instant at which tension development first appears. A piezoelectric cathode-ray oscillographic technique developed by the author for use in this type of study is described in detail.

SANDOW ALEXANDER, AND OTHERS

Muscular contraction. New York New York Academy of Sciences 1947 266 p illus 23 cm (New York Academy of Sciences Annals. Vol 47 p 665–930 1947) $3 00 2852

Contents Introduction to the conference, by A. Sandow Part I, Dynamics *Dynamics of single muscle fibers* by R. W Ramsey The time course of tension development in the muscle response by A. S. Gilson, jr and others. Muscular contraction and rubberlike elasticity by E. Guth. Membrane changes during excitation and inhibition of the contractile mechanism, by S. W Kuffler Part II, Ultrastructure Birefringence and ultrastructure of muscle, by E. Fischer Electron microscope and X-ray diffraction studies of muscle structure, by F O Schmitt and others. Part III, Chemistry The main chemical phases of the recovery of muscle by O. Meyerhof. Chemical processes of oxidative recovery by S. Ochoa. Part IV Mechano-chemical coupling Intracellular inorganic ions and muscle action, by H B. Steinbach The interaction of myosin and adenosinetriphosphate by Shih-Chang Shen. Latency relaxation and theory of muscular mechano-chemical coupling, by A. Sandow

Note A collection of papers prepared by noted physiologists, chemists, physicists, and medical scientists, presented originally at a conference held in February 1946 under the auspices of the New York Academy of Sciences. Based on the authors' investigations and on a review of the literature of the subject, the papers provide integration of modern knowledge regarding the phenomenon of muscular contraction New experimental results and theoretical approaches are discussed, and earlier findings critically evaluated. Gaps in present-day knowledge are indicated as means of stimulating and suggesting future lines of research. Bibliographies are included.

(vitamin D). Ascorbic vitamins. Fat-soluble vitamins. Different food groups and their place in the diet. Adequate diets for general adults. Part two, Body processes. The body and its role in its metabolism. Part two, Digestion and absorption of food. Metabolism and from its food. Excretion and the factors affecting the influence of ductless glands. Excretion and the factors affecting it. Part three, Meal planning: How to build menus—for diet-work. Family food budgets. Food fads and fancies. Recent trends in American dietary habits. Part four: Diet for special conditions. Diet for pregnant and nursing mothers. Diet for children and teen-agers. Diet after forty. Overweight—its significance and treatment. Malnutrition—how to detect and overcome it. Appendix. Index.

Note: A widely used textbook, the first edition of which was published in 1931 and the fifth edition in 1949. It deals in an elementary and practical manner with the fundamentals of nutrition, the biochemistry of the digestion and absorption of food, and the planning of diets. It is used in the instruction of college students pursuing courses in home economics, nursing, etc., and to a lesser extent by housewives and others who plan meals for families and larger groups. The fifth edition was very extensively rewritten and revised in preparing this sixth edition. The major changes are the omission of the former Part one and the extensive revision and expansion of the former second part to form the present Part one. Changes made in other parts include the rewriting of the chapter on family food budgets. The number of illustrations has been substantially increased and the reading lists well revised.

BOURNE, GEOFFREY H., AND GEORGE W KIDDER, editors

Biochemistry and physiology of nutrition. New York Academic Press Inc., 1953 2 v illus. 23 cm. Vol. I, $13.00 vol. II $15.00 2867

Contents Volume I: The early development of the science of nutrition, by E. P. Cathcart. The history of vitamins, by L. J. Harris. Water and electrolyte metabolism, by R. L. Zwemer. Carbohydrate metabolism, by T. L. Sourkes. Amino acids, by A. Meister. The biosynthesis of proteins, by H. Borsook and C. L. Deasy. Lipid metabolism, by A. C. Frazer. The fat-soluble vitamins (with special reference to the requirements of different animals), by T. Moore. The vitamin B complex, by S. K. Kon and J. W. G. Porter. Vitamins and haematopoiesis, by T. H. Jukes. Vitamin C, by B. B. Lloyd and H. M. Sinclair. Author index. Subject index. Volume II: The biochemistry of nutrition by histochemical methods of enzymes and vitamins, by G. H. Bourne. Structural changes in vitamin deficiency, by G. H. Bourne. Microbiology of digestion, by D. P. Cuthbertson and A. T. Phillipson. The nutrition of invertebrate animals, by G. W. Kidder. Enzymes and metabolic function, by E. P. Kennedy. Hydrolytic and phosphorolytic enzymes, by W. H. Taylor. The respiratory enzymes, by B. L. Horecker and A. Kornberg. Coenzymes, by G. D. Novelli and M. Soodak. Iron metabolism, by H. F. W. Kirkpatrick. Calcium and phosphorus metabolism, by H. F. W. Kirkpatrick and J. D. Robertson. Trace elements, by E. J. Underwood. Applications to human nutrition, by G. A. Goldsmith. Author index. Subject index.

Note: Both the editorship and authorship of this treatise were shared among scientists of Great Britain and the United States of America. The primary purpose of the work is to present critical summaries of recent research bearing on metabolism and related aspects of nutrition. It is composed of the monographs whose authors and titles are listed in the above contents. The chapters are compact, critical presentations based on the literature and are keyed to extensive literature references printed as footnotes. They are addressed to graduate scientists working in nutrition and in related fields.

BYRD OLIVER E compiler

Nutrition sourcebook. Stanford Stanford University Press 1955 370 p. 24 cm. $7.50 2868

Contents: Nutrition as an international problem. Dietary standards and eating habits. The six basic essentials of the human diet. Breakfast—the forgotten meal. Milk. Nutrition in medicine. Nutrition during pregnancy and infancy. Foods and emotional health. Nutrition and economics. Food and body weight. Food processing and preparation. Food charges. Nutrition in old age. Chemicals in foods. Food selection and restaurant sanitation. Nutrition in industry. The school lunch program. Military and wartime nutrition. Public health and community aspects. Bibliography. Alphabetical list of sources. Author index. Subject index.

Note: Except for introductory section written by the compiler and printed in italics to distinguish it, each chapter of the book consists of abstracts of articles selected from the literature bearing on nutrition published in the English language during the decade 1945–55. The articles abstracted have been well chosen, either judged from the standpoint of illustrating the many facets of the contemporary interest in nutrition or that of inclusion of interesting material. The average length of an abstract is less than a third of a page. Each abstract is referenced to the citation of the original article. Some of the abstracts have been taken from the compiler's annual *Health yearbook*. Each publication can be used to find additional material and material published since 1955.

FANNING ROBERT JOSEPH compiler

Pacific Islands nutrition bibliography. Compiled and annotated by Robert Joseph Fanning Honolulu University of Hawaii Press 1951 0 p. 22 cm. $1.00 2869

Contents: Bibliography. Subject index. Area index.

Note: A comprehensive bibliography of publications relating to chemical composition of foods, dietary requirements, dietaries of groups, nutritional status and dental conditions of groups, studies of energy metabolism, physical standards (heights and weights), descriptions of foods, methods of preserving foods, and culture of use of foods. The annotations are short but well written. The bibliography covers all publications issued through June 1950. The geographical scope is Caroline Islands, Hawaiian Islands, Mariana Islands, Marshall Islands and Samoan Islands.

GERARD RALPH W., editor

Food for life. By Ralph W Gerard, Richard J Block, Norman Jolliffe Clive M Mc Cay Sedgwick E. Smith and Samuel Soskin. Chicago University of Chicago Press 1952 306 p. illus. 22 cm. $5.50 2870

Contents: The basic questions of nutrition. The nutrient materials in food. Preparation—from mouth to cell. Processing—in organs and cells. Enzymes—the effective agents. The regulators of metabolism. The pattern of energy and growth. The foods of animals and men. The improvement of human nutrition. Index.

Note: An authoritative discussion of nutrition and foods, written by key authors. The style is lively and the book is illustrated with graphic diagrams which are easy to comprehend. However it is not an extremely simplified presentation. Technical terms, even chemical formulas, are used rather freely. Research methods and noted experiments are described. The main theme is understanding of the body processes and requirements so that food can be chosen intelligently.

GILBERT FRANK A.

Mineral nutrition of plants and animals Norman University of Oklahoma Press 1953 131 p. illus. 23 cm. $2 75 2871

Contents: Introduction. Early history of plant nutrition. Classification of the elements used in nutrition. Phosphorus. Calcium. Magnesium. Potassium. Sulfur. Iron. Copper. Cobalt. Manganese. Zinc. Iodine. Boron. Molybdenum. Aluminum. Silicon. Sodium and chlorine. Fluorine. Arsenic, lead, and selenium. Human nutrition. Bibliography. Index.

Note: The purpose of this volume is to provide a comprehensive yet concise review of the essential facts regarding the relation of the elements to nutrition and the mineral requirements of plants and animals. Each mineral or element is discussed on the basis of its nutritive functions, its occurrence in the soil, and its deficiency effects in plants and animals. The book is based on a survey of the more important literature of the subject, and the references cited throughout the text are keyed to a 16-page bibliography. The author is a member of the Agricultural Sciences Research Division at Battelle Memorial Institute. It was first published in 1948. Although the 1953 printing is not termed a new edition, some information taken from the literature published as recently as 1952 has been added to it.

GRAUBARD MARK AARON

Man's food, its rhyme or reason. New York The Macmillan Company 1943 213 p. 22 cm. $3.50. 2872

Contents (abridged): Introduction. Why a nutrition movement. How food habits concern us. Food and the health of populations.

NALL, MABEL LEXTON, AND FAITH CRAWFORD FERGUSON

Physiology of the circulation of the brain, an annotated bibliography Part II, Report literature, 1938–1952 Washington, D C The American Physiological Society 1956 148 p 25 cm (Physiological Reviews July, 1956 Supplement no 2) $2 75 2861

Note A companion work to R. Keak and M L. Nall, *Physiology of the circulation of the brain an annotated bibliography 1938–1948* 1952 *Physiological Reviews*, Supplement no. 1 It is an annotated bibliography of scientific reports, most of which were products of research carried out under government contracts and research grants. The reports listed represent a wide range of original research.

NEDZEL, ALEXANDER JOHN

Vascular spasm, experimental studies (with 161 figures) Urbana University of Illinois Press, 1943 151 p illus 27 cm. (Illinois medical and dental monographs Vol III, nos 3–4) $2 75 2862

Contents Introduction Vascular spasm. Splanchnoperipheral balance (experiments) Gastrointestinal tract. Liver Respiratory tract. Kidneys. Drug action. Discussion Pitressin First series of experiments. Second series of experiments. Discussion. Endocarditis (experiments) Response of valvular endothelium. Localization of particulate matter and microorganisms. Spontaneous bacterial endocarditis. Non-bacterial endocarditis. Subendothelial changes. Injections of pitressin and particulate matter Death rate from pitressin. Discussion. Gastric ulcer (experiments): Direct observation. Histologic findings. Seasons and gastric ulcer Discussion. Liver and kidneys Experiments. Discussion. Multiple sclerosis Etiology of multiple sclerosis. Transient vascular spasms in the central nervous system. Experiments. Discussion. Localization of bacteria in the central nervous system. Summary Bibliography

Note The author shows experimentally that a purely *functional* disturbance in this case induced vascular spasm in dogs, can in itself precipitate diseases which are very different clinically in their *localization and manifestations. Valvular disease gastric and duo*denal ulcers, lesions in the central nervous system, and liver and kidney involvement were shown to have the same etiological basis, namely vascular spasm under identical experimental conditions.

NUTRITION

ALBANESE, ANTHONY AUGUST, editor

Protein and amino acid requirements of mammals New York Academic Press Inc. 1950 155 p illus 24 cm $6 00 2863

Contents Some species and age differences in amino acid requirements, by H. H. Mitchell. Methods of measuring the nutritive value of protein hydrolysates and amino acid mixtures—the rat repletion method, by D V Frost. The laboratory evaluation of amino acid mixtures and protein hydrolysates, by R. H. Silber and C. C. Porter Dietary proteins and synthesis of tissue proteins, by B F Chow The protein and amino acid requirements of man, by A A. Albanese. Index.

Note The five papers in this volume present the current state of the knowledge of the nutritional requirements of protein and amino acid of mammals. In addition to one which is devoted entirely to the requirements of man, there is also some information on man in the other papers. Each paper is *essentially* a literature digest, supplemented by a *substantial list of references*. The book is addressed to graduate scientists, especially biochemists, nutritionists, and practitioners of medicine who are not actively engaged in protein and amino acid research but require a current knowledge of the progress in the field.

AMERICAN MEDICAL ASSOCIATION COUNCIL ON FOODS AND NUTRITION

Handbook of nutrition A symposium prepared under the auspices of the Council on Foods and Nutrition of the American Medical Association Second edition New York McGraw Hill Book Company, Inc., 1951 717 p illus 22 cm $4.50 2864

Contents Part I, Individual nutrients: Proteins in nutrition, by H. B. Lewis. Fat in nutrition, by H. C. Eckstein. Carbohydrate metabolism, by D Stetten, jr Human requirement of calcium, phosphorus and magnesium, by G Stearns. Iron and copper, by W J Darby Iodine in nutrition by O. M. Curtis and M. R. Fertman. Fluorine and other trace elements in nutrition, by F J. McClure. The vitamin-B complex, by C. A. Elvehjem. Vitamin C, by C. G. King. Vitamin D by P C. Jeans. Fat-soluble vitamins A, E, and K, by H. R. Bott. Part II, Nutritional needs Recommended dietary allowances, by G. MacLeod and H. C. Sherman. Energy requirements of adults, by A. Keys. Feeding of healthy infants and children, by P C. Jeans. Nutritional requirements during pregnancy and lactation, by B S. Burke and H. C. Stuart. Nutrition problems of geriatric medicine by E. J Stieglitz. Nutritional needs in illness and disease, by G. V Mann and F J Stare. Part III, Nutritional deficiencies. Imbalance and dietary interrelationships in nutrition, by C. A Elvehjem and W A. Krehl. Caloric undernutrition and starvation, with notes on protein deficiency by A. Keys. Fluid therapy by D C. Darrow and E. L. Pratt. Deficiencies of the fat-soluble vitamins, by J B Youmans. Deficiencies of the water-soluble vitamins, by J B. Youmans. Mineral deficiencies, by J. B. Youmans. Part IV Foods and their nutritional qualities: Adequacy of American diets, by E. F Phipard and H. K. Stiebeling. Foods of plant origin, by L. A. Maynard and W L. Nelson. Foods of animal origin by P E. Howe. Foods for emergencies, by R. M. Wilder and T E. Keys. Improving the quality of cheap staple foods, by G. R. Cowgill. Index.

Note Rather than a reference book of tabulated data as the title might suggest, this work is a collection of original papers, each of which presents a survey of the current knowledge of the particular aspect of nutrition named in its title. Extensive literature references are included for most of the papers. The book is designed for the information of medical practitioners and public health personnel, as well as for graduate nutritionists. The index is exceptionally full. The first edition appeared in 1943 This edition represents a rather extensive rewriting in order to incorporate the great advances in the knowledge of nutritional requirements made during World War II and subsequently

AMERICAN PUBLIC HEALTH ASSOCIATION

Nutrition practices a guide for public administrators New York American Public Health Association, Inc. 1955 72 p. illus. 23 cm $1 00 2865

Contents Nutrition confronts the administrator Nutrition's place in public health practice. Determining opportunities for nutrition services. The total public health staff and nutrition services. Nutritionists in nutrition services. Program planning for nutrition. Ways the nutritionists may contribute to departmental programs. Questions of administrative placement. Planning records and reports. Nutrition services of other agencies and their interrelationships. *Advisory committees. Professional associations affiliations.* Assistance from federal and state departments. Measuring nutrition service gains. Bibliography

Note The primary thesis of this publication is that improvement of the nutritional status of the people is a proper objective in public health programs. The publication is addressed, therefore, to administrators of public health departments and it serves to provide such officials with information on the fostering, conduct and evaluation of nutrition services. Included also are discussions of methods of co-operating with other agencies in supporting nutrition services. The publication was prepared by the Association's Subcommittee on Nutrition Practices, Committee on Administrative Practice.

BOGERT, L JEAN

Nutrition and physical fitness Sixth edition Philadelphia W B Saunders Company 1954 664 p illus 22 cm $4 50 2866

Content Part one Body needs: Functions of food and its relation to health. *Carbohydrates*, fats, [illegible] proteins. Energy needs. Total energy: basal metabolism and regulation of body temperature. Total energy requirement of adults. Fuel value of foods and control of body weight. The protein requirement. Why the body needs mineral elements, water and fiber Calcium and phosphorus. Iron, copper and iodine. General information about vitamins. Ascorbic acid

ment dependence. Morphology of the heart and blood vessels. Histology of the endocrine glands. Bones and teeth. Skin and hair. Fluid morphology including bone marrow. Biochemistry: Basal metabolism. Total energy exchange and nitrogen balance. Vitamins and vitamin metabolism. Lipid metabolism. Mineral metabolism. Carbohydrate metabolism. Physiology: The gastrointestinal system. Respiration. Circulation and cardiac function. Fainting and the cardiovascular response to posture. The electrocardiogram. Renal function. Special senses. Neuromuscular function and motor performance. The capacity for work. Sexual function. Volume II. Psychology: Psychological problems in starvation. Behavior and complaints in natural starvation. Behavior and complaints in experimental starvation and rehabilitation. Intellective functions. Personality. Special problems: The edema problem. Anorexia nervosa and pituitary cachexia. Growth and development. Infectious diseases and undernutrition. Tuberculosis. Diabetes mellitus and undernutrition. Cancer and other neoplasms. Diets for rehabilitation, with special reference to the Minnesota experiment. Appendices. References. Index.

Note: A detailed technical report, based on an extended experimental investigation of starvation in which 32 young men served voluntarily as subjects. In addition to the data derived from this original investigation, selected data from the published literature have been incorporated. The work is a major contribution to the scientific knowledge of the subject and is of interest to graduate workers in such fields as biochemistry, medical research, and nutritional research as well as in physiology and psychology.

LEONG PANG CHONG compiler

Nutrition bibliography of Malaya. Compiled and annotated by P. C. Leong. Honolulu University of Hawaii Press, 1952 23 p. 22 cm. $0.65 2878

Note: A bibliography of published writings of all types through June 30, 1951. The term "nutrition" has been interpreted liberally to include all literature bearing on the subject, including compilations of data on heights and weights of children.

MACY ICIE GERTRUDE AND OTHERS

The composition of milks a compilation of the comparative composition and properties of human, cow and goat milk, colostrum, and transitional milk. Prepared by Icie G. Macy, Harriet Kelley and Ralph Sloan for the Food and Nutrition Board with the consultation of the Committee on Maternal and Child Feeding, Icie Macy Hoobler chairman. Washington, D. C. National Academy of Sciences—National Research Council, 1953 70 p. 24 cm. (National Academy of Sciences—National Research Council. Publication 254) $1.00 2879

Note: This work consists chiefly of five tables in which detailed data on the milks named in the subtitle are organized. Data are supplied not only on the main constituents, but also on trace elements such as lead, iodine, etc., when such information was available, and on physical properties, fat characteristics, and vitamin content. Literature references are included.

MACY ICIE GERTRUDE AND HAROLD H. WILLIAMS

Hidden hunger New York The Ronald Press Company 1945 286 p. illus. 24 cm. $3.50. 2880

Contents: The science of nutrition. Nutrition at the human frontier. Choosing and using nutrients. Poor nutrition—poor health. Nourishment from the soil. The substance of life. Food—on ocean. Food in action. Food for work. Food to fight. Food for thought. References.

Note: This account of present-day knowledge regarding the science of nutrition and of the part played by proper diet in the life of the individual and the nation, is written in a manner which will appeal to the educated lay reader. The authors stress the fact that an abundance of food does not necessarily imply good nutrition, and on this basis discuss the various types of food which are essential to good health and general well-being. They describe the digestive process and show how a lack of one or more essential minerals or vitamins results in undernourishment and disease. The book is essentially an argument for the belief that optimal nutrition for everybody is a vital step in curing the ills of the world.

MACY, ICIE GERTRUDE

Nutrition and chemical growth in childhood Volume I Evaluation. By Icie G. Macy director, Research Laboratory Children's Fund of Michigan. With a foreword by Hugo A. Freund Springfield Ill Charles C Thomas 1942 432 p. illus. 23 cm $5.00 2881

Contents: Foreword. Preface. List of illustrations. List of tables. Introduction. General considerations in metabolic balance studies. Organization of an extensive metabolic investigation. Satisfying appetite and meeting recommended dietary allowances. Some physiological aspects of digestion and excretion. Some chemical aspects of digestion and excretion. Energy metabolism in childhood. Metabolic balances. Hematochemical studies. 34 tests. Food, urine and feces. Cytometric and hematochemical. Roentgenographic. Compilation and treatment of data. References cited. Publications of the Research Laboratory Children's Fund of Michigan. Author index. Subject index.

——Volume II Original data with a foreword by Lawrence Reynolds, and a supplement by Julia Outhouse Holmes. Springfield Ill Charles C Thomas 1946 1 460 p illus 24 cm. $10.00 2882

Contents (abridged): Introduction. Data for normal children, obtained by the Research Laboratory of the Children's Fund of Michigan. Data for normal children, obtained by the Department of Home Economics, Agricultural Experiment Station, College of Agriculture, University of Illinois. Addenda. Comparative values for abnormal children, obtained by the Research Laboratory of the Children's Fund of Michigan. Osteogenesis imperfecta. Vitamin? function. Lipemia. Hematochemical studies of the blood in health and disease. Epilepsy. Index. Subjects and names, Volumes I and II.

——Volume III Calculated data. With a foreword by Helen A. Hunscher Springfield Illinois Charles C Thomas, 1951 2 174 p 24 cm $8.00 2883

Content (abridged): Introduction. Data calculated for normal children from the original data obtained by the Research Laboratory of the Children's Fund of Michigan. Proximate composition and energy values of diet. Carbohydrate. Fat. Nitrogen. Phosphorus. Chlorine. Sulfur. Negative minerals. Calcium. Magnesium. Sodium. Potassium. Positive minerals. Excess of positive or negative minerals. Supplement. Average values calculated from the original data obtained by the Department of Home Economics, Agricultural Experiment Station, College of Agriculture, University of Illinois. Appendix. Interpretation of roentgenograms. Assessment of ages of bones in the hand and wrist. Index: Subjects and names, Volumes I, II, and III.

Note: The results of an intensive clinical, biochemical, psychological, anthropometric and roentgenologic study of a diet-controlled group of normal children are presented in detail in these volumes. Each child in the group was repeatedly measured and tested over a period of years in order to record the anatomical and physiological changes due to growth. Techniques of the study are described, results of measurements are presented in the text and many hundreds of tables. Hundreds of roentgenograms showing skeletal changes are reproduced.

MARTIN ETHEL AUSTIN

Roberts' nutrition work with children Chicago University of Chicago Press, 1954 527 p illus. 25 cm. $7.50 2884

Contents: Introduction. The meaning of nutrition. Signs of progress in nutrition work; evidences of need. How can you tell

Remember the food groups. Citrus fruit, cabbage tomatoes and other vegetables bread, milk eggs, meat, fish, vegetables, legumes, nuts, fats and oil, sugar Condiments and spices—an episode in human folly Stimulants and intoxicants—the futility of harsh laws. Table manners. Food and the nature f man. Food and morale Postscript on freedom from want in food. Index

Note This volume sponsored by the American Association for the Advancement f Science deals with man's attitude toward food throughout history and the change from superstition to science in man's dietary conduct. Dietary notions and practices of the past are analyzed in the light of nutrition The role of food in war is surveyed, stressing the value of nutrition movement in improving food habits. There is a discussion of the means whereby science and democratic organization may achieve freedom from want in food, also a possible solution to the problem of feeding the post war world.

HARVARD SCHOOL OF PUBLIC HEALTH DEPARTMENT OF NUTRITION

Overeating overweight and obesity, proceedings of the Nutrition Symposium held at the Harvard School of Public Health, Boston Massachusetts, October 29, 1952 New York The National Vitamin Foundation, Inc, 1953 151 p illus 23 cm (Nutrition symposium series No 6) $1 50 2873

Content Lipogenesis, by S. Gurin. Obesity measurement and the composition of the body by A. Keys. Physiology of appetite, by J R. Brobeck. The psychology of overeating, by H. W Bruch. Factors in human obesity by E. E. Hunt, Jr and others. Obesity—red light of health, by D P Barr Fat people who lose weight live longer by L. I. Dublin. Practical reducing regimens, by A. W Pennington. A practical regimen for the cure of obesity by F A. Evans. Nutrition in liver disease, by P Gyögy

Note The papers in this volume were based both on experimental investigations and clinical experience. They deal with those aspects of overeating, overweight, and obesity which are named in the chapter titles, and they range from formal reports of investigation to concise discussions of diet for overweight patients. They are accompanied by transcripts of discussion and, in some instances, by literature references.

HAWLEY, ESTELLE E, AND OTHERS

The art and science of nutrition, a text book on the theory and application of nutrition Fourth edition By Estelle E Hawley Grace Carden Elizabeth D Munves With 70 illustrations, including one in color St Louis The C V Mosby Company, 1955 689 p illus (part col d) 23 cm $5 25 2874

Contents (abridged) Part i, The nutrients Nutrition and its place in the everyday orld The carbohydrates. The lipids The proteins. Ingestion, digestion absorption utilization. Indigestible fiber in the diet and its relation to health Energy metabolism. The blood and lymph. The endocrines and their role in nutrition The fat-soluble vitamins. The water-soluble vitamins. Minerals and mineral metabolism Food adjuncts Food hazards, food fads, and food protection. Part ii Normal nutrition Nutritive needs in pregnancy and lactation The feeding f infants. Food for children. Nutritional needs f the adult Food customs and culture patterns. Planning the family diet Part iii Modifications of the normal diet General suggestions for diet therapy The diet of surgical patients. Fevers, burns, and fractures. Diabetes mellitus. Spontaneous hypoglycemia. The ketogenic diet Diseases of the joints Addison's disease Disorders of the gastrointestinal tract. Celiac disease Diseases of the liver and bladder Diseases of the kidney Circulatory disturbances. The anemias Food allergy Summary f diet therapy Part iv Questions for general review Part R ferences. Part vi, Appendix Index

Note A standard textbook used in courses offered to students who are preparing for careers in dietetics, ursing, etc. It provides a sound introduction to the basic physiology that underlies good utrition practices, and also fairly ide range f practical information, particularly in the chapter on diet therapy A long series of tables provides wide range f data useful in applied nutrition. The list of literature references is an extensive one, classified by topics. The third edition was published in 1949 In comparison, this fourth edition, written with the aid of new co-author Professor Munves, represents a ery extensive revision. There has been considerable reorganization, including deletion of the former section on laboratory ork. Data on nutritional needs have been revised so as to conform to the last edition of the National Research Council's *Daily recommended allowances*. There are now 70 figures and 133 tables.

JENSEN, LLOYD B

Man's foods nutrition and environments in food gathering times and food producing times Champaign, Ill The Garrard Press, 1953 278 p 24 cm $4 50. 2875

Contents Part i, Food-gathering times Foods of men of pre-Chellean-Chellean Non Sapiens men of the Old Stone Age. Homo sapiens, modern man. The Mesolithic Period in Europe Part ii, Food-producing times The Neolithic Age. The Neolithic farm Cereals. Foods of orchards and gardens. Domesticated animals and protein foods. Spread of food production in Europe Part iii, Foods, environment, and man nutrition Social aspects of nutrition. Early preparations of foods. Nutrition and bodily changes. Climatic stress and nutrition. Nutrition and man's welfare References. Index.

Note An unusual book. It gathers together from the literature on the history and archaeology of early man the knowledge that pertains to his food habits and his nutrition. The nutritional aspect runs through the book as a constant theme and as shown in the table of contents, several chapters are devoted specifically to it The author cites numerous specific examples of relations between food habits and the strength and endurance exhibited by ethnic groups Literature references are given to the sources from which the information has been drawn The style is too technical for the book to be attractive to general readers, but it is suitable as background reading for such professionals as food technologists and home economists, in addition to its interest for students of civilization.

JOHNSTON, JOSEPH A

Nutritional studies in adolescent girls and their relation to tuberculosis. Springfield, Ill., Charles C Thomas 1953 320 p. illus. 24 cm. $7 50 2876

Contents Introduction. Tuberculosis in adolescence. Nutrition and tuberculosis. Results of inadequate caloric and protein intake Endogenous reinfection. Objectives. Factors affecting retention of nitrogen and calcium in the period of growth. Metabolic observations on adolescent girls with tuberculosis. Comment and summary Appendix. Bibliography

Note The record of nutritional and metabolic study extending over 20 years of group of adolescent girls most of whom had tuberculosis. The study was carried out at the Henry Ford Hospital. Although other factors are considered, the investigation centered on metabolism and particularly on nitrogen and calcium retention. The author states "It is concluded that a broad consideration of all those factors which are anabolic for nitrogen storage is essential to an understanding of the development and course of teen-age tuberculosis. It is felt that calcium may be shown to be important in the maintenance of the integrity of the healed first infection Condensed case histories and full data of nitrogen and calcium metabolism of all the cases studied are presented in the 200-page chapter entitled "Metabolic observations on adolescent girls with tuberculosis. I the terminal chapter results are summarized, and the author draws conclusions applicable to tuberculosis therapy Methods f the investigation, including typical diets, are described in the appendix.

KEYS ANCEL, AND OTHERS

The biology of human starvation. By Ancel Keys Josef Brozek Austin Henschel Olaf Mickelsen Henry Longstreet Taylor With the assistance of Ernst Simonson Angie Sturgeon Skinner and Samuel M Wells Minneapolis University of Minnesota Press, 1950 2 v illus 27 cm $24 00 2877

Contents (abridged) Volume i. Background The history of starvation. The sources of evidence and information. The Minnesota Nutrition. Laboratory experiment. General features of the Minnesota experiment. Morphology Body eight. Physical appearance and

National Research Council. Food and Nutrition Board

Recommended dietary allowances. Revised 1953 Washington, D C. National Academy of Sciences—National Research Council 1953 36 p 23 cm (National Academy of Sciences—National Research Council Publ 302) $0.50 2889

Contents: The meaning and applicability of the recommended dietary allowances. Scientific bases for the tabulated recommendations: Calories. Protein. Calcium. Iron. Vitamin A. Thiamine. Riboflavin. Niacin. Ascorbic acid. Vitamin D. Recommended daily dietary allowances (table). Consideration of nutrients not tabulated: Carbohydrate and fat. Water. Sodium, potassium, and chlorine. Phosphorus. Copper. Iodine. Fluorine. Trace elements. Vitamin B_6 group. Vitamin B_{12}. Folacin. Pantothenic acid. Biotin. Vitamin K. General discussion. References.

Note: A carefully formulated statement of the food elements and their quantities which appear to be essential in adequate diets. The actual recommendations are all stated in a one-page table, while the rest of the volume is devoted to concise discussions which are essentially critical appraisals of the literature and to a bibliography. The preceding edition was published in 1948. This 1953 revision reflects the advances in the knowledge of nutrition published since the 1948 revision was prepared. These advances and the revisions made in the recommendations are discussed explicitly.

National Research Council. Food and Nutrition Board. Committee on Nutrition Surveys

Nutrition surveys: their techniques and value. Washington, D C. National Academy of Sciences—National Research Council, 1949 144 p illus. 25 cm. (Bulletin of the National Research Council. Number 117 May 1949) $1 50. 2890

Contents: The objectives and demonstrated value of nutrition surveys. Dietary surveys and their interpretation. Chemical tests and their interpretation. Clinical diagnosis in nutrition surveys. The role of surveys in community nutrition programs. Nutrition surveys in relation to professional training in schools of medicine and public health. The role of health departments in nutrition surveys and appraisal.

Note: This bulletin is especially intended for food industry leaders, public health officers, doctors, and nutritionists. It provides scientific information on the methods and value of dietary and nutritional surveys. Each chapter includes an extensive bibliography.

Nutrition Symposium Series

Recent advances in nutrition research, with emphasis on the newer B vitamins. Proceedings of the scientific sections of the seventh annual meeting, The National Vitamin Foundation Incorporated New York City April 3 1952 New York The National Vitamin Foundation, Inc., 1952 129 p. 23 cm. $1.50 2891

Contents: The metabolic role of crystalline vitamin B_{12}, by B. F. Chow. Some observations on substances combining with vitamin B_{12}, by B. F. Chow and R. L. Davis. Role of the vitamins in antibody production, by A. E. Axelrod. Adrenal function in pantothenic acid deficiency, by R. A. [illegible] and others. Some studies on the role of certain of the B vitamins in [illegible], by D. R. [illegible] and R. W. [illegible]. The effect of certain nutritional factors on the reactions produced by acute stress in human subjects, by E. P. Ralli. The skin lesions of human pyridoxine deficiency and their relationship to seborrheic dermatitis of the skin type, by R. W. [illegible] and W. [illegible]. The role of B vitamins in the nutrition of the pig, by R. W. Luecke. The comparative value of various proteins in swine rations, by H. D. Wallace and T. J. Cunha.

Note: A collection of original papers in which recent important developments in selected areas of nutrition research are summarized for professional workers. Literature references are included.

Quartermaster Food and Container Institute

Methods for evaluation of nutritional adequacy and status: a symposium sponsored by the Quartermaster Food and Container Institute for the Armed Forces Quartermaster Research and Development Command U S Army Quartermaster Corps and Medical Nutrition Laboratory Research and Development Division, Office of the Surgeon General Oriental Institute University of Chicago February 25–26 1954 Edited by Harry Spector and Martin S Peterson and T E Friedemann Washington D C National Academy of Sciences—National Research Council 1954 313 p illus. 23 cm. Gratis 2892

Contents: I, Introduction: The problems, purposes, and scope of the symposium, by C. G. King. Importance of nutritional status and methodology to the army, by T. E. [illegible]. Controls in measuring nutritional response, by E. W. Crampton. II, Evaluation of protein adequacy: Biological value of proteins and amino acid interrelationships, by H. H. Mitchell. The rat repletion method, by P. R. Cannon. Introductory notes on quantitative interrelationships between tissue enzymes and dietary protein, by J. N. Williams, Jr. Other methods of evaluation, by J. B. Allison. III, Evaluation of vitamin adequacy: Blood levels, by O. A. Bessey. Evaluation of vitamin adequacy—urinary excretion tests, by W. G. Unglaub and G. A. Goldsmith. Some considerations in making therapeutic trials, by W. J. McGanity and W. J. Darby. Vitamin adequacy and specific metabolic functions, by E. E. Snell. IV, Evaluation of mineral adequacy: Balance studies: the macro-elements, by D. M. Hegsted. Specific functions of trace elements in blood formation, by G. E. Cartwright and others. Other functions, by G. K. Davis. V, Evaluation of military rations by animal experimentation: Rats, by H. Spector. Nutrition and performance in animals, by J. Brožek. Monkeys and dogs, by C. A. Elvehjem. The nutritive value of army rations as determined with growing chicks, by M. L. Scott and others. VI, Evaluation of nutritional status of populations: Nutrition survey methods, by W. H. Sebrell, Jr. and J. M. Hundley. Clinical examination, by N. Jolliffe. Physical performance, by J. Brožek. Physiological alterations in organic functions, by R. E. Johnson. Some aspects of nutritional problems of [illegible] soldiers, by S. M. Levenson and H. [illegible]. VII, Round-table discussion on body composition: Aspects of nutritional status reflected by body composition, by M. I. Grossman. Measurement of body composition in nutritional research—comments on selected methods, by J. Brožek. Body fluid compartments and indices of body composition, by D. E. [illegible]. Relation of body composition to metabolic activities, by W. R. [illegible]. Body composition—I, In vivo estimation of fat and water content from specific gravity (density) determinations, by A. R. Behnke. Body composition—II, In vivo estimation of body fat from measurements of gaseous absorption or desorption, by A. R. Behnke.

Note: The papers presented in this volume present a wide range of basic information pertinent to the evaluation of not only military rations but also civilian diets. They are based on the literature and on laboratory experimentation and field experience. Most of the papers are accompanied by literature references, and a few of them are accompanied by transcripts of the discussions at the symposium.

Quartermaster Food and Container Institute

Nutrition under climatic stress: a symposium sponsored by the Quartermaster Food and Container Institute for the Armed Forces Quartermaster Research and Development Command, U S Army Quartermaster Corps National Academy of Sciences Washington December 4–5 1952 Edited by Harry Spector

when a child is well nourished? How does a child grow? How do you know when a child is growing normally? Why aren't all children well nourished? What difference does it make to a child if he is malnourished? What does it take to make a child well nourished? Agencies, organizations, and movements which contribute to nutritional well-being of children Basic methods of improving the nutriture of children Nutrition services in state and local programs. Fundamental aspects of the school nutrition program. Essentials of effective nutrition teaching. Nutrition teaching at different grade levels. The school lunch Nutrition teaching aids for school and community programs. Index.

Note This book is a successor to Lydia J Roberts, *Nutrition work with children* revised and enlarged edition, Chicago, 1935 Under the original authorship the book achieved a reputation of being the standard text on its subject. The author of the present work—termed in its preface as the third edition of *Nutrition work with children*—was an associate of Professor Roberts at the University of Chicago when the first and second editions were written The book has been extensively revised, reorganized, and the chapters retitled. Most of the expository text is new In the bibliographies, literature published since 1945 predominates. In its new form, the book is still intended primarily for the instruction of advanced undergraduate college students. However its scope is broad enough to make it useful to graduate specialists in nutrition and to general practitioners of medicine and public health workers who advise parents on the nutrition of children

MERRILL, ANNABEL L, AND BERNICE K WATT

Energy value of foods basis and derivation Human Nutrition Branch Agricultural Research Service United States Department of Agriculture Washington, D C. Government Printing Office, 1955 105 p 26 cm (United States Department of Agriculture Agriculture handbook no 74) $0 55 2885

Contents Introduction. Part I Sources of food energy Fat Carbohydrate Protein Determined gross calculated gross energy values of foods. Other sources of energy Part II Digestibility and available energy of foods. Definition of terms. Digestibility of fat, carbohydrate, and protein Availability of energy from digested nutrients. Part III Derivation of current calorie factors Physiological fuel values of foods of animal origin. Physiological fuel values of plant products Part IV Application of calorie factors Comparison of calculated and determined available calories for diets. General factors and more specific factors for calculating calories in individual foods. Application of general factors to national food supplies. Conclusions. Literature cited. Appendix Tabular summary of experiments on digestibility of foods of plant origin by human subjects. Apparent digestibility and available energy Composition and heat of combustion of foods

Note Accurate evaluation of the energy value of foods is essential in dealing with problems of normal nutrition, undernutrition, or obesity This handbook provides more detailed information on food energy values than is available in current textbooks and food tables. It also shows the basic data drawn upon in deriving the revised calorie factors now used in tables of food composition in the United States of America

MILBANK MEMORIAL FUND

Nutrition in relation to health and disease Papers presented at a round table at the 1949 annual conference of the Milbank Memorial Fund November 16–17 1949 New York Milbank Memorial Fund 1950 249 p illus (part col d) 23 cm $1 00 2886

Contents (abridged) Foreword, by H D Kruse and F G Boudreau. A survey of nutritional status among school children and their response to nutrient therapy by J G. Brown and H. B Pierce Results from the study of bone density in the appraisal of calcium status, by P B Mack The influence of nutrition on the course of pregnancy by G Toverud. The objective evidences of nutritional deficiencies in pregnancy by W T Tompkins. Changes in blood values during pregnancy and the relation of protein levels to toxemia symptoms, by D G Wiehl. Amino acids and protein in pregnancy with and without toxemias, by T Priserose. Hypertension and renal lesions as manifestations of nutritional deficiency by W S Hartroft. Ménétrier's syndrome as malnutritional disorder by M. Atkinson. An experiment in the control of tuberculosis among Negroes, by J Downes. The effect of nutrient supplements on the course of tuberculosis, by H. R. Getz.

Note The papers in the volume are the work of medical practitioners or others with professional interests in the relationship between nutrition and health. They are addressed to persons with similar interests, but they are not so technical that they cannot be understood by persons with about a standard education in medicine In other words, the contents of the book are also within the grasp of public health personnel and social workers. The individual papers are supplemented by excerpts from the discussions at the conference, illustrations, and literature references. Several illustrations are reproduced in color

MINER, ROY WALDO, editor

Nutrition in infections. Conference chairman and consulting editor W Alan Wright. New York Published by the Academy 1955. 145–318 p illus (part col'd) 22 cm. (New York Academy of Sciences. Annals. Vol. 63, art. 2) $4 00 2887

Contents Critical evaluation of the role of nutrition in the prophylaxis and treatment of disease, by S. L. Halpern. Implications of observations made during experimental deficiencies in man, by M. K. Horwitt. Nutrition and intestinal parasitism, by W W Frye. The effect of high levels of vitamins on the resistance of chicks to fowl typhoid, by C. H. Hill and H. W Garren. Antibiotics and vitamins in the treatment of swine enteritis, by R. W Luecke. The role of the vitamins in antibody production, by A. E. Axelrod and J Pruzansky Observations on infection and certain vitamins, by B M Kagan. Fluid balance during infection with reference to protein and mineral metabolism enzyme systems, by J Elman. Fortified broad spectrum antibiotics as adjuncts in the treatment of surgical infections of the young, the aged, and the debilitated patient, by A. Prigot and A. de L. Maynard. Nutritional and metabolic aspects of infection, by L. W Kinsell. Antibiotics and nutrition in infections, by M. R. Milberg and M. Michael, Jr Protein deficiency as it predisposes to infection and the role of vitamin deficiencies, by R. López-Toca. Nutritional problems of surgical patients, by J E. Rhoads and C. E. Alexander. Certain aspects of deficiency diseases of the tropics and treatment of some related infections, by E. H. Loughlin and W G. Mullin. Nutritional disorders in bilharzial cases with hepatosplenic affection, by A. R. Mousa and others. Altered prognosis in the diabetic with infection, by H. Pollack. Recapitulation and prospects, by H. A. Schneider

Note Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in May 1955, are made available in this publication. They are listed by title and author above. In most of the papers the results of recent experimental investigations or clinical experience are correlated with the results reported in the literature. Literature references and transcripts of conference discussion of the individual papers are furnished for most of the papers. In the recapitulation, Dr Schneider, of the Rockefeller Institute for Medical Research, summarizes the conference and also takes issue with the basic assumption of many of the contributors that a good state of nutrition produces increased resistance to infection.

MITCHELL, HAROLD HANSON, AND MARJORIE EDMAN

Nutrition and climatic stress, with particular reference to man. Springfield, Ill. Charles C Thomas 1951 234 p illus. 24 cm. $6.75. 2888

Contents Introduction. Diet in a cold environment. Diet in a hot environment. Diet at altitude. Practical considerations. Literature cited. Addendum.

Note Essentially this work is a digest of the literature bearing on such matters as the effect of diet on tolerance to cold, the effect of heat on nutrient requirements, the physiological effects of altitude, and the effect of dietary modifications on the tolerance to anoxia. The literature surveyed includes both published literature and governmental research reports. The work itself was prepared as a government research report under a contract between the University of Illinois and the Quartermaster Food and Container Institute for the Armed Forces as an aid in the proper rationing of troop personnel in various climates and at different altitudes. It has been published in the present form because it is potentially useful in other fields than the military The literature has been covered up to about October 1 1949

[illegible] courses in chemistry and physiology. Interest is lent to the subject by linking it to the student's own nutritional problems as, for example, in the chapter where the relations between food intake and body weight are discussed. There are 41 tables of reference data and selected but extensive bibliographies. In this edition numerous changes have been made to bring the book in line with the 1948 revision of the National Research Council's Recommended daily dietary allowances and with other developments. The fourth edition was published in 1937. 303 p. $4.90

SHERMAN HENRY CLAPP

Food and health. New edition completely revised and reset. New York The Macmillan Company 1947 290 p illus. 22 cm $4.75 2898

Contents (abridged). The importance of an intelligent use of food. How foods affect health and efficiency through nutrition. The control of body weight, and the maintenance of health during middle life. Energy needs in childhood and with advancing age. Proteins and their amino acids. Mineral elements in food and nutrition. The significance of food calcium in development and health. Vitamin A and its precursors. Thiamine (vitamin B_1). Riboflavin (vitamin B_2 or G). Pellagra and niacin (nicotinic acid). Ascorbic acid (vitamin C). The vitamins D and the prevention of rickets. The existence of other vitamins and the concept of [illegible]. The chief groups of foods and the place of each in the diet—breadstuffs and cereals—vegetables and fruits—milk and cheese—meats, fish, poultry and eggs—fats—sweets and sweets—summary. Adjustments for better nutrition. Appendices: Recommended dietary allowances (revised 1945) of the National Research Council. Nutritive values of typical foods. Nutritional criteria in common servings and commercial units of a larger number of typical foods. Selected bibliography. Glossary. Subject index.

Note. An authoritative and well-written book for general readers. It points the way to selecting food and planning everyday diets so that an optimum level of health and vitality will be maintained. Although little space is given to menu planning, an appendix contains three representative series of meals that were chosen according to the principles explained in the book. The first edition was published in 1934. In the present edition, there has been much revision in order to incorporate the knowledge gained since 1934. There are five new chapters, and the bibliography has been thoroughly revised.

SHERMAN HENRY CLAPP

Foods their values and management. New York Columbia University Press, 1946 221 p. 21½ cm. $4.00. 2899

Contents. Modern views of food supply. Grain crops as food and feed. Mature legumes and nuts. Potatoes and sweetpotatoes. Green and yellow vegetables. Citrus fruits and tomatoes. Other (and total) fruits and vegetables. Milk and its products other than butter. Meats, fish, poultry and eggs. Food fats. Sugar and sweets. Food [illegible] problems. Appendix: Recommended dietary allowances. Bibliography. Index.

Note. A companion to *The science of nutrition* by the same author. It is intended for the general reader as well as for specialists. In the discussion of each article (or type) of food, its place in the individual or family dietary or in the national food supply is considered from the viewpoint of its contribution to each main aspect of nutritive value: energy, protein, mineral elements, and vitamins. Special attention is given to new knowledge of the distribution and conservation of vitamin values and to the economy of individual [illegible] in the different food groups. Although the bibliography is a selected one and is chiefly limited to recent publications, it runs to 13 pages.

SHERMAN HENRY CLAPP

The nutritional improvement of life New York Columbia University Press 1950 270 p illus 23 cm. $4.50 2900

Contents. Introductory—nutrition as public concern and as [illegible] adventure. Nutrition in the nineteenth—beginnings of permanently organized research in nutrition. First decade of the twentieth century science of nutrition. Nutrition in the decade of 1911–1920. Advances during 1921–1930 and the concept of nutritional improvement. Nutrition in the decade of 1931–1940. In the Second World War. Principles and practice. The internal environment and the quality of life. Improved nutrition and length of life. Further human implications. Better nutritional status for more people. Appendices: The 1946 world food survey of the Food and Agriculture Organization of the United Nations. Records of actual food consumption. Selected bibliography. Index.

Note. The main theme of this book by an internationally known authority on nutrition is that the rapid advance of nutritional knowledge, especially in the present century, has already improved the quality of human life and promises further improvement in the years ahead. The presentation is semi-popular and the book is presumably of interest to professional workers in the fields of public health, nutrition, and child care, as well as to those general readers who seek mature discussions of scientific subjects.

SHERMAN HENRY CLAPP

Selected works of Henry Clapp Sherman Mitchell Professor Emeritus of Chemistry Columbia University New York The Macmillan Company 1948 1,056 p illus 24 cm $2.50. 2901

Contents. Looking forward in nutrition, by H. C. Sherman. An appreciation. Biographical notes. Chronological list of papers. Books. Acknowledgment. Selected reprints: Foods and nutrition. Addresses and reviews.

Note. Henry Clapp Sherman, former Professor of Chemistry at Columbia University, is world famous for his outstanding work and research in all the major branches of the science of nutrition. This volume contains biographical material, a bibliography of his writings, and 119 of his articles reprinted from various scientific journals, ranging in date of publication from 1900 to 1946. Unfortunately the volume lacks an index.

TAYLOR CLARA MAE, AND OTHERS

Foundations of nutrition Fifth edition By Clara Mae Taylor Grace Macleod and the late Mary Swartz Rose. New York The Macmillan Company 1956 620 p illus (part col d) 21 cm. $6.00. 2902

Contents. Historical introduction. The basal metabolism and factors affecting it. The energy requirement of adults. The energy requirement of children. Food as the source of energy for the body. Food in relation to growth and weight control. Water. Protein. Mineral elements. Calcium, phosphorus, and magnesium. Iron, copper, cobalt, and other trace elements. Vitamin A. Thiamine. Ascorbic acid. Vitamin D. Riboflavin. Niacin (nicotinic acid). Other vitamins. Contributions to the diet made by various types of food materials. Milk and cheese. Bread, flour and cereals. Vegetables and fruits. Meat, fish, poultry, eggs, and nuts. Fats, and sugars, and other sweets. Adequate diets for adults. Food needs of mothers and babies. Food needs of preschool and kindergarten children. Food needs of school children. Adequate diets for the family. Appendix. Index.

Note. A textbook of college grade. It was first published in 1927 and in its various editions has been widely used in courses offered to students of home economics and students preparing for careers in dietetics. It emphasizes both the scientific knowledge that is the basis for current recommendations in nutrition and the practical aspects of diet management and menu planning. It contains enough tables of data, for example a table of the nutritive values of individual foods in calories and metric weights, to make it useful as a practical reference book. The fourth edition, the work of the same authors, was published in 1944. In comparison this fifth edition contains a wide range of new data, several new tables and many revised sections of text. The chapters include short lists of references, and these have been revised to refer mostly to literature published since 1944.

TOEPFER, EDWARD WILLIAM AND OTHERS

Folic acid content of foods. Microbiological assay by standardized methods and compilation of data from the literature By Edward W Toepfer Elizabeth Gates Zook Martha Louise Orr and L. R. Richardson Washington D C. Government Printing Office 1951 116 p illus. 26 cm. (United States. Depart

and Martin S Peterson Washington, D C. National Academy of Sciences—National Research Council, 1954 204 p illus 23 cm. Gratis 2893

Content Conference objectives, by E. M Nelson I, Practical problems of service operations under climatic stress Army by H. E. Ratcliffe. Air force, by W E. Bills. Canadian armed forces, by J G. Armstrong. Summary remarks, by A. Henschel. Discussion of the practical problems of service operations under climatic stress. Physiological responses of men to heat and cold, by F Daniels. II, Animal experimentation: Effect of heat on physiological economy by S. Brody Vitamin requirements in hot climates, by C. A. Mills. Water metabolism in hot climates, by E. F Adolph. Discussion of animal studies—under high temperatures. Acclimatization to cold environment, by L. P Dugal. The effect of certain vitamins on the response of normal subjects to cold water stress, by E. P Ralli. Protein metabolism under stressful conditions, by B F Chow Discussion of animal studies—under cold temperatures. Food problems in exploring the arctic, by Sir H. Wilkins. III, Human experimentation: Laboratory studies, by H. H. Mitchell. Role of the field test in nutrition and weather stress studies, by F Sargent. Summary remarks, by R. M Kark. Discussion of laboratory and field studies using human subjects. IV Summary of present knowledge—need for more research Lessons from Korea, by H. Pollack. Discussion. Heat tolerance and nutrition suggestions for new directions in investigation and interpretation, by L. P Herrington. Low temperature considerations, by E. Page. Laboratory studies on man by H. H. Mitchell. Studies on troops in the field, by R. M Kark. The coordination of research approaches, by A. Keys. Discussion of new research approaches.

Note The diverse nature of the material in this volume is obvious from the titles of the papers listed above. Included are results of research on animals and on human subjects summaries of military field experience suggestions for future research, etc. Important findings are reported in some of the papers, and their value is not limited to military planning and operations, but is of value also in the dietary management of domesticated animals and human beings subsisting under extremes of climate

PATTERSON, THOMAS LEON

Comparative physiology of the gastric hunger mechanism New York New York Academy of Sciences 1933 226 p illus 23 cm (New York Academy of Sciences Annals Vol XXXIV p 55–272 277–284) $2 25 2894

Content Introduction. The biological significance of hunger Hunger in the Protozoa Hunger in the simpler Metazoa. Hunger in plants. Hunger in the higher animals. The theories of hunger Methods of experimentation. Comparative physiology of gastric motility in vertebrate and invertebrate animals. Types of Invertebrata studied Arthropoda. Mollusca. Types of Vertebrata studied Chordata Cyclostomes. Pisces Amphibia. Reptilia. Aves. Mammalia. The gastro-neuro-muscular mechanism The nature of the gastric response. The influence of stimulation of the sciatic. The influence of stimulation of the vagus. The influence of stimulation of the splanchnic The ocular-gastric reflex from compression of the eyeball. Man (*Homo sapiens*) Discussion and conclusion. Bibliography Index.

Note A comprehensive analysis of the hunger problem by means of a series of physiological experiments upon such diverse vertebrates and invertebrates as the crab, clam, dogfish, frog turtle, pigeon monkey and man Its purpose is to study comparatively the hunger mechanism throughout the animal kingdom in order to be able better to interpret the mechanism of the human stomach.

SAHYUN MELVILLE editor

Proteins and amino acids in nutrition New York Reinhold Publishing Corporation 1948 566 p illus 23 cm $10 00 2895

Contents Introduction by H. B. Lewis. Proteins in nutrition (historical) by E F Beach The biological utilization of proteins and protein requirements, by H H Mitchell. Caloric vitamin and mineral requirements with particular reference to protein nutrition by H. J Deuel, Jr Economic aspects of food proteins, by L. E. Booher The nutritive aspects of meat and meat products, by H R. Kraybill The amino acid requirements of avian species, by H. J Almquist. The relation of hormones to protein metabolism, by A. White. Plasma proteins and their relation to nutrition, by M Sahyun. Protein deficiency and its relationship to nutritional anemia, hypoproteinemia, nutritional edema, and resistance to infection, by C. P Berg. Protein and amino acid nutrition in pediatrics and in pregnancy by S. Z. Levine. Protein nutrition in surgical patients, by C. C. Lund and S. M. Levenson. The relation of fluid and mineral balance to protein metabolism, by W E. Abbott. Proteins as related to burns, by A. Large and C. G. Johnston. The protein nature of toxins, antibodies and related substances, by E. A. Kabat. Protein nature of filtrable viruses, by M. A. Lauffer Appendix Table I, Proximate composition of American food materials. Table II, Nutritive value of 100 grams of selected foods, edible portion. Index.

Note The common theme of these papers is the effects of varying amounts of protein (including amino acids and accompanying food components) in the diet of human beings. Many interesting correlations are indicated of the close connection between protein nutrition (especially protein deficiency) and various diseases. Of the many tables, two in Chapter X (Tables X I and X II) report a direct correlation between the protein diet of pregnant women and the resultant height, weight, and general health of their offspring. Another table 73 pages long, tabulates the water, protein, fat, carbohydrate ash acid, and food value of a long list of American food materials. The work is designed primarily for professional workers in nutrition and allied fields. Extensive references are given at the end of each chapter.

SHERMAN, HENRY CLAPP

Chemistry of food and nutrition. Eighth edition. New York The Macmillan Company 1952 721 p illus, 22 cm. $6.50. 2896

Contents (abridged) Carbohydrates. Fats and lipids Nutritional chemistry of the proteins and their amino acids Enzymes and digestion. The basal energy metabolism, regulation of body temperature, and specific dynamic action. Total energy metabolism and food requirement. Quantitative aspects of protein needs and values. Mineral elements in foods and nutrition. Nutritional aspects of acid-base balance. Quantitative aspects of calcium and phosphorus needs and values. Iron and copper in food and nutrition. Iodine in nutrition. Ascorbic acid (vitamin C) Thiamine (vitamin B_1) Riboflavin Niacin (nicotinic acid) and the pellagra problem. Folic acid, vitamin B_{12}, and citrovorum factor Other water-soluble vitamins and substances of related interest. Vitamin A and its precursors. The vitamins D and prevention of rickets The nutritional chemistry of reproduction and lactation Some chemical aspects of growth and development. Dietary adequacy and nutritional status Correlative chemical control of the internal environment—the problem of the best use of food. Causes and extent of variations in the nutritive values of foods. Food economics in the light of the newer chemistry of nutrition. Improvement of already-normal nutrition. Appendices. Index.

Note A standard work since the publication of the first edition in 1911 It was designed and is widely used as a college text for use in home economic courses and other courses where a fairly extensive knowledge of the fundamentals of nutrition is important. It has gradually taken on also the status of a reference book for lay readers, social workers, public health workers, and others who have serious interests in the facts regarding the relation of nutrition to health. The style is concise, and a good deal of space is given to tables, formulas, and bibliographies The seventh edition was published in 1946. In this edition the three last chapters are new and numerous revisions have been made in the text of other chapters.

SHERMAN HENRY CLAPP AND CAROLINE SHERMAN LANFORD

Essentials of nutrition Third edition. New York The Macmillan Company 1951 454 p. illus 22 cm 2897

Content (abridged) The nutritional improvement of life The more abundant nutrients in foods. What happens to food in the body—digestion and metabolism Energy aspects of nutrition How to meet the energy need and have the body weight you want. How to meet the need for protein. Mineral elements and regulatory processes in nutrition Iodine Ascorbic acid (vitamin C) Thiamine (vitamin B_1) Riboflavin niacin (nicotinic acid) and the problem of pellagra with its related ills. Other water-soluble vitamins Vitamin A and its precursors Rickets and the vitamin D Other fat-soluble vitamins Some relations of food to the teeth Nutritional characteristics of food commodities Food costs and values—nutritional guidance in food economics Appendix Fatty acids. Growth enzymes Composition and nutritive values of foods Recommended dietary allowances. Glossary Subject index.

Note A relatively brief textbook designed particularly for introductory college courses taken mainly by students who ...

of age, were studied. Pertinent literature is cited in footnotes, with statements in the text keyed to the references. The investigations were sponsored by the Herman Frasch Foundation for Research in Agricultural Chemistry and were carried out by the Missouri Agricultural Experiment Station.

CARPENTER THORNE MARTIN

Tables, factors, and formulas for computing respiratory exchange and biological transformations of energy Fourth edition. Washington, D C. Carnegie Institution of Washington, 1948. 147 p. 25 cm. (Carnegie Institution of Washington. Publication 303C) $1.25 2909

Note: The purpose of this publication is to make available in one place the majority of tables and conversion factors needed in calculations of results from measurements obtained by the several types of respiratory-exchange apparatus, particularly the Carpenter-Knipping and the combination of spirometer, valves, and breathing appliance, and to make available the standards of normal metabolism. The introductory section gives the method of construction and calculation of the tables, with examples of their application. Among the tables are those giving reductions of barometric pressure and temperature used in computing the reduction of gas volumes to 0° and 760 millimeters; oxygen-volume tables used in calculating the oxygen deficit of expired air; calorific values of oxygen and carbon dioxide for the calculation of heat derived from carbohydrate and fat in respiratory exchange measurements; the Lissauer formula for calculating body-surface of infants, and the DuBois formula for calculating body-surface of adults; basal heat-production and metabolism tables for both sexes, energy expenditure tables and other data on metabolism.

GREENBERG DAVID M editor

Chemical pathways of metabolism. New York Academic Press, Inc. 1954 2 v. 23 cm. Vol. 1 $11.00 vol 2 $9.50 2910

Contents: Volume I. Free energy and metabolism, by A. B. Pardee. Enzymes in metabolic sequences, by D. E. Green. Glycolysis, by P. K. Stumpf. The tricarboxylic acid cycle, by H. A. Krebs. Other pathways of carbohydrate metabolism, by S. S. Cohen. Biosynthesis of complex saccharides, by W. Z. Hassid. Fat metabolism and acetoacetate formation, by I. L. Chaikoff and G. W. Brown, Jr. Sterol and steroid metabolism, by D. K. Fukushima and L. S. Zuerchold. Author index. Subject index. Volume II. Nitrogen metabolism of amino acids, by P. P. Cohen. Carbon catabolism of amino acids, by D. M. Greenberg. Synthetic processes involving amino acids, by D. M. Greenberg. Metabolism of sulfur-containing compounds, by D. M. Greenberg. Enzymatic synthesis of peptide bonds, by H. Borsook. Purines and pyrimidines, by M. P. Schulman. Nucleotides and nucleosides, by L. A. Heppel. Metabolism of heme and chlorophyll, by S. Granick. Author index. Subject index. Errata: Volume I.

Note: Planned as a survey of the accumulated knowledge of the biochemistry of metabolism, this work contains the chapters whose authors and titles are listed above. Essentially each of the chapters is a scholarly written monographic survey of the topic covered in its title. It presents in organized form the results reported in the pertinent literature. Literature references—several hundred of them in the case of some chapters—are printed as footnotes, and the names of the authors of the cited work are brought together in the author indexes. The work is of interest to graduate biochemists and other scientists who have need for a compact and authoritative survey of the subject or a guide to the literature published to approximately the close of 1953.

HOLLEY HOWARD L AND WARNER W CARLSON

Potassium metabolism in health and disease New York Grune & Stratton, 1955 131 p. illus 22 cm $4 50 2911

Contents: Normal potassium metabolism. Abnormal potassium metabolism—potassium deficiency. Abnormal potassium metabolism—potassium excess. Appendix. Selected references. Index.

Note: The chapter on normal potassium metabolism in this work is an outline, only 19 pages long. Most of the volume is devoted to abnormal potassium metabolism, which is surveyed from the standpoint of clinical medicine. The book is intended as a clinical guide in diagnosis and treatment of abnormal potassium metabolism. Signs and symptoms, laboratory findings, and treatment are covered, and a selection of typical cases described. The appendix includes data on the potassium content of public water supplies in a number of cities in the United States of America.

MCELROY WILLIAM D., AND BENTLEY GLASS editors

Phosphorus metabolism A symposium on the role of phosphorus in the metabolism of plants and animals Sponsored by the McCollum Pratt Institute of the Johns Hopkins University Volume I. Baltimore The Johns Hopkins Press 1951 762 p illus 24 cm. $10.00. 2912

Contents (abridged): Metabolism of polysaccharides and disaccharides, by W. Z. Hassid. The problem of the "direct utilization" of disaccharides by certain microorganisms, by M. Doudoroff. The synthesis of polysaccharides without the intermediation of phosphate, by E. J. Hehre. The effect of the hyperglycemic factor and epinephrine on liver and muscle phosphorylase, by E. W. Sutherland. Some studies of fructose metabolism, by M. W. Slein. Phosphoglucomutase and aldolase, by J. F. Taylor. The metabolism of pentose and triose phosphates, by B. L. Horecker. The primary product of glucose-6-phosphate oxidation, by F. Lipmann. Pyridine nucleotides, by F. Schlenk. Recent investigations on the formation and utilization of active acetate, by H. A. Barker. Initial stages of pyruvate oxidation, by R. S. Schweet and others. Acetyl transfer in the enzymatic synthesis and breakdown of citric acid, by J. R. Stern. The metabolism of two-carbon compounds, by [illegible]. Lactate and citrate biosynthesis, by S. F. Carson. Oxidative phosphorylation during electron transport, by F. E. Hunter, Jr. Ethyl alcohol oxidation and phosphorylation in extracts of *E. coli*, by D. D. Fischer and E. Racker. The regulation of the rate of oxidation in rat liver mitochondria, by V. R. Potter and R. O. Recknagel. The metabolism of phosphorus-containing coenzymes, by A. Kornberg. The structure of coenzyme A, by G. D. Novelli. The structure of pyridoxal phosphate, by I. C. Gunsalus. Pyridine nucleotides and coupled phosphorylation, by N. O. Kaplan. The biochemistry of inorganic pyrophosphates and metaphosphates, by G. Schmidt. The influence of inorganic ions on phosphorylation reactions, by H. Lardy. The chemistry and thermodynamics of phosphate bonds, by P. Oesper. Phosphate metabolism in the activity of skeletal and cardiac muscle, by W. F. H. M. Mommaerts. Energy sources of bioelectricity, by D. Nachmansohn. Phosphate bond energy and bioluminescence, by W. D. McElroy. Urea formation, by S. Ratner. The synthesis of peptide bonds, by P. P. Cohen. Adenosine triphosphate and carbon dioxide fixation, by M. F. Utter. Summary, by B. Glass. Author index of participants. Subject index.

—— Volume II. Baltimore The Johns Hopkins Press 1952 930 p. illus 24 cm. $11.00 2913

Contents: Mechanisms of phosphate assimilation. The acid-soluble phosphates in animal metabolism, by D. M. Greenberg. Phosphate assimilation in higher plants, by P. K. Stumpf. The glycolytic cycle in the breakdown and synthesis of carbohydrates in green leaves, by D. I. Arnon. The role of phosphate in amino acid and protein metabolism. Enzymatic synthesis of glutathione, by K. Bloch and others. Transpeptidation and transamidation reactions, by C. S. Hanes and others. The biological significance of the phosphoryl radical, by H. Warburg. Synthesis and transfer of the labile methyl group, by G. L. Cantoni. The genetic control of enzyme formation, by D. M. Bonner. Enzymatic dephosphorylation of phosphoproteins and the nature of phosphorus linkages, by G. E. Perlmann. The role of phosphorus in the metabolism of lipids. The chemistry of phospholipides, by J. Folch. Formation of phospholipids in animal tissues, by C. Artom. Phospholipid metabolism in human liver disease, by W. E. Cornatzer. The enzymatic oxidation of fatty acids, by E. P. Kennedy and A. L. Lehninger. Fatty acid oxidation by soluble enzyme system from mitochondria, by G. R. Drysdale and H. A. Lardy. Fatty acid oxidation in soluble enzyme preparations, by H. R. Mahler. Fatty acid synthesis and oxidation in pumpkin cotyledons, by E. H. Newcomb and P. K. Stumpf. The chemistry and metabolism of nucleic acids. Recent aspects of the chemistry of nucleic acids, by S. Zamenhof. Observations on pentose nucleic acid composition in sea urchin embryos and in mammalian cell fractions, by D. Elson and E. Chargaff. The products of ribonucleic acid hydrolysis and their relationship to its structure, by W. E. Cohn and others. The relation of desoxynucleosides to the biochemistry of

ment of Agriculture Agriculture handbook no 29) $0 45 2903

Contents Introduction. Part I Laboratory analysis of foods Analytical procedures. Standardization of growth curves. Calculation of confidence limits. Reproducibility of assays. Recovery of added folic acid. Potential enzyme activity of chicken pancreas. Completeness of extraction. Results of laboratory analysis of foods. Part II Compiled data on folic acid content of foods. Literature cited.

Note Recognition of folic acid as a factor required for growth reproduction, and prevention of anemia in animals, and for treatment of several types of anemia in human beings, led to the laboratory work on the folic acid content of food which is described and summarized in this handbook. The study was carried on jointly by the Bureau of Human Nutrition and Home Economics in Washington and by the Texas Agricultural Experiment Station. Results are reported of the systematic application of standardized analytical procedures to a large number of foods. Two summary tables on the folic acid content of various foods are given the first covering 16 pages, contains the detailed results of the laboratory analysis of market purchased, locally produced, and special foods, showing total and free folic acid in edible portions determined by microbiological assay with *Lactobacillus casei* and *Streptococcus faecalis* the second, covering 79 pages, contains compiled data from literature and other sources. References listed in the bibliography number 131

UNDERWOOD, E J

Trace elements in human and animal nutrition New York Academic Press Inc, 1956 430 p illus 24 cm $9 50 2904

Contents. Introduction. Iron. Copper Molybdenum. Cobalt. Nickel. Zinc. Manganese. Iodine Fluorine. Selenium. Aluminum arsenic, barium boron, bromine silicon strontium, and vanadium. Soil-plant-animal interrelationships. Author index. Subject index.

Note The trace elements" are those whose names are given in the chapter titles listed above. This book is a comprehensive survey of the knowledge accumulated to date on the importance of these elements in animal nutrition. In a typical chapter the historical development of the knowledge is outlined, then the known facts are concisely stated and references are given to the source literature. Essentiality in nutrition and toxicity (when the latter exists) are both covered. The names of authors of the cited literature are assembled in the author index hence the book may be used as a convenient guide to the literature of the field. The author is associated with the Institute of Agriculture of the University of Western Australia.

METABOLISM

BENEDICT, FRANCIS GANO, AND ROBERT C LEE

Hibernation and marmot physiology Washington D C Carnegie Institution of Washington 1938 239 p illus 25 cm (Carnegie Institution of Washington Publication no 497) o p 2905

Contents (abridged) Techniques employed. Physiology of the non-hibernating marmot. Physiology of the non-hibernating marmot during prolonged fasting. Physiology of the marmot when entering hibernation Physiology of the marmot in hibernation Physiology of the marmot when awakening from hibernation Approaches to artificial hibernation The causes and theories of hibernation.

Note A investigation of hibernation centered around the main theme of vital energetics, with emphasis upon heat production and [illegible] less extent upon heat loss. Comparisons are made between the heat production of the marmot in nonhibernating condition and that of the hibernating animal. Respiration, metabolism, and changes in body weight are also studied on the basis of laboratory data.

BENEDICT FRANCIS GANO AND ROBERT C LEE

Lipogenesis in the animal body with special reference to the physiology of the goose Washington, D C Carnegie Institution of Washington, 1937 232 p. illus. 25 cm. (Carnegie Institution of Washington. Publication no 489) $2 50 2906

Contents (abridged) Techniques employed. Physiology of the normal goose Body weight and composition. Rectal temperature. Heart rate. Respiration rate. Basal metabolism. Water-vapor output. Physiology of the goose during prolonged fasting Length of life. Loss in body weight. Changes in body composition during fasting. Heat production. Physiology of the goose during excess feeding Kinds and amount of food. Rectal temperature. Heart rate Water-vapor output. Carbon-dioxide production. Oxygen carbon dioxide. Character of gain in body weight. Energy [illegible] in the transformation of carbohydrate into fat.

Note A study of the transformation of food carbohydrate into body fat, or animal lipogenesis, as observed in experiments using a normal goose as subject because of that animal's marked disposition to convert carbohydrate readily into fat. The data secured from heat production and respiratory exchange measurements have not only physiological value but likewise are potentially of great economic value in the feeding of domestic animals.

BENEDICT FRANCIS GANO AND CORNELIA (GOLAY) BENEDICT

Mental effort in relation to gaseous exchange heart rate, and mechanics of respiration Washington, D C Carnegie Institution of Washington 1933 83 p illus. 25 cm. (Carnegie Institution of Washington. Publication no 446) o p 2907

Contents (abridged) Earlier investigations cerebral, [illegible] circulatory and gaseous metabolism studies. Plan of research Technique employed respiration apparatus. Mechanics of respiration. Heart rate. Record of muscular activity Results of experiments. General discussion physiological normality of subject. Influence of body position. Mental effort and metabolism.

Note A discussion of the effects of mental effort upon metabolism, based upon review of previous literature and upon original experimental data. The findings of the present investigation in large part controvert the idea that the mental process has significant dynamic effect upon the energy metabolism.

BRODY, SAMUEL

Bioenergetics and growth with special reference to the efficiency complex in domestic animals New York Reinhold Publishing Corporation 1945 1,023 p illus 24 cm. (A publication of the Herman Frasch Foundation) $5 00 2908

Content Introduction Factors in the efficiency complex. Energetic efficiency, energy units, and dietary-energy categories. Energetic efficiencies of growth and work processes. Specific dynamic action and [illegible] efficiency of productive processes [illegible] of nutrition, the principle of diminishing increments, and efficiency Metabolic catalysts in the efficiency complex—enzymes, minerals and vitamins in biological oxidations. Metabolic catalysts in the efficiency complex—hormones. Metabolic catalysts in the efficiency complex—seasonal rhythms Metabolic catalysts in the efficiency complex—diurnal rhythms Homeothermy temperature [illegible] Homeostasis and organismic theory [illegible] life processes, and productive efficiency Methods in animal calorimetry Basal energy and protein metabolism in relation to body weight in mature animals of different species. Metabolism and body weight during growth Pulmonary ventilation in relation to body weight [illegible] body size and maintenance needs in relation to basal metabolism, [illegible] efficiency Time relations of growth of individuals and populations. Linear growth, form, and function. Aging in relation to growth and efficiency with special reference to milk and egg production Physiologic time and equivalence of age. Nutritional, [illegible] aspects in the efficiency complex Milk—nutritional, [illegible] physiological aspects. The monetary economy of milk production Egg production—nutritional and energetic efficiency aspects [illegible] energetic efficiency of muscular work and indices of work-[illegible] Summary and integrating discussion. [illegible] Author's index. Subject index.

Note A systematic presentation of the results obtained in [illegible] program of research into the energetics of farm animals. Although the main object was to investigate problems with practical applications, the approach was fundamental hence many problems [illegible] physiologic time and equivalence [illegible] out immediate practical value.

tems. Sponsored by the McCollum-Pratt Institute of the Johns Hopkins University Baltimore The Johns Hopkins Press 1956 728 p. illus. 24 cm. $10.00 2916

Contents: Role of molybdenum in plant nutrition, by A. J. Anderson. Nitrate and nitrite metabolism by plants and microorganisms: Some remarks on nitrate metabolism in microorganisms, by W. Verhoeven. The enzymatic mechanisms of nitrate and nitrite metabolism in bacteria, by S. Taniguchi and others. Enzymatic steps in the assimilation of nitrate and nitrite in fungi and green plants, by A. Kessler. Normal pathways of assimilation of nitrate and nitrite, by W. D. McElroy and D. Spencer. Metabolism of inorganic nitrogen by plants, by R. A. Steinberg. The participation of cytochrome in nitrate reduction, by W. Verhoeven and Y. Takeda. The cytochrome system and microbial reduction of nitrate, by R. Sato. Note on the utilization of nitrite-N and ammonium-N by *Azotobacter vinelandii*, by R. R. Roberts and M. A. Aiken. The role of molybdenum in oxidation-reduction processes in *Neurospora* and *Azotobacter* by D. J. D. Nicholas and H. M. Stevens. Nitrate reduction from the analysis of leguminous plants, by G. Chrome and H. J. Evans. Identification of NO, N_2O and N_2 as products of the nonenzymatic reduction of nitrate by ascorbate or reduced diphosphopyridine nucleotide, by H. J. Evans and C. McNall. General processes of nitrification and denitrification: General processes of nitrification and denitrification, by J. H. Quastel. Nitrification, by C. C. Delwiche. Denitrification, by C. C. Delwiche. Enzymatic steps in denitrification, by V. A. Najjar and C. W. Chung. Nitrogen fixation: Introductory remarks, by M. Kamen. Whiteley and E. J. Ordal. Iodine oxidation by xanthine oxidase, by I. Fridovich and P. Handler. Properties of purified xanthine oxidase, by P. G. Avis and others. Sulfhydryl groups apparently concerned in the activity of milk xanthine oxidase, by J. Harris and L. Hellerman. General mechanisms of metallo-flavoproteins in electron transport, by H. R. Mahler and J. L. Glenn. The function of the electron-transferring flavoprotein in the first oxidative step of the fatty acid cycle, by H. Beinert and F. L. Crane. The role of iron and copper in terminal electron transport, by D. E. Green and others. Summary by B. Chance. Author index of participants. Subject index.

Note: Published in these volumes are the papers and discussions presented at symposia sponsored by the McCollum-Pratt Institute of the Johns Hopkins University. The symposia are attended by eminent biochemists and scientists working in fields related to biochemistry. Each one ... organized around several major papers in which ... summarized the current knowledge of specific sectors of the same subject. These papers are complemented by shorter papers in which scientists report the results of their own investigations in the area. Literature references are included in both the long and short papers. The first volume in the series, Copper metabolism, 1950, ... out of print.

Meyer, Frieda L., and others

A standardized diet for metabolic studies its development and application, by Frieda L. Meyer Myrtle L. Brown, Harriet J Wright, and Millicent L. Hathaway Washington, D. C. Government Printing Office 1955 81 p. illus 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1126) $0.30 291

Contents: Need for ... standardized diet. Section i. The diet, its nutritive value and application: Plan of the diet. Nutritive value of the diet. Possible applications of the diet. Section ii. Metabolic response to the standardized diet and to ... low-fat intake: Preliminary tests of the diet. General plan of the study. Results and discussion. Estimate of the nutritive value of and the metabolic response to the standardized diet. Section iii. Procedures for the metabolic study: Preparation of the diet. Methods of adding levels of vitamins and mineral salts. Collection and preservation of samples. Analytical methods. Section iv. Brief review of literature on human requirements of essential nutrients for adults: Proteins. Minerals. Vitamins. Literature cited.

Note: The study reported in this bulletin was carried out cooperatively by the Human Nutrition Research Branch of the Agricultural Research Service of the United States Department of Agriculture, the University of Maryland, and the Maryland Agricultural Experiment Station. Diets used for the study of nutritional requirements have seldom been applicable to the study of more than one nutrient at ... time and even ... the same nutrient has been under study basal diets have varied from laboratory to laboratory. In the Human Nutrition Research Branch of the Agricultural Research Service ... standardized uniform basal diet was developed to be applicable to the study of the requirements and utilization ... large number of ... nutrients and to the interrelationship of ... nutrients. This diet was tested in the spring of 1952 upon ... group of six University of Maryland ... adults. Wide variation was found among these subjects in their metabolic response to the levels of intake in the standardized diet. The detailed results are reported in this bulletin.

Miner, Roy Waldo editor

The regulation of hunger and appetite. Conference chairman and consulting editor Franklin Hollander New York Published by the Academy 1955 144 p. illus 22 cm. (New York Academy of Sciences. Annals. Vol 63 art. 1) $3.00 2918

Contents: Introduction by F. Hollander. Part i. Regulatory mechanisms: Untoward reactions to weight reduction among certain obese persons, by A. J. Stunkard. The role of the digestive tract in regulating the ingestion of food, by J. P. Quigley. Regulation of energy intake and the body weight—the glucostatic theory and the lipostatic hypothesis, by J. Mayer. Neural regulation of food intake, by J. R. Brobeck. The time factor in the adjustment of food intake to varied caloric requirement in the dog—a study of the precision of appetite regulation, by H. D. Janowitz and F. Hollander. Part ii. Disorders of regulation: Role of the emotions in hunger and appetite, by H. Bruch. Integration of current views on the regulation of hunger and appetite, by M. I. Grossman. Part iii. Clinical aspects: Food preferences in man—special cravings and aversions, by I. Sherman. A study of hunger and appetite in ... young man with esophageal obstruction and gastrostomy, by F. Hollander and others. Chemically useful appetite depressants, by S. C. Harris. The action of various deterrent compounds on voluntary food intake, by S. Leykovsky. Interpretation of food intake data obtained in chronic monkey tests, by A. E. Light. Shortcomings of food consumption as ... measure of hunger—results from other behavioral techniques, by N. E. Miller.

Note: Papers first presented at ... conference held by the Section of Biology of the New York Academy of Sciences in November 1 ... 54 are published in this monograph and are listed by title and author above. The conference was concerned with physiologic regulatory mechanisms of hunger and appetite and with the clinical implications of the basic physiologic knowledge. Literature references and transcripts of discussion are included in most of the papers. The terminal paper is to ... what degree ... critique of the conference but is primarily ... statement of the author's view that the amount of food eaten is not an accurate index of hunger.

Morse Kenneth T editor in chief

Calcium and phosphorus metabolism in man and animals with special reference to pregnancy and lactation. Associate editor Franklin N Furness Conference chairman Franklin C. McLean. Organizing chairman and consulting editor Robert R. Marshak. New York Published by the Academy 1956 279–462 p. illus. 22 cm. (New York Academy of Sciences. Annals Vol. 64 art. 3) $4.00 2919

Contents: Part i. Calcium balance and turnover studies. Radiocalcium studies in pregnancy by C. L. Comar. Calcium and phos-

nucleic acids, by R. B. Merrifield and D. W. Woolley. Indications of individuality among ribonucleic acids, by A. W. Bernheimer. Enzymatic studies on the metabolism of nucleosides and their components in microorganisms, by J. O. Lampen. Biosynthesis of nucleic acids, by G. B. Brown and others. Studies on the biosynthesis of purines *in vitro* by J. M. Buchanan. The role of desoxyribonucleates in bacterial transformations, by R. D. Hotchkiss. The role of phosphate in the metabolism of photosynthetic and chemoautotrophic organisms: The path of carbon in photosynthesis—XVII. Phosphorus compounds as intermediates in photosynthesis, by J. G. Buchanan and others. Reduction of pyridine nucleotides in photosynthesis, by W. Vishniac and S. Ochoa. Photosynthesis—energetics and phosphate metabolism, by B. L. Strehler. Serendipic aspects of recent nutritional research in bacterial photosynthesis, by M. D. Kamen and H. Gest. Molecular hydrogen—oxidation and formation in cell-free systems, by H. Gest. The role of phosphate in CO_2 assimilation of *Thiobacilli* by K. Baalsrud and K. S. Baalsrud. Influence of hormones on phosphate metabolism: The effect of epinephrine and the hyperglycemic factor on liver and muscle metabolism *in vitro* by E. W. Sutherland. The effects of thyroxine on phosphate metabolism, by C. H. DuToit. The relation between the parathyroid glands and phosphorus metabolism, by J. C. Aub. The effects of insulin and hormones of the pituitary and adrenal cortex on the glucose uptake by the tissues, by C. R. Park. The effect of insulin on phosphorylations in muscle by J. Sacks. Phosphate metabolism in specialized tissues: Pathways of phosphate metabolism in cancer tissue, by V. R. Potter and P. Siekevitz. Phosphorus metabolism in the skeleton, by W. D. Armstrong. Studies on renal tubular transport, by J. V. Taggart. The role of phosphorus in the maintenance of the resting potential and selective ionic accumulation in frog muscle cells, by G. Ling. Spatial and chemical exchange of phosphate in the resting and active nervous system, by L. G. Abood and others. Summary by B. Glass. Author index of participants. Subject index.

—— A symposium on the mechanism of enzyme action. Sponsored by The McCollum Pratt Institute of the Johns Hopkins University. Baltimore. The Johns Hopkins Press. 1954. 819 p. illus. 24 cm. $11.00 2914

Contents: Protein configuration and biological activity: Introduction, by M. Heidelberger. The nature of the forces between protein molecules in solution by J. G. Kirkwood. Essential chemical structures of chymotrypsin and pepsin, by R. M. Herriott. The activation of chymotrypsinogen and trypsinogen as viewed by enzymatic end-group analysis, by H. Neurath and others. Denaturation of proteins and enzymes, by W. Kauzmann. Kinetics of enzyme-catalyzed reactions: Kinetic and thermodynamic aspects of enzyme-catalyzed reactions, by H. Eyring and others. The enzyme-substrate complex as an intermediate in enzyme-catalyzed reactions, by H. B. Bull. Elementary kinetic theory of enzymatic activity—first order theory by J. S. Friedenwald and G. D. Maengwyn-Davies. Elementary kinetic theory of enzymatic activity—second order theory—influence of pH. The function of metals in enzyme catalysis: Chelation and catalysis, by M. Calvin. Thermodynamic and molecular properties of some metal-protein complexes, by I. M. Klotz. The specificity and mode of action of two metal-peptidases, by E. L. Smith and others. The mechanism of electron and hydrogen transport: "One-electron and two-electron oxidation-reduction reactions in inorganic and organic chemistry by F. H. Westheimer. Hydrogen transport and steric specificity in reactions catalyzed by pyridine nucleotide dehydrogenases, by B. Vennesland and F. H. Westheimer. One and two electron reactions in catalases and peroxidases, by B. Chance and R. R. Fergusson. Enzyme mechanisms in living cells, by B. Chance. The function of enzymes in group transfer: Introduction, by F. Lipmann. Formation of acyl and carbonyl complexes associated with electron-transport and group-transfer reactions, by E. Racker. In most of the papers the results of recent research studies are correlated with related results in the literature and references to the literature are included.

NAJJAR, VICTOR A , editor

Fat metabolism a symposium on the clin ical and biochemical aspects of fat utilization in health and disease. Baltimore The Johns Hopkins Press 1954 185 p illus 22 cm $4 50 2920

Content Clinical and biochemical features of fat metabolism—an introduction, by V A N jjar Obesity in childhood—some clinical aspects, by H. H. Gordon. Multiple causative factors in obesity by J Mayer Discussion Constitutional factors in obesity by B. Childs Endocrine factors in obesity by L. Wilkins Lipemia, by L. E. Holt, jr Discussion Essential hyperlipemia, by E. H. Ahrens, jr Preparation utilization and importance of neutral fat emulsion in intravenous alimentation, by H. C. Meng On the role of lipemia clearing factor in lipid transport, by C. B Anfinsen. Consideration of the role of coenzyme A in some phases of fat metabolism, by F Lipmann Enzymatic oxidation and synthesis of fatty acids, by A. L. Lehninger Discussion A contribution to the mechanism of *diabetes mellitus, by S. P Bessman Lipogenesis in vitro* and its hormonal control by S. Gurin. Lipid and phospholipid synthesis, by A. Kornberg. Some aspects of cholesterol metabolism related to atherosclerosis, by R. G. Langdon. Index.

Note. The papers collected in this volume include both surveys of clinical experience written from the clinical viewpoint and reports of scientific investigations conducted from the physiologic viewpoint. Literature references are included for most of them. The four inclusions designated as "Discussion in the above Contents are not the usual transcripts of symposium discussions but are organized in the form of short papers with literature references.

NATIONAL VITAMIN FOUNDATION

Symposium on the antimetabolites their modes of action and therapeutic implications Proceedings of the scientific sessions of the tenth annual meeting the National Vitamin Foundation Inc New York City March 1 1955 66 p illus 27 cm (Nutrition symposium series No 11) $2 00 2921

Contents Introduction by R S. Goodhart. Thiamine antagonists, by *L. R. Cerecedo. Riboflavin* antagonists, by J P Lambooy Vitamin B_6 antagonists, by W W Umbreit. Pantothenic acid antagonists, by G. D Bird and others. A naturally occurring antimetabolite in the causation of a disease, by D W Woolley Folic acid antagonists, by J H. Burchenal. Purine and pyrimidine antagonists, by G. H. Hitchings. Anti-vitamin E stress factors as related to lipid peroxides, by E. L. Hove.

Note The subtitle notwithstanding, the papers in this publication taken together present picture of research progress in an area of biochemical knowledge where there are still many gaps to be filled. Therapeutic implications of the knowledge acquired to date are discussed briefly in the introduction, and some of the papers contain brief discussions. However the following statement is not atypical "The medical implications which can be derived from the known riboflavin inhibitors and our very meager knowledge of their mechanism of action are obviously not impressive. One of the most interesting papers from the medical practitioner's standpoint is Burchenal's "Folic acid antagonists which includes considerable clinical experience. However although it is shown that folic acid drugs produces remission in children with acute anemia, it has never effected cure. Furthermore, the mechanism of its action is not understood. The publication is of interest primarily to biochemists and physicians ho are concerned ith research.

RUTGERS UNIVERSITY CONFERENCE ON PROTEIN METABOLISM

Protein metabolism, hormones and growth, a symposium Six lectures presented at the eighth annual Conference on Protein Metabolism, Bureau of Biological Research, Rutgers University, The State University of New Jersey February 1–2 1952 New Brunswick. Rutgers University Press, 1953 80 p. illus. 23 cm $1 50 2922

Content Effect of protein and amino acids of the diet on the endocrine system, by L. T Samuels. Relationships between the thyroid and protein metabolism, by J H. Leathem. Some aspects of the protein anabolic action of the androgens, by C. D Kochakian. Relationships between the adrenal cortex and protein metabolism, by F L. Engel. Effects of growth hormone on metabolism f nitrogen by J A Russell. Hormonal regulation of human growth, by L. W Kinsell.

—— Some conjugated proteins a symposium Six lectures presented at the ninth annual Conference on Protein Metabolism, Bureau of Biological Research Rutgers University The State University of New Jersey January 30–31 1953 William H. Cole, editor New Brunswick Rutgers University Press 1953 73 p illus 24 cm. $1 75 2923

Content The anatomy of hemoglobin and some functions of its parts, by S. Granick. Cytochromes in the mammal, by F. F. Walsh. On the problem of nucleoproteins, by E. Chargaff. The metabolism of virus-infected bacteria, by S. S. Cohen. Lipoproteins, by J L. Oncley Mucoproteins and mucoids, by K. Meyer.

—— Serological approaches to studies of protein structure *and metabolism.* Edited by William H Cole. New Brunswick Rutgers University Press 1954 97 p illus. 24 cm. $2 00 2924

Content Proteins as antigens and antibodies, by F Haurowitz. The precipitin reaction and studies of native and denatured proteins and derivatives, by M Heidelberger Light scattering and ultracentrifugation methods in studies f precipitin systems and their application to human metabolism, by D Gitlin. The immunological analysis of the biosynthesis of protein, by M Cohn. The use and limitations of serological techniques in studies f proteins, by J Munoz. The measurement and significance of serological correspondence among proteins, by A. A. Boyden.

—— Some physiological aspects and consequences of parasitism Edited by William H. Cole New Brunswick Rutgers University Press 1955 90 p illus 23 cm. $2 00 2925

nutritive metabolism, by E. E. Warren. Steroid hormones in osteoporosis, by D. D. Whedon. Sex steroid replacement in the aging individual, by W. H. Masters. Effects of steroids in women with breast cancer, by B. J. Kennedy. Endocrine regulation of prostatic growth, by H. Brendler. The effects of some of the steroid hormones on the metabolic behavior in aged males, by N. W. Shock. Cerebral metabolism in the aging process—the steroid factor, by G. S. Gordan and J. E. Adams. Author index. Subject index.

Note: An important publication, ... better viewed from the standpoint of endocrinology or geriatrics. The papers in it are surveys of accumulated knowledge or reports of the results of research programs, or combinations of both. The authors of the papers (and the participants in the symposium) were eminent specialists associated with the faculties of leading medical schools and other institutions concerned with medical research, such as the Sloan-Kettering Institute for Cancer Research, and they addressed themselves to physicians and scientists with similar professional interests in endocrinology and aging. There are three principal topics: quantitative variations in the production of hormones with advancing age; the role of hormones in the wasting of tissues and components associated with aging; and results of experimental medication with steroids in heart disease, osteoporosis, cancer, etc. Some of the papers, such as Masters' "Sex steroid replacement in the aging individual," formulate programs of hormonal therapy that may delay the onset of senility in aging individuals or prevent altogether the development of this clinical state. The full transcripts of discussion which accompany each paper add considerably to the value of the volume. Literature references are included for all papers.

FIELDS, WILLIAM S., AND OTHERS, editors

Hypothalamic-hypophysial interrelationships; a symposium. Third annual scientific meeting of the Houston Neurological Society, Texas Medical Center, Houston, Texas. Compiled and edited by William S. Fields, Roger Guillemin and Charles A. Carton. Springfield, Ill., Charles C Thomas, 1956. 156 p. illus. 23 cm. $4.75 2937

Contents: Neural pathways to the hypophysis, by J. D. Green. Neurosecretion in the central nervous system, by W. Hild. Hypothalamic control of the anterior lobe of the hypophysis, by G. W. Harris. Hypothalamic-hypophysial interrelationships in the production of pituitary hormones in vitro, by R. Guillemin. The relation between anterior and posterior hypophysis and the hypothalamus in respect to stress, by M. Vogt and I. A. Mirsky. Telencephalic influence upon the hypothalamus, by P. Gloor. Steroid hormonal response to stimulation of electrodes implanted in the subfrontal parts of the brain, by J. L. Paul and others. Hypothalamic-hypophysial dysfunction in man—laboratory and clinical assessment, by C. L. Spurr and S. H. Sulkind. General discussion and summary.

Note: Eminent authorities on neurology, physiology, biochemistry and other related areas of medicine wrote the papers and contributed to the discussions published in this volume. The current state of knowledge and unsolved problems are both discussed. Some research results not previously published are included. All of the papers but the last one are written essentially from ... neurophysiologic viewpoint. In the last one, the authors—who are on the staff of the College of Medicine of Baylor University and the Veterans Administration Hospital in Houston, Texas—discuss hypothalamic-hypophysial dysfunction as seen from ... clinical viewpoint and describe in detail ... specific case of apparent true diabetes insipidus and defects not accurately describe pituitary hypofunction. Literature references are included for all of the papers.

GAUNT, ROBERT, AND JAMES H. BIRNIE

Hormones and body water. Springfield, Ill., Charles C Thomas, 1951. 57 p. illus. 22 cm. (American lecture series. Publication no. 103. A monograph in American lectures in physiology, edited by Robert F. Pitts) $2.25 2938

Contents: Introduction. Evolutionary considerations. The posterior pituitary antidiuretic hormone. The adrenal cortex. The thyroid. The adrenal medulla. The pancreas. The gonadal hormones. Vagaries of pregnancy. The liver. The inappropriate syndrome. Water intoxication. Water metabolism in the newborn. Conclusions. References.

Note: This short monograph presents ... analysis of the available information on the secretion of hormones on water metabolism in the human body. The action of individual and groups of hormones are considered as are some of the evolutionary factors which developed the present functional mechanism of the human body. The bibliography contains 118 citations.

HARTMAN, FRANK ALEXANDER, AND KATHARINE A. BROWNELL

The adrenal gland. 72 illustrations. Philadelphia, Lea & Febiger, 1949. 581 p. illus. 24 cm. $12.00 2939

Contents: Anatomy. Adrenal size. Circulation and innervation. Histology. Development and involution. Chemistry of chromaffin tissue. Chemistry of cortical tissue. Methods of assay and factors in secretion of epinephrine. Anaphylactic shock and other effects in relation to the medulla. Physiological and pharmacological effects of epinephrine. Functions of interrenal tissue. Relation of the adrenal to electrolyte and water exchange. Relation of the adrenal cortex to energy metabolism. Output and functions of cortical hormones. Function and fate of cortical hormones. Dietary factors in adrenal activity. Interrelation of the adrenal with the pituitary. Adrenal hypertrophy and regeneration. Other endocrine interrelationships. Relation of the adrenal cortex to the sexual organs. Addison's disease. Other insufficiencies. Hypersecretion of chromaffin tissue. Hyperactivity of the adrenal cortex. Adrenogenital syndrome. Adrenal pathology. Pathology related to adrenal dysfunction. Bibliography. Author index. Subject index.

Note: A monograph which presents the accumulated knowledge of the adrenal gland and its hormones, throughout the animal kingdom, but with the greatest emphasis on the gland in mammals. The inclusive scope is obvious from the chapter titles. The chapters are concise, critical digests of the pertinent literature and are keyed to the 170-page bibliography of nearly ... articles. The senior author has made many contributions to the field, and both his and the junior author's findings are incorporated. The book is important in the literature of comparative physiology as well as in the narrower field of endocrinology.

HOSKINS, ROY GRAHAM

Endocrinology; the glands and their functions. Revised & enlarged edition. New York, W. W. Norton & Company, Inc., 1950. 402 p. illus. 22 cm. $6.50 2940

Contents: Hormones—the chemical regulators. The adrenal glands. The thyroid gland. The parathyroid glands. The hypophysis or pituitary gland. The male sex glands—the testes. The female sex glands—the ovaries. The placenta as an endocrine organ. The pineal gland. The thymus gland. Endocrine aspects of reproduction. Hormone regulation of the digestive functions. Insulin and diabetes. Some general aspects of endocrinology. Endocrinology of the future. The endocrine literature. Index.

Note: An authoritative, semitechnical presentation designed for such readers as psychologists, sociologists, and laymen who have some familiarity with scientific terminology. The first edition appeared in 1941. In this edition the text has been revised at various points to incorporate advances since that year, and additional literature citations have been added to the reference lists and general bibliography.

KITAY, JULIAN I., AND MARK D. ALTSCHULE

The pineal gland; a review of the physiologic literature. Cambridge, Mass., Published for The Commonwealth Fund by Harvard University Press, 1954. 280 p. illus. (part col. d) 21 cm. $5.00 2941

Contents: Part I, Pineal physiology: Characteristics of the pineal gland. Older methods of investigating pineal function. Bodily growth and development. The pituitary gland in general. Pituitary gonadotrophin and the gonads. Corticotrophin and the adrenal cortex. Thyrotrophin and the thyroid gland. Pancreas, parathyroid glands, and thymus. Skin pigmentation. Carbohydrate, lipid, protein, and electrolyte metabolism. Tumor growth. Relation of various factors to the pineal gland. Miscellaneous studies in physiochemical and ... Immediate effects of pineal extracts. Clinical use of pineal extracts. Part II, Clinical correlations: Pineal calcification. Pineal tumors. Gonadal changes associated with pineal tumors. Pineal hyperplasia. Absence of the pineal gland. Miscellaneous findings.

Vitamin Foundation, Inc. 1954 107 p illus 23 cm. (Nutrition symposium series No 8) $1 50 2931

Contents The relation of vitamin B_6 and riboflavin to protein metabolism, by J R. Beaton. The interrelationship between vitamin B_{12}, steroids and proteins, by B F Chow Role of the vitamins in antibody production, by A. E. Axelrod and J Pruzansky Effects of growth hormone preparations on protein metabolism, by [illegible] H. Gesbler The amino acid requirements of man, by R. M Leverton. Factors influencing amino acid utilization in tissue protein synthesis, by P R. Cannon and others. Amino acids and protein in therapy by H. Pollack.

Note Seven of the eight papers presented in the symposium named in the title of the book are published in this volume, together with literature references. Several of the papers present the results of recent experimental investigation and correlate them with related literature. Others are summaries of the accumulated knowledge of the aspects of protein metabolism named in their titles.

WAGNER, ROBERT P , AND HERSCHEL K MITCHELL

Genetics and metabolism. New York John Wiley & Sons, Inc., 1955 444 p illus 24 cm. $7.50 2932

Contents Introduction to the gene concept. Some aspects f cell structure and function. Mutation. Inherited chemical differences. Inheritance of utritional requirements. Some problems of biochemistry Mutation and the agents of metabolic control. Metabolic patterns. Allelism, allelic interaction and pseudoallelism. Interactions of non-allelic genes. Environmental modification of phenotype. The continuity of cellular organization. The problem of the mechanism of development. Genetics, development, nutrition, and disease. References. Index.

Note. Considerable work has been done in the area where genetics and biochemistry come together and this book is both an introduction to and critical survey f it. The central theme may be identified with the following statement by the authors "Within the limits of sensitivity of chemical and physical analytical methods it is possible to arrive at reasonably precise descriptions of many chemical differences that result from changes in the genetic constitution of an organism. The uthors show that there are *many gaps in the accumulated knowledge and that hypotheses* put forth to explain observed relationships have not yet been adequately proved. Nevertheless, the progress to date is worthy of the attention of not only geneticists and biochemists but of scientists in general. The treatment is on graduate level and assumes considerable previous education in biology and chemistry Literature references are included in fact, the bibliography runs t well over 700 references.

WOOLLEY, DILWORTH WAYNE

A study of antimetabolites. New York John Wiley & Sons Inc , 1952 269 p 24 cm. $7 00 2933

Contents Introduction—discovery and development of ideas about antimetabolites. Competition between metabolically important compounds and substances related to them in chemical structure. Some general aspects f the phenomenon. Hypotheses about mechanism of action of antimetabolites. The spectrum of activity of antimetabolites. The natural occurrence f antimetabolites as participants in physiological processes and as etiological agents in disease. Selectivity of action f antimetabolites. Applications to chemotherapy Other applications to pharmacology Applications to biochemistry The designing of antimetabolites. Practical suggestions for the synthesis and testing of antimetabolites. Bibliography Index of structural form las. Subject Index.

Note The term antimetabolites" as used in this book designates substances which are closely related in chemical structure to essential metabolic substances and have the additional property of interfering with these substances in the biochemistry of living organisms. The interest in antimetabolites derives (1) from the light that experiments with them may throw on biochemical processes, and (2) from the possibility that an understanding of them will point the way to the synthesizing of powerful pharmacologic agents. This book is a survey f the current state of the field. It includes results from the author's own investigations and also those that have been reported in the literature. There is bibliography of 500 references.

ENDOCRINE SYSTEM

CORNER, GEORGE WASHINGTON

The hormones in human reproduction. Revised edition Princeton Princeton University Press, 1947 281 p. illus. 22 cm. $3.75. 2934

Contents The place of the higher animals and of mankind in particular in the general scheme of animal reproduction. The human egg and the organs that make and care for it. The ovary timepiece. The hormone of preparation and maturity A hormone for gestation. The menstrual cycle. Endocrine arithmetic. The hormones in pregnancy The male hormone. Appendix: Chemical structure of the sex gland hormones. Index.

Note An account of the nature and function of hormones in the processes of sex and reproduction. Intended for the general reader, it is also appropriate for the use of biologists, physicians, and biochemists. It represents, with additions, the substance of the Vanuxem lectures, given at Princeton University in February 1942.

DORFMAN, RALPH I., AND REGINALD A. SHIPLEY

Androgens biochemistry physiology and clinical significance. New York John Wiley & Sons, Inc., 1956 590 p illus. 24 cm. $13.50 2935

Content Part I, Introduction General concepts. Historical background. Part II, Biochemistry: Sources of androgens. Isolation and chemistry of androgens and related compounds. Preparation of urinary extracts. Assay f androgens and 17-ketosteroids. Metabolism of the androgens. Relative activities of androgens. Biological actions and interactions of androgens. Part III, Physiology: Androgens and the embryo, Intersexuality Actions of androgens on sex structures of animals. Androgens and behavior Influence on endocrine glands other than gonads, and various nonendocrine glands. Influence of androgens on metabolism and enzymes. Part IV Clinical aspects Normal pubertal development in boys. Conditions of androgen excess. Androgen deficiency—hypogonadism. Androgen therapy Androgen preparations and methods of administration. The excretion of androgens and 17-ketosteroids in various clinical conditions. Appendix: Names and structural formulas of compounds. Preparation of urinary extracts for 17-ketosteroid and androgen assay Androgen bioassay methods. Chemical assay methods. Index.

Note: The accumulated knowledge on the androgens—less accurately termed the male sex hormones—has been integrated in this volume. The first three parts, devoted to the biochemical and physiological aspects total 246 pages and include much information from animal experimentation as well as some observations on human subjects. The section on clinical aspects is 204 pages long. In both sections the treatment is very compact with extensive use of tables for the presentation of data. Literature references are a special feature. The appendix contains useful material for biochemists and other scientists concerned with research on the androgens or with their assay

ENGLE, EARL T , AND GREGORY PINCUS, editors

Hormones and the aging process, proceedings of a conference held at Arden House, Harriman New York, 1955 New York Academic Press Inc. 1956 323 p illus. 23 cm. $8 50 2936

Contents. Aging and urinary steroid excretion, by G. Pincus. *Effect of aging* on the steroid metabolism as reflected in plasma levels, by L. T Samuels. The thyroid in the aging process, by R. W Rawson. Urinary excretion f gonadotrophin as function of age, by A. Albert and others. Hormonal regulation of growth and development, by C. D Kochakian and C. Tillotson. Steroids and protein metabolism in experimental animals, by J H. Leathem. Androgenic and anabolic action of testosterone derivatives, by V A. Drill and F J Saunders. Naturally occurring pathology in the aging rat, by D J Ingle. Effects of hormones on protein metabolism, by A. White. The role of steroids in calcium and phosphorus metabolism, by G. H. Pearson *Newer techniques* in the study of calcium metabolism in man and effects of hormones thereon, by D. Laszlo and H. Spencer Mechanisms regulating fluid and elec-

the text is very extensive chapter bibliographies. It is suitable for advanced undergraduate students, graduate students, and for scientists who are not specialists in this field but need a reliable survey of it and the related literature. The first edition was published in 1948. The book was rather extensively revised and somewhat reorganized for this second edition. Much of the material that appeared in the first two chapters of the original edition has been condensed and rewritten and now appears in the penultimate chapter. Many revised sections appear in chapters carried over from the first edition. The chapter on [illegible] reactions to stress is newly added. The bibliographies are still extensive, but some older references have been deleted and selected references to literature published since the first edition was written have been added. The book's comparative approach is unchanged.

VAN DYKE, HARRY BENJAMIN AND OTHERS
Protein hormones of the pituitary body New York New York Academy of Sciences 1943 174 p. illus 22 cm. (New York Academy of Sciences. Annals. Vol. XLIII p. 253–426) $2.00. 2947

Contents Introduction to the conference on protein hormones of the pituitary body by H. B. Van Dyke. Criteria of purity of proteins, by T. Shedlovsky. Hormones of the posterior lobe of the pituitary gland, by G. W. Irving, jr., and V. du Vigneaud. The chemistry of thyrotropin, the follicle-stimulating hormone of the anterior pituitary by H. F. Chow. The luteinizing hormone of the anterior lobe of the pituitary by H. L. Fevold. The lactogenic hormone and mammogen, by A. White. The growth and metabolic hormones of the anterior pituitary by C. N. H. Long.

Note A collection of papers presented by the Section of Physics and Chemistry of the New York Academy of Sciences at a conference held January [illegible] and 15, 1943. The introduction discusses hormones of the pituitary body and [illegible] concepts of pituitary hormone physiology. References appear as footnotes throughout.

ZIMMERMANN BERNARD
Endocrine functions of the pancreas Springfield, Ill. Charles C Thomas 1952 82 p. illus 22 cm. (American lecture series Publication no. 114 A monograph in American lectures in endocrinology edited by W O Thompson) $2.50 2948

Contents History. The nature of insulin. Metabolism in diabetes and the action of insulin. The regulation of internal pancreatic secretion. Special problems in lipid metabolism. The hyperglycemic factor. Conclusions. Index.

Note A brief but useful summary of the current knowledge of the pancreas viewed as an endocrine gland, together with indications of aspects that need further investigation. An example of the latter is [illegible] elucidation of the chemical mechanisms by which insulin exerts its metabolic action. The book is based on selective and critical review of the literature in which the results of experimental investigations are reported. Fairly extensive bibliographies, [illegible], are included with the chapters.

NERVOUS SYSTEM

ELLIOTT K. A. C., AND OTHERS editors
Neurochemistry the chemical dynamics of brain and nerve Edited by K. A. C Elliott, Irvine H. Page, J H. Quastel. Springfield, Ill. Charles C Thomas 1955 900 p illus. 24 cm. $19.50 2949

Contents Thudichum and the chemistry of the brain, by I. H. Page. Chemical constituents of brain and nerve, by R. J. Rossiter. Brain tissue respiration and glycolysis, by K. A. C. Elliott. Oxidative mechanisms, by H. Waelsch [illegible]. Pyruvate metabolism in the central nervous system, by R. A. Peters. The mechanism of glycolysis by E. Racker. Acetylcholine synthesis in the central nervous system by J. H. Quastel. Metabolism of glutamic acid and glutamine by H. Waelsch. Nucleic acids and proteins, by H. Hydén. The biochemistry of the brain during early development, by W. M. Sperry. Intracranial fluids, by J. K. Kinney and D. B. Tower. [illegible] and metabolism of the human brain in health and disease, by S. S. Kety. The physiological significance of acetylcholine by S. F. V. Burgen and F. C. MacIntosh. Metabolism and function in the nerve cell, by D. Nachmansohn. Neurohormones in adrenergic nerves, by U. S. von Euler. Electrolytes and nerve function, by R. D. Keynes and P. R. Lewis. Metabolism and function in the nervous system, by R. W. Gerard. Acute chemical changes associated with pathological physiology of the brain, by W. W. Stone. Neurotropic drugs by J. E. P. Toman. Bacterial neurotoxins, by J. W. Stevenson. Neurochemical effects of snake venoms, by B. M. Braganca. The toxic effect of oxygen on nervous tissue, by F. Dickens. Biochemical aspects of narcosis, by J. H. Quastel. Chemical studies in relation to convulsive conditions, by K. A. C. Elliott. The biochemistry of demyelination, by R. J. Rossiter. Neuromuscular disorders, by D. McEachern. Blood analysis in behavioral disorders by F. Georgi [illegible]. Steroid hormones and events in the nervous system, by H. Hoagland. Nutritional disorders of the nervous system, by J. D. Spillane. Inborn errors of metabolism in relation to mental pathology by L. S. Penrose. Structure chemistry and pathology of the central nervous system of arthropods, by A. G. Richards. Thermodynamics of the neuron, by N. Wiener. Author index. Subject index.

Note Planned as a memorial to J. L. W. Thudichum whose treatise *Physiological chemistry of the brain*, published in 1884 was the first systematic work on neurochemistry this volume is essentially a survey of the knowledge accumulated up to 1952 on the chemistry of the nervous system and on such related topics as the neurochemical effects of toxins. The titles and authors of all of the chapters are listed above. The majority of contributors are physicians and scientists resident in the United States of America. However contributions from Canada, England, and Sweden are included. Most of the chapters are based on published literature, including in many instances the author's own publications, and are supplemented by extensive bibliographies. The author index includes the names of authors of cited literature as well as the names of authors of chapters. The book is of interest to graduate students and research workers in such fields as biochemistry, physiology and pharmacology as well as neurology.

FULTON JOHN FARQUHAR
Physiology of the nervous system. Third edition revised. New York Oxford University Press 1949 667 p. illus 22 cm. $10.00 2950

Contents (abridged) The neuron. Dorsal spinal nerve roots and the dermatomes. The motor unit. Synapses and elementary reflexes. Central inhibition. The spinal cord—flexion reflexes—crossed extension reflexes—intersegmental reflexes—spinal man. The medulla oblongata—decerebrate rigidity. The medulla oblongata and midbrain—postural reflexes. The pons and midbrain—optic reflexes. Autonomic nervous system. The hypothalamus and the autonomic nervous system. The thalamus. Cerebral cortex—architecture, intracortical connections, motor projections—the olfactory system—the occipital lobes and visual system—the temporal lobes—the parietal lobes and somatic sensation—the motor areas and pyramidal system—extrapyramidal and behavioral functions—the orbitofrontal and cingulate regions—autonomic representation in premotor motor cortex. The extrapyramidal motor system—basal ganglia and reticular formation. The cerebellum. The nervous system as [illegible] brain—the conditioned reflex. Bibliography and author index. Subject index.

Note A standard, well-known textbook in which neurophysiology is presented from the experimental standpoint. It is designed primarily for medical students with interests in clinical medicine. The third edition is about 90 pages longer than the second edition published in 1943. There are numerous changes, and the chapter on the autonomic and cingulate regions of the cerebral cortex has been completely rewritten. The extensive bibliography includes both papers cited in the text and other important contributions published since 1943 and is supplementary to the bibliography in the author's *Muscular contraction*, 1926.

GELLHORN ERNST
Physiological foundations of neurology and psychiatry Minneapolis University of Minnesota Press 1953 556 p. illus. 23 cm. $10.00. 2951

Contents Part I. Internal and external factors regulating neural activity. The unit analysis of nervous activity. The internal environment and central nervous activity. Part II. Contributions to the physiology and pathology of movements. The motor cortex and the physiology of movements. Voluntary movements, motor cortex, and reflex activity. The restitution of movements after cortical lesions. Electromyographic studies on experimental con-

Concluding comment. Bibliography Pineal physiology Clinical correlations. Appendices to bibliography: Pineal anatomy embryology and histology Reviews and related papers. Index.

Note. A literature review and a comprehensive bibliography of the international literature are combined in this book. The review occupies the first 104 pages and is essentially a classified outline of the knowledge to be found in the literature with references to the listings of the source articles in the bibliography Many of the chapters in the review contain critical conclusions by the authors, and in addition there is a general concluding comment, the first sentence of which reads "Available evidence lends support to the notion that the pineal gland is a functionless, vistigial organ in any mammalian species studied"—a conclusion fully supported by recent developments. The bibliography and its appendices, also composed of literature references, run to 167 pages.

RICHMOND, W SMITH, JR , AND OTHERS

International symposium the hypophyseal growth hormone nature and actions Editors W Smith Richmond jr , Oliver H Gaebler, and C N H Long New York The Blakiston Division McGraw Hill Book Company, Inc. *1955 576 p illus 23 cm $12 00* *2942*

Contents (abridged) Part I, Bioassay preparation and physical chemical properties of growth hormone What is growth? by P Weiss. Methods of detection and assay of growth hormone, by J A. Russell. The tibia test for growth hormone, by I. I. Geschwind and C. H. Li. Comparative biochemistry of growth hormone from ox, sheep, pig, horse and fish pituitaries, by A. E. Wilhelmi. Hypophyseal growth hormone as a protein, by C. H. Li and others. Part II, Effects of growth hormone on certain structures Growth hormone (somatotropin) and the glands of the digestive system, by B L. Baker and G. D Abrams. Effect of somatotropic hormone (STH) upon inflammation by H. Selye. The effect of hormones on *differentiated* tissues in culture, by *H B Fell. Growth* hormone induced bone and joint changes in the adult rat, by C. W Asling and others. Growth hormone and renal function by H. L. White. Part III, Growth hormone and energy sources Importance of the nutritional state for the biological function of growth hormone, by E. W McHenry Growth hormone in nitrogen retention, by P D Bartlett. Effects of growth hormone on the metabolism of amino acids, by J A. Russell The role of insulin in nitrogen retention, by F D W Lukens and S. M. McCann. Effect of growth hormone on liver proteins and nucleic acids, by E. Reid. Diabetogenic actions of growth hormone by J Campbell. Relation of the metabolic effects of corticotropin concentrates to growth hormone, by E B. Astwood. Relationship of the adrenal cortex to the diabetogenic action of *growth hormone, by R. C. de Bodo and N Altszuler Growth* hormone and fat metabolism, by A. L. Greenbaum. Factors involved in the ketogenic action of growth hormone, by F L. Engel Part IV Growth hormone in cellular systems Effect of pituitary hormones on metabolism of isolated tissues, by M. E. Krahl. Effect of growth hormone on transaminases, by O. H. Gaebler The effect of insulin and alloxan diabetes on the transport of glucose and other sugars into the cells of muscle and brain, by C. R. Park. The influence of growth hormone on blood insulin and glucogen activity by P J Randle. The influence of growth hormone and *other factors* on the islets of Langerhans and the pancreas, by R. E. Haist. Part V Influence of growth hormone on the mammary gland and on human metabolism Mammary growth and lactation in male rats, by W R. Lyons and others. Effects of somatotropin and other pituitary hormones on the lactating mammary gland, by S. J Folley Human studies of purified pituitary growth hormone preparations, by L. W Kinsell Metabolic studies of the action of growth hormone (somatotropin) in man by E. Shorr and others. Closing remarks, by C. N H. Long.

Note. The proceedings of an international symposium attended by 100 scientists from Europe, England, South America, Canada, and the United States of America are published in this volume. The titles *of the papers presented* are listed in the above contents. Not listed there are the equally important transcripts of discussions. The discussion were of two types, designated and general, and transcripts of both are included. Many results of recent research were presented at the meeting and the discussions serve in a way to evaluate them as well as to bring out important points not explicit in the original papers. Literature references are included for most of the papers.

SALTER, WILLIAM THOMAS

Chemical developments in thyroidology Springfield, Ill Charles C Thomas 1950 87 p illus 22 cm (American lecture series Publication no 26 A monograph in American lectures in endocrinology edited by Willard O Thompson) $2 00 2943

Contents Introduction. Synthesis of the thyroid hormone. The blocking of thyroid activity Circulating thyroid hormone. [illegible]tion of radio-iodine Synopsis. Bibliography Index.

Note A useful and authoritative summary of advances in the understanding of the thyroid hormone and of thyroid disease, made in the period 1928–1948. A critical review of radioactive tracer techniques in studying thyroid physiology is included. What is known about the "metabolic circuit of the thyroid hormone" is concisely *stated*, and points which *are still* obscure are indicated. There is a bibliography of 119 citations of literature published 1928–1949

SALTER, WILLIAM THOMAS

The endocrine function of iodine Cambridge Mass. Harvard University Press, 1940 351 p illus. 24 cm (Harvard University monographs in medicine and public *health No 1) $3 50* 2944

Contents Iodine balance and endocrine balance. Iodine stores in body tissues. Iodine compounds of biological importance. Circulating iodine. Thyroid activity Endocrine balance. Iodine and *the pituitary-ovarian axis. Neurological influence.* Iodine [illegible] Radioactive iodine. Clinical problems. Appendix for laboratory workers Estimation of iodine. Assay of thyrotropic hormone Some properties of iodine. Bibliography Indexes.

Note This monograph presents material of interest to the surgeon, physiologist, pharmacologist, biochemist, the expert in nutrition, and also to the atomic physicist. Among recent developments discussed in the book, the following may be mentioned radioactive iodine in man and animals radioactive iodine and the new element astatine in studies of nutrition and goiter the beneficial effect of iodized albumin in human myxedema, new blood iodine fractions (P T D and I) in clinical thyroid disease and recent reports on the chemical properties of thyroglobulin.

SELYE HANS AND HELEN STONE

On the experimental morphology of the adrenal cortex. Springfield Ill. Charles C Thomas 1950 105 p illus. 22 cm. (American lecture series. Publication no 74 A monograph in American lectures in endocrinology edited by Willard O Thompson) $2 75 2945

Contents Introduction Materials. Experimental. Histologic findings and discussion. Summary References.

Note. A condensed report of the findings in a series of experiments on cats and dogs conducted to elucidate hormonal influences on the gross weight and histologic structure of the adrenal cortex. The effects of six hormones and combinations of them were studied The results are discussed and are related to previously published work in the field. There are 12 plates of illustrations and a bibliography

TURNER, C DONNELL

General endocrinology Second edition. Illustrated Philadelphia W B *Saunders* Company 1955 553 p illus. 24 cm. $8 00. 2946

Contents Principles of endocrinology The thyroid gland. The parathyroid glands. The pancreas. The gastrointestinal principles. The adrenal glands Adaptive reactions to stress. The biology of sex and reproduction. Endocrinology of the testis. Endocrinology of the ovary The hormones in pregnancy and lactation. The pituitary gland. Endocrine-like mechanisms. Endocrine mechanisms in the invertebrates. Index.

Note. Although written as a textbook, this work is a valuable contribution to the literature of endocrinology because of its treatment of the subject as a field of biology rather than as a branch of medicine. *Human endocrinology* is emphasized, but related mechanisms in other animals and even in plants have been included in the book's scope. The chapter on the individual glands describe anatomic features, physiology and selected clinical manifestations. Special attention is given to experimental methods of investigation. The book is written in monograph style, with keyed references from

Philippson-Vulpian and allied phenomena. Post-tetanic effects. The action of potassium ions. The electrical excitability of striated muscle. The electric response of striated muscle. The electric response of autonomic ganglia. A comparison of synaptic transmission at autonomic ganglia and at somatic neuromuscular junctions. The electrical theory of synaptic transmission. The chemical theory of synaptic transmission by acetylcholine. Alternative theories of synaptic transmission. References. Author index. Subject index.

Note This well-documented publication for neurophysiologists presents in systematic form an explanation of chemical transmission at the junctions of motor nerves with striated muscles and at the synapses in autonomic ganglia. The properties are discussed of the junctions between excitable effector elements. One of the central problems considered is precisely whether the processes that take place at these junctions differ qualitatively from those that occur in the course of the propagation of nerve impulses. The bibliography runs to 720 references. The work brings up to date but does not entirely supersede *Autonomic neuro-effector systems* by Walter B. Cannon and Arturo Rosenblueth, New York, 1937

TASAKI ICHIJI

Nervous transmission. Springfield, Ill. Charles C Thomas, 1953 164 p. illus. 24 cm. $7.50. 2955A

Contents: The action current. Electrical properties of the nerve fiber. Saltatory transmission. Properties of the nerve fiber carrying an impulse. The myelin sheath. Transmission during the refractory period. Transmission in the narcotized fiber. The effect of electrotonus on transmission. The nerve trunk. Appendixes: Technique of preparing a single vertebrate nerve fiber. Nervous transmission as a mathematical problem. Some implications of the saltatory nature of nervous transmission. References. Index.

Note A contribution to the understanding of the transmission of the nerve impulse. It is based largely on experiments carried out by the author though it does incorporate some of the results of other researchers. The experiments were carried out on single nerve fibers under a variety of conditions, including the normal state, the refractory state, the non-narcotized state, the narcotized state, the myelinated and non-myelinated states. On the basis of the results, the author constructs a detailed theory of the mechanism of nervous transmission. The ingenious and delicate techniques used in the experiments are fully described. Much of the work was done when the author was a student in Japan, but it was continued and the book written in the United States of America where the author now resides.

WINDLE WILLIAM F editor

Regeneration in the central nervous system, by thirty three contributors. Foreword by Pearce Bailey Springfield, Ill. Charles C Thomas, 1955 311 p illus. 23 cm. $9.50 2956

Contents: Regeneration in the central nervous system of fishes, by T Koppanyi. Regeneration in the central nervous system of amphibia, by J Piatt. Regeneration in the central nervous system of reptiles and of birds, by V Hamburger. Neuronal regeneration in vitro, by R. Levi-Montalcini. Functional regeneration in the optic system, by R. W Sperry. Comments on the relation of age to capacity for regeneration in amphibians, by R. L. de Nó. Comments on regeneration as opposed to outgrowth of amphibian neurons, by H. Hoffman. Time pattern in retrograde degeneration after trauma of central nervous system of mammals, by C. Liu. Studies of cortical regeneration with special reference to cerebral implants, by P Glees. Axoplasm, its structure and regeneration, by H. Hoffman. The neuroregenerative factor "NR," by R. A Kuechle. Parameters of nerve regeneration, by P Weiss. Structural regeneration in the mammalian central nervous system in relation to age, by W W Chambers. Structural regeneration in the mammalian central nervous system and the role of neuroglia and connective tissue, by C D Clemente. Tissue reactions and possible mechanisms of pyrogens and desoxycorticosterone acetate in central nervous system regeneration, by R. G. Stuart. Comments on regeneration of functional connections, by G. P McCouch. Conduction over regenerated central nervous system neurons, by D Scott, Jr. Functional recovery in spinal cats, by L W Freeman. Walking in spinal kittens and puppies, by P S Shurrager. Apparent functional restoration in pyrogen treated spinal cats, by J. L. Littrell. A perspective evaluation of central nervous system regeneration in mammals, by R. W Gerard. Review of structural evidence of regeneration of nerve fibers in injury to the human spinal cord, by R. Drachman. Experimental compression of the spinal cord, by D Duncan. Evidence of structural and functional regeneration of the central nervous system in man, by W S Lockhart, Jr. Comments on regeneration in the human central nervous system, by W F Windle. Bibliography Index.

Note A product of an international meeting held under the sponsorship of the National Institute of Neurological Diseases and Blindness, this volume contains the papers whose titles and authors are listed above. The primary question before the meeting was whether regeneration can occur in the central nervous system. Most of the papers are devoted to descriptions of the results of specific experiments or to literature surveys. In the two papers at the end of the volume, studies of apparent regeneration in the central nervous system of man published in the period 1890–1930 are re-examined in the light of more recent results of animal experimentation, and the authors fail to find positive evidence that such regeneration occurred. However in his foreword, Dr Pearce Bailey states: "Cajal, I believe, is the first, obligatory and almost canonical dogma, which has prevailed in neurological education for almost half century that central nervous regeneration does not occur. Yet unequivocal success in demonstrating structural regeneration with useful restitution of function in the mammalian nervous system is not near at hand. The bibliography at the end of the volume is a comprehensive compilation of the international literature.

SENSES AND SENSATION

ADLER, FRANCIS HEED

Physiology of the eye clinical application. Second edition. With 329 illustrations, includ ing 3 in color St. Louis The C. V Mosby Company 1953 734 p. illus. (part col d) 26 cm. $13.00 2957

Contents: The eyelids. The lacrimal apparatus. The cornea. The aqueous humor. The intraocular pressure. Iris and pupil. Lens and vitreous. Accommodation. The ocular circulation. Ocular motility. Light. Metabolism of the retina. The photochemistry of vision. Electrical phenomena in the eye. The optic nerve. Visual pathways. Adaptation. Sensory response. Visual acuity. Color vision. Entoptic and allied phenomena. Binocular vision. Index.

Note: A cyclopedic and rather detailed presentation of the accumulated knowledge on the physiology of the human eye written, as indicated by the subtitle, from the viewpoint of its applications in clinical medicine. It is useful as a text for advanced medical students and as a reference book for graduate practitioners. Extensive lists of the literature published through 1951 are included.

DAVIS HALLOWELL, AND OTHERS

Hearing aids an experimental study of design objectives by H. Davis, S S Stevens R. H. Nichols, Jr., C V Hudgins, G E Peterson, R. J Marquis D A. Ross. Cambridge, Mass. Harvard University Press, 1947 197 p. illus. 23 cm. $2 00 2958

Contents: Introduction and summary. The hard-of-hearing listeners. Audiometric tests. The master hearing aid. Articulation tests. Articulation curves of normal listeners. Objective criteria for evaluating the performance of hearing aids. The relative performance of tilted frequency patterns for hard-of-hearing listeners. The problem of tolerance—choice of clipping level. Quality comparisons of the frequency patterns. Restriction of the frequency range. Compression amplification versus peak clipping. Articulation scores in relation to other estimates of auditory impairment. Design objectives for hearing aids. Appendixes: Individual data on the hard-of-hearing subjects. A clickless electronic switch. The master hearing aid. Articulation curves obtained with band-pass filters. Compression amplification. Bibliography Index.

Note The report of a program of fundamental research that was carried out at Harvard University under the auspices of the Office of Scientific Research and Development. The methods and findings of the program are described in detail. Tentative design objectives for hearing aids are described. Also, the results indicate that the fitting of hearing aids need not be based on the relation between the frequency characteristics of the instrument and the "shape" of the patient' audiogram, as is ordinarily done.

DAVIS HALLOWELL editor

Hearing and deafness a guide for laymen New York Rinehart and Company Inc., 1947 496 p. illus. 22 cm. $6.00 2959

vulsions. Part III, The physiological basis of consciousness An approach to the problem. The physiology of consciousness. The pathology of consciousness. Part IV Some aspects of autonomic physiology Neurohumors and neuropharmacology of the autonomic nervous system. The eye as an indicator of autonomic activity Part V Integrations Principles of neuro-endocrine action. The physiological basis of emotion Factors involved in conditioning Homeostasis. The constancy of the external environment. Part VI, Applications Schizophrenia, the autonomic nervous system, and shock therapy The physiological foundation of carbon dioxide therapy Physiological principles for the therapy of psychoneuroses and functional psychoses. Bibliographical index of authors. Subject index.

Note A wealth of material of a fundamental nature is presented in this volume. The author has done extensive research on the physiology of the autonomic nervous system. His work and the related work of other investigators are well summarized in the fourth part of the book. The third part in which such phenomena as the central control of sleep, the arousal reaction, the physiology of the phantom limb, and consciousness are discussed, is an authoritative survey of brain stem-cortical mechanisms. The thesis of the sixth part is that there is a relationship between mental disease and dysfunction of the autonomic nervous system, and the physiology of shock therapy and carbon dioxide therapy are discussed from this viewpoint. The book is of interest not only to neurologists and psychiatrists, but also to psychologists, endocrinologists, and others. The "Bibliographical index of authors" lists in alphabetical order of authors' names, the authors, titles, general references, etc., of the literature cited in the book.

GELLHORN, ERNST, AND EDWARD H LAMBERT

The vasomotor system in anoxia and asphyxia, a study of the adjustment reactions of the mammalian organism (With 21 figures) Urbana University of Illinois Press 1939 71 p illus 28 cm (Illinois medical and dental monographs Vol. II no 3) $1 00 2952

Contents Introduction Methods Results Relation between respiratory and circulatory changes carotid sinus reflexes in anoxia synergism between the effects of oxygen deficiency and carbon dioxide excess on blood pressure organization of the vasomotor center Discussion Mode of action of oxygen deficiency of carbon dioxide on blood pressure comparison of the chemical control of respiration and circulation respiratory and circulatory adjustment to anoxia and the relationship between asphyxia and oxygen deficiency carotid sinus reflexes in anoxia synergistic action of carbon dioxide excess and low oxygen tension on blood pressure. Significance of the results from an organismic point of view Summary Bibliography

Note This treatise is a joint contribution from the Department of Physiology of the College of Medicine of the University of Illinois and the Psychiatric Institute of the State Department of Public Welfare. The investigation here reported was carried out in order to clarify the mechanism by which oxygen-deficient gas mixtures with and without carbon dioxide influence the central nervous system T these investigations the authors have added synthetic description which allows an insight into the physiologic activities of the organism as a unity The volume is intended for physiologists, neurologists, and physicians.

KATZENELBOGEN SOLOMON

The cerebrospinal fluid and its relation to the blood a physiological and clinical study Baltimore The Johns Hopkins Press, 1936 468 p illus 23 cm $5 00 2953

Contents (abridged) The origin of the cerebrospinal fluid. The mode of formation. Circulation. The barrier between blood and cerebrospinal fluid. The distribution of chlorides between blood and cerebrospinal fluid. The sugar content and its relation to the blood sugar The distribution of nitrogen components between the blood and the cerebrospinal fluid Phosphorus in the cerebrospinal fluid and the blood. Magnesium in cerebrospinal fluid and blood. The concentration of potassium and sodium in blood and cerebrospinal fluid The acid-base equilibrium between blood and cerebrospinal fluid (pH and CO_2) Cholesterol in the cerebrospinal fluid and its relation to cholesterol in the blood. Immunity processes. Examination of the function of the barrier between blood and cerebrospinal fluid. Influence of various physiological and pathological factors. Artificial alteration of the barrier permeability. Iontherapy Bismuth therapy Bibliography Index.

Note This reference book for neurologists, psychiatrists, and biochemists is divided into two main parts: the first three chapters deal with the cerebrospinal fluid as such, its origin, mode of formation, and circulation the second and largest portion of the book studies more specifically the physicochemical constitution of the cerebrospinal fluid as compared to that of blood in physiological and pathological conditions. In this part, the role and composition of the cerebrospinal fluid and certain therapeutic procedures are discussed in the light of the present-day concept of the function of the barrier between blood and cerebrospinal fluid. The extensive bibliography contains about 400 references to the world literature on the subject.

PROGRESS IN NEUROBIOLOGY I Neurochemistry Edited by Saul R. Korey and John I. Nurnberger, with twenty three contributors. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1956 244 p illus 24 cm. $6 75 2954

Contents Introduction, by H. G. Wood. Separation of sphingolipids and related compounds by reversed phase partition chromatography by J B. Wittenberg. Formation and utilization of γ-aminobutyric acid in brain, by E. Roberts. Enzymatic thiotransacetylation, by R. O. Brady and E. R. Stadtman. Fractionation of brain enzyme protein, by H. Porter and J. Folch-Pi. Relation of ceruloplasmin and plasma copper to hepatolenticular degeneration (Wilson's disease) by I H. Scheinberg. Structure and function in the nerve, by S. L. Palay Role of adaptive enzyme formation in morphogenesis, by M. W Gordon. Chemical changes in postnatal development of rat brain in relation to structural and functional differentiation by W K. Jordan and others. Recent studies on the structure of ribonucleic acid, by A. Rich. Effects of brief ... the ribonucleic acids and the labile nitrogen pool of brain and liver in the rat, by J I. Nurnberger and M. W Gordon. Studies on acetal phospholipids, by S. R. Korey Action of tertiary and quaternary nitrogen derivatives upon the acetylcholine receptor, by I. B Wilson and M. Altenbrunn. The neurochemistry of ... seizures, by D B. Tower Application of chemistry of brain lipoproteins to problem of allergic encephalomyelitis, by N P Goldstein and M. W Kies. Relation of cerebral circulation to metabolism to mental activity by L. Sokoloff. The cerebral metabolic rate in children, by C. Kennedy Index.

Note. The first volume published in a new series in which it is planned to publish, from time to time, volumes of symposia on areas of neurochemistry in which there is much active research and interest. This volume contains the 14 papers whose authors and titles are given above. The authors are associated with medical colleges and other organizations, such as the National Institute of Mental Health, which conduct research in biochemistry and neurology Some are neurologists, some are biochemists, and some are psychiatrists. The series is of interest to such readers as scientists and physicians who are concerned with neurology at the research level. They include literature references.

ROSENBLUETH, ARTURO

The transmission of nerve impulses at neuroeffector junctions and peripheral synapses New York Published jointly by the Technology Press of Massachusetts Institute of Technology and John Wiley and Sons, Inc., 1950 325 p illus 24 cm. $6 50 2955

Contents. Introduction. Part I, Transmission at autonomic neuroeffector junctions Adrenergic and cholinergic axons. The liberation of acetylcholine by stimulation of some autonomic postganglionic fibers. The liberation of sympathin by stimulation of autonomic fibers. The theory of two sympathins, excitatory and inhibitory The distribution of cholinergic and adrenergic nerves in the organism. The generalized effects of the chemical mediators liberated in physiological conditions. The electric responses of smooth muscle. The mode of action of the chemical mediators. Some physiological properties of smooth muscles. Theories of transmission in autonomic neuroeffector systems. Part II, Transmission at neuromuscular and at peripheral synapses The stages of neuromuscular and of ganglionic synaptic transmission. The liberation of acetylcholine by preganglionic nerve impulses. The action of acetylcholine on striated muscle and on ganglion cells. The action of eserine, prostigmine, and diisopropyl fluorophosphate. Curare and some decurarizing agents. Wedensky inhibition. The failure of synaptic transmission in the course of Wallerian degeneration of the presynaptic nerve. The

Contents: The star point demonstration. The box demonstration. The dim-brightness demonstrations. The overlay demonstration. The peripheral demonstration. The hypothetical and apertures demonstration. The "thereness-thatness" demonstrations. The chair demonstration. The watch-card-magazine demonstration. The afterimage screens. The trick-card-magazine demonstration. The tilting screen demonstration. The medical retina demonstration. The distorted room demonstrations. The monocular demonstration. The tidal motion demonstration. The tangential motion demonstration. The circular motion demonstration. The "S" motion demonstration. The rotating trapezoid demonstration. The starry demonstration. Bibliography

Note: Twenty demonstrations developed under the direction of Professor Adelbert Ames, Jr. of the Dartmouth Eye Institute and Institute for Associated Research, are specifically described in this book. The descriptions include for each demonstration a photograph or drawing of the apparatus, a brief description of the apparatus and its operation, an outline description of typical observations and effects which can be demonstrated with the apparatus and dimensional drawings for the guidance for those who wish to construct the apparatus. The demonstrations are not limited to the study of vision but include a wide range of perceptual phenomena.

KRAUSE, ARLINGTON COLTON

The biochemistry of the eye. Baltimore The Johns Hopkins Press, 1934 264 p. illus. 23 cm. (The Wilmer Ophthalmological Institute, The Johns Hopkins Hospital and University Monograph no 2) $3.25 2965

Contents: Introduction. The chemistry of the external secretions and conjunctiva. The chemistry of the sclera. The chemistry of the cornea. The chemistry of the uveal tract. The chemistry of the retina. The chemistry of the aqueous humor. Chemistry of the vitreous humor. The chemistry of the lens. Author index. Subject index.

Note: This book is primarily a reference work for the use of ophthalmologists, biochemists, and other research workers in biological sciences. Among the subjects discussed are the permeability of the ocular tissues, the metabolism of the retina, the growth of the eye, the senescence of the lens, the pathology of the vitreous humor, and the etiology of cataract. The bibliography lists approximately 1,800 titles.

LANDIS CARNEY

An annotated bibliography of flicker fusion phenomena covering the period 1740–1952 San Diego The Armed Forces—National Research Council Committee on Vision, Scripps Institution of Oceanography 1953 130 p. 28 cm. Gratis. 2966

Note: This bibliography of over 1,000 books and articles in all languages is arranged alphabetically by author. The descriptive notes, ranging from one to 10 lines in length, are written as amplifications of the titles of the articles, so that persons consulting the bibliography may obtain definite knowledge of the contents of the works. Where the contributions are of unusual importance evaluative judgments are expressed in addition. The compiler reports that the subject of flicker fusion has been discussed in other publications under the following titles among others: persistence of vision, photopic vs. scotopic vision, visual beats, visual ripple, intermittent vision, duration of retinal impressions, vanishing point of flicker, the difference, experimental temporal luminosity vs. heterochromatic critical period of duration, time differentiation threshold, discontinuous illumination, and apparent movement.

LINKSZ, ARTHUR

Physiology of the eye. Foreword by Walter B Lancaster New York Grune & Stratton, 1950–52 2 v illus. 26 cm. Vol. I, $7.50 vol. II, $19.00 2967

Contents (abridged): Volume I, Optics: Physics of light. Geometric optics. The eye as an image-forming mechanism. Index. Volume II, Vision: An analysis of sensations. Pattern and detail vision. The perception of spatial relationships. Vision and the ocular motor reflexes. References. Author index. Subject index.

Note: The books described here are the first two volumes of a projected three-volume work. The work is a development of many years of teaching. The author describes it as a transcript of lectures, but obviously the lectures have been consolidated and revised to some extent. However, the informal style remains. Practically all points mentioned are fully discussed. The author's style is lucid, and he has included numerous mentions of optical illusions and other borderline matters that add interest to the exposition. There are 117 figures in Volume I and 344 in Volume II.

LUCKIESH MATHEW AND FRANK K. MOSS

The science of seeing. New York D Van Nostrand Company Inc 1937 548 p. illus. 22 cm. $7.50 2968

Contents: Seeing. The human seeing-machine. Visual sensory processes. Visual thresholds. Visibility of objects. Physiological effects of seeing. Conservation and achievement. Light and lighting. Prescribing light. Quality of lighting. Spectral quality of light. Reading as a task. Eyesight and seeing. Index.

Note: This book presents studies of human vision made from the viewpoints of ease, certainty, and efficient seeing. In the course of the studies, new methods of testing were invented, and new concepts and criteria were developed. The application of the new methods and of the data obtained by them, to practical questions is discussed. The book is of interest to educational administrators, factory managers, printers, publishers, physicians, architects, and illuminating engineers.

LUNEBURG RUDOLF KARL

Mathematical analysis of binocular vision. Princeton Princeton University Press for Hanover Institute 1947 104 p. illus. 28 cm. $3.50 2969

Content (abridged): Mathematical analysis of binocular vision. Introduction. Section I. Psychometric coordination. Section II, Bipolar coordinates. Section III, Characterization of a metric by quadratic differentials. Section IV. The psychometric of visual sensation. Section V. Derivation of the hyperbolic metric of visual sensation. Section VI, Geodesic lines—the horopter problem. Section VII, The alley problem. Section VIII, Rigid transformations of the hyperbolic space. Conclusion.

Note: As indicated in both title and contents, this abstruse monograph is concerned with the development of a mathematical theory of visual perception. And, as would be expected in treatment of an optical problem, the mathematics level of it is very largely geometry, both Euclidean and non-Euclidean, with particular emphasis on the hyperbolic geometry of Lobachevskii. The work is intended for research scientists. A knowledge of graduate mathematics is required.

POLYAK, STEPHEN L.

The retina. The anatomy and the histology of the retina in man, ape, and monkey including physiological considerations, the history of the physiological optics and the histological laboratory technique Chicago University of Chicago Press, 1941 608 p. illus. 27 cm. $20.00 2970

Contents: General outline of the vertebrate visual system. Part I, Methods of investigation of the retina and of the visual pathway. Part II, Historical survey of investigations of the faculty of vision, of the laws of optics, and of the structure of the eye. Part III, History of the investigations of the structure and function of the retina. Part IV. Minute structure of the retina. Part V. Structure of the retina and the visual functions. Bibliography. Index. One hundred detailed illustrations.

Note: This book is based on original research that tries to analyze the mechanisms upon which the various visual functions, such as space perception and perception of colors, depend. The author surveys all past investigations in the field, from the earliest beginnings in Greece through the Arabian and early western periods up to modern times. Includes an extensive bibliography.

STEVENS, STANLEY SMITH AND HALLOWELL DAVIS

Hearing, its psychology and physiology New York John Wiley & Sons Inc., 1938 489 p. illus. 23 cm. $7.50 2971

Content Foreword, by L. Tracy Introduction by C. S. Nash. Part I, Audiology: Audiology meeting of varied specialists, by H. Davis. Part II, Hearing and hearing loss Physics and psychology of hearing, by H. Davis. Anatomy and physiology of the ear by H. Davis. Medical aspects of hearing loss, by E. P Fowler Jr Surgical treatment of hearing loss, by T E. Walsh. Part III Auditory tests and hearing aids Tests of hearing, by H. Davis. Hearing aids, by H. Davis. The choice and use of hearing aids, by S. R. Silverman. Part IV Rehabilitation for hearing loss Speech reading, by M D Pauls. Auditory training, by R. Carhart. Conservation of speech, by R. Carhart. Military aural rehabilitation by H. Canfield and L. E. Morrissett. Part V Education and psychology *From Aristotle t Bell* by S. R. Silverman Hard-of-hearing children, by S. R Silverman. Deaf children by S. R. Silverman and H. S. Lane The psychology f the hard-of hearing and the deafened adult, by D A Ramsdell Part VI, Social and economic problems Organizations for the aurally handicapped by B C. Wright. Employment for the hard-of-hearing, by A. M. Hill Vocational guidance for the deaf by H. R. Myklebust. Index.

Note A comprehensive presentation of i formation on defective hearing. The volume was planned as whole and the papers it contains were written expressly for it. Although designed primarily for laymen it is of value also to such groups as social workers, teachers, and general medical practitioners who deal with deaf people in the practice f their professions. The chapters vary considerably in difficulty Some are nontechnical and easy to read, but the majority are a level above popular reading and include some technical terms not in the vocabulary of the average reader

FLETCHER, HARVEY

Speech and hearing in communication Princeton D Van Nostrand Company Inc. 1953 461 p illus 23 cm $11 50 2960

Content The speech sounds of English. The speaking mechanism. Characteristics of speech waves. Acoustical speech power. *Frequency f occurrence f the different speech sounds.* Noise Mechanism of hearing. Hearing acuity Minimum perceptible changes in frequency and sound pressure level. Masking effects. Loudness. Binaural hearing effects. Auditory perspective. Space-time pattern theory of hearing. Methods f measuring the recognition aspect of speech. Specification of the telephone system responses, *listener acuities, and proficiencies f talker-listener pairs.* Methods of calculating articulation scores. Effects of distortion on the individual speech sounds. The perception of speech sounds by deafened persons. A method of computing the percent hearing loss in compensation cases. Author index. General index.

Note A scientific study f the processes of speech and hearing. *It is synthesis of the information gained in many years of in*vestigation at the Bell Telephone Laboratories and other laboratories. Since the investigations were undertaken because of the importance f accurate descriptions f these processes in the design f telephone systems, the results are rendered in terms useful to physicists and engineers, namely physical values and mathematical equations. *Experimental techniques are described in adequate de*tail, and the findings are fully described. Most of the discussion and data pertain to the perception f speech by persons possessing normal hearing, but in one chapter it is shown how to modify the calculations in measuring speech perception by persons with subnormal hearing. Applications of the material are of course not *limited to telephone system design but are of interest to specialists* in speech training and to physicists and engineers concerned with the design of practically all types of acoustical and electroacoustical systems. The book supersedes the uthor' *Speech and hearing* 1929

GIBSON JAMES J

The perception of the visual world Boston Houghton Mifflin Company 1950 235 p illus 25 cm $5 75 2961

Contents Why do things look as they do? Theories f perception The visual field and the visual world. The formation of retinal images. A psychophysical theory f perception The stimulus variables for visual depth and distance—momentary stimulation. The stimulus variables for visual depth and distance—the active observer The problem f th stable and boundless visual world. The constant sizes and shapes of things. Geometrical space and form. Meaning. Learning Spatial perception and spatial behavior References. Index

Note A *psychophysical theory f vision is advanced in this not*able book. The central idea is that spatial perception depends upon the pattern of distribution f stimulated spots on the retina or in other words, upon the serial order f *elements in the retinal image.* The theory is based on many years f experimental investigation and is convincingly presented. Other elements in perception [illegible] in the psychophysical realm and other theories are discussed. Although readers need some introduction to scientific terminology including the terminology of physics, biology and psychology the style of presentation is not formidably technical. A bibliography of 121 references is included.

HARVARD UNIVERSITY PSYCHO-ACOUSTIC LABORATORY

Bibliography on hearing Prepared by the Psycho-Acoustic Laboratory, Harvard University, S S Stevens, director, J G. C. Loring, compiler, Dorothy Cohen, technical editor Being an enlargement of *A bibliography in audition,* which was compiled by George A Miller, Robert Galambos Walter A. Rosenblith, Ira J Hirsh. Cambridge Mass. Harvard University Press, 1955 599 p. 27 cm $7 00 2962

Note A comprehensive, well-edited bibliography of the international literature. It is successor to the bibliography mentioned in the title which was published in 1950 in format of two hefty volumes of mimeographed pages. The present version has the form of book and is well printed and bound. It includes all of the entries of the earlier work and, in addition, lists more publications issued before 1939 newly discovered titles for the years 1939–1949 and covers the recent literature to the end of 1952. Entries are arranged alphabetically by name of author with anonymous publications in separate list. Books, dissertations and journal articles are included. Their titles are given in full, but the titles of journals are abbreviated. Titles of articles in languages other than English are given in full in the original language and are also translated. A subject index is provided. The following headings taken from this index illustrate the broad scope of the list. Anatomical, "Biophysics, "Biochemistry and pharmacology "Psychophysics, Animal studies, "Speech and intercommunication, "Music, "Noise "Effects of sound on man, "Deafness, Audiometry and Auditory theory

HIRSH IRA J

The measurement of hearing New York McGraw Hill Book Company, Inc 1952 364 p illus 24 cm (McGraw Hill publications in psychology, Clifford T Morgan, editor) $6 50 2963

Contents Foreword, by H. Davis. Preface. Introduction. Sound: generation and measurement. The auditory stimulus sound and electricity Electroacoustic systems. Absolute threshold for pure tones the audiogram. The intelligibility of speech. Auditory masking and fatigue Differential sensitivity Loudness and recruitment. Binaural hearing and bone conduction Conditioning in audiometry Clinical audiometry Appendixes. Specifications for audiometers. Speech materials for auditory tests. Glossary Bibliography Name index Subject index.

Note All aspects of the measurement of hearing except the anatomy and physiology of the ear are considered in this work. The main emphasis is on the psychophysical aspects of the relations between sound sensations and *stimuli.* In the first chapter the reader is introduced to psychophysical methods, in the third chapter to the principles and characteristics of audiometers and hearing aids and in the final chapter to the clinical techniques of measuring hearing. The rest of the book is chiefly devoted to use of experimental techniques in studying and measuring such aspects of the problem as *ability t hear speech,* auditory fatigue auditory discrimination etc. The book as ritten when the author was associated with the Psycho-Acoustic Laboratory of Harvard University and it was originally published as report under the auspices of the Office of N val Research.

ITTELSON WILLIAM H

The Ames demonstrations in perception a guide to their construction and use Princeton Princeton University Press 1952 88 p illus 28 cm $4 00 2964

BIOCHEMISTRY

GENERAL

ADVANCES IN PROTEIN CHEMISTRY Edited by M. L. Anson, Kenneth Bailey John T Edsall. Volume VII. New York. Academic Press Inc., 1952. 411 p. illus. 23 cm. $9.50 2976

Contents: [illegible] Author index. Subject index.

—— Volume VIII. New York Academic Press Inc., 1953 529 p. illus. 23 cm. $10.50 2977

Contents: [illegible] Author index. Subject index.

—— Volume IX. New York Academic Press, Inc., 1954 542 p. illus. 23 cm. $10.50. 2978

Contents: [illegible] Author index. Subject index.

—— Volume X. New York Academic Press Inc., 1955 384 p. illus. 23 cm. $9.00 2979

Contents: [illegible] Author index. Subject index.

—— Volume XI. New York Academic Press Inc., 1956 665 p. illus. 23 cm. $12.00 2980

Contents: [illegible] Author index. Subject index. Cumulative subject index [illegible] volumes VI–X.

Note: An established and useful review series. Each of the contributed chapters is essentially an independent monographic survey of the biochemical subject named in its title. It is based on the literature and includes an extensive bibliography. The chief purpose of the series is to enable graduate chemists to keep abreast of developments in areas of protein chemistry outside their own specialties. Earlier volumes in the series are still in print.

ANNUAL REVIEW OF BIOCHEMISTRY Volume 25 J Murray Luck, editor Frank W Allen and Gordon Mackinney associate editors. Palo Alto Annual Reviews, Inc., 1956 794 p. illus. 23 cm. $7.00. 2981

Contents: [illegible] Author index. Subject index.

Note: [illegible]

ARONOFF SAM

Techniques of radiobiochemistry Ames Iowa State College Press 1956 228 p. illus. 28 cm. $5.95 2982

Contents: [illegible]

Note: [illegible]

Contents. The nature of the auditory stimulus. The sensitivity of the ear Pitch. Loudness. The other attributes of tones. Auditory localization. Aural harmonics and combination-tones. Auditory masking, fatigue, and persistence. Modulation: vibrato and beats. *The mechanics of the ear* Deafness and bone-conduction. Principles of neurophysiology The microphonic action of th cochlea. Considerations as to the nature and origin of aural microphonics. The localization f frequency-reception on the basilar membrane. Auditory nerve-impulses. Nerve-impulses in response to tonal stimulation. Nerve-impulses in the higher auditory pathways. Appendixes Formulas for modulation. *Glossary References. Index.*

Note Designed for advanced study in psychology (particularly the psychology of sensation) and physiology (particularly neurophysiology and the physiology of sense-organs) this work provides the fundamentals of the science f sound with a minimum of mathematics. The authors have endeavored to give systematic and consistent picture of the auditory process. Three appendixes provide convenient reference to some mathematical developments of supplementary interest and a useful table for converting ratios of sound-pressure or voltage into decibels.

United States Library of Congress Technical Information Division

Visibility, a bibliography Compiled by Jack Weiner and Morris C Leikind Edited by Jack R. Gibson. Washington The Library of Congress, 1952 90 p 27 cm $0 65 2972

Contents (abridged): Visual detection factors in the laboratory Physical variables in the field. Field visibility computations, measurements and observations. Engineering applications of visibility data. A thor index.

Note. An unannotated but classified list of more than 3,000 references to the international literature published from 1925 to 1950 inclusive on the subject of visibility as influenced by the various physical psychological, and physiological factors inherent in the observer target, background and atmosphere and the engineering applications of visibility data.

Walls, Gordon Lynn, and Ravenna W Mathews

New means of studying color blindness and *normal foveal color vision with some results* and their genetical implications A contribution from the School of Optometry and the Department of Psychology of the University of California. Berkeley University of California Press 1952 172 p illus 23 cm (University of California publications in psychology Vol 7 no 1) $2 50 2973

Contents. Introduction Normal color vision. Big four color blindness. The excess hypothesis. Genetics of color blindness. Maxwell's spot. Receptor-type distribution. Methods The anomaloscope. The 3-light test. Neutral-point determination The RDP Results and discussions Color-normal subjects Typical dichromates. Typical anomalous trichromates. Typical monochromates Protanopia-normality heterozygotes. Special cases—miscellaneous. Special cases—tonalistic compounds. *Interpretation of the RDP* Itemized summary Bibliography

Not The results of an experimental exploration of the commoner kinds of color blindness using the anomaloscope, filter instrument, are reported in this work. The methods adopted are put forward as an essentially new and valuable means of studying the common types of color blindness and normal foveal color vision.

Wever, Ernest Glen, and Merle Lawrence

Physiological acoustics. Princeton. Princeton University Press 1954 454 p. illus. 23 cm $10 00 2974

Contents. Part I, Introduction The ear and its structure. The nature of sound. *Experimental methods in the study of the ear.* The sensitivity of the ear Part II, The middle ear as mechanical transformer The function of the middle ear. The nature of the middle ear transformer. The principles of transformer action Part III, The problem of distortion The nature of distortion in the ear The locus of distortion in the ear. Part IV Further characteristics of the middle ear The tympanic muscles. The effects of air pressure on the ear Part V Sound conduction in the cochlea. The pathways of entry to the cochlea. The passage of sounds through the cochlea. Cochlear patterns and the stimulation process. Part VI, Clinical applications. The forms of conductive deafness. Otosclerosis and the fenestration operation. Part VII, Further theoretical considerations Analytical treatment of the middle ear mechanism. The present status of auditory theory Glossary of abbreviations and symbols. Appendixes. References. Index.

Note. A contribution of considerable importance to the literature on physiological acoustics. Its subject is the functioning of the ear from the tympanic membrane to the receptor cells in the cochlea. In other words, it is concerned with the acoustical and *mechanical processes f audition and not with the perception* of sound. The chapters on the middle ear as a mechanical transformer constitute an analysis of the efficiency of this part of the ear. The chapters on distortion are thorough discussions leading up to the authors' conclusion that distortion occurs not in the middle ear but in the sensory cells of the inner ear The two chapters on clinical applications though relatively brief are particularly of interest to physicians and surgeons specializing in the ear Included in these chapters is a detailed discussion from the acoustical standpoint of the fenestration operation. Some of the most significant parts of the book are based on the authors' own experiments. However pertinent results in the literature have been included and the bibliography of references cited runs to 19 pages.

Wever, Ernest Glen

Theory of hearing New York John Wiley & Sons Inc. 1949 484 p illus. 22 cm.(Wiley publications in psychology Herbert S. Langfeld advisory editor) $7 50 2975

Contents Part I, The classical theories The beginnings of auditory theory The Helmholtz resonance theory The place theories after Helmholtz. The frequency theories. Part II, The modern developments Modern developments of the classical theories Auditory nerve responses. Frequency representation in the auditory nerve. The volley principle. Part III, The volley theory: Basic evidence Further evidence on cochlear localization the acoustic areas Sensitivity Loudness and fatigue. Pitch and pitch discrimination. Auditory abnormalities. The products of tonal interaction Temporal phenomena of auditory perception. Binaural phenomena The volley theory in review concluding observations. Definitions and symbols. References. Index.

Note The author Professor of Psychology at Princeton University shows that the two main types of hearing theory formerly advanced and thought to be in conflict—the resonance type of place theory and the simple frequency theory—may be reconciled in the volley theory The book sets forth in as nontechnical language as possible the basic principles underlying the relationship between the physics of sound and the psychology of hearing and shows how the physical sound acts upon the sensory and neural mechanisms of the body and through its actions there becomes transformed into auditory impressions. The bibliographical references cover 23 pages.

General

BLOCK, RICHARD JOSEPH AND DIANA BOLLING

The amino acid composition of proteins and foods analytical methods and results. Second edition. Springfield Ill. Charles C Thomas 1951 5 6 p 25 cm. $11.50. 2990

Contents (abridged) [illegible]

Note [illegible]

BLOCK, RICHARD JOSEPH

Amino acid handbook methods and results of protein analysis. By Richard J Block, with the cooperation of Kathryn W Weiss. With contributions by Herman J Almquist, Diana Bolling Carroll, William G. Gordon, Sidney Saverstein. Springfield, Ill. Charles C Thomas, 1956. 386 p. illus. 24 cm. $10.50. 2991

Contents [illegible]

Note [illegible]

BLOCK, RICHARD JOSEPH AND OTHERS

A manual of paper chromatography and electrophoresis. By Richard J Block, Emmett L Durrum, Gunter Zweig with the cooperation of Raymond LeStrange, Winston H. Wingerd, and Kathryn W Weiss. New York Academic Press Inc., 1955 454 p. illus. 24 cm. 2992

Contents [illegible]

CANTAROW ABRAHAM, AND BERNARD SCHEPARTZ

Biochemistry Illustrated. Philadelphia W B Saunders Company 1954 843 p. illus. 24 cm. 2995

Contents [illegible]

Note [illegible]

ters which present analytical and synthetic procedures for groups of compounds and specific compounds. The descriptions of procedures are condensed, but references are always given to paper or other publication in which full details may be found. The appendix includes nomograms, transparent maps, and graphs useful in counting. The author is Associate Professor Institute for Atomic Research in the Department of Plant Pathology of Iowa State College

ARTZ, NEAL ELLSWORTH, AND ELIZABETH M OSMAN

Biochemistry of glucuronic acid New York Academic Press, Inc., 1950 103 p illus 23 cm $4 50 2983

Contents Introduction. Analytical methods. Occurrence Origin of glucuronic acid in the body Detoxication. Bibliography Index.

Note. A digest of the international literature that bears on the biochemistry of glucuronic acid and especially on its metabolic significance. Statements and data in the text are carefully keyed to the bibliography which lists 456 books and papers.

ASIMOV, ISAAC

The chemicals of life, enzymes, vitamins hormones New York Abelard Schuman 1954 159 p illus 21 cm $2 50 2984

Content The all-important protein. Enzymes—proteins that make haste. Enzymes and body chemistry Enzymes and digestion. Enzymes and energy The friends and foes of enzymes. The B vitamins. Other vitamins. Protein hormones. Other hormones. Index.

Note. An elementary but scientifically accurate survey of human biochemistry It is intended for general readers, particularly young people and others who have read no other books on the subject. The author's style is easy to read, and the technical terms used are carefully explained when first introduced. The author is a member of the faculty of the School of Medicine of Boston University

BABKIN, B P

Secretory mechanism of the digestive glands With 233 illustrations Second edition revised and enlarged New York Paul B Hoeber, Inc Medical Book Department of Harper & Brothers, 1950 1,027 p illus 24 cm $20 00 2985

Contents Correlation of structure and function in the digestive glands. The secretory granules—and the digestive enzymes. Histology of the gastric mucous membrane Morphological and functional topography of the gastric mucosa blood and nerve supplies to the stomach. The enteric plexuses methods of investigation of gastric secretory function. Regulation of the secretory activity of the stomach. Spontaneous and continuous secretion of the digestive glands. Nervous mechanism of gastric secretion gastric mucus. Dissolved mucin and non-protein nitrogen in the gastric juice esophageal glands. Sympathetic innervation of the stomach Histamine as stimulant of gastric secretion Histamine, insulin, and the dilution-indicator method in clinical practice Intimate mechanism of gastric secretion Inorganic compounds of the gastric juice and theories concerning the variations of gastric acidity Further discussion of the theories on the variations of gastric acidity Chemical phase of gastric secretion. Triple mechanism of the chemical phase of gastric secretion Hormones of the alimentary canal. Regulation of the secretory activity of the salivary glands correlation of macroscopical structure with physiological function in the submaxillary gland. Ducts of the salivary glands Significance of the double innervation of the salivary glands. Augmented salivary secretion Fundamental features of the secretory process. Hydrelatic and ecbolic effects of nerves on the digestive glands. Bibliography Index of authors Index of subjects.

Note The results of experimental investigations in the author's own laboratory at McGill University and related results of other investigators are correlated in this noteworthy contribution to physiology The principal subject is the mechanisms of regulation of the secretory activity of the principal digestive glands under normal conditions The knowledge that has been gained about these mechanisms in experiments on carnivorous animals, such as dogs and on human subjects, is presented in some detail Gaps in the knowledge are pointed out Pathological aspects are not emphasized, but some information is included on them in such sections as the one entitled Abnormal functioning of the gastric secretory mechanism as possible factor in the pathogenesis of peptic ulcer. The first edition was published in 1944 A considerable amount of new material, based on research and publications since the writing of the first edition has been added to this second edition. Plates and illustrations have been increased in number, and literature published subsequently to 1943 has been added to the bibliography which is now 101 pages long

BIOCHEMICAL PREPARATIONS Volume 1. Herbert E Carter, editor in-chief New York. John Wiley & Sons, Inc., 1949 76 p. 24 cm. $4 00 2986

Content Adenosine diphosphate Adenosine triphosphate [illegible] alanine and L-serine. Azobenzene-p-sulfonic acid trihydrate, p-hydroxyazobenzene-p'-sulfonic acid. 5-nitronaphthalene-1-sulfonic acid dihydrate. Casein. β-3 4-dihydroxyphenyl-L-alanine. Diphosphopyridine nucleotide The α-glucose-1-phosphates. L-glutamine [illegible] glyceraldehyde 3-phosphoric acid. Lycopene L-lysine monohydrochloride. Lysozyme. D-tyrosine. Subject index

—— Volume 2 Eric G Ball, editor-in-chief New York John Wiley & Sons, Inc., 1952 109 p 24 cm $4 00 2987

Content Cytochrome Cucurbit seed globulin. Oxygen. Phosvitin, sodium salt. Crystalline lactate dehydrogenase Sodium pyruvate. Phosphoryl-enolpyruvic acid. L-α-glycerophosphoric acid Glucose-6-phosphate. C[14] uniformly labeled sucrose Fructose-1,6-diphosphate [illegible] and DL-epi-inositol-2 [illegible] DL-glutamic acid monohydrate L-aspartic acid. S-benzyl-L-cysteinylglycine. α-methyl carbobenzoxy-L-glutamate. N-carbobenzoxy-glutamyl-S-benzyl-L-cysteinylglycine. Glutathione. Reduced diphosphopyridine nucleotide Phosphorylcholine. Oleic acid and methyl oleate. Methyl ricinoleate Subject index.

—— Volume 3 Esmond E. Snell, editor in-chief New York John Wiley & Sons, Inc., 1953 128 p illus. 23 cm. $4 00 2988

Content Crystalline muscle phosphorylase Riboflavin [illegible] phosphopyridine nucleotide (DPN) Triphosphopyridine nucleotide (TPN) Pyridoxamine phosphate. Pyridoxal phosphate. Protoporphyrin dimethyl ester d-isocitric acid. dl-isocitric acid lactone. Dihydroxyfumaric acid. Oxaloacetic acid. L(+) and D(−) lactic acids. Sodium α-ketoiso-caproate D-glucose-6-phosphate [illegible] galacturonic acid. β-3 4-dihydroxyphenyl-DL-alanine. L-isoleucine and D-isoleucine, -alloisoleucine, and D-alloisoleucine. [illegible] monohydrochlorides. [illegible] and DL-citrulline (from [illegible] citrulline (from L-arginine) -kynurenine. L and D-[illegible] hydrochlorides. Elaidic acid. 2 4-dinitrofluorobenzene. Subject index.

—— Volume 4 W W Westerfeld editor in-chief New York John Wiley & Sons, Inc., 1955 108 p 23 cm $4 25 2959

Content α-D-galactose-1-phosphate. Homogentisic acid. [illegible] palmitoleyl)-L-α-lecithin α-lactalbumin. β-lactoglobulin. Alcohol dehydrogenase Inorganic pyrophosphatase Carnosine. [illegible] hydrochloride Urocanic acid. N-acetyl imidazole. Glycolaldehyde Sodium glyoxylate monohydrate. α-D-glucose-1-phosphate. Tetra-acetyl-D ribofuranose -argininic acid. DL-methionine sulfoxide DL-methionine sulfone and DL-ethionine sulfone. Linoleic acid and methyl linoleate. D-glutamic acid. D-glutamic acid, alternative procedure Subject index

Note Verified methods of synthesizing chemical compounds of biochemical interest are published in the biochemical compounds of biochemical interest are published [illegible] series. The compounds covered in the first four volumes are listed above Also included are lists of compounds of biochemical interest which have been published in *Organic syntheses* through Volume 34 Each compound included is the subject of standardized monographic essay There is first discussion of the basic principles This is followed by description of starting materials next comes an explicit description of the laboratory procedure and finally there are discussions of the properties and purities of the product and of other methods of preparation. Literature references are provided The subject index at the end of Volume 4 is a cumulative one covering the series up to and including Volume 4.

Racker, D R. Schwarz, E. Stadtman H. Waelsch. New York Academic Press Inc., 1954 341 p. illus. 23 cm. $8.50. 2999

Contents: Properties and organic chemistry [illegible] and disulfides; some physics, chemistry and speculation, by M. Calvin. The reactivity of the sulfhydryl group in glutathione and related peptides, by R. Benesch and others. Chemistry and properties of glutathione, by T. Wieland. Thiol-thioketone complex formation, by W. W. Kielley and others. The methods for detection and assay of glutathione and sulfhydryl compounds: Methods of glutathione assay—a review of chemical methods, by J. W. Patterson and A. Lazarow. Paper chromatography of glutathione and its hydrolysis products, by M. Gutcho and L. Laufer. Electrochemical experiments on sulfhydryls and disulfides, by R. J. Barrett and A. M. Seligman. Biochemical mechanisms. The enzymatic synthesis and reduction of glutathione, by S. Yanari and E. E. Conn. The biosynthesis of glutathione, by J. E. Snoke and K. Bloch. [illegible] and γ-glutamyl activation, by H. J. Strecker. Biosynthesis of component amino acids of glutathione in the rat, by J. A. Stekol. Glutathione in relation to transpeptidation reactions, by C. S. Hanes and others. γ-glutamyl transfer reactions, by H. Waelsch. Cysteine-containing peptide sequences in ovalbumin and ribonuclease, by C. B. Anfinsen. Glutathione as coenzyme in intermediary metabolism, by E. Racker. The coenzyme function of glutathione in cis-trans isomerization, by W. E. Knox and S. W. Edwards. Contrasting changes in blood level of glutathione and sulfhydryl, apparently in association with the formation of methemoglobin, by E. P. Vollmer. The role of sulfhydryl compounds in acyl-transfer reactions, by E. R. Stadtman. The enzymatic hydrolysis of S-acetyl and S-benzoyl glutathione, by W. W. Kielley and L. B. Bradley. SH and growth, by D. Mazia. Physiological actions and clinical aspects. Relation of glutathione to hormone action and diabetes, by A. Lazarow. Increased blood sulfhydryl in rats and guinea pigs treated with ACTH and cortisone, by E. P. Vollmer. Glutathione in radiation injury, by E. P. Cronkite and others. Remarks concerning sulfhydryl protection against radiation injury by H. M. Patt. Oxygen poisoning and X-irradiation—a mechanism in common, by R. Gerschman. The metabolism of injected radioactive glutathione (S^{35}) in X-irradiated and non-irradiated mice, by W. H. Chapman and J. W. Duckworth. Protective effect of glutathione against [illegible], by E. P. Vollmer. Glutathione and protein oxidation and precipitation in the process of aging and *cataract formation* in the lens, by Z. Dische. Glutathione in human disease, by D. R. [illegible] and others. Author index. Subject index.

Note: The papers presented and the discussions of them at a symposium sponsored by the National Science Foundation and the Office of Naval Research are published in this volume. Some of the papers report important advances in biochemistry and most of them include some results of recent research. The reports of the discussions are apparently unabridged, and important points are made in many of them. Literature references accompany most of the papers, and—an unusual feature in a volume of this kind—the names of the authors of the cited literature are assembled in the author index.

COWDRY EDMUND VINCENT

Laboratory technique in biology and medicine. Third edition. Baltimore The Williams & Wilkins Company 1952 382 p. 24 cm $5.00. 3000

Note: A standard reference book of information on chemical substances, instruments, and methods which are of interest in professional laboratory work in such fields as biology, biochemistry, and medicine. The information is supplied in concise paragraphs devoted to specific topics. The arrangement of topics is alphabetical with abundant cross-references. Citations of pertinent literature are given under most headings. The second edition was published in 1948. The third edition represents a very extensive revision with much new material added and all of the old that is still useful retained.

DEUEL, HARRY JAMES, JR.

The lipids their chemistry and biochemistry Vols. I–II. New York Interscience Publishers, Inc., 1951–55 2 v illus. 24 cm. Vol. I $18.50 vol. II $25.00 3001

Contents: Volume I: Chemistry. General characteristics and classification of lipids. The chemistry of fatty acids and glycerol. The chemistry of neutral fats. Waxes, higher alcohols including sterols, [illegible], glyceryl ethers, [illegible] oils, and hydrocarbons. Chemistry of the phosphatides and cerebrosides. Carotenoids and related compounds. Distribution, properties, and chemistry of the vitamins A. Distribution, properties, and chemistry of the provitamins D and vitamins D. Distribution, properties and chemistry of the vitamin E group. Distribution, properties, and chemistry of the vitamin K group. Author index. Plant and animal sources of lipids. Subject index. Volume II: Biochemistry; digestion, absorption, transport and storage. Introduction. The digestion and absorption of fats in the gastrointestinal tract. The digestibility of fats. The digestion, absorption, and digestibility of lipids other than fats. Blood lipids. The occurrence of lipids in the animal as [illegible] fats. Lipid distribution in specific tissues and in their secretions. Author index. Plant and animal sources of lipids. Subject index.

Note: A comprehensive, well-documented treatise on an abundant family of natural substances. Essentially it is an expertly made digest of the published literature, including the author's own papers. Particular care has been taken with the botanical and zoological nomenclature and with the literature references. All topics are treated at the professional level, and the work is of interest to graduate biochemists and scientists in other fields, such as medicine and food chemistry. References to the literature are printed in the form of footnotes and the names of the authors of that literature are assembled in the author indexes. A third volume, which will complete the work and will cover biosynthesis, metabolism, oxidation and nutritional value of the lipids, is scheduled for publication.

DOWNES HELEN R.

The chemistry of living cells. New York Harper & Brothers 1955 549 p illus. 24 cm $7.50 3002

Contents: Part I, Some preliminary considerations. Biochemical history and literature. Some selected properties of aqueous solutions. The structure of living forms. Part II, The organic constituents of cells. The chemistry of the carbohydrates. The compounds of nitrogen. The lipids. The enzymes. Part III, Intermediary metabolism. The methods used in the study of intermediary metabolism. Transportation systems. Digestion and absorption. Metabolism of the compounds of nitrogen. Lipid metabolism. Anaerobic carbohydrate metabolism. Biological oxidations. Biosynthetic mechanisms. Index.

Note: The basic principles and facts of biochemistry are expounded in this book, which is designed primarily as a textbook for college courses offered to advanced undergraduate students. The title notwithstanding, the book is not limited to biochemical processes within cells. The subject is biochemical processes in which living cells take part, in other words, all of biochemistry. Both animal and plant biochemistry are covered, but as would be expected in a general text, more space is given to the former. The "Suggestions for further reading" at the ends of chapters are well selected and are classified by topic. The index covers topics only but is fully detailed for them. The author is Professor of Chemistry in Barnard College of Columbia University.

EIGSTI O J AND PIERRE DUSTIN JR.

Colchicine—in agriculture medicine biology and chemistry Ames The Iowa State College Press, 1955 470 p. illus. 23 cm. $7.50 3003

Contents. The parent plant. Nucleus and chromosomes. Spindle and cytoplasm. Cellular growth. Sources of the drug. Chemistry. Pharmacology. Embryonic growth in animals. Experimental growth in animals. Neoplastic growth—in animals and plants. The experimental polyploids. The amphiploids. The autoploids. The aneuploids. Criteria for judging polyploidy. Techniques of colchicine treatment. Mechanisms of colchicine-mitosis. Author index. Subject index.

Note: In this book, the results of independent investigation by the two authors—an American botanist and a Belgian pathologist—and a review of the vast literature are combined. It is primarily a report of laboratory research, but due attention is paid also to the clinical use of the drug in the treatment of gout, cancer and other diseases. Although the authors provide a historical account, they emphasize investigations from 1934, when the "colchicine era" in biological research began, to the mid-1950's. The chapter treatments, which are systematic, close with summaries and extensive lists of references to the published literature.

FIESER, LOUIS FREDERICK, AND MARY FIESER

Natural products related to phenanthrene. Third edition of the monograph previously

are members of the faculty of Jefferson Medical College. A second edition entitled *Textbook of biochemistry* was published in 1957 867 p $12.00

CANTAROW, ABRAHAM, AND MAX TRUMPER

Clinical biochemistry Fifth edition Philadelphia W B Saunders Company, 1955 738 p illus 25 cm $9 00 2995A

Contents Carbohydrate metabolism. Lipid metabolism. Protein metabolism. Nucleic acid metabolism. Metabolism of hemoglobin and porphyrins. Biochemical aspects of diet. Calcium and inorganic phosphate metabolism. Phosphatase activity Magnesium metabolism Iron metabolism. Sulfur metabolism. Iodine metabolism. Sodium, potassium and chloride metabolism. Water balance. Acid-base balance. Respiratory exchange and basal metabolism. Hormone assay and endocrine function. Vitamins. Chemical investigation of gastric function. Pancreatic function. Hepatic function. Renal function. Cerebrospinal fluid. Index.

Note A standard survey of the biochemical knowledge which has significance in clinical medicine. It is designed both for use as medical college textbook and as a reference guide to the literature of the field. Correlations between biochemical knowledge and clinical implications are made as direct as possible, but the treatment is from the viewpoint of the medical clinician rather than the biochemist. The fourth edition appeared in 1949 In preparing this fifth edition information was added on number of topics including liver function plasma protein abnormalities, porphyrin metabolism, biochemical aspects of diet and potassium metabolism.

CHARGAFF, ERWIN, AND J N DAVIDSON, editors

The nucleic acids, chemistry and biology New York Academic Press, Inc., 1955 2 v illus 24 cm Vol I, $16 80 vol II $14 50 2996

Content Volume I Introduction, by J N Davidson and E. Chargaff. Chemistry of ribose and deoxyribose, by W G. Overend and M Stacey Chemistry of purines and pyrimidines, by A. Bendich. Chemistry of nucleosides and nucleotides, by J Baddiley Hydrolysis of nucleic acids and procedures for the direct estimation f purine and pyrimidine fractions by absorption spectrophotometry by H. S Loring. The separation of nucleic acid derivatives by chromatography on ion-exchange columns, by W E. Cohn. Separation of nucleic acid components by chromatography on filter paper by G R. Wyatt. *The electrophoretic separation f nucleic acid components*, by J D Smith. Color reactions of nucleic acid components, by Z. Dische. Isolation and composition of the deoxypentose nucleic acids and f the corresponding nucleoproteins, by E. Chargaff. Isolation and composition of the pentose nucleic acids and of the corresponding nucleoproteins, by B Magasanik. Evidence on the nature of the chemical bonds in nucleic acids, by D M Brown and A. R. Todd. The physical properties f nucleic acids, by D O Jordan Optical properties f nucleic acids and their components, by G. H. Beaven. Nucleases and enzymes attacking nucleic acid components, by G. Schmidt. Author index. Subject index. Volume II. The nucleic acid contents of tissues and cells, by I. Leslie. Cytochemical techniques for nucleic acids, by H. Swift. The isolation and composition f cell nuclei and nucleoli by A. L. Dounce. The deoxyribonucleic acid content f the nucleus, by R. Vendrely Nucleic acids in chromosomes and mitotic division, by B Thorell The cytoplasm, by G H Hogeboom and W C. Schneider *Biosynthesis of pentoses*, by G. E Glock Biosynthesis of purines and pyrimidines, by F Reichard Biosynthesis f nucleosides and nucleotides, by F Schlenk. Biosynthesis of nucleic acids, by G. B Brown and P M. Roll. The metabolism of the nucleic acids, by R. M. S. Smellie. The biological role of the deoxypentose nucleic acids, by R. D Hotchkiss The biological role of the pentose nucleic acids, by J Brachet. Author index. Subject index.

Note Editorship f this treatise was shared by an eminent American biochemist and an eminent British biochemist, and the chapter authors are from Great Britain Canada and the United States f America. All of the chapters are compactly written reviews of the pertinent international literature, with text and tabulated data number-referenced to citations of the source articles However the editors aimed at co-ordinated treatise rather than collection of reviews and to large extent they have succeeded. There is very little duplication among the chapters, and the field that the work was intended to cover is well covered. Assembling f the names f the authors of the cited literature in the two author indexes makes it possible to use the work as guide t the literature as well as survey of the extant knowledge.

CLARK, W MANSFIELD

Topics in physical chemistry, a supplementary text for students of medicine. Second edition. Baltimore The Williams & Wilkins Company, 1952 777 p 23 cm. $11.00 2997

Contents (abridged) Limiting laws. Review of certain indispensable conventions. The standard chemical balance. Measurements f volume. Density and some of its clinical uses. Sedimentation in gravitational and centrifugal fields. Certain colligative (bound together) properties of solutions. Distribution of solutes between phases. Diffusion. The laws of mass-action. Conductance of electricity by solutions of electrolytes. Equilibria in proton exchanges. A stepwise treatment f the equilibrium states of weak electrolytes. Brief excursions in thermodynamics. Oxidation-reduction with special reference to electromotively active systems. The glass electrode and potentiometry The polarograph A picture f atomic and molecular structure. Notes on isotopes. Emission and absorption of radiant energy Luminescence [fluorescence and phosphorescence] A few topics from colloid chemistry Appendix. Index.

Note A useful and widely used work. It is directed to first-year medical students, and it provides review of those basic principles of physical chemistry which are prerequisite to further study in biochemistry and related topics. It is not intended for classroom use but for self-instruction and reference. Although is self-contained in the sense that enough information is provided on most topics for the intended purpose, literature references are given. The topics discussed are those which the author's experience has shown to be the most needed. Suggestions for further reading and review problems are included at the ends of most chapters. The first edition was published in 1948. The organization and scope of the book have not been changed in this second edition, but the treatments of number of topics has been revised and expanded, and selection of the books published since the first edition was written has been added to the reference list.

CLARKE, HANS T , editor

Ion transport across membranes incorporating papers presented at a symposium held at the College of Physicians & Surgeons, Columbia University, October, 1953 Hans T Clarke editor, David Nachmansohn associate editor New York Academic Press, Inc., 1954 298 p illus 24 cm. $7.50 2998

Contents Note on the work of Jacques Loeb, by W J V Osterhout. Ion transport across biological membranes, by H. H Ussing. The Electrical processes in nerve conduction by A. F Huxley The generation of bioelectric potentials, by I. B Wilson and D. Nachmansohn. Some optical observations on the interaction between acetyl cholinesterase and its substrate, by S. L. Friess and others. Ion permeability of the red cell, by A. K. Parpart and J F Hoffman. Renal mechanisms of electrolyte transport, by R. J Mudge. Membrane permeability and electrical potential, by [illegible] Parlin and H. Eyring. Transport of ions through biological membranes from the standpoint of irreversible thermodynamics, by J G. Kirkwood. Transport of ions across charged membranes, by G. Scatchard. Electrochemical studies with model membranes, by K. Sollner and others. Theory of protein solutions, by T L. Hill. Interaction of proteins and ions with special reference to mercury derivatives of mercaptalbumin, by J T Edsall. The specificity of metal-protein interactions, by F R. N Gurd. Equilibrium and sedimentation of uncharged particles in inhomogeneous electric fields, by P Debye. Author index. Subject index.

Note The symposium named in the title of this book was meeting planned to encourage scientists to exchange ideas across the borders of their own specialties. The biological emphasis was dominant but the participants included physical chemists and specialists in protein chemistry as well as biologists. Some of the papers have an air of "specialist-talking-to-specialists, but others are clearly addressed to scientists outside the author's own field. Each paper includes list of literature references. All of the papers appear to have been written for the volume Eight of them were read at the symposium and six were contributed as invitations.

COLOWICK S , AND OTHERS, editors

Glutathione proceedings of the symposium held at Ridgefield, Connecticut, November 1953 Editors S Colowick, A. Lazarow E.

GRAFF SAMUEL editor

Essays in biochemistry New York John Wiley & Sons, Inc. 1956 345 p. illus. (part col d) 24 cm. $6.50 3009

Contents: Some metabolic products of basidiomycetes, by M. Anchel. Heterogeneity of desoxyribonucleic acid (DNA), by A. Bendich. Biosynthesis of branched-chain compounds, by K. Bloch. The biochemistry of [illegible], by E. Borek. The development of plasma volume expander, by M. Bovarnick and M. R. Bovarnick. The very big and the very small—remarks on conjugated proteins, by E. Chargaff. Unbalanced growth and death—a study in thymine metabolism, by S. S. Cohen. Some thoughts on the biochemistry of the steroid hormones, by L. L. Engel. The biochemistry of the bacterial viruses, by E. A. Evans. The biosynthesis of peptide bonds, by J. S. Fruton. On the nature of cancer, by S. Graff. Problems in lipide metabolism, by S. Gurin. Tetrazolium as carbonyl [illegible] and analogs, by R. M. Herbst. The structural basis for the determination of identical groups in asymmetric reactions, by H. Hirschmann. The nitrogen-sparing effect of glucose, by H. D. Kohrman. The metabolism of inositol in microorganisms—a study of molecular conformation and biochemical reactivity, by B. Magasanik. The biochemistry of ferritin, by A. Mazur. Some aspects of nitrogen transfer in biosynthetic mechanisms, by S. Ratner. On the kinetics of enzymes, by D. Rittenberg. The biosynthesis of porphyrins, by D. Shemin. The role of carbohydrates in the biosynthesis of aromatic compounds, by D. B. Sprinson. On determining the chemical structure of proteins, by W. H. Stein. Glycogen turnover, by DeW. Stetten, Jr. and M. R. Stetten. The uricase [illegible], by G. Wintersteiner. The chemical basis of hereditary [illegible], by S. Zamenhof. Index.

Note: Essays written in honor of Professor Hans Thacher Clarke, formerly Chairman of the Department of Biochemistry of the College of Physicians and Surgeons of Columbia University, are published in this volume. All of the authors are former students or faculty associates of Professor Clarke. Many of the essays are informal, in the sense that they are not the traditional reports of the results of recent research. Some do fall in this category, but many of them are in the nature of "shop talk." Since they discuss [illegible] number of biochemical problems still unsolved and in some instances indicate present or to approaches that might produce useful results, they are of interest to biochemists generally.

GREEN DAVID E. editor

Currents in biochemical research 1956 Twenty-seven essays charting the present course of biochemical research and considering the intimate relationship of biochemistry to medicine, physiology and biology New York Interscience Publishers, Inc. 1956 697 p. 24 cm. $10.00 3010

Contents: Chemistry and viral growth, by A. D. Hershey. Photosynthesis, by J. A. Bassham and M. Calvin. Bacterial fermentations, by H. A. Barker. Some aspects of vitamin and growth factor research, by E. E. Snell. The significance of induced enzyme formation, by S. Spiegelman and A. M. Campbell. Certain problems in the biochemical study of disease, by D. Stetten, Jr. The hormones, their present significance, their future, by D. Pressman. Problems of cellular biochemistry, by C. F. Cori. Enzymes as reagents, by E. Racker. Attempts at the formulation of some basic biochemical questions, by F. Lipmann. Enzyme complexes and complex enzymes, by H. R. Mahler. Relations between prosthetic groups, coenzymes and enzymes, by H. Theorell. Enzyme-substrate compounds and electron transfer, by B. Chance. On the nature of hemoproteins, by P. George. Aspects of protein structure, by R. W. Low and J. T. Edsall. The structure of insulin, by F. Sanger. A new concept of ribonucleic acids, by W. E. Cohn. Chemical structure as [illegible] guide in the study of biochemical systems, by K. Bloch. The role of nucleotides and coenzymes in enzymatic processes, by F. M. Huennekens. The biosynthesis of porphyrins: the succinate-glycine cycle, by D. Shemin. Problems in the study of multiple enzyme systems, by D. E. Green. Enzyme kinetics, by R. A. Alberty. The interconversion of sugars in nature, by L. F. Leloir. A theory of the primary event in muscle action, by M. F. Morales and J. Botts. Trends in the biochemistry of nerve cells, by D. Nachmansohn and I. B. Wilson. Blood—some functional considerations, by D. M. Surgenor. An integrated concept of carcinogenesis, by R. P. Rusch.

Note: The first book in this series bore the same title and was published in 1946. This new work was neither [illegible] revision, nor is it intended to supersede the earlier one. Instead, it has been edited to present the current picture of biochemical research, including recent accomplishments, research in progress, and areas still to be investigated. The contributors are established specialists, but the book is intended for readers other than graduate scientists working in biochemistry. It is written in scientific terminology and is therefore not [illegible] book for average lay readers. Scientists not specializing in biochemistry but working in other fields of biology and chemistry and in such fields as medicine and pharmacy will find it of interest. Literature references are included in the individual chapters, but the volume lacks indexes.

GREENBERG DAVID MORRIS compiler and editor

Amino acids and proteins theory methods application Springfield, Ill Charles C Thomas, 1950 950 p. illus. 26 cm. $15.00 3011

Contents: Properties of amino acids, by E. F. Howe. Methods for the determination of amino acids, by H. S. Olcott. The preparation of amino acids and polypeptides, by S. Archer. The synthesis of labeled alpha amino acids, by J. C. Reid and B. M. Tolbert. Isolation of amino acids, by M. S. Dunn and L. B. Rockland. Classification, purification and isolation of proteins, by H. L. Fevold. Determination of the molecular size of proteins, by H. P. Lundgren and W. H. Ward. Amphoteric properties of amino acids and proteins, by D. M. Greenberg. Criteria of the purity of proteins, by C. H. Li. Chemical reactions of proteins, by H. Fraenkel-Conrat. Nutritional applications of the amino acids, by H. J. Almquist. The chemistry of antibodies, by D. H. Campbell and F. Lanni. Biochemical applications of proteins and peptides, by D. M. Greenberg. The metabolism of amino acids and proteins, by H. Tarver. Index.

Note: A collection of original monographs on several aspects of the amino acids and proteins which are currently of interest in research. In each paper the topic named in its title is treated compactly with extensive references to the related literature. The book is written on [illegible] professional level and is aimed specifically at graduate students and postdoctoral biochemists beginning work in the field. It is [illegible] product of the Biochemistry Laboratory of the University of California.

GURD FRANK R. N editor

Chemical specificity in biological interactions. New York Academic Press Inc., 1954 234 p. illus 24 cm. (Harvard University Memoirs of the University Laboratory of Physical Chemistry related to Medicine and Public Health) $6.00 3012

Contents: Chemical specificity in biological interactions, by E. J. Cohn. The effects of X-ray and other radiation on proteins and living tissues, by S. Warren. Physical and chemical properties of the steroids related to protein binding, by E. S. Turner. Konrad Dobriner (1902–1952), by T. F. Gallagher. Biochemical problems of the steroid hormones, by T. F. Gallagher. Some studies on the active principles of the posterior pituitary gland, by V. du Vigneaud. The influence of ion-exchange chromatography upon our concept of the structure of ribonucleic acid, by W. E. Cohn. Special problems in the formation of metal complexes, by C. D. Coryell. Interactions of metals with small molecules in relation to metal-protein complexes, by J. Schubert. The specificity of metal complex formation, by G. Schwarzenbach. The interaction of proteins with small molecules and ions, by G. Scatchard and others. Author index. Subject index.

Note: Most of the papers in this volume had their origin in symposiums sponsored by the Laboratory of Physical Chemistry related to Medicine and Physical Health of Harvard University in 1952. However, they were written or put into final form after the symposiums and therefore describe some developments since it was held. Generally speaking, they are devoted to research in progress, research which has already produced interesting results and which will probably extend the borders of biochemical knowledge. The contributors are biochemists actively engaged in fundamental research, and they have addressed themselves to biochemists and other scientists working at similar levels. The paper on Konrad Dobriner is [illegible] tribute and is therefore an exception to the general pattern. The group of papers on metal complexes in biochemical processes is worthy of special attention.

entitled *Chemistry of natural products related to phenanthrene* by L F Fieser New York Reinhold Publishing Corporation 1949 704 p illus 24 cm (American Chemical Society Monograph series No 70) $10 00 3004

Content Quinones, morphine and related alkaloids. Resin acids. Sterols and bile acids. Sex hormones. Adrenal cortical hormones. Steroid metabolism. Cardiac active principles. Steroid saponins. Steroid and terpenoid alkaloids. Stereochemistry of the steroids, by Richard B Turner Author index. Subject index.

Note The steroids, which comprise bile acids, heart poisons, saponins, and sex hormones, constitute one of the largest groups of substances whose structures are similar to phenanthrene. This volume provides comprehensive survey of knowledge regarding the chemistry and molecular structure of such compounds. The present volume is double the size of the 1937 edition New chapters on adrenal cortical hormones and steroid metabolism have been added, while others dealing with the sterols and sex hormones have been greatly expanded. Like other volumes in the series, this monograph is based on an extensive survey of the literature of the subject.

FRUTON, JOSEPH S , AND SOFIA SIMMONDS

General biochemistry New York John Wiley & Sons, Inc., 1953 940 p illus 24 cm $12 00 3005

Content (abridged) Part I, Proteins Amino acids as structural units of proteins. Amino acids and proteins as electrolytes. Metalloporphyrin proteins and related conjugated proteins. Nucleoproteins. Part II, Enzymes Kinetics of enzyme action. Part III, Biological oxidation Pyridine nucleotides and dehydrogenases. The flavin nucleotides and flavoproteins. Metal-containing oxidases. Coupled enzyme-catalyzed reactions. Part IV Intermediate metabolism of carbohydrates Enzymatic cleavage and synthesis of glycosidic bonds. Anaerobic breakdown of carbohydrates. Aerobic breakdown of carbohydrates. Photosynthesis. Part Intermediate metabolism of lipids. Chemistry of fats and phospholipids. Metabolic breakdown and synthesis of fatty acids. The chemistry and metabolism of steroids. Chemistry and metabolism of carotenoids, anthocyanins, and related compounds. Part VI, Intermediat metabolism of nitrogen compounds Enzymatic cleavage and synthesis of peptide bonds Metabolic breakdown and synthesis of proteins. Special aspects of amino acid metabolism. Metabolism of porphyrins. Metabolism of nucleic acids. Part VII General aspects of metabolism Role of inorganic ions in metabolism. Heat changes in metabolism. The hormonal control of metabolism Vitamins and growth factors. Index.

Note A college textbook which may be used also by qualified readers as general up-to-date survey of biochemistry or as reference book giving synopses and literature citations on specific topics, such as the folic acid group of vitamins. The authors are members of the faculty of Yale University and the book is addressed primarily to advanced undergraduate and graduate students majoring in the biological sciences or preparing for medicine Selected literature is cited in footnotes throughout the book.

GLICK, DAVID

Techniques of histo- and cytochemistry a manual of morphological and quantitative micromethods for inorganic, organic and enzyme constituents in biological materials With a foreword by Robert R Bensley New York Interscience Publishers Inc. 1949 531 p illus 24 cm $9 50 3006

Contents (abridged) Microscopic techniques. Chemical techniques. Microbiological techniques. Mechanical separation of cellular components. Bibliography Bibliography appendix List of manufacturers. Index.

Note. Laboratory techniques and procedures for the freeze-drying preparation of tissue, for the detection of various inorganic and organic elements and substances in tissues by chemical and physical methods, and for the separation of cellular components by centrifuging are some of the techniques covered in this book. Techniques and procedures are described fully together with the apparatus and (in the case of chemical techniques) the reagents. The book is based on the literature and the text is cross-referenced to the 30-page bibliography Included in the appendix is a list of manufacturers of apparatus and chemicals. The book is addressed to prim scientists and professional research workers.

GOMORI, GEORGE

Microscopic histochemistry principles and practice Chicago University of Chicago Press, 1952 273 p illus 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine, Emmet B Bay and others) $6 00 3007

Contents Part I Histochemical methods in general The nature of the processes of identification in histochemistry The special features of histochemical methods. The histochemical reaction Controls to prove validity of technique. Quantitation in histochemistry Part II, Systematic histochemistry Inorganic substances A, Metallic elements. B Nonmetallic elements. Organic substances. A, Saccharides General principles of the histochemical demonstration of saccharides Substances other than nucleic acids. Nucleic acids Appendix Ascorbic acid. B Lipids Histochemical methods for lipids. Physical methods. Chemical methods. C, Proteins, amino acids, and products of protein metabolism Proteins Amino acid components of proteins. Antigens. Urea. Uric acid. D Prosthetic groups. Phenolic substances, especially polyphenols. Adrenalin. The enterochromaffin substance. Sulfhydryl (thiol) groups. E, Various unclassified organic substances. F Pigments. Enzymes Preparation of tissues for enzymatic reactions. Histochemical reactions for enzymes I, Oxidizing enzymes Dehydrogenases. Oxidases. Peroxidases. Appendix Cases *Rotablitonsert* and *Senerstoferte*. II, Hydrolytic enzymes Methods for hydrolytic enzymes in general Phosphatases. Alkaline phosphatases. 5-nucleotidase. Lecithinase (phospholipase). Acid phosphatase. Phosphamidase. Phosphorylase. Zymohexase (aldolase) Sulfatase. Esterases Aliesterases. Cholinesterases. The results of histochemical methods for esterases. β-glucuronidase. Carbonic anhydrase. Urease. Appendix Buffers for use in histochemistry Additional references. Author index. Subject index.

Note A survey and summary of current information in the field of microscopic histochemistry This field between histology and analytical chemistry or biochemistry is emerging as an independent discipline with its own theoretical background methods, and special problems. In this volume the term "histochemistry" is used in the restricted sense to include only those methods of the identification and localization of chemical substances on cytological scale in which the identifying chemical reaction is observed directly through the microscope in tissues of which the architecture is not greatly altered. The work is suitable for use as textbook and as a laboratory guide. Bibliographical references are given in footnotes and additional references in an appendix.

GORTNER, ROSS AIKEN

Outlines of biochemistry Third edition edited by Ross Aiken Gortner, jr and Willis Alway Gortner New York John Wiley & Sons Inc. 1949 1 078 p illus. 24 cm. $9.75 3008

Contents (abridged) Part I, Colloids. The colloid state of matter Hydrogen-ion concentration. Oxidation-reduction Electrokinetic phenomena. Gels and the water relationships of the hydrophilic colloids. The Gibbs-Donnan equilibrium. Part II, Proteins The amino acids. The primary decomposition products of proteins. Protein structure and the possibilities of protein isomerism. Reactions of proteins with acids and bases. Protein denaturation. Biological reactions of the proteins. Part III, Carbohydrates and related substances: Metabolism of carbohydrates. The pectic substances. Lignin and the tannins Part IV The lipids and essential oils. Part Plant pigments. Part VI, Biochemical regulators. Vitamins. The hormones. Enzymes. Author index. Subject index.

Note An outline in the sense that it presents concisely wide range of information, this standard work is useful both as an introductory survey of the current knowledge and as guide to the literature. The treatment is essentially from the standpoint of chemistry rather than that of physiological systems. Both plant and animal biochemistry are included. In this edition, the chapters on protein denaturation, carbohydrate metabolism and lipid metabolism have been added, and numerous revisions have been made in other parts. In spite of the extensive revisions, considerable recent research is not included, probably because biochemistry has now grown too large to be encompassed in single volume no matter how condensed.

structure in relation to biological phenomena. Except clinical applications. Appendix. Index.

Note: A standard textbook directed to undergraduate students in medical college. The standard, accepted biochemical knowledge is correlated with basic aspects of clinical medicine. The third edition was published in 1951. In preparing the present edition, the discussions of a considerable number of topics were revised and in some cases expanded. Also, a fair number of new topics have been added. A selection of recent literature has been added to the bibliographies at the ends of chapters. The author is Professor of Biochemistry and Director of the Department of Biochemistry, New York Medical College. A new edition was scheduled for publication early in 1958.

KOCH, FREDERICK C., AND MARTIN E. HANKE

Practical methods in biochemistry. Sixth edition. Baltimore: The Williams & Wilkins Company, 1953. 537 p. illus. 24 cm. $5.00. 3019

Contents: Part I, The chemistry of cell constituents: Carbohydrates. Lipids. Proteins and amino acids. Some biochemical preparations. Enzymes [illegible] activity and pH. Part II, The chemistry of the digestive tract: Salivary digestion. Gastric digestion. Intestinal digestion. [illegible] Part III, Blood and urine: Blood and [illegible]. The quantitative analysis of blood. The quantitative analysis of urine. Microgasometric methods. Pathological urinary constituents. Part IV, Enzymes, vitamins and hormones: Enzymes. Colorimetric and fluorometric methods for vitamins. Microbiological methods. Chemical tests for hormones. Appendix. Index.

Note: A standard instruction and reference book used in laboratory courses in biochemistry in medical colleges. The main part of the book is devoted entirely to discussions and laboratory directions for individual experiments. These experiments are organized in parts and chapters, the titles of which are given in the above contents. The appendix—which [illegible] pages long—discusses biochemical laboratory techniques in general and provides instructions for the preparation of standard reagents and solutions used in biochemical laboratory work. This sixth edition is more than 100 pages longer than the preceding one. Most of the increased length is due to the addition of experiments, of which there are now 319.

LWOFF, ANDRÉ, AND S. H. HUTNER, editors

Biochemistry and physiology of protozoa. New York: Academic Press Inc., 1951–55. 2 v. illus. 23 cm. Vol. I, $9.50; vol. II, $9.00. 3020

Contents: Volume I: Introduction to biochemistry of protozoa, by A. Lwoff. The phytoflagellates, by S. H. Hutner and L. Provasoli. The nutrition of parasitic flagellates (Trypanosomidae, Trichomonadinae), by M. Lwoff. Metabolism of Trypanosomidae and Bodonidae, by T. von Brand. Nutrition of parasitic amebae, by M. Lwoff. Biochemistry of plasmodium and the influence of antimalarials, by R. W. McKee. The biochemistry of ciliates in pure culture, by G. W. Kidder and V. C. Dewey. Author index. Subject index. Volume II: Introduction, by S. H. Hutner. Comparative biochemistry of flagellates, by S. H. Hutner and L. Provasoli. Composition and synthesis of the starch of Polytomella caeca, by S. A. Barker. The nutrition of ciliates, by W. J. van Wagtendonk. Enzymes and enzymology of protozoa, by W. J. van Wagtendonk. Metabolism of free-living ciliates, by C. R. Seaman. Metabolism of [illegible] protozoa, by E. K. [illegible]. Developmental physiology of the [illegible], by M. [illegible]. The chemotherapy of malaria, piroplasmosis, trypanosomiasis, and leishmaniasis, by L. G. Goodwin and I. M. Rollo. Comparative studies on amebae and amebicides, by W. Balamuth and P. E. Thompson. Author index. Subject index.

Note: The biochemistry of protozoa is of considerable scientific interest. This work is an attempt to bring together the accumulated knowledge of the subject. As indicated above, it consists of reviews of specific topics in the field. Each of the papers contains an extensive list of references. All are written on the professional level and are addressed to zoologists, biochemists and other scientists having an interest in the subject.

METHODS OF BIOCHEMICAL ANALYSIS. Edited by David Glick. Volume I. New York: Interscience Publishers Inc., 1954. 521 p. illus. 23 cm. $9.50. 3021

Contents: Determination of sulfhydryl groups in certain biological substances, by F. P. Chinard and L. Hellerman. Analysis of phenolic compounds of interest in metabolism, by H. G. Bray and W. V. Thorpe. Microbiological assay of antibiotics, by F. C. Kavanagh and F. C. Fink. Microbiological assay of vitamin B_{12}, by E. H. S. Jørgensen. Chemical determination of ascorbic, dehydroascorbic, and diketogulonic acids, by J. H. Roe. Zone electrophoresis, by H. G. Kunkel. Chromatographic separation of the steroids of the adrenal gland, by W. J. Haines and J. N. Karnemaat. Analysis of mixtures of sugars by paper and cellulose column chromatography, by L. Hough. Chromatographic analysis of radioactive iodine compounds from the thyroid gland and body fluids, by J. Roche and others. Chemical estimation of choline, by R. W. Engel and others. Estimation of nucleic acids, by E. Volkin and W. E. Cohn. Determination of rutinose and hexoses in plant products, by H. C. S. de Whalley and D. Gross. Determination of ATP and related compounds—firefly luminescence and other methods, by B. L. Strehler and J. R. Totter. The assay of catalases and peroxidases, by A. C. Maehly and B. Chance. The in vitro determination of hyaluronidase, by S. Tolksdorf. Ultracentrifugal analysis of serum lipoproteins, by O. F. de Lalla and J. W. Gofman. The assay of urinary neutral 17-ketosteroids, by L. L. Engel. Index.

—— Volume II. New York: Interscience Publishers Inc., 1955. 470 p. illus. 24 cm. $9.50. 3022

Contents: Analysis of steroids by infrared spectrometry, by H. Rosenkrantz. Chemical determination of adrenaline and noradrenaline in body fluids and tissues, by H. Persky. Lipide analyses, by W. M. Sperry. Measurement of [illegible] activity, by R. T. Holman. Assay of compounds with folic acid activity, by T. H. Jukes. Determination of vitamin E, by R. W. Lehman. Methods for determination of coenzyme A, by G. D. Novelli. Assay of proteolytic enzymes, by N. C. Davis and E. L. Smith. Determination of [illegible], by J. W. Patterson and A. Lazarow. Determination of serum [illegible], by R. J. Winzler. New color reactions for the determination of sugars in polysaccharides, by Z. Dische. Recent developments in techniques for terminal and sequence studies in peptides and proteins, by H. Fraenkel-Conrat and others. Spectrophotometric assay of cytochrome c oxidase, by L. Smith. Author index. Subject index.

—— Volume III. New York: Interscience Publishers, Inc., 1956. 437 p. illus. 24 cm. $9.50. 3023

Contents: Determination of organic phosphorus compounds by phosphate analysis, by O. Lindberg and L. Ernster. Assay of [illegible] acid, by E. L. R. Stokstad and others. Quantitative determination of histamine, by C. F. Code and F. C. McIntire. Enzymatic micro determinations of uric acid, hypoxanthine, xanthine, adenine, and xanthopterine by ultraviolet spectrophotometry, by P. Plesner and H. M. Kalckar. Use of periodate oxidations in biochemical analysis, by J. R. Dyer. End group analysis of polysaccharides, by F. Smith and R. Montgomery. Use of infrared analysis in the determination of carbohydrate structure, by S. A. Barker and others. Measurement of complexion stability by the use of ion exchange resins, by J. Schubert. Analysis of metal-protein complexes, by T. R. Hughes and I. M. Klotz. Hydrogen ion buffers and metal indicators in biochemistry, by [illegible]. Determination of zinc in biological materials, by B. L. Vallee [illegible]. Flame photometry and spectrometry—principles and applications, by M. Margoshes and B. L. Vallee. Author index. Subject index. Cumulative index.

Note: The volumes listed above constitute a review series whose purpose it is to cover new analytical methods and improvements in established methods. The typical chapter or paper is based on a critical review of the pertinent literature and includes citations of the source articles. In most instances, considerable information is presented in addition to the description of the analytical method, and in a few instances, the whole area named in the chapter title is reviewed, including historical development, nomenclature, and special problems.

MITCHELL, PHILIP HENRY

A textbook of biochemistry. Second edition. New York: McGraw-Hill Book Company, Inc., 1950. 695 p. illus. 23 cm. $7.50. 3024

Contents: An introduction to biochemical literature. Carbohydrates. Photosynthesis. Fats and related substances. Proteins and amino acids. Nucleoproteins and nucleic acids. The vitamins. Enzymes. Digestion. Absorption and assimilation. Blood and lymph.

HARROW, BENJAMIN, AND ABRAHAM MAZUR

Textbook of biochemistry Sixth edition Philadelphia W B Saunders Company 1954 563 p illus 24 cm $6 50 3013

Contents Introduction Carbohydrates. The lipids. Proteins. Nucleoproteins and nucleic acids. Enzymes. Digestion. Absorption. Blood. Chemistry of respiration Biological oxidations. Metabolism of carbohydrates—of the lipids—of proteins—of nucleoproteins. Photosynthesis. Energy metabolism. Inorganic metabolism Foods. Vitamins. Chemistry of the tissues. Biochemistry of the kidneys—urine. Hormones. Detoxication. Immunochemistry and chemotherapy Appendix. Index.

Note One of the outstanding introductory textbooks in its field. It was first published in 1935 and a fifth edition was published in 1950. It is shorter than some introductory texts in the subject nevertheless, wide range of material is presented. The writing is concise and much use is made of tables in order to save space. There are many structural diagrams of biochemical compounds and reactions. Grouping of the entries in the lists of literature references according to their most important features is a valuable aid to students and other readers who wish to pursue specific topics. This sixth edition has been considerably reorganized. Two chapters have disappeared, but some of their contents have been incorporated in other chapters. One chapter has been added. Throughout the book there are many new or revised paragraphs and larger sections. This is the first edition to bear the name of a collaborator on the title page. Both the senior author and the co-author are members of the faculty of the College of the City of New York.

HAUROWITZ, FELIX

Biochemistry, an introductory textbook. New York John Wiley & Sons Inc, 1955 485 p illus 24 cm $6 75 3014

Contents Introduction. Water and its functions. The mechanism of biochemical reactions. Carbohydrates. Proteins. Lipids. Nucleic acids (purines, pyrimidines) Porphyrins and their derivatives. Mineral metabolism. Enzymes. Energy balances and nutrition. Human biochemistry Index.

Note Metabolism, both the general mechanisms and the intermediary reactions, is emphasized in this book. The field covered in biochemistry presented as the chemistry of all living organisms, both plant and animal. In the final chapter which is little more than an outline of high points, the basic biochemical reactions are related to human biochemistry In spite of the basic, general approach the impression of a catalogue of biochemical facts which is so common in biochemistry texts has not altogether been avoided. However the book presents a more consistent picture and is easier to comprehend than some introductory texts. The author an internationally known biochemist, is at present a member of the faculty of Indiana University

HAUROWITZ, FELIX

Chemistry and biology of proteins New York Academic Press, Inc, 1950 374 p illus 23 cm $6 80 3015

Contents Role of proteins in biology Isolation purification, and determination of proteins. Hydrolytic cleavage of proteins. Size and shape of protein molecules. Electrochemistry of proteins. Interaction of proteins with water Internal structure of globular proteins. Albumins, globulins, and other soluble proteins. Insoluble proteins (scleroproteins) Combination of proteins with other substances. Conjugated proteins. Proteins with enzymatic properties. Proteins with hormone activity Role of proteins in immunological reactions. Toxins (toxic proteins) The supply of amino acids for protein biosynthesis. Protein synthesis. Index.

Note. In this excellent book the author has presented proteins from the following standpoints (1) structure, (2) biological activity (3) biosynthesis in the living cell. These aspects are well integrated, but wherever knowledge is available to explain the behavior or biosynthesis of proteins on the basis of physical chemistry the author has presented it. The book is written on the graduate level. The treatment is compact but full of detail, and numbered references are made from the text to exceptionally extensive bibliographies. The author is Professor of Chemistry in Indiana University

HAWK PHILIP B, AND OTHERS

Practical physiological chemistry Thirteenth edition By Philip B Hawk, Bernard L Oser and William H Summerson New York The Blakiston Division, McGraw-Hill Book Company, Inc., 1954 1,439 p. illus. (part col d) 24 cm. $12 00 3016

Content (abridged) Physicochemical principles. Carbohydrates. Fats. Proteins. Nucleic acids and nucleoproteins. Epithelial and connective tissues. Muscular tissue. Nervous tissue. Enzymes and their action. Salivary digestion. Gastric digestion. Gastric analysis. Pancreatic digestion. Intestinal digestion. Bile and liver function. Intestinal absorption. Blood, lymph, and cerebrospinal fluid. Respiratory exchange and neutrality regulation. Energy metabolism. Hormones. Urine. Isotopes. Carbohydrate, fat, and protein metabolism. Inorganic metabolism. Vitamins and deficiency diseases. Metabolic antagonists and antibiotics. Appendix Index.

Note A textbook and laboratory guide which has been used for 50 years, the first edition having been published in [illegible] Another remarkable fact about it is that the senior author of the current edition was the sole author of the first edition and has been the sole or senior author for 50 years. It is concerned with the principles that underlie the methods used in present-day biochemical and diagnostic laboratories and with the methods themselves. Chapters such as that on muscular tissue contain compact discussions of the pertinent knowledge of biochemistry and provide specific directions for the laboratory preparation of extractives and chemical determinations on them. In contrast, the five chapters on [illegible] cover not only the biochemistry and the experimental techniques but also the full range of diagnostic tests. The literature is cited as footnotes. The 12th edition was published in 1947 For this 13th edition, several chapters were rewritten, and new and revised sections were added to others. The book is approximately [illegible] pages longer

HÖBER, RUDOLF

Physical chemistry of cells and tissues, by Rudolf Höber, with the collaboration of David I Hitchcock, J B Bateman, David R. Goddard, Wallace O Fenn New York McGraw Hill Book Company Inc., 1945 676 p. illus 24 cm $6 00 3017

Content (abridged) Section I Selected principles of physical chemistry by D. I. Hitchcock. Section II, Large molecules—their physicochemical properties and their architectural and functional significance in living matter by J. B. Bateman Some properties of large molecules in solution. Condensed systems of large molecules. Some properties of films and membranes. Section III, Introductory remarks concerning the architecture of protoplasm, by R. Höber Section IV The surface of the protoplast, its properties and its architecture by R. Höber The permeability of the cell to organic nonelectrolytes. Permeability to electrolytes. Permeability to weak bases and weak acids. Permeability to water Section V Influence of some extracellular factors on cellular activity by R. Höber Section VI, The respiration of cells and tissues, by D. R. Goddard. Section VII, Contractility by W O. Fenn Section VIII, Passive penetration and active transfer in animal and plant tissues by R. Höber Authors' index. Subject index.

Note. The fundamental thesis of this book is that physiology is essentially a branch of physical chemistry The elementary processes combined in the life of a cell are analyzed and discussed from this viewpoint. The discussion proceeds from the simplest principles of physical chemistry which are applicable to analyses of the more complex cell processes, such as muscular contraction, the transfer of body fluids, and the energetics of such phenomena. The work is based largely on published literature, but in some of their applications and interpretations the authors have purposely gone beyond other authorities. The book is primarily for graduate physiologists. There are many hundreds of references to pertinent literature

KLEINER ISRAEL S

Human biochemistry Fourth edition. With 93 text illustrations and five color plates. St. Louis The C V Mosby Company 1954 745 p illus. (part col'd) 25 cm. $7 50 3018

Contents. Introduction. Physical chemistry Carbohydrates. Lipids. Proteins. Tissues. Milk. Blood. Enzymes. Digestion. Chemical changes within the large intestine. Vitamins. Foods. Biological oxidations. Nitrogen metabolism. Carbohydrate metabolism Lipid metabolism. Mineral metabolism and water balance Energy metabolism. Chemistry of respiration and acid-base balance. Hormones. Changes in the chemical composition of blood.

to such topics as cancer than would be given in a general textbook of biochemistry. Most of the exposition deals with human biochemistry but there are incidental references to biochemical processes in lower forms of life. The chapters include extensive references to the literature. The illustrations are primarily representations of the structure of molecules, but some other types are included, for example, the reproduction of a roentgenogram of the major bones of the leg in a child recovering from rickets. The first edition was published in 1951 and the second, somewhat revised edition in 1954. A third edition was published in 1957. $12.00.

WEST EDWARD STAUNTON AND WILBERT R. TODD

Textbook of biochemistry Second edition New York The Macmillan Company 1956 1,356 p. illus. 24 cm. $12.00. 3029

Contents: Introduction. Gases and solutions. Electrolytic dissociation and the mass law. Acids, bases, and buffers. Osmotic pressure. The colloidal state and membrane phenomena. Lipids. Carbohydrates or the saccharides. Proteins. Nucleoproteins and nucleic acids. Composition of tissues. Enzymes. Digestion of food. Absorption from the intestine. Detoxication in the body. Blood and other body fluids. Chemistry of respiration, acid-base balance, and electrolyte and water balance. Energy metabolism. The vitamins. Biological oxidation and reduction. Introduction to intermediary metabolism. Organic phosphates in metabolism—chemical energetics. Lipid metabolism. Carbohydrate metabolism. Protein metabolism. Nutritional aspects of proteins and amino acids. Nutritional aspects of the lipids and the carbohydrates. The metabolism of the inorganic elements. Foods. Urine formation and composition. The hormones. Antimetabolic agents. Index.

Note: A comprehensive introduction used in courses offered to students preparing for medicine and other careers in which a thorough fundamental knowledge of biochemistry is essential. It presents a broad view of the subject, and at the same time a fairly detailed one. The chapters include long bibliographies divided into "General references" and "Special references." References are made from the text to citations in the latter group. The first edition of the book was published in 1951. The organization and scope are the same in this second edition, but there has been extensive rearrangement of the material in some of the chapters and a considerable range of revisions in others. There have included the addition to the bibliographies of literature published since the first edition was written.

WHITE ABRAHAM AND OTHERS

Principles of biochemistry by Abraham White, Philip Handler, Emil L. Smith, and DeWitt Stetten Jr. New York McGraw Hill Book Company Inc. 1954 1 117 p. illus. 23 cm. $15.00 3030

Contents (abridged): Part I. Chemical composition of cells. Chemistry of carbohydrates. Chemistry of lipids. The proteins. Nucleic acids and nucleoproteins. Porphyrins, hemoproteins, and chlorophyll. Part II, Catalysts. Enzymes. Part III, Metabolism. General metabolism. Biological oxidations. Carbohydrate metabolism. Lipid metabolism. Protein metabolism. Metabolism of nucleic acids. Evolution, genetics, and metabolism. Part IV. Body fluids. Blood. Plasma proteins. The chemistry of respiration. Electrolyte, water, and acid-base balance. Specialized extracellular fluids. Renal function and the composition of urine. Milk. Part V. Biochemistry of specialized tissues. Muscle. Nervous tissue. Connective tissue. Bone, calcium, and phosphorus metabolism. Erythrocyte and iron metabolism. Eye. Liver. Skin. Part VI, Biochemistry of the endocrine glands. Thyroid gland. Parathyroid glands. Gonads. Adrenal glands. Pancreas. Hypophysis. Part VII, Nutrition. The major quantitative nutrients. Chemical elements in nutrition. Water-soluble vitamins. Lipid-soluble vitamins. Index.

Note: A college textbook designed primarily for the instruction of students in medical colleges. It presents a broad view of mammalian biochemistry with emphasis on such aspects as catalysis and metabolism. Literature references are limited to brief lists, mostly of review articles, at the ends of the chapters.

WILLIAMS ROGER JOHN

Biochemical individuality the basis for the genetotrophic concept. New York John Wiley & Sons, Inc. 1956 214 p. illus. 23 cm $5.75 3031

Contents. Biochemical variation—its significance in biology and medicine. Genetic basis of biochemical individuality. Anatomical variation—significance. Individuality in composition. Individual enzymic patterns. Endocrine activities. Excretion patterns. Pharmacological manifestations. Miscellaneous evidences of individuality. Individuality in nutrition. The genetotrophic approach. Implications for the biological sciences. Implications for medical and dental research. Implications for advance in psychiatry. Index.

Note. The variability of individual organisms and particularly individual human beings in levels of endocrine activity, nutritional needs and other aspect of their biochemistry is the principal subject of the book; and the genetic basis for such variability is the underlying scientific thesis. Although the author—an eminent biochemist—has presented only a selection of the available evidence the book indicates a wide and varied array of it. As to its implications, he states: "... in biology and in medicine ... we have concentrated too much on a single recognizable picture of man and have given too little attention to man ... What we need is to understand people and patients for what they are. Knowledge about variability we believe contributes substantially to this understanding." Although written primarily for scientists, many sections of the book can be understood by educated laymen.

WILLIAMS ROGER JOHN AND ERNEST BEERSTECHER, JR.

An introduction to biochemistry Second edition. New York D Van Nostrand Company Inc., 1948 736 p. illus. 22 cm $7.00 3032

Contents (abridged): Section I, Composition of organisms: Cell structure. Inorganic constituents. Carbohydrates. Fats and related compounds. Proteins. Colloidal systems. Essential characteristics of living matter. Section II, Nutritional requirements of organisms. Section III, Mechanisms used by organisms in general for promoting and regulating chemical change. Enzyme action. Permeability. Nervous and endocrine control. Biochemical genetics. Section IV, Metabolism of simple cells. Section V, Metabolism in green seed plants. Section VI, Metabolism in mammals. Mammalian respiration. Digestion and absorption by mammals. Intermediate carbohydrate metabolism. Intermediate lipide metabolism. Intermediate protein metabolism. Excretion. Glossary. Index.

Note: A textbook for college students who have had college courses in general and organic chemistry. Although it is intended for courses offered in the senior year, it is considerably less difficult and also less comprehensive than some introductory texts in the subject. The first edition was published in 1931. In this edition the work is extensively revised, is 224 pages longer and contains three new chapters and many new illustrations. The directions for laboratory experiments that were included in the first edition have been omitted.

WITTCOFF HAROLD

The phosphatides. New York Reinhold Publishing Corporation, 1951 564 p. 24 cm. (American Chemical Society monograph series. No. 112 William A. Hamor editor) $14.00 3033

Contents (abridged): Part I, The chemistry of the phosphatides. Nomenclature and classification of lipides. The structure of lecithin. The structure of the cephalin phosphatides. The structure of sphingomyelin. The structure of the minor phosphatides. The purification and the chemical properties of the phosphatides. The physical chemistry of the phosphatides. Phosphatide complexes. The lysophosphatides and the lecithinases. Synthesis of the phosphatides. Part II, The analytical determination of the phosphatides. Part III, Phosphatides from plant sources. Part IV, Phosphatides from animal sources. Part V, The biochemistry and physiology of the phosphatides. General aspects of lipide metabolism. The phosphatides as metabolic elements. The role of phosphatide hydrolysis products in metabolism. The role of the phosphatides in pathological conditions. Biological and additive functions of the phosphatides. Part VI, The industrial aspects of the phosphatides. The manufacture of phosphatides. The industrial uses of phosphatides. Author index. Subject index.

Note: A comprehensive survey of the literature and current knowledge of the phosphorus-bearing lipides. The published literature is covered through 1949 with some data from papers published in 1950. The book is addressed to graduate chemists, and it is of particular interest to biochemists and to industrial chemists in the food industries.

Chemistry of respiration and acid-base regulation. Biological oxidation. Calorimetry and energy metabolism. Carbohydrate metabolism. Metabolism of the lipids. Protein metabolism. Urine. Composition of foods dietetics. The chemistry of animal tissues. Chemistry of the hormones. Chemotherapy Author index. Subject index.

Note The second edition of this textbook for undergraduate college students has been revised to include many significant developments since 1946. Important changes have been made in the chapters on the vitamins, enzymes, hormones, and the antibiotics. Essentially the book offers an introductory study of metabolism and food chemistry and their interrelationships as a basis for the science of nutrition. A knowledge of basic organic and physical chemistry on the part of readers has been presupposed. The references given at the end of each chapter cite monographic and periodical literature through 1950 and have some helpful through brief annotations. The purpose of this bibliography is to summarize the mass of literature in the field, rather than to document the text. The book has 90 figures and 85 tables.

NEURATH, HANS, AND KENNETH BAILEY, editors

The proteins chemistry, biological activity, and methods New York Academic Press Inc. 1953–54 2 v in 4 parts illus 24 cm Vol. I, pt A, $13 00, vol I, pt B $13 00 vol II, pt A, $14 00, vol II, pt. B, $16 50 3025

Contents Vol. I, pt. A The isolation of proteins, by J F Taylor The general chemistry of amino acids and peptides, by P Desnuelle. The amino acid composition of proteins, by G. R. Tristram. The structure and configuration of amino acids, peptides and proteins, by B W Low Optical properties of proteins, by P Doty and E. P Geiduschek. Electrochemical properties of the proteins and amino acids, by R. A. Alberty Vol. I, pt. B The size, shape and hydration of protein molecules, by J T Edsall. Protein interactions, by I M Klotz. Protein denaturation, by F W Putnam The chemical modification of proteins, by F W Putnam. The relation of chemical structure to the biological activity of the proteins, by R. R. Porter Author index for Volume I. Subject index for Volume I. Vol. II, pt. A: Nucleoproteins and viruses, by R. Markham and J D Smith. The oxidizing enzymes, by T P Singer and E. B Kearney Respiratory proteins, by F Haurowitz and R. L. Hardin. Toxic proteins, by W E Van Heyningen. Milk proteins, by T L McMeekin. Egg proteins, by R. C. Warner Seed proteins, by S. Brohult and E. Sandegren. Proteins and protein metabolism in plants, by F C. Steward and J F Thompson. Protein hormones by C. H Li. Author index. Subject index. Vol. II, pt. B Interstitial proteins—The proteins of blood plasma and lymph, by W L. Hughes. The proteins of immune reactions, by W C. Boyd. Structure proteins—I by J C. Kendrew Structure proteins—II, Muscle by K. Bailey Proteolytic enzymes, by N M. Green and H Neurath. Peptide and protein synthesis. Protein turnover by H. Tarver Author index for Volume II. Subject index for Volume II.

Note. A major comprehensive treatise composed of the contributed chapters whose authors and titles are listed above. Each of the chapters is an *expertly written literature digest* accompanied by an extensive bibliography in the form of footnote citations. Although the chapters are by separate authors and may be used independently of one another the work differs from the review type of survey composed of individual monographic chapters in that it was planned as a whole It is directed to graduate biochemists and physiologists.

NEW YORK ACADEMY OF MEDICINE

Cellular metabolism and infections Edited by E Racker Symposium held at the New York Academy of Medicine March 4 and 5 1954 New York Academic Press Inc. 1954 196 p 24 cm $4 80 3026

Content Part I Aspects of comparative biochemistry Some singular features of bacteria as dynamic systems, by R Y Stanier Some aspects of the comparative biochemistry of *Ascaris* and of *schistosomes*, by E. Bueding Energy production in animal tissues and in microorganisms, by H A Krebs Metabolic adaptation in animals, by W E. Knox. Metabolic approaches to chemotherapy by A. D Welch. Metabolic factors affecting chemotherapeutic response by B D Davis. Comparative biochemistry and chemotherapy by S. S. Cohen. Part II, Metabolic aspects of the infection process The tissues and body fluids as media for pathogenic agents, by R. J Dubos. Some effects of bacteria and their products on host-cell metabolism, by A. M. Pappenheimer, Jr. The role of host polysaccharides in virus reproduction, by M. H. Adams. Some metabolic and cytochemical aspects of bacteriophage infection, by S E. Luria. Metabolism of infected cells, by E. Racker *A study of phytopathogenic* microbial toxins of known chemical structure and mode of action, by D. W Woolley Intracellular survival of bacteria in acute and chronic tuberculosis, by H. Bloch. Inhibition of Theiler's GDVII virus by an intestinal mucopolysaccharide, by B Mandel. Relation of an enzyme dephosphorylating adenosine triphosphate to the virus of avian erythromyeloblastic leukosis, by J W Beard. Alteration of host energy metabolism during infection, by G. B. Pinchot. Concluding remarks, by A. Lwoff Author index. Subject index.

Note. Papers describing the results of fundamental research in biochemistry are published in this volume. The primary interest of the symposium of which the book is a product was in the metabolism of infected cells However as shown above, some of the papers deal with various aspects of comparative biochemistry not directly related to infections. Most papers include literature references.

UMBREIT, WAYNE WILLIAM, AND OTHERS

Manometric techniques and tissue metabolism by W W Umbreit, R. H. Burris, and J F Stauffer Chapters on specialized techniques by P P Cohen, G A LePage, V R. Potter and W C Schneider, and contributions by J A. Bain D E Green, H. A. Lardy A. L. Lehninger R. W McGilvery, and R. Wennesland Second edition. Minneapolis Burgess Publishing Company, 1949 227 p illus 29 cm 3027

Contents The Warburg constant volume respirometer The "direct method" for carbon dioxide. Carbon dioxide and bicarbonate. The "indirect method" of Warburg. Useful techniques in manometry Design and calibration flasks. The differential manometer with special reference to its use in studies of photosynthesis. Special methods employing manometric and electrometric techniques. "Thunberg techniques" for estimation of dehydrogenase activity Methods for preparation and study of tissues. The homogenate technique Methods for the isolation of particulate components of the cell. Chemical methods. Manometric estimation of metabolites and enzyme systems. Methods for the analysis of phosphorylated intermediates. Preparation of physiologically important intermediates and metabolites. Index.

Note This laboratory manual for beginning graduate students in biology provides clear description of various methods used in the study of tissue metabolism. The methods described are ones which the authors have found satisfactory in their own laboratories, including both manometric and other methods and approaches. The methods described require equipment such as is likely to be found in a laboratory engaged in biological research, the chief of which are respirator calorimeter and centrifuge. Bibliographical references, chiefly from the periodical literature, are listed at the end of each chapter A revised edition was published in 1957 338 p. $6.50

WALKER, BURNHAM S , AND OTHERS

Biochemistry and human metabolism. Second edition By Burnham S Walker William C Boyd and Isaac Asimov Baltimore The Williams & Wilkins Company, 1954 904 p. illus 24 cm 3028

Content Part I, Structure Proteins and amino acids. Protein structure. Tissue chemistry Blood and the anemias. Part II, Control Enzymes. Hormones. Part III, Growth Nucleoproteins and growth. Cancer Reproduction and heredity Part IV Metabolism Food and diet. Digestion Carbohydrates and diabetes. Lipid metabolism and ketosis. Proteins and starvation. Electrolytes and water—edema and shock. Respiration and acidosis. Heat and work Excretion and some of its disturbances. Part V Pathology Vitamins and vitamin deficiency diseases. Infection. Part VI, Appendices Colloids and colloid phenomena Isotopes. Principles of thermodynamics. Abbreviations and symbols Index.

Note The special organization and subject content of this book are due to its having been planned for the instruction of medical students rather than students of biochemistry Proteins, group of complex substances, are taken up first also more space is given

tory related to enzymology. The reviews are topical rather than chronological. In other words, each of the monographic chapters is based on a considerable body of recent literature pertinent to the topic of the chapter rather than on the literature of a specified calendar year or other arbitrary period of time. Each chapter is accompanied by an extensive bibliography. Contributors are drawn from countries from many nations, including the United States of America.

Colowick, Sidney P and Nathan O Kaplan editors

Methods in enzymology Advisory board Britton Chance and others. Volumes I–II. New York Academic Press Inc., 1955 2 v illus. 24 cm. Vol. I, $19.00 vol. II, $23.80 3043

Contents (abridged) Section I, General preparative procedures: Tissue slice technique. Tissue homogenates. Fractionation of cellular components. Methods of extraction of enzymes. Protein fractionation. Preparation of buffers. Section II, Enzymes of carbohydrate metabolism: Polysaccharide cleavage, and synthesis. Disaccharide hydrolysis and glucuronide metabolism. Metabolism of hexoses. Metabolism of pentoses. Metabolism of three-carbon compounds. Ketoses. Metabolism of three-carbon compounds. Reactions of two-carbon compounds. Reactions of formate. Section III, Enzymes of lipid metabolism: Fatty acid oxidation. Acyl activation and transfer. Lipases and esterases. Phospholipid and steroid enzymes. Section IV Enzymes of citric acid cycle. Author index. Subject index.

Note A comprehensive work addressed to graduate scientists working in enzymology and to scientists in related fields who occasionally need information about enzymological techniques. Each volume consists of signed contributions. In the first volumes there are 170 descriptions of techniques and related matters organized under the section titles given above. The typical signed section is six pages in length, is a specific and detailed description of a single laboratory procedure and is accompanied by literature references. Volumes III and IV deal with preparation and assay of enzymes. Volume III, *Preparation and assay of substrates*, $18.00 and Volume IV *Special techniques*, $14.00, were published in 1957

Edsall, John Tileston editor

Enzymes and enzyme systems their state in nature Cambridge, Mass. Harvard University Press, 1951 146 p. illus. 22 cm. $3.50. 3044

Contents The organized respiratory activity of isolated cell-free mitochondria, by A. L. Lehninger. The cytochrome system, by D. E. Green. Aspects of the specificity and mode of action of some peptidases, by E. L. Smith. The reactions of intracellular peroxidase with various ligands, by A. C. Maehly. The reaction of ferrocytochrome c with peroxidases and peroxides, by B. Chance. The state in nature of proteins and protein enzymes of blood and liver, by E. J. Cohn and others.

Note The first volume of a new series entitled "Memoirs of the University Laboratory of Physical Chemistry Related to Medicine and Public Health, Harvard University." It contains papers which were first presented at a symposium held in 1949. The papers reveal several common lines of approach to thinking on fundamental problems by workers in widely separate laboratories. Each paper is illustrated and has a documenting bibliography appended. The book is of interest to graduate biochemists and other scientists concerned with enzymes.

Emmens, Clifford Walter, editor

Hormone assay New York Academic Press Inc. 1950 556 p illus. 24 cm. $13.00 3045

Contents Statistical methods, by C. W. Emmens. Insulin, by R. L. Smith. Parathyroid hormone, by R. H. Thorp. Biological and chemical assay of adrenaline, by G. B. West. Posterior pituitary-like hormones, by R. H. Thorp. Biological assay of the melanophore expanding hormone from the pituitary, by F. W. Landgrebe and H. Waring. Gonadotrophins, by C. Hamburger. Adrenocorticotrophin, by F. S. Greenspan and others. Thyrotropic hormone, by C. W. Turner. Lactogenic hormone, by J. Meites and C. W. Turner. Mammogenic hormones, by C. W. Turner. Growth hormone, by F. S. Greenspan and others. Androgens, by R. I. Dorfman. Adrenal cortical hormones, by R. I. Dorfman. The chemical assay of steroids of the androgen and adrenocortical hormone groups, by R. K. Callow. Estrogens, by C. W. Emmens. Hormones of the corpus luteum, by C. W. Emmens. Chemical assay of estrogens and pregnanediol, by G. A. D. Haslewood. Thyroidal substances, by E. P. Reineke and C. W. Turner. The chemical assay of thyroxine and other substances with thyroidal activity, by R. Pitt-Rivers. Index.

Note A full treatment addressed to biochemists and others whose professional work requires a knowledge of practical methods and of the current state of development of the field. Each of the chapters is essentially a compact monograph based on the author's own work and the published literature. In the first chapter the application of statistical methods to hormone assays is outlined but, as the editor points out, the study of many hormones has not yet reached the point where a high level of statistical treatment is possible in papers such as make up this book.

Gordon, Edgar Stillwell, editor

A symposium on steroid hormones. Madison University of Wisconsin Press, 1950 396 p. illus. 24 cm $6.50 3046

Contents The steroids—a historical review, by G. F. Marrian. Review of research on the chemistry of the steroids, by L. F. Fieser. Biosynthesis of steroids, by K. Bloch. The metabolism of steroid hormones in humans, by K. Dobriner and S. Lieberman. Round table: Growth and fattening of animals, by S. A. Asdell and others. Round table: Metabolism and excretion of steroids, by H. L. Mason and others. Excretion of adrenal metabolites in man in health and disease, by E. H. Venning. The mechanism of the protein anabolic action of testosterone propionate, by C. D. Kochakian. Metabolic effects of adrenal steroids, by D. J. Ingle. Effects of adrenal steroids on blood cells and on certain aspects of protein metabolism, by A. White. Round table: The relation of structure to function of steroids, by A. L. White and others. The effects of steroids on prostatic cancer, by C. B. Huggins. The relationship of steroid hormones to cancer: clinical aspects, by O. H. Twombly. Round table: Lactation and reproduction in animals, by S. A. Asdell and others. Enzyme systems involved in the metabolism of androgens in the liver, by L. T. Samuels. Factors influencing endometrial growth in monkeys (*Macaca mulatta*), by F. L. Hisaw. Hormones and behavior with special reference to birds and the mechanisms of hormone action, by N. E. Collias. Steroids and pituitary hormones, by R. O. Greep and I. C. Jones. Some inherited hormonal factors influencing mammary carcinogenesis in virgin mice, by J. J. Bittner and R. A. Huseby. The metabolism of corticosterone, by E. C. Kendall, Jr. Genetic control of sex determination and differentiation in vertebrates, by R. R. Humphrey. Steroid hormones and sex differentiation, by L. V. Domm. Reconsideration of the influence of genetic factors and steroid hormones in sex differentiation, by C. R. Moore.

Note This book contains the major papers that were presented at a symposium held at the University of Wisconsin in 1949. The papers were written by leaders in the investigation of the steroids or in their applications in animal husbandry, clinical medicine, etc. Most of the papers are accompanied by extensive lists of references. The book lacks an index.

Henry Ford Hospital. International Symposium

Enzymes units of biological structure and function. Edited by Oliver H. Gaebler New York Academic Press Inc., 1956 624 p. illus. 24 cm. $12.00 3047

Contents (abridged) Introduction. Purpose and scope of the symposium, by B. D. Davis. Part I, The origin of enzymes: Remarks on the mechanism of enzyme induction, by J. Monod. Enzymes in cellular differentiation, by B. Ephrussi. Nucleic acids and enzyme synthesis, by E. F. Gale. On the nature of the enzyme-forming system, by S. Spiegelman. Part II, The status of the gene-enzyme relationship: Genetic structure and function in bacteriophage T2, by A. D. Hershey. The genetic organization of the deoxyribonucleic units functioning in bacterial transformations, by R. D. Hotchkiss. The role of the genes in the synthesis of enzymes, by N. H. Horowitz and M. Fling. Gene interactions in enzyme synthesis, by C. Yanofsky. The future of enzyme research, by L. Pauling. Part III, Enzymes and cell structure: Electron microscopy of mitochondria and other cytoplasmic structures, by G. E. Palade. Physiology of mitochondria, by A. L. Lehninger. Submicroscopic and biochemical characteristics of cytoplasmic particles, by E. L. Kuff and G. H. Hogeboom. Nuclear products and nuclear reproduction, by D. Mazia. Localization of photosynthesis in chloroplasts, by D. I. Arnon. Part IV Enzymatic basis of some physiological func-

WOLTERINK, LESTER F, editor
The biology of phosphorus By G Evelyn Hutchinson, Harry G Albaum, Harold C Hodge, Jacob Sacks, and Henry A Lardy East Lansing Michigan State College Press 1952 147 p illus 22 cm $2 00 3034

Contents. The biogeochemistry of phosphorus, by G. E. Hutchinson. The role of phosphorus in the metabolism f plants The incorporation of radiophosphorus during growth, by H. G Albaum The dynamic role of the skeleton as shown by radioisotopes, by H. C. Hodge. The significance of the phosphorylation cycle in intermediary metabolism, by J Sacks. The role f phosphate in metabolic control mechanisms, by H. A. Lardy

Note A collection of original papers which were first presented at a symposium held at Michigan State College in April, 1951 Each paper is essentially a short monograph in which the current status of a specific facet of the biological role f phosphorus is described and is related to the pertinent source articles. Accounts of recent developments, for example the use f radioactive isotopes in studying the biochemistry of the skeleton are included. The papers are addressed to such persons as graduate biologists and professional biochemists. The book is handy survey for such scientists as are in need of a review of the subject and as a guide to the significant literature.

HORMONES AND ENZYMES

ADVANCES IN ENZYMOLOGY AND RELATED SUBJECTS OF BIOCHEMISTRY, edited by F F Nord Volume x New York Interscience Publishers, Inc, 1950 533 p illus 24 cm. $10 75 3035

Content Blood clotting and related processes, by T Astrup. Tryptophanase-tryptophan reaction by F C. Happold. Phosphatase alcaline by J Roche and Nguyen-van Thoai. Synthesis of disaccharides with bacterial enzymes, by W Z. Hassid and M. Doudoroff Some aspects of streptomycin and other *Streptomyces* antibiotics, by N G. Brink and K. Folkers. Probleme des Citronensäurecyklus, by C. Martius and F Lynen Die Phytochemie des Schwefels, by T Bersin. Author index Subject index.

Not The proceedings of symposium of more than 40 prominent scientists orking in various fields of biology and chemistry are published in this book. The volume contains not only the principal papers whose thors and titles are listed above but also transcripts of the discussions of the papers by participants in the symposium and added comments" by individual scientists. Much of the information presented has not been published before. The book is potentially of interest to scientists orking in such diverse fields as metabolism, cytology and genetics as ell as those more directly concerned ith enzyme research.

Laidler, Keith J

Introduction to the chemistry of enzymes New York McGraw Hill Book Company, Inc., 1954 208 p illus 24 cm $5 00 3048

Contents General characteristics of enzymes. The kinetics of enzyme reactions. The proteolytic enzymes. Other hydrolytic enzymes, and the phosphorylases. The oxidative enzymes Catalase and peroxidase. Splitting, transferring, and isomerizing enzymes. The inacti iation of enzymes. The mechanisms of enzyme action. Bibliography Appendix Tables f enzyme data. Name index. Subject index.

Not The basic knowledge of enzyme chemistry is well presented in this relatively short book Although the style is strictly factual, it is not so condensed that reading is difficult. Brevity has been achieved largely by omitting cyclopedic detail. The level of discussion assumes the reader's acquaintance with basic organic chemistry and chemical terminology Literature citations are supplied both as footnote references to papers in which there is more ex tended exposition of specific points, and selected classified bibliography of book and articles for further reading.

Laurentian Hormone Conference

Recent progress in hormone research. Vol ume xi The proceedings of the 1954 Lauren tian Hormone Conference. Edited by Gregory Pincus New York Academic Press, Inc. 1955 518 p illus 23 cm $10 00 3049

Contents i, Pituitary hormones Aspects of the biochemistry and physiology of the neurohypophyseal hormones, by H. B van Dyke and others. The f t and metabolism f anterior pituitary hormones, by M. Sonenberg and W L. Money The mechanism of stimulation of ACTH secretion, by F L. Munson and F N Briggs. Studies on Amphenone and related compounds, by R Hertz and others. ii, Steroid chemistry and biochemistry The use of microorganisms in the synthesis f steroid hormones and hormone analogues, by J Fried and others. Recent progress in methods of isolation chemistry and physiology f aldosterone by S. A. Simpson and J F Tait. iii, Hormones and abnormal growth Experimental pituitary tumors, by J Furth The endocrinology of neoplastic disease, by R. W Rawson and J E. Rall, iv Hormones and aging in man Aspects of aging as reflected in the human ovary and testis, by E. T Engle. Steroid metabolism in aging men and omen by G Pincus and others. v Mechanism f hormone action On the mechanism of action f insulin, by R. Levine and M S Goldstein. Effects of ions and hormones on carbohydrate metabolism by A. B Hastings and others. vi Hormone-cardiovascular interrelations Dietary and hormonal factors in experimental atherogenesis and blood pressure regulation, by J Stamler and others Chemical and biological properties of the hepatorenal factors VEM and VDM (ferritin) by E. Shorr and others. Author index to Volume xi. Subject index t Volume xi. Cumulative subject index t Volumes i–x.

—— Volume xii. Proceedings of the Laurentian Hormone Conference 1955 Edited by Gregory Pincus New York Academic Press, Inc 1956 453 p. illus. 23 cm. $10.00. 3050

Contents i, Hormone biosynthesis and metabolism [illegible] metabolism of thyroid hormones, by J Roche and [illegible] adrenal medulla and the biosynthesis of pressor amines by P Hagen and A. D Welch. Biogenesis of the steroid [illegible] hormones, by R. D H. Heard and others. Some aspects of the biogenesis of adrenal steroid hormones, by M. Hayano and others. Enzymatic mechanisms of hormone metabolism—[illegible] tion of the steroid nucleus, by G. M. Tomkins—Mechanism of hormonal glucuronide formation, by K. J Isselbacher. ii, [illegible] mones and metabolism Influence of steroids on cerebral metabolism in man, by G S. Gordan. Studies of aldosterone in relation to water and electrolyte balance in man, by J. A. Luetscher. Functions of insulin and other regulatory factors in peptide formation by animal cells, by M. E. Krahl. iii, Pituitary hormones Human urinary gonadotropin by A. Albert. Hormonal control of melanin pigmentation, by A. B Lerner and Y Takahashi. Pituitary syndromes in man, by R. F Escamilla. iv Sex hormones [illegible] sex hormone and its role in reproduction, by T Mann [illegible] studies f testicular hormone production, by R. B. Leach and others. The mechanism of effect of the ovarian steroids, by [illegible] Author index. Subject index.

Note These volumes are the tw most recent (prior to [illegible]) in series which began publication in 1944. The series [illegible] the papers presented at annual conferences of eminent [illegible] working in areas of biochemistry pertaining to the hormones, together with transcripts f the discussions of the papers at the conferences. Most of the papers discuss the results of recent research and correlate it ith work that has been published previously. They include extensive lists of references to the international literature. The series is of interest not only to biochemists and others working directly in endocrinology but also to those working in tangential areas, and to medical specialists in endocrinology

Meyerhof, Otto, and others

A symposium on respiratory enzymes. Contributors Otto Meyerhof [and others] Madison The University of Wisconsin Press, 1942 281 p illus 24 cm. $4.50 3051

Contents Intermediate carbohydrate metabolism, by O. Meyerhof [illegible] Oxidative mechanisms in animal tissues, by E. G. Ball. [illegible] of hydrogen transport, by V R. Potter Pasteur effect, by F Lipmann [illegible] Oxidases, peroxidases, and catalase, by K. G. Stern. [illegible] thiamide nucleotide enzymes, by F Schlenk. The [illegible] T R. Hogness. Cytochromes, by E. Stotz. Phosphorylation of carbohydrates by C. F Cori. Discussion of phosphorylation [illegible] Kalckar Metabolic cycles and decarboxylation, by [illegible] Transamination, by P P Cohen. Discussion [illegible] ration C. A. Baumann. Discussion on bacterial respiration [illegible] Peterson. Discussion of animal tissue respiration [illegible]

Note Papers delivered at the Symposium on the Respiratory Enzymes and the Biological Action f Vitamins, held in connection with the University of Chicago's 50th anniversary in September 1941 The papers dealing with the biological actions of vitamins are published in separat olume by the University of Chicago Press.

Neilands J B, and Paul K Stumpf

Outlines of enzyme chemistry With a chapter on the synthesis of enzymes by Roger [illegible] Stanier New York John Wiley & Sons, Inc. 1955 315 p illus 24 cm. $6 50 3052

Contents Part General principles Introduction and [illegible] Equilibria and ionization Isolation methods. Criteria of purity Characterization. Part ii, Physical chemistry Reaction rates [illegible] of substrate concentration on elocity Action of inhibitors. Effect of [illegible] temperature. Effect of hydrogen-ion concentration. Energetics. Oxidation-reduction. Enzyme-substrate compounds. Specificity of enzymes. Part iii, Types of coenzymes and enzymes: [illegible] of coenzymes. Classification of enzymes. Respiratory enzymes. [illegible] iv Metabolic patterns Metabolic processes. Glycolysis. [illegible] monophosphate shunt. Tricarboxylic acid cycle. Oxidative phosphorylation. Fatty acid oxidation. The synthesis of enzymes [illegible] dex.

Not A book developed in a one-semester course given at the University of California. It is comparatively brief outline of

SEBRELL, W H., JR. AND ROBERT S HARRIS, editors

The vitamins chemistry physiology pathology New York Academic Press Inc. 1954 3 v illus. 24 cm. Vols. I–II, $16 50 per vol. vol. III, $15.00 3062

Contents: Volume [illegible] Vitamin A and carotenes. Ascorbic acid. Vitamin B_{12}. Biotin. Author index. Subject index. Volume [illegible] Choline. Vitamin D group. Essential fatty acids. Inositols. Vitamin K group. Niacin. Pantothenic acid. Author index. Subject index. Volume III: p-Aminobenzoic acid. Pteroylglutamic acid. Pyridoxine and related compounds (vitamin B_6 group). Riboflavin. Thiamine. The tocopherols. New and unidentified growth factors, by V. H. Cheldelin. Author index. Subject index.

Note: A critical survey of the accumulated knowledge on the vitamins. The presentation is very compact, and much use has been made of graphs and tables for the presentation of data. The individual chapters are organized under such sub-heads as: Nomenclature and formulas, Chemistry, Biochemical systems, Deficiencies, Occurrence, Requirements. The section under each sub-head is signed by its contributor; thus a chapter often has half a dozen authors. Footnote references to source literature are printed on the pages containing the information condensed from them, and the names of the authors of the cited literature are [illegible] in the author indexes. The set is a standard reference work for biochemists and others who are concerned with vitamin research or production.

VANDERBILT UNIVERSITY SCHOOL OF MEDICINE

Symposium on the role of some of the newer vitamins in human metabolism and nutrition. Proceedings of the Nutrition Symposium held at Vanderbilt University School of Medicine, Nashville, Tennessee October 20–21 1955 New York The National Vitamin Foundation, Inc. 1956 137 p illus. 27 cm. (Nutrition symposium series. No. 12) $2.50. 3063

Contents: History of vitamin B_6, by P. György. Vitamin B_6 deficiency in the [illegible] with particular reference to the occurrence of atherosclerosis, dental caries, and hepatic cirrhosis, by J. F. Rinehart and L. D. Greenberg. Neurochemical aspects of pyridoxine metabolism and function, by D. B. Tower. The neuropathology of experimental vitamin B_6 deficiency in monkeys, by M. Victor and R. D. Adams. Effects of vitamin B_6 on the central nervous activity in childhood, by D. B. Coursin. Some metabolic effects of vitamin B_6 in man, by E. W. McHenry. Evidence for abnormal vitamin B_6 metabolism in pregnancy and various disease states, by M. Wachstein. The metabolism of vitamin B_6 in human beings, by R. W. Vilter. Nutritional muscular dystrophy in monkeys receiving a diet deficient in both vitamins B_6 and E, by P. L. Day and J. S. Dinning. Some studies of tocopherol in infants and children, by H. H. Gordon and H. M. Nitowsky. Some studies of tocopherol deficiency in infants and children III, by H. M. Nitowsky and J. T. Tildon. Alpha-tocopherolquinone and muscle dystrophy, by F. L. Mason and K. E. Mason. Effects of limited tocopherol intake in man with relationships to erythrocyte hemolysis and lipid oxidation, by M. K. Horwitt and others. Studies of pantothenic acid metabolism, by B. Lubin and others. Effect of an study on the absorption of vitamin B_{12} by healthy young and old subjects, by B. F. Chow and others. Vitamin B_{12} serum level and pregnancy, by K. Okuda and others.

Note: The "newer vitamins" considered at the symposium of which this publication [illegible] are those named in the titles of the various papers. The papers are based primarily on recent investigations, but most of them refer also to related results published in the literature. Some of the authors have cited the literature extensively. Taken together the papers present a reasonably complete survey of the knowledge accumulated to mid-1955 on the human metabolic and nutritional roles of vitamin B_6 and other components of the B-vitamin complex as named in the titles of the papers.

VITAMINS AND HORMONES ADVANCES IN RESEARCH AND APPLICATIONS. Edited by Robert S. Harris, G F Marrian Kenneth V Thimann. Volume x. New York Academic Press Inc. 1952 421 p. illus. 23 cm. $9 50 3064

Contents: Dietary neuropathies, by E. K. Cruickshank. The problem of the absorption and transportation of fat-soluble vitamins, by A. E. Sobel. The nutrition of the crustacea, by E. Beerstecher Jr. Nutrition and the anterior pituitary with special reference to the general adaptation syndrome, by R. H. Ershoff. Hormone assays in obstetrics and gynecology, by R. Borth and H. de Watteville. Experimental glycosuria—its production, prevention and alleviation, by R. F. Ogilvie. Some effects of thyroxine and iodinated casein on dairy cows and their practical significance, by K. L. Blaxter. The intermediary metabolism of the non-benzenoid steroid hormones, by L. T. Samuels and C. D. West. The influence of corticoids on enzymes of carbohydrate metabolism, by F. Verzár. Steroids and tissue oxidation, by R. I. Dorfman. Author index. Subject index.

—— Volume XI. New York Academic Press Inc., 1953 356 p illus 23 cm $9 50 3065

Contents: Function of ascorbic acid in plants, by L. W. Mapson. The biochemistry and physiology of vitamin D by E. Kodicek and N. Eeg-Larsen. The physiology and biochemistry of ascorbic acid, by A. P. Meiklejohn. Endocrine disturbances in chronic human malnutrition, by S. Zubirán and F. Gómez-Mont. Relation of pantothenic acid to adrenal cortical function, by E. P. Ralli and M. E. Dumm. Recent knowledge of the biochemistry of the thyroid gland, by J. Gross and R. Pitt-Rivers. Evaluation of procedures for the cytological localization of ketosteroids, by H. W. Deane and A. M. Seligman. Synthesis of cortisone and related steroids, by C. Djerassi. Cumulative subject index for volumes VI–X. Author index for volume XI. Subject index for volume XI.

—— Volume XII. New York Academic Press Inc., 1954 305 p illus. 23 cm $7.50 3066

Contents: Chemistry of vitamin B_{12}, by K. Folkers and D. E. Wolf. The intestinal synthesis of vitamins in the ruminant, by S. K. Kon and J. W. G. Porter. The biochemistry and pathology of hypervitaminosis A, by C. Nieman and H. J. K. Obbink. Vitamin A requirements of animal species, by S. H. Rubin and E. De Ritter. Disturbances in nutrition relating to liver disease in man, by C. S. Davidson. Light regulation of hormone secretion, by J. Hammond, Jr. Estrogens and related substances in plants, by E. B. Bradbury and D. E. White. Effects of estrogens on domestic fowl and applications in the poultry industry, by F. W. Lorenz. Author index. Subject index.

—— Volume XIII. New York Academic Press Inc 1955 382 p illus. 23 cm. $9.00 3067

Contents: The role of the vitamins in antibody production, by A. E. Axelrod and J. Pruzansky. The physiology and biochemistry of the essential fatty acids, by H. J. Deuel, Jr. and R. Reiser. The biosynthesis of ascorbic acid, by L. W. Mapson. Role of vitamin B_{12} in the metabolism of microorganisms, by J. E. Ford and S. H. Hutner. The chemotherapeutic action of vitamin B_{12}, by C. C. Ungley. Vitamin requirements of human beings, by L. B. Pett. Parasitic infections and nutrition, by D. A. Smith. Hormones and mitotic activity, by W. S. Bullough. Concerning possible mechanisms of hormone action, by O. Hechter. Author index. Subject index.

—— Volume XIV New York Academic Press, Inc. 1956 486 p illus. 23 cm. $10 00 3068

Contents: Intestinal synthesis of vitamins in the nonruminant, by O. Mickelsen. Some aspects of vitamin A metabolism, by J. S. Lowe and R. A. Morton. Regulation of carbohydrate metabolism in isolated tissues, by A. E. Renold and others. Experimental hyperglycemic states not primarily due to a lack of insulin, by L. H. Stetten and J. Mayer. Biochemical studies on insect hormones, by P. Karlson. Glucuronide metabolism, with special reference to the steroid hormones, by G. A. Levvy. Bioassay of pituitary and placental gonadotropins in relation to clinical problems in man, by J. A. Loraine. Microbiological transformations of steroids and their applications to the synthesis of hormones, by S. H. Eppstein and others. Author index. Subject index.

C. The enzyme-substrate compounds and mechanism of action of the hydroperoxidases, by B Chance. Copper oxidases, by C. R. Dawson and W B Tarpley Oxidation of amino acids, by H. A. Krebs. Oxidation of amines, by E. A. Zeller Lipoxidase or unsaturated-fat oxidase, by R. T Holman and S. Bergström. Enzymes in luminescence, by E N Harvey Oxidation f organic sulfur by C. Fromageot. Anaerobic glycolysis, respiration and the Pasteur effect by F Dickens. Yeast and mold fermentations, by F F Nord and S. Weiss. Volume II, part II Bacterial fermentation by S. R. Elsden. Enzymes in detoxication by F Bernheim. Urea synthesis, by H. A. Krebs. Peptide bond synthesis, by P P Cohen. Enzymatic synthesis of glutamine by P P Cohen. Synthesis of acetylcholine—choline acetylase, by K. B Augustinsson. Oxidative assimilation by microorganisms, by C. E. Clifton. Enzymatic mechanism of carbon dioxide fixation by S Ochoa. Carbohydrate-fat conversion, by F L. Breusch. Photosynthesis in green plants, by W E. Loomis. Bacterial photosynthesis, by C. B Van Niel. Nitrogen assimilation, by A. I. Virtanen and N Rautanen Tumor enzymology by J P Greenstein and A. Meister Enzyme technology by A. F Langlykke and others. Author index. Subject index.

Not A comprehensive and valuable addition to the literature of enzymology written on the graduate and professional level. The chapters are monographic in form and have been prepared by specialists from the staffs of universities and biochemical and medical research organizations in the United States of America and other countries. Numerous footnot references constitute an extensive bibliography of the subject. Indexes for each volume are included in parts two, but no index for the set as a whole is provided.

TAUBER, HENRY

The chemistry and technology of enzymes New York John Wiley & Sons Inc., 1949 550 p illus 23 cm $10 50 3057

Contents (abridged) Part I, The chemistry f enzymes Esterases. Carbohydrases. Phosphorylases and related enzymes. Nucleases, amidases, and deaminases. Proteolytic enzymes. Iron-porphyrin enzymes. Oxidases containing copper Dehydrogenases containing codehydrogenase I and II. Flavoproteins. Decarboxylating and phosphopyridoxal enzymes. Hydrases, mutases, and other enzymes. Part II The technology f enzymes Yeast—production and utilization. Production of ethyl alcohol by fermentation. Mold fermentations. Bacterial fermentations. The production of antibiotics. Enzymes for medical use The role of amylases and proteinases in bread making and the production of malt syrup. Enzymes in dairy products. Enzymes in the meat, egg, vegetable, and fruit industries. Pectin-decomposing enzymes and their use in the fruit juice wine and jelly industries. Enzymes in textile, paper and related industries. The use of enzymes in the manufacture f leather Enzymes in other industries. Microbiological methods for the estimation of vitamins and amino acids. Author index. Subject index.

Note In this comprehensive work, the uthor has combined, in thoroughly revised form, the material found in two of his earlier works *Enzyme hemistry* New York 1937 and *Enzyme technology* New York, 1943 It is written on professional level and is designed primarily for the use of physiological and biological chemists, including those employed in industry It provides an up-to-date summary of the chemistry of practically all known enzymes, and description of their industrial production methods and present day uses.

VITAMINS

THE ASSOCIATION OF VITAMIN CHEMISTS INC

Methods of vitamin assay Prepared and edited by The Association of Vitamin Chemists Inc *Second edition revised and supplemented* New York Interscience Publishers Inc. 1951 301 p illus 24 cm $6 00 3058

Contents Sampling for vitamin analyses Vitamin A. Carotene. Ascorbic acid. Thiamine. Microbiological assay technics. Riboflavin. Niacin. Pantothenic acid. Vitamin B_6. Folic acid. Biotin. Vitamin B_{12}. Methods for other vitamins. Use of check samples in control of vitamin methods. Index.

Note The new edition of this practical manual for laboratory analysts differs from the original edition in having been revised throughout and in including assays for several members of the vitamin B complex, namely pantothenic acid, pyridoxine folic acid, biotin, vitamin B_{12} for which methods were not described in the first edition. As in the earlier edition the scope of the book is limited to methods which have been successfully applied by several members of the various committees of the sponsoring Association. The chapter "Methods for other vitamins, which discusses the vitamins for which specific methods have not been outlined, has been extended to provide the analyst with a basis for selecting procedure suitable to his work, and brief discussion is presented of the relative merits of the various published methods and their applicability t different types of samples. Selected bibliographical references appear at the ends of the chapters.

GYORGY, PAUL, editor

Vitamin methods. New York Academic Press, Inc., 1950–51 2 v 24 cm. Vol. I, $12 00, vol. II, $14 50 3059

Contents Volume I. Physical methods of [illegible] assay by E. T Stiller Chemical methods of vitamin assay by P György and I. H. Robin. Microchemical methods, by O. A. Bessey Microbiological methods in vitamin research, by E. E. Snell. The use of special instruments in vitamin analysis, by Erich Hirschberg [illegible] Author index. Subject index. Volume II. General aspects of [illegible] animal experimentation, by N B. Guerrant. The animal vitamin assays, by C. I. Bliss and P György Laboratory diagnosis of human vitamin deficiencies, by J H. Jones. Clinical signs of malnutrition, by N Jolliffe. Statistical methods in vitamin research, by C. I. Bliss. Supplement to Volume I Physical methods of vitamin assay by E. T Stiller Chemical methods of vitamin assay by P György and others. Microbiological methods in vitamin research, by L. D Wright and others. Author index. Subject index.

Note A work of fundamental significance to professional workers in medicine pharmacy food industries, and other fields in which vitamins are of importance. The emphasis is on analysis and assay, but wide range of related information which is of importance research workers is also included. Each part is essentially monograph of its particular topic and is supplemented by long list of related literature.

JOHNSON, BRUCE CONNOR

Methods of vitamin determination. Minneapolis Burgess Publishing Company, 1948 109 p illus 28 cm $2.25 3060

Content Outline of lecture course. Microbiological methods of vitamin analysis. Principles of colorimetric and fluorometric methods of analysis. Carotene. Vitamin A. Vitamin D. Vitamin E [illegible] pyridyl method. Vitamin K—prothrombin-time method. Thiamine. Riboflavin. Nicotinic acid. Pyridoxine. Pantothenic acid Biotin. Pteroylglutamic acid (folic acid) Inositol. P-aminobenzoic acid. Choline. Ascorbic acid. Microbiological determination of the amino acids.

Note Essentially a laboratory manual based on courses given graduate students in the field of animal nutrition at the University of Illinois. General procedures and techniques are followed by detailed outlines of the microbiological and chemical methods used in the determination f specific vitamins. An outline of lectures and brief list of reference in conjunction with the laboratory work and tools are included.

JUKES, THOMAS H

B vitamins for blood formation. Springfield, Ill Charles C Thomas 1952 113 p. 22 cm. (American lecture series. Publication no. 146. A monograph in American lectures in pharmacology edited by Chauncey D Leake) $4 00 3061

Contents Introduction—the megaloblastic anemias. B vitamins in the megaloblastic anemias of pregnancy and infancy Folic acid. The pteroylglutamic acid. The vitamin B_{12} group of compounds. The intrinsic factor Antagonists of pteroylglutamic acid. The citrovorum factor Metabolic reactions involving folic acid and vitamin B_{12}. Vitamin B_{12} deficiency and anemia. Index.

Not A brief review of the chemistry and physiology of the B-complex vitamins which are used in combating certain types of anemias. The book is concerned specifically ith pteroylglutamic acid, the vitamin B group, and the intrinsic factor each of which is discussed as to its properties, physiological effect, and therapeutic value. Extensive bibliographies are included. The author is associated with the Lederle Laboratories Division of the American Cyanamid Company

MICROBIOLOGY IMMUNOLOGY PARASITOLOGY

GENERAL

AMERICAN PUBLIC HEALTH ASSOCIATION

Diagnostic procedures and reagents: techniques for the laboratory diagnosis and control of the communicable diseases. Third edition. New York: American Public Health Association, Inc., 1950. 589 p. illus. (part col'd) 24 cm. $6.00. 3070

Contents: Culture media, by Lt. Col. P. R. Carlquist. The streptococci, by G. M. [illegible]. The pneumococcus, by [illegible]. The meningococcus (Neisseria meningitidis), by S. E. Branham. The gonococcus (Neisseria gonorrhoeae), by C. M. Carpenter. Hemophilus pertussis, by P. Kendrick and others. The diphtheria bacillus (Corynebacterium diphtheriae) by M. Frobisher, jr. The tubercle bacillus (Mycobacterium tuberculosis) by M. M. Cummings. Salmonella and Shigella, by M. R. [illegible]. Brucellosis (undulant fever) (Brucella abortus, Brucella suis, and Brucella melitensis), by [illegible] and D. E. West. Tularemia (Pasteurella tularensis) by [illegible]. The cholera vibrio (Vibrio comma, Vibrio cholerae) by C. V. Seastone. The laboratory diagnosis of [illegible], by W. A. [illegible]. The laboratory diagnosis of [illegible], by W. A. [illegible]. Serodiagnosis of syphilis, by J. F. Mahoney and M. R. [illegible]. Chancroid and granuloma inguinale, by [illegible]. Infectious mononucleosis, by C. A. Stuart. Leptospira icterohaemorrhagiae (Weil's disease) by A. R. [illegible]. Bacterial food poisoning, by G. M. Dack. The animal parasites of man, by A. [illegible]. Laboratory diagnosis of helminths and protozoa, by H. W. Brown. Trichinosis, by H. B. Shookhoff. Pathogenic fungi, by N. F. Conant. Blood cultures, by C. C. [illegible]. Technic of Rh testing, by P. Levine and M. Wigod. [illegible] antigen—bacterial [illegible] and [illegible] in body fluids, by C. R. [illegible]. Index.

Note: A more or less official handbook of accepted and standard procedures. Each of the monographic papers was prepared by one or more recognized specialists and was evaluated in manuscript by experts serving as referees. In the present edition, 4 of the chapters are new, and those carried over from the preceding edition have been slightly or extensively revised as required. As in earlier editions, the papers are accompanied by extensive literature references and in some instances by illustrations.

ANDERSON, HAMILTON H., AND OTHERS

Amebiasis: pathology, diagnosis and chemotherapy. By Hamilton H. Anderson, Warren L. Bostick, and Herbert G. Johnstone. Springfield, Ill.: Charles C Thomas, 1953. 431 p. illus. 26 cm. $11.50. 3071

Contents: Introduction. Epidemiology of amebiasis. Etiology and pathogenesis. Introduction to pathology of intestinal amebiasis. Pathology of intestinal amebiasis. Pathology of extra-intestinal amebiasis. Pathology of experimental amebiasis. Complications and sequels of amebiasis. Symptomatology and clinical manifestations. Laboratory diagnosis of amebiasis—technical appendix. Prevention and public health aspects. Chemotherapy and supportive therapy. Requirements for growth and control of E. histolytica. Index.

Note: A sound presentation of accumulated experience and knowledge of [illegible]. Once were thought to be confined to the tropics, but are recognized as worldwide in distribution. The primary viewpoint is that of clinical medicine: pathology, symptomatology, diagnosis and treatment are all well covered. There are also critical discussions of the research work done on the disease in animals, chapters on the public health aspects and on techniques of growth of E. histolytica in the laboratory. The book is based on the literature and on the authors' own observations. Most of the chapters contain extensive lists of references, and the names of the authors of the cited literature are assembled in the author index, thus making it for use as a literature guide as well as treatise. When the book was published, the authors were all associated with the School of Medicine of the University of California.

ANNUAL REVIEW OF MICROBIOLOGY. Volume 10. Charles E. Clifton, editor; Sidney Raffel and Roger Y. Stanier, associate editors. Palo Alto: Annual Reviews, Inc., 1956. 426 p. illus. 23 cm. $7.00 3072

Contents: Factors affecting resistance to infection, by [illegible]. The biology of the cellular slime molds, by M. Sussman. Review of the microbiological and immunological literature published in 1955 in the U.S.S.R., by P. Grabar. Antimicrobial chemotherapy, by E. Jawetz. Mutual relationships in fungi, by J. E. DeVay. Nutrition of bacteria and fungi, by L. D. Wright. The anaerobic bacteria with special reference to the genus Clostridium, by L. S. McClung. Nutrition of Protozoa, by W. H. Johnson. Antibodies as indicators for bacterial surface structures, by J. Tomcsik. Pox viruses, by A. W. Downie and K. R. Dumbell. Cytology of bacteria, by G. Knaysi. Metabolism of carbohydrates and related compounds, by D. J. O'Kane. Proteins and [illegible], by E. O. [illegible]. Metabolism of nitrogenous compounds, by C. R. [illegible]. Problems of localization in plant diseases, by H. Kern. [illegible], and their relation to [illegible], by J. R. [illegible]. The parasexual cycle in fungi, by G. Pontecorvo. Author index. Subject index.

Note: Survey chapters authored and titled as listed above are contained in this tenth volume of standard series. All but one are cast in the familiar pattern of very concise, narrative summaries of groups of original papers pertaining to specific topics within the larger field covered by the series. The exception is Grabar's "Review of the microbiological and immunological literature published in 1955 in the U.S.S.R.," which is a national rather than topical survey. The bibliography appended to this paper contains 193 citations of Russian publications with all titles translated into English. Recent literature is covered in all of the chapters, although some cover the literature of several years, while others cover the literature of approximately a single year. All chapters contain extensive bibliographies of the source articles.

BERGEY, DAVID HENDRICKS

Bergey's manual of determinative bacteriology. By Robert S. Breed, E. G. D. Murray and A. Parker Hitchens. Assisted by sixty contributors. Sixth edition. Baltimore: The Williams & Wilkins Company, 1948. 1,529 p. 24 cm. 3073

Note An annual review in which each paper is a compact, monographic survey of the current knowledge of the specific topic named in its title. The authors are outstanding specialists and in many instances have contributed to the advance of the subject about which they write. Extensive bibliographies accompany all of the papers. Earlier volumes of the series are still in print.

WILLIAMS, ROGER JOHN, AND OTHERS
The biochemistry of B vitamins, by Roger J Williams, Robert E Eakin, Ernest Beerstecher, jr, and William Shive New York Reinhold Publishing Corporation, 1950 741 p 23 cm (American Chemical Society monographs, William A Hamor, editor No 110) $17 50 3069

Contents (abridged) Section A, Characterization, [illegible], assay and biogenesis of B vitamins: Distribution of B vitamins. Assay methods. Biogenesis of the B vitamins. Section B, The catalytic functions of the B vitamins. Section C, The role of the B vitamins in animal and plant organisms: Methods of assay of B vitamin requirements. Factors influencing B vitamin requirements. B vitamin deficiency states. Section D The comparative biological activities of the B vitamins and related compounds: p-Aminobenzoic acid. Biotin. The folic acid group. The nicotinic acid group. Pantothenic acid. The vitamin B_6 group. Riboflavin. Thiamine. Biological activities of other nutritional factors of doubtful status. Index.

Note A substantial contribution to the literature of vitamins. Essentially it is a critical digest of the published literature of the field. Statements in the text are keyed to the extensive lists of original sources which accompany each chapter. As is characteristic of this series, the authors are all recognized experts, and the volume is addressed to persons with scientific training and interests. It is of interest to professional workers in many fields, including biochemistry pharmacology nutrition, and medicine.

DUBOS, RENÉ JULES editor

Bacterial and mycotic infections of man. Second edition. 98 illustrations. Philadelphia J. B. Lippincott Company 1952 886 p. illus. 26 cm. $[illegible] 3080

[illegible]

DUBOS, RENÉ JULES

The bacterial cell in its relation to problems of virulence, immunity and chemotherapy, with an addendum by C. F. Robinow. Cambridge, Mass. Harvard University Press 1945 460 p. illus. 22 cm. (Harvard University monographs in medicine and public health) $5.00. 3081

[illegible]

DUBOS, RENÉ JULES

Biochemical determinants of microbial diseases. Cambridge, Mass. Harvard University Press 1954 152 p. 22 cm. $3.50 3082

[illegible]

FAUST, ERNEST CARROLL

Amebiasis. Springfield, Ill., Charles C Thomas 1954 154 p. illus. (part col'd) 22

Contents (abridged) Historical survey of classifications. How bacteria are named and identified. Rules of nomenclature. Class *Schizomycetes* Nägeli. Order I. *Eubacteriales* Buchanan Suborder I. *Eubacteriineae* Breed, Murray and Hitchens Family I. *Nitrobacteriaceae* Buchanan. Family II. *Pseudomonadaceae* Winslow et al. Family III. *Azotobacteriaceae* Bergey Breed and Murray Family IV *Rhizobiaceae* Conn. Family V *Micrococcaceae* Pribram. Family VI. *Neisseriaceae* Prévot. Family VII. *Lactobacteriaceae* Orla-Jensen. Family VIII. *Corynebacteriaceae* Lehmann and Neumann. Family IX. *Achromobacteriaceae*. Family X. *Enterobacteriaceae* Rahn Family XI. *Parvobacteriaceae* Rahn. Family XII. *Bacteriaceae* Cohn. Appendix Suborder *Eubacteriineae*—overlooked species and synonyms. Family XIII. *Bacillaceae* Fisher Suborder II. *Caulobacteriineae* Breed, Murray and Hitchens Family I. *Nevskiaceae* Henrici and Johnson. Family II. *Gallionellaceae* Henrici and Johnson. Family III. *Caulobacteriaceae* Henrici and Johnson. Family IV. *Siderocapsaceae* Pribram. Appendix—Family *Pasteuriaceae* Laurent. Suborder III. *Rhodobacteriineae* Breed, Murray and Hitchens Family I. *Thiorhodaceae* Molisch Family II. *Athiorhodaceae* Molisch. Family III. *Chlorobacteriaceae* Geitler and Pascher Order II. *Actinomycetales* Buchanan Family I. *Mycobacteriaceae* Chester Family II. *Actinomycetaceae* Buchanan. Family III *Streptomycetaceae* Waksman and Henrici. Order III *Chlamydobacteriales* Buchanan Family I. *Chlamydobacteriaceae* Migula. Family II *Crenotrichaceae* Hansgirg. Family III *Beggiatoaceae* Migula. Appendix—Family *Achromatiaceae* Massart. Appendix—Order *Caryophanales* Peshkoff Family I. *Pontothricaceae* Peshkoff. Family II. *Arthromitaceae* Peshkoff Family III. *Oscillospiraceae* Peshkoff Family IV *Caryophanaceae* Peshkoff. Order IV *Myxobacteriales* Jahn Family I. *Cytophagaceae* Stanier Family II. *Archangiaceae* Jahn. Family III. *Sorangiaceae* Jahn. Family IV *Polyangiaceae* Jahn. Family V *Myxococcaceae* Jahn. Order V *Spirochaetales* Buchanan Family I. *Spirochaetaceae* Swellengrebel Family II. *Treponemataceae* Schaudinn Supplement I Order *Rickettsiales* Gieszczykiewicz Family I. *Rickettsiaceae* Pinkerton. Family II. *Bartonellaceae* Gieszczykiewicz. Family III. *Chlamydozoaceae* Moshkovsky Supplement II: Order *Virales* Breed, Murray and Hitchens Suborder II. *Phytophagineae* Holmes Family II. *Marmoraceae* Holmes. Family III. *Annulaceae* Holmes. Family IV *Rugaceae* Holmes. Family V *Savoiaceae* Holmes. Family VI. *Lethaceae* Holmes. Suborder III. *Zoophagineae* Holmes Family I. *Borreliaceae* Holmes. Family II. *Borreliotaceae* Holmes. Family III. *Erronaceae* Holmes. Family IV *Charonaceae* Holmes. Family *Trifuraceae* Holmes. Family VI. *Rabulaceae* Holmes. Supplement III Family *Bartonomycetaceae* Turner Index of sources and habitats. Index of names of genera and species.

Note. An internationally recognized authority on the identification and taxonomy of bacteria. A seventh edition was published in 1957 1000 p. $15 00

Birkeland, Jorgen

Microbiology and man being an account of the diverse properties and characteristics of microorganisms a description of the various tools and techniques for their handling and an inquiry into their subtle relationships to everyday life Second edition. Baltimore Williams & Wilkins Company 1949 525 p illus 23 cm $5 00 3074

Contents (abridged) Section I, Fundamentals of microbiology How we study microorganisms. Biological characteristics of microorganisms. Microorganisms and the carbon and nitrogen cycles. Bacterial heredity and variation. How the environment affects microorganisms. Antibiosis and antibiotics. Section II, Infection and resistance How the body defends itself against infection. Epidemiology or the natural history of disease. Section III, Common infectious diseases. Section IV Microbiology f air food, milk water sewage, and soils Bacterial warfare Glossary References Index.

Note An introductory textbook primarily for college courses offered to students who need general knowledge f bacteriology but do not plan t do advanced work in the subject. Emphasis is on the methodology of bacteriological research and on the application of the knowledge of bacteriology to personal and community health. I this edition the work has been rather extensively revised. The taxonomic material included in the first edition has been deleted. Six new chapters have been added

Buchanan Robert Earle and Estelle Denis Buchanan

Bacteriology Fifth edition New York The Macmillan Company 1951 678 p illus 21 cm. $6 50 3075

Contents (abridged) The beginnings of bacteriology How microorganisms are named and classified. Bacteria, their morphology and classification. The viruses, their characteristics and classification. The yeasts, their morphology and classification The molds, their morphology and classification Inheritance, variability and mutation of microorganisms. Distribution of microorganisms. [illegible] Preparation and uses of culture media. Study of growth characters in pure cultures. Methods of observation of certain physiological characters. Methods of microscopic examination. Effects of physical agencies on microorganisms. Physical effects produced by microorganisms. Effects of chemical environment upon microorganisms. Basic mechanisms of chemical changes produced by microorganisms. Chemical changes of economic significance produced by microorganisms. Microorganisms in water and sewage. Microorganisms in [illegible] Microorganisms as symbionts and commensals in animals. Resistance to disease—immunology and serology Disease-producing microorganisms. The pathogenic cocci. Diphtheria group. Plague group. The intestinal group or enterobacteria. Undulant fever—abortus group The cholera-pseudomonad group. Group of plant pathogens. The hemophilic group Acid-fast or tuberculosis group. The [illegible] group The spirochete group. The typhus-tick fever group Viruses and bacteriophages. Fungi and yeasts pathogenic for man and animals. Pathogenic protozoa. Appendices. Index.

Note A standard textbook for introductory college courses. [illegible] knowledge is emphasized, but there is also much description of applications. Although pathogenic organisms are described and the diseases they produce are discussed briefly the book is not designed for pre-medical or medical students. In this edition it has been extensively rewritten and enlarged.

Burger, Martin

Bacterial polysaccharides their chemical and immunological aspects. Springfield, Ill. Charles C Thomas, 1950 272 p. illus. 24 cm. $6 75 3076

Contents Historical and introduction. Pneumococcus polysaccharides. Enzyme studies on bacterial polysaccharides and [illegible] tions. Streptococcus polysaccharides. Neisseria polysaccharides. [illegible] polysaccharides Anthrax polysaccharides Eberthella typhosa polysaccharides. Polysaccharides of the mycobacteria. Dysentery bacilli polysaccharides. Genus Hemophilus polysaccharides. Polysaccharides of the Salmonella, Brucella group polysaccharides. [illegible] polysaccharides. Polysaccharides of the more important Klebsiella, Escherichia, Aerobacter and Proteus groups. Appendix. Author index. Subject index.

Note A monograph on the polysaccharide substances [illegible] related to infection and immunity Essentially it is a digest of the published literature, and each of the short chapters is accompanied by an extensive bibliography Also, there are many tabular presentations f data. Techniques for isolation and identification of specific polysaccharides in the laboratory are given particular emphasis.

Burrows, William, and others

Textbook of microbiology Sixteenth edition With the collaboration of Francis Byron Gordon, Richard Janvier Porter, and James William Moulder Philadelphia W B. Saunders Company, 1954 824 p illus. 26 cm. $11 00 3077

Content (abridged) The history and development of microbiology Laboratory methods. Bacterial physiology by J W Moulder The action of physical agents, bactericidal substances (disinfectants) and chemotherapeutic drugs. Bacterial [illegible] The pathogenic bacteria and disease. The epidemiology of infectious disease. The bacteriology of water and sewage—milk and food. Immunity—antigens, antibodies and the antigen-antibody reaction—The immune state. The staphylococci. The streptococci The pneumococci. The gram-negative pathogenic cocci (neisseria —the gonococcus and the meningococcus. The enteric bacilli The cholera vibrio and related forms. Brucella. Pasteurella The hemophilic bacteria Pseudomonas. Bacillus—the spore-forming aerobes. Clostridium—the spore-forming anaerobes. Corynebacterium (the diphtheria bacillus) Mycobacterium. Medical mycology The spirochetes. Medical parasitology by R. J Porter The rickettsiae The viruses, by F B. Gordon. Bacteriophage (the bacterial viruses) Index.

Note Known in its early editions as Jordan's *Textbook of bacteriology* this ork has been used in its several editions since 1908 as textbook for medical college students and other students requiring professional grade treatment f microbiology Although considerabl attention is paid to the basic biology of the bacteria

KLUYVER, A. J., AND C. B. VAN NIEL

The microbe's contribution to biology. Cambridge, Mass. Harvard University Press, 1956. 152 p. illus. 21 cm. $4.00 3088

Contents: Microbial metabolism and the energetic basis of life, by A. J. Kluyver. Microbial metabolism, further evidence for life's unity, by A. J. Kluyver. Phototrophic bacteria, key to the understanding of green-plant photosynthesis, by C. B. van Niel. Life's flexibility: microbial adaptation, by A. J. Kluyver. Trial and error in living organisms; microbial mutations, by C. B. van Niel. Evolution as viewed by the microbiologist, by C. B. van Niel. References.

Note: An interesting, informal account of some of the research that has been done on microorganisms that has enriched and contributed to the fund of basic biological knowledge. The material was first delivered as the John M. Prather Lectures at Harvard University in April, 1954, and has been somewhat revised. The book is informative reading for laymen interested in biology and for biologists who are not specialists in microbiology. The first named author is a member of the faculty of the Technological University of Delft, and his coauthor is a member of the faculty of Stanford University.

KNAYSI, GEORGES

Elements of bacterial cytology. Second edition. Ithaca. Comstock Publishing Company Inc., associated with Cornell University Press, 1951. 375 p. illus. 24 cm. $5.00 3089

Contents: Form and size of the bacterial cell. Chemical composition and structural organization. Cytoplasm and cytoplasmic membrane. The nucleus. The cell wall and slime layer. Physicochemical properties of the bacterial protoplasm. Vegetative reproduction. Vacuoles and inclusions. The motility of bacteria. The spores of bacteria. [illegible]. Bacterial cultures. Cytology of the Actinomycetales. Cytology of the Spirochaetales. Cytology of the Myxobacteriales. Bibliography. Index.

Note: The standard treatise on the bacterial cell. In it the established knowledge is organized and expertly presented together with references to the source articles. The book is addressed to advanced undergraduate students of bacteriology and its coverage is thorough enough to make it useful also to graduate students in this field. The first edition was published in 1944. In this edition the work has been considerably enlarged and a good portion of it revised. There are 123 figures and 49 plates.

KRUEGER, WALTER W.

Principles of microbiology. Philadelphia. W. B. Saunders Company, 1953. 648 p. illus. 21 cm. $5.50. 3090

Contents (abridged): Part I. Introduction. Part II. The microscopic world. Part III. The physiology of microorganisms. Part IV. Microbiologic techniques and methods. Part V. Useful activities of microorganisms. Part VI. Microbiology of sewage and water. Part VII. Microbiology of foods. Part VIII. Infection and body defenses. Part IX. Infectious diseases. Index.

Note: A general introduction to microbiology designed for the instruction of college students who are taking their first course in the subject. The first part contains an outline of the history of the development of microbiological knowledge and a chapter on [illegible]. The second part contains chapters on the leading groups of microorganisms, including the bacteria, the fungi, and the rickettsiae and viruses. The fourth part includes a chapter on antibiotics and other chemotherapeutic agents. Inclusion of chapters on applications of microbiological knowledge, particularly in such areas as food technology, makes the book more interesting to beginning students. There are 143 figures and selected literature references to related books.

LAMANNA, CARL, AND M. FRANK MALLETTE

Basic bacteriology: its biological and chemical background. Baltimore. The Williams & Wilkins Company, 1953. 6[illegible]7 p. illus. 24 cm. $10.00. 3091

Contents: The scope of bacteriology. The occurrence and taxonomy of bacteria. General properties of bacteria. Microscopy. Dyes and staining. The structure of eubacteria. Surface properties of bacteria. Growth of bacteria. Enzymes and bacteria. Physical factors affecting bacteria. Variation of bacteria. The variation and genetics of bacteria. Bacterial metabolism. Chemical disinfection. Appendix. Index.

Note: A book that is complementary to most textbooks on bacteriology. It is directed to college students who have completed introductory courses in biology, chemistry and bacteriology and it is concerned with the basic biological, physical, and chemical science that underlies the scientific study of bacteria. Such aspects of the subject as the surface properties of bacteria are discussed in the light of the concepts and techniques of physical chemistry. Much biological and, particularly, biochemical knowledge is incorporated in many of the chapters. Selected literature references, many of them to publications in fields other than bacteriology, are included.

NEW YORK ACADEMY OF MEDICINE

Streptococcal infections. Edited by Maclyn McCarty. Symposium held at the New York Academy of Medicine February 25 and 26 1953. New York. Columbia University Press 1954. 218 p. illus. 23 cm. $5.00 3092

Contents: Cellular constituents of group A streptococci concerned in antigenicity and virulence, by R. C. Lancefield. Streptolysins and their inhibitors, by A. W. Bernheimer. The streptokinase-plasminogen system, by L. R. Christensen. Streptococcal proteinase, by S. D. Elliott. The metabolism of amino acids by streptococci, by H. D. Slade. The cellular localization of injected streptococcal antigens, by W. C. Schmidt. Host factors in experimental streptococcal infections, by D. W. Watson. The streptococcidal action of the serum [illegible] from patients, by W. S. Tillett. The clinical pattern of streptococcal infection in man, by J. H. Dingle. The antibody response to streptococcal infections, by M. McCarty. Transfer of skin reactivity to streptococcal products, by H. S. Lawrence. The epidemiology of streptococcal infections, by L. W. Wannamaker. The prophylaxis of streptococcal infections, by F. W. Denny, Jr. Acute hemorrhagic glomerulonephritis, by C. H. Rammelkamp, Jr. The relation of antibody response to rheumatic fever, by C. A. Stetson, Jr.

Note: Papers on the various biochemical, immunological, and clinical aspects of streptococcal infections named in the above titles are published in this volume. Many of them deal with the results of investigations in progress or concluded not long before the time of the symposium, and correlate these results with the related results reported in literature published earlier. Several of the papers are reports of investigations carried out at the Streptococcal Disease Laboratory, Francis E. Warren Air Force Base, Wyoming, under the sponsorship of a unit of the United States Armed Forces Epidemiological Board. Extensive bibliographies are included with most of the papers.

PORTER, JOHN ROGER

Bacterial chemistry and physiology. New York. John Wiley & Sons, Inc., 1946. 1,073 p. illus. 23 cm. $13.50 3093

Contents: Some physico-chemical properties of bacteria and their environment. The growth and death of bacteria. The effects of physical agents on bacteria. The effects of chemical agents on bacteria. The chemical composition of microorganisms. Bacterial enzymes and bacterial respiration. Bacterial nutrition. Metabolism of carbon compounds by microorganisms. Metabolism of nitrogen compounds by microorganisms. Microbial fermentations. Microorganism index. Subject index.

Note: A relatively comprehensive treatment that is based partly on material used in an advanced course at the University of Iowa. Both the nature of the subject matter and the skilled handling of the material make the work valuable not only to college students but to bacteriologists, chemists, and technicians in food and other industries. Many bacteriological interrelations and research trends are discussed, such as the effect of electromagnetic waves, sound waves, and temperature on bacteria; bacterial enzymes; and the use of bacteria in the interpretation of the results of experiments in chemotherapy. The numerous references to the pertinent recent literature are a valuable aid for the research worker.

PRESCOTT, SAMUEL CATE, AND CECIL GORDON DUNN

Industrial microbiology. Second edition. New York. McGraw-Hill Book Company Inc., 1949. 923 p. illus. 23 cm. $12.00. 3094

cm (American lecture series Publication no 191 A monograph in American lectures in internal medicine Edited by Roscoe L Pullen) $4 75 3083

Contents Definition etiology history and geographic distribution f amebiasis. The natural history f amebiasis. Pathogenesis and pathology of amebiasis. Manifestations and clinical evidences of amebiasis. Diagnosis, treatment and prognosis of amebiasis. Control of amebiasis. Bibliography Author index. Subject index.

Note. A concise presentation of accumulated knowledge on amebiasis. The subject is discussed both from the clinical and from the public health points of view It is designed for rapid reading, and the chapters, which are themselves short, conclude with even shorter summaries in which the main points are restated There is 17-page bibliography and references to it are incorporated directly in the text. The book is addressed primarily to general practitioners. The uthor is Head f the Division f Tropical Medicine and Public Health of Tulane University School of Medicine.

Faust, Ernest Carroll

Animal agents and vectors of human disease 216 text figures, 9 plates, including one in color Philadelphia Lea & Febiger, 1955 660 p illus 24 cm $9 75 3084

Contents (abridged) Section 1 General information and orientation: The natural history and epidemiology of animal parasites. Etiologic classification of animal agents and vectors of disease. Pathogenesis and symptomatology of disease produced by animal agents. Diagnosis, treatment and prognosis. Control and prevention. Section 2 Protozoan agents of disease. Section 3 Roundworms (Nematodes) Section 4 Tapeworms and flukes. Section 5 Other helminths parasitizing man Thorny-headed worms (Acanthocephalans) Gordiid worms or "hair snakes. The leeches or hirudineans. Section 6, Arthropods as agents and vectors. Section 7 Other invertebrate and vertebrate agents of disease Invertebrate agents other than the protozoa, helminths and arthropods. Fishes as causative agents of human disease. Reptiles as causative agents of human disease. Certain mammals harmful to man. Section 8, Technical aids: Parasitologic diagnosis. Culture technics. Immunologic diagnostic tests. *Entomological material Intermediate and reservoir hosts*. Index of authors. Subject index.

Not A comprehensive work which covers not only parasites, but also such carriers of disease as mosquitoes and animals with poisonous bites such as certain snakes. The agents and vectors are described as to morphology lif cycles, etc. and the human diseases transmitted or caused by them are discussed as to etiology epidemiology pathogenesis, symptoms, diagnosis, and control. Related matters such as the *in vitro* cultivation of protozoan parasites are discussed. Fairly extensive bibliographies are included in the chapters. The author is Head of the Division of Parasitology of the Department of Public Medicine and Public Health of Tulane University

Frobisher, Martin, jr

Fundamentals of microbiology Fifth edition, illustrated. Philadelphia W B Saunders Company 1953 633 p. illus (part col d) 24 cm $6 00 3085

Contents (abridged) Section 1, The relationships f microorganisms to each other and to the living world Protozoa, algae and bacteria Molds and yeasts. Viruses. The rickettsiae. Pleuropneumonia-like organisms Section II, Methods and phenomena of microbiology Optical methods in microbiology Morphology and structure f bacteria. Classification f bacteria Effect f chemical and physical agents on microorganisms. Cultivation of microorganisms. Variation of microorganisms. Destruction, removal and inhibition of microorganisms. Enzymes and microbiology Metabolism f microorganisms. Section III, Immunology the body's resistance to microorganisms. Section IV The bacteria (Class Schizomycetes) Section The microbiology of special environments Microbiology of water Microbiology of the soil. Microbiology f air Microbiology f milk. Microbiology f foods. Microbiology and industry Some viral diseases. Some rickettsial diseases Some protozoal diseases. Index.

Note A standard introductory textbook the first edition f which was published in 1937 and the fourth edition in 1949 It is used in courses offered to premedical students and other college students in need of more than general knowledge of microbiology The section and chapter titles indicate the wide [illegible] might be *anticipated*, the main emphasis is on medical and [illegible] health aspects. However much material of a basic nature is included also. Rather extensive lists of references are included [in] the chapters. *In comparison to the fourth edition*, this [illegible] represents a very extensive reorganization and revision. [illegible] material has been deleted, while accounts of advances made since the *fourth edition* was written have been incorporated. [illegible] is about 300 pages shorter but it still contains a wide range of information. There are 253 figures, [illegible] new in this edition. *The sixth edition was published in* [illegible] $6.50.

Grant, Madeleine Parker

Microbiology and human progress New York Rinehart and Company, Inc., 1953 718 p illus 23 cm $7 50 3086

Contents (abridged) Part I, The biology of microorganisms [illegible] Importance of microbiology Birth and development of microbiology Cultivation of microorganisms. The necessity for [illegible]tion. The Scientist's view of life. Microorganisms and the chemistry of life. The significance of classification. [illegible] Exotic microbic forms. Growth and reduction. Heredity [illegible] characteristics of microorganisms. Nature and origin of life. Part II, Microbic friends of man. Part III, Microbic foes of man—[illegible] I, *Biological aspects f infectious diseases*: The infectious [illegible] man defends himself. Science helps man defend himself. [illegible] Important infectious diseases. Infectious diseases of [illegible] things. *Infectious diseases of* the respiratory tract. Infectious diseases of the intestinal tract. Diseases caused by organisms entering the blood stream—the nose and throat—[illegible] Beyond the microscope. Index.

Note. A well-written introductory textbook designed for use [in] undergraduate college courses offered to students who do not plan to pursue further study of biology It is "cultural" type of text. In addition to teaching the elementary facts of biology, it has also the purpose of demonstrating some of the methods of science and the importance of science in modern life It includes [illegible] those of numerous applications, as in public health, of basic biological knowledge and of microbiology in particular. [illegible] activities of the World Health Organization in [illegible] health services in various nations of the world are depicted [illegible] illustrations. Most of the topics included are discussed at [illegible] length in style that contains minimum of specialized technical terms and is easy for lay readers to comprehend.

Kelly, Florene C, and K. Eileen Hite

Microbiology Foreword by G M. Dack Second edition New York Appleton-Century-Crofts Inc., 1955 615 p. illus. 24 cm $7 50 3087

Contents (abridged) Introduction to the microscopic world [illegible] nature f microscopic plants and animals Protozoa. Algae. [illegible] Bacteria. Rickettsiae and viruses. Methods for studying microorganisms The microscope and microscopic methods. Laboratory equipment and sterilization methods. Cultivation of microorganisms. The classification of bacteria. The physiology of bacteria [illegible] metabolism. Activities of bacteria in nature and industry. [illegible] bial populations Microbial associations—synergism and antibiosis. A ntimicrobial methods Surgical and medical asepsis. Chemotherapy. Microorganisms and disease Parasitism and pathogenicity [illegible] sistance to infection—immunity Pathogenic microbiology [illegible] cocci Streptococci. Pneumococci. Gram-negative cocci [illegible] importance—the genus *Neisseria* Spore-forming bacteria—the [illegible] Mycobacteria—tuberculosis and leprosy Gram-negative [illegible] teric bacteria. Genus *Brucella*—brucellosis, undulant fever [illegible] chetes. The rickettsial diseases. Virus diseases Epidemiology and public health. Technical methods of bacteriology Appendix [illegible] *milestones in microbiology* A book and journal library [illegible]

Note An introductory textbook designed for students who have [illegible] prospective professional interest in the subject. In other words, it is for students who want thorough rather than superficial knowledge. Reasonably full discussions of basic matters and [illegible] niques are included along with condensed descriptions of [illegible] genic organisms In the descriptions of organisms, there is [illegible] information on taxonomy and morphology but the main emphasis is on relation to disease. The reference material includes chronological arrangement of developments in microbiology [illegible] formulas for stains, indicators, culture media, etc. The first edition was published in 1949 Recent information was added to number f the chapters in preparing this second edition, and newer literature has been added to the chapter bibliographies

scribed in detail. The extensive bibliographies contain about 700 references.

SALLE, A. J

Fundamental principles of bacteriology Fourth edition. New York McGraw Hill Book Company Inc., 1954 782 p. illus. 24 cm. $8.50 3099

Contents: Introduction. The microscope. Biological stains. Morphology of bacteria. Yeasts. Molds. Technique of pure cultures. Effect of environment upon bacteria. Sterilization. Disinfection and disinfectants. Nutrition of bacteria. Enzymes of bacteria. Respiration of bacteria. Hydrolysis and putrefaction of proteins. Fermentation of carbohydrates and other compounds. Differentiation and classification of bacteria. Variation of bacteria. Associations of bacteria. Bacteriology of air—the soil—water—milk and milk products—food—soil. Infection and immunity. Bacterial diseases of man. Bacterial viruses. Bacterial and viral diseases of plants. Viral diseases of man. Rickettsial diseases of man. Index.

Note. An introductory textbook designed primarily for use in college courses provided for students who plan to become professional bacteriologists or at least to pursue the subject beyond the first course. The subject is covered with unusual comprehensiveness for an introductory book. Furthermore the separate chapters include [illegible] bibliographies of not only literature in English, but also in German and French. The third edition was published in 1948. The book has been very extensively revised in both text and illustrations in this fourth edition. There are now 246 figures. The comprehensive treatment, together with such supplementary material as abundant illustrations and extensive reference lists, makes the book also useful in reference libraries.

SARLES WILLIAM BOWEN AND OTHERS

Microbiology general and applied. Second edition. By William Bowen Sarles, William Carroll Frazier Joe Bransford Wilson Stanley Glenn Knight. New York Harper & Brothers, 1956 491 p. illus. 28 cm $6.00 3100

Contents (abridged) Part I, An introduction to the microorganisms. Part II, The physiology of microorganisms. Part III, Cultivation, observation, and classification of microorganisms. Part IV Microorganisms in industry Part [illegible] Soil microbiology. Part VI Microbiology of sewage, water, and air. Part VII, Microbiology of foods. Part VIII, Infectious diseases of animals and plants. Part IX, An outline of the history of microbiology. Appendixes. Index.

Note. An introductory textbook for use in college courses. The part on infectious diseases of animals and plants [illegible] less than 80 pages long, and the rest of the book is devoted to aspects of microbiology which are not related to disease. Applications to agriculture, industry and the home are given considerable emphasis. The first edition was published in 1951. About half of the chapters in this second edition have been revised to some extent, and several of them have been very extensively revised. The authors are faculty members of the Department of Bacteriology of the University of Wisconsin.

SKINNER, CHARLES EDWARD AND OTHERS

Henrici's Molds, yeasts and actinomycetes a handbook for students of bacteriology Second edition, by Charles E. Skinner Chester W Emmons, and Henry M Tsuchiya. New York John Wiley & Sons Inc., 1947 409 p. illus. 24 cm. $7.50. 3101

Contents: The structure and classification of the fungi. Yeastforms in the lower fungi. Methods for studying molds, yeasts, and actinomycetes. Molds belonging to the phycomycetes. Molds belonging to the fungi imperfecti and the ascomycetes. Fungous diseases of man and animals—general considerations. Infections caused by molds. Biological activities of molds. Morphology and classification of the yeasts and yeast-like fungi. Pathogenic yeast-like fungi. Biological activities of yeasts. Classification, morphology and biological activities of the actinomycetes. Actinomycoses. Antibiotic substances. Index.

Note. The late Arthur T. Henrici wrote Molds, yeasts, and actinomycetes, published in 1 [illegible], which before his death he started to revise. Three [illegible] his associates brought the revision to completion, involving [illegible] complete rewriting and [illegible] considerable change in the arrangement of topics. The book is [illegible] discussion of molds, yeasts, and actinomycetes for students of bacteriology including in the term students many individuals who have completed their formal education. It contains bibliographies at the ends [illegible] the chapters and 134 illustrations. The emphasis in the book is upon the forms of fungi of particular interest to the bacteriologist rather than to the botanist or phytopathologist. The stress on medical and industrial applications of mycology has been retained and intensified in the new edition.

SMITH DAVID T, AND OTHERS

Zinsser's textbook of bacteriology By David T Smith Norman F Conant, Joseph W Beard Hilda Pope D Gordon Sharp and Mary A. Poston Tenth edition New York Appleton-Century-Crofts Inc., 1952 1,012 p illus 25 cm. 3102

Contents (abridged) The general biology of bacteria and the general methods of bacteriology. Outline of the history and scope of bacteriology. Classification of bacteria. General morphology and reproduction of bacteria. Variability of bacteria. Growth of bacteria. Metabolism of bacteria. Effects of sulfonamides, antibiotics and chemical agents. Bacterial ecology and flora of the normal body. Infection and immunity. Pathogenic microorganisms. The spirochetes. The pleuropneumonia group of organisms. Rickettsia and the rickettsiae. Diseases caused by the filtrable viruses. Medical mycology. Technical methods. Bacteriology immunology and serology. Appendix. Antigenic structure of the Salmonella. Index.

Note. The first edition of this work appeared in 1910 and it has been extensively used as [illegible] text in schools of medicine and public health ever since that year. The subject is covered from the standpoint of the biology of the microorganisms and the host; nevertheless most of the space is given to specific information on diseases, disease control, and other topics of interest in medicine and public health. In preparing this edition the information on diseases caused by viruses has been much expanded, and information has been added on the effects of ACTH, cortisone, and the recently developed antibiotics on specific microorganisms. The 11th edition was published in 1957 [illegible] p. $12.00.

SMITH LOUIS DS

Introduction to the pathogenic anaerobes. Chicago University of Chicago Press 1955 253 p illus. 24 cm. (The University of Chicago Committee on Publications in Biology and Medicine Emmet B Bay and others) $7 50 3103

Contents: Anaerobic methods and media. Identification of the pathogenic anaerobic bacteria. *Clostridium novyi. Clostridium perfringens. Clostridium tetani. Clostridium botulinum. Clostridium septicum. Clostridium feseri. Clostridium bifermentans.* The proteolytic clostridia—*C. histolyticum, C. sporogenes, C. bifermentans.* Other pathogenic clostridia—*C.* [illegible], *C. difficile C.* [illegible] *C.* [illegible]. Actinomyces. Bacteroides—*B.* [illegible], *B.* [illegible], *B.* [illegible], *B.* [illegible], *B.* [illegible], *B.* [illegible]. *Dialister pneumosintes.* The anaerobic streptococci—*Streptococcus anaerobius, Strep. evolutus, Strep. foetidus, Strep. putridus, Diplococcus* [illegible]. Fusospirochetal infections. Anaerobic wound infections in man. Index.

Note. A concise and useful handbook in which the pathogenic anaerobic microorganisms, their toxins, and the diseases they cause in man and other animals are described. The first two chapters describe techniques of laboratory culture, culture media, and identification. The chapters that follow except for the terminal chapter are devoted to the individual species of anaerobic bacteria. In most of these chapters the data and discussion are arranged under the following subheadings: occurrence morphology cultural characteristics, toxins, isolation, serological aspects, infections in man, and diseases of animals. Toxins are discussed more fully than other aspects. In addition, each of these chapters begins with an outline of the history of the identification of the species under discussion and concludes with selected references to the literature. The terminal chapter is [illegible] compact summary of the accumulated knowledge of infections of wounds in man by anaerobes. The entire book is concisely written and is intended primarily for supplementary reading by advanced students of bacteriology and reference use by workers in biological and clinical laboratories.

Content (abridged) Saccharifying agents—methods of production d uses. The production of industrial alcohol by fermentation. Facts and theories concerning the mechanism of the ethyl alcohol fermentation. Brewing. Wine. The distilling industries. Production f yeast and yeast products. The glycerol fermentation. The acetone-butanol fermentation. Th acetone-ethanol fermentation *The butyl alcohol-isopropyl alcohol fermentation*. The acetic acid bacteria and some f their biochemical activities. The production f lactic acid by fermentation. Sauerkraut. Pickles. Some fermented milk products. Cheese The propionic acid fermentation The production and properties of *2,3-butanediol* Some minor bacterial activities with industrial implications. The molds. The citric acid fermentation. The gluconic acid fermentation. The fumaric acid fermentation. The gallic acid fermentation The itaconic and itatartaric acid fermentations. The kojic acid fermentation. The production f lactic acid by molds. Mannitol production by molds. Mold enzyme preparations—uses and products. The production of fat by molds. Some minor chemical activities f the lower fungi. A tibiotics. Textile microbiology The microbiology of wood. Appendixes Detergency disinfection and sterilization The treatment and disposal f industrial microbiological wastes. Index.

Note This work is both text for college students who have completed introductory courses in such fields as bacteriology and organic chemistry and reference guide for industrial chemists and other technical personnel in industries making use of fermentation. It covers comprehensively as of about 1948 both the theory and practice with emphasis on the latter of fermentations and related microbiological processes of industrial importance.

RAHN, OTTO

Microbes of merit New York The Ronald Press Company, 1945 277 p illus 24 cm $4 50 3095

Content (abridged) The discovery of bacteria. The relatives of bacteria. Bacteria divide when they multiply Contamination. Bacteria help the city people. Bacteria help the farmer The 1941 census of bacteria. Domesticated yeasts. When bacteria blunder Compromise between man and microbe. Microbes, the food f the future, Man parasite f bacteria. Inheritance among the meekest. The world without microbes. Index.

Note This easy-to-read volume is concerned chiefly with th so-called beneficial bacteria, molds, and yeasts, which are essential to the existence of life. The author *Professor of Bacteriology* t Idaho State College describes in nontechnical language how bacteria form an indispensabe link in the lif cycle and how they maintain the fertility f the soil bring about decomposition f organic matter purify contaminated water etc. Particular attention is given to the rol of bacteria in human utrition and in the formation of such common foods as bread, cheese, inegar and alcohol. The development of our knowledge of bacteria and some of the interesting techniques for studying them are also described.

REDDISH, GEORGE F , editor

Antiseptics, disinfectants fungicides and chemical and physical sterilization Philadelphia Lea & Febiger 1954 841 p illus 24 cm 3096

Contents Part Introduction Historical review by G F Reddish. Definition f terms, by G F Reddish Part II, Methods of testing: Methods f testing—General review by G F Reddish —Antiseptics, by G F Reddish—Disinfectants, by L. S. Stuart. Fungistatic and fungicidal test methods, by K. A. Oster and M J Golden Methods of testing chemical sterilizers and tests for *sterility by G F Reddish* Bacterial resistance and dynamics f antibacterial activity by O Wyss. Part III, Antiseptics Iodine, by L. Gershenfeld. Mercurials—inorganic and organic, by J H. Brewer *Heavy* metals other than mercury and silver by A. J Salle. The bis-phenols, by A. R. Cade and W S. Gump Essential oils, by A. R. Cade. Alcohols, by H. E. Morton. Surgical antiseptics, by P B Price. Antiseptic ointments, by W J Huss Antiseptic powders, by W O Fredell, Virucidal agents, by W B. Dunham. Silver compounds, by L. B. Romans. Oligodynamic metals, by I B Romans. Part IV Disinfectants Phenolic compounds, by E. G Klarmann and E. S. Wright. Chlorin and chlorine compounds, by W A. Hadfield. Quaternary ammonium compounds, by C A. Lawrence. Pla ed disinfectants, by B G. Philbrick. Oxidizing compounds, by A. G Bowers. Chemical disinfection of surgical instruments, by E. H Spaulding. Part Fungistats and fungicides Fungistatic and fungicidal compounds, by K. A. Oster and M. J Golden. Part VI, Preservatives. Food preservatives, by C. G Dunn. Industrial preservatives, by S S. Block. Part VII, Chemical and physical sterilization *Gaseous sterilization* by C. R Phillips. Bacteriological and surgical sterilization by heat, by J J Perkins. Thermal resistance of microorganisms by C. F Schmidt. Commercial processing of canned foods, by C. F Schmidt. Sterilizing by ionizing radiations, by R. E. Proctor and S. A. Goldblith. Part VIII, Pasteurization Pasteurization, by J J Perkins. Bibliographic index. Subject index

Note A professional grade reference book. The authors of the chapters are recognized specialists who are associated with schools, hospitals, pharmaceutical manufacturing firms, and public health agencies in the United States of America. Some [illegible] given to methods of testing and in the chapters on the [illegible] techniques are described in sufficient detail to enable [illegible] nicians to follow them in the laboratory without reference to the source literature. However references to sources are given not only in this section of the book, but in all others. The chapters on antiseptics, disinfectants, etc., are essentially literature reviews in which the high points of the abstracted articles are described concisely The "Bibliographic index" is an index to the names of uthors mentioned in the text or whose works are listed in the bibliographies. A second edition was published in 1957 [illegible] $15.00.

REES, CHARLES WILLIAM

Problems in amoebiasis. Springfield, Ill. Charles C Thomas, 1955 119 p. illus 23 cm $4 75 3097

Contents Introduction. Diagnosis of infection with *Entamoeba histolytica*. The usefulness of crude cultures of *Entamoeba histolytica*. The problem of eliminating complications [illegible] growth of species of bacteria in cultures of *Entamoeba histolytica*. The usefulness f monoxenic cultures of *Entamoeba histolytica* problems on growth requirements. Experimental chemotherapy of amoebiasis. Clinical notes—On the etiology pathology [illegible] management and therapy f amoebiasis, by C. A. [illegible] Author index. Subject index.

Note Written by the head of the Section on [illegible] of the National Institute of Health's Laboratory of Tropical Diseases, this book is addressed to other investigators of [illegible] begins with a brief critical survey of the various [illegible] points now current pertaining to pathogenicity of *E histolytica* and discussion f problems still awaiting solution. The [illegible] of the book, except for the terminal chapter, is devoted to [illegible] tions and critical discussions of techniques useful in the study of [illegible] amoebiasis. Although all of the chapters are clearly written [illegible] brief the author has included summary at the end of each. The last chapter written by physician who is a specialist in public health, is very condensed description of clinical aspects of amoebiasis. Each of the chapters, except the last one, includes an extensive list of literature references, and the names of the authors of this cited literature have been assembled in the [illegible] author index

RILEY, WILLIAM ALBERT, AND OSKAR A. JOHANNSEN

Medical entomology, a survey of insects and allied forms which affect the health of man and animals Second edition. New York McGraw Hill Book Company, Inc., 1938 4[illegible] p illus 23 cm (McGraw Hill publications in the zoological sciences A F Shull, consulting editor) $9 00 3098

Contents Early suggestions regarding the transmission of disease by insects. Ways in which arthropods may affect the health of man and animals. Classes of phylum Arthropoda. Class Arachnida Ixodoidea, or ticks. Myriapoda, or centipedes and millipedes [illegible] ture and development of insects. Hexapoda, or true insects [illegible] or lice. Hemiptera. Coleoptera. Lepidoptera. Diptera. Culicidae mosquitoes. Mosquitoes and disease. Measures for [illegible] extermination of mosquitoes. Other blood-sucking Diptera [illegible] House flies and their allies. Glossina, or tsetse flies. Myiasis, infestation of man and animals by Diptera. Siphonaptera, or fleas. Hymenoptera. Appendix. Bibliography Index.

Note This text is revision of the authors *Handbook of medical entomology*, Ithaca, N Y 1915 presenting the various [illegible] forms in their systematic order rather than in disease groups as in the former volume. The present work, intended for students and research workers, offers detailed study of insects and allied forms which affect the health of man and animals. The results obtained by earlier researchers in the field are constantly referred to, summarized and evaluated. Methods of transmission of disease, together [illegible] instructions for the control and destruction of the agents, are [illegible]

[illegible] primarily for use in advanced undergraduate and first-year graduate courses in bacteriology, also its viewpoint and scope make it of interest to such scientists as graduate biologists who find themselves in need of an authoritative introduction to bacteriology. Long lists of references in which review papers and papers with extensive bibliographies are especially marked are a useful feature.

WAKSMAN SELMAN A., editor

Perspective and horizons in microbiology A symposium edited by Selman A Waksman. New Brunswick Rutgers University Press, 1955 220 p. illus. 22 cm. $3 50 3109

Contents: Part I, The microbe as a living system: The microbe as a whole, by C. B. Van Niel. Some aspects of metabolic [illegible], by A. Lwoff. Genetics and microbiology, by J. Lederberg. Nutritional and enzymatic studies on microbial mutants, by B. D. Davis. Part II, Metabolism of microorganisms: Progress and problems in bacterial metabolism, by H. A. Barker. Molds as metabolic models, by J. W. Foster. Metabolic pathways, by W. W. Umbreit. Pathways in biological nitrogen fixation, by P. W. Wilson. Microorganisms and steroid transformation, by D. H. Peterson. Part III, Microorganisms and higher forms of life: Some unsolved problems in immunology, by M. Heidelberger. The inhibition of virus reproduction by chemical substances, by F. L. Horsfall, Jr. Challenging problems in antibiotic research, by H. Eagle. Microorganisms and plant life, by R. L. Starkey. Appendix: Addresses delivered at the dedication of the Institute of Microbiology: Dedication of the Institute of Microbiology, by L. W. Jones. Microbiology takes the stage, by S. A. Waksman. From Dutch settlements to the Rutgers Institute of Microbiology, by A. J. Kluyver.

Note: The occasion for this volume was the dedication of the Institute of Microbiology at Rutgers University, June 7 1954. It contains both the papers read at the symposium and the addresses delivered at the dedication ceremonies. Biological, and particularly physiological, aspects of microorganisms are emphasized in the papers. Although there are implications for medicine and agriculture, they are not stressed. Most of the papers are short and describe the results of recent research, usually correlating them with work that has gone before. Literature references are included in the papers, but not, of course, in the addresses.

WEDBERG STANLEY E.

Microbes and you. New York The Macmillan Company 1954 439 p. illus. (part col'd) 22 cm. $4 95 3110

Contents: Introduction. Highlights in the history of microbiology. Bacteria are classified as plants. Microbes great and small. Microbial structures and staining reactions. Cultivation and identification of bacteria. Bacterial multiplication. Effects of physical factors on bacteria. Effects of bacterial growth on the environment. The effect of chemicals on microorganisms. Polluted water can kill you. Biological sewage disposal. The air we breathe. The soil and they that dwell therein. Food poisoning and food infection. Disease transmission and host resistance. Pathogenic bacteria. Arthropods and disease transmission. The fungi—molds—yeasts. The rickettsiae. Viruses. Blood grouping. References. Index.

Note: An elementary survey of microbiology intended primarily for use in college courses offered to students who are not preparing for further study in biology. The elementary basic facts of the field are described, but the treatment goes somewhat further. For example, the techniques of standard tests used in the bacteriological testing of water, the evaluation of disinfectants, etc., are described. Many applications of microbiological knowledge are mentioned, and some are discussed at length. In addition to its use as a textbook, the book is suitable for lay readers who feel the need for knowledge of the elements of microbiology. The author is a member of the faculty of the University of Connecticut.

WEIL ALFRED J., AND IVAN SAPHRA

Salmonellae and shigellae laboratory diagnosis correlated with clinical manifestations and epidemiology Springfield, Ill. Charles C Thomas, 1953 247 p. illus. 24 cm. $7 75 3111

Contents: Introduction. The biological and immunological properties of salmonella and shigella. The shigellae—the taxonomy of the genus Shigella. The Salmonellae. Methods of isolation. Cultural methods for the identification of shigellae and salmonellae. The serological differentiation of shigellae. The serological differentiation of salmonellae. The widal test. Borderline organisms and the question of the pathogenicity of other enterobacteriaceae. Clinical features and epidemiology of salmonelloses and shigelloses. Natural and immune resistance; vaccination; the skin test—serotherapy—animal experimentation. Bacteriophages for diagnosis and therapy of salmonelloses and shigelloses. Sulfonamides and antibiotics. Notes on cultural methods. References. Index.

Note. Laboratory diagnosis is the principal subject of this manual. However, the descriptions of techniques are supplemented by descriptions of the clinical manifestations, epidemiology and therapy of salmonellae and shigellae infections. Basic information on the historical development of the knowledge of salmonellae and shigellae, on their biological properties, their taxonomy, etc., is presented in the early chapters. The book is directed primarily to graduate bacteriologists and medical clinicians. It contains also much information of value to experienced laboratory technicians. Public health officials find it useful, [illegible] dealing with outbreaks of salmonellosis and shigellosis. A fairly extensive bibliography is included.

WENRICH D H., editor

Sex in microorganisms A symposium presented on December 30 1951 at the Philadelphia meeting of the American Association for the Advancement of Science. Editorial Committee D H. Wenrich, chairman and editor Ivey F Lewis John R. Raper Washington, D C. American Association for the Advancement of Science 1954 362 p. illus. 24 cm. $5 75 3112

Contents: Genetic recombination in bacterial viruses, by M. Delbrück. Sex in bacteria—genetic studies, 1945-1952, by J. Lederberg and E. L. Tatum. Sex in bacteria—evidence from morphology, by W. G. Hutchinson and H. Stempen. Life cycles, sexuality and sexual mechanisms in the fungi, by J. R. Raper. Sexual reproduction in diatoms, by R. Patrick. Sex in unicellular algae, by R. A. Lewin. Sex in protozoa—a comparative review, by D. H. Wenrich. Mating type determination in *Paramecium aurelia*—a study in cellular heredity, by D. L. Nanney. Mating substances and the physiology of fertilization in ciliates, by C. B. Metz. Comments on the origin and evolution of "sex," by D. H. Wenrich. Author index. Subject index.

Note: The development and function of sex in the principal lower forms of life "from the viruses through bacteria, fungi, and unicellular algae to the protozoa," are described in this book for advanced students of biology. In the volume, the ground covered at the symposium is somewhat expanded. The longest of the chapters, that entitled "Sex in protozoa: a comparative review" (pages 134-265) presents, order by order, an illustrated review of sexual phenomena in the Mastigophora, the Sarcodina, the Sporozoa, and the Ciliophora. The final chapter includes a discussion of some problems in connection with sexuality in the microscopic organisms which are yet unsolved. Each of the chapters is accompanied by bibliographical references.

WERKMAN CHESTER HAMLIN AND P W WILSON editors

Bacterial physiology New York Academic Press, Inc., 1951 707 p illus. 24 cm. $9.80. 3113

Contents: Chemistry of the bacterial cell, by D. Knaysi. The structure of the bacterial cell, by G. Knaysi. Inheritance, variation, and adaptation, by J. Lederberg. Growth of bacteria, by I. C. Gunsalus. Physical factors affecting growth and death, by F. Mitchell. Chemical factors affecting growth and death, by O. Wyss. Bacterial nutrition—chemical factors, by E. E. Snell. Bacterial enzymes and the theory of action, by F. Schlenk. Anaerobic dissimilation of carbohydrates, by C. H. Werkman and F. Schlenk. Bacterial oxidations, by R. H. G. Burris. Autotrophic assimilation of carbon dioxide, by J. W. Foster. Assimilation of carbon dioxide by heterotrophic bacteria, by C. H. Werkman. Organic nitrogen, by E. F. Gale. Biological nitrogen fixation, by P. W. Wilson. Mineral metabolism, by B. G. Knight. The comparative biochemistry of molecular hydrogen, by H. Koffler and P. W. Wilson. Antibiotics by bacteria, by C. E. Clifton. Degradation and synthesis of complex carbohydrates, by H. A. Barker and W. Z. Hassid. Significance of autotrophy for comparative physiology, by W. W. Umbreit. Luminous bacteria, by F. H. Johnson. Bibliography. Subject index. Microorganism index.

SPOEHR, HERMAN AUGUSTUS, AND OTHERS

Fatty acid antibacterials from plants By H A Spoehr, J H C Smith, H H Strain, H W Milner, and G J Hardin Carnegie Institution of Washington, Division of Plant Biology, Stanford California Washington, D C Carnegie Institution of Washington, 1949 67 p illus 25 cm (Carnegie Institution of Washington Publication 586) $0 75 3104

Contents Introduction. The large-scale culture of *Chlorella pyrenoidosa*. The extraction of antibacterial material from culture solutions. *Chlorella* cells as a source of antibacterial material N ture of the fatty acids extracted from *Chlorella* cells. Antibacterial material from other plant sources. Antibacterial activity f fatty acids. Antibacterial activity of the fatty acids obtained from the fruits of the California laurel

Not The results of a research project which had as its primary objective the isolation of antibacterial substances from autotrophic organisms are reported in this pamphlet Culture methods and the techniques of separating the active material from the plants are f lly described. An unexpected discovery was that freshly prepared plant extracts showed little or no antibacterial activity but antibacterial properties were developed when the extracts were exposed to light and air It was found that this effect was due to the photo-oxidation of certain fatty acids in the extracts and the project was then diverted to an investigation of the antibacterial activity of certain fatty acids of medium chain length.

STEINHAUS, EDWARD ARTHUR

Insect microbiology an account of the microbes associated with insects and ticks, with special reference to the biologic relationships involved Ithaca Comstock Publishing Company, Inc., 1946 763 p illus 24 cm $7 75 3105

Contents Introduction Extracellular bacteria and insects. Specific bacteria associated with insects. Intracellular bacteriumlike and rickettsialik symbiotes. Rickettsiae. Yeasts and insects. Fungi and insects. Viruses and insects. Spirochetes associated with insects and ticks. Protozoa and insects (except termites) Protozoa in termites. Immunity in insects. Methods and procedures. References. Author index. Subject index.

Not In effect, this book is comprehensive survey and digest of all the data that has been published on its subject. The word 'microbe is taken in its broad sense thus bacteria, rickettsia, yeasts, fungi, spirochetes, protozoa and viruses are included. The word "associated" is likewise interpreted broadly to include relationships ranging from true symbiosis to those in which the insect or tick appears t act merely as mechanical carrier of the microorganism. Some idea f the comprehensiveness of the work is indicated by the fact that the bibliography which includes only references cited in the text contains approximately 1 700 references. The book is useful to any scientist interested in the subject, from student to specialist.

STITT, EDWARD RHODES, AND OTHERS

Practical bacteriology, hematology and parasitology By E R. Stitt, Paul W Clough Sara E Branham and contributors Revised tenth edition New York The Blakiston Division McGraw Hill Book Company Inc., 1951 991 p illus (part col d) 24 cm $10 00 3106

Content (abridged) Part Bacteriology Study and identification of bacteria. Spirochetes. Rickettsia and Bartonella. Filtrable viruses. Medical mycology Immunity and hypersensitiveness. Staining methods and special procedures. Part II Hematology· Technic of clinical blood examinations. Normal and pathologic blood cells. Diseases of the blood. Part III Parasitology The blood Protozoa. The intestinal Protozoa. Medical helminthology Keys to the helminths and laboratory technics. Medical entomology Scorpions, spiders, ticks, mites—class Arachnida. The insects. Poisonous snakes and lizards. Poisonous fish and coelenterates. Part IV Chemical and pathologic examinations of the various body fluids and [illegible] appendices Apparatus. Preparation of tissues for [illegible] microscopic sections. Equivalent-normal solutions. Colorimetric determinations. Anatomic and physiologic normals. Important [illegible] and injuries due to toxic plants. Laboratory procedures [illegible] diagnosis, indexed by diseases. Index.

Note. For many years, this [illegible] standard practical [illegible] for students and laboratory technicians in diagnostic laboratories. It is concerned with methods and laboratory procedures pertaining to the study and identification of parasites, bacteria, [illegible] the diagnosis of diseases with which these organisms are associated and the interpretation of laboratory data in clinical diagnosis. The tenth edition was published in 1948. This "revised tenth edition" contains small revisions made without change in the [illegible] of the volume.

TANNER, FRED WILBUR, AND FRED WILBUR TANNER, JR.

Bacteriology a textbook of microorganisms Fourth edition. New York John Wiley & Sons, Inc., 1948 625 p illus 22 cm $6.00 3107

Contents History and development of early theories [illegible] relationships of plant and animal groups. Living matter and the cell. Ultramicroscopic forms of life. Morphology of bacteria. Variability of microorganisms. Nomenclature and classification of bacteria. Molds. The yeasts and related organisms. The Protozoa. Action of physical agents on bacteria. Relation of chemical agents to bacteria. Mutual relationship—microbial association. [illegible] and metabolism of bacteria. Growth of bacteria. Bacterial enzymes. Nitrogen metabolism (cycle) sulfur metabolism (cycle) [illegible] metabolism. Microorganisms in air Water bacteriology. Sewage treatment and bacteriology Bacteriology of milk and milk products. Industrial fermentations. Food preservation. Food infection and food poisoning. Relation of bacteria to disease. Transmission of infecting agents. Factors influencing infection. Modes of bacterial action. Protective substances—immune bodies, antibodies. Variations of [illegible] munity Bacteria in plant diseases. Appendix Bacteriology [illegible] ture. Glossary Index.

Note. The new edition of this standard undergraduate textbook is the first to bear the name of junior author. It is [illegible] edition in the following respects. general review and minor changes to bring the 1937 (third) edition up to date new chapters on ultramicroscopic forms of life and variability of microorganisms added material on metabolism in the chapter on [illegible] of bacteria.

THIMANN, KENNETH V

The life of bacteria their growth, metabolism and relationships New York The Macmillan Company, 1955 775 p. illus. 24 cm $13 50 3108

Contents Part I, The morphology and general physiology of bacteria: How microorganisms have been cultivated and studied. The bacterial cell and its relationship to other organisms. The internal structure of bacteria. Conditions of culture—media, [illegible] and temperature—oxygen and oxidation. Bacteria and the [illegible] Part II, The role f microorganisms in the nitrogen cycle: Proteolysis. The breakdown of amino acids. The fixation of nitrogen. Part III, The Nitrification, denitrification, and the nitrogen cycle. Part [illegible] metabolism of carbohydrates: The alcoholic fermentation. The lactic [illegible] tic fermentation. The propionic fermentation. The "[illegible]" fermentation. Fermentations of the butyric type. The [illegible] fermentations. The breakdown of disaccharides and polysaccharides. Part [illegible] Fermentations making use of inorganic hydrogen acceptors. [illegible] Growth and synthesis Growth and protoplasm formation. [illegible] tion. The autotrophic mode f life. Bacterial photosynthesis [illegible] inhibition of growth—general—antibiotics. The evolution of bacteria. Author index. Index of organisms. Subject index.

Note. An outstanding textbook in which bacteriology is presented as branch of biology without bias toward any of its applications, as in medicine. The space is divided among the four parts of the book as follows: Part 253 pages Part II, 113 pages; Part III, 173 pages Part IV 166 pages. The level of treatment [illegible] that the reader will be familiar with the terminology and basic knowledge f organic chemistry Chemical reactions [illegible] sections of the book including the first one, and much of the discussion is in terms of hydrogen-ion concentration, chemical equilibria, and balanced chemical reactions. Many applications of bacteriology are mentioned, as in the chapters on [illegible] but the book is by no means descriptive text. It is [illegible]

[illegible] of action of antibiotics in rickettsial and virus diseases, by T. E. Woodward and R. T. Parker.

Note: Papers and discussions presented at a symposium in October 1953, at the Henry Ford Hospital in Detroit, Michigan, are published in this volume. The symposium was planned as an opportunity for scientists and physicians engaged in research on the virus and rickettsial infections to exchange ideas and to report on the results of recent research and clinical experience. The papers are supplemented by literature references. There is no volume index either to authors cited or to subjects.

Kidd, John G., editor
The pathogenesis and pathology of viral diseases. Symposium held at the New York Academy of Medicine December 14 and 15 1948. New York Columbia University Press 1950. 235 p. illus. 24 cm. (New York Academy of Medicine Section on Microbiology Symposium no. 3) $5.00. 3120

Contents: Introduction, by J. G. Kidd. The spread of viruses [illegible] to susceptible hosts, by R. E. Shope. The culture and [illegible] of viruses in chick embryo cells, by C. J. [illegible]. The relationships of viruses and cells, with particular reference to the [illegible] phenomenon, by G. Dalldorf. The [illegible] of viruses by [illegible], by T. F. Anderson. The electron microscopic study of virus growth, by R. W. G. Wyckoff. Pathology and pathogenesis of the cutaneous lesions of variola, vaccinia, herpes simplex, herpes zoster, and varicella, by T. F. M. Scott and others. Pathogenesis of the [illegible] (Infectious [illegible]) of mice, by F. Fenner. Cardiac lesions produced by viruses, by J. M. Pearce. Pathology of yellow fever, by J. E. Ash. Reactions of the cells of the respiratory tract to viral infection, by T. P. Magill. Proliferative lesions caused by viruses and virus-like agents, by J. G. Kidd. The pathology of [illegible] virus infections—a discussion, by R. D. Lillie. The pathology of some viral encephalitides, by A. Wolf. The nature and pathogenesis of neuronal changes in poliomyelitis, by H. A. Howe.

Note: The papers included in this volume deal both with the accumulated knowledge on viruses and the results of recent research. To cite examples, Pearce's paper "Cardiac lesions produced by viruses," is primarily a report of original experimentation, while Dalldorf's paper "The relationships of viruses and cells," is [illegible] survey of published literature, including the author's own previously published papers. Literature references are included in all of the papers. Illustrations are numerous and include many reproductions of microphotographs. Wyckoff's paper "Electron microscopic study of virus growth," includes a series of remarkable electron micrographs.

Luria, S. E.
General virology New York John Wiley & Sons, Inc., 1953 427 p. illus 24 cm. $9.00 3121

Contents: Introduction—the science of virology. Detection and identification of viruses. Titration of viruses. Size and morphology of virus particles. Purification and chemical composition of virus material. Biological properties of viruses. Environmental effects on virus particles. Virus-host interaction—The bacteriophage-bacterium system. The interaction of plant viruses with their host plants. The interaction of animal viruses with their hosts—Tissue cultures—[illegible] inclusions. Growth of viruses in the chick embryo. [illegible] phenomena and virus growth—Summary on virus reproduction. Interference phenomena in virus infection. Variation in viruses—host variation and susceptibility to viruses. Viruses and tumors. Origin and nature of viruses. Appendix—The Rickettsiae. Bibliography. Author index. Index.

Note: In this book virology [illegible] treated as [illegible] biological science rather than as [illegible] cause of disease. The viewpoint is [illegible] novel one, but [illegible] has the advantage of co-ordinating the wide range of material on viruses and of offering an approach to the subject that is of greater interest to the general biologist than the pathological or clinical. In the first three chapters, basic [illegible] are discussed, such as the range of [illegible] of viruses, [illegible], structure and [illegible] of viruses. The [illegible] chapters that constitute the main body of the book are devoted to properties of viruses outside the host, host-virus systems, variation, ecology and transmission of viruses under natural conditions. The book was developed in courses given by the author at the University of Indiana and the University of Illinois, and [illegible] designed for use as a textbook in courses of level in advanced undergraduate and graduate students of biology.

The scope and viewpoint render it useful also to graduate biologists in need of a [illegible] survey of the knowledge on viruses and of laboratory techniques useful in their study. The bibliography contains more than 700 literature citations.

Miner, Roy Waldo editor
Virus and rickettsial classification and nomenclature Conference chairman MacFarlane Burnet. Consulting editor Hilary Koprowski. New York Published by the Academy 1953 381–622 p illus. 22 cm. (New York Academy of Sciences Annals Vol. 56 art 3) $4.00 3122

Contents: Virus classification and nomenclature, by M. Burnet. Concepts of classification and nomenclature in higher organisms and microorganisms, by E. Mayr. Viruses that reproduce in plants and insects, by L. M. Black. Problems of viral nomenclature and classification, by F. O. Holmes. The naming of viruses in relation to nomenclature, by J. Johnson. The [illegible] approach to study of selected groups of viruses, by C. H. Andrewes. Advantages of the Linnean binomial system for plant viruses, by F. [illegible]. Possibilities of generic classification in rickettsiae and viruses, by C. W. Rake. Criteria for [illegible] classification of bacterial viruses, by M. H. Adams. Discussion of the problem of imperfectly known viruses, by A. A. [illegible]. Virus and rickettsial classification and nomenclature by H. R. Cox. Classification of rickettsiae pathogenic to vertebrates, by J. D. W. A. Coles. Nomenclature of the rickettsiaceae pathogenic to vertebrates, by C. B. Philip. On the nomenclature and classification of insect viruses by G. H. Bergold. Taxonomy of insect viruses, by E. A. Steinhaus. Criticism of binomial nomenclature as applied to plant viruses, by F. C. Bawden. Psittacosis group by K. F. Meyer. The lymphogranuloma—psittacosis group, by C. W. Rake. The nomenclature and classification of the pox group of viruses, by G. J. Buddingh. Influenza virus group, by M. Burnet. Possible classification of the arthropod-borne encephalitis viruses, by W. M. Hammon. On the nomenclature and classification of arthropod-borne encephalitides, by P. Lépine. Relationships between arthropod borne viruses based on antigenic analysis, growth requirements, and selective biochemical inactivation, by A. B. Sabin. The Coxsackie virus group, by G. Dalldorf. The Coxsackie group of viruses, by J. L. Melnick. Classification and nomenclature of the poliomyelitis group of viruses by A. J. Rhodes. Discussion of classification and nomenclature of the poliomyelitis virus group, by H. Koprowski. Viruses of the [illegible] group, by J. Warren. The viral and rickettsial [illegible], by J. E. Smadel. [illegible] type cell inclusions, by R. H. McKinney. General discussion of virus nomenclature, by M. Burnet.

Note: Papers originally presented at a conference held by the Section of Biology of the New York Academy of Sciences in January 1952, have been made available in this publication. The authors and titles of the papers are given above. The terminal paper [illegible] direct summary of the contents, together with recommendations for further study and action. Literature references are included in some of the papers.

Moulton Forest Ray, editor
Rickettsial diseases of man. A symposium on the rickettsial diseases of man organized by the Section on Medical Sciences of the A.A.A.S. and presented at the Boston meeting on December 26–28 1946. Organized by Malcolm H. Soule, secretary of the Section on the Medical Sciences Washington, D. C. American Association for the Advancement of Science 1948 247 p illus. 26 cm. $6.25 3123

Contents: Epidemic typhus in the Mediterranean area during World War II, by [illegible]. Louse-borne typhus fever in the European theater of operations, U. S. Army 1945, by J. E. Gordon. Epidemic typhus fever in Japan and Korea, by A. B. Sabin, Jr. Scrub typhus (tsutsugamushi disease) in the U. S. Army during World War II, by K. F. Maxcy. Outbreaks of Q fever during World War II, by J. H. Dingle. Biology of the rickettsiae by D. Greiff. The classification of rickettsiae and rickettsial diseases, by H. Pinkerton. Laboratory procedures for the isolation and identification of the pathogenic rickettsiae by H. Pinkerton. Vectors of rickettsial

Note A book composed of original papers which are monographic in nature and heavily documented. However a comprehensive survey of the pertinent literature has not been attempted. Thirteen of the 20 papers deal with various aspects of the biochemistry of bacteria and, of course, some of the results reported are applicable to the biochemistry of higher organisms. The short paper by Umbreit is potentially of interest to most persons concerned with biological research. The book is designed mainly for graduate students majoring in bacteriology and biochemistry

VIRUSES

ADVANCES IN VIRUS RESEARCH Volume I Edited by Kenneth M Smith and Max A. Lauffer New York Academic Press, Inc. 1953 362 p illus 23 cm $8 00 3114

Contents The properties of bacteriophages, by H. T Epstein Interactions between viruses and virus strains by C. W Bennett. Transmission of plant viruses by cicadellids. Insect viruses, by G H. Bergold. Multiplication of influenza virus in the entodermal cells of the allantois of the chick embryo. Poliomyelitis by J L. Melnick. Purification and properties of animal viruses, by D G. Sharp Virus nucleic acids, by R. Markham. Author index. Subject index.

—— Volume II New York Academic Press Inc. 1954 313 p illus 23 cm. $7 00 3115

Contents Inheritance of resistance to viral diseases in plants, by F O Holmes. Inhibitors in plant viruses, by F C. Bawden. Incomplete forms of influenza virus, by P von Magnus. Characteristics of viral development in isolated tissues, by W W Ackermann and T Francis, jr The action of ionizing radiation on viruses, by E. Pollard. The chemical constitution of viruses, by C. A. Knight. Electron microscopy of viruses, by R. C. Williams. The hydration of viruses, by M. A. Lauffer and I. J Bendet. Author index. Subject index. Contents of Volume I.

—— Volume III New York Academic Press Inc 1955 339 p illus 23 cm. $8 00 3116

Contents Comparative biochemistry and virology by S. S. Cohen The chemotherapy of viruses, by R. E. F Matthews and J D Smith. Tumor viruses, by J W Beard and others. Kunkel. Current status of bacteria transformation by H. Ephrussi-Taylor Author index. Subject index. Contents of Volumes I–II.

Note A review series dedicated to recording the advances in virology in general that is to say it is not limited to medical virology or any other special area but is designed to discover the whole field. The first three volumes published contain the monographic reviews whose authors and titles are listed above. Each monograph is a substantial review of a considerable body of literature. Although recent literature predominates in the bibliography reviewers are not limited to the literature of a year or any other stated period, but encompass whatever is necessary to give an adequate account of their specific topics. One of the editors is a British scientist the other one is a member of the faculty of the University of Pittsburgh in the United States of America. Contributors also are drawn from the United States, Great Britain and occasionally from other countries.

BURNET FRANK MACFARLANE

Virus as organism evolutionary and ecological aspects of some human virus diseases Cambridge Mass Harvard University Press 1945 134 p 22 cm (Harvard University monographs in medicine and public health) $2 00 3117

Contents Reproduction, variation, and survival. Evolution and change in virus disease The reaction of the host to virus infection. Herpes simplex. Poliomyelitis. Psittacosis and related infections Smallpox, alastrim and vaccinia Yellow fever Influenza. Conclusion. Bibliography

Note This brief description, from the biological point of view of the characteristics and epidemiology of some of the more common virus diseases of man, is based on the author's thesis that "viruses are microorganisms which have evolved by parasitic degeneration from larger micro-organisms. Although the book deals primarily with the diseases themselves, the author also discusses the reproduction, variation survival, and evolution of viruses as a biological group. A seven-page bibliography is included.

EVANS, EARL ALISON, JR.

Biochemical studies of bacterial viruses. Chicago The University of Chicago Press, 1952 68 p illus 21 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $2 75 3118

Contents The nature of the virus particle. The origin of viral components. The mechanism of virus reproduction. Bibliography

Note The lectures collected in this volume are in effect a condensed survey of the results of recent work done at the University of Chicago on the biochemical aspects of the relationships between viruses and host cells. Some results from related research of other workers are incorporated. The lectures were originally delivered under the auspices of the Institute of Atomic Research at Iowa State College. They were addressed to graduate scientists working in other fields hence the author assumed a familiarity on the part of his audience (and readers) with the technical terminology of biology and chemistry Literature references are included therefore the book can be used also as a guide for published papers which relate to the studies done at the University of Chicago.

HENRY FORD HOSPITAL

International symposium The dynamics of virus and rickettsial infections. Edited by Frank W Hartman Frank L. Horsfall, jr, and John G Kidd New York The Blakiston Division, McGraw Hill Book Company, Inc., 1954 461 p illus 24 cm. $7.50 3119

Contents I, Mechanisms of virus and rickettsial infections moderators, T M Rivers and J G. Kidd The initiation of cellular infection by viruses, by A. Gottschalk. Some central problems of viral growth, by A. D Hershey Cell attachment and penetration by viruses, by T T Puck. Genetic functions and developmental processes of bacterial viruses, by S. E. Luria. "Incomplete" forms of influenza virus, by P von Magnus. Studies on double infection with influenza virus, by G. K. Hirst. Cellular metabolism and virus growth, by F C. Bawden. Plant viruses and proteins, by B. Commoner Abortive infection with viruses, by M. H. Adams. Metabolic transformations in virus infected cells, by S. S. Cohen. Intracellular sites important to the development of animal viruses, by W W Ackermann. Enzymic changes in virus synthesis, by E. A. Evans, jr II, Ecology and pathogenesis of virus and rickettsial infections moderator A. B. Sabin Ecology and virus reservoirs, by R. E. Shope. The effect of host and vector densities on the epidemiology of scrub typhus, by J R. Audy Maintenance of yellows-type viruses in plant and insect reservoirs, by L. O Kunkel. Variation in virulence of rickettsia rickettsii under natural and experimental conditions, by W H. Price. Pathogenic mechanisms of virus diseases, by W McD. Hammon. Pathogenesis of variola, by A. W Downie and K. McCarthy III, Mechanisms of immunity in virus and rickettsial infections moderator J Paul Mechanisms of convalescent immunity and how it may be simulated, by J E. Salk. Sites of immune barriers in poliomyelitis, by D Bodian Mechanism of active induced immunity with attenuated living vaccines, by K. Habel. Practical application of living virus vaccines, by H Koprowski. IV Laboratory diagnosis of virus and rickettsial infections moderator A. J Rhodes Early diagnosis of infections by the psittacosis-lymphogranuloma venereum group, by K. F Meyer Early diagnosis of smallpox, by F O. MacCallum The diagnosis of virus infections employing tissue culture methods, by T H. Weller An evaluation of diagnostic procedures for virus and rickettsial diseases, by E. H. Lennette. Early detection of antigen as a diagnostic method, by J C. Snyder. Approaches to prophylaxis and therapy of virus and rickettsial infections moderator G. Dalldorf Interference and physical-chemical blockade by F L. Horsfall, jr Bacterial transformation as an infection by desoxyribonucleic acid by R. D Hotchkiss. Nutritional inhibitors, by A. F Rasmussen Inhibition of virus multiplication through considered ... metabolites, by D. W Woolley Suppression of growth by antibiotics, by I. W McLean and others. Clinical applic...

[illegible] of action of antibiotics in rickettsial and virus diseases, by T. E. Woodward and R. T. Parker

Note: Papers and discussions presented at a symposium in October, 1951, at the Henry Ford Hospital in Detroit, Michigan, are published in this volume. The symposium was planned as an opportunity for scientists and physicians engaged in research on the virus and rickettsial infections to exchange ideas and to report on the results of recent research and clinical experience. The papers are accompanied by literature references. There is no volume index either to authors cited or to subjects.

Kidd, John G., editor

The pathogenesis and pathology of viral diseases. Symposium held at the New York Academy of Medicine December 14 and 15 1948. New York Columbia University Press 1950. 235 p. illus. 24 cm. (New York Academy of Medicine Section on Microbiology Symposium no. 3) $5.00. 3120

Contents: Introduction, by J. G. Kidd. The spread of viruses from infected to susceptible hosts, by R. E. Shope. The culture and effects of viruses in chick embryo cells, by C. J. Buddingh. The relationships of viruses and cells, with particular reference to the interference phenomenon, by G. Dalldorf. The [illegible] of viruses by [illegible], by T. F. Anderson. The electron microscope study of virus growth, by R. W. G. Wyckoff. Pathology and pathogenesis of the cutaneous lesions of variola, vaccinia, herpes simplex, herpes zoster, and varicella, by T. F. M. Scott and others. Pathogenesis of the viral encephalitides as exemplified by [illegible] of mice, by P. Peters. Cardiac lesions produced by viruses, by J. H. Pearce. Pathology of yellow fever, by J. E. Ash. Reactions of the cells of the respiratory tract to virus infections, by T. P. Magill. Proliferative lesions caused by viruses and virus-like agents, by J. G. Kidd. The problem of lymphatic choriomeningitis virus infections—a discussion, by E. D. [illegible]. The pathology of some viral encephalitides, by A. [illegible]. The nature and pathogenesis of neuronal changes in poliomyelitis, by R. A. [illegible]

Note: The papers included in this volume deal both with the accumulated knowledge on viruses and the results of recent research. For example, Pearce's paper "Cardiac lesions produced by viruses" [illegible] report of original experimentation; Dalldorf's paper "The relationships of viruses and cells" [illegible] survey of published literature, including the author's own previously published papers. Literature references are included in all of the papers. Illustrations are numerous and include many reproductions of [illegible] Wyckoff's paper "Electron microscopic study of virus growth" includes a series of remarkable electron micrographs.

Luria, S. E.

General virology. New York John Wiley & Sons Inc., 1953 427 p. illus 24 cm. $9.00. 3121

Contents: Introduction—the science of virology. Detection and identification of viruses. Titration of viruses. Size and morphology of virus particles. Purification and chemical composition of virus material. Biological properties of viruses. Environmental effects on virus particles. Virus-host interaction—The bacteriophage-bacterium system. The interaction of plant viruses with their host plants. The interaction of animal viruses with their hosts—Tissue cultures—Intracellular inclusions. Growth of viruses in the chick embryo. [illegible] phenomena and virus growth—Immunity [illegible] virus reproduction. Interference phenomena in virus infections. Variation in virus—host variation and susceptibility to viruses. Viruses and tumors. Origin and nature of viruses. Appendix—The Rickettsiae. Bibliography. Author index. Index.

Note: In this book virology is treated as a biological science rather than as a class of diseases. The viewpoint is a novel one, but [illegible] has the advantage of co-ordinating the wide range of material on viruses and of offering an approach to the subject that is of greater interest to the general biologist than the pathological or clinical. In the first three chapters, basic matters are discussed, such as the story of discovery of viruses, nomenclature, detection and classification of viruses. The [illegible] chapters that constitute the main body of the book are devoted to properties of viruses outside the host, host-virus systems, variation, mutability and transmission of viruses under natural conditions. The book was developed as courses given by the author at the University of Indiana and the University of Illinois and [illegible] designed for use as textbook in courses at level in advanced undergraduate and graduate students of biology.

The major and subsequent reader is [illegible] graduate [illegible] in need of [illegible] survey of the knowledge on viruses and of laboratory techniques useful in their study. The bibliography contains more than 720 literature citations.

Miner, Roy Waldo editor

Virus and rickettsial classification and nomenclature Conference chairman MacFarlane Burnet. Consulting editor Hilary Koprowski. New York Published by the Academy 1953 351-622 p. illus 22 cm. (New York Academy of Sciences Annals Vol. 56 art. 3) $4.00 3122

Contents: Virus classification and nomenclature, [illegible] by M. Burnet. Concepts of classification and nomenclature in [illegible] organisms and microorganisms, by E. Mayr. Viruses that reproduce in plants and insects, by L. M. Black. Problems of virus nomenclature and classification, by F. O. Holmes. The [illegible] of viruses in relation to [illegible] nomenclature, by J. Johnson. The Rio Grande [illegible] A record on study of selected groups of viruses, by C. H. Andrewes. Advantages of the Linnean binomial system for plant viruses, by F. [illegible]. Possibilities of generic classification in rickettsiae and viruses, by G. W. Rake. [illegible] Biological classification of bacterial viruses, by M. H. Adams. Taxonomy of the problem of imperfectly known viruses, by A. A. [illegible]. Virus and rickettsial classification and nomenclature, by H. R. Cox. Classification of rickettsial pathogens to vertebrates, by J. D. W. A. [illegible]. Nomenclature of the rickettsiae pathogenic to vertebrates, by C. B. Philip. On the nomenclature and classification of insect viruses, by G. H. Bergold. Taxonomy of insect viruses, by E. A. Steinhaus. Criticism of binomial nomenclature as applied to plant viruses, by F. C. Bawden. Psittacosis group, by K. F. Meyer. The lymphogranuloma venereum-psittacosis group, by G. W. Rake. The nomenclature and classification of the pox group of viruses, by C. J. Buddingh. Influenza virus group, by M. Burnet. Possible classification of the arthropod-borne encephalitis viruses, by W. McD. Hammon. On the nomenclature and classification of arthropod-borne encephalitides, by P. [illegible]. PATHOGENIC FUNGI

CONANT NORMAN F., AND OTHERS

Manual of clinical mycology By Norman F Conant, David Tillerson Smith Roger Denio Baker Jasper Lamar Callaway and Donald Stover Martin. Second edition. Illustrated. Philadelphia W B Saunders Company 1954 456 p. illus 20 cm. $6.50. 3128

Contents: Actinomycosis. Nocardiosis. North American blastomycosis. South American blastomycosis. Coccidioidomycosis. Histoplasmosis. Cryptococcosis. Candidiasis. Geotrichosis. Aspergillosis. Mucormycosis. Penicilliosis. Sporotrichosis. Maduromycosis. Rhinosporidiosis. Chromoblastomycosis. Tinea nigra palmaris. Symptomatology, diagnosis and treatment of the dermatomycoses. Immunology of the dermatomycoses. Mycology of the dermatomycoses. Piedra. Trichomycosis axillaris. Tinea versicolor. Erythrasma. Otomycosis. [illegible]. Fundamentals of elementary mycology. Contaminants. Appendix. Index.

Note: The first edition of this book, published in 1944, was prepared under the auspices of the Committee on Medicine of the Division of Medical Sciences of the National Research Council, in co-operation with the Surgeons General of the United States Army and Navy. The authorship was the same as in this second edition. The book is directed to general practitioners of medicine, and it presents background knowledge and clinical information designed to aid nonspecialists in the diagnosis and treatment of fungus diseases. In general, the following information is given for each disease included: definition and general description, geographical distribution, source of infection, symptomatology, mycology, pathology, immunology, differential diagnosis, prognosis, treatment and literature references. The discussions of most of the diseases were revised for this second edition and much information added. There are now 223 figures, 35 of which were newly added in this edition.

KEENEY EDMUND L.

Practical medical mycology Springfield, Ill. Charles C Thomas, 1955 145 p. illus. 23 cm. (American lecture series. Publication no. 248. A monograph in American lectures in internal medicine edited by Roscoe L. Pullen) $4.50. 3129

Contents: Introduction. Human infections from actinomycetes. Coccidioidomycosis. North American blastomycosis. Histoplasmosis. Sporotrichosis. Cryptococcosis (torulosis). Moniliasis. Geotrichosis. Chromoblastomycosis. South American blastomycosis. Aspergillosis. Mucormycosis. Dermatophytoses. Spores of saprophytic fungi as allergens. Poisonous fungi. Index.

Note: A simplified presentation designed for the guidance of general practitioners of medicine. Each of the diseases included is the subject of a compact entry containing information on such aspects as the causative agent, geographic distribution, clinical picture, diagnosis and treatment. Furthermore, each of the essays is supplemented by a one-page illustration in which the gist of the essay is presented in graphic form. Literature references are given. The chapter on poisonous fungi is organized on a different pattern. It is devoted to poisoning by mushrooms and to ergotism. The forms of poisoning due to the ergot fungus, and in general the causes of such poisoning, together with detailed recommendations for treatment in the case of mushroom poisoning.

LITTMAN M L AND LORENZ E. ZIMMERMAN

Cryptococcosis, torulosis or European blastomycosis New York Grune & Stratton 1956. 205 p. illus. (part col'd) 26 cm. $8.50. 3130

Contents: Introduction. Historical aspects. Incidence. Source of infection and portal of entry. Human cryptococcosis: clinical aspects. Cryptococcosis in animals. Immunology. Pathology. Laboratory studies. Treatment and prognosis. Addendum. Appendix (culture media and special stains). References. Index.

Note: A comprehensive, thoroughly illustrated monograph on a mycotic disease once thought to be rare, but now reported with increasing frequency. The causative agent is *Cryptococcus neoformans* and it infects various tissues of the body, including the nervous system, to which it may be carried hematogenously from the lungs. The clinical, pathological, and other aspects mentioned in the chapter titles are covered in a concise but adequate manner with references to the source literature. The illustrations, of which there are 82 in monochrome and 4 in color, illustrate a considerable range of cases and show both gross and microscopic pathology.

NICKERSON, WALTER JOHN, editor

Biology of pathogenic fungi foreword by J G. Hopkins. Waltham Chronica Botanica Company 1947 236 p illus 24 cm. (Annales cryptogamici et phytopathologici. Vol. VI) $5.50. 3131

Contents: Introduction, by W. J. Nickerson. On the biology of the pathogenic Torulopsidaceae, by J. Lodder. Chromoblastomycosis and its etiologic fungi, by A. L. Carrión and M. Silva. Biology of Pityrosporum ovale, by R. W. Benham. Biology of Coccidioides, by C. W. Emmons. Recent advances of the Italian school of mycopathology (1941–1945), by R. Ciferri and P. Redaelli. The action of sulfonamides and antibiotic agents on the pathogenic fungi, by F. T. Wolf. Geographic distribution of systemic fungus diseases, by D. S. Martin. Nutrition and metabolism of pathogenic fungi, by W. J. Nickerson and J. W. Williams. Metabolic products of pathogenic fungi, by W. J. Nickerson. The lipids of fungi with special reference to pathogenic fungi, by R. L. Peck. Respiration and fermentation of pathogenic fungi, by W. J. Nickerson. Author index. Organism index. Subject index.

Note: This volume is made up of a series of short monographs written for it by specialists in several fields. Most of the monographs embody not only the author's own work, but the information and experimental results which have been reported in published literature. Each paper is accompanied by an extensive list of the pertinent literature. The treatment is aimed at persons with scientific education in biology or medicine. The book is not intended as a textbook or as a comprehensive manual of the subject. Instead, its scope is limited to summarized presentations of the current knowledge of the specific aspects of pathogenic fungi which are named in the chapter titles.

Boston Little Brown and Company 1955 337 p. illus. 24 cm. $7.50. 3132

Contents: Outstanding problems in the study of antibacterial and antifungal antibiotics, with special reference to the antibiotics of actinomycetes, by S. A. Waksman. Soil as the natural reservoir for human pathogenic fungi, by L. Ajello. Ecology and spread of pathogenic fungi, by O. A. Plunkett. Possible approaches to the therapy of fungus diseases, by J. W. Wilson. An evaluation of the laboratory methods for testing fungicides, by D. L. McVickar. Studies on mycotic diseases in India, by A. N. Chakraborty. The status of fungus diseases in France, by E. Drouhet. The status of fungus diseases in Argentina, by P. Negroni. Deep skin and pulmonary mycosis in Brazil, by O. da Fonseca. The status of fungus diseases in Mexico, by A. González Ochoa. The status of fungus diseases in the Philippines, by S. A. [illegible]. The status of fungus diseases in the Ukraine, by V. T. [illegible]. Some reflections on the biology of ringworm infections, by A. M. Kligman. The influence of hormonal conditions on experimental fungus infection, by Z. T. Mankowski. Active immunization against *Trichophyton gypseum* infection in guinea pigs, by F. Reiss and L. Leonard. A further report on Tinea capitis in the Philippines, by S. A. [illegible] and others. Tinea pedis in the United States army troops stationed in Puerto Rico and the comparative effectiveness of an antihistamine (diphenylpyraline) and undecylenic acid in its treatment, by C. C. Campbell and others. Fungi of the human bile, by P. Negroni. Studies on Candida, by A. [illegible]. Experimental genetic and nutritional controls of pathogenicity of *Venturia inaequalis*, by G. W. Keitt, and D. M.

diseases, by G M Kohls. The reservoirs of infection in rickettsial diseases of man by C. B. Philip. Rickettsialpox—general considerations of a newly recognized rickettsial disease by R. J Huebner The pathology of the rickettsial diseases of man by S. B Wolbach. The symptomatology clinical course, and management of louse-borne typhus fever by A. Yeomans. Endemic (murine) typhus fever symptomatology by T E. Woodward. Symptomatology and certain other aspects f Rocky Mountain spotted fever by R. R. Parker The symptomatology of tsutsugamushi disease, by F G Blake. Q fever clinical features, by F C. Robbins. The treatment of the rickettsial diseases of man, by J C. Snyder The serological reactions in the rickettsial diseases of man by C. J D Zarafonetis. The Weil-Felix reaction, by K. Wertman. Complement fixation and agglutination reactions in rickettsial diseases, by J E. Smadel. The soluble substances of the rickettsiae, by H. Plotz. The preparation and standardization of rickettsial vaccines, by H. R. Cox. DDT and other insecticides for the control f lice and fleas attacking man, by E. F Knipling. Methods of application of DDT by D M. Greeley The control of murine typhus in the United States, by G H. Bradley and J S. Wiley Miticides and mite control, by R. C. Bushland.

Not Much of the material in this collection, particularly that relating to control measures and the use of insecticides, is based on experience gained by the armed forces in Europe and other battle fronts during World War II. Each paper has been prepared by an expert in the fields of entomology biology or medicine, and in most cases an extensive bibliography is included. The work is addressed to persons trained in medicine and public health.

NEW YORK ACADEMY OF MEDICINE SECTION ON MICROBIOLOGY

The pathogenesis and pathology of viral diseases Symposium held at the New York Academy of Medicine December 14 and 15, 1948 Edited by John G Kidd. New York Columbia University Press, 1950 235 p illus 24 cm. $5 00 3124

Contents Introduction by J G. Kidd. The spread of viruses from infected to susceptible hosts, by R. E. Shope. The culture and effects f viruses in chick embryo cells, by C. J Buddingh. The relationships of viruses and cells, with particular reference to the interference phenomenon, by G. Dalldorf The activation of viruses by adsorption cofactors, by T F Anderson. The electron microscopic study of virus growth, by R. W G. Wyckoff. Pathology and pathogenesis of the cutaneous lesions of variola, vaccinia, herpes simplex, herpes zoster and varicella, by T F M Scott and others. Pathogenesis f the viral exanthems as exemplified by mouse pox (infectious ectromelia) of mice by F Fenner Cardiac lesions produced by viruses, by J M. Pearce. Pathology of yellow fever by J E. Ash. Reactions of the cells of the respiratory tract to virus infections, by T P Magill. Proliferative lesions caused by viruses and virus-lik agents, by J G Kidd. The pathology of lymphatic choriomeningitis virus infection—a discussion, by R. D Lillie. The pathology of some viral encephalitides, by A. Wolf. The nature and pathogenesis of neuronal changes in poliomyelitis, by H. A. Howe.

Note Original papers presented at the symposium named in the book's title have been collected in this volume. Several of the papers include information gathered in recent investigations and not hitherto published. The illustrations include number of remarkable microphotographs of viral organisms. The papers are supplemented by selected bibliographies. There is no index to the volume.

POLLARD, ERNEST C

The physics of viruses New York Academic Press Inc. 1953 230 p illus 23 cm. $5 50 3125

Contents The nature of viruses and their relation to physics. The size, shape, and hydration of viruses. Ionizing radiation and viruses. Thermal inactivation of viruses. The surface of viruses. Action of ultraviolet light on viruses. Sonic and osmotic effects on viruses. Virus genetics, virus multiplication, and virus physics. Author index. Subject index.

Note Written by physicist, this book is an exploratory survey of the nature of viruses from physical point of view The concepts of physics and chemistry are applied in tentative way to the interpretation of basic knowledge about viruses which has been discovered mostly by bacteriologists. The author points out possible correlations and suggests interpretations rather than attempting complet hypotheses. Literature references are included.

RHODES, A J, AND C E VAN ROOYEN

Textbook of virology for students and practitioners of medicine. Second edition. Baltimore The Williams & Wilkins Company 1953 561 p illus 24 cm. 3126

Content (abridged) Section I, The fundamental characteristics of virus infections: Classification and biologic relationships of viruses and rickettsiae. Fundamental properties of viruses. Technical methods and apparatus used in virology The method of spread of virus diseases. Immunity mechanisms in virus diseases The specific treatment of virus diseases—experimental and applied aspects. The laboratory diagnosis of virus diseases. Present concepts of the nature of viruses. Section II, Skin diseases. Section III, Exanthemata. Section IV Respiratory diseases. Section V Venereal diseases. Section VI, Eye diseases. Section VII, Arthropod borne and tropical fevers. Section VIII, Infectious hepatitis and serum jaundice. Section IX, The Coxsackie viruses. Section X, Encephalomyocarditis and encephalomyelitis of animals. Section XI, Neurotropic virus diseases. Section XII, Rickettsial infections. Index.

Note. An introduction to virus and rickettsial diseases of man, addressed primarily to advanced students of medical schools, but of value also to students preparing for careers in public health and to graduate practitioners of medicine and public health. Basic information on techniques of study and diagnosis of viruses and rickettsia, on immunology and other topics is presented in the first section. Beginning with page 123 the book is devoted to descriptives of individual diseases. Although these descriptions are succinct, they cover both the clinical and public health aspects and are supplemented by literature references. A first edition was published in 1949 Bibliographies designed as guides for further reading were added in the second edition, and the discussions of laboratory diagnosis and treatment were expanded, among other scriptions of individual diseases. Although these descriptions are changes. A third edition was published early in 1958, 643 p., $10 00.

RIVERS, THOMAS MILTON, editor

Viral and rickettsial infections of man. Second edition 90 illustrations including 7 plates in color Philadelphia J B Lippincott Company, 1952 719 p illus (part col d) 26 cm. $7 50 3127

Contents General aspects of viral and rickettsial infections, by T M. Rivers. Chemical and physical procedures, by W M. Stanley and M. A. Lauffer Serologic reactions in viral and rickettsial infections, by J E. Smadel. Hemagglutination by viruses, by G. K. Hirst. Chick-embryo technics, by G. J Buddingh. Propagation of viruses and rickettsiae in tissue cultures, by J F Enders. Epidemiology by K. F Maxcy Interference between animal viruses, by R. W Schlesinger Diagnosis of viral and rickettsial infections, by A. B Sabin and others. Bacterial viruses—bacteriophages, by A. D Hershey and J Bronfenbrenner Viral encephalitides, by P K. Olitsky and J Casals. Rabies, by H. N Johnson. Poliomyelitis, by H. A. Howe. The Coxsackie group, by J L. Melnick and E. C. Curnen. Infectious hepatitis and serum hepatitis, by W P Havens, Jr and J R. Paul. Common cold, by F L. Horsfall, Jr. Primary atypical pneumonia, by F L. Horsfall, Jr. Influenza, by F L. Horsfall, Jr. Smallpox and vaccinia, by J E. Smadel. Psittacosis-lymphogranuloma group, by K. F Meyer Trachoma and inclusion conjunctivitis, by P Thygeson. Measles, by G. Rake. Rubella, by G. Rake. Exanthem subitum, by G. Rake. Diseases caused by the virus of herpes simplex, by T F McNair Scott. Epidemic keratoconjunctivitis, by T M. Rivers. Varicella-herpes zoster group, by J. Stokes, Jr Mumps, by J F Enders Infectious mononucleosis, by T M. Rivers. Colorado tick fever by H. R. Cox. Yellow fever by M. Theiler Rift valley fever by M. Theiler Dengue, by A. B. Sabin. Phlebotomus fever by A. B Sabin. The typhus fevers, by J. C. Snyder The spotted-fever group, by H. R. Cox. Scrub typhus, by J E. Smadel. Q fever by J E. Smadel. Infections of minor importance, by J Warren Bibliographic index. Subject index.

Note A comprehensive presentation of basic information, written primarily for nonspecialists in viral diseases, particularly medical students, general medical practitioners, and public health officers. Each chapter is accompanied by an extensive bibliography and the names of the authors of the cited literature are brought together in the bibliographic index, thus making it easy to trace specific original contributions. The relatively low price is due to partial underwriting of the cost of the preparation and publication by the National Foundation for Infantile Paralysis. The first edition was published in 1948. Although this edition is only few pages longer important revisions have been made and three new chapters have been added.

PATHOGENIC FUNGI

CONANT NORMAN F, AND OTHERS

Manual of clinical mycology By Norman F Conant, David Tillerson Smith, Roger Denio Baker Jasper Lamar Callaway and Donald Stover Martin. Second edition. Illustrated. Philadelphia W B Saunders Company 1954 456 p. illus. 20 cm. $6.50 3128

Contents. Actinomycosis. Nocardiosis. North American blastomycosis. South American blastomycosis. Coccidioidomycosis. Histoplasmosis. Cryptococcosis. Candidiasis. Geotrichosis. Aspergillosis. Mucormycosis. Penicilliosis. Sporotrichosis. Maduromycosis. Rhinosporidiosis. Chromoblastomycosis. Tinea nigra palmaris. Symptomatology, prognosis and treatment of the dermatomycoses. Immunology of the dermatomycoses. Mycology of the dermatomycoses. Piedra. Trichomycosis axillaris. Tinea versicolor. Erythrasma. Otomycosis. Con[illegible]. Fundamentals of elementary mycology. Contaminants. Appendix. Index.

Note: The first edition of this book, published in 1944, was prepared under the auspices of the Committee on Medicine of the Division of Medical Sciences of the National Research Council, in co-operation with the Surgeons General of the United States Army and Navy. The authorship was the same as in this second edition. The book is directed to general practitioners of medicine, and it presents background knowledge and clinical information in a form designed to aid nonspecialists in the diagnosis and treatment of fungal diseases. In general, the following information is given for each disease included: definition and general description, geographical distribution, source of infection, symptomatology, mycology, pathology, immunology, differential diagnosis, prognosis, treatment and literature references. The discussions of some of the diseases were revised for this second edition and much information added. There are now 202 figures, 64 of which were newly added in this edition.

KEENEY EDMUND L.

Practical medical mycology Springfield Ill. Charles C Thomas, 1955 145 p illus. 23 cm. (American lecture series. Publication no. 248. A monograph in American lectures in internal medicine edited by Roscoe L. Pullen) $4.50 3129

Contents. Introduction. Human infections from actinomycetes. Coccidioidomycosis. North American blastomycosis. Histoplasmosis. Sporotrichosis. Cryptococcosis (torulosis). Moniliasis. Geotrichosis. Chromoblastomycosis. South American blastomycosis. Aspergillosis. Mucormycosis. Dermatophytoses. Spores of saprophytic fungi as allergens. Poisonous fungi. Index.

Note: A simplified presentation designed for the guidance of general practitioners of medicine. Each of the diseases included is the subject of a compact essay containing information on such aspects as the causative agent, geographic distribution, clinical picture, diagnosis and treatment. Furthermore, each of the essays is complemented by a one-page illustration in which the gist of the essay is presented in graphic form. Literature references are given. The chapter on poisonous fungi is organized on a different pattern. It is devoted to poisoning by mushrooms and to ergotism, [illegible] form of poisoning due to the ergot fungus, and a general discussion of such poisoning, together with definite recommendations for treatment in the case of mushroom poisoning.

LITTMAN M L., AND LORENZ E. ZIMMERMAN

Cryptococcosis, torulosis or European blastomycosis. New York Grune & Stratton, 1956 205 p illus. (part col d) 26 cm. $8.50 3130

Contents. Introduction. Historical aspects. Incidence. Source of infection, and portal of entry. Human cryptococcosis: clinical aspects. Cryptococcosis in animals. Immunology. Pathology. Laboratory studies. Treatment and prognosis. *Addendum.* Appendix (culture media and special stains). References. Index.

Note: A comprehensive, thoroughly illustrated monograph on a mycotic disease once thought to be rare, but now reported with increasing frequency. The causative agent is *Cryptococcus neoformans* and it infects various tissues of the body, including the nervous system, to which it may be carried hematogenously from the lungs. The clinical, pathological, and other aspects mentioned in the chapter titles are covered in a concise but adequate manner with references to the source literature. The illustrations, of which there are 33 in monochrome and 4 in color, illustrate a considerable range of cases and show both gross and microscopic pathology.

NICKERSON WALTER JOHN, editor

Biology of pathogenic fungi foreword by J G Hopkins. Waltham Chronica Botanica Company 1947 236 p illus. 24 cm. (Annales cryptogamici et phytopathologici Vol VI) $5.50 3131

Contents. Introduction, by W. J. Nickerson. On the biology of the pathogenic Torulopsidoideae, by J. Lodder. Chromoblastomycosis and its etiologic fungi, by A. L. Carrión and M. Silva. Biology of *Pityrosporum ovale*, by R. W. Benham. Biology of Coccidioides, by C. W. Emmons. Recent advances of the Italian school of mycopathology (1941—1945) by R. Ciferri and P. Redaelli. The action of sulfonamides and antibiotic agents on the pathogenic fungi, by F. T. Wolf. Geographic distribution of systemic fungus diseases, by D. S. Martin. Nutrition and metabolism of pathogenic fungi, by W. J. Nickerson and J. W. Williams. Metabolic products of pathogenic fungi, by W. J. Nickerson. The lipids of fungi with special reference to pathogenic fungi, by R. L. Peck. Respiration and fermentation of pathogenic fungi, by W. J. Nickerson. Author index. Organism index. Subject index.

Note: This volume is made up of a series of short monographs written for it by specialists in several fields. Most of the monographs embody not only the author's own work, but the information and experimental results which have been reported in published literature. Each paper is accompanied by an extensive list of the pertinent literature. The treatment is aimed at persons with scientific education in biology or medicine. The book is not intended as a textbook or as a comprehensive manual of the subject. Instead, its scope is limited to summarized presentations of the current knowledge of the specific aspects of pathogenic fungi which are named in the chapter titles.

STERNBERG THOMAS H. AND VICTOR D NEWCOMER, editors

Therapy of fungus diseases an international symposium. Presented June 23 24 25 1955 by the Division of Dermatology Department of Medicine School of Medicine and Medical Extension, University Extension University of California at Los Angeles. Boston Little Brown and Company, 1955 337 p illus. 24 cm. $7.50. 3132

Contents. Outstanding problems in the study of antibacterial and antifungal antibiotics, with special reference to the antibiotics of actinomycetes, by S. A. Waksman. Soil as the natural reservoir for human pathogenic fungi, by L. Ajello. Ecology and spread of pathogenic fungi, by G. A. Plunkett. Possible approaches to the therapy of fungus diseases, by J. W. Wilson. An evaluation of the laboratory methods for testing fungicides, by D. L. McVickar. Studies on mycotic diseases in India, by A. K. Chakraberty. The status of fungus diseases in France, by E. Drouhet. The status of fungus diseases in Argentina, by P. Negroni. Deep skin and pulmonary mycosis in Brazil, by O. da Fonseca. The status of fungus diseases in Mexico, by A. González Ochoa. The status of fungus diseases in the Philippines, by [illegible]. The status of fungus diseases in the Ukraine, by V. T. [illegible]. Some reflections on the biology of ringworm infections, by A. M. Kligman. The influence of hormonal conditions on experimental fungus infection, by [illegible]. Active immunization against *Trichophyton gypseum* infection in guinea pigs, by F. Reiss and L. Leonard. A further report on Tinea capitis in the Philippines, by [illegible] and others. Tinea pedis in the United States army troops stationed in Puerto Rico and the comparative effectiveness of an antihistaminic (diphenylpyraline) and undecylenic acid in its treatment, by C. C. Campbell and others. Fungi of the human [illegible], by P. Negroni. Studies on Candida, by A. Cas[illegible]. Experimental genetic and nutritional controls of pathogenicity of [illegible], by G. W. Keitt, and D. M.

diseases, by G M. Kohls. The reservoirs of infection in rickettsial diseases of man by C. B. Philip. Rickettsialpox—general considerations of a newly recognized rickettsial disease by R. J Huebner The pathology of the rickettsial diseases of man by S. B. Wolbach. The symptomatology clinical course and management of louse-borne typhus fever by A. Yeomans. Endemic (murine) typhus fever: symptomatology by T E. Woodward. Symptomatology and certain other aspects of Rocky Mountain spotted fever by R. R. Parker The symptomatology of tsutsugamushi disease, by F G Blake. Q fever clinical features, by F C. Robbins. The treatment of the rickettsial diseases of man, by J C. Snyder The serological reactions in the rickettsial diseases of man, by C. J D Zarafonetis. The Weil-Felix reaction, by K. Wertman. Complement fixation and agglutination reactions in rickettsial diseases, by J E. Smadel. The soluble substances of the rickettsiae, by H. Plotz. The preparation and standardization of rickettsial vaccines, by H. R. Cox. DDT and other insecticides for the control of lice and fleas attacking man, by E. F Knipling. Methods of application of DDT by D M Greeley The control of murine typhus in the United States, by G H. Bradley and J S Wiley Miticides and mite control, by R. C. Bushland.

Note Much of the material in this collection particularly that relating to control measures and the use of insecticides, is based on experience gained by th armed forces in Europe and other battle fronts during World War II. Each paper has been prepared by an expert in the fields of entomology biology or medicine, and in most cases an extensive bibliography is included. The work is addressed to persons trained in medicine and public health.

New York Academy of Medicine Section on Microbiology

The pathogenesis and pathology of viral diseases Symposium held at the New York Academy of Medicine December 14 and 15, 1948 Edited by John G Kidd New York Columbia University Press 1950 235 p illus 24 cm $5 00 3124

Contents Introduction by J G Kidd. The spread of viruses from infected to susceptible hosts, by R. E. Shope. The culture and effects of viruses in chick embryo cells, by C. J Buddingh. The relationships of viruses and cells, with particular reference to the interference phenomenon, by G Dalldorf The activators f viruses by adsorption cofactors, by T F Anderson. The electron microscopic study of virus growth by R. W G. Wyckoff Pathology and pathogenesis of the cutaneous lesions of variola, vaccinia, herpes simplex, herpes zoster and varicella, by T F M. Scott and others. Pathogenesis of the viral exanthems as exemplified by mouse pox (infectious ectromelia) f mice, by F Fenner Cardiac lesions produced by viruses, by J M Pearce. The illustrations include number of remarkable microphotographs of viral organisms The papers are supplemented by selected bibliographies. There is no index to the volume.

Pollard, Ernest C

The physics of viruses. New York Academic Press, Inc 1953 230 p illus 23 cm $5 50 3125

Contents. The ature of viruses and their relation to physics. The size, shape, and hydration of viruses. Ionizing radiation and viruses. Thermal inactivation of viruses. The surface of viruses. Action of ultraviolet light on viruses. Sonic and osmotic effects on viruses. Virus genetics, virus multiplication, and virus physics. Author index. Subject index.

Not Written by a physicist, this book is an exploratory survey of the nature of viruses from physical point of view The concepts of physics and chemistry are applied in a tentative way to the interpretation of basic knowledge about viruses which has been discovered mostly by bacteriologists. The author points out possible correlations and suggests interpretations rather than attempting complete hypotheses. Literature references are included.

Rhodes, A J, and C E van Rooyen

Textbook of virology for students and practitioners of medicine. Second edition. Baltimore The Williams & Wilkins Company 1953 561 p illus. 24 cm 3126

Contents (abridged) Section I The fundamental characteristics of virus infections Classification and biologic relationships of viruses and rickettsiae. Fundamental properties of viruses. Technical methods and apparatus used in virology The method of spread of virus diseases. Immunity mechanisms in virus diseases. The specific treatment of virus diseases—experimental and applied aspects. The laboratory diagnosis of virus diseases. Present concepts of the nature of viruses. Section II, Skin diseases. Section III, Exanthemata. Section IV Respiratory diseases. Section V Venereal diseases. Section VI, Eye diseases. Section VII, Arthropod borne and tropical fevers. Section VIII, Infectious hepatitis and serum jaundice. Section IX, The Coxsackie viruses. Section X, Encephalomyocarditis and encephalomyelitis of animals. Section XI, Neurotropic virus diseases. Section XII, Rickettsial infections. Index.

Note An introduction to virus and rickettsial diseases of man, addressed primarily to advanced students of medical schools, but of value also to students preparing for careers in public health and to graduate practitioners of medicine and public health. Basic information on techniques of study and diagnosis of viruses and rickettsia, on immunology and other topics is presented in the first section. Beginning with page 175 the book is devoted to descriptions of individual diseases. Although these descriptions are succinct they cover both the clinical and public health aspects and are supplemented by literature references. A first edition was published in 1949 Bibliographies designed as guides for further reading were added in the second edition, and the discussions of laboratory diagnosis and treatment were expanded, among other scriptions of individual diseases. Although these descriptions are changes. A third edition was published early in 1958, 642 p., $10 00.

Rivers, Thomas Milton, editor

Viral and rickettsial infections of man. Second edition 90 illustrations including 7 plates in color Philadelphia J B Lippincott Company, 1952 719 p illus (part col'd) 26 cm $7 50 3127

Contents General aspects f viral and rickettsial infections, by T M. Rivers. Chemical and physical procedures, by W M. Stanley and M. A. Lauffer Serologic reactions in viral and rickettsial infections, by J E. Smadel. Hemagglutination by viruses, by G. K. Hirst. Chick-embryo technics, by G. J Buddingh. Propagation of viruses and rickettsiae in tissue cultures, by J F Enders. Epidemiology by K. F Maxcy Interference between animal viruses, by R. W Schlesinger Diagnosis of viral and rickettsial infections, by A. B Sabin and others. Bacterial viruses—bacteriophages, by A. D. Hershey and J Bronfenbrenner Viral encephalitides, by P K. Olitsky and J Casals. Rabies, by H. N Johnson. Poliomyelitis, by H. A. Howe. The Coxsackie group by J L. Melnick and E. C. Curnen. Infectious hepatitis and serum hepatitis, by W P Havens, Jr and J R. Paul. Common cold, by F L. Horsfall, Jr Primary atypical pneumonia, by F L. Horsfall, Jr Influenza, by F L. Horsfall, Jr Smallpox and vaccinia, by J E. Smadel Psittacosis-lymphogranuloma group by K. F Meyer Trachoma and inclusion conjunctivitis, by P Thygeson. Measles, by G. Rake. Rubella, by G. Rake. Exanthem subitum, by G. Rake. Diseases caused by the virus of herpes simplex, by T F McNair Scott. Epidemic keratoconjunctivitis, by T M. Rivers. Varicella-herpes zoster group, by J Stokes, Jr Mumps, by J F Enders. Infectious mononucleosis, by T M. Rivers. Colorado tick fever by H. R. Cox. Yellow fever by M. Theiler Rift valley fever by M. Theiler Dengue, by A. B. Sabin. Phlebotomus fever by A. B Sabin. The typhus fevers, by J C. Snyder The spotted-fever group by H. R. Cox. Scrub typhus, by J E. Smadel. Q fever by J E. Smadel. Infections f minor importance, by J Warren. Bibliographic index. Subject index.

Note A comprehensive presentation of basic information, written primarily for nonspecialists in viral diseases, particularly medical students, general medical practitioners, and public health officers. Each chapter is accompanied by an extensive bibliography and the names of the authors of the cited literature are brought together in the bibliographic index, thus making it easy to trace specific original contributions. The relatively low price is due to partial underwriting of the cost of the preparation and publication by the National Foundation for Infantile Paralysis. The first edition was published in 1948. Although this edition is only few pages longer important revisions have been made and three new chapters have been added.

Note. The authors of this book define immunochemistry as "the study of the chemistry of antigens and antibodies and of the chemical bases of immunity and resistance. However their book, as implied in the title, is devoted chiefly to laboratory techniques and procedures which are useful to chemists doing analytical and experimental work in this field. Essentially it is a well-organized survey of the techniques which have been reported in the literature. Many of the chapters include generalized discussions of particular techniques or problems, and also details of specific procedures for analytical determinations in the laboratory. There are good selected lists of references to related literature.

Miner, Roy Waldo editor

The relation of immunology to tissue homotransplantation. Conference co-chairmen John Marquis Converse and Blair O Rogers. Consulting editor Blair O Rogers. New York Published by the Academy 1955 277–466 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol 59 art. 3) $4.00 3137

Contents: Part I, General discussion of immunology—systemic and local factors: Tissue response in immunity by R. L. Kahn. The allergic response and the tuberculin reaction, by R. A. Cooke. Skin transplants—homografts, by M. B. Sulzberger. Compatibility and noncompatibility by H. S. N. Greene. The role of wound healing in relation to the tissue and humoral responses in homotransplantation, by F. B. Engley jr and others. Reticuloendothelial activity during antibody response, by E. R. Gabrieli. Part II, Techniques for detection of immune responses: Observations on the circulation of homologous grafts of skin to recipients treated with sodium salicylate, histadyl, and hyaluronidase, by R. B. Stark and others. Definition of survival time of homograft by A. C. Taylor and J. W. Lehrfeld. Studies on the localization of radioactively labeled specific protein globulin in skin homotransplantation, by M. Goodman. The antibody response to skin homografts in mice, by P. A. Gorer. Some remarks on the immunological aspects of homografts, by P. Gorer. Tissue antibody mechanism, by D. [illegible] Part III, Methods of modifying the host response: Effect of skin extracts on the viability of homologous skin grafts in mice by C. A. Hardin and A. A. Werder. Induced alteration of the normal host-graft relationships in homotransplantation of mouse tumors, by N. Kaliss. The possible role of cortisone in overcoming resistance to the growth of human cancer in heterologous hosts, by H. W. Toolan. Transplantation of rat kidneys in peritoneum and pseudoperitoneal cavity by J. Long and others. Acquired tolerance of skin homografts, by R. E. Billingham and others. Part IV Immune reactions in tissue homotransplants: The immune concept—its relation to tissue transplantation, by M. [illegible] and others. Immunological factors in homogenous bone transplantation—I, histological analysis, by P. H. Curtiss jr and C. H. Herndon. Ovarian homotransplantation, by P. L. Krohn. The acquired immunity concept in kidney homotransplantation, by M. Simonsen. The immune concept—its relation to corneal homotransplantation, by A. E. Maumenee. Lymphoid biological response to corneal transplantation, by B. T. [illegible].

Note. A collection of papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in February 1954. A majority of them are based on research in which their authors had a part, as well as on the literature. References to the literature are included in some of the papers and several of them are accompanied by transcripts of the discussion at the conference.

Sevag Manasseh Giragos

Immuno-catalysis and related fields of bacteriology and biochemistry (Second edition revised and enlarged.) With a preface by Stuart Mudd. Springfield, Ill Charles C Thomas, 1951 547 p. illus. 23 cm. $12 00 3138

Contents (abridged): Part I, Antigens to biocatalysis. Part II, Mechanism of antibody formation. Part III, Antibody as specific enzyme inhibitor. Part IV Anti-enzyme immunity. Part V, Antibodies against respiratory enzymes. Part VI, Physiology and biochemistry of shock. References. Author index. Subject index.

Note. A notable study in which the author has integrated a wide range of knowledge to support his central theme that the production of antibodies and substances which inhibit the activities of enzymes, etc., [illegible] catalytic reaction. He emphasizes the parallels between bacteria and their corresponding antibodies and enzymes and their inhibiting reaction products. He states "practically all proteins foreign to the species present a special sort of biocatalytic power, namely that of stimulating and directing specifically the synthesis of antibody. The results of certain studies would seem to show that under appropriate conditions specific activity as enzyme and as antigen may and frequently do in fact reside in the same specific chemical configuration of the protein molecule. The book is organized as a monograph with references from text statements to the 61-page bibliography. The first edition appeared in 1945. It was substantially revised and augmented for this edition.

Sevag Manasseh Giragos, and others, editors

Origins of resistance to toxic agents. Proceedings of the symposium held in Washington D. C., March 25–27 1954 Editors M G Sevag Roger D Reid Orr E Reynolds. New York Academic Press, Inc. 1955 471 p. illus 24 cm. $12 00. 3139

Contents: Section I, Resistance to microbicides: Spontaneous and induced mutations to drug resistance in *Escherichia coli*, by H. B. Newcombe. Origin of drug resistance in microorganisms, by W. Szybalski and V. Bryson. Mechanism of resistance to penicillin in *Bacterium aerogenes* (*Aerobacter aerogenes*) by A. C. R. Dean. Mechanisms of the origin of resistance to drugs in protozoa, by R. J. Schnitzer. Section II, Resistance to herbicides and insecticides: Resistance of plants to herbicides, by W. E. Loomis. Resistance factors against *Leptinotarsa decemlineata* Say isolated from the leaves of wild *Solanum* species, by R. Kuhn and I. Löw. Physiological aspects of insect resistance to insecticides, by L. E. Chadwick. The enzymatic dehydrochlorination of DDT by C. W. Kearns. Theories on evolution, by C. P. Martin. Section III, Tolerance and addiction to drugs and alcoholism: Some effects of alcohol on metabolic mechanisms with applications to therapy of alcoholism, by E. C. Hoff and J. C. Forbes. The genetotrophic approach to alcoholism, by R. J. Williams. Biochemical effects of administration of narcotics and alcohol, by J. H. Quastel. The phenomena of tolerance by N. B. Eddy. Possible mechanisms of physical dependence to narcotics, by M. H. Seevers. Section IV Resistance factors, infectious agents, and cancer cells: Studies on transformations to resistance and dependence in leukemic cells by L. W. Law. Biochemical investigations on the mechanism of carcinogenesis by the azo dyes, by E. C. Miller and J. A. Miller. The nature of tumor immunity by M. K. Barrett. Factors in resistance to infectious agents, by H. A. Schneider. Section V Physiological, chemical, and genetic viewpoints: Biochemical properties in relation to the action of drugs and inhibitors, by H. K. Mitchell. Protein molecule, resistance to microbicides, mutations, and related problems, by M. G. Sevag. Experiments in microevolution—a summary from the physiological viewpoint, by R. W. Gerard. Appendices: Posing of the basic questions. Historical notes. Author index. Subject index.

Note. The symposium mentioned in the title of this book was held under the joint auspices of the Office of Naval Research and the University of Pennsylvania. Its basic theme and general outline were planned in advance of the meeting, and its outline is included in the volume. Its four major subdivisions indicate the scope of the conference: "I, Basic differences between the parent sensitive and derived resistant individuals (strains, etc.) "II, Control of the development of resistance. "III, Origin of drug-resistant individuals (strains, etc.) and "IV Projection into future. The principal subject is the mechanism of development of resistance to toxic agents, and a theme that runs generally through the papers and discussion is that this mechanism is associated with alterations or loss in enzyme protein. Each of the five sections included a period of discussion among the participants in the symposium, and the transcripts of these discussions are included in the volume. Lists of literature references, some of them rather extensive, are included with the individual papers.

Sherwood Noble Pierce

Immunology Third edition. Illustrated St. Louis The C. V Mosby Company 1951 731 p. illus. 22 cm. $4 50 3140

Contents (abridged): Infection and infectious agents. Inflammation and leucocyte response. Anatomical and physiological factors in infection and resistance of the individual. Natural and acquired immunity. Immunity mechanisms in experimental infections. Complement. Isohemagglutinins—blood groups. The Rh and Hr factors of human blood. Measurement of antibodies. Mechanism of antigen-

Bonar. Therapeutic action of sulfur for powdery mildews and rusts, by C. E. Yarwood. The aromatic diamidines, cinnamic acids, and nitrostyrenes in the treatment of fungus diseases, by A. C. Curtis. Filipin, an antibiotic inhibiting fungi, by D Gottlieb. The sensitivity of pathogenic actinomycetes to various sulfonamide and sulfone compounds, by C. Halde and D Newstrand. The effect of chlorquinaldol alone and in combination with neomycin of the intestinal microbial flora of man by B A Shidlovsky and others. Preliminary results with a new antibiotic, 1968 (sepra) in mice with experimental histoplasmosis, sporotrichosis, and candidiasis, by C. C. Campbell. Nystatin and actidione two antifungal agents produced by *Streptomyces noursei* by R. Brown and E. Hazen. Studies of the chemical properties and structure of *nystatin* (mycostatin) by J H Dutcher and others. Some in vitro characteristics of nystatin (mycostatin) by R. Donovick and others. Bioassay of nystatin (mycostatin) in body fluids, by J F Pagano and H. Stander The effect of nystatin (mycostatin) on experimental candidiasis in mice and *embryonated eggs*, by B. A. Steinberg and W P Jambor Moniliasis in experimental animals—prophylaxis and therapy with nystatin (mycostatin) by E. Hazen and others. Cutaneous moniliasis in pediatrics—diagnosis and treatment with nystatin by B Dobias Therapeutic activity of nystatin (mycostatin) in candida infections, by E. Drouhet. First results in Italy with a new antimycotic, nystatin by F Flarer The use of nystatin as a topical antifungal agent, by J H. Graham and others. Two cases of abdominal wall moniliasis, after colostomy treated with nystatin by A. G. Ochoa. The action of nystatin on the growth of *Sporotrichum schenckii* and on its behavior in vivo, by F Mariat. Evaluation of the action of nystatin (mycostatin) on *Histoplasma capsulatum* in vitro and in hamsters and mice by E. Drouhet, and J Schwarz. Mycostatin and aminostilbamidine treatment of experimental coccidioidomycosis, by L. E. Gordon and C. E. Smith. Therapeutic activity of mycostatin in mice infected with *Histoplasma capsulatum Coccidioides immitis Cryptococcus neoformans Candida albicans* or *Sporotrichum schenckii* by C. C. Campbell. Evaluation of nystatin in the treatment of coccidioidomycosis in man, by V D Newcomer and others. The sensitivity of *Histoplasma capsulatum* to rhodanine and related compounds, by I. B Christison and others. Structural elements of *Histoplasma capsulatum* and their role in immunization against experimental disease, by S. B Salvin and E. Ribi. Histoplasmosis—pathogenesis and immunology in relation to therapy by P K. Beamer and others. Problems in treatment of chronic histoplasmosis as experienced in over twenty cases, by C. A. Brasher and M. L. Furcolow Trials with 2-hydroxystilbamidine, aminostilbamidine MRD-112 and other agents in pulmonary histoplasmosis—experiments with more than twenty cases, by M L. Furcolow and C. A. Brasher Sulfonamides and experimental histoplasmosis, by R. L. Mayer and J Lanzola. The isolation of *Cryptococcus neoformans* from pigeon droppings, by C. W Emmons. Some ecologic studies of *Coccidioides immitis* in soil, by R. Lubarsky and O A. Plunkett. *Coccidioides immitis* in the soil of the southern San Joaquin valley by R. O Egeberg and A F Ely In vitro inhibition of *Coccidioides immitis* by antihistaminics, by D Pappagianis and G. Kobayashi. Effectiveness of DDS in the treatment of chromoblastomycosis and of mycetoma caused by *Nocardia brasiliensis* by A. González Ochoa. Successful treatment of mycetoma caused by *Monosporium apiospermum* by H. Seeliger and M. Reiffenscheid. Index of contributors. Index of subjects.

Note Scientists to the number of 108 from nine countries, including the United States of America, participated in the symposium of which this book is a product. As printed in the volume, the papers are somewhat condensed versions of the papers read at the meeting. Many of them are accompanied by literature references.

Swartz, Jacob Hyams

Elements of medical mycology Introduction by Fred D Weidman Second revised edition. New York Grune & Stratton 1949 179 p illus 22 cm $5 50 3133

Contents General discussion. Diagnosis of fungus infection. Blastomycetes yeastlike fungi. Genus *Microsporum* (Gruby 1843) Genus *Trichophyton* Other pathogenic fungi. Common contaminants and probable pathogens. Immune reactions. Sulfanilamide and its derivatives effect on fungi.

Note. A basic study of the elements of pathologic and clinical investigation of diseases caused by fungous agents. Its presentation of experimental, diagnostic and therapeutic procedures is systematically keyed to practical application. Special discussion is made of the common ringworm infections. An added feature of the volume is a large folding chart classifying the organisms by general and mycologic characteristics, and pathogenicity

IMMUNOLOGY

Boyd, William C

Fundamentals of immunology Third edition, completely revised and rewritten New York Interscience Publishers, Inc. 1956 776 p illus 23 cm $10 00 3134

Content Immunity and immunology Antibodies and antibody specificity Antigens. Cell antigens. Blood groups. Antibody-antigen reactions. Complement and complement fixation. Immediate hypersensitivity Delayed hypersensitivity Non-immunological equivalents of hypersensitivity reactions. Hypersensitivity and immunity Autoimmunization and disease. Immunity in action some examples. Practical use of immunity and hypersensitivity Laboratory and clinical technic. Index.

Note An introduction to the basic principles and facts of immunology directed to medical students and research workers in the fields of chemistry and biology The serological aspects are emphasized, but chapters are included also on laboratory techniques and clinical applications and in this edition the three "practical" chapters, Immunity in action "Practical use of immunity and hypersensitivity and "Laboratory and clinical technic, taken together are 250 pages long. The second edition was published in 1947 This third edition is substantially longer contains several new chapters, and many of those carried over have been extensively rewritten. Most of the chapters have been revised to some extent. Recent literature has been added to the extensive and useful chapter bibliographies.

Carpenter, Philip L

Immunology and serology Philadelphia W B Saunders Company 1956 351 p. illus. 24 cm. $6 50 3135

Contents Infection and immunity The immune reactions. Antigens. Serum proteins. Production of antibody The antigen-antibody reaction. Precipitation. Agglutination. Isohemagglutination. Toxins and antitoxins. Phagocytosis. Cytolysis and complement fixation. Antiviral immunity Allergy Appendix Experiments in serology Index.

Note A textbook based on the author's experience in teaching a course in immunology and serology at the University of Rhode Island. It provides an introduction to the subject at the advanced undergraduate and first-year graduate level In other words, it is directed to students with considerable previous education in biology biochemistry and physiology who are taking their first courses in immunology and serology It is written from a general, fundamental viewpoint without special emphasis on medical aspects although much information is included which is basic to medicine. Selected literature references are included. Laboratory experiments are described in the 14-page appendix.

Kabat, Elvin Abraham, and Manfred M Mayer

Experimental immunochemistry with a foreword by Michael Heidelberger Springfield Ill. Charles C Thomas 1948 567 p. illus. 24 cm. $10 00 3136

Content (abridged) Part I, Immunological and immunochemical methodology Precipitin reaction. Agglutination Complement and complement fixation. Anaphylaxis and allergy Antibodies and their characterization. Part II, Applications and uses of quantitative immunochemical methods. Estimation of antigens. Cross reactions. Effects of chemical treatment in altering immunochemical properties of proteins and polysaccharides. Part III, Chemical and physical methods and special procedures used in immunochemistry Kjeldahl nitrogen determination. Phosphorus estimation. Amino nitrogen determination. *Acetyl determination.* Estimation of uronic acid. Glucosamine estimation. Nucleic acid determination. Estimation of protein with the Folin-Ciocalteu phenol reagent. Determination of protein concentration by density measurement. Estimation of enzyme activity Electrophoretic analysis. Ultracentrifugal analysis. Ultraviolet absorption spectra Titration of proteins with acid and alkali. Dialysis and ultrafiltration. Extraction of antigens from microorganisms. Part IV Preparations Crystalline serum albumins. Gamma globulins. Crystalline enzymes and enzyme precursors. Bence-Jones proteins. Purification of antibodies. Acetylated and malonyl proteins. Phosphorylated proteins. Diphtheria toxin. Balvin-type antigens. Blood group substances. Appendix. Index.

Histoplasma, by A. B. Sabin. Some epidemiological and clinical aspects of pulmonary histoplasmosis in a farm family by C. G. Loosli. An outbreak of an unusual form of pneumonia at Camp Gruber Oklahoma, a review of the outbreak and followup studies, by A. E. Feller and others. Followup of the Camp Gruber epidemic, by H. W Larsh and M. L. Furcolow. *Epidemics of histoplasmosis*, by J. T Grayston and M. L. Furcolow. Discussion of serology of histoplasmosis, by S. B. Salvin. Laboratory infections with *Histoplasma capsulatum*, by M. J. Wills and M. L. Furcolow. Summary, by C. E. Smith, chairman. Second session, Mycological aspects of histoplasmosis: *Histoplasma capsulatum*, a review of its historical background, by L. Ajello. Growth of *Histoplasma capsulatum* in liquid mediums, by S. B. Salvin. The problem of selective isolation mediums for *Histoplasma capsulatum*, by M. A. Gordon. Laboratory studies of *Histoplasma capsulatum*: Size of spores, by G. C. Cozad and M. L. Furcolow. Efficiency of the flotation method in isolation of *Histoplasma capsulatum* from soil, by H. W Larsh and others. The size of spores of *Histoplasma capsulatum*, by A. L. Hubbell and H. W Larsh. Isolation of *Histoplasma* by animal inoculation, by C. W Emmons. The mouse as an aid in the isolation of *Histoplasma capsulatum* and the effect of adjuvants, by H. W Larsh and others. Infection of mice with single spores of *Histoplasma capsulatum*, by L. Ajello and L. C. Runyon. Experimental histoplasmosis in mice, a preliminary report, by J. T. Grayston and others. Actidione in the treatment of experimental histoplasmosis in mice, by C. W Emmons. Immunization of mice against *Histoplasma capsulatum*, by S. B. Salvin. Cultivation of *Histoplasma capsulatum* in the chick embryo, by H. W Larsh and others. Summary by H. W Larsh, chairman. Third session, Serological diagnosis of histoplasmosis: Evaluation of histoplasmin antigens for the complement fixation test, by J. R. Schubert. The collodion agglutination test, by S. Saslaw. The precipitin test in human histoplasmosis, by S. B. Salvin and M. L. Furcolow. A study of the complement fixation reaction in histoplasmosis, employing whole yeast-phase cells as antigen, by J. T. Grayston. Use of yeast-phase antigens in complement fixation test for histoplasmosis. Results with ground yeast-phase antigens in serial specimens of serums from 37 patients, by C. C. Campbell. Cross reactions of mycotic antigens, by C. C. Campbell. Comparative serologic study. Introduction, by M. L. Furcolow. Histoplasmin and whole yeast phase *Histoplasma capsulatum* as antigens in complement fixation tests on histoplasmosis, by D. J. Tenenberg. Collodion agglutination test and complement fixation test with ground yeast-phase antigen, by S. Saslaw. Precipitin and complement fixation with [illegible] whole yeast-phase antigen, by S. B. Salvin. Preliminary experiments on the separation of antiprotein and antipolysaccharide antibodies in North American blastomycosis, by D. S. Martin. Summary and recommendations, by A. B. Sabin, chairman. Fourth session. The skin test as an epidemiological tool: Analogy of coccidioidin and histoplasmin sensitivity by C. E. Smith. Histoplasmin sensitivity conversion rates, by M. E. Mason. The interrelationship of histoplasmin sensitivity in an endemic area, by L. D. Zeidberg. Histoplasmin and tuberculin sensitivity among Illinois residents, by W. G. Bandemkopf and others. Geographic distribution of histoplasmin reactors among school-age children in Jackson County Iowa, by J. T. Grayston, and others. Histoplasmin sensitivity in animals, by R. W Menges. Continued observations on histoplasmin sensitivity and calcified pulmonary lesions in a rural community by C. F. T. Mattern, and others. Standardization of histoplasmin, by W. G. Workman and G. A. Hottle. Availability of standardized histoplasmin, by A. B. Hillegas. Summary by C. G. Loosli. Fifth session. Natural reservoirs of the fungus. Isolation of *Histoplasma capsulatum* from soil, by C. W Emmons. Soil studies, by L. D. Zeidberg. Soil studies, by H. W Larsh and A. Hinton. Studies of *Histoplasma capsulatum* experimentally introduced into tap-water by C. Ritter and R. L. Cody. Water as a possible natural reservoir of *Histoplasma capsulatum*, by M. A. Gordon. Pathological studies of histoplasmosis. Preliminary report on 30 cats and 30 dogs from Loudoun County Virginia, by D. A. Rowley. Histoplasmosis in animals, by C. W Emmons. Animal histoplasmosis, by C. R. Cole and others. The role of animals in the epidemiology of histoplasmosis, by R. W Menges and others. Air and water in the natural history of *Histoplasma capsulatum*, by M. L. Furcolow and W. H. Kurz. Summary by K. Habel, chairman. Sixth session. Summarization and recommendations (J. M. Andrews, chairman). Clinical aspects, pathology and epidemiology. Serology. Skin tests. Mycology. Natural reservoirs. Discussion. Bibliography

Note Histoplasmosis, a fungus infection of the human and domestic-animal population, knowledge of which has tremendously increased since the close of World War II. The Conference on Histoplasmosis was called in 1952 by the Communicable Disease Center of the U S Public Health Service to consider the various aspects of the disease. Those who participated in the conference were asked not to review the literature or to summarize their published work, but to deal entirely with their current research, even if incomplete. These published *Proceedings* are a permanent and valuable result of the conference, covering all aspects of the disease, especially its cause and prevention. Each of the papers is accompanied by a list of bibliographical references.

PARASITOLOGY

Baker E. W., and others

A manual of parasitic mites of medical or economic importance. By E. W Baker, T M Evans D J Gould W B Hull and H L. Keegan. New York National Pest Control Association Inc., 1956 170 p illus 23 cm. $4.25 3144

Contents: Introduction. Morphology. Mounting and examining mites. Key to included species. Holothyridae. Dermanyssidae. Halarachnidae. Rhinonyssidae. Miscellaneous mesostigmatic mites. Macrochelidae. Uropodidae. Pyemotidae. Scutacaridae. Tetranychidae. Cheyletidae. Demodicidae. Myobiidae. Psorergatidae. Trombiculidae. Trombidiidae. Erythraeidae. Hydrachnellae. Acaridae and Glycyphagidae. Sarcoptidae. Psoroptidae. Epidermoptidae. Listrophoridae. Cytoditidae. Laminosioptidae. Feather mites. Oribatei. Index.

Note A reference book useful in the identification and control of parasitic mites. It is not as strictly limited in scope as the title indicates. A number of mites are described which are of no known economical or medical importance. According to the introduction, "The species discussed are either of direct medical and veterinary importance or are frequently encountered because they are parasitic on animals in which man is interested. In the latter category are mites parasitic or predaceous on bees, mosquitoes, grasshoppers, roaches, moths and earthworms. All but a few pages of the volume are devoted to concise monographs on individual species in which (in most instances) there is first a short general discussion covering such points as range, host parasitized, and diseases transmitted; then descriptions of morphology, life cycle and control methods. One or more drawings is usually included. Literature references are given.

Belding David Lawrence

Textbook of clinical parasitology Second edition. New York Appleton-Century-Crofts Inc., 1952 1 139 p. illus. 25 cm. $12.00. 3145

Contents (abridged) Section one, General parasitology: The pathology of parasitic infections. The immunity of parasitic infections. The transmission of parasitic diseases. The diagnosis of parasitic diseases. The treatment and prevention of parasitic diseases. Section two, The protozoa. Section three, The nemathelminthes or roundworms. Section four, The Cestoidea or tapeworms. Section five, The Trematoda or flukes. Section six, Arthropods. Section seven, Technical methods for the diagnosis and treatment of parasitic infections. The examination of parasitic protozoa. The examination of helminths. Serological and chemical methods of diagnosis. The methods of examination of intermediate and reservoir hosts, including mollusks, fishes, birds, mammals and arthropods. Useful drugs in the treatment of parasitic diseases. Insecticides and repellents. Index of authors. Index of subjects.

Note. In this book designed for the instruction of medical students, public health officials, etc., the zoology of the parasites has been subordinated to the pathology diagnosis, treatment, and prevention of diseases. This is true, though the greater part of the work is arranged by systematic zoological groups. In the discussions of each group and subgroup, there is some information on classification and morphology but more space is given to descriptions of life cycles, pathogenicity treatment, and other aspects of interest in medicine and public health. The material added in the present edition includes recently developed knowledge in the amoebida, malaria, etc., recently developed diagnostic methods, and new chemotherapeutic agents. The bibliographies and illustrations have been revised. The scaled drawings of the morphology and life cycles of particular parasites which were a feature of the first edition have been retained.

Boyd Mark Frederick, editor

Malariology a comprehensive survey of all aspects of this group of diseases from a global standpoint. By sixty five contributors Philadelphia W B Saunders Company 1949 2 v illus. 26 cm $35.00 3146

Contents (abridged) Volume I. Section I, Introduction. Historical review I. M. F Boyd. Section II, Parasitology: A catalogue of the species of the genus *Plasmodium*, and index of their hosts, by R.

antibody reactions—cellular agglutination. Precipitins. Toxins and antitoxins. *Normal convalescent and immune sera.* Biological and antigenic specificity Modified and conjugated antigens. Bacterial antigens and specificity The importance of antibodies in diagnosis. The basis of bacterial complement fixation technique. Flocculation *tests in syphilis. Hypersensitiveness. The significance of allergy in* tuberculosis and a few other diseases. Colloids. Authors index. Subject index.

Note A standard treatise which was used as a text in medical schools and *as a survey and guide to the literature by medical* graduates. The field is covered in a compact style with frequent references to the source literature. Extensive bibliographies are included in the chapters. Although intended primarily for readers *who will make clinical applications of the knowledge, the clinical* aspects are not emphasized over the fundamental knowledge. The second edition was published in 1941 Important revisions were made throughout the work in preparing this edition. These include changes in *the text of many chapters and additions to the bibliographies.*

WHITELOCK, *OTTO V ST*, *editor*

Natural resistance to infections Editor in chief *Otto v St. Whitelock.* Associate editor Franklin N Furness Conference chairman Walsh McDermott Consulting editor J S Kiser New York Published by the Academy 1956 *233–414* p illus 22 cm (New York Academy of Sciences Annals Vol 66, art. 2) $3 50 3141

Contents The nature of the properdin system and its interactions with polysaccharide complexes, by L. Pillemer The demonstration *of the bactericidal activity of the properdin system, by A. C.* Wardlaw and L. Pillemer The kinetics of the bactericidal activity of the properdin system, by R. J Wedgwood and L. Pillemer Inactivation of virus by the properdin system, by H. S. Ginsberg and R. J Wedgwood. *The relationship of Terrapterone antibody activator* to the serum-properdin system, by H. A. Feldman. Properdin levels in infectious and noninfectious disease, by C. F Hinz, Jr The properdin system in relation to fatal bacteremia *following* total-body irradiation *of laboratory animals, by O. A. Ross. The effect of* irradiation on natural resistance to infection by C. P Miller Increase in resistance *following administration* of bacterial lipopolysaccharides, by M. Landy *Some factors affecting the resistance of animals to bacterial infection, by D Rowley The effect of various* substances on resistance to experimental infections, by J S. Kiser and others. The effect of peripheral vascular collapse on the antibacterial defense mechanisms, by J Fine. N utritional and genetic *factors in the natural resistance of mice to Salmonella infections, by* H. A. Schneider Cellular products affecting the establishment of bacteria of different virulence by W Braun. Nonspecific defense reactions in bacterial infections, by A. A. Miles. Effect of compo*nents of the tricarboxylic-acid cycle on bacterial infections*, by L. J Berry Biochemical studies on the bactericidal power of phagocytic cells, by J G. Hirsch. *Phagocytosis-promoting factor of* plasma and serum, by J L. Tullis and *D M Surgenor Serum bactericidins active against gram-positive bacteria, by Q N Myrvik.* Effect of levan and dextran on the inflammatory process, by S. Hestrin Concluding remarks, by A. A. Miles.

Note. Papers first presented at a conference held by the Section of Biology of the New York Academy of Sciences in March, 1956, have been made available in this publication. The subject of the conference—as its title is intended *to indicate*—was natural resistance rather than the immunity of antibodies. In the "Concluding remarks Miles raises but does not attempt to answer the question of whether there is such a thing as natural resistance, or whether all resistance to infection is due to antibodies.

WHITELOCK, *OTTO V ST*, editor

Second tissue homotransplantation conference Editor in chief Otto v St. Whitelock Associate editor Franklin N Furness Conference chairmen John Marquis Converse and *Blair O Rogers. New York Published* by the Academy, 1957 735–1073 p. illus 22 cm *(New York Academy of Sciences* Annals. Vol. 64, art. 5) $4 50 3142

Contents Introductory remarks, by H. Koprowski. Introduction, by J M Converse and B. O. Rogers. Part I, Genetics, phylogenetics, and acquired tolerance The genetics of skin grafting, by E. J. Eichwald and others. The genetics of skin homotransplantation in the human by B O Rogers. Prolonged survival of a skin homograft in a patient with very extensive burns, by C. D Kay Scale homotransplantation in goldfish (*Carassius auratus*) by W H. Hildemann. Postpartum induction of tolerance to homologous skin in rats, by M F A. Woodruff. Studies on epidermal cell suspensions, with particular reference to problems of transplantation immunity by R. E. Billingham. The homotransplantation of functional erythropoietic elements in the rat following total-body irradiation, by T T Odell and others. Part II Cellular antibodies, serum antibodies, and delayed hypersensitivity phenomena Similarities between *homograft rejection* and tuberculin-type allergy—*a review of* recent experimental findings, by H. S. Lawrence. Observations on immunological manifestations of the homograft rejection phenomenon in man—the recall flare by F T Rapaport and J M. Converse. *In vitro* studies on cell injury in the tuberculin-type reaction—implications in homotransplantation, by C. B. Favour Passive immunity against four mouse leukoses by means of isoimmune sera, by D B. Amos and E. D. Day The problem of specific inhibition of *antibody synthesis in adult animals by immunization of embryos,* by M. Cohn. Production of delayed sensitivity to protein without detectable circulating antibody by J W Uhr and others. Transplantation studies in patients with agammaglobulinemia, by R. A. Good and others. The level of gamma globulin postoperatively after perforating keratoplastics—a preliminary report on 14 cases, by R. Klen and M Kinsky The demonstration of delayed-type reactivity in congenital agammaglobulinemia, by H. M. Porter Part III, Embryonal, adult, and tumor tissue homotransplants The possibilities of trephoplastic transplants, by R. M. May Studies on kidney homotransplant rejection using a cross-circulation technique, by R. H. Egdahl and D M. Hume. The relation of hair cycles to the survival time of suprapanniculur and subpanniculur skin homografts in rats, by D L. Ballantyne, Jr and J M. Converse. Prolonged survival of skin homografts in uremic patients, by G. J. Dammin and others. The survival of homografts in mice pretreated with antisera to mouse tissue, by N Kaliss. Immune phenomena elicited by transplanted tumors—II, Cytotoxic effects of immune guinea pig sera on mouse cancer cells, by O. N Rambo, Jr and others. Chemical studies on the enhancing factor by A. A. Kandutsch. Part IV *Lymphocytes,* lymph nodes, and homotransplantation Studies on tissue homotransplantation in mice, using diffusion-chamber methods, by G. H Algire and others. *Cellular and humoral factors in the immunity to skin homografts—experiments with a* porous membrane, by M. F A. Woodruff. *Studies on the response of the regional lymph node to skin homografts, by R. J Scothorne.* Studies on the homotransfer of *suspensions of lymph-node cells,* by T N Harris and S. Harris. *Studies on the role of antibodies in the failure of homografts, by G. A. Voisin and P Maurer*

Note Papers originally presented at a conference held by the Section of Biology of the New York Academy of Sciences in February 1956 constitute this monograph. The conference was the second one on tissue transplantation held by the Section on Biology The monograph based on the proceedings of the first conference held in February 1954 is described above under Miner Roy Waldo, editor The papers of the second conference represent a different body of experience than those presented at the first conference. The second conference was devoted largely to the results of basic experiments designed to throw light on fundamental physiologic principles bearing on tissue homotransplantation, while the first conference included papers on the results of both basic experimentation and clinical experience.

WILLIS, *MYRON J*, *editor*

Proceedings of the Conference on Histoplasmosis *held at Excelsior Springs, Missouri,* November *18–20 1952* Sponsored by the Communicable Disease Center of the Public *Health Service. Washington D C.* Government Printing Office, 1956 *322 p illus. 26 cm* (United States. Public Health Service. Public health monograph no 39) $2 00 *3143*

Contents First session, Clinical pathological, and epidemiological aspects of histoplasmosis Clinical diagnosis of histoplasmosis, by M L. Furcolow The fungistatic action of stilbamidine and 2 hydroxy-stilbamidine against *Histoplasma capsulatum* as compared to *Blastomyces dermatitidis,* by I Snapper and S. S. Schneierson. General aspects of the pathology of histoplasmosis, by J Schwarz. Problems in the histological diagnosis of histoplasmosis, by H. E. Fisher-Moloney Differential pathology of histoplasmosis, by H. E. Fisher-Moloney Differential pathology of histoplasmosis pneumonitis caused by ton. An epidemic of military granulomatous pneumonitis caused by

absence made during World War II and subsequently. Also, the recent literature has been added to the extensive, classified bibliography. A sixth edition was published in 1951. $15.00.

CRAIG CHARLES FRANKLIN

Laboratory diagnosis of protozoan diseases. Second edition, with 56 illustrations and 7 colored plates. Philadelphia Lea & Febiger 1948. 384 p illus. (part col d) 24 cm $6.50. 3150

Contents (abridged) Part I, Laboratory diagnosis of amebiasis and flagellate infections. Part II, Laboratory diagnosis of the leishmaniases—kala-azar, oriental sore and espundia. Part III, Laboratory diagnosis of the trypanosomiases—West African or Gambian sleeping sickness—East African or Rhodesian sleeping sickness—Chagas' disease. Part IV Laboratory diagnosis of coccidiosis. Part [illegible] Laboratory diagnosis of the malaria plasmodia. Part VI, Laboratory diagnosis of balantidiasis, Blastocystis cells. References. Author's index. Subject index.

Note A text and reference book designed for physicians who conduct their own clinical laboratories, for public health officials, and for laboratory technicians. The volume includes those methods for laboratory diagnosis which have proved their value in work with protozoan diseases, together with an evaluation of their usefulness. Each section concludes with "Critique of diagnostic methods" wherein suggested diagnostic procedures based on the author's own experience. The revisions and changes made in this new edition are due largely to wartime experience and research, especially with regard to [illegible] malarial fever [illegible], and other intestinal flagellate infections. A few references, published since the previous edition (1943), have been added to the nine-page bibliography.

CULBERTSON JAMES THOMAS

Immunity against animal parasites. New York Columbia University Press, 1941 274 p. illus. 23 cm. $3.50 3151

Contents Introduction. Natural resistance and acquired immunity. Natural resistance [illegible] specifically acquired immunity. [illegible] for immune response. [illegible] Immunity. Mechanisms of acquired immunity. Demonstrations of immunity. Immunity in specific diseases. The amebiases. The leishmaniases. The trypanosomiases. The malarias. The coccidioses. The trematodiases. The cestodiases. The nematodiases. Response to arthropods. Applied immunology. Classification of parasites. Vaccination against parasites. Diagnosis of parasitic infection.

Note An extensive but highly technical discussion of a branch of the study of human disease which was practically unknown before the advent of the 20th century. The reader is assumed to be well versed in parasitology and immunology. The literature on these two subjects from the year 1929 onward has been consulted and significant material thus acquired has been incorporated.

FAUST ERNEST CARROLL

Human helminthology A manual for physicians, sanitarians, and medical zoologists. Third edition, thoroughly revised, with 313 engravings. Philadelphia Lea and Febiger 1949 744 p illus. 24 cm. $10.00 3152

Contents (abridged) Section [illegible] The scope of helminthology. The phenomenon of parasitism in helminth groups. The [illegible] of helminthic infections. The interrelations of the helminth parasite and its host. Control of the helminthic infections of man—the scope of the problem. The scientific nomenclature of helminth parasites. Section II. The Platyhelminths or flatworms. The trematodes or flukes. The human blood flukes. Trematode parasites of the intestinal tract, biliary passages and lungs. The cestodes or tapeworms. Section III, The Acanthocephala, or thorny-headed worms. Section IV The Nematoda, or true roundworms. The aphasmid nematode parasites of man. The phasmid nematode parasites of man. Section [illegible] The Gordiacea, or "hair worms." Section VI, The Annelida. The leeches (Hirudinea). Section VII, Technical aids in the diagnosis and treatment of helminthic infections. The basic equipment required for the diagnosis of helminthic infections. The collection, preparation and preservation of helminthological material. The identification and differential diagnosis of helminth parasites, their larvae and eggs. Intermediate and reservoir hosts involved in human helminthic infections. Anthelmintics and their use. Important literature on human helminthology. General literature. Literature on special groups. Author index. Subject index.

Note A comprehensive manual which is used both for teaching and for reference. The third edition is an extensive revision of the previous edition. New data and concepts have been introduced, including information from findings resulting from investigations conducted during military operations in warm climates during the war years 1942-1945; older information has been re-evaluated. The chapter on Hirudinea (leeches) is new as is glossary of zoological and medical terms contained in the first chapter. The bibliography has been substantially increased and brought up to date. Thirty-four new illustrations have been added, and some older ones revised and remodeled.

GOULD, SYLVESTER EMANUEL

Trichinosis. Springfield Ill Charles C Thomas 1945 356 p illus. 25 cm. $6.00 3153

Contents Historical. Life cycle. Morphology. Epidemiology. Trichinosis in animals. Pathology. Immunology. Laboratory diagnostic methods. Symptomatology. Diagnosis. Treatment. Prognosis. Control measures. Bibliography. Author index. Subject index.

Note The aspects of trichinosis which are of interest to medicine, food inspection, and public health are covered in this monograph. The chapters on the clinical aspects are especially full. The work is essentially a digest of the world literature pertaining to the subject. The bibliography covers publications issued 1822–1945. Statements in the text are keyed to the bibliography. There are approximately 121 figures, of which a considerable number are reproduced from microphotographs of trichina-infected tissue.

HERMS, WILLIAM BRODBECK

Medical entomology with special reference to the health and well being of man and animals. Fourth edition. Based on the book known as *Medical and veterinary entomology* New York The Macmillan Company 1950 643 p illus. (part col d) 24 cm. $9.00 3154

Contents Introduction. Scope and method. Parasites and parasitism. How arthropods cause and carry disease. Structure, development, and classification of insects and arachnids. Insect and arachnid mouth parts. Cockroaches and beetles. Bugs. The lice. Gnats (exclusive of mosquitoes). Mosquitoes—classification and biology. Mosquitoes as vectors of disease. Mosquito abatement. Horseflies, deer flies, and snipe flies. Houseflies. Bloodsucking muscoid flies. Myiasis. Louse flies. Fleas. Ticks and tick-borne diseases. Mites. Venomous and urticarial arthropods. Index.

Note A standard textbook and reference work in which the subject is presented chiefly from the standpoint of public health. However there is also a good deal of material of veterinary interest, for instance a detailed description of the technique of the control of poultry lice by dipping the birds. Statements in the text are carefully identified with the source articles, hence, the book serves as a guide to a considerable range of literature. It has been substantially revised in this edition and now includes discussions of DDT and other new insecticides in the control of insect pests. It does not of course include material on all of the recently developed insecticides.

JAMES MAURICE THEODORE

The flies that cause myiasis in man. Washington D C. Government Printing Office 1947 175 p. illus 23 cm. (United States. Department of Agriculture Miscellaneous publication no 631) Gratis. 3155

Contents Introduction. Types of myiasis. Life histories. Morphology. Technique for rearing, preserving, and shipping. Classification of the Diptera. Keys to families of Diptera. The family Sarcophagidae. The family Calliphoridae. The family Gasterophilidae. The family Cuterebridae. The family Hypodermatidae. The family Oestridae. The family Muscidae (including the Anthomyiidae). The family Tipulidae. The family Psychodidae. The family Sylvicolidae. The family Stratiomyidae. The family Therevidae. The family Syrphidae. The family Ephydridae. The family Drosophilidae. The family [illegible]idae. The family Piophilidae. The family Sepsidae. The family Phoridae. The family Larvaevoridae (Tachinidae). Literature cited. Index.

Coatney and R. L. Roudabush. Life cycles of the malaria parasites with special reference to the newer knowledge of pre-erythrocytic stages, by C. G. Huff The human parasites of the genus *Plasmodium* by E. Brumpt. A photographic atlas of human plasmodia, by M F Boyd. Synopsis of species found in other mammals, by L. T Coggeshall. Synopsis of species of avian malaria parasites, by R. Hewitt. Laboratory diagnosis of malaria infections, by M F Boyd and others. In vitro methods for study and cultivation of plasmodia, by Q M Geiman. Section III Definitive hosts Insect vectors, by Col Sir R. Christophers. Anopheline mosquitoes—morphology in different stages and instars—life history by H. S. Leeson and P A. Buxton The physiology of mosquitoes, by V B Wigglesworth. Ecology of anopheline mosquitoes, by M. Bates. Culicine and aedine mosquitoes and the malaria infections of lower animals, by L. Vargas. Laboratory technics for the study of simian malaria, by R. J Porter Technics applicable to experimental infection of birds, by R. Hewitt. Section IV Intermediate host Epidemiology of malaria—factors related to the intermediate host—factors related to the definitive host, by M F Boyd. Endemic and epidemic prevalence, by Col. Sir R. Christophers. Volume II. Surveys—epidemiologic and entomologic, by M F Boyd and others. The pathologic anatomy of malaria, by H. C. Clark and W J Tomlinson. The physiologic pathology of malaria, by J D Fulton and B. G. Maegraith. Immunity in the malaria infections, by W H. Taliaferro. Old and new plasmodicides, by L. T Coggeshall and B Craige. Prevention of malaria infections by drug prophylaxis, by J J Sapero Treatment of patent infections, by W S. Dove. Induced malaria as a therapeutic agent, by F T Becker Section V Control and eradication General considerations in control and eradication by Sir M Watson. Species sanitation and species eradication for the control of mosquito-borne diseases, by F L. Soper Mosquito repellents, by E. F Knipling Imagocides, by F C. Bishopp. Drainage of mosquito-breeding water collections, by E. H. Magoon and others. Larvicides, by F C. Bishopp. Naturalistic methods of anopheline control, by K. B Williamson. Control of malaria in the United States Army by J S. Simmons. Planning for malaria control by M. F Boyd. Appendixes. Indices.

Note The contributors to this monumental work include authorities of several nations and their papers were written especially for it. The two volumes contain together 70 papers or chapters. Not listed above but nevertheless valuable are three series of six papers each which cover the anophelines, the incidence of malaria, and the control of malaria in the various regions of the world. The appendixes contain lists of equipment for field and laboratory investigations, directories of manufacturers and distributors of equipment and supplies for use in mosquito control Each chapter is accompanied by extensive references. The indexes are exceptionally full, and the author index includes the names of authors of cited papers.

CHANDLER, ASA C

Introduction to parasitology, with special reference to the parasites of man Ninth edition. New York John Wiley & Sons, Inc, 1955 799 p illus 23 cm $8 50 3147

Content Introduction Parasites in general. Part I, Protozoa Introduction to protozoa. Spirochetes. Amebas. Intestinal flagellates and ciliates. Hemoflagellates—I, Leishmania and leishmaniasis—II, Trypanosomes. The Sporozoa—I Malaria. Other Sporozoa, and arthropod-borne microorganisms other than protozoa. Part II Helminthology Introduction to the worms. The trematodes or flukes—I, General account—II Schistosomes—III, Other trematodes The Cestoidea or tapeworms. Acanthocephala (spiny-headed worms) The nematodes in general Trichuris, Trichinella, and their allies. The hookworms and their allies—suborder Strongylata. Other intestinal nematodes. Filariae, Spiruroids, and guinea worm. Part III, Arthropods Introduction to arthropods. The Acarina (mites) and Pentastomida. Ticks. Bedbugs and other Hemiptera Lice (Anoplura and Mallophaga) Fleas (Siphonaptera) Diptera—Bloodsucking and disease-carrying flies other than mosquitoes—II Mosquitoes—III, Fly maggots and myiasis Sources of information. Index.

Note A long-established, introductory text in which the biological aspects of human parasitology are emphasized. Life cycles, epidemiological factors, interrelations of parasite and host, and other aspects which underlie medical and public-health techniques of treatment and prevention are given more attention than classification, nomenclature, and morphology It is used as a text for first courses in parasitology in medical schools, schools of zoology, etc and as a reference book. The eighth edition was published in 1949 In this edition the most obvious changes are in the illustrations, many of which are new and in the bibliographies to which have been added references to literature published as recently as 1954 In addition a number of the chapters have been rewritten in whole or in part although the scope and arrangement of the book are unchanged.

COGGESHALL, LOWELL T, AND OTHERS

The chemotherapy of filariasis New York The New York Academy of Sciences 1948. 152 p illus 24 cm (New York Academy of Sciences Annals Vol 50, p 19–170 1948) $2 50 3148

Contents Filariasis, by L. T Coggeshall. General experimental methods used in studying filaricides, by R I. Hewitt. Use of arsenicals in filariasis, by G. F Otto and T H. Maren. Treatment of filariasis with anthiomaline (lithium antimony thiomalate) by H. W Brown Treatment of filariasis with neostibosan and some other compounds, by J T Culbertson. Experimental therapy of onchocerciasis with trivalent antimonials by F C. Rector and others. Tolerance of antimony and arsenic by intensively treated patients, by H. M Rose. Chemistry of the cyanine dyes, by L G S. Brooker Chemotherapeutic activity of cyanines and related compounds in filariasis in the cotton rat, by H. N Wright and others Effect of cyanine dyes on the metabolism of *Litomosoides carinii*, by E. Bueding. Antifilarial action toxicology and clinical trial of cyanine dyes in filariasis, by L. Peters. The chemistry of piperazine compounds in the chemotherapy of filariasis, by S. Kushner and others. Parasitology of piperazines in the treatment of filariasis, by R. I. Hewitt and others. Some toxicological and pharmacological properties of 1-diethylcarbamyl-4-methylpiperazine hydrochloride, hetrazan, by B K. Harned and others. The treatment of filariasis bancrofti with 1-diethylcarbamyl-4-methylpiperazine hydrochloride (hetrazan) by D Santiago-Stevenson and others.

Note The papers presented in this volume were read at a conference held by the New York Academy of Sciences in October, 1947 Filariasis, a parasitic disease, the chief complication of which is elephantiasis, had been given increased attention after thousands of American soldiers contracted it in the Pacific during World War II. Since control of the infection by means of insecticides and immunization holds little promise of success, the main effort is now being directed toward the discovery of effective drugs. Results of experiments with various chemical compounds on animals and humans are reported in these papers. Brief bibliographies are given at the ends of some of the papers.

CRAIG, CHARLES FRANKLIN, AND ERNEST CARROLL FAUST

Clinical parasitology With a chapter on "Control of medically important arthropods," by Albert Miller Fifth edition thoroughly revised illustrated with 326 engravings and 6 colored plates Philadelphia Lea & Febiger 1951 1 032 p illus (part col'd) 24 cm 3149

Contents (abridged) Section I General introduction and orientation The epidemiology of parasitic infections The disease processes produced by parasites in the human body and their manifestations. Diagnosis, prognosis and treatment of parasitic infections. The geographical distribution of parasitic infections, with special reference to human disease. Scientific nomenclature. Section II, Protozoa and protozoan infection. Section III, Helminths and helminthic infections The roundworms. The aphasmid nematode parasites of man. The Gordiacea or "hairworms. The morphology biology and classification of the flatworms (Platyhelminthes) The digenetic trematodes of flukes, general considerations. The cestodes or tapeworms of man. The Acanthocephala or thorny-headed worms. The leeches (Hirudinea) Section IV Arthropods and human disease The morphology biology and classification of arthropods of medical importance. Insects of medical importance Biting lice (Mallophaga) and sucking lice (Anoplura) The flies or Diptera. The fleas or Siphonaptera. Insects causing vesication urtication and venenation of man. Section V Technical appendix Technics and aids for the collection, culture preparation and identification of parasitic protozoa. Technics and aids for collection, culture, preparation and identification of helminths. Technics and aids for the collection, preparation and identification of arthropods of medical importance. Synoptic tables on diagnosis, recommended treatment and teaching aids in clinical parasitology Section VI, The literature of clinical parasitology Index of authors. Subject index

Note. A long-established comprehensive text for students and reference manual for practitioners, laboratory workers, and directors of diagnostic laboratories. In it are presented the most essential facts regarding symptoms, methods of diagnosis, treatment and control of those parasites which are of clinical and public health interest. The fourth edition was published in 1945 A substantial amount of material has been added in the present edition, reflecting the development of new drugs, new insecticides, and the other

VON BRAND THEODOR

Chemical physiology of endoparasitic animals. New York Academic Press, Inc. 1952 339 p. illus. 23 cm. $8.50. 3161

Contents (abridged) Part I. Chemical composition of endoparasites: Dry matter and inorganic substances. Carbohydrates. Lipids. Proteins. Miscellaneous physiologically active substances. Pigments. Toxic substances. Part II. Metabolism of endoparasites: Water metabolism and osmotic relationships. Carbohydrate metabolism. Lipid metabolism. Protein metabolism. The aerobic and anaerobic gaseous exchanges. The growth requirements of parasites. Part III. Chemical host-parasite relationships: Nutritional relationships between parasites and hosts. Metabolic disturbances in parasitic infections. Endocrinological relationships. Parasite physiology and chemotherapy. Author index. Subject index.

Note A summary of the established knowledge of the chemical composition, metabolism, and biochemical aspects of host-parasite relationships of such parasites as protozoa and the endoparasitic arthropods. The text is a compact literature digest with careful references to the source articles. The author index includes the names of all authors of cited papers. The book is of interest to professional biochemists, physicians specializing in tropical medicine and parasitology and zoologists doing research in parasitology. The author is associated with the Laboratory of Tropical Diseases of the National Institutes of Health.

Note The families, genera, and species of Diptera responsible for myiasis in man are identified and described in this monograph, myiasis being defined as the condition resulting from the invasion of tissues or organs of man or animals by dipterous larvae. For the families and genera, there are general descriptions, followed by keys to aid in identification of both adults and larvae. The species are described under the following headings synonyms, recognition characters, geographical distribution life history and pathogenesis, and literature. The total known world geographical distribution for each species is given not merely the geographical distribution of recorded myiasis. The bibliography lists 160 references in eight languages.

MORSE, KENNETH T , editor

Some protozoan diseases of man and animals anaplasmosis, babesiosis, and toxoplasmosis. Editor in chief Kenneth T Morse. Conference organizing committee Clarence R. Cole, *chairman, and others. Consulting* editor Ross F Nigrelli New York Published by the Academy, 1956 25–277 p illus 22 cm. (New York Academy of Sciences Annals Vol 64, art. 2) $3.50 3156

Contents Part I, Anaplasmosis Manifestations and diagnosis of anaplasmosis, by H. Schmidt. The status of the complement-fixation test for the diagnosis of anaplasmosis in 1955 by D. W Gates and T O. Roby Transmission of anaplasmosis, by P L. Piercy The prevention and treatment of anaplasmosis, by J G. Miller Part II, Babesiosis Classification, transmission, and biology of piroplasms of domestic animals, by W O Neitz. *Babesiosoma* gen. nov and other babesioids in erythrocytes of cold-blooded vertebrates, by S. Jakowska and R. F Nigrelli. The manifestations and diagnosis of babesia infections, by W D Malherbe. Treatment and control of babesiosis, by J Carmichael. *Part III*, Toxoplasmosis Introductory remarks, by F S. Markham. Propagation, morphology and biology of *Toxoplasma*, by L. Jacobs. Congenital human toxoplasmosis, by H. A. Feldman and L. T Miller Toxoplasmosis acquisita lymphnodosa—clinical and pathological aspects, by J C. Siim. The laboratory diagnosis of toxoplasmosis, by H. F Eichenwald. Pathogenesis of toxoplasmosis and of infections with organisms resembling *Toxoplasma*, by J K. Frenkel. Newer knowledge of the chemotherapy of toxoplasmosis, by D E. Eyles. On the nomenclature of *Besnoitia besnoiti* protozoan parasite, by W L. Jellison. Transmission of the protozoan *Besnoitia jellisoni* by ingestion, by W L. Jellison and others. Summary and challenge, by D E. Eyles.

Note Papers first presented at conference held by the Section of Biology of the New York Academy of Sciences in November 1955 are published in this monograph. All are listed by title and author above. Most of the papers include literature references.

NEW YORK ACADEMY OF MEDICINE SECTION ON MICROBIOLOGY

Parasitic infections in man. Symposium held at the New York Academy of Medicine March 15 and 16 1949 Edited by Harry Most. New York Columbia University Press 1951 229 p illus. 24 cm $4 50 3157

Contents Introduction—the world health importance of parasitic diseases, by P F Russell. The significance of new findings in the life cycle of malarial parasites, by C. G. Huff. Immunological mechanisms in parasitic infections, by J T Culbertson. Immunological diagnosis of parasitic diseases, by J Bozicevich. Diagnosis of intestinal helminths and protozoa—current perspective, by N R. Stoll Studies on growth and metabolism of Endamoeba histolytica, by W W Frye. The physiology of blood flagellates, by T von Brand. Biochemistry and metabolism of malarial parasites, by R. W McKee. The cultivation of malarial parasites, by Q M Geiman. Metabolism of helminths, by E. Bueding. Pharmacologic evaluation and clinical application of amebacides with special reference to the thioarsenites, by H. H. Anderson. The status of antimalarial drugs, by G. R. Coatney Theory of filariasis and the more common intestinal helminths, by H. W Brown *The treatment of schistosomiasis*, by F J Brady

Note. A collection of original papers prepared for delivery at the symposium mentioned in the book's title. The authors are recognized authorities in parasitology and related fields, and their papers are addressed primarily to professional orkers in medicine and public health. The book as hole presents a cross section of the current knowledge and research in human parasitology. Substantial lists of references accompany most of the papers. The book contains neither subject nor author indexes.

SAWITZ, WILLIAM G

Medical parasitology for medical students and practicing physicians Second edition. New York McGraw Hill Book Company, Inc. 1956 342 p illus 23 cm $6 00 3158

Contents Protozoa. Helminths. Arthropods. Treatment. Synopsis. Techniques for laboratory diagnosis. Vocabulary of technical terms. Index.

Note. A well-organized manual f essential information on human parasitology for medical students and practitioners. Its purpose is to aid in the identification of parasites and in the diagnosis and treatment of parasitic infection. It is arranged to facilitate reference use. In the discussions of individual species of parasites, subheadings in distinctive type are used, and treatment is either explicitly described or reference is made to the exact page in the chapter on treatment. The latter chapter is 43-page summary of drugs and other therapeutic measures applicable to specific parasitic infections. The volume is illustrated with many line drawings of parasites and their anatomy which are clearly drawn and reproduced in large scale. The first edition was published in 1950. The organization of this second edition is similar. The synopsis chapter is a new addition and important revisions have been made in the chapter on treatment, among other changes.

STRONG, RICHARD PEARSON, AND OTHERS

Onchocerciasis with special reference to the Central American form of the disease. Cambridge Mass Harvard University Press, 1934 234 p illus 26 cm. $5 00 3159

Contents (abridged) Part I, Onchocerciasis with special reference to the Central American form of the disease, by R. P Strong Previous investigations relating to Central American onchocerciasis. The regions in Guatemala in which the present investigations were particularly conducted. Epidemiological and endemiological studies. Clinical and pathological observations. *Description of the adult* parasite and microfilariae. *Other* pathological conditions. Ocular complications. Transmission. *Other* parasites found in dissections. Immunity Studies of microfilaricidal substances. Public health aspects. Prophylaxis and treatment. Bibliography Part II, On the validity of the various species of the genus Onchocerca Diesing, by J H. Sandground *Outline of the history of Onchocerca and species attributed thereto*. Material. Definition of the genus and discussion of taxonomic criteria for the species. Discussion. Summary and conclusions. Bibliography Part III, Notes on the black-flies or Simuliidae, with special reference to those of the Onchocerca region of Guatemala, by J C. Bequaert Introduction. Early stages. *Adult flies*. Taxonomy Bibliography Part IV Some epidemiological facts about the onchocerciasis of Guatemala, by M. Muñoz Ochoa Geographical information. Seasons and climate. Population, races, certain customs. Statistics. Discussion. Summary

Note A detailed discussion of this rare, parasitic condition by group of authorities, who lived and orked in the restricted area here it is endemic.

UNITED STATES NAVAL MEDICAL SCHOOL

Medical protozoology and helminthology Revised 1955 Bethesda, Md. Naval Medical School 1955 218 p. illus (part col d) 26 cm. 3160

Contents (abridged) Medical parasitology Medical protozoology I testinal protozoa. Malaria parasites. Blood and tissue flagellates. *Medical helminthology* Flukes (Class Trematoda) Tapeworms (Class Cestoidea) Intestinal roundworms. Laboratory diagnosis of intestinal nematode infections. Trichinosis. Tissue roundworms. Laboratory diagnosis of tissue roundworm infections. Key to the eggs of helminths. Key to the larval forms of helminths. Key to the adult helminths. Laboratory methods for detection and recognition of helminths. Reference list.

Note. A concise manual useful as an introduction to parasitology It is primarily guide to laboratory diagnostic procedures, but it contains also information on the biological classification, life cycles, etc. of the parasites discussed. It is exceptionally well illustrated for a book of its scope. The illustrations include 91 text figures, many of them in large scale and several plates in color

medicine. Nervous and mental diseases. Obstetrics and gynecology. Ophthalmology. Orthopedic surgery. Pathology and physiology. Pediatrics. Physical medicine. Preventive and industrial medicine and public health. Radiology. Surgery, general and abdominal. Urology. Arthritis and rheumatism. Miscellaneous topics. Commercial exhibits. Index.

Note The scientific exhibits have been a valuable feature of the meetings of the American Medical Association for a number of years. Essentially these are a graphic presentation of advances in medicine and surgery. Prior to 1955, no photographic record was kept, and except for isolated instances, the exhibits were dismantled and the material dispersed. In 1955 the publisher of this volume began to publish a record of them in which each exhibit is reproduced from photographs taken of it at the annual meeting. Charts, diagrams, explanatory legends, instruments and equipment are all reproduced as they appeared in the exhibits though often in a much reduced scale and without color. In this second volume in the series, the material is organized under the headings given above, which serve to illustrate the breadth of scope.

American Medical Association

J. A. M. A. queries and minor notes. St. Louis. Published for the American Medical Association by The C. V. Mosby Company 1956. 334 p. 23 cm. $5.50 3169

Contents (abridged) Body as a whole. Integumentary system. Musculoskeletal system. Respiratory system. Cardiovascular system. Blood and lymphatic systems. Digestive system. Urogenital system. Endocrine system. Nervous system. Organs of special sense. Miscellaneous.

Note One of the features of the *Journal of the American Medical Association* is a column of questions from physicians seeking information on matters of diagnosis, programs of treatment, prognosis of cases and other clinical matters. Answers to the questions are supplied by competent authorities, and both questions and answers are published. The questions and replies published in the *Journal* during the 12 months ended June, 1955 are republished in this volume. Although [illegible] the book is interesting and sometimes helpful reading for graduate general practitioners.

American Medical Association

Standard nomenclature of diseases and operations. By Richard J. Plunkett, editor and Adaline C. Hayden, associate editor. Fourth edition. New York. McGraw Hill Book Company Inc., 1952. 1,034 p. illus. 22 cm. $8.00 3170

Contents (abridged) Instructions to medical record librarians. Scheme of classification. Nomenclature of diseases. Nondiagnostic terms for hospital records. Supplementary terms. Operations, introduction. Classification of operative procedures. Nomenclature of operations. Anesthesia section. Disease index. Operation index. Appendix. Code numbers of International list of causes of disease, injuries and causes of death cross-referenced to "standard" code numbers.

Note The standard United States authority on nomenclature and classification of diseases and operations and on subjects pertaining thereto. The present edition represents an extensive and careful revision. Among the important changes is the inclusion of code numbers that correlate this work with the *International statistical classification of diseases, injuries, and causes of death*.

Andrews, Edmund

A history of scientific English: the story of its evolution based on a study of biomedical terminology. West Ridge, N. H. Richard R. Smith, 1947. 342 p. illus. 24 cm. $7.50. 3171

Contents (abridged) Indo-European philology. Semantics: the science of meanings. The history of medical terminology. Prehellenic influences. The Aryan heritage. Greek. Latin. Dead Latin. Arabic. French. English. Science vs. vulgarity. German. The future. Bibliography. Index.

Note An informal but not uninformed treatise. The author is Doctor of Medicine, and there is more emphasis on medical etymology than might be inferred from the title and table of contents. Planned as philology [illegible] rather light reading, but it can not be overlooked by professional students of language. The index includes every word discussed in the text—a feature that makes the book easy to use for quick reference.

Annual review of medicine.

Volume 7. Edited by David A. Rytand and William Creger. Palo Alto. Annual Reviews Inc. 1956. 611 p. 23 cm. $7.00 3172

Contents Viruses of the upper respiratory tract, by D. D. Jackson. Nutrition and nutritional diseases, by W. J. Darby. Endocrinology (the hormones), by C. Dodds and others. Obstetrics, by A. C. Barnes. Advances in the treatment of sterility, by E. J. Farris. Psychiatry, by L. C. Kolb. Pulmonary emphysema, by R. V. Ebert. The metabolic response to trauma, by J. E. Rhoads and others. Laboratory aids to diagnosis and therapy, by J. G. Reinhold. Toxicological aspects of occupational hazards, by H. E. Stokinger. Sympathetic blocking agents, by F. F. Yonkman. Kidney (cardiac during anesthesia), by E. M. Papper and S. H. Ngai. Radioactivity injury and recovery from radiation exposure, by J. W. Howland. Diseases of the kidney, by C. Bras and others. Cardiovascular diseases (medical), by B. Lopez and C. Tomlin. Diseases of the cardiovascular system (surgical), by C. Hufnagel. Diseases of the gastrointestinal tract, by J. Cole and R. A. Rovelstad. Hematopoietic responses to radiation injury, by L. Jacobson. Neoplastic diseases (cancer), by D. Laszlo and others. Immunity (properdin, agammaglobulinemia, irradiation and immunologic paralysis), by S. Raffel. Pediatrics, by R. V. Platou. Diseases of the nervous system, by W. H. Sweet. Audiology, by D. M. Markle and E. P. Fowler, Jr. Diseases of the bones and joints, by J. R. Bauer. Applied preventive medicine, by H. S. Leavell. Annotated list of reviews in medicine, by E. MacKay and L. MacKay. Author index. Subject index.

Note The list of annotated reviews in medicine which appears near the end of the present volume is a special feature of this series. It lists annually the review articles that have been published during a period of approximately one year. In this instance the coverage is from late 1954 to late 1955. The information given about each article includes title, author's name, title of journal, volume number, pages and year of publication, the number of references and sometimes a very short annotation. In previous years the list was classified more or less in accordance with the topics covered in the surveys in the particular volume. In this volume that arrangement has been abandoned in favor of an alphabetical arrangement of topics running from "allergy" to "vascular system." The other chapters in the book are very concise summaries of the recent international literature on the topics named in their titles. Some cover the literature of only a single year, others of a longer period. For example, Darby's "Nutrition and nutritional diseases" is based on the literature of approximately a five-year period ending in 1955.

Binger, Carl

The doctor's job. New York. W. W. Norton & Company Inc. 1945. 243 p. 21 cm. $3.75 3173

Contents (abridged) Background and changes. Specialties and specialists. The choice of physician, medical fees and etiquette. The relationship of doctor and patient. Medicine and psychoanalysis. Psychiatry and medicine. Psychosomatic medicine or mind and body relationships. Stomach ulcer. Allergy: asthma and tuberculosis. High blood pressure. The care and control of diseases. Convalescence and chronic disease. The prevention of illness. Office practice, hospitals and outpatient departments. Socialized medicine or paying the piper. Past, present and future. Bibliography. Index.

Note Here the author, a medical doctor, provides for lay readers an authoritative discussion of the cause and treatment of some common diseases. He also deals with the problems of doctor-patient relationships, the choice of a physician, the family doctor versus the specialist, and topics in the field of psychosomatic medicine. Throughout the book, effective use is made of illustrative anecdotes taken from the author's personal experience and from events in medical history. The work is the first volume of the Vernon Medical Award which was established to encourage the writing of books for general readers on medicine and the medical profession.

Brodman, Estelle

The development of medical bibliography. Baltimore. Medical Library Association. 1954. 226 p. illus. 19 cm. $5.00 3174

Contents The history of medical bibliography. Development of bibliographic technique in the 17th Century. Golden Age of bi-

MEDICINE

GENERAL, INCLUDING TEXTBOOKS FOR GENERAL MEDICINE

ADVANCES IN INTERNAL MEDICINE Volume IV Editors, William Dock and I Snapper, associate editors, Tinsley R. Harrison, Chester S Keefer, Warfield T Longcope, J Murray Steele Chicago The Year Book Publishers, Inc., 1950 549 p illus 23 cm $10 00 3162

Contents Nitrogen mustards in the treatment of neoplastic disease, by D A. Karnofsky Use of radioactive isotopes in medicine, by L R. Wasserman and R. Loevinger Brucellosis, by A. I Braude and W W Spink. Advances in the neuromuscular disorders, by D McEachern and R. Rabinovitch Use of sodium depletion in therapy by W Dock. Clinical use of anticoagulants, by J E. Estes and E. V Allen. Hepatitis and cirrhosis of the liver by A. J Patek, jr Hepatic tests, by H. Popper and F Schaffner The vascular physiology of hypertension, by G W Pickering. Author index. Subject index. Cumulative index Volumes I-IV

—— Volume V Editors William Dock and I Snapper Chicago The Year Book Publishers, Inc. 1952 464 p illus 23 cm. $10 50 3163

Contents Diseases of the pregnant woman affecting the offspring, by M. H. Ross. Catheterization of the heart, by R. J Bing. Portal hypertension and its treatment, by A H. Blakemore. The anemia of infection XVII. A review by G. E. Cartwright and M. M Wintrobe. Gout, a derangement of purine metabolism, by A. B Gutman and T F Yü. Clinical aspects of ganglionic and adrenergic blocking agents, by R. H. Lyons and V L. Love Aspects of the influenza problem, by J Mulder Experiences with adrenocorticotropic hormone (ACTH) and cortisone by C. Ragan. Abnormal proteins in myeloma, by J Waldenström.

—— Volume VI. Editors William Dock and I Snapper Chicago The Year Book Publishers Inc., 1954 375 p illus 23 cm. $10 00 3164

Contents Uropepsin by H C. Balfour jr Glucagon the hyperglycemic-glycogenolytic hormone of the pancreas, by P P Foà Diagnosis of cancer of internal organs by Papanicolaou technic, by R. M Graham Spatial vectorcardiography by A. Grishman. The L E. cell phenomenon, by M M Hargraves. Biopsy studies of the liver and kidney by P Iversen and others. Thrombotic thrombocytopenic purpura, by K. Singer Porphyria, by C. J Watson Diaphragmatic hernia, by S. Weintraub. The determination of insulin in blood, by A. F Willebrands and J Groen. Author index. Subject index.

—— *Volume VII. Editors William Dock* and I Snapper Chicago The Year Book Publishers Inc 1955 311 p illus 23 cm $8 50 3165

Contents Pathogenesis and treatment of renal lithiasis—newer concepts, by A. J Butt. Hepatic coma, by C. F Davidson. The pathophysiology of the pancreas, by D A. Dreiling and H. D Janowitz. Clinical significance of serum mucoproteins, by E M Greenspan. Advances in physiology of clinical disorders of the adrenal cortex, by J W Jailer Diseases of the pericardium, by V A. McKusick and A. M Harvey The nephrotic syndrome by J R Squire. Applied pulmonary physiology by D J Stone. Author index. Subject index.

—— Volume VIII Editors William Dock and I Snapper Chicago The Year Book Publishers, Inc., 1956 366 p. illus. 23 cm. $9 00 3166

Contents. Disorders of esophageal motor function, by F J Ingelfinger Peptic ulcer—review of recent literature pertaining to etiology pathogenesis, and certain clinical aspects, by J. B. Kirsner and others. Digitalis and potassium, by B. Lown. Aldosterone, by J A. Luetscher jr Adrenalectomy and hypophysectomy in the treatment of advanced cancer by O H. Pearson. Chemotherapy of tuberculosis, by W F Russell, jr and others. Trace metals and chronic diseases, by H. A. Schroeder Hemoglobins and disease, by R. J Watson. Author index. Subject index.

Note A useful review series of the kind which publishes reviews of topics of current interest rather than reviews of the literature of a chronological period such as a year Recent literature is, of course emphasized, but each reviewer covers whatever he considers necessary for an adequate treatment of his topic. The reviews are written by authorities, often by authors who have themselves contributed to the progress about which they write. The series is of interest both to general practitioners of medicine and to specialists who wish to keep up with developments in this branch of medicine.

AMERICAN FOUNDATION

Medical research a midcentury survey Boston Published for the American Foundation by Little Brown and Company 1955 2 v 23 cm $15 00 3167

Contents Volume I. American medical research—in principle and practice Introductory Medical research in the perspective of biological chemical, physical, mathematical science. Current trends and current problems in medical and biological research in the United States. Research agencies. Clearing results and controlling products of medical research. Appendix Major sources. Volume II. Unsolved clinical problems—in biological perspective Introductory Current metabolic concepts orienting research in biology and medicine. Cancer Infertility Arteriosclerosis. Hypertension. The rheumatic syndromes. Tuberculosis. The nature of viruses and of virus diseases. Alcoholism. Biology of schizophrenia. Appendix Major sources.

Note The results of a very extensive study of medical research and medical care are published in this work. Medical research is taken to include research in biology chemistry and mathematics contributing, or capable of contributing to medicine. The study was carried out under a consultant committee comprised of eminent teachers of medicine in medical colleges and hospitals, chemists and biologists, with Esther Everett Lape of the American Foundation staff in charge of the project Presented in the first volume are information and discussions on the concepts, methods, financing, governmental relations, professional literature etc., of medical and related research in contemporary United States of America. Types of research agencies and individual research agencies also are described in this volume. The second volume is devoted to a summary of accumulated knowledge and a discussion of problems awaiting investigation or further investigation in the nine clinical entities named in the above Contents for Volume II. Extensive though selected bibliographies are included in both volumes. Unfortunately no index has been provided to authors or subjects.

AMERICAN MEDICAL ASSOCIATION

A. M A. scientific exhibits 1956 Sponsored by Council on Scientific Assembly, American Medical Association New York Grune & Stratton 1956 411 p illus 28 cm. $10 00 3168

Contents (abridged) Anesthesiology Dermatology Diseases of the heart. Gastroenterology and proctology General practice. Internal medicine Laryngology otology and rhinology Military

General

thyrotoxicosis. Management of myxedema. Treatment of cardiovascular manifestations of thyroid disorders. Management of disorders of cardiac rhythm. Medical management of hypertension. Treatment of painful disorders of skeletal muscle. Use of new antimicrobial agents in genitourinary infections. Management of the menopause. Treatment of morphine addiction. List of conferences for volumes 1, 2, and 3.

—— Volume five. Edited by Harry Gold, David P Barr McKeen Cattell Frank C. Ferguson, jr., Frank Glenn and George Reader New York The Macmillan Company 1952 295 p. 21 cm. $4.50. 3181

Contents: Treatment of cough. The management of fever. General indications for vitamin therapy. Treatment of obesity. Low cholesterol diet in the treatment of atherosclerosis. Use of hypnotics and sedatives. Addiction as a complication of the therapeutic use of drugs. Treatment of some chronic muscular diseases. Relief of pain by ethyl chloride spray. Use of curare and curare-like agents. Problems in treatment of the [illegible] cavity. Treatment of acute arterial occlusion. Treatment of carbon monoxide poisoning. Treatment of pneumonia. Treatment of bacterial meningitis. List of conferences for volumes 1, 2, 3, and 4.

—— Volume six. Edited by Harry Gold, David P Barr McKeen Cattell Frank C. Ferguson, jr., Frank Glenn and George Reader New York The Macmillan Company 1953 287 p. 21 cm. $4.50 3182

Contents: Treatment of the patient in coma. Some therapeutic applications of ganglion-blocking agents. The place of anticoagulants in coronary thrombosis. Drugs and measures in the treatment of leukemia. Therapeutic applications of psychotherapy. Therapeutic use of combinations of antibiotic agents. One-dose prophylaxis and three-day cure of gonorrhea. Ion-exchange resins. Treatment of burns. Current developments in the treatment of bacterial endocarditis. Treatment of osteoporosis. Drugs in the diagnosis of one of the curable forms of hypertension. Treatment of hiatus hernia. Medical treatment of peptic ulcer. Re-evaluation of the problems of treatment of barbiturate poisoning. List of conferences for volumes 1, 2, 3, 4, and 5.

—— Volume seven. Edited by Harry Gold, David P Barr McKeen Cattell, Frank C. Ferguson, jr Frank Glenn and George Reader New York The Macmillan Company 1954 259 p. 21 cm. $4.50. 3183

Contents: How to evaluate a new drug. Selection of digitalis preparations and the proper administration. Choice of a diuretic agent. Most effective application of therapeutic measures in the management of congestive failure. Treatment of paroxysmal [illegible]. A re-evaluation of quinidine therapy. Choice of narcotics and anesthetics in the patient with shock. The choice of therapy in intractable bronchial asthma. Utility of medications in the treatment of headache. The doctor's bag reviewed. Management of poliomyelitis by penicillin. Choice of therapy in [illegible] classification. Use and abuse of physical therapy. Management of [illegible] associated with portal hypertension. Surgical treatment of mitral valvular disease. List of previous conferences.

Note: These volumes contain edited stenographic reports of a series of conferences held under the auspices of the Departments of Medicine and Pharmacology of Cornell University Medical College—New York Hospital. Inaugurated in 1937, the original purpose of the conferences was to assist the third- and fourth-year students of the college in the translation of pharmacology and general medical practice. The discussions soon proved to have a wide appeal to the profession, and reports of them have been published regularly in medical journals. Participants in the conferences include staff members of the college and hospital, pharmacists, visiting practitioners, and specialists. As collected in this form, they are of considerable interest to general practitioners.

FISHBEIN, MORRIS

Medical writing the technic and the art. With the assistance of Jewel F Whelan. Second edition. New York The Blakiston Division McGraw-Hill Book Company Inc., 1948 292 p. illus. 24 cm. 3184

Contents: An acceptable paper. Style. The subject and the material. Construction of the manuscript. Words and phrases. Spelling. Capitalization. Abbreviations. Numbers. Pharmaceutic products and prescriptions. Bibliographic material. Preparation of the manuscript. Illustrations. Tables and charts. Revision of the manuscript. Proofreading. Indexing. Abbreviations of names of periodicals. Index.

Note: The material for this manual was compiled during the course of the work of the Editorial Department of the American Medical Association in preparing their various publications for the press. Although primarily a manual for the guidance of medical writers it contains material of interest to most scientific writers. Containing the usual features of any good style manual, it gives particular attention to the special problems of the writer on medical topics. A third edition was published in 1957. $7.00.

GARLAND, JOSEPH editor

The physician and his practice Boston Little, Brown and Company 1954 270 p. 21 cm. $5.00 3185

Contents: Evolution of the doctor, by C. S. Burwell. Family and community relations, by H. F. Howe. The doctor's wife, by K. L. McCabe. Choice of opportunities, by J. E. Means. General medicine, by D. M. Clark. Specialty practice, by L. S. McKittrick. Group practice, by E. P. Jordan. Doctor and hospital, by A. Kramer. Medical organization, by W. B. Martin. Community medical resources, by H. F. Howe. Reading and writing, by R. W. Buck. Laboratory facilities, by D. W. Boardman. Drugs and medical supplies, by A. C. DeGraff. The office and related business aspects, by J. A. Ford. Auxiliary services, by F. R. Bryant. Office records, by R. T. Cree. Accounting practices—the income tax, by F. Gallo. Economic security, by J. A. Appleman. Medicine and the law, by L. J. Regan. Index.

Note: Primarily addressed to young physicians who are beginning the practice of medicine, this book contains 19 essay chapters written by eminent authorities, most of whom are experienced medical practitioners. However, the chapters written on the non-medical aspects of medical practice were written by authorities from other fields. For example, the chapter on office records was written by a professional management consultant. Taken together, the chapters provide a wide range of helpful advice and useful information on the practical aspects of medical practice.

GIBSON, H. LOU

The photography of patients including discussions of basic photographic and optical principles. Springfield, Ill. Charles C Thomas 1952 118 p. illus. (part col d) 22 cm. (American lecture series Ralph P Creer editor Publication no. 95) $5.50. 3186

Contents: Fundamentals. Equipment and space. Making closeups with self-fixing cameras. Lens properties. Positioning and lighting. Films and filters. Printing methods. Paper selection, quality control and print quality. Appendix A. Index.

Note: A short, practical manual on the basic knowledge and techniques of photography that are useful in the production of clear photographic records in connection with medical research and practice. The author is a member of the Medical Division of the Eastman Kodak Company.

GIVNER, ISADORE AND MAURICE BRUGER

The prevention of disease in everyday practice by Isadore Givner and Maurice Bruger and contributors. With 50 text illustrations. St. Louis The C. V Mosby Company 1955 964 p. illus. (part col d) 25 cm. $10.00 3187

Contents (abridged): A practical outline of cancer prevention, by E. L. Wynder. Prevention of poisoning—accidental and intentional, by E. Press. Preventive pediatrics, by G. J. Ginandes. Preventive aspects of infectious diseases, by E. Appelbaum. Prevention of deformities in the orthopedics of childhood, by R. J. Mann. Preventive immunology, by F. Vogel and R. E. Rosenfield

dividual bibliographers. Development of cooperative bibliography The present situation. Appendix References. Medical bibliographies published since 1500. Author index to bibliography General index.

Note Two aspects of medical bibliography are treated in this book. As the title implies, one of them is the historical development of medical bibliography However in order to cover this subject within reasonable compass, the author imposed rather severe limitations. Only bibliographies in the western languages are considered, and among these only those which attempted to cover medicine in general. Bibliographies of specialties, such as surgery or subdivisions of medicine, such as industrial medicine, are not discussed. Another important omission is catalogues. Such lists of medical literature as the *catalogues of booksellers, publishers and libraries are omitted with the single exception of the Index-catalogue of the library of the Surgeon General's Office.* Within these limitations the historical aspect is covered in reasonable detail with discussions of not only the scope of the bibliographies considered, but also of their formats and their influence The other aspect treated is bibliographical control of medical literature, which is the predominant topic of the fourth and fifth chapters but also runs through the other chapters. The current situation as to bibliographical control is discussed rather thoroughly from the viewpoint of the author's long experience in medical libraries.

CECIL, RUSSELL L, editor

The specialties in general practice. Philadelphia W B Saunders Company, 1951 818 p illus 26 cm 3175

Contents Minor surgery by W A Barnes. Orthopedic surgery by L. R. Straub. Fractures and dislocations, by C. H. Herndon Urology by H J Jewett. *Diseases of the anus, rectum and colon* by C. G Child. Gynecology by L. M. Hellman Obstetrics, by L. M. Hellman. Pediatrics, by R. C. Eley Ophthalmology by R. T Paton. Diseases of the nose and throat, by A. W Proetz. Diseases of the larynx, bronchi and esophagus, by C. L. Jackson. Otology by E. P Fowler Dermatology and syphilology by G. M. Lewis. Psychiatry by D D Bond and J M. Flumerfelt. Index.

Note The several chapters of this work have been written by eminent specialists, but the book is designed, as the title indicates, for the general practitioner The emphasis is on knowledge that can be put to practical use in the regular work of general practitioners. *Much of the information is—as might be expected—familiar* but some of the techniques, *for instance a number of those treated in* the chapter on orthopedic surgery *are outside the usual knowledge of the general practitioner Each chapter is supplemented by litera* ture references. There are 470 figures and an exceptionally full index. A second edition was published in 1937 780 p., $10.00.

CECIL, RUSSELL L, AND ROBERT F LOEB, editors

Textbook of medicine Associate editors Alexander B Gutman, Walsh McDermott and Harold G Wolff Ninth edition Philadelphia W B Saunders Company 1955 1,786 p illus (part col'd) 27 cm. $15 00 3176

Content (abridged) The infectious diseases Viral diseases. Rickettsial diseases. Bacterial diseases. Spirochetal infections. Protozoan infections. Metazoan infections. Diseases of unproved etiology Diseases of allergy Collagen diseases. Diseases due to physical agents. Diseases due to chemical agents. Deficiency diseases. Diseases of metabolism. Diseases of the ductless glands Diseases of the thyroid glands. Diseases of the pituitary gland. Diseases of the adrenal glands. *Diseases of the thymus gland. Diseases of the* parathyroid gland. Diseases of the sex glands. Diseases of the digestive system Diseases of the mouth, salivary glands and pharynx. Diseases of the esophagus. Diseases of the stomach. Diseases of the intestines. Diseases of the liver Diseases of the gallbladder and bile ducts. Diseases of the pancreas. Diseases of the peritoneum. Diseases of the respiratory system Diseases of the nose. Diseases of the larynx. Diseases of the bronchi. Diseases of the lungs. Diseases of the pleura. Diseases of the mediastinum Diseases of the diaphragm. Diseases of the kidneys. Diseases of the spleen and reticuloendothelial system. Diseases of the blood Diseases of the cardiovascular *system. Diseases of the locomotor* system *Diseases of the muscles. Diseases of the joints.* Diseases of the bones. Diseases of the nervous system Important symptoms and signs. Diseases of the motor tracts. Hereditary familial and congenital diseases. Diseases of various etiology Diffuse and focal diseases of the spinal cord. Diffuse and focal diseases of the brain. Diseases of nerve roots, plexuses and nerves. Diseases of other roots and nerves. Vasomotor and trophic disorders. *Psychosomatic medicine. The psychoneuroses. The psychoses. Appendix and* index.

Note A leading American textbook on internal medicine. It is encyclopedic in scope and is used both as a text in medical schools and as a reference book by medical graduates. Most of the space is devoted to descriptions of individual diseases, and each disease is discussed under such subheadings as. definition, epidemiology etiology bacteriology diagnosis, treatment, prognosis, and prophylactics. The contents given above is much abridged. Actually the book is organized into several hundred small sections, each one of which bears the name of the author There are approximately 170 contributors to this edition. The eighth edition was published in 1951 As would be expected in a work of this nature, much of the material in the ninth edition has been carried over from the preceding one, but important revisions and additions have been made, including the addition of articles on 39 *subjects not covered in previous editions. Recent literature* has been added to the reference lists.

CORNELL CONFERENCES ON THERAPY [Reports] *Volume one. Edited by Harry Gold,* David P Barr, Eugene F DuBois McKeen Cattell, and Charles H Wheeler New York The Macmillan Company, 1946 *322* p. *21* cm $4 50 3177

Content The doctor's bag. Use and abuse of bed rest. Hypnotics and sedatives. Psychologic aspects of the treatment of pain. Surgical measures for the relief of pain. Treatment of heart failure. Digitalis *vs. digitoxin.* The use of the mercurial diuretics. Treatment of subacute bacterial endocarditis. Management of abdominal distention. Treatment of some intestinal infestations. Treatment of some common diseases of the eye Treatment of poisoning. The RH factor in therapy

—— Cornell Conferences on Therapy [Reports] Volume two Edited by Harry Gold David P Barr, Eugene F DuBois, McKeen Cattell Paul A Bunn, and Walter Modell. New York The Macmillan Company 1947 354 p 21 cm. $4 50 3178

Contents The use of placebos in therapy Treatment of poliomyelitis. Treatment of meningitis. Treatment of syphilis. Treatment of rheumatic fever Oral penicillin. Choice of sympathomimetic amines. The management of gallbladder disease. Principles of treatment of edema and dehydration. Treatment of edema by drugs. Uses and abuses of quinidine. Treatment of coronary artery disease. Treatment of some tropical diseases. Surgical treatment of hypertension. Evaluation of local antiseptics.

—— Cornell Conferences on Therapy [Reports] Volume three. Edited by Harry Gold, David P Barr Eugene F DuBois, McKeen Cattell Walter Modell and Ralph R. Tompsett. New York The Macmillan Company, 1948 337 p *21 cm. $4 50* 3179

Contents The dose of a drug. An optimal routine for the management of congestive failure. Uses of streptomycin. Uses of protein hydrolysates. Management of peptic ulcer with protein hydrolysates Treatment of pneumonia. Treatment of barbiturate poisoning. Therapeutic uses of BAL. Treatment of hepatic insufficiency Management of pain due to muscle spasm. Treatment of thrombophlebitis Treatment of alcoholism. The rational use of cathartic agents. Treatment of infections of the genitourinary tract.

—— *Volume four Edited by Harry Gold,* David P Barr, Frank Glenn McKeen Cattell Walter Modell *and* George Reader New York The Macmillan Company, 1951 342 p *21* cm. $4 50. *3180*

Contents Household poisonings. Treatment of diabetic emergencies. Therapeutic uses of gamma globulin. Treatment of cardiac. Treatment of neurosyphilis. Management of vascular syphilis.

sity School of Medicine. Yale Medical Library Historical Library Publication no. 1) $8.50. 3192

Contents: Preface. Introduction. List of abbreviations. Manuscripts. Orientalia. Incunabula. General works. Cushing memorabilia.

Note: A short-title catalogue, compiled by Margaret Brinton and Henrietta T. Perkins, listing all the printed books, manuscripts, and bound memorabilia belonging to Dr. Cushing, and turned over to Yale University at the time of his death.

HARVEY SOCIETY OF NEW YORK

The Harvey lectures 1951–1952 (Series XLVII) Under the patronage of the New York Academy of Medicine. New York Academic Press, Inc., 1953 271 p. illus. 20 cm. $7.50 3193

Contents (abridged) The nucleotides—some recent chemical research and its biological implications, by A. R. Todd. Hydrostatic pressures affecting the flow of urine and blood in the kidney, by F. R. Winton. An ascending reticular activating system in the brain stem, by H. W. Magoun. Studies on the cellular immunology of acute bacterial infections, by W. B. Wood, Jr. Metabolic blocks in carbohydrate metabolism in diabetes, by I. L. Chaikoff. Morphogenesis and the metamorphosis of insects, by C. M. Williams. The development of the cerebral cortex—a cytological, functional, and biochemical approach, by L. B. Flexner. Coagulation of the blood, by W. H. Seegers. Some biochemical studies based on chromatographic methods, by L. Zechmeister. Active members. Associate members. Honorary members.

—— 1952–53 (Series XLVIII) New York Academic Press Inc., 1954 273 p. illus. 20 cm. $7.50 3194

Contents (abridged) The hormonal control of plant growth, by J. Bonner. Experiments on chemical alteration of virus infections, by F. L. Horsfall, Jr. Biological synthesis of cholesterol, by K. Bloch. Congenital malformations induced by maternal dietary deficiency, by J. Warkany. The functions of the lung, by J. H. Comroe, Jr. Glycogen structure and enzyme deficiencies in glycogen storage disease, by G. T. Cori. Mechanisms for stabilizing the chloride content of the body, by R. F. Pitts. Acetyl coenzyme A and the fatty acid cycle, by F. Lynen. Active members. Associate members. Honorary members.

—— 1953–54 (Series XLIX) New York Academic Press Inc., 1955 299 p. illus. 20 cm. $7.50 3195

Contents (abridged) The metabolism of sulfur and its relations to general metabolism, by C. Fromageot. Adenosine triphosphate and motility of living systems, by H. H. Weber. Metabolism and function of the nerve cell, by D. Nachmansohn. The significance of the intercellular substances of the connective tissue in human disease, by P. Klemperer. The genetic chemistry of the pneumococcal transformations, by R. D. Hotchkiss. Enzymes in action in living cells—the steady state of reduced pyridine nucleotides, by B. Chance. Oxidative phosphorylation, by A. L. Lehninger. Abnormality of hemoglobin molecules in hereditary hemolytic anemias, by L. Pauling. Control of heat loss and heat production in physiologic temperature regulation, by J. D. Hardy. Active members. Associate members. Honorary members.

—— 1954–55 (Series L) New York Academic Press, Inc. 1956 421 p. illus. 20 cm. $8.00 3196

Contents (abridged) Hormones of the posterior pituitary gland—oxytocin and vasopressin, by V. du Vigneaud. The metabolism of the heart, by R. J. Bing. Lipoproteins of human plasma, by J. L. Oncley. Control and interrelations of metabolic and viral diseases of bacteria, by A. Lwoff. The intermediary metabolism and biological activities of ferritin, by E. Shorr. Some aspects of the organization and behavior of normal and malignant cells maintained in continuous culture, by G. O. Gey. Biochemical explorations with bacterial mutants, by B. D. Davis. The biosynthesis of porphyrins, by D. Shemin. The Harvey Society—its first fifty years and its future (an address given on the occasion of the fiftieth anniversary of the founding of the Harvey Society May 19 1955) by H. Emerson. Osmotic activity in relation to the movement of water under normal and pathological conditions (fiftieth anniversary Harvey lecture) by E. L. Opie. Former officers of the Harvey Society. Active members. Associate members. Honorary members. Deceased members. Cumulative tables of contents (Series 1-50). Cumulative author index (Series 1-50). Cumulative subject index (Series 1-50).

Note: The object of the Harvey Society is "the diffusion of scientific knowledge in selected chapters in anatomy, physiology, pathology, bacteriology, pharmacology, and physiological and pathological chemistry through the medium of public lectures by men who are workers in the subjects presented." The lectures are delivered by eminent scientists of the world and are published in this series of volumes together with illustrations, literature references, and also the constitution, list of authors, and roster of the Harvey Society.

HOLLANDER, JOSEPH LEE, editor

Comroe's Arthritis and allied conditions. Fifth edition with 399 illustrations. Completely revised and rewritten. Collaborating editors Nathan R. Abrams and others. Philadelphia Lea & Febiger 1953 1 103 p. illus 24 cm. $16.00 3197

Contents (abridged) Part I, The study of the rheumatic diseases. Introduction to arthritis and the rheumatic diseases, by J. L. Hollander. Examination of the arthritic patient, by J. L. Hollander. The synovial fluid, by H. C. Coggeshall. Radiology in rheumatic diseases, by C. J. Smyth. Part II, Rheumatoid arthritis. The pathology of rheumatoid arthritis, by E. F. Rosenberg. The clinical picture of rheumatoid arthritis, by C. Ragan. The visceral lesions of rheumatoid arthritis, by E. F. Rosenberg. Rheumatoid arthritis—differential diagnosis, by H. C. Coggeshall. Gold therapy for rheumatoid arthritis, by R. H. Freyberg. Corticotropin, cortisone, and hydrocortisone, by R. H. Freyberg. Prevention of deformities from arthritis, by J. G. Kuhns and T. A. Potter. Correction of arthritic deformities, by J. G. Kuhns and T. A. Potter. Physical therapy in arthritis, by M. A. Bowie. Part III, Factors influencing the onset or course of the rheumatic diseases. Psychogenic factors in rheumatic diseases, by E. W. Boland. Climate and the rheumatic diseases, by W. P. Holbrook. The role of the endocrine glands in rheumatic diseases, by J. Lansbury. The ameliorative effect of pregnancy and jaundice on certain rheumatic diseases, by J. Lansbury. Diet and vitamins in arthritis, by E. F. Rosenberg. Part IV, Important rheumatic diseases closely allied to rheumatoid arthritis. Spondylitis, by E. W. Boland. Rheumatic fever, by W. P. Holbrook. Fibrositis syndrome (non-articular rheumatism), by W. Graham. Part V, The diseases of collagen, by J. Lansbury. Part VI, Degenerative joint disease (osteoarthritis). The etiology and pathogenesis of degenerative joint disease, by N. R. Abrams. Treatment of degenerative joint disease, by N. R. Abrams. Part VII, Arthritis from disorders of metabolism. Gout, by C. J. Smyth. Part VIII, Arthritis caused by or occurring with specific infections. Gonorrheal arthritis, by V. G. Balboni. Tuberculous arthritis, by V. G. Balboni. Arthritis with tropical diseases, by V. G. Balboni. Part IX, Miscellaneous conditions of obscure etiology. Hemophilic arthritis, by M. A. Bowie. Sarcoidosis, by J. Lansbury. Tumors of joints and tendon sheaths, by J. G. Kuhns and T. A. Potter. Part X, Regional disorders of joints and related structures. Traumatic arthritis and allied conditions, by N. R. Abrams. The painful shoulder, by W. Graham. Painful feet, by J. G. Kuhns and T. A. Potter. Low back pain and sciatica, by P. D. Wilson and P. D. Wilson, Jr. Index.

Note: A comprehensive work in which rheumatism, arthritis and related conditions are covered from the viewpoints of both internal medicine and orthopedics. In each of its editions, it has been outstanding for its broad scope and [illegible] for the source of information. Included are diagnosis and treatment. Three editions were published during Dr. Comroe's lifetime, the first appearing in 1940. This fifth edition is the second one prepared by the present group of editors and contributors. It is organized in 10 parts and 57 chapters, of which only a selection are listed above. The editors are all specialists in the field, but they have written primarily for graduate general practitioners who are not specialists. Since the book is used primarily for reference, the individual chapters are compactly written, and the chief points in management are often summarized in tabular form. The bibliographies are extensive. Comparing the fourth edition, published in 1949, with the fifth edition, extensive revisions have been made including deletions, rewriting of chapters, and the addition of new chapters.

Preventive aspects of diabetes mellitus and spontaneous hypoglycemia, by M Bruger Preventive aspects of peripheral vascular disease, by A. W Duryee Preventive aspects of pulmonary disease, by D Ulmar Preventive aspects of gastroenterology by H. A. Ralsky and H. D Feis. Preventive aspects of arthritis and allied rheumatic disorders, by E. F Hartung. Preventive aspect of tropical medicine, by R. A. Marin. Preventive aspects of allergic disorders, by W C. Spain. Preventive dermatology by M. B Sulzberger and V H. Witten. Preventive psychiatry by P Polatin. Preventive neurology by C. Rupp Preventive radiology by A. L. Bachman Preventive aspects of industrial medicine, by A. J Lanza. Preventive aspects of surgery by J L. Chassin Preventive anesthesiology by S. Goldenberg and L. S. Blancato. Preventive aspects of abdominal surgery by F W Bancroft and B Lewis. Preventive aspects of thyroid surgery by R. R. Moolten Preventive aspects of thoracic surgery by J M Chamberlain and C. F Daniels. Preventive ophthalmology by L Givner and others. Preventive otolaryngology by G. E. Shambaugh Jr Preventive laryngology and bronchoesophagology by H. von Leden. Preventive aspects on neurological surgery by K. J Stually Preventive proctology by H. E. Clark. Preventive urology by P R. Roen. Preventive gynecology by W B Silberblatt. Preventive dentistry by J Schaffer Index.

Note A treatise written from an uncommon viewpoint. Its subject is not preventive medicine in the public health sense, nor is it strictly the prevention of disease. Instead, there are three principal themes cognizance of conditions that lead to disease the early recognition and treatment of disease and the management of established diseases so as to avoid further complications. There is much emphasis on symptoms and their significance, on diagnosis and differential diagnosis. The chapters on preventive aspects of various regional surgeries include discussions of the management of surgical procedures so as to avoid complications, but are not limited to this subject The 37 chapters are the work of 47 contributors. Extensive bibliographies are included. The book is directed to advanced medical students, internes and graduate practitioners.

GLASSER, OTTO, editor

Medical physics Chicago Year Book Publishers Inc. 1944 1,744 p illus 27 cm Vol I, $20 00 3188

—— Volume II Editor in-chief Otto Glasser Editorial Assistant Jessie C Tucker Chicago The Year Book Publishers, Inc. 1950 1,227 p illus 28 cm $25 00, both volumes $40 00 3189

Note The two volumes of this set are complementary to one another Both are reference books of physical knowledge of interest in medicine and biology—knowledge pertaining to such matters as the effects of physical agents on living tissues, physical instruments and devices used in medicine or possessing medical interest, biological effects and medical uses of radiation etc. In addition to signed articles, there are numerous tables. The typical article is several pages in length. Bibliographies and fully detailed subject indexes are included.

GREEN DAVID EZRA, AND W EUGENE KNOX editors

Research in medical science New York The Macmillan Company 1950 492 p illus 24 cm. $6 50 3190

Contents Bacteriophages and their action on host cells, by T F Anderson Viruses, by F M. Burnet Rickettsial diseases, by H. M. Rose. Epidemiology by J R Paul. The methodology of medical genetics, by L. Hogben. Anthropology by M. F Ashley Montagu. Immunochemistry by E. A. Kabat. Enzyme chemistry and physiologic mechanisms, by W E. Knox. Chemotherapy by R. O. Roblin, Jr Microorganisms and vitamin research, by D D Woods The biosynthesis and metabolism of porphyrins—an illustration of the use of isotopes in biologic and medical research, by D Shemin and I. M. London. Differentiation and specialization of biologic media, by J P Peters. Kidney physiology by R. F Pitts. Pulmonary physiology by D W Richards, Jr Liver injury by P György The role of hepatorenal vasotropic principles in experimental shock by E. Shorr and others. Plasma proteins in the investigation of disease mechanisms, by S. H. Armstrong, Jr Some aspects of red-cell production by M. M. Wintrobe. Endocrinology in cancer research, by C. P Rhoads. Rheumatic fever—a disease for adventure by A F Coburn Hypertension, by L. F Leiter. Pediatrics Nuclear jaundice (kernikterus) in hemolytic disease of the newborn by R. Day Congenital malformations, by T H. Ingalls. Galactosemia—glycogen storage disease, by H. H. Mason. The celiac syndrome, by D H Andersen. The direction of surgical effort, by I. S. Ravdin. Neurology by J Ebbs. Research in psychiatry by K. A. Menninger Some biochemical problems in military engineering, by A. Wolman.

Note The typical article in this book contains a brief outline of the development of study in the field of medical or biological research named in its title, describes the more important findings to date, and indicates probable lines of future development. Literature references are included for each article. The style is semitechnical, and the book is suitable for persons who are thinking of entering research and for physicians, biochemists, and even laymen who want to get a view of the scope of the field or of the more significant discoveries.

HARRISON, T R., AND OTHERS, editors

Principles of internal medicine. Second edition. Edited by T R Harrison, Raymond D Adams, Paul B Beeson William H Resnik, George W Thorn and M M Wintrobe. New York McGraw Hill Book Company, Inc., 1954 1,790 p illus (part col d) 26 cm. $16 00 3191

Content (abridged) Part I, The physician and the patient Approach to the patient. Part II Cardinal manifestations of disease Pain. Fever Shortness of breath and cough. Disturbances of circulation. Indigestion and jaundice. Polyuria, oliguria, uremia, and edema. Alterations of weight. Anemia, bleeding, and lymphadenopathy Disorders of nervous function. Part III Biologic considerations. Inheritance and aging. Neoplastic diseases. Fluid and electrolyte balance. Intermediary metabolism. Electrophysiology Normal emotional development. Part IV Reactions to stress and to antigenic substances Reactions to injury and stress. Immune mechanisms. Part V General care of the patient The care of the patient. Iatrogenic disorders. Part VI, Metabolic and endocrine disorders Nutritional disturbances. Hormonal disturbances. Metabolic disorders of bone. Disorders of muscle. Inborn errors of metabolism. Part VII, Disorders due to chemical and physical agents. Chemical agents. Physical agents. Part VIII, Diseases due to biologic agents. Chemotherapy of infection. Infections due to gram-positive cocci Infections due to gram-negative cocci. Infections due to enteric gram-negative bacilli. Infections due to bacteria of the hemophilic group. Other gram-negative bacillary infections. Anaerobic infections. Miscellaneous bacterial infections. Diseases due to toxin-producing bacteria. Mycobacterial infections. Fungous diseases involving the internal organs. Fungous diseases involving only the skin and subcutaneous tissues. Fungous diseases of skin, hair or nails. Spirochetal infections. Rickettsial infections. Viral infections of the respiratory tract. Exanthematous viral infections. Neurotropic viral infections. Viral infections of the liver. Miscellaneous viral infections. Protozoan infections. Diseases caused by nematodes, or roundworms. Diseases caused by trematodes, or flukes. Diseases caused by cestodes, or tapeworms. Disorders due to venoms. Part IX, Diseases associated with reactions to stress and to antigenic substances. Disorders associated with reactions to stress and to antigenic substances Part X, Diseases of organ systems The hemopoietic system. The cardiovascular system. The kidneys. The respiratory tract. The alimentary tract. The liver, gallbladder and bile ducts. The nervous system. Index.

Note Primarily a textbook for use in medical school courses, this book is used also for orientation and reference by beginning practitioners of medicine. Its scope is cyclopedic. Only the titles of the parts and sections are given above There are 311 chapters, all of them signed with the names of distinguished contributors. There is as much emphasis on the basic mechanisms of disease as on the descriptions of specific diseases Such a wide number of topics is covered that there could be no general pattern of organization of chapters. However in the chapters on diseases, etiology pathology diagnosis, therapy and prognosis are all discussed. Selected literature references are included, and the volume is very well indexed. The first edition was published in 1950 Fairly extensive revisions were made in preparing this second edition and there has been some reorganization of the material but the over-all plan of the volume is unchanged.

THE HARVEY CUSHING COLLECTION OF BOOKS AND MANUSCRIPTS New York Abelard-Schuman 1943 207 p 28 cm (Yale Univer

[illegible] of his investigation. Electrokinetics. Stability of colloidal systems. Membrane phenomena. Biological energy exchange. Appendixes. Index.

Note The chief topics in physical chemistry that are of interest in medicine are treated in this text for undergraduate college students who are preparing for medical schools. The topics are well chosen, and although the main emphasis is on basic matters, applications to biology and medicine are frequently pointed out in such instances as, A valuable technique in diffusion studies on biological materials is known as the porous disk method. The level of treatment assumes previous study of basic physics and general chemistry

MAYO CLINIC ROCHESTER, MINNESOTA
Collected papers of the Mayo Clinic and the Mayo Foundation. Volume XLVII. 1955 published June, 1956 Edited by Richard M Hewitt and others. Philadelphia W B Saunders Company 1956 791 p. illus. 24 cm. $12.50. 3205

Contents (abridged) Surgery of the heart and blood vessels with special reference to the extracorporeal bypass pump-oxygenator. Blood and circulatory organs. Alimentary tract. Genitourinary diseases. Ductless glands. Dermatology Head, trunk and extremities. Thorax. Brain, spinal cord and nerves. Radiology *Physical medicine and rehabilitation.* Anesthesia, gas and intravenous therapy Miscellaneous. Index of contributors. Index of subjects.

Note The 47th in [illegible] series of annual volumes designed to make generally available reports on advances in medicine which have taken place at the Mayo Clinic and the Mayo Foundation. In this volume, 14 papers or reports are published in full, 53 in abridged form, 43 in abstract form, and 191 by title only In every case, [illegible] reference is given to the original reading or publication of the paper. The series is of interest to physicians in all branches of medical science.

MEAKINS JONATHAN CAMPBELL, editor
The practice of medicine. Associated editors Alvan L. Barach and others. Sixth edition. With 518 illustrations including 4 in color St. Louis The C. V Mosby Company 1956 1916 p. illus. (part col d) 26 cm. $16.00 3206

Contents (abridged) Section I, Bacterial infections, by L. Weinstein, associate editor Section II, Diseases due to viruses, by D M. Horstmann, associate editor. Section III, Spirochetal diseases, by [illegible] associate editor Section IV Diseases due to infestations, by R. T Parker, associate editor. Section [illegible] Diseases due to animal agents and vectors, by E C Faust, associate editor Section VI, The chemotherapy of infections, by C. S. Keefer associate editor Section VII, The allergic states by R. Rose, associate editor. Section VIII, Diseases due to abnormal environments, A. L Fleming, associate editor. Section IX, Diseases of the laryngotracheobronchial system, by C L. Jackson, associate editor Section X, Diseases of the pulmonary parenchyma, by A. L. Barach, associate editor Section XI, Diseases of the heart and pericardium, by L. W [illegible] and R. P Lopez, associate editors. Section XII, Diseases of the blood vessels, by J W Culbertson, associate editor Section XIII, Disorders of the [illegible], diaphragm, and pleura, by J. C Meakins Section XIV Diseases of the kidneys and urinary tract, by A. Merrill, associate editor Section XV Disorders of the gastrointestinal tract and pancreas, by T E. Machella, associate editor Section XVI, Diseases of the liver and biliary tract, by C S Davidson and G K Mallory associate editors Section XVII, Diseases of metabolism and nutrition, by M. M. Hoffman, associate editor Section XVIII, Diseases of the ductless glands, by H W McIntosh, associate editor Section XIX, Diseases of the hematopoietic system, lymphatic tissue, and spleen, by R. K. Wheeler associate editor Section XX, The musculoskeletal system, by R. H. Freyberg, associate editor Section XXI, Organic diseases of the brain, spinal cord, and peripheral nerves, by G. M. Sky associate editor Section XXII, Psychosomatic aspects of medicine, by S G Margolin, associate editor Index

Note A standard textbook used in undergraduate courses in medical colleges It presents [illegible] general approach to medicine and is in effect [illegible] cyclopedic treatment of present-day medicine in one volume The first edition was published in [illegible] 936, and the fifth edition in 950 All of the editions up to the sixth edition were written by Dr Meakins. The sixth edition, which is the work of 87 contributors, is, therefore, [illegible] radical departure in authorship though not in scope or purpose from previous editions. It is organized in 22 sections, the titles and editors of [illegible] hich are listed above, and in 214 signed chapters. The typical chapter is [illegible] concise essay on small group of related diseases [illegible] hich it discusses in regard to their etiology pathology signs and symptoms, diagnosis and treatment. Selected literature references are given for each disease or group of related diseases.

MEDICAL PROGRESS 1956 a review of medical advances during 1955 Morris Fishbein editor New York The Blakiston Division Mc Graw Hill Book Company Inc., 1956 389 p. 24 cm. $5.50 3207

Contents: Medicine by M. Fishbein. Allergy by G. T Brown. Rheumatic diseases, by E. W Boland. Diabetes, by E. P Joslin. Gynecology by E. A. Kale and A. R. Corbie. Gastroenterology by F P Brooks and D J Sandweiss. Laboratory procedures, by R. B. H. Gradwohl. General surgery by E. S. Judd and F J Squires. Ophthalmology by M. L. Stillerman. Poliomyelitis vaccine, by P H. Long. Neurology by F M. Forster Physical medicine and rehabilitation, by G. M. Martin. Dermatology by H. Rattner Nutrition, by K. H. Shull and others. Cardiovascular disease by W A. Brams. Psychiatry, by F J Braceland and M. R. Jackson. Neuropsychiatry by W Overholser and L. J. Kosiek. New drugs, by F L. Warner Endocrinology by L. M Hurxthal. Ear nose, and throat, by F L. Lederer and R. J Schwartz. Orthopedic surgery by P Lewin. Index.

Note The fourth volume of an annual series, the first volume of which was published in 1953. Each of the chapters is [illegible] concise review of [illegible] selection of the published literature pertaining to its specific topic. In general, each chapter reviews the literature of [illegible] year but exceptions are made in order to round out the presentation of [illegible] subject. T[illegible] cite an example 11 of the 30 literature references included in the chapter on allergy in this volume were published earlier than 1955. There is some variation in topics and authors from year to year but the over-all pattern of the volumes does not vary The purpose of the series is to enable graduate medical practitioners to keep informed about developments in fields of medicine of interest to them but in which they find it impractical to read all of the published literature.

METHODS IN MEDICAL RESEARCH Volume 1 Van R. Potter editor in-chief Chicago The Year Book Publishers, Inc., 1948 372 p illus. 24 cm. $8.00 3208

Contents (abridged) Section I, Assay of antibiotics, by H. Welch, associate editor Assay of penicillin potency Assay of streptomycin potency Assay of tyrothricin potency Assay of bacitracin potency Pyrogen tests for penicillin and streptomycin. Toxicity—safety tests for penicillin and streptomycin. Section II, Circulation—blood flow measurement, by H. D Green, associate editor Venous drainage recorders. Mean flow recorders. Pulsatile flow meters. Perfusion systems. Indirect methods for regional blood flow Collateral circulation. Cardiac output and contractility Analysis of cardiovascular activity Section III, Selected methods in gastroenterologic research, by A. C. Ivy associate editor. Section IV Cellular respiration, by V R Potter associate editor Index.

—— Volume 2 Julius H. Comroe Jr., editor-in-chief Chicago The Year Book Publishers Inc. 1950 361 p illus. 22 cm $6.50 3209

Content (abridged) Section I, Methods of study of bacterial viruses, by M. H. Adams, associate editor Section II, Pulmonary function tests, by J. H. Comroe, Jr associate editor Section III, Assay of hormone secretions, by E. H. Venning, associate editor Subject index Name index.

—— Volume 3 Ralph W Gerard, editor in-chief. Chicago The Year Book Publishers Inc., 1950 312 p. illus. 22 cm. $7.00 3210

Contents (abridged) Section I, Genetics of micro-organisms, by S. E. Luria, associate editor Section II, Assay of neurohumors, by J H. Gaddum, associate editor Section III, Selected psychometric [illegible] methods, by W R. Miles, associate editor Section IV Methods for study of peptide structure, by C. H. Li, associate editor Subject index. Name index.

HYMAN, HAROLD THOMAS

An integrated practice of medicine, a complete general practice of medicine from differential diagnosis by presenting symptoms to specific management of the patient. 1,184 illustrations, 305 in color 319 differential diagnostic tables Philadelphia W B Saunders Company 1946 4 v and index. illus (part col'd) 24 cm With Progress volume, described below, $70 00 3198

Contents Volume I, Bodily injuries and bodily responses to injury General reactions of bodily tissues. Infection. Allergy Neoplasms. Metabolism. Poisoning. Disturbances of systems of communication and coordination: The circulatory system. Volume II, The blood and blood forming organs, including the spleen. The organs of internal secretion. The nervous system, including psychiatry The eye. Disturbances of end organ systems The digestive system, Volume III, The respiratory system. The urinary system. The male reproductive system. The female reproductive system. Obstetrics. Pediatrics. The skeletal and locomotor systems. Volume IV The tegumentary system. The technics of medical diagnosis and therapy The technics of physical diagnosis. Laboratory methods. Medical therapeutics, including pharmacotherapy Surgical therapeutics. Prognosis. Appendix. Index volume: Index of differential diagnosis and general index.

Note: An encyclopedic work covering the whole field of medicine and designed to serve as comprehensive reference tool for the general practitioner The aim is to present a concise summary of accepted opinion and practice regarding the clinical manifestations, diagnosis, and treatment of the various diseases. Excellent integration of the various topics, an outstanding feature of this work, is obtained by the use of tabulations of symptoms and causes and by numerous cross references. These devices, and the provision of a separate index volume in addition to the volume indexes, contribute to the ease with which information concerning the diagnosis and treatment of a specific disease may be located. Bibliographies are not included.

HYMAN, HAROLD THOMAS

An integrated practice of medicine. Progress volume Modern developments in therapeutics and methods of treatment Philadelphia W B Saunders Company, 1950 4133–4867 p 24 cm $10 00 3199

Note A supplement to the author's cyclopedic *Integrated practice of medicine*, described above. Its purpose is to cover developments between the writing of that work and some unspecified date in 1950 Topics are arranged alphabetically from actinomycosis to yellow fever and references are given to the pages of the original work, to which the new material is related. The volume contains both the general indexes to the main work and an index to the *Progress* volume itself

KELLY, EMERSON CROSBY

Encyclopedia of medical sources Baltimore The Williams & Wilkins Company, 1948 476 p 23 cm $7 50 3200

Note A useful reference book whose purpose is to direct surgeons, medical practitioners, and medical librarians to the original source descriptions of operations, methods, tests, etc., which are known by the names of their originators, or at least by the names of individuals associated with them in medical literature. In other words, it is compilation of eponyms that can be used to identify and trace the origin of such terms as Babinski's sign the Schick test, and Sabin's method. The person whose name is identified with the particular term is identified as to full name, nationality profession, and dates of birth and death The eponym is then defined, and a reference is made to a periodical article or other source in which it was given an early authoritative description.

McCOMBS, ROBERT P

Internal medicine, a physiologic and clinical approach to disease Chicago The Year Book Publishers, Inc., 1956 706 p. illus. 24 cm $10 00 3201

Contents. Disorders of the heart. Hypertension and vascular disease. Renal disease and renal failure. Body fluids and electrolytes. Endocrine disorders. Infectious diseases. Pulmonary diseases. Allergic diseases. Disorders of the gastrointestinal tract. Disorders of the blood and blood forming organs. Rheumatic disorders and diseases of bone. Nutritional and metabolic disorders. Index.

Note: This successor to the author's *Internal medicine in general practice* second edition, 1947 is primarily a text for medical school students and secondarily review and reference book for general practitioners. It is shorter than some of the standard texts on internal medicine. The relative brevity has been achieved partly by omitting such specialties as neurology and such techniques as electrocardiography Aside from these omissions, the book provides a wide range of basic information on physiology diagnosis, critical manifestations of specific diseases, and therapy The chapter on infectious diseases is 100 pages long and covers most of the infectious diseases encountered in general practice. Selected literature references are included in the chapters.

McMANUS, JOSEPH FORDE ANTHONY, editor

Progress in fundamental medicine. 74 illustrations and 2 colored plates. Philadelphia Lea & Febiger, 1952 316 p. illus (part col'd) 26 cm. $9 00 3202

Contents: Recent advances in parenteral nutrition with particular reference to protein hydrolysates, by P R. Cannon. Melanotic tumors of the skin, by J A. Cunningham. Pathology of systemic lupus erythematosus, by P Klemperer The diagnosis of fungus infections with particular reference to staining methods, by A. M. Kligman. The liver by G K. Mallory and T B Mallory A survey of techniques for the histochemical approach to pathology by J F A. McManus. Coronary artery disease, by J C. Paterson. The problem of carcinoma in situ with reference to the human cervix uteri, by L. D Stoddard. The recognition of carcinoma in situ of the cervix uteri by Papanicolaou's method, by W K. Cuyler Non-silica pneumonoconioses, by J P Wyatt. Index.

Note A volume made up of original monographs in which the authors have organized and interpreted significant recent advances in selected areas of medicine. The book is the result of planned effort to do justice to these advances by providing graduate medical practitioners with rather full accounts of them and by providing lists of the literature in which they were originally reported.

MAINLAND, DONALD

Elementary medical statistics the principles of quantitative medicine Philadelphia W B Saunders Company 1952 327 p. illus. 22 cm $5 00 3203

Contents The place of statistics in medicine. On looking at evidence. Estimating the error in enumeration data. Comparison of samples of enumeration data. Variation between measurements. Relationships between measurements—concomitant variation and trends. Statistical ideas in clinical medicine. Some further hints for investigators. Answers. References. Appendix. Index. Graphs.

Note An introductory textbook in which the reader is introduced to certain basic statistical concepts and techniques, but in which the main emphasis is on the application of statistical techniques to medical research and other matters of medical interest. The author is Professor of Medical Statistics in the College of Medicine of New York University

MATSEN FREDERICK ALBERT AND OTHERS

Pre-medical physical chemistry by F A. Matsen Jack Myers and Norman Hackerman New York The Macmillan Company 1949 344 p. illus 22 cm $5 00 3204

Contents (abridged) Mathematical introduction. Atomic structure. Molecular structure and intermolecular forces. Gases. Imperfect gases and the liquid state. The solid state. Elementary kinetics. Equilibrium and free energy Equilibria in one-component systems. Equilibria in two-component systems. Oxidation-reduction equilibria. pH and determination of pH. Titration. Buffers. Surface equilibria. Molecular orientation at interfaces. The colloidal state and physical

Press, Inc., 1955 131 p. 22 cm. (New York Academy of Medicine. Lectures to the laity No. XVII) $3.00 3218

Contents: Foreword, by H. B. Craig. Introduction, by I. Galdston. Disease and its social setting, by Sir J. Spence. The biology of ethics, by R. W. Gerard. The natural history of neurotic behavior, by H. S. Liddell. Environment and heredity, by T. H. Ingalls. Changing concepts of child care, by M. J. E. Senn. Environment in nutrition, by R. M. Wilder. Index.

—— Medicine in a changing society. Iago Galdston, editor. New York, International Universities Press, Inc., 1956 166 p. 22 cm (New York Academy of Medicine. Lectures to the laity No. XVIII) $3.00 3219

Contents: Foreword, by W. B. Parsons. Introduction, by I. Galdston. Adventure and security in a changing world, by F. Alexander. Changes in family life and mental health, by J. A. Rose. Organic factors and personality functions, by W. Malamud. What the laboratory can teach us about nervous breakdown, by W. H. Gantt. Science and the man, by I. Galdston. Index.

Note: These books contain the lectures given in the 16th, 17th and 18th annual "Lectures to the laity" united series in which eminent medical practitioners and scientists associated with research in medicine and biological sciences interpret selected areas of their fields for the benefit of laymen, including members of professions such as law, teaching and social work. In most of the lectures there is some emphasis on recent advances. The series is both readable and authoritative.

New York Hospital-Cornell Medical Center

Practitioners conferences held at the New York Hospital-Cornell Medical Center. Edited by Claude E. Forkner. Volume I. New York, Appleton-Century-Crofts, Inc., 1955 411 p. illus. 22 cm. $6.75 3220

Contents: [illegible] and primary atypical pneumonia. The harmful effects of tobacco. Newer drugs in the therapy of malignant disease. Congestive heart failure. Acute and chronic [illegible]. Nodules in the breast. Anemia. Present status of ACTH and cortisone. Acute adrenal [illegible]. The home care of acute poliomyelitis. Rehabilitation of the patient paralyzed by poliomyelitis. Diagnosis and treatment of pulmonary tuberculosis. Present methods in the treatment of pulmonary and extrapulmonary tuberculosis. Headache. Diabetes mellitus. Addison's. Disorders of the feet.

—— Volume II. New York, Appleton-Century-Crofts, Inc., 1955 387 p. illus. 22 cm. $6.75 3221

Contents: The dangers of the sulfonamides and antibiotics. Acute and chronic hepatitis. Menopausal symptoms. Sciatica and low back pain. Bright's disease. Psychosomatic. Alcoholism. Cholelithiasis and cholecystitis. Tumors of the stomach. Multiple myeloma. Rheumatoid arthritis. Penetrating wounds, lupus erythematosus, dermatomyositis, scleroderma. Arteriosclerosis and atherosclerosis. Psychotherapeutic measures useful in medical practice. Pheochromocytoma tumors. The acute abdomen. Syphilis.

—— Volume III. New York, Appleton-Century-Crofts, Inc., 1956 293 p. illus. 22 cm. $6.75 3222

Contents: Cancer of the skin and precancerous lesions of the skin and of the oral cavity. The detection of early cancer. Hodgkin's disease and lymphosarcoma. Ulcerative colitis. Eczema including seborrheic dermatitis and contact dermatitis. The adrenal disease—lymphogranuloma venereum, granuloma inguinale, chancroid, gonorrhea. Tumors of the bone. Convulsive seizures. Neurovascular syndromes of the shoulder girdle. The common cold and its complications. Hay fever.

—— Volume IV. New York, Appleton-Century-Crofts, Inc., 1956 407 p. illus. 22 cm. $6.75 3223

Contents: Pulmonary hypertension. Hyperthyroidism and tests of thyroid function. Hyperthyroidism. Fractures of the hip. Mechanisms of the anemias. Treatment of the anemias. Burns. Obesity. Ileitis (ileojejunitis, regional ileitis, regional enteritis). Hypersensitivity. Pheochromocytoma. The role of religion in healing. Cancer of the rectum and anus. Patent ductus arteriosus and coarctation of the aorta. The treatment of chronic rheumatic heart disease. Parasitic infection—enterobiasis, oxyuriasis.

Note: These volumes are products of an unusual venture in post-graduate medical education. They are the proceedings of conferences sponsored by the New York Hospital-Cornell Medical Center for graduate physicians in New York City and the region around it. At these conferences selected practitioners give informal —often bedside—discussions of specific cases, and the physicians attending the conference ask questions, make comments based on their own experience, etc. Both the discussions and the comments are reproduced in these books and are followed by summaries written by the volume editor and by references to related literature.

Osler, Sir William, Bart

The principles and practice of medicine designed for the use of practitioners and students of medicine. Originally written by William Osler. By Henry A. Christian. Sixteenth edition. New York, D. Appleton-Century Company Inc. 1947 1,539 p. 24 cm. $12.50. 3224

Contents (abridged): Functional diseases of the nervous system. Infectious diseases. Parasitic infection. Metazoan parasites. Insects and reptiles. Diseases due to physical agents. The intoxications. Deficiency diseases. Diseases of metabolism. Diseases of the oral cavity. Diseases of the digestive system. Diseases of the respiratory system. Diseases of the urinary tract. Diseases of the blood. Diseases of the spleen. Diseases of the lymph nodes. Diseases of the heart. Diseases of the arteries. Diseases of the veins. Vasomotor and trophic diseases. Diseases of the glands of internal secretion. Diseases of the locomotor system. Organic diseases of the nervous system. Index.

Note: A classic text for students and practitioners and best known for its fine clinical descriptions, classifications, and complete coverage of the field of internal medicine. The first eight editions were written by the late Sir William Osler, the next four by the late Dr. Thomas McCrae and the next four by the present author.

Piersol, George Morris, editor

American medicine 56. George Morris Piersol, editor-in-chief. Edward L. Bortz, assistant editor. Alton Ochsner, surgery. Claude E. Heaton, obstetrics. Francis L. Lederer, otology, laryngology and rhinology. Frederick H. Falls, gynecology. Robert A. Lyon, pediatrics. Conrad Berens, ophthalmology. Philadelphia, F. A. Davis Company *1956* *927* p. illus. 26 cm. $11.50 *3225*

Contents: Allergy. Anesthesia. Cancer. Dermatology and syphilology. Diet and dietotherapy. Endocrinology. Endocrinology. Gynecology and obstetrics. Medicine. Neurology and psychiatry. Ophthalmology. Otolaryngology. Pathology, clinical. Pediatrics. Physical medicine and rehabilitation. Radiology. Surgery. Teeth and mouth, diseases of. Therapeutics. Urinary. Index.

Note: The latest in a series of annual volumes in which a carefully chosen selection of recent medical literature published in the United States of America is reviewed and interpreted by a group of experts. It is addressed primarily to general practitioners. Each of the sections or chapters is a readable digest of recent articles on specific topics with references to the source articles. The names of the contributors who, in addition to the editors, are responsible for each section are given in the volume.

Richardson, Henry Barber

Patients have families. Cambridge, Mass. Harvard University Press 1945 408 p. 24 cm. $3.00. 3226

Contents: Part I. The family as the unit of illness. A family as seen in the hospital. A family as seen from other angles. The family

—— Volume 4 Maurice B Visscher, editor in-chief Chicago The Year Book Publishers, Inc., 1951 306 p illus 22 cm $7 00 3211

Contents (abridged) Section I, Histochemical staining methods, by G Gomori associate editor *Section II Fluid and electrolyte distribution*, by L. B Flexner associate editor Section III, Studies on gastrointestinal pressures, innervation and secretions, by J P Quigley associate editor *Section IV Tissue culture methods, by C. M. Pomerat*, associate editor Subject index. Name index.

—— Volume 5 A C Corcoran, editor in *chief Chicago The Year Book Publishers* Inc., 1952 394 p illus 22 cm. $7 50 3212

Contents (abridged) Section I Methods for separation of complex mixtures and higher molecular weight substances, by L. C. Craig, *associate editor Section II, Methods of renal study by A. C* Corcoran associate editor Section III, Immunochemical methods for determining homogeneity of proteins and polysaccharides, by M. Cohn, associate editor Subject index. Name index.

—— Volume 6 J Murray Steele, editor in-chief Chicago The Year Book Publishers Inc 1954 271 p. illus 22 cm $7 00 3213

Contents (abridged) Section I Some methods of studying human genetics, by *A. Ciocco, associate editor* Section II, Methods in environmental medical research, by R. G Daggs, associate editor Section III, Statistics in medical research, by D Mainland, associate editor Section IV Design and construction of metabolism cages, by A. Lazarow associate editor Subject index. Name index.

Note A *serial series dedicated to the publication of monographic* papers on currently important and newly developed methods and techniques in medical research. The term "medical research" has *been interpreted broadly The series includes selected* topics from biochemistry physiology pharmacology bacteriology immunology biophysics, radiobiology etc. It is addressed to scientists and technicians engaged in medical research at the professional level. The individual volumes, except the first, are organized in sections, *each of which is the responsibility of an associate editor* The titles of the sections and the names of the associate editors are listed above. Each section consists in turn of several papers on specific topics. For example, the sixth volume is organized in four sections which together contain 27 individual signed monographs. Each volume contains a detailed subject index and name index that includes the authors of cited literature.

Michal Smith Harold

The mentally retarded patient Philadelphia J B Lippincott Company 1956 203 p 21 cm $4 00 3214

Contents The role of the physician. Brain impairment, learning and emotional factors. *Classification of mental retardation, by L. B* Slobody Attitudes toward prevention and etiology The psychological situation The problem of family adjustment. Education Vocational prognosis. Looking forward. Appendix. Index.

Note Written by clinical psychologist and addressed to *graduate* physicians, this book deals primarily with the psychological aspects of the care of patients who are mentally subnormal The chapter on the classification of mental retardation was written by an *eminent physician and contains medical definitions* and descriptions of abnormalities and diseases associated with mental retardation Other chapters in the book deal with those aspects of patient care which are named in their titles. *It is noteworthy that the problem of family adjustment is accorded one* chapter A bibliography of modern literature for professional workers including not only physicians but also social workers and others who are concerned with the care of mental defectives, and *several lists of literature* for laymen are included.

Miller *James Alexander and others*

Medical addenda related essays on medicine and the changing order Cambridge Mass. Harvard University Press 1947 156 p illus 22 cm $1 75 3215

Contents Preface, by F B Kirkbride. The doctor himself, by J A. Miller Psychosomatic medicine, by L. Hamman. Medical social work, by M A. Cannon and H. M. Bartlett. Psychiatric social work, by W W Arrington. Rehabilitation and convalescence, by H A. Rusk. Chronic diseases, by E. P Boas.

Note Supplementing earlier monographs in this series of the New York Academy of Medicine's Committee on Medicine and the Changing Order the present collection of essays completes the committee's consideration of medical service as a whole. As previously the writing is for both the professional and the layman who are associated with or interested in current medical practice.

Musser, John Herr, *and Michael G* Wohl, editors

Internal medicine, its theory and practice. Originally edited by John H Musser Fifth edition edited by Michael G Wohl With 80 *contributors, 236 illustrations* and *10* colored plates Philadelphia Lea & Febiger, 1951 1,563 p illus 27 cm. $15 00 3216

Contents Part I, Infectious diseases Some aspects of infection and resistance, by P R. Cannon. The viral diseases, by C. Woodhouse. The rickettsial diseases, by H. Pinkerton. Diseases due to spirochetes, by J A. Kolmer The bacillary diseases, by J. Felsen. The coccal diseases, by R. A. Kinsella. The contagious diseases of childhood, by P F Lucchesi and A. C. La Boccetta. The protozoan diseases, by C. F Craig. The metazoan diseases, by E. C. Faust. Fungous infections or mycoses, by N F Conant. Principles of antimicrobial therapy by H. F Flippin. Diseases of doubtful etiology by F F Rosenthal and others. Part II, Diseases due to physical and chemical agents *Diseases due to physical and toxic agents*, by D P Barr. Diseases due to chemical agents, by M. C. Piccolo and R. S. Fisher Part III Diseases of nutrition—metabolism—endocrine glands General considerations, by P Gyorgy Diseases of nutrition, by M. G. Wohl and others. Diseases of metabolism, by J. H. Talbott and others. Diseases of the endocrine glands, by M. G. Wohl and others. Part IV Diseases of allergy and collagen disease Diseases of allergy by R. A. Cooke and others. Collagen diseases, by M. G. Wohl and others. Part Systemic diseases Genetics and medical practice, by L. H. Snyder Psychosomatic aspects of medical practice, by E. Weiss. Diseases of the heart, by S. Bellet and others. Diseases of the respiratory tract, by J W Peabody and others. *Diseases of the kidneys, by L. Leiter Diseases of blood* vessels and lymph vessels and abnormalities of blood pressure by I. S. Wright and C. D. Marple. Diseases of the blood, by C. C. Sturgis. Diseases of the spleen and the reticulo-endothelial system, by E. B Krumbhaar and E. P Custer Diseases of the alimentary tract, by C. M. Jones. Diseases of the locomotor system, by S. R. Mettier Part V Care of the aged and rehabilitation The care of the aged, by R. A. Kern. Medical practice and rehabilitation, by H. A. Rusk. *Part VI, Diseases of the nervous system* Diseases and abnormalities of the mind including the neuroses, by E. A. Strecker and M. M. Pearson. Organic diseases of the nervous system, by G. Wilson and others. *Index.*

Note A standard textbook and reference manual which is outstanding for its comprehensiveness. Most of the authors of the various chapters are professors on the faculties of leading medical schools in the United States of America. The fourth edition, the *last one edited by the late Professor* John H. Musser was published in 1945 Although the length of the book has been increased by only about 50 pages in this edition, the work has been extensively revised and several chapters have been added. The subject index is very detailed.

New York Academy of Medicine

Medicine and science Iago Galdston, editor New York International Universities Press Inc. 1954 159 p *illus. 22 cm (New* York Academy of Medicine. Lectures to the laity No XVI) $3 00 3217

Contents Introduction by H R. Craig. Men, machines, and the world about, by N Wiener The renaissance in endocrinology, by H. Selye and P Rosch The relation of animal psychology to *psychiatry by D M. Levy* Quest for antibiotics, by P R. Burkholder Stress, emotions and bodily disease by H. G Wolff. "Miracles"—some produced, by J E. McKeen. Index

—— *Society and medicine.* Iago Galdston *editor New York International Universities*

and Part two, Subjects. Part one, Authors, reproduces in book form all catalog cards prepared by the Library in 1955 for materials of medical interest, including current acquisitions, titles recatalogued from the old collections, and pre-1801 and Americana titles cataloged in the History of Medicine Division. Part two, Subjects, reflects the Library's policy of limiting subject headings to titles published within the last 25 years. However, important reference and historical materials, biographies, bibliographies, and materials of similar types are listed in the subject section regardless of date of publication. The Catalog is published as a supplement to the Library of Congress catalogs. The 1954 Catalog, issued in 1955, is similar in scope and organization, but is based on cards prepared in 1954 and appears under the authorship of the National Library of Medicine, reflecting an official change in status and name of the sponsoring library

UNITED STATES. NATIONAL LIBRARY OF MEDICINE

Index-catalogue of the Library of the Surgeon General's Office United States Army (National Medical Library) Fourth series, Vol. I–XI, (A–Mn) Washington, D C. Government Printing Office 1936–55 11 v 29 cm. Vol. 1 o.p vol. 2 o.p vol. 3 $2 75 vol. 4 $2.00 vol. 5 $2 75 vol. 6 $2 75 vol. 7 $2 75 vol. 8 $2.50 vol. 9 o p vol. 10 $4.25 vol. 11 $9.00 3231

Note: The first volume of this monumental printed catalogue of one of the world's greatest medical libraries was published in 1880. It consists of four series as noted below, the fourth series being incomplete. Publication of the traditional format came to an end with the 11th volume in this series. In the course of preparation is a *Supplementary series* which will be limited to monographic publications published in the period 1936–1949. When the *Supplementary series* is completed and published, no more volumes of the *Index-catalogue* will be published, nevertheless the set will provide nearly complete record of the Library's holdings to 1950. Beginning with 1950, book accessions to the Library now the National Library of Medicine, are recorded in its annual *Catalog*—described in the entry preceding this one—and periodical material is recorded in the monthly Current list of medical literature. The following table shows the number of entries in the *Index-catalogue*

	Author titles	Subject titles: Books and Pamphlets	Subject titles: Journal articles
First series, 1880–95, 16	174,364	168,537	511,112
Second series, 1896–1916, 21	149,182	136,408	643,875
Third series, 1918–32, 10	83,478	87,034	469,400
Fourth series, 1936–55, 11	60,144	56,533	793,767

UNITED STATES NATIONAL LIBRARY OF MEDICINE

National Library of Medicine classification. A scheme for the shelf arrangement of books in the field of medicine and its related sciences. Second edition. Washington, D C. Superintendent of Documents, 1956 314 p 26 cm. $2.00 3232

Contents: Introduction. Classification of serial publications. Serial numbering. Table G. Synopsis. Schedules. Preclinical sciences, QS–QZ. Medicine and related subjects, W–WZ. Nineteenth century schedule. Index

Note: The first edition of this work was published 1951 as the classification of the Armed Forces Medical Library. During the preparation of the second edition, the name of the Library was changed to National Library of Medicine. In the new edition the tables have been revised (1) to effect further simplification, (2) to make provision for new concepts and developments, and (3) to incorporate the four change lists which have been issued at yearly intervals since the first edition appeared. The tables are planned as a scheme for the shelving of medical books rather than as a classification of medicine. Table G, outlined in the preliminary pages, [illegible] modified Cutter arrangement which the Library finds useful in certain classes for permitting [illegible] shelving under which [illegible] controlled both geographically and alphabetically

UNITED STATES OFFICE OF SCIENTIFIC RESEARCH AND DEVELOPMENT

Advances in military medicine made by American investigators working under the sponsorship of The Committee on Medical Research. Edited by E. C. Andrus. Tucker man Day associate editor Foreword by Alfred N Richards. Volume I–II. Boston Little Brown and Company 1948 2 v Illus. 22 cm. (Science in World War II) 2 vols $20 00 net. 3233

Contents (abridged): Volume I. Part I, Medicine. Venereal diseases, by J. E. Moore. Tropical diseases, by L. R. Farquhar. Part II, Surgery. The prevention of infection in accidental wounds, by F. L. Meleney. Experimental wound healing, by E. L. Howes. The application of penicillin to surgical problems, by J. W. Hirshfeld. The problem of gas gangrene by W. A. Altemeier and W. L. Furste. The burn problem by O. Cope. New surgical plastics and hemostatics, by W. K. Francis. Studies on wound ballistics, by E. N. Harvey. Part III, Aviation medicine. The effects of acceleration and their counteraction, by E. M. Landis. Visual problems, by W. R. Miles and D. W. Bronk. Motion sickness by P. Bard. Altitude decompression sickness, by J. F. Fulton. Part IV, Physiology. The history of plasma fractionation, by E. J. Cohn. Blood substitutes, by C. A. Janeway and J. L. Oncley. Volume II. Problems of nutrition, by J. B. Youmans and G. M. Guest. Protective clothing, by S. Robinson and H. S. Belding. Part V, Chemical-warfare agents. Recent research on respiratory irritants, by R. W. Gerard. Protection and treatment of the skin exposed to blister gases, by M. B. Sulzberger. Part VI, Anti-pest agents. The development of new insecticides, by H. L. Haller and S. J. Cristol. The toxicology and mechanism of action of DDT in mammals, by R. A. Ormsbee. The development of new insect repellents, by R. O. Schultz. The development of new rodenticides, by R. A. Ormsbee. Part VII, The synthesis of adrenocortical steroids, by T. F. Gallagher. Part VIII, Malaria. The synthesis of antimalarial drugs, by R. C. Elderfield. The clinical testing of antimalarial drugs, by J. A. Shannon. Part IX, Penicillin. Research in the development of penicillin, by K. B. Raper. Part X, Sensory devices, by G. W. Corner. Bibliography. List of contracts. Index.

Note: These two volumes constitute a report to the general public of the vast program of medical research carried out under the auspices of the Committee on Medical Research, and of the resulting advances in medicine which occurred during World War II. Because of the wide variety of topics discussed, much technical data has been omitted, and the treatment of each subject is comprehensive rather than exhaustive. Particular attention is of course given to those fields of medical research which have specific military applications. Periodical articles which report on the various projects sponsored by the Committee on Medical Research are cited in 73-page bibliography. The series, of which this work is part, serves as an official record of the activities and accomplishments of the Office of Scientific Research and Development.

UNITED STATES PUBLIC HEALTH SERVICE

The ship's medicine chest and first aid at sea. Completely revised as a joint project of the United States Public Health Service and the War Shipping Administration. Washington, D C. Government Printing Office, 1947 498 p Illus. 24 cm. (United States Public Health Service Miscellaneous publication no 9) $3.50. 3234

Contents: Preface. Historical introduction. The human body—its structure and function. Hygiene, sanitation, and preventive medicine. The sickbay and medicine chest. General nursing care. First aid and the emergency treatment of injuries. The classification and treatment of diseases. Medical advice by radio. Birth and death at sea. Appendix. Regulations governing medical relief of merchant seamen and others. Excerpts from regulations governing foreign quarantine. List of U. S. marine hospitals and other medical relief stations. List of disinfecting plants. Special safeguards for Harrison Law narcotic drugs. Salt-water soap. Weights, measures, and approximate equivalents. Glossary. Index.

Note: The latest revised edition of a work which was first published in 1881 is intended like its predecessors for use on ships having no physician. It describes in simple and nontechnical language

as the unit of illness. The family equilibrium. Different types of family equilibrium. Part II, The family as the unit of treatment The family practitioner The family and the physician's responsibility as viewed from the hospital. The cooperation of the physician and the psychiatrist. The case worker and the family unit. The medical social worker and the family unit. The public health nurse and the family unit. Part III, Present and future The family in wartime. The family unit in hospital practice and medical school teaching. The family unit as the subject of research. Appendix. Index of families and their members. General index.

Note. Maintaining that it is not enough for medical practice to stop at treating "the patient rather than the disease," the author calls for a broader view one which recognizes family difficulties as the base of much illness, both physical and emotional. Based on study conducted jointly by Cornell University Medical College, the New York Hospital, and the Community Service Agency the book represents also the experience of the author in both medical and social science. Dr Richardson insists that since today's medical specialist no longer knows the patient and his family status, as did the now nearly outmoded general practitioner there must be a marshaling of forces among doctor psychiatrist, social worker public health nurse and others to produce really intelligent diagnosis and treatment. The full appendix includes outlines of suggested procedures and reports of the case histories discussed in the text.

ROUECHÉ, BERTON

Eleven blue men and other narratives of medical detection Boston Little Brown and Company, 1953 215 p 21 cm. $3 50 3227

Contents A pig from Jersey A perverse ungrateful, maleficent malady A game of wild Indians. The alerting of Mr Pomerantz. *Birds of a feather* Eleven blue men. A man from Mexico. A lonely road. A pinch of dust. Something extraordinary Family reunion. The fog.

Note The twelve essays collected in this book appeared originally in the *New Yorker* magazine. Detection by medical and public health authorities of the causes of specific outbreaks of disease is the central theme. One of the outstanding accounts describes the sequence of events in 1946 when the first outbreak of the disease later named *rickettsialpox* occurred among the residents of a middle-class housing development in New York City and not only was identified as a new disease, but its causative agent and vector were identified through the co-operation of physicians, public health specialists, and a layman in the business of pest exterminating. The book is a good example of science journalism. Without resort to sensationalism or distortion, it describes in a fascinating manner the methods and some achievements of medical men and associated scientists. It is addressed to lay readers.

SODEMAN, WILLIAM A., editor

Pathologic physiology mechanisms of disease. Second edition Philadelphia W B Saunders Company 1956 963 p 26 cm. $13 00 3228

Contents. Part I, Pathologic physiology by W A. Sodeman. Part II, Genetics, growth and neoplasia. Genetics of abnormal growth and neoplasia, M. T Macklin. Part III, Metabolism and the endocrine glands Nutritional factors, protein and fat metabolism, by W A. Sodeman. Carbohydrate metabolism, by H. T Ricketts and J M. Goldinger Water and electrolyte balance, by R. L. Pullen and R. F Kushner Endocrine glands, by E. C Reifenstein Jr Part IV Infection and allergy Factors affecting infections, by G T Harrell, Jr *Effects of infection* by G T Harrell, Jr Recovery by G. T Harrell, Jr Alteration of the course of an infection by G T Harrell, Jr Allergy by R. A. Cooke and W B Sherman Part Physical, toxic and chemical agents Physical and toxic agents, by W Bean. Chemical agents and disease, by J H. Foulger Part VI, Circulatory system Hemodynamics—the blood vessels, by W A. Sodeman. Dynamics and circulation of heart muscle cardiac curve heart pain the cardiac cycle, by J T Roberts. The electrocardiogram, by F D Johnston. Cardiac output, hypertrophy and dilatation valvular diseases congenital defects, pericardial diseases, extracardiac factors, by E. Hall. Cardiac failure and function tests, by J S. La Due Part VII, Respiratory system Pulmonary ventilation and respiration tests of respiratory function, by J H. Seabury Protective mechanisms of the lungs pulmonary disease pleural disease by H. L. Alexander Part VIII, Digestive system The esophagus, by W L. Palmer and J B. Kirsner The stomach, by W. L. Palmer and J B Kirsner The small intestine, by L. Schiff. The large intestine, by L. Schiff. The liver by F J Ingelfinger The gall-bladder and pancreas, by R. Elman. Part IX, Urinary tract The kidney by A. C. Corcoran and I. H. Page. Part X, Blood and spleen Disorders of the blood, by W B. Castle. The spleen and reticuloendothelial system, by C. A. Doan. Part XI, Locomotor system The joints, by R. H. Freyberg. Part XII, Nervous system: The nervous system, by R. N De Jong. Index.

Note A treatise composed of chapters written specifically for this work by 39 authors, the majority of whom are members of the faculties of medical colleges in the United States of America. Its purpose is to interpret the clinical manifestations of disease in terms of dysfunction of basic physiological processes. The presentation is a critical one, and the authors do not hesitate to point out gaps in the available knowledge and the disagreements among authorities. In most of the chapters the first few pages are devoted to descriptions of the pertinent physiological processes these are followed by compact discussions of diseases. Extensive lists of references accompany most of the chapters. The first edition was published in 1950. In this second edition the scope of the volume is unchanged, but there has been some reorganization. The number of chapters has been increased by four and some of the chapters carried over have been extensively revised. The number of figures is now 173

STUDIES IN MEDICINE A VOLUME OF PAPERS IN HONOR OF ROBERT WOOD KEETON Springfield, Ill Charles C Thomas 1951 396 p. illus 24 cm $8 50 3229

Contents Robert Wood Keeton, by L. H. Sloan. Bibliography of Robert W Keeton. The relation of serum colloid osmotic pressure to refractometrically corrected electrophoretic protein distribution during spontaneous remissions of severe nephrosis, by S. H. Armstrong, Jr and others. Physiologic and clinical basis for sympathetic denervation as therapy in peripheral vascular disorders, by D I. Abramson. A stereotaxic instrument for use on the human brain, by P Bailey and S. N Stein. Some small studies in blood clotting, by C. La Fleur Birch. Overnutrition—its causes and consequences, by A. J Carlson and F Hoelzel. The role of nutrition in surgery by W H. Cole. Management of diabetes in children, by A. R. Colwell. The control of environmental factors in clinical research, by M. K. Fahnestock and others. The role of protein in liver disease, by E. F Foley and M. A. Spellberg. Psychiatric implications of dental erosion, by F J Gerty and others. The diagnosis of congenital stenosis of the pulmonic valve with associated auricular septal defect, by R. L. Grissom and others. Studies on factors controlling cholesterol synthesis in the body by R. G. Gould. The present status of knowledge concerning gastrin, by M. I. Grossman and A. C. Ivy Circulatory failure as a cause of fever by F K. Hick and M. M. Montgomery The art of using lantern slides, by T S. Jones. Nutritional and endocrinological relationships in cirrhosis of the liver by R. M. Kark and N. O. Calloway The microdetermination of lipids—the synthesis of labile phosphorus compounds of the phospholipids by reaction with monobasic sodium phosphate, by A. B. Kendrick. The pathologic physiology of the upright posture, by F C. Lendrum. Unusual and diagnostic bone marrow patterns, by L. R. Limarzi and others. The progress of applied pharmacology during Dr Keeton's life, by H. A. McGuigan. Some metabolic aspects of obesity in man and animals, by H. H. Mitchell Viscosity studies in whole blood following the administration of heparin dicumarol and paritol C, by L. A. Nalefski and others. Outline of a course in practical nutrition for medical students, by E. S. Nelson Primary tumors of renal pelvis and ureter by V J O'Conor Allergy and immunity to insulin, by H. T Ricketts and M. G. Goldner Comments regarding the etiology of sarcoidosis, by A. Rosenberg, Jr Observations on the behavior of eosinophils, by M Sacks and others. Fetor hepaticus, by F Steigmann. Chronic ulcerative colitis—clinical and bacteriological response to aureomycin, by M. H. Streicher Clinical applications of ACTH and cortisone.

Note Organized on the familiar *Festschriften* plan, this book contains original papers gathered and titled as noted above. Bibliographical references are included with many of the papers

UNITED STATES ARMED FORCES MEDICAL LIBRARY

Catalog 1955 A list of works represented by Armed Forces Medical Library cards Washington D C The Library of Congress 1956 986 p 28 cm $17 50 3230

Note The 1955 annual volume of this *Catalog* supplements the 1950–1954 cumulated edition, Ann Arbor Mich., J W Edwards, 1955, 6 volumes. It is published in two parts Part one Authors,

so as to facilitate use. Pronunciations and derivations are given. Medical and chemical binomial terms are listed and defined under the common part of the term, e.g., under reaction are defined 78 different specified reactions; under reagent are defined 87 reagents; under radium, approximately 115 radium compounds, under test several hundred tests are defined. It includes short biographical sketches of persons prominent in medical history. "Gould" is retained in the title in recognition of the lineage with various dictionaries of medical terms compiled by George Milbry Gould and published as early as 1890. Beginning with the edition published in 1949, however, this dictionary has been a completely new one, compiled under the direction of a carefully chosen group of editors. In preparing this second edition of the new work, terms have been added from many fields of medicine and allied sciences, and some changes have been made in the definitions of terms carried over from the first edition. As before, the appendix consists of useful tables of terms classified under such headings as bacilli, muscles, nerves, enzymes, hormones, anesthetics and [illegible], plexuses, poisons and vitamins. A table on radioactive isotopes has been added.

DE VRIES, LOUIS AND OTHERS

German-English medical dictionary New York McGraw Hill Book Company Inc., 1952 586 p. 24 cm. $12.50. 3241

Note: This work gives the English equivalents of 60,000 German terms and is meant to be a desk book for physicians and others who read or translate medical literature written in German. Terms from related fields, such as psychiatry, physiology and pharmacology, are included. Idioms and verbs in the past tense are translated, but definitions, pronunciation, and abbreviations are not given. The author who had the assistance of 16 medical collaborators is an established authority in the science dictionary field.

DORLAND WILLIAM ALEXANDER NEWMAN

The American illustrated medical dictionary a complete dictionary of the terms used in medicine surgery dentistry pharmacy chemistry nursing veterinary science biology and medical biography with their pronunciation, derivation and definition. Twenty-second edition with 720 illustrations, including 49 plates. Editorial board Richard M Hewitt and others. Contributors Lloyd W Daly and Austin Smith. Philadelphia W B Saunders Company 1951 1 736 p. illus. (part col d) 25 cm. 3242

Note: One of the standard comprehensive dictionaries. The twenty-second edition published in 1951 was the semi-centennial edition, the book having been published first in 1900. It was the result of extensive revision of the preceding edition and was printed from new type. It defined approximately 105,000 terms and included a number of supplementary features of reference value such as an article on medical etymology written by Lloyd W Daly and a reference table of drugs and dosages compiled by Austin Smith. The twenty-third edition was published in 1957 1,598 p $13.50

GOLDBERG MORRIS

English-Spanish chemical and medical dictionary comprising terms employed in medicine surgery dentistry veterinary biochemistry biology pharmacy allied sciences, and related scientific equipment. New York Mc Graw Hill Book Company Inc., 1947 692 p. 23 cm. $15.00. 3243

Note: An excellent dictionary, which gives not only the Spanish equivalents of English terms, but also definitions in Spanish. Thus the entry under dextrocardia reads: "dextrocardia, dextrocardia, f., [illegible] de los [illegible] en forma de [illegible] [illegible] definida." The number of words for which equivalents are given is about 30,000. Medical terms predominate but there is a fair number of chemical terms.

GOLDBERG MORRIS

Spanish-English chemical and medical dictionary comprising terms employed in medicine biochemistry surgery dentistry veterinary biology, pharmacy allied sciences and related scientific equipment New York Mc Graw Hill Book Company Inc., 1952 608 p 24 cm. $17.50. 3244

Note: A complement to the author's English-Spanish chemical and medical dictionary, New York, 1947. The number of Spanish words for which English equivalents are given is about 33,000. Renderings are brief, not encyclopedic; for instance, mortinato, L. [illegible], form of aphasia characterized by an inability to [illegible]. However a short definition is always given in addition to the English equivalent of the Spanish term.

JAEGER, EDMUND C.

A source-book of medical terms. Illustrations by Lloyd Mason Smith and the author Springfield Ill. Charles C Thomas, 1953 145 p 25 cm. $5.50 3245

Note: A useful compendium of the elements and etymology of medical terms. It is not a dictionary of terms as such, but is devoted instead to prefixes, suffixes and other combining forms. Examples of uses of the elements in medical terms are given, but these terms are not defined. Included are not only the elements used to form the technical terminology of medicine, but also those used in medical terms which are part of the common language such as "mouth," "stomach" and "tooth." The following is a sample entry: "Icter—L. The Latin term icterus Gr. ikteros, jaundice; also, some yellow bird, perh. the oriole, the sight of which was alleged to cure yellow jaundice. Gr. ikterikos, jaundiced. Ex: icter-ic [illegible] sub-icter-ic.

SKINNER HENRY ALAN

The origin of medical terms. Baltimore The Williams & Wilkins Company 1949 379 p 26 cm. $7.00 3246

Note: A reference book for medical students and other nonspecialists in etymology. A certain amount of encyclopedic information is included. The source word is always given, as is customary in etymological dictionaries, and this information is frequently supplemented by a discussion—sometimes many sentences in length—in which is given historical and general information on the early uses of the word. Another feature is the inclusion of short biographical sketches of prominent physicians and other persons who made some contribution to the development of medicine. The author is Professor of Anatomy at the University of Western Ontario.

TABER CLARENCE WILBUR

Taber's Cyclopedic medical dictionary including a digest of medical subjects medicine surgery nursing dietetics physical therapy treatments, drugs, etc. Seventh edition. Illustrated. Philadelphia F A. Davis Company 1956 1,305 p illus. 21 cm. $5.25 3247

Note. A standard and useful dictionary intermediate in scope between the pocket-size compilations and the large compendiums. It is printed in small type, two columns to the page, so as to present a large amount of information in a volume of handy size. A majority of the terms are defined in a few lines. However the more important ones are the subject of concisely written presentation of various pertinent information such as etiology, diagnosis, and treatment of diseases of interest in medicine and nursing. This is a cyclopedic feature. Pronunciation is indicated for most of the terms. The appendix includes a considerable range of useful data, such as a glossary of Latin medical words, lists of muscles, bones, nerves, etc. A fair number of new terms and other matter were added in this seventh edition.

the diseases and medical emergencies most commonly encountered at sea, the signs and symptoms by which they are recognized, and directions both for first aid and for follow-up or prolonged emergency treatment. The edition currently available is one issued in 1955 with minor additions and changes from the 1947 edition.

WILDER, LUCY

The Mayo Clinic. Illustrated by Ruth Barney Second edition Springfield, Ill Charles C Thomas, 1955 69 p illus. (part col d) 26 cm. $3 75 3235

Contents (abridged) The Mayo Clinic. The past. The future. The present.

Note A short and unpretentious book about one of the most famous of medical institutions in the United States of America. It outlines briefly the history of the Mayo Clinic and describes in a sympathetic manner the routine of handling a typical patient who has come to the clinic for diagnosis and treatment. It is intended for the information of the general public, particularly visitors to the Mayo Clinic and their friends.

WILLIAMSON, PAUL

Office procedures Philadelphia W B Saunders Company, 1955 412 p 1100 illus 28 cm. $12 50 3236

Contents: Ear nose and throat. Eye. Musculoskeletal system. Gynecology Obstetrics. Urology Proctology Pediatrics. Minor surgery Internal medicine. Psychological testing. Anesthesia. Physiotherapy The small laboratory Roentgenography Index.

Note A reference manual of diagnostic and therapeutic procedures most of which may be carried out without instruments or with simple instruments in the offices of practicing physicians. Techniques of physiotherapy and roentgenography are described in sections at the end of the book, but here also the coverage is limited to procedures within the scope of office equipment. As the section titles listed above indicate, a wide range of techniques is covered. The book is illustrated with simple but clear drawings at the rate of several pictures per page.

YATER, WALLACE MASON

Fundamentals of internal medicine Fourth edition prepared with the assistance of William Francis Oliver New York Appleton Century-Crofts Inc., 1954 1,276 p illus 25 cm $13 50 3237

Contents Diseases of the heart. Diseases of the blood vessels. Diseases of the kidneys. Diseases of the blood and blood-forming organs. Diseases of the respiratory system. Diseases of the digestive system. Diseases of the locomotor system, by W M. Yater and W J Martin. Diseases of the endocrine glands, by E. J Kepler and F R Keating, Jr revised by L. H Kyle. Diseases of the spleen and reticuloendothelial system. Diseases of the metabolism. Diseases of allergy by W M. Yater and G T Brown. Diseases due to intoxications, by T Koppanyi and W M Yater Diseases due to physical agents, by S. M Rosenthal. Diseases due to vitamin deficiency and malnutrition by W H. Sebrell and others. The infectious diseases Diseases of the nervous system, by J M. Williams. Mental diseases, by L Rodis. Diseases of the skin by W O Teichmann. Diseases of the ear by F C. Schreiber Diseases of the eye, by E. J Cummings and W H. Hanna. Dietetics. Antibiotic therapy including the sulfonamide compounds, by W E. Wellman and W E. Herrell. Symptomatic and supportive treatment, by H. H. Hussey Inhalational therapy by P F Jaquet. Clinical values and useful tables. The physician himself Index.

Note A standard introduction to this field, used chiefly as a text for medical college students, but valuable also as a reference book to general practitioners of medicine and to medical specialists in fields other than internal medicine. It is comprehensive in the sense that much ground is covered. On the other hand the discussions of many diseases is much more concise than they would be in specialized treatises. Literature references are provided for those readers who need more information on specific topics The third edition was published in 1949 As was true of the third edition, this fourth edition contains chapters written by Dr Yater himself and also chapters written by other authorities. (Those by Dr Yater alone are listed without an author's name in the above table of contents.) Revisions are to be found in many of the chapters, and they have to do with such matters as newly described diseases, new diagnostic techniques, and new drugs. Chapter titles are the same but there are several new contributors. The literature references have also been revised so as to include publications issued since 1949

YEAR BOOK OF MEDICINE

The year book of medicine (1956–57 year book series) Edited by Paul B Beeson, Carl Muschenheim, William B Castle, Tinsley R. Harrison, Franz J Ingelfinger Philip K. Bondy Chicago The Year Book Publishers, Inc., 1956 744 p illus 20 cm $6 75 3238

Contents Part I, Infections. Part II, The chest. Part III, The blood and blood-forming organs. Part IV The heart and blood vessels and the kidney Part V The digestive system. Part VI, Metabolism. Index. Index of authors.

Note. An annual publication addressed to general medical practitioners and designed to enable them to keep abreast of progress in the fields of medicine named in the above-quoted part-titles. It is organized on essentially the same plan as the other volumes in this publisher's useful Year Book Series. The parts are composed of fairly long abstracts of articles selected from the world medical periodicals and published during a period of one year In the volume at hand, for example, the material has been taken from journals received by the editor between May 1955 and May 1956. The abstracts of the individual articles are long enough to contain the gist of the original articles. However a reference to the source article is given in all cases. Many of the abstracts are supplemented by a short editorial comment in which the editor evaluates the results reported in the abstract or relates them to other work. There are 118 figures in this issue.

DICTIONARIES

AMERICAN POCKET MEDICAL DICTIONARY Nineteenth edition A dictionary of the principal terms used in medicine nursing, pharmacy dentistry veterinary science and allied biological subjects Philadelphia W B Saunders Company 1953 639 p 17 cm Plain, $3 25 thumb-indexed $3 75 3239

Note. An abridged dictionary which has been widely used in its various editions for over 50 years. It is based partly on the fuller *American illustrated medical dictionary* A large number of terms are defined but their definitions are brief, and there are no illustrations. Pronunciation is indicated for some of the terms and accentuation for all of them. Some tables are included, for example, a table of bones of the human body In this 19th edition, it has been given a new format and is truly of pocket size.

BLAKISTON'S NEW GOULD MEDICAL DICTIONARY a modern comprehensive dictionary of the terms used in all branches of medicine and allied sciences, including medical physics and chemistry dentistry pharmacy nursing veterinary medicine, zoology and botany as well as medicolegal terms with illustrations and tables. Second edition. Normand L. Hoerr and Arthur Osol editors Editorial board Normand L. Hoerr Arthur Osol Samuel W Chase, Carl C. Francis. With the cooperation of an editorial board and 88 contributors 252 illustrations on 45 plates, 129 in color New York The Blakiston Division, McGraw Hill Book Company Inc., 1956 1,463 p illus (part col d) 26 cm. $12 50 3240

Note A standard, comprehensive dictionary of terms and abbreviations. Defined words and terms are arranged two columns to the page and are listed in boldface type with definitions indented

are accompanied by a short, explanatory text which in some instances explains the pictures but in others simply furnishes additional information on medicine in the period to which they pertain. Most aspects of the development of medicine from [illegible] to the beginning of chemotherapy are represented, with many portraits of medical figures, many depictions of dissections and operations, and—to lighten the story—some cartoons and advertisements of patent medicines. The book is too fragmentary to serve as a dependable work of reference; nevertheless, it is of interest to most medical practitioners and to others who are curious about medical history.

BREASTED JAMES HENRY, editor

The Edwin Smith surgical papyrus, published in facsimile and hieroglyphic transliteration with translation and commentary in two volumes. Chicago The University of Chicago Press, 1930 2 v 30 and 41 cm. (The University of Chicago. Oriental Institute publications. Vol. III–IV) $20.00 set. 3254

Contents Volume I Foreword General explanatory notes for physicians and other non-Egyptological readers. General introduction. Part I. The surgical treatise (the recto) Special introduction. Translation and commentary Consecutive translation. *Part II. The incantations and recipes.* Special introduction. Translation and commentary Consecutive translation. Part III. The [illegible] Egyptian glossary General index Addenda. The date of the Edwin Smith papyrus. Additional textual notes Discovery of [illegible] example of ancient Egyptian [illegible] Volume II Introduction. The original text of the Edwin Smith papyrus. The hieroglyphic transliteration. Facsimile plates and hieroglyphic transliteration. Recto The surgical treatise Verso [illegible] incantations and recipes appended on the back

Note In these two volumes the author presents the first translation of the papyrus which was named after Edwin Smith. Edwin Smith acquired the papyrus in Luxor in 1862 and after his death it was presented to the New York Historical Society This study shows that it constitutes the oldest known treatise on surgery It consists of cases, not recipes; it is systematically organized in an arrangement of cases, beginning with injuries of the head and proceeding downward through the body like modern treatises on anatomy [illegible] rational and chiefly surgical, with resort to magic in only one case out of the 48 preserved, each case is classified as favorable, uncertain, or unfavorable (not to be treated) The [illegible] appear here for the first time in the history of medicine.

BROMBERG WALTER

Man above humanity a history of psychotherapy Philadelphia J B Lippincott Company 1954 342 p. illus. 24 cm. $5 75 3255

Contents Scope and meaning of psychotherapy Magic, faith and [illegible] Witchcraft and psychotherapy Medicine [illegible] mental healing The era of asylums The return of faith-healing The [illegible] heritage The emergence of dynamic psychotherapy Psychoanalysis and its derivatives. Mental hygiene, psychotherapy's catalyst *The return of physiology* *The breadth of psychotherapy* Observations Index

Note Described by the author as a "rethinking and rewriting" of his *The mind of man*, 1937 this book is a history of psychotherapy in the broad sense of the term. It is not limited to formal psychotherapy but goes back in time to include medicine men, witchcraft, faith healing, etc. An account of the evolution of the care of the insane is included Approximately half of the book is devoted to modern psychotherapy and the terminal chapter is a survey of the methods and directions of contemporary psychotherapy Developments in all periods are related to the cultural milieu from which they sprang Literature references are given in the form of footnotes throughout the volume. The volume is of interest to physicians and other professional workers in psychotherapy and to lay readers who are interested in the history of medicine

BURKE, RICHARD M

An historical chronology of tuberculosis. Second edition. Springfield Ill. Charles C Thomas. 1955 125 p. illus. 19 cm. $3 75 3256

Contents Ancient period. Pre-modern period. Modern period Pathology—experimental and clinical [illegible]—bacteriology—[illegible] pathology—treatment—prevention Milestones in the history of tuberculosis. Bibliography Index of names. Subject index.

Note The greater part of this volume is a chronologically arranged list of landmarks in the description and treatment of tuberculosis. Within the larger periods listed above the arrangement is by year The events therein are described briefly as in these typical entries. "Thomas Sydenham (1624–89) Foremost [illegible] He is a strong advocate of fresh air and horse exercise in consumption. Thinks [illegible] of thorax beneficial. [illegible] Graham. Performed successful total pneumonectomy (for cancer) "The United Nations World Health Organization creates a tuberculosis section. References to sources are given for most of the events listed with the consequence that the bibliography is a fairly comprehensive bibliography of the history of tuberculosis. The first edition was published in 1938 Events since it was written, including the development of successful drug therapy for tuberculosis, have been added in this second edition.

CASTIGLIONI, ARTURO

A history of medicine. Second edition, revised and enlarged. Translated from the Italian by E. B Krumbhaar New York Alfred A. Knopf 1947 1 192 p illus. 27 cm $17.50 3257

Content (abridged) Medical thought in its historical evolution. Empiric, demoniac, animistic, magic medicine Old Egyptian medicine. The medicine of the people of Israel. Canonical codifications of sanitary laws The medicine of ancient Persia and India. Systematic theories. Systems of scholastic medicine. The medicine of ancient Greece. The temples and cult of *Asclepius*—the Greco-Italian schools—the dawn of scientific medicine. The golden age of Greek medicine. Hippocratic medicine—the Alexandrian school. Beginnings of anatomical and physiological studies. *The Latin concept of medicine and sanitary legislation.* Christian dogmatic medicine. The Byzantine school. Arabian medicine. Lay medicine, Renaissance of classic doctrines. *From monastic medicine to the lay medicine of Salerno.* The universities and humanism. The Renaissance. The revival of anatomy and physiology *The seventeenth century Dawn of scientific liberty Biological and experimental trends in medicine.* The eighteenth century *First half of the nineteenth century* The cell doctrine. The second half of the nineteenth century Clinical *medicine based on the fundamental sciences. Growth of the specialties.* The twentieth century Bibliography Index of subjects. Index of persons.

Note A comprehensive, well-balanced account of *the evolution of* medical theory and practice from earliest times. The author devotes about equal attention to medical ideas, medical facts, and medical personages. Although text of the entire volume was revised for this revision, the major change made was the revision and expansion of the treatment of the modern period—1840 to the present—with the medical work of the recent war years receiving particular emphasis. There are 524 illustrations and 45 pages of bibliography

CHESNEY ALAN MASON

The Johns Hopkins Hospital and the Johns Hopkins University School of Medicine a chronicle. Volume I. Early years, 1867–1893 Baltimore The Johns Hopkins Press, 1943 318 p. illus. 23 cm. $3.00 3258

Contents (abridged) The founder original hospital trustees, and selection of site. John Shaw Billings. Appointment of Daniel C. Gilman as president. Preliminary plans and engineering problems. First steps by the University toward the establishment of the School of Medicine. [illegible] organization and selection of the hospital staff. *First years of operation of the hospital.* Formation of the Women's Fund Committee. Announcement of the opening of the School. Appendix. Index.

Note The first volume of a projected history of the Johns Hopkins Hospital and School of Medicine. Emphasis is placed on the importance of this period for both institutions, since it was during this period that plans were made and principles and policies established which were to influence their future development. The material is based largely upon the official records of the Hospital and the University and upon previously published biographies and autobiographies of men connected with the development of the institution. The work is illustrated with contemporary photographs.

TAYLOR, NORMAN BURKE, editor

Stedman's medical dictionary of words used in medicine with their derivations and pronunciation including dental veterinary, chemical, botanical, electrical, life insurance and other special terms, anatomical tables of titles in general use, the terms sanctioned by the Basle Anatomical Convention the new British Anatomical Nomenclature, pharmaceutical preparations official in the U S and British *Pharmacopoeias or contained in the* National Formulary, biographical sketches of the principal figures in the history of medicine Edited by Norman Burke Taylor, in *collaboration with* Allen Ellsworth Taylor Eighteenth revised edition with etymologic and orthographic rules Baltimore The Williams & Wilkins Company, 1953 1,561 p illus (part col'd) 25 cm 3248

Note A standard work that has held place for many years as one of the world's chief dictionaries of medical terms. Definitions are adequately full. Etymology is indicated for principal terms and accentuation is indicated for all. A selection of abbreviations is included in the main alphabet. *Although* trade names were a feature of older editions, they have been all but eliminated in the current edition. An appendix of the dictionary proper contains such reference information as weights and measures, comparative temperature scales, common and scientific mes for pathogenic microparasites and "New nomenclature in Latin and English adapted by the *Anatomical Society of Great Britain and Ireland,* with Basle anatomical nomenclature [BNA] equivalents. The 17th edition was published in 1949 I this 18th edition, an unstated number of obsolete terms were deleted and some thousands of new terms added The length of the work has been increased by 100 pages, but part of this increase is due to the inclusion of new illustrations. *The 19th revised edition was published* in *1957 1,656* p., $12 50

HISTORY

ACKERKNECHT, ERWIN HEINZ

Malaria in the Upper Mississippi valley 1760–1900 Baltimore The Johns Hopkins Press 1945 142 p. illus. 26 cm. (Supplements to the Bulletin of the history of medicine Henry E Sigerist, editor, Genevieve Miller associate editor No 4) $2 00 3249

Content (abridged) Introduction. The rise and fall of malaria in the Upper Mississippi valley Possible factors for the disappearance of malaria from the Upper Mississippi valley Population movements. Clearing, cultivation and drainage. Prosperity Housing Screening Food. Cattle breeding. Mosquitoes. *Quinine.* The evolution f quinine treatment in the United States and the Upper Mississippi valley during the 19th century Climate and weather Some remarks on malaria and history Alphabetic list of books and articles quoted.

Note This detailed study of the history and epidemiology of malaria in states bordering the Upper Mississippi emphasizes economic and social development as factors in the rise and then almost complet disappearance of malaria in these states In spite of the inadequacies f existing reports, the author has produced revealing picture of the background and course of the malaria epidemics in this area. Charts and population maps illustrate the relationship between population movements and the decline of the epidemic.

ACKERKNECHT, ERWIN HEINZ

A short history of medicine New York The Ronald Press Company 1955 258 p illus. 21 cm $4 50 3250

Contents. Paleopathology and paleomedicine. Primitive medicine Medicine of ancient civilizations Ancient India and China. Greek medicine—physicians, priests, philosophers—Hippocratic medicine—Alexandria and Rome. Medieval medicine. Renaissance medicine. Medicine in the seventeenth century—eighteenth century The clinical schools of the first half of the nineteenth century The basic sciences *during the nineteenth century* Clinical medicine in the second half of the nineteenth century Bacteriology Surgery and gynecology in the nineteenth century The new specialism of the nineteenth century Public health and professional developments in the nineteenth century Medicine in the United States prior to 1900. Main trends in medicine in the first half of the *twentieth* century Nobel laureates in medicine and physiology 1901 1953 Suggestions for further reading Index.

Note A relatively brief account in which the main emphasis is on trends and landmarks. The text proper is only 223 pages long and is designed for reading rather than reference. Pages 229–244 are devoted to an extensive list of source books and recommended *reading. Although not fully annotated,* this list contains helpful comments on many of the titles. The uthor is *Professor* of the History of Medicine in the University of Wisconsin Medical School

BAUER, LOUIS H , editor

Seventy five years of medical progress 1878–1953 Philadelphia Lea & Febiger, 1954 286 p illus 24 cm $4 00 3251

Contents Anesthesiology by H. K. Beecher Dermatology and syphilology by M B. Sulzberger and V H. Witten. General practice, by U R. Bryner Internal medicine, by D L. Wilbur and M H. McLain. Neurological surgery by J. D French. Obstetrics and gynecology by N J Eastman. Ophthalmology by D Vail. Orthopedic surgery by C. L. Compere. Otorhinolaryngology by J Lempert. Pathology by K. M. Brinkhous. Pediatrics, by *L. McQuarrie. Physical medicine and rehabilitation,* by H. A. Rusk. Plastic surgery by W G. Hamm and F F Kanthak. Preventive medicin and public health, by J S. Simmons. Proctology by L. J Hirschman Psychiatry by L. H. Bartemeier Radiology by A. H. Dowdy and S. L. Warren. Surgery by A. Blalock and E. M Nanson. *Thoracic surgery by M. E. DeBakey and D. A. Cooley Urology by J H. Morrissey*

Note. The first Western Hemisphere *Conference* of the World Medical Association was held in Richmond, Virginia, in April, 1953 It was devoted to the commemoration of 75 years of medical progress. This volume contains the papers presented. Generally speaking, each paper is concise tline of landmark developments in one area of medicine or surgery The papers are readable rather than scholarly but they are authoritative. In most cases the authors have *included references to the chief source articles.*

BEAUMONT, WILLIAM

William Beaumont's formative years two early notebooks 1811–1821 with annotations and an introductory essay by Genevieve Miller New York Abelard-Schuman, Ltd 1946 87 p illus. 24 cm. $6 00 3252

Contents List f illustrations. Introduction. Part Beaumont's medical notebook. Notes. Part II Beaumont's general notebook. Notes. Index.

Note William Beaumont, born in Lebanon, Connecticut, in 1785 is best known for his direct observations of the processes of digestion on the person of Alexis St. Martin. This volume reproduces the material contained in two f his notebooks which were kept during the years 1811 to 1821 One contains Beaumont's medical notes and observ tions, the other consists of his personal notes of a nonmedical nature. Together they provide an insight into the status of American medical knowledge during a period in which the War of 1812 occurred, and a first-hand account f American *frontier life* of that time.

BETTMANN, OTTO L

A pictorial history of medicine With a foreword by Philip S Hench *Springfield Ill* Charles C Thomas, 1956 318 p illus 28 cm $9 50 3253

Contents. Egypt and the ancient East. The Greeks. The Romans. The early Middle Ages. Moslem medicine. The lat Middle Ages. The Renaissance The seventeenth century The ighteenth century The ineteenth century I. The nineteenth century II. Acknowledgments Bibliography Index.

Note Some of the pages of this book contain six pictures, and the verage umber of pictures per page is over three. The pictures

known bases of medical history but rather upon the history of medical ideas as ... continuous process, stressing the motivations rather than the specific accomplishments of medical scientists. The style is dignified and plain, and there is ... considerable amount of little-known information presented.

GORDON BENJAMIN LEE

Medicine throughout antiquity Foreword by Max Neuburger 157 illustrations. Philadelphia F A. Davis Company 1949 818 p illus. 24 cm. $6.00. 3265

Contents: Part I, Prehistoric and protohistoric medicine: Introduction. The antiquity of medicine. Paleontologic evidence of the antiquity of medicine. Prehistoric medicine. Primitive concepts of disease and death. Nature worship and medicine. Medicine in Assyro-Babylonia. Medicine of ancient Egypt. Ancient Hebrew medicine. Medicine in ancient Persia. Antiquity of Indian medicine. Medical concepts in China. Medicine in ancient Japan. Medicine among the prehistoric Americans. Part II. The Greco-Roman period Dawn of Greek medicine. Influence of philosophy on medicine Medical philosophers and practitioners. Hippocrates, the great teacher. Hippocratism, the classics. The drift towards dogmatism. The Athenians. The Peripatetics, Epicureans, and Stoics. Alexandrian school. Empiricism. Roman medicine. The methodic school. The encyclopedists. The pneumatics and eclectics. Galen. Talmudic medicine. Talmudic diagnosis and treatment. Index.

Note: A comprehensive yet readable account of the art of medicine from the beginning of man's existence to 476 ... The book, which ... written for both laymen and practitioners, discusses the medical beliefs and knowledge held by the men of that early period, and describes the diseases from which they suffered and the therapeutic measures employed. Numerous extracts from the ancient records upon which the book ... based are woven into the general narrative. Chapter bibliographies are provided.

HAYMAKER, WEBB editor

The founders of neurology one hundred and thirty three biographical sketches, prepared for the fourth International Neurological Congress in Paris by eighty four authors. Edited by Webb Haymaker with the bibliographical and editorial assistance of Karl A. Baer Springfield Ill. Charles C Thomas, 1953 479 p. illus. 24 cm. $10.50 3266

Contents (abridged): The meaning of some of the academic terms used in these biographies—In France, by P I Yakovlev—In Germany by H. Kuhlenbeck and E. A Spiegel—In Great Britain, by D Denny-Brown Biographical sketches Neuroanatomists Neurophysiologists Neuropathologists Clinical neurologists. Neurosurgeons Name index Subject index.

Note: The biographical sketches in this book average about three and one-third pages in length and provide concise information on the personal traits, education, and contributions to the neurology of the biographees A portrait and literature references are also given. The scope of the volume is international, but the authors of the sketches are American. The book was planned by ... committee of the American Neurological Association as ... historical account of the achievements in neurology Although admittedly it does not include sketches of all those men who have made significant contributions to neurology ... nevertheless ... valuable reference book of the history of the specialty

JONES WILLIAM HENRY SAMUEL

Philosophy and medicine in ancient Greece. Baltimore The Johns Hopkins Press 1946 100 p. 26 cm. (Supplements to the Bulletin of the history of medicine Henry E. Sigerist, editor Genevieve Miller associate editor No 8) $2.00 3267

Contents (abridged): Section I, The pre-Hippocratics and Plato. Section II, Hypotheses in Greek thought, Philosophy and medical [illegible]. Section III Introduction to Ancient medicine Text, translation and commentary Authorities.

Note: A critical analysis of the concepts ... which dominated Greek thought on medicine and physiology during the centuries between the founding of the Pythagorean school and the writings of Aristotle. The book "Ancient medicine" from the Hippocratic "Corpus medicorum Graecorum," which the author considers as most revealing in this connection, is quoted almost in its entirety in the Greek version and in the author's translation. The monograph will be of particular interest to students of Greek philology and philosophy and to medical historians. A knowledge of Greek language and philosophy will facilitate an understanding of the discussion.

KEYS THOMAS EDWARD

The history of surgical anesthesia with an introductory essay by Chauncey D Leake and a concluding chapter The future of anaesthesia, by Noel A. Gillespie New York Abelard-Schuman, Inc., 1945 191 p illus 24 cm. $6.00 3268

Contents: Introductory essay by C. D. Leake. The development of anesthesia. A chronology of events relating to anesthesiology and allied subjects. Selected references by subject. Selected references by author The future of anesthesia, by N A. Gillespie. Appendix The Morton and Warren tracts on ether (letheon) by J. F Fulton. Index.

Note: A scholarly and well-written account of the development of anesthesia from man's first attempts to relieve pain up to the present time. The author has not attempted to dramatize his subject, but the book will appeal to both the layman interested in medical history and to persons in medicine and allied professions. Of particular interest to the latter groups are the carefully documented accounts of early experiments and the extensive bibliography arranged both by subject and author The volume contains excellent portraits of men ... who have done outstanding work in the field of anesthesia.

LEAKE, CHAUNCEY D

The old Egyptian medical papyri. Lawrence University of Kansas Press 1952 108 p 21 cm. (University of Kansas, Logan Clendening lectures on the history and philosophy of medicine. Second series) $1.50. 3269

Contents: The chief Egyptian medical papyri. Old Egyptian weights and measures. Drug measurements in the old Egyptian medical papyri. Ancient Egyptian therapeutics. The Hearst medical papyrus. Organization of the Hearst medical papyrus. Diseases in the Hearst medical papyrus. The ingredients of the Hearst papyrus prescriptions. Summary Appendix—List of prescriptions in the Hearst medical papyrus. References. Index.

Note: In this work, the main features of ancient Egyptian medical practice as revealed by the study of eight papyri dating from 1900 ... to 1200 ... are summarized. The greater part of the book deals with the diseases and methods of treatment described in the Hearst papyrus (1550 ...) which was acquired by the University of California in 1901.

LINK, VERNON B

A history of plague in the United States of America. Washington D C Government Printing Office 1955. 120 p illus. 26 cm. (United States Public Health Service. Public health monograph no 26) $0.60 3270

Contents: Introduction. The first San Francisco epidemic. The second San Francisco epidemic, including other bay area cities. Plague in Seattle. Plague in wild rodents. The New Orleans epidemics. Plague in Gulf Coast cities. Los Angeles pneumonic plague outbreak. Maritime quarantine measures. Plague in the Territory of Hawaii. Plague in Puerto Rico. Modern plague control methods. Treatment and prophylaxis of plague. References. Appendix.

Note: This monograph gives ... narrative account of plague in the United States of America, including Hawaii and Puerto Rico, during the first half of the 20th century when large amounts of money were spent to keep plague away from the United States, to suppress epidemics which occurred in principal seaports, and to control or eradicate epizootics in domestic and wild rodents. The potential danger from plague (bubonic, septicemic, pneumonic) has [illegible]

DUBOS, RENE, AND JEAN DUBOS

The white plague tuberculosis, man and society Boston Little, Brown and Company, 1952 277 p 21 cm. $5 00 3259

Contents Part I, *The white plague in the nineteenth century* The captain of all the men of death. Death warrant for Keats. Flight from the north winds. Contagion and heredity Consumption and the Romantic Age. Part II, The causes of tuberculosis Phthisis, consumption and tubercles. Percussion auscultation and the unitarian theory of phthisis. The germ theory of tuberculosis. Infection and disease. Part III, Care and prevention of tuberculosis The evaluation of therapeutic procedures. Treatment and natural resistance. Drugs, vaccines and public health measures. Healthy living and sanatoria. Part IV Tuberculosis and society: The evolution of epidemics. *Tuberculosis and industrial civilization.* Tuberculosis and social technology Appendices. Bibliography and notes. Index.

Note A unique combination of medical and social history this account of tuberculosis in Western society is of interest both to laymen and to physicians. The main theme is that tuberculosis is a social disease still unconquered, still dangerous if principles of healthful living are ignored, if man fails to "incorporate physiological principles in the complex fabric of industrial society" Woven around it are studies of the attitudes of the Romantic Age of the 19th century toward consumption of the tuberculous histories of John Keats, the Brontës, the family of Ralph Waldo Emerson, and other celebrated persons of the halting progress toward the discovery of the causative agent of tuberculosis the rise and fall of various therapies and finally of the social factors.

EDELSTEIN, EMMA JEANNETTE (LEVY), AND LUDWIG EDELSTEIN

Asclepius a collection and interpretation of the testimonies Baltimore The Johns Hopkins Press, 1945 2 v 26 cm. (Johns Hopkins University Institute of the History of Medicine Publications Second series Texts and documents Vol. II) $7 50 3260

Content Volume I, A collection of the testimonies. Legend. Descendants. Deification and divine nature Medicine. Cult. Images. Sanctuaries. Index locorum. *Volume II, Interpretation of the testimonies* The hero Asclepius. The god Asclepius. Temple medicine. Cult. Image. Temples. List of abbreviations. Index of testimonies. Index of names.

Note In this scholarly work, the references to Asclepius and the Asclepian cult which are found in extant Greek and Latin literature have been collected and are discussed. The allusions or "testimonies" are collected and classified in the first volume. In each instance reference is given to the source and the passage is quoted in the original language and also in English translation. The second volume is a historical and critical study based on the testimonies, of the hero and the god Asclepius, and of his significance to medicine. The work is of value not only to students of the history of medicine, but to students of the history of religion and of civilization as well.

ESSAYS IN THE HISTORY OF MEDICINE, presented to Professor Arturo Castiglioni on the occasion of his seventieth birthday, April 10 1944 (Supplements to the Bulletin of the history of medicine No 3) Baltimore The Johns Hopkins Press 1944 358 p illus 25 cm. $3 50 3261

Content Epistola dedicatoria, by H. E. Sigerist. Vita and bibliography of Professor A. Castiglioni. Paul Bert's triumph, by E. H. Ackerknecht. Random thoughts with a hopeful purpose, by A. Ascoli. La historia de la medicina y el perfeccionamiento médico, by J. R. Beltrán Giovanni Maria Lancisi and De subitaneis mortibus, by M. Calabresi. Sydenham and Cervantes, by L. Edelstein. O Museu de psiquiatria e de antropologia criminal organizado por Cesare Lombroso, by C. Fox. Polydore Vergil, his chapters on the history of physick and his *A gftes Historie*, by J. F. Fulton. *Jean Antoine François Ozanam, 1773–1837* soldier physician, epidemiologist, by I. Galdston. Angina inflammatoria (diphtheria?) as described in David Orme's *Edinburgh* dissertation (1750) and Benjamin Morris' Leyden dissertation (1750) by E. B. Krumbhaar and W. B. McDaniel, 2d. Medicina aborigen peruana, by J. B. Lastres. A short chronology of important events in cardiology by A. A. Luisada. Dialbetikerdiäten der Vergangenheit, by A. Magnus-Levy Los hospitales de América durante la epoca colonial, by C. Martinez Durán. Mignotydes, an undescribed epidemiological monograph of the cinquecento, by C. F. Mayer. La historia y la filosofía de la ciencia, by A. Mieli. Directions for the use of an early American marine medicine chest, by G. Miller Some relations between British and German medicine in the seventeenth century by M. Neuburger Medical matters in Marco Polo's Description of the world, by L. Olschki. Medidas de seguridad contra la fiebre amarilla durante el virreynato del Perú, by C. E. Paz Soldán. Der Zahnbrecher des Hans Sachs, by C. Proskauer. Beccaria (1733–94) by G. Sarton. *Frédéric Bérard, historien de la médecine*, by R. de Saussure. La manuscrit du *Régime du corps* d'Aldebrandino de la Bibliothèque d'Ajuda, à Lisbonne, by A. da Silva Carvalho. Retail pharmacy as the nucleus of the pharmaceutical industry by G. Urdang.

Note A collection of scholarly papers written for this memorial volume. As the titles indicate, several of them are in languages other than English.

FRIEDENWALD, HARRY

Jewish luminaries in medical history and a catalogue of works bearing on the subject of the Jews and medicine from the private library of Harry Friedenwald. Baltimore The Johns Hopkins Press, 1946 199 p illus. 24 cm $3 00 3262

Note The essay that gives this book its title occupies only 24 of its pages and was originally delivered as a lecture at Johns Hopkins University in 1943 It outlines the major contributions of Jews to medicine and mentions significant books and outstanding men. The remainder of the volume is devoted to the catalogue mentioned in the title.

FULTON, JOHN FARQUHAR

The great medical bibliographers, a study in humanism Philadelphia University of Pennsylvania, 1951 107 p illus. 22 cm (The Rosenbach Fellowship in Bibliography Publications) $4 00 3263

Contents. The beginnings: Trithemius, Champier and Gesner The seventeenth and eighteenth centuries medical book sales, Beughem, Van der Linden, Haller and the rise of medical bibliography Medical subject indices Ploucquet, Forbes, Callisen, and Billings Choulant and Osler Keynes and the rise of personal bibliography Appendices. Index.

Note: The history of medical bibliography is skillfully outlined in this collection of lectures that were delivered in 1950 on the A. S. W. Rosenbach Fellowship in Bibliography at the University of Pennsylvania. The bibliographical accomplishments of the great medical bibliographers are emphasized, but there is enough on their other accomplishments and personal life to make the account interesting. Among the appendix material is a list of early sale catalogues of medical books, bibliographical descriptions of the *Bellay Rabelais*, and descriptions of the bibliographies of Geoffrey Keynes. The illustrations include reproductions of portraits and facsimiles of title pages. The author himself a noted contributor to medical bibliography is Sterling Professor of the History of Medicine in Yale University School of Medicine.

GALDSTON, IAGO

Progress in medicine a critical review of the last hundred years With a foreword by *Henry E Sigerist* New York Alfred A. Knopf, 1940 361 p 22 cm $3.50 3264

Contents: Introduction *Preludes to Pasteur* The genius of Pasteur The *Pasteurians.* The reign of the microbes. The challenge of nutrition The inner realm and the endocrines. From Mesmer to Freud. Freud and modern psychiatry A century of clinical progress. Whither medicine? Index.

Note. The author traces the progression of ideas as witnessed in the development of medicine during the last hundred years, and draws from present-day trends in medical thought such deductions as to its future as seem warranted by the facts. Although the book is written for the layman, it is not a popularized account in the usual sense. The emphasis is not upon the well-

those who pass the examinations and meet the other requirements. It exerts an elevating influence on the practice of surgery in the United States of America. Its history during the first 35 years of its existence is recounted in detail in this short book. The account furnishes an excellent example of the rise and successful functioning of a voluntary regulatory body within a profession.

ROSEN, GEORGE

Fees and fee bills some economic aspects of medical practice in nineteenth century America. Baltimore The Johns Hopkins Press, 1946 93 p. 26 cm. (Supplements to The Bulletin of the history of medicine Henry E. Sigerist, editor Genevieve Miller associate editor No 6) $1.50 3278

Contents: Early fee bills. Reasons for the origin of fee bills. Economic problems of the medical profession. Fees during the 'thirties. Medical charges in eastern cities. Rules for professional conduct in pecuniary matters. Some fees in Vermont, New York and Connecticut in 1843. Fees and economic problems in the southwestern states. Medical charges during the middle of the century. Economic problems and social controls of the medical profession. Fee bills and price changes. Medical prices during the Civil War. A fee table for specialists. Medical price levels during the 'eighties and 'nineties. Conclusion. Index of medical societies.

Note: A brief survey of American medical prices reflected in the tables of charges stipulated by a number of medical societies in the period from 1818 to 1891. The lists, which are quoted verbatim, are revealing not only with regard to the economic situation of the medical profession during that period, but also with regard to the general cost of living, credit abuses, economic differences between urban and rural areas, etc. By pointing out those items in the fee bills which might be indicators of the growing specialization, development of new medical instruments, procedures, and professional trends, the author has hoped to stimulate further research into economic medical history in the United States of America.

RUSKIN ARTHUR, compiler

Classics in arterial hypertension Springfield, Ill Charles C Thomas, 1956 358 p. illus. 23 cm. (American lecture series. Publication no. 290 A monograph in the Bannerstone division of American lecture series classics in science and medicine W W Nowinski, editor) $9.50 3279

Contents: Methods: Stephen Hales (1733) Jean-L. M. Poiseuille (1828) Carl Ludwig (1847) Jean Faivre (1856) Etienne J. Marey (1875) Samuel S. K. von Basch (1880) Scipione Riva-Rocci (1896) Nikolai S. Korotkov (1905) Significance: Carlo Amoroso (1900) Johann J. Wepfer (1658) Thomas Young (1809) Richard Bright (1827) George Johnson (1868) Ludwig Traube (1856) William W. Gull and Henry G. Sutton (1872) Fred A. Mahomed (18[illegible]) Pierre C. Potain (1875) William R. Gowers (1876) Clifford Allbutt (1896) Robert Tigerstedt and Per G. Bergman (1897) Harvey Cushing (1906) Leo Ambard and Eugene Beaujard (1904) Heinrich F. Ewing 1924 Eberhard Koch and Heinz Mies (1929) Harry Goldblatt *et al.* (1934) Bibliography

Note: An anthology of classic papers and other writings on arterial hypertension. Writings originally in languages other than English have been translated into English. Notes of a biographical and historical nature, written by the compiler, accompany each of the selections.

SARTON GEORGE

Galen of Pergamon. Lawrence University of Kansas Press, 1954 112 p. illus. 22 cm. (University of Kansas. Logan Clendening lectures on the history and philosophy of medicine Third series) $2 50. 3280

Contents: The Roman world in the second century. Pergamon. Galen's life. Galen's writings. The medical sects in Galen's time. The anatomist and physiologist. The physician, surgeon and pharmacist. The philosopher, historian, and philologist. Character and style. Galen's influence. Appendices: Chronological summary. Galenic treatises translated from the Arabic. Galenic texts available in English translation. Index.

Note: A broad survey of information on Galen's personality, life, writings, work and influence is presented in this small book. The titles of the 10 lectures of which it is composed are given above. Although most of the topics mentioned are covered in essentially an outline form, and others are treated superficially, the late author's erudition in the history of science is apparent on every page. Literature references are given in support of most of the statements made. The chronological summary and the two bibliographies of Galenic treatises are complementary to the lectures and will be equally useful to anyone beginning a serious study of Galen.

SHRYOCK RICHARD HARRISON

American medical research past and present. Cambridge, Mass Harvard University Press 1947 350 p 21 cm. (The New York Academy of Medicine. Committee on Medicine and the Changing Order Monograph studies) $2.50 3281

Contents: Preface, by J. F. Fulton. Introduction. Formative influences. Early support of research 1840-1913. The changing economic and social background. The era of private support, 1913-1940. Research trends. Research fields. Public relations. Public support. The future. Index.

Note: In this book, a considerable amount of factual information is buttressed by the author's scholarship and wide acquaintance with our national culture to make this a valuable addition to the social and economic, as well as the medical, history of the United States. The story of medical research before 1900 is by no means slighted, but its accelerating expansion since Welch's early days at Johns Hopkins, its present status, and its future prospects constitute the bulk and the real value of the book. Socio-economic implications, involving especially finance and control, are presented with careful objectivity but considerable challenge. Thoroughly documented.

SHRYOCK RICHARD HARRISON

The development of modern medicine an interpretation of the social and scientific factors involved New York Alfred A. Knopf 1947 457 p. illus 22 cm $5 75 3282

Contents: First attempts to establish a physical science, 1600-1700. The partial failure of physical science, 1700-1800. Social factors in medical lag after 1700. Renewed progress toward an objective science, 1750-1800. Early contributions of physic and physicians to the public welfare, 1750-1800. Science in a romantic age, 1800-1850. Medicine and "the basic sciences." Medicine, mathematics, and the social sciences. The emergence of modern medicine, 1800-1850. The influence of French medicine in Europe and America. Modern medicine in Germany 1850-1880. Medicine and the public health movement, 1800-1880. Public confidence lost. The triumphs of modern medicine, 1870-1900. Further progress and some of the consequences. Public confidence regained. A delayed advance against mental disease. Practice in a changing society 1850-1900. American experience. Some contemporary questions. Index.

Note: This scholarly study traces the advance of scientific medicine from the close of the Renaissance to the present, stressing especially the relationship of medical thought and practice to contemporary scientific and social attitudes. It is shown that the predominant philosophy of any given age determines the contemporary concept of healing, and that not until the scientific revival in early 19th-century France did "modern" medicine really take form. That form has developed into the medical science of today in harmony with general scientific and social progress and has been especially influenced by German methods of investigation, by the emphasis on bacteriological studies, and by the opportunities afforded by 20th-century research. An earlier edition of the work (University of Pennsylvania, 1936) was entitled *The development of modern medicine.* That edition has been extensively rewritten, and the type has been reset.

SIGERIST HENRY ERNST

Civilization and disease. Ithaca Cornell University Press, 1943 255 p illus. 23 cm. $3 75 3283

Contents: Introduction. Civilization as a factor in the genesis of disease. Disease and economics. Disease and social life. Disease and the law. Disease and history. Disease and religion. Dis-

while been greatly reduced by modern methods of rodent and ectoparasitic control and by the use of antibiotic drugs. Between 1900 and 1951 there were 523 recorded cases of plague in the United States, most of them in port cities on the west and Gulf coasts. The appendix contains a variety of facts and figures concerning the disease in the United States and a list of publications on plague by officers of the Public Health Service

MacKinney, Loren Carey

Early medieval medicine, with special reference to France and Chartres. Baltimore The Johns Hopkins Press 1937 247 p illus 20 cm (Institute of the History of Medicine, The Johns Hopkins University Publications 3rd series. Vol 3) $2 75 3271

Contents The Dark Age concept and early medieval medicine Medicine in Merovingian and Carolingian France. Medical progress at Chartres in the tenth and eleventh centuries. Notes. Plates. Index.

Note The Hideyo Noguchi lectures, given in 1936 for the first time by a layman a professor of medieval history rather than a physician. They are interpretive and general. References are included in the notes section, and the plates are mostly photographic reproductions of medieval manuscripts on medical subjects.

Major, Ralph H

A history of medicine. Springfield, Ill Charles C Thomas, 1954 2 v illus 22 cm $14 50 3272

Contents Volume 1. The dawn of medicine Greek medicine Medicine in the Roman Empire The Middle Ages—earlier period—later period. The Renaissance. The seventeenth century Volume II. The eighteenth century The nineteenth century—the first half The rise of American medicine. The nineteenth century—the second half The twentieth century General bibliography Index of names. Index of subjects.

Note An episodic account of the development of medicine, rather than a well-integrated interpretation of the important events and influences of medical history The plan of organization provides for each main period, first, a narrative survey in which the personalities and works of the most important persons are described and, second, a "biographical addenda" in which the biographical facts on eminent but less important figures are concisely related. However this plan is modified to suit the man and the period. Sometimes a man of secondary importance is discussed in the main survey The addenda sections of early chapters are slight, while the section of the chapter on the second half of the 19th century alone runs to 42 pages. Both volumes are extensively illustrated. The organization of the work does not encourage reading of it from beginning to end. On the other hand, it is a repository of a wide array of facts and pictures and is well indexed. It is useful for ready reference and also for orientation in the history of specific periods.

Mullett Charles Frederic

Public baths and health in England 16th–18th century Baltimore The Johns Hopkins Press 1946 85 p 26 cm. (Supplements to the Bulletin of the history of medicine Henry E Sigerist, editor Genevieve Miller associate editor No 5) $1 50 3273

Contents Public baths and health in England, 16th–18th century Bibliography Index of names or titles Index of spas

Note. Essentially a bibliographic essay on the English spas in the 16th to 18th centuries. The text offers brief outlines of the contents of various papers, books, and articles on the subject, starting with the first English dissertation on baths in 1562 The 238 references cited in the bibliography are keyed to the text proper Primarily of interest to students of the history of medicine, the monograph also sheds some light on the social aspect of the period.

Orr, Hiram Winnett

On the contributions of Hugh Owen Thomas of Liverpool, Sir Robert Jones of Liverpool and London, John Ridlon, M.D., of New York and Chicago, to modern orthopedic surgery Springfield Ill Charles C Thomas, 1949 253 p. illus 22 cm. $4.50. 3274

Contents Biographies Hugh Owen Thomas. Sir Robert Jones. John Ridlon. A review of past and present methods in surgical practice. Rest as the fundamental factor in the relief of pain and the arrest and cure of inflammation. Methods of securing rest in fractures and in articular disease. Diagnosis and treatment of hip disease Disease of the knee joint, foot, and ankle. The prevention and cure of disability and deformity in fractures. Comments upon methods still in use in orthopedic practice from the writings of H. O. Thomas, Sir Robert Jones, and Dr John Ridlon Supplement: Ridlon and his share in molding orthopedic surgery by A. Steindler Annotated bibliography

Note. The scope of this contribution to the history of orthopedic surgery is indicated by the title and table of contents. The biographical sketches at the beginning of the book are short, but in the chapters which follow there is much additional information on the influence of these men and many quotations from their writings. There are 20 figures, most of which show early orthopedic appliances.

Petersen, William Ferdinand

Hippocratic wisdom for him who wishes to pursue properly the science of medicine a modern appreciation of ancient scientific achievement. Springfield, Ill Charles C Thomas, 1946 263 p illus. 22 cm $5 00. 3275

Contents. The poles of the earth. Seasons and erysipelas. Ascaris. Reproduction—The dancer lost her baby Epilepsy and hydrophobia. The medical clinic Pneumonia, pleurisy empyema. Phthisis. The patient who lived on Broadway In the surgery The art. Practice—The skull. Fractures and dislocations. Theory The cosmic concept. The unstable equilibrium. Resumption Too much and too early The era. "Le miracle grec. Appendix. Glossary Index of illustrations Index of contents.

Note In the main part of this book, extensive quotations from Hippocratic texts are interspersed with additions and discussion by Dr Petersen. The appendix—which is more than 80 pages in length—consists largely of explanatory notes and accounts of contemporary medical observations and cases that parallel observations in the Hippocratic texts. The book's chief purpose is to demonstrate to medical students and young physicians the significance and pertinence of Hippocrates to the ethics and philosophy of modern medicine.

Rapport, Samuel, and Helen Wright, editors

Great adventures in medicine New York The Dial Press, 1952 874 p 22 cm $6 00 3276

Note An anthology covering the whole field of medical history from early times to the present It presents a selected group of significant writings by and about medical pioneers and practitioners arranged roughly in chronological order Each of the six parts into which the work is divided contains a separate introductory synopsis written by the editors The book is of interest not only to physicians and students of medicine but also to laymen interested in medical history

Rodman, J Stewart

History of the American Board of Surgery 1937–1952 Philadelphia J B Lippincott Company 1956 104 p illus 23 cm $3 00 3277

Contents. Organization, 1935–1937 The first five years. The second 5 years. The third five years.

Note The American Board of Surgery is an organization which promulgates standards for education, training and ethics in the practice of surgery holds examinations for those who have completed the required education and training, and issues diplomas to

Medical Library Historical Library Publication no. 15) $4.00. 3290

Contents: Forerunners of surgical anesthesia. Crawford Williamson Long. Horace Wells and nitrous oxide. William T. G. Morton. Henry J. Bigelow & Edward Warren. Charles Jackson. Sir James Y. Simpson and chloroform. Other studies on individual surgical anesthetics (to 1875). Early general monographs on surgical anesthesia. Regional and block anesthesia. Studies on individual anesthetics (after 1875). Anesthesia and psychiatry. History and bibliography of surgical anesthesia. Addendum. Index.

Note: The books, pamphlets, leaflets, and patents listed in this exhibition catalogue are given full bibliographical descriptions, and these are supplemented by notes that tell something about the history of the person. Locations of copies in American libraries are given. Editorial paragraphs at the heads of chapters and interspersed among the bibliographical material summarize steps in the discovery and acceptance of anesthetics and describe the fortunes and misfortunes of the various men who are associated with the development. The bibliographies of regional and block anesthesia, and of studies on individual anesthetics, mentioned in the contents, are not in this book, but will appear in a scheduled Part II of the Catalogue.

GENERAL PATHOLOGY

ACKERMAN LAUREN V AND OTHERS

Pathology seminars. Edited by Robert S. Haukohl and W A. D Anderson. St. Louis The C. V Mosby Company 1955 195 p. illus. 26 cm. $7.50 3291

Contents: Tumor seminar, moderated by L. V. Ackerman. An introduction to pathology of the skin, moderated by A. C. Allen. Tumors of the bone and thyroid, moderated by J. E. Ash. Tumor seminar, moderated by A. P. Stout. Tumor seminar, moderated by R. A. Willis. Index.

Note: Published in this volume are the proceedings of five seminars held at the Marquette University School of Medicine. The proceedings were not formal, and, as printed in the book, they consist of concise descriptions of cases. Discussions, which in most instances are reproductions of microphotographic diagnoses submitted by experts on the basis of the case history and the illustrative material, and discussion of the submitted diagnoses. Literature references are given also. The book is typical of the "slide seminar," postgraduate educational device that is currently used—often under the sponsorship of a professional society—in medicine and surgery in the United States of America.

ADAMS RAYMOND D AND OTHERS

Diseases of muscle a study in pathology By Raymond D Adams D Denny Brown, and Carl M. Pearson. With 347 illustrations. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1954 556 p. illus (part col d) 24 cm. $16.00 3292

Contents: Part I. The nature of skeletal muscle: Embryology and histology of skeletal muscle. Innervation and blood supply of muscle, with brief consideration of chemistry and physiology of muscular contraction. Part II. The pathologic reactions of skeletal muscle: Experimental pathology. The general reactions of human muscle to disease. Part III. The pathology of muscle disease: Congenital defects of skeletal muscle. Muscular dystrophies. Inflammatory diseases ("myositis"). Tumors. Traumatic and circulatory diseases. Spinal and neural muscular atrophies. Miscellaneous diseases. Toxic, metabolic, and endocrine diseases—II. Disorders of excitability and contractility. Differential diagnosis and methods of pathologic study. Index.

Note: At the time this note was written, this was the only recent monograph in the English language on the diseases of muscle. It is, in addition, a work in which much recent research, including some hitherto unpublished work of the authors, is surveyed. Because it is designed primarily for use as a textbook in advanced courses in medical schools, considerable space is devoted to basic anatomy and physiology. The chapter on experimental pathology—which is one of the longest ones in the book—is a critical survey of the published results of many researchers. In the chapters on specific diseases of muscle, the emphasis is on pathology. Extensive bibliographies are a feature of most of the chapters. The majority of illustrations are reproductions of microphotographs. All of the authors are members of the medical staff of Boston City Hospital, and two of them are also members of the faculty of the Harvard Medical School.

ANDERSON W A D editor

Pathology With 1241 illustrations and 10 color plates. Second edition. St. Louis The C. V Mosby Company 1953 1,393 p illus (part col'd) 27 cm. 3293

Contents: Introduction, by P. Klemperer. Cells and their behavior, by E. V Cowdry. Inflammation, by M. McCutcheon. Degenerative changes and disturbances of metabolism, by W. A. D Anderson. Disturbances of circulation, by V H. Moon. Physical agents in the causation of injury and disease, by A. R. Moritz. Chemical injury, by W. W. Jetter. Effects of radiation, by C. E. Dunlap. General principles of infection and resistance, by F. R. Cannon. Bacterial diseases, by H. C. Hopps. Tuberculosis, by J. D. Gunn. Leprosy, by E. Keppich. Spirochetal and venereal diseases, by K. R. Pund. Rickettsial and viral diseases, by H. Pinkerton. Fungus infections, by R. D. Baker. Protozoal and helminthic infections, by E. Keppich. Vitamins and deficiency diseases, by H. Pinkerton. Neoplasms, by S. Warren. The heart, by E. M. Hall. The blood and lymphatic vessels, by E. M. Hall. The kidneys, by W. A. D Anderson. The lower urinary tract and male genitalia, by E. B. Pund. The lung, by J. D. Gunn. The organs of special senses, by J. E. Ash. The lips, mouth, teeth, and neck, by W. H. Bauer. The gastrointestinal tract, by J. R. Schenken and E. L. Burns. The liver, by W. A. D. Anderson. The gall bladder and the biliary ducts, by R. Halpert. The pancreas, by W. A. D Anderson. Diabetes mellitus, by S. Warren. The blood and bone marrow, by M. N. Richter. The spleen, lymph nodes, and reticulo-endothelial system, by M. N. Richter. The thymus, by W. A. D. Anderson. The pituitary gland, (hypophysis) by J. E. Kraus. The pineal, by W. A. D Anderson. The thyroid, by W. A. D. Anderson and T. Winship. The parathyroids, by W. A. D. Anderson. The adrenal glands, by W. A. D Anderson and J. A. Sexton, Jr. The female genitalia, by W. Schiller. The breast, by J. F. Kernan. The skin, by A. C. Allen. The bones, by G. A. Bennett. The joints, by G. A. Bennett. The nervous system, by J. Mischler. Heredity and constitution in disease, by M. T. Macklin. Index.

Note: A cyclopedic presentation of the current knowledge of pathology. It is suitable for use as a textbook in medical school courses and as a reference book in the offices of graduate medical practitioners who are not specialists in pathology. By the use of small type much more material has been included than even the large number of pages would indicate. Most of the chapters are supplemented by selected though unnecessarily lengthy lists of references. The first edition was published in 1948. Extensive revisions were not made in preparing this edition, but numerous small changes have been made throughout the volume in both text and illustrations. A new edition was published in 1957 1,402 p. $18.00.

APPERLY FRANK LONGSTAFF

Patterns of disease on a basis of physiologic pathology 50 figures and 37 charts. Philadelphia J B Lippincott Company 1951 456 p. illus 24 cm. $8.00 3294

Contents: Life and disease. Pathology, the science of disease. The positive changes in disease—nutrition and its disturbances—disturbances of the peripheral circulation. The reactive changes to injury—the local reaction—inflammation—the general reaction—leukocytosis, fever and antibodies—the local reaction—repair. Infection and resistance. Some special types of inflammation—the reaction to certain other living forms. Pigmentation and certain degenerations. Hypertrophy and hyperplasia. Tumors. Cysts. Diseases of the cardiovascular system. Diseases of blood and the organs of blood formation. Diseases of the urinary system. Diseases of the respiratory system. Diseases of the gastro-intestinal tract and the peritoneum. Diseases of the liver and the gallbladder. Diseases of the pancreas. Diseases of the female reproductive organs. Diseases of the breast. Diseases of the male reproductive organs. Diseases of the cerebrospinal system. Diseases of the ductless glands. Diseases of the locomotor system. Disease and the man. Index.

Note: An unconventional but useful presentation of pathology. The detailed descriptions of diseased tissues and the numerous illustrations that are a feature of most texts on pathology are largely lacking. The author has devoted his attention to the beginnings and progressions of diseases and to the compensatory mechanisms set into action by the body. Descriptions of specific diseases and pathological conditions are short but are cast in a style that is easy to read. The author is Professor of Pathology at the Medical College of Virginia.

ease and philosophy Disease and science. Disease and literature. Disease and art. Disease and music. Civilization against disease. Epilogue. Index.

Note This volume is based on the Messenger lectures on the evolution of civilization, given at Cornell University in 1940. The major aspects of the complex relationships between civiliza tion and disease are discussed. Nontechnical language is used, as the book is intended for laymen.

SIGERIST, HENRY ERNST

A history of medicine. Volume I Primitive and archaic medicine. New York Oxford University Press 1951 564 p. illus, 24 cm (Yale Medical Library, Historical Library Publication no 27) $12 50 3284

Contents Introduction. Primitive medicine. Ancient Egypt. Mesopotamia. Appendixes *Histories of medicine. Source books of medical history* Museums of medical history Literature of paleopathology since 1930. Index.

Note The first volume published of an eight-volume work planned on a more comprehensive scale than has been attempted before. It is the author's purpose to apply to the history of medicine the same principles as are applied in scholarly histories of other segments of human life. A reading of the part of his introduction entitled "The historic approach to medicine is essential to an understanding of his plan, but the subheadings in his chapter on Mesopotamia, "The setting, "Social environment, Principles and sources of Mesopotamian medicine Patient and physician, "Content of Mesopotamian medicine Rational elements in Mesopotamian medicine *indicate the scope of his method and the inclusion of much material* on the social and economic setting His style is both scholarly and readable. Sources are scrupulously noted.

SIGERIST, HENRY ERNST

Medicine and human welfare New Haven Yale University Press, 1941 148 p illus 21 cm (The Terry lectures) $3 00 3285

Content Preface. List of illustrations. Disease. Health. The physician. Index of proper names.

Note Medicine, its close and continued relation to religion and the changes that have taken place in man's attitude toward *disease form the subject matter of the first chapter f this book.* The chapter entitled "Health is concerned with the development of the concept of the pursuit of health from the days of *ancient Greece when it was an individual matter* luxury confined to the favored few up to the present day when awakening social consciousness is bringing the realization that health must be the privilege of all. The third chapter gives realistic account of the development of the medical man. His gradual emergence is traced from the condition of craftsman attached to a court, a rich family or perhaps city to that of scientist working independently *The* other stresses the inadequacy of the present 'commercialized system and ends with stirring appeal to mak *medical treatment* public service

STERN BERNHARD JOSEPH

American medical practice in the perspectives of a century Cambridge, Mass Harvard University Press, 1945 170 p 21 cm (New York Academy of Medicine Committee on Medicine and the Changing Order Studies) $1 50 3286

Contents Social and economic changes in American life. The expanding horizons of medicine. The specialist and the general practitioner The supply and distribution of physicians The patient load in medical practice. *The income of physicians.* The distribution of medical services. Appendix Th *effect of recruitment* on the supply *of physicians in civilian areas* Index.

Note. A short historical sketch whose chief purpose is to familiarize physicians, and others concerned with the problems of contemporary medicine with some of the origins of these problems. The author traces the evolution f the social and economic forces in the world today revealing the effect which the growth of machine production and industrial urbanization *has* had on health. He sketches the concurrent growth of medicine, the increasing costs of its services, the increasing duration and costliness of medical education, the growth of specialization, the development f th modern hospital, and surveys the present distribution of medical care.

STEVENSON, LLOYD G

Nobel prize winners in medicine and physiology, 1901–1950 New York Abelard Schuman, Ltd, 1953 291 p illus. 22 cm $6 50 3287

Note A reference work on the Nobel laureates in medicine and physiology during the first 50 years of the 20th century For each year in which the prize was awarded, the book contains a separate chapter which includes the following concerning the prize winner biographical sketch, description of the prize-winning work in the words of the recipient, the significance of the winning work in the theory and practice of medicine, and bibliographical *references. In most instances the description of the prize-winning* work is an excerpt from the Nobel lecture delivered in Stockholm at the time f the presentation of the prize. A separate section of illustrations contains photographic portraits of the prize winners.

WEBB, GERALD BERTRAM

Tuberculosis With 17 illustrations New York P B Hoeber Inc. Medical Book Department of Harper & Brothers, 1936 205 p. illus 17 cm (Clio medica, a series of primers on the history of medicine editor, E. B Krumbhaar XVI) $2 50 3288

Contents Epidemiology Knowledge of the ancients. The Middle Ages. Contagion Pathology The tubercle. The tubercle bacillus. Immunity Diagnosis. Treatment. Rest treatment of tuberculosis. Climate. Sanatoria. Legislative prophylaxis. Bibliography Index of personal names. Index of subjects.

Note This handbook gives a brief history of this disease, which has been present in man since the dawn of civilization. The author has traced the earliest records of the disease found in writings, in pictures, vases, etc., and in other relics of antiquity and the earliest records of the forms of treatment, often *bizarre. He has also traced the development of the words em*ployed in describing the various forms of the disease in different languages. The later course of the development of our knowledge of the etiology diagnosis, and treatment of tuberculosis is also described, with mention of the men who have made outstanding contributions in this field. The book is intended for student, physician and layman.

WINSLOW, CHARLES EDWARD AMORY

The conquest of epidemic disease a chapter in the history of ideas Princeton Princeton University Press 1943 411 p 24 cm. $6 00 3289

Contents The world of demons. The wrath of God. Metaphysical medicine. The universe of natural law Primitive concepts f contagion. The great teacher Fracastorius. The conception of contagium animatum. The English Hippocrates. The last of the *plague tractates.* The enigma of yellow fever. The great sanitary awakening. Three pioneer epidemiologists. Pasteur Pettenkofer—the last stand. *The concept of the carrier* The insect host. The modes of infection. *Acknowledgments.* References. Index.

Note. The story of how man solved the mystery of epidemic disease, told as far as possible in the actual words of the various participants, after an analysis by the author of all their surviving works. Hippocrates, Galen, Fracastorius, Paracelsus, Kircher Mead, Rush, Pasteur and Chadwick are some of these participants. For the layman as well as public health workers and *members of the medical profession*

YALE UNIVERSITY SCHOOL OF MEDICINE. YALE MEDICAL LIBRARY

The centennial of surgical anesthesia an annotated catalogue of books and pamphlets bearing on the early history of surgical anesthesia compiled by John F Fulton and Madeline E Stanton New York Abelard-Schuman Ltd 1946 102 p illus. 23 cm (Yale

KARSNER, HOWARD T

Human pathology 557 illustrations in black and white and 19 subjects in color on 14 plates. Eighth edition. Philadelphia J B Lippincott Company 1955 960 p illus. (part col d) 26 cm. $15 00. 3300

Contents: Part I, General pathology: General phenomena of disease. Pathologic pigmentation. Degenerations and infiltrations. Necrosis and somatic death. Mineral infiltrates and concrements. Atrophy. Disturbances of circulation. Inflammation. Principles of infectious disease. The infectious granulomas. Progressive tissue changes. Tumors. Part II, Systemic pathology: The cardiovascular system. The hematopoietic system. The respiratory system. The alimentary canal. Liver and pancreas. The urinary system. The genital system. Endocrine glands. The organs of locomotion. The nervous system. The eye and adnexa. The skin. Index.

Note: A standard and long established work, useful as a text in medical colleges and as an office reference book by physicians and surgeons. The scope is comprehensive with both congenital anomalies and the pathology of diseases, and rare conditions as well as common ones, included. However many of the disorders are described only briefly with reference being given to fuller discussions in the literature. The author's style is straightforward and easy to read. In this edition, 40 per cent of the space is devoted to the first part on the general principles and aspects of pathology and 60 per cent to the pathology of systems and organs. The seventh edition was published in 1949. A considerable range of new material has been added in this eighth edition, including a new chapter on the pathology of the nervous system, several extensively revised chapters, and new and revised sections in a number of other chapters. A selection of new literature has been added to the bibliographies.

MENKIN VALY

Biochemical mechanisms in inflammation. Completely revised second edition. Springfield, Ill. Charles C Thomas, 1956 438 p illus. 23 cm. (American lecture series. Publication no. 288. A monograph in the Bannerstone Division of American Lectures in Dentistry edited by Edward J Ryan) $9 50 3301

Contents: The problem of the initial increased capillary permeability and the migration of leukocytes in inflammation (leukotaxine). The rôle of the hydrogen ion concentration and the cytology of an exudate: glycolysis in inflammation, some aspects of the chemistry of exudates. The rôle of inflammation in immunity. Phagocytosis, chemical factors in alkaline exudates concerned with the mechanism of leukocytosis and leukopenia. The pattern of injury in inflammation (necrosin). Cause of fever in inflammation (pyrexin): chemical factors in acid exudates concerned with the mechanism of leukopenia and leukocytosis, determination of the white blood cell level with inflammation. Diabetes in inflammation. Repair: cellular injury: possible relation to neoplasia and precancerous lesions. The anti-inflammatory problem. Recapitulation and conclusions. Index.

Note: A revision and enlargement of the author's *Newer concepts of inflammation*, Springfield, Ill. 1950, this book is a synthesis of a wide range of research studies on the biochemistry of inflammation. The author defines inflammation as "the complex vascular, lymphatic and local tissue reaction elicited in higher animals by the presence of micro-organisms or of non-viable irritants," and he views this reaction as an immunological mechanism of definite significance in bodily economy. The presentation is a critical one, and on matters where the author does not agree with the views of other workers in this field, he describes the differences explicitly. The pertinent literature is carefully cited. In comparison to the first edition, the book has been more than doubled in length and much new information has been incorporated. The author is widely recognized as an investigator of inflammation and an authority on the aspects of pathology and immunology.

MORITZ ALAN RICHARDS

The pathology of trauma. Second edition, enlarged and thoroughly revised. Philadelphia Lea & Febiger 1954 414 p. illus. 24 cm. $8.50. 3302

Contents: Mechanical injuries. Trauma and infection. Trauma and tumors. Mechanical injuries of the cardiovascular system. Mechanical injuries of the respiratory system. Mechanical injuries of the alimentary canal. Mechanical injuries of the liver, gall bladder, bile passages, pancreas and spleen. Mechanical injuries of the urogenital tract. Mechanical injuries of the central nervous system. Mechanical injuries of the skeletomuscular system. The medicolegal autopsy.

Note: A standard work on the pathological aspects of lesions produced by mechanical violence. It deals largely with but is not limited to the aspects of trauma associated with criminal violence. Trauma associated with industrial and other accidents and with military operations are considered also. The principal causes of mechanical injury, the pathological characteristics of the resulting lesions, the pathogenesis of their complications and sequelae, and collateral evidence of medicolegal interest are discussed concisely but in adequate detail. The first edition was published in 1942. The terminal chapter is new in this second edition, and sections of other chapters have been extensively revised, usually in collaboration with other authorities whose names are given. A selection of recent literature has been added to the bibliographies, and the illustrations have been revised and their number increased somewhat.

NEUBUERGER, KARL THEODORE

Atlas of histologic diagnosis in surgical pathology. With a section on Exfoliative cytology by Walter T Wikle. Photography by Glenn E. Mills. Baltimore The Williams & Wilkins Company 1951 460 p. illus. 26 cm. $11.00 3303

Contents: Skin and subcutaneous tissues. Lymph nodes. Spleen. Muscles and tendons. Bones, joints, and bursae. Nose and paranasal sinuses. Larynx and trachea. Bronchi and lungs. Pleura. Thymus. Thyroid. Parathyroids. Branchiogenic lesions. Carotid body. Oral cavity. Salivary glands. Tonsils. Esophagus. Stomach. Intestines. Appendix. Peritoneum. Liver. Gall bladder. Pancreas. Adrenals. Kidneys and ureters. Urinary bladder and urethra. Prostate. Male genitalia except prostate. Uterus. Fallopian tubes. Ovaries. Vagina and vulva. Breast. Meninges (cerebral). Brain. Spinal cord and spinal meninges. Pituitary. Peripheral and sympathetic nervous system. Blood vessels. Eye. Ear. Exfoliative cytology: Vaginal tract. Respiratory tract. Gastrointestinal tract. Urinary tract. Body fluids. Supplement. Index.

Note: A comprehensive work in which the author has endeavored to include microphotographs that exhibit all the common lesions observable in tissues. Rare conditions have been omitted; nevertheless, a considerable range of material has been included for all of the principal systems and organs. The special section on exfoliative cytology pertains to the interpretation of smears. Each of the 880 figures is accompanied on the same page with a short description in which diagnostic features are emphasized. The author is Professor of Pathology in the School of Medicine of the University of Colorado.

SMITH LAWRENCE WELD AND EDWIN S GAULT

Essentials of pathology. Third edition. With a foreword by the late James Ewing. New York McGraw Hill Book Company Inc., 1948 764 p illus. (part col d) 28 cm. $12.00. 3304

Contents: General pathology. Retrograde processes. Disturbances of circulation. Somatic [illegible] The [illegible] Inflammation. Specific bacterial infections. Diseases caused by animal parasites. Oncology. Systemic pathology: Diseases of the circulatory system. Diseases of the respiratory system. Diseases of the gastro-intestinal tract. Diseases of the liver and the pancreas. Diseases of the hematopoietic and reticulo-endothelial systems. Diseases of the urinary tract. Diseases of the male genitalia. Diseases of the female genitalia. Diseases of the ductless glands. Diseases of the nervous system. Diseases of the organs of locomotion. Diseases of the teeth and related structures. Bibliography. Index.

Note: In this text for medical students the authors have sought to make the treatment of practical value by emphasizing fundamentals rather than attempting an encyclopedic presentation; by frequent citations of case histories; by avoiding controversial subjects and theories; and by the extensive use of photomicrographs and gross pathological pictures. The page size of this edition has been reduced,

BELL, E T

A text book of pathology Eighth edition, enlarged and thoroughly revised with 545 illustrations and 5 color plates Philadelphia Lea & Febiger 1956 1,028 p illus (part col'd) 24 cm $14 50 3295

Contents: Introduction—predisposition to disease. Mechanical injuries. Injuries due to physical agents. Injuries due to chemical agents. Diseases due to deficiency of vitamins (avitaminosis and hypovitaminosis) Circulatory disturbances. Retrogressive tissue changes. Inflammation. Tuberculosis. The venereal diseases. Other chronic infectious diseases. The mycoses or fungus infections, by J S McCartney Bacterial diseases. Tumors. Diseases of the blood. Certain diseases caused by animal parasites. Diseases of the thymus and lymph nodes. Diseases of the spleen. Diseases of the respiratory system. Diseases of the digestive system. Diseases of the pancreas. Diseases of the liver and gall-bladder by J S. McCartney Diseases of the heart, by B J Clawson. Diseases of the blood-vessels. Diseases of the urinary system. Diseases of the reproductive organs of the male. *Gynecological pathology* Diseases of the ductless glands. Neuropathology Diseases of the bones and joints. Index.

Note A long-established text for use in medical school courses in general pathology The first eight chapters are devoted to the general mechanisms of disease, and the 22 chapters that follow them to specific diseases. The descriptions of the pathology of specific diseases are very concise but they are supplemented by illustrations, and by references to the literature. The seventh edition was published in 1952 Small revisions were made in many sections in preparing this eighth edition. A selection of recent literature was added to the bibliographies and the number of illustrations has been slightly increased, but many parts of the book are unchanged.

BOYD, WILLIAM

A text book of pathology an introduction to medicine Sixth edition thoroughly revised, with 570 illustrations and 32 colored plates Philadelphia Lea & Febiger 1953 1 024 p illus (part col d) 24 cm. $12 50 3296

Content Part I General pathology The content of pathology Degenerative processes and disturbances of metabolism. Circulatory disturbances. Inflammation. Repair Infection and resistance. Bacterial infections. Diseases caused by animal parasites. Growth and its disorders. Tumors. Vitamin deficiency Injuries caused by physical irritants. Injuries caused by chemical poisons. Heredity and constitution in disease. Part II, Special pathology The heart. The blood vessels. The respiratory system. The mouth, neck and esophagus. The stomach and duodenum. The intestines. The liver and gall-bladder The pancreas. The peritoneum and abdominal wall. The urinary system. The male reproductive system. The female reproductive system. The breast. The ductless glands. The lymphoid structures. The blood. The nervous system. The bones. The joints. The muscles, tendons and bursae The skin. Dental pathology Index.

Note A standard textbook widely used in undergraduate courses in medical schools It is written in a straightforward, explicit style that is easy to comprehend. As noted in the title, there are hundreds of illustrations. These are well selected, and the majority of them are clearly reproduced. The references to additional reading are classified so that the reader who wishes more information on a single topic for example, carcinoma of the cervix, is referred to several papers specifically on the subject The first edition was published in 1932 and the fifth edition in 1947 A number of sections carried over from the fifth to this sixth edition were rewritten A considerable list of new topics has been added, but the discussions of some of these are brief The author is Professor of Pathology in the University of British Columbia.

FORBUS WILEY DAVIS

Reaction to injury pathology for students of disease based on the functional and morphological responses of tissues to injurious agents 532 illustrations 20 of which are in color Baltimore The Williams & Wilkins Company, 1943 797 p illus (part col'd) 26 cm $9 00 3297

Contents (abridged) Part one Introduction to the study of disease Its nature. Causation Extrinsic, intrinsic factors. Extrinsic intrinsic factors. Part two 1 *The inflammatory reaction and diseases arising therefrom.* Inflammatory diseases of bacterial etiology—focal and local infections, scarlatina, rheumatic fever nephritis, alimentary tract infections, biliary tract, urinary tract and kidneys, gonorrhea, respiratory tract, osteomyelitis, endometritis, endocarditis. 2, Virus and rickettsial diseases. 3 Chronic granulomatous diseases—typhus and typhoid, tuberculosis, leprosy tularemia, etc., Hodgkin's disease, syphilis, fungus diseases. Index.

—— Volume II The reactions of submission and adaptation and the disease entities arising out of their elaboration 836 illustrations, 54 of which are in color Baltimore The Williams & Wilkins Company 1952 1 110 p illus (part col'd) 26 cm $20.00 3298

Content (abridged) Part three, The submissive reaction to injury and the disease entities arising therefrom—disturbances in metabolism and function with and without structural alteration of the tissues Section one, Disturbances in function and metabolism of cells and tissues with and without their structural alteration. Section two, *Disturbances in organic and systemic function,* and metabolism with and without structural alteration of the tissues. Section three, Disturbances in function and metabolism related to the process of growth and development. Part four *Reaction to injury through adaptation—functionally and structurally adaptive, sometimes compensatory reactions of cells, tissues and organ systems following injury* Section one, Applications of the principle of adaptation to the study of disease. Section two, Adaptive reactions following injury to the circulatory system. Section three, Adaptive reactions following injury to the respiratory system. *Section four* Adaptive reactions following obstruction to the passage of body fluids from and through the hollow viscera. Index.

Note A treatise on pathology which is organized on an unusual plan. The author's thesis is that disease is a matter of the abnormal outcome of a constantly changing relation between the ultimate biological unit, the cell, and its environment stated another way disease is a matter of qualitative and quantitative reaction of an individual to environmental stimulation. A wide range of pathological conditions is covered from this viewpoint, and most of them are described in detail. Extensive literature references are included. The author is Professor of Pathology in Duke University Medical School.

HERBUT, PETER A.

Pathology 1,378 illustrations on 651 figures and 6 color plates Philadelphia Lea & Febiger 1955 1 227 p illus (part col d) 27 cm $16 00 3299

Content Orientation. The autopsy Congenital anomalies. Degenerations. Inflammations. Physical disturbances. Tumors. Heart. Vessels. Upper respiratory system. Larynx. *Lower respiratory system. Thyroid gland.* Parathyroid glands. Upper digestive system Esophagus. Stomach. Small intestine. Appendix. Large intestine. Liver and biliary system. Pancreas. Peritoneum Reticulo-endothelial system. Blood. Spleen. Lymph nodes. Thymus. Adrenal glands. Lower urinary system. Kidneys. Male generative system Female generative system. Breast. Bones. Joints. Fascias, tendons, and bursae. Skeletal muscle. Skin. Central nervous system, by B J Alpers. Index.

Note. A compact, concisely written treatise suitable for use as text in medical college courses and as reference book. The first chapter is concerned with definitions of basic terms and with the historical development of the study of pathology The second chapter describes the purposes and techniques of autopsies. The five chapters that follow it are devoted to broad categories of disease processes. All of the remaining chapters—and there are 40—are devoted to the pathology of specific systems and organs. Specific diseases are described very concisely In most instances, information is given on all of these points, definition incidence, cause, gross appearance microscopic appearance, complications, clinico-pathologic correlation, diagnosis, treatment, and prognosis. Long bibliographies are included in the chapters. The illustrations are of high quality and are well reproduced.

generally speaking, each one includes information on the general features of the disease with which it is concerned, the special characteristics of the causative organism, the more important methods of isolation and identification, and biological and immunologic procedures for diagnosis. In some of the chapters there are discussions of clinical features and pathology. Literature references are always given.

ANNINO JOSEPH

Clinical chemistry principles and procedures. Boston Little, Brown and Company 1956 280 p. illus. 24 cm. $7.50 3311

Contents: Part I, Basic technics and fundamental information. Laboratory apparatus and standard solutions. Colorimetry A review of quantitative analysis. Collection, preservation and identification of samples, and normal values. Part II, Methods. General orientation; methods and physiological interpretations. Carbon dioxide. Chloride. Sodium and potassium. Flame photometry. Determination of pH and the physiological significance of electrolyte concentrations. Glucose. Nitrogen. Protein. Calcium and phosphorus. Liver function tests. Enzymes. Drug levels. Creatinine, creatine and uric acid. Cerebrospinal fluid (C.S.F.) analyses. Kidney function tests and notes on urinalysis. Index.

Note: A useful text on the analytical techniques used in hospital diagnostic laboratories and on the scientific principles that underlie them. The first part describes standard laboratory apparatus and its care; standard solutions; reviews very briefly the principles and techniques of colorimetry, turbidimetry, nephelometry and fluorophotometry; and provides useful information on the collection, preservation and identification of samples. The second and longer part describes specific techniques for a considerable range of diagnostic tests. These methods are, of course, selected, but they are those most commonly used in the leading diagnostic laboratories. In discussing the individual techniques, due attention is given to such matters as reagents, detailed procedures, calculations, and accuracy of the determinations. Also, the physiological significance of the findings is usually indicated. The author is Clinical Chemist for the Massachusetts Memorial Hospitals in Boston.

BAUER, JULIUS

Differential diagnosis of internal diseases clinical analysis and synthesis of symptoms and signs on pathophysiologic basis. Second revised and enlarged edition. New York Grune & Stratton 1955 987 p. illus. 23 cm. $15.00 3312

Contents: Part I, Leading symptoms. Headache. Chest pain. Abdominal pain. Backache. Pain in the extremities, dysesthesias, paresthesias. Disturbance of general feelings. Disturbance of consciousness. Vertigo, nausea, and vomiting. Paralysis, incoordination and involuntary movements. Cough and dyspnea. Diarrhea and constipation. Hemorrhages. Part II, Leading signs. The general appearance (habitus). Hyperthermia, fever and infectious diseases. Respiratory system. Cardiovascular system. Digestive system. Hematopoietic system. Urogenital system. Glycosuria. Index.

Note: Techniques of differential diagnosis, many of them originated with the author, are thoroughly expounded in this textbook for medical college courses. Many case histories are described and discussed. Neurotic and psychosomatic aspects are given due emphasis. The importance of thorough observation and examination in cases where there is no emergency is fully emphasized. Selected but extensive bibliographies are included in the chapters. The first edition was published in 1950. Further extensive revisions and augmentations have been made in this second edition, and the bibliographies have been enlarged. The author is Clinical Professor of Medicine in the College of Medical Evangelists.

BEHRMAN HOWARD TAFT

Dermatologic clues to internal disease. New York Grune & Stratton, 1947 165 p. illus. 23 cm. $4.00 3313

Note: In this reference manual, the skin manifestations of a considerable range of diseases are described concisely and are illustrated in numerous photographs. The arrangement is alphabetical by name of disease. The volume is intended as an aid in diagnosis.

BRAY WILLIAM EDWARD

Clinical laboratory methods Fourth edition. With 119 text illustrations and 18 color plates. St. Louis The C. V Mosby Company 1951 614 p. illus. (part col d) 22 cm. 3314

Contents: General rules—laboratory examinations of value in various cases. Urinalysis. Hematology. Blood chemistry. Gastric analysis. Feces and intestinal parasites. Puncture fluid examination—cerebrospinal fluid examination. Sputum. Bacteriology. Mycology. Water and milk examinations. Serology. Basal metabolism tests. Allergy tests. Poisons and foreign substances. Surgical pathology. Indicators, stains and staining solutions, reagents, renewal of laboratory stains, atomic weights, table of equivalents, table of normals. Index.

Note: A long-established reference book addressed to medical college students and clinical laboratory technicians. In it accepted procedures are described step by step and in detail, with special reference to such matters as collecting of specimens, chemical and microscopical examinations, staining techniques and special points, such as precautions, useful variations in procedures, etc. Literature references are included for many of the methods. The third edition entitled *Synopsis of clinical laboratory methods* was published in 1944. A fifth edition was published in 1957 [illegible]

BRUST RAYMOND W

Physical diagnosis. Introduction by Truman G Schnabel New York Appleton-Century-Crofts Inc., 1951 294 p. illus. 22 cm. $5.00 3315

Contents (abridged): Part one, Orientation. Part II, The body in general. Part III, The pulmonary system. Part IV The cardiovascular system. Part V The gastrointestinal system. Part VI, The nervous system. Index.

Note: A concise text on diagnostic techniques, such as can be carried out in the physician's office without resort to laboratory tests. The discussions are direct and specific. The material is arranged logically and liberal use has been made of paragraphs and subtitles to facilitate rapid study and reference use. There are 40 illustrations.

DUNPHY J ENGLEBERT AND THOMAS W BOTSFORD

Physical examination of the surgical patient. Philadelphia W B Saunders Company 1953 326 p. illus 24 cm. $7.50 3316

Contents: Part I, The elective examination: The lesson of the physical examination. Examination of the head and neck. Examination of the breast. Examination of the inguinal and femoral regions and the male external genitalia—the differential diagnosis of hernia. Examination of the abdomen. Examination of the abdomen of infants and children. Examination of the extremities. Special examinations of the peripheral blood vessels. Ulcer and gangrene of the extremities. Examination of the spine and hips. Examination of the female external genitalia and pelvis. Examination of the anus and rectum. Part II, The emergency examination: General principles in examination of the injured patient. Injuries of the head and face. Injuries of the thoracic wall, heart and lungs. Abdominal injuries. Injuries of the kidney, bladder and urethra; fractured pelvis. Injuries of the spine and extremities. Bibliography. Appendix. Index.

Note: This book teaches diagnosis by visual observation, palpation, etc. It is limited to the diagnosis of conditions for which surgery is the indicated therapy, hence the title. It is clearly written and well illustrated. Almost all of the illustrations are from drawings, and these are of excellent quality and are clearly reproduced. The appendix contains a brief but useful checklist for physical diagnostic examination. The authors are members of the faculty of Harvard Medical School and of the surgical staff of Peter Bent Brigham Hospital in Boston.

GOODALE, RAYMOND H.

Clinical interpretation of laboratory tests. 105 illustrations—6 in color Third edition. Philadelphia F. A. Davis Company 1954 720 p illus. (part col d) 24 cm. 3317

and most of the chapters have undergone some form of revision. Case histories have been condensed and set in fine print, and subject specialists have assisted in the revision of such chapters as those on endocrine gland pathology the hematopoietic system, and pathological chemistry A new chapter on pathology of teeth and related structures has also been added. Bibliographies, arranged according to chapter are again included at the end of the volume.

UNITED STATES NAVAL MEDICAL SCHOOL

Color atlas of pathology Prepared under the auspices of the U S Naval Medical School of the National Naval Medical Center, Bethesda, Maryland Volume I. Illustrated with 1 053 figures in color on 365 plates Philadelphia J B Lippincott Company 1950 546 p illus (col d) 25 cm. $20 00 3305

Content Diseases of the hematopoietic system. Diseases of the reticulo-endothelial system. Diseases of the respiratory tract. Diseases of th cardiovascular system. Diseases of the alimentary tract. Diseases of the liver Diseases of the kidney and urinary tract. Diseases of the musculoskeletal system. Index.

—— Volume II. Illustrated with 1,032 figures in color on 343 plates Philadelphia J B Lippincott Company, 1954 450 p illus (col'd) 25 cm $20 00 3306

Content Diseases of the endocrine system. Gynecologic lesions. Obstetric lesions. Diseases of the breast. Disease f the male genital tract. Diseases of the skin. Index.

Not Each of the chapters of this work is divided into "descriptive survey" and color unit. The descriptive survey is a *compact summary of the diseases of specific physiological system.* The color unit consists of reproductions of color photographs of gross and microscopic pathological specimens. These ar reproduced three to plate and are printed in the outer columns of the pages bearing illustrations. The inner columns of these pages ar occupied by concise but specific *descriptions f the illustrations on* the page. The work was prepared over a considerable period f years at the National Naval Medical Center It is valuable reference volume of interest to medical practitioners, diagnosticians, and pathologists in all fields.

WELLS BENJAMIN B

Clinical pathology application and interpretation. Second edition Philadelphia W B Saunders Company 1956 488 p illus 25 cm $8 50 3307

Contents Introductory considerations. Infectious *diseases.* Diseases f the gastrointestinal system. Diseases of the respiratory system. Diseases of the cardiovascular system Diseases of the kidney and urinary tract. Diseases of the blood. Metabolic and endocrine disorders. Clinical laboratory studies in surgery Clinical *laboratory studies in obstetrics.* Laboratory *procedures.* Index.

Note A useful introduction to laboratory methods in clinical diagnosis. It is addressed both to students in medical colleges and to graduate physicians, and its purpose is to guide such readers in the practical use of the more important clinical tests. It is *arranged mainly—as the chapter titles show—by class f disease.* In the chapters specific type of disease or disorder is described briefly from the diagnostic viewpoint. Then the useful tests are described, and the interpretation f results obtained with them is discussed. Limitations f specific tests are indicated Most topics are treated *compactly* but not so compactly that the reader must refer to other literature for essential procedural details. The first edition was published in 1950. This edition represents very extensive revision with considerable amount of material added that did not appear in the first edition.

THE YEAR BOOK OF PATHOLOGY AND CLINICAL PATHOLOGY (1955–1956 year book series) Edited by William B Wartman Chicago The Year Book Publishers Inc. 1956 480 p illus 20 cm $6 50 3308

Contents (abridged) Pathology Introduction, General pathology —Infectious diseases—Neoplasia—radiation effects. Cardiovascular system. Hemopoietic system. Respiratory system. Alimentary system. Liver Pancreas. Urinary and male genital systems. Female *genital system and breast. Endocrine glands.* Musculoskeletal system and skin. Nervous system. Clinical pathology Hematology Clinical chemistry Clinical microbiology Index. Index to authors.

Note. As in the similar books issued by the publisher in other fields of medicine, this annual publication is designed to provide a digest and key to the significant literature in its field which was published during the preceding year In preparing it, selection of the world's literature is made by the editors, then the articles are abstracted and organized into readable summaries under main topics and subtopics. The abstracts themselves are fairly long, and a footnote reference is made in each instance to the original publication. Some abstracts are supplemented by notes written by the editor in which reference is *frequently* made to the work of still other authorities. There are 161 figures in this year's issue.

DIAGNOSIS

AMERICAN ASSOCIATION OF CLINICAL CHEMISTS

Standard methods of clinical chemistry *Volume I. Editor in-chief Miriam Reiner* New York Academic Press, Inc. 1953 142 p illus 24 cm. $4 50 3309

Contents Introduction, by M. R. Hodes. Amylase. Bilirubin. Calcium. Carbon dioxide content (titrimetric) Carbon dioxide determination by the Van Slyke volumetric and manometric apparatus. Chloride. Total and free cholesterol. Creatinine. Glucose (Folin-W) Glucose (Nelson-Somogyi) Lipase (Tributyrinase) Alkaline and acid phosphatases. Inorganic phosphate. Total protein, albumin, and globulin. Prothrombin time. Sodium and potassium by flame photometry Thymol turbidity Urea nitrogen. Uric acid. Author index. Subject index.

Note The first volume of series in which carefully selected and checked methods for analytical procedures in clinical laboratories will be published. Each method included is the subject of monographic essay containing short introduction a discussion of the basic principle a list of the necessary reagents (with directions for making those which would not be stocked regularly in every clinical laboratory) detailed and explicit directions for the laboratory procedure a supplementary discussion of the procedure and other helpful information such as points on interpreting the results, a list of precautions, etc. Before publication, each *procedure* is checked in laboratory other than the laboratory of the submitter. Submitters' names and checkers' names are given in all cases. Bibliographies are given for most of the procedures, and there is an occasional picture of apparatus.

AMERICAN PUBLIC HEALTH ASSOCIATION

Diagnostic procedures for virus and rickettsial diseases. Second edition New York American Public Health Association, 1956 578 p illus. 23 cm $7 50 3310

Contents General principles underlying laboratory diagnosis of virus and rickettsial infections, by E. H. Lennette. Poliomyelitis, by J R. Paul, and J L. Melnick. ECHO viruses Tissue culture methods for the cultivation of poliomyelitis and other viruses, by J L. Melnick. The Coxsackie viruses, by G. Dalldorf and G. M. Sickles. Encephalitis (arthropod-borne virus encephalitides and lymphocytic choriomeningitis) by W McD Hammon. Rabies, by H. N Johnson. Influenza, by K. E. Jensen. Primary atypical pneumonia, by A. E. Feller and M. R. Hilleman. Mumps, by J. F Enders and K. Habel. Herpes simplex, by T F McN. Scott. Variola and vaccinia, by C. H. Kempe Yellow fever by J C. Bugher Dengue, by A. B. Sabin. *Phlebotomus (Pappataci or sandfly)* fever by A. B. Sabin. Psittacosis, by K. F Meyer and B. Eddie. Trachoma, by P Thygeson. Inclusion blennorrhea, by P Thygeson. Lymphogranuloma venereum, by G. Rake. Miscellaneous virus diseases, by M. R. Hilleman. Rickettsial diseases, by J E. Smadel. Index.

Note Originally product of panel discussion at the 1947 meeting of the American Public Health Association, this book is now an established reference manual. It is an authoritative presentation of laboratory diagnostic techniques for the virus and rickettsial diseases which are named in the chapter titles and includes also a long chapter on the general principles of such diagnoses. The chapters are not organized according to set pattern but,

Cancer (syphilis). The liver. The clotting of blood and hemorrhagic ... Iron and hemoglobin. Calcium and phosphorus. The thyroid. Sterols and other hormones. Nucleic acids. Vitamins. Gastric and pancreatic secretion, by A. Lerman. Biological antagonists. [illegible]. Index.

Note: A broad, general treatise addressed primarily to general practitioners of medicine. The author has defined his purpose as ... to acquaint the students and practitioners of the various branches of medicine with the qualitative and quantitative of the biochemical ... demonstrable body constituents than occur in the diseased state and to show them how to utilize that information in diagnosis, prognosis and treatment. Each of the chapters begins with ... compact but inclusive survey of background information, then proceeds to discussions of specific biochemical processes, such as the renal excretion of glucose and to specific tests. The tests are discussed from the viewpoint of the general practitioner—that is to say full directions are given for administering the tests to patients and the taking of samples for the laboratory. Difficulties in applying particular tests are discussed, and the interpretation of test results are discussed in relation to prognosis and therapy.

Kampmeier, Rudolph Herman

Physical examination in health and disease. With 550 illustrations 1 in color Philadelphia. F A. Davis Company 1950 821 p. illus. (part col'd) 24 cm. $5.00 3323

Contents (abridged): The case history. The body in action, by W. F. Orr. The general survey. The head. The neck. The breast. The chest. The heart and blood vessels. The abdomen. The genitalia, perineum, anus, rectum. Musculoskeletal system and extremities. Index.

Note: A textbook for use as first courses in the subject in medical ... The separation of normal and abnormal conditions into separate chapters is a feature that facilitates study. Also, the normal ... [illegible] ... A majority of the illustrations are reproductions of photographs. The author is a member of the faculty of the Vanderbilt University School of Medicine.

Keefer, Chester S., and Samuel E. Leard

Prolonged and perplexing fevers. Boston Little Brown and Company 1955 248 p. 21 cm. $5.50 3324

Contents: Part I. Regulation of temperature and diagnostic ... Variations in normal body temperature. Diagnostic procedures. Part II. Infectious fevers. Tuberculosis. Local septic infections—common sepsis and ... [illegible] ... Other infectious fevers. Uncommon causes of infectious fevers. Part III. Non-infectious fevers. Tumors frequently causing prolonged fever. Tumors infrequently causing prolonged fever. Blood dyscrasias. [illegible] ... Summary and conclusions. Bibliography. Index.

Note: The diagnosis of prolonged fevers—those lasting more than two weeks—is covered in this book from the standpoint of the general practitioner of medicine. The authors point out that such fevers are often difficult to diagnose. After an introductory part on both normal variations in body temperature and the diagnostic problems presented by prolonged fevers in general are discussed, the diseases of which such fevers are manifestations ... are taken up and their diagnosis ... discussed. The chapters on specific diseases include a large number of case histories in some of which the correct diagnosis was made ... the patient was living but in others was made at autopsy. The authors, who are members of the Boston University School of Medicine, based the book on their own extensive experience and on the literature. The bibliography ... limited to publications cited in the text ... [illegible].

Kolmer, John Albert and others

Approved laboratory technic. By John A. Kolmer Earle H. Spaulding and Howard W Robinson. Fifth edition, with 403 illustrations and 28 color plates. New York Appleton-Century-Crofts Inc., 1951 1 180 p. illus. (part col'd) 25 cm. $12.00. 3325

Contents (abridged): Part I. General laboratory methods. The microscope and methods of microscopy. Diseases of animals and methods for the care, inoculation and bleeding of animals. Part II. Clinical pathologic methods. Methods for the examination of the blood, by C. J. D. Zarafonetis. Methods for conducting kidney function tests. Methods for the examination of stomach contents. Methods for conducting liver function tests. Methods for conducting pancreas function tests. Methods for the examination of cerebrospinal fluid. Methods for the examination of the blood and urine for hormones. Part III. Bacteriologic, mycologic and virologic methods. Methods for the collection and handling of specimens. Methods for the preparation of culture media. Diagnostic bacteriologic methods. Methods for the preparation of bacterial vaccines. Methods for testing disinfectants. Diagnostic mycologic methods. Part IV. Parasitologic methods. Part V. Serologic methods. Methods for the preparation and preservation of ... and serum. Methods of conducting hemagglutinins ... and blood grouping tests, by L. Diamond. Methods for conducting immunologic and allergic skin tests. Part VI. Chemical methods. Colorimetric methods. Methods for the preparation of standard volumetric solutions. Determination of basal metabolic rate. Methods for chemical examinations of milk and ... foods. Methods for toxicologic examinations. Part VII. Pathologic methods. Appendix. Index.

Note: A comprehensive manual of medical laboratory methods of general value. It contains a wide range of information on equipment, care of laboratory animals, laboratory methods of various kinds, and the prevention and emergency treatment of laboratory accidents. In its present edition, the work has been very extensively revised. Many new methods have been added. The authors are members of the faculty of Temple University School of Medicine.

Kolmer, John Albert

Clinical diagnosis by laboratory examinations. Second edition. New York Appleton-Century-Crofts Inc., 1949 1,212 p. illus. 25 cm. $12.00. 3326

Contents (abridged): Part I. The clinical interpretation of laboratory examinations. Blood examinations. Urine examinations. Blood chemistry examinations. Glucose tolerance tests. Kidney function tests. The basal metabolic rate and the iodine ... test. Technique examinations. Liver function tests and examinations of the bile. Examination of the saliva and sputum. Examinations of the stomach, duodenal contents and pancreas function tests. Parasitologic examinations. Cerebrospinal fluid examinations. Bacteriologic examinations. Mycologic examinations. Serologic examinations. Immunologic and allergic skin tests. Examinations for hormones and vitamins. Part II. The practical applications of laboratory examinations in clinical diagnosis. Diseases of the blood and hemopoietic system. Diseases of the kidneys and urinary system. The venereal diseases. Diseases of the stomach, intestines and pancreas. Diseases of the liver and biliary tract. Diseases of the cardiovascular system. Diseases of the respiratory tract. Diseases of metabolism. Diseases of vitamin deficiency. Diseases of the endocrine glands. Part III. Technic of laboratory examinations. Blood examinations. Urine examinations. Blood chemistry examinations. Functional examinations. Examinations of gastric contents. Feces examinations. Spinal fluid examinations. Bacteriologic examinations. Serologic examinations. Index.

Note: A comprehensive work on the use of laboratory tests and findings in the diagnosis of disease. The first part—in which diseases are covered by classes and individually—is 634 pages long in this edition. The second part also is addressed to the clinician rather than the laboratory technician and it occupies an additional 373 pages. The third part on the techniques of the laboratory is useful but relatively minor section. The book is useful as ... complementary work to standard texts on internal medicine, because of its particular emphasis on laboratory diagnosis. The first edition was published in 1944. Fairly extensive revisions were made in preparing this edition.

Leopold Simon Stein

The principles and methods of physical diagnosis correlation of physical signs with physiologic and pathologic changes in disease 390 illustrations with 19 color plates. Philadelphia W B Saunders Company 1952 430 p. illus. (part col'd) 24 cm. 3327

Contents: Routine data. Examination of the head. Examination of the neck. Examination of the musculoskeletal system. Examination of the breasts. Sounds from the thoraco-acoustic principles (by S. R. Warren, Jr.) Examination of the chest. Palpation of the chest. Percussion of the chest. Auscultation of the chest. Physical signs in certain diseases of the lungs and pleura—correlative data. Examina-

Contents Part I, Body fluids, excreta, and functional tests. Hematology Blood chemistry Serology Urine. Gastric and duodenal contents. Cerebrospinal fluid. Sputum and saliva. Feces. Transudates and exudates. Spermatozoa. Basal metabolic rate. Tests for liver and biliary function. Bacteriological examinations. Rickettsiae and viruses. Mycological examinations. Skin tests. Toxicologic examinations. Part II Diseases with associated laboratory findings The blood and hematopoietic organs. Heart and blood vessels. The respiratory system. Gastrointestinal tract and pancreas. Liver and biliary tract. The genitourinary system. Endocrine glands. Central nervous system. Bacteriological diseases and diseases of doubtful cause. Vitamin deficiency Fluid balance and electrolyte metabolic disorders Collection and care of laboratory specimens. Index.

Note This manual provides concise, specific information on diseases for which useful diagnostic laboratory tests are available describes the tests and discusses the interpretation of their results. In addition it provides useful information on methods of collecting specimens for laboratory examination and on the care and labelling of these specimens prior to their delivery to the laboratory It is addressed to the clinician rather than to laboratory technicians, but it is useful to the latter group for background information The actual procedures of laboratory tests are not covered in sufficient detail to make the book useful as a guide to laboratory technicians. Selected literature references are given and the book is thoroughly indexed. The second edition was published in 1951 In this edition the length of the volume has been increased by more than 100 pages. Many revisions and augmentations have been made in both the text and illustrations A fourth edition was published January 1958 $8 75.

Gradwohl, R B H

Clinical laboratory methods and diagnosis a textbook on laboratory procedures with their interpretation Fifth edition St. Louis The C V Mosby Company, 1956 2 v illus. (part col'd) 26 cm $38 50 3318

Content Volume I. General considerations. Urine analysis. Blood chemistry Hematology Blood groups and transfusion. Gastric analysis. Index. Volume II. Examination of puncture fluids. Feces. Special tests. Bacteriologic applications to clinical diagnosis. Medical mycology Parasitology and tropical medicine Serology Tissue cutting and staining. Toxicologic technic. Basal metabolism. Electrocardiography Index.

Note A practical guide and reference work prepared for the use of medical students, technicians in diagnostic laboratories, and graduate physicians. The techniques of laboratory procedures are explicitly described from the viewpoint of laboratory workers. Interpretation of the results of tests are related to practical diagnosis in medicine. A few of the techniques included, for example, electrocardiography are covered less thoroughly and the reader is warned in the book itself that the discussion is not intended to be complete. The fourth edition was published in 1948 in three-volume format. The principal change in organization of this fifth edition has been the elimination of the third volume and the condensation of the material formerly contained in it into single chapter Numerous revisions and augmentations have been made in chapters carried over from the first volumes of the fourth edition. The number of text figures is now 783 and the number of color plates 52 Each of the two volumes contains a complete subject index to the entire work.

Harvey, A McGehee, and James Bordley III

Differential diagnosis the interpretation of clinical evidence Philadelphia W B Saunders Company 1955 665 p 25 cm $11 00 3319

Contents Introduction. Aortic insufficiency Heart failure. Pain in the chest. Sudden death. Failure of urinary excretion. Hematemesis and melena. Jaundice Hepatomegaly and ascites. Lymphadenopathy and splenomegaly Fever of obscure origin. Diseases involving the lungs or mediastinum. Meningitis. Special diagnostic problems, including the diagnosis of certain rare diseases Unknown cases for study. Laboratory values of clinical importance (adult) Special index of symptoms, signs, and laboratory findings. General index

Note Drawn largely from cases discussed at clinical-pathological conferences held as part of the teaching program at Johns Hopkins Medical School, this volume uses the case method of exposition and is, in essence, a series of clinical-pathological conferences in print. A sound approach to diagnosis is expounded in the introductory chapter After this chapter most of the book is devoted to chapters on differential diagnosis in specific diseases. Except a few these chapters are organized on a set pattern first, a generalized discussion of the disease its signs and symptoms, causes, clinical picture when complicated by another disease, helpful points on differentiation second, a series of illustrative cases. The case histories are condensed transcripts of actual cases in which the diagnosis was checked in autopsy Clinical data from the admission record, the physical examination, course in the hospital and laboratory tests are compactly presented, then discussed at some length. Finally the findings of the anatomical diagnosis (autopsy) are presented and the case is summarized. In the terminal chapter 11 cases are presented separately from the discussions, autopsy findings, etc. to enable the reader to test his own ability to arrive at the correct diagnosis.

Hepler, Opal E

Manual of clinical laboratory methods. Fourth edition With a foreword by James P Simonds Springfield Ill Charles C Thomas, 1951 395 p illus. 28 cm. $9.50 3320

Contents Urinalysis. Hematology Gastric and duodenal contents. Liver function tests. Feces. Sputum. Cerebrospinal fluid. Body fluids. Pregnancy tests. Bacteriology Mycology Serology Blood groups. Clinical chemistry Allergy extracts. Tissue sectioning. Basal metabolism. Electrocardiography Solutions used in routine tests. Index.

Note A standard reference book of methods useful in hospital and other laboratories where clinical tests are made. Although in most instances only one method for particular determination is described, a wide range of tests is covered. Procedures are described specifically usually in numbered steps. However the interpretation of results is not covered. More than 80 tables of reference data are included. The book was developed originally for use by medical students in the Medical School of Northwestern University but it is suitable also for the guidance of laboratory technicians who are not medical graduates. The first three editions were not published commercially The fourth edition was published in 1951 and has been reprinted sometimes with slight revisions and augmentations, several times since.

Hiller, Alma

Practical clinical chemistry, a guide for technicians. Springfield, Ill Charles C Thomas 1953 266 p. 23 cm. 3321

Contents General laboratory procedures. Standard solutions of acid and alkali. Photometry Determination of Amylase in plasma or serum and in urine. Direct and total bilirubin in serum. Bromsulfalein in plasma Calcium in serum and spinal fluid. Carbon dioxide combining capacity of plasma. Cephalin flocculation test in serum. Determination of Chloride in plasma, serum, and spinal fluid Chloride in urine Total cholesterol in plasma or serum. Creatinine in blood Icterus index in plasma or serum. Nitrogen by Micro-Kjeldahl analysis. Non-protein nitrogen in blood. Inorganic phosphorus in plasma or serum. Inorganic phosphorus in urine. Alkaline and acid phosphatase in serum. Protein in plasma or serum. Protein in spinal fluid. Sugar in blood. Sugar in spinal fluid. Sugar in urine. Sulfonamides in blood. Sulfonamides in urine Uric acid in plasma or serum. Uric acid in urine. Index. Outlines of methods (removable)

Note Described in this book are methods which, according to the author have been employed successfully over period of several years in the Laboratory of Clinical Chemistry of the Presbyterian Hospital of the city of Chicago. Each procedure is described explicitly and the description is supplemented by a briefer outline. An unusual feature of the volume is that these outlines are printed twice, first in the body of the book adjacent to the techniques to which they pertain, and second in perforated section of pages at the end of the volume so that they may be removed and bound in cellophane or otherwise protected for use in the laboratory The descriptions of techniques are preceded by three chapters on general laboratory procedures, standard solutions, and on photometry as noted in the above table of contents. A second edition was published January 1958, 330 p., $6.50.

Hoffman, William S

The biochemistry of clinical medicine Chicago The Year Book Publishers, Inc., 1954 681 p illus 25 cm. $12 00 3322

Contents Introduction. Proteins. Carbohydrates. Lipids. Diabetes mellitus. Water and electrolytes. The kidneys and urine. Bright's

MILLER, SEWARD E editor

A textbook of clinical pathology Fifth edition. Baltimore The Williams & Wilkins Company 1955 1,208 p. illus. 24 cm. $11.00 3333

Contents: Blood technique, by L. W Diggs. Blood cells—bone marrow examination, by L. W Diggs. Anemias, erythrocytosis, hemoglobinuria, and abnormal hemoglobin compounds, by L. W Diggs. Laboratory tests used in the diagnosis and management of hemorrhagic and thromboembolic diseases, by L. W Diggs. Diseases primarily affecting leukocytes, by I Davidsohn. Blood groups, including [illegible] and other immunohematologic tests, by I. Davidsohn. Blood chemistry, by C. Cohn and A. Kaplan. Hepatic tests, by C. Cohn and A. Kaplan. The assay of chemotherapeutic and antibiotic agents, by A. Milzer. Diagnosis of viral and rickettsial diseases, by A. Milzer. Immunologic tests, by R. McBurney. Medical bacteriology by A. Milzer Medical mycology by E. R. Mann and A. W McQuown. Medical parasitology by S. E. Miller. The assay of vitamins, by E. von Haam. The assay of hormones, by E. von Haam. Examination of transudates, exudates, skin and mucous membranes, by E. von Haam. The diagnosis of venereal lesions, by E. von Haam. Syphilis serology, by S. E. Miller Cerebrospinal fluid, by S. E. Miller. Renal function tests and urine examination, by S. E. Miller. Saliva, sputum, and bronchial secretions, by S. E. Miller. Gastric and duodenal contents, by S. E. Miller. Seminal fluid, by S. E. Miller. Feces, by S. E. Miller

Note One of the standard United States of America texts on diagnosis by means of clinical laboratory tests. The subject is covered from the medical practitioner's viewpoint rather than that of the laboratory worker. The diseases that may be detected by such tests, techniques of taking samples and interpretation of laboratory analyses and findings are the main topics. The latter is handled critically in such statements as, "Unless the worker has special training the laboratory identification of [illegible] [illegible], both positive and negative reports, are valueless." Selected literature references are included, and illustrations are numerous. The first edition was published in 1935 and the fourth edition in 1952. In this fifth edition the two chapters at the end of the volume are new although part of the material that they contained was previously included in other chapters. Several other chapters have been extensively revised, in some cases by new co-author.

NEW YORK ACADEMY OF MEDICINE. SECTION ON MICROBIOLOGY

Diagnosis of viral and rickettsial infections. Symposium held at the New York Academy of Medicine January 29 and 30 1948. Edited by Frank L. Horsfall, jr New York Columbia University Press, 1949 153 p. illus. 24 cm. $3 75 3334

Contents Introduction, by F L. Horsfall, jr Laboratory diagnostic procedures for [illegible], by G. K. Hirst The diagnosis of [illegible], by G. [illegible] and W [illegible] The diagnosis of infections caused by the psittacosis-lymphogranuloma group of viruses, including trachoma and inclusion blennorrhea, by G. Rake. The diagnosis of primary atypical pneumonia, by F L. Horsfall, jr The diagnosis of neurotropic virus infections, including the viral encephalitides, lymphocytic choriomeningitis, and poliomyelitis, by J Casals and P K. Olitsky The diagnosis of infections with the virus of herpes simplex, by T F M Scott and others The diagnosis of rabies, by H N Johnson The diagnosis of dengue, by R W Schlesinger The diagnosis of infectious mononucleosis, by J. R. Paul. The diagnosis of epidemic, murine, and scrub typhus, as well as Q fever, by J E Smadel The diagnosis of Rocky Mountain spotted fever and rickettsialpox, by H R Cox. The diagnosis of infectious hepatitis by W P Havens, jr

Note A collection of original papers presented on the occasion mentioned in the book title Many of the authors have themselves made contributions to the knowledge of viral and rickettsial infections, and some of the information included has not been previously published. The lectures were intended for practitioners of medicine and other graduate scientists with professional interests in the subject Each paper is accompanied by list of literature references, but there are no indexes.

PETERS JOHN PUNNETT AND DONALD D VAN SLYKE

Quantitative clinical chemistry Volume I Interpretations. Second edition. Baltimore The Williams & Wilkins Company 1946 1,041 p illus. 24 cm. $7.00 3335

Contents: Part I, Energy metabolism. Part II, Carbohydrates Chemistry Physiology Clinical. Part III, Lipids Lipids. Steroid hormones. Fat-soluble vitamins. Part IV Protein metabolism. The net metabolism of protein. Amino acids. Urea. Ammonia. Creatine and creatinine. Purines and pyrimidines. Index.

Note A very comprehensive presentation of the current knowledge of the chemistry of physiological processes in both health and disease. The text consists chiefly of integrated, concise summaries of the findings reported in thousands of periodical articles. Full references are given to the original publications. Although the main viewpoint is clinical, the tremendous scope of the work makes it valuable reference book in general biochemistry as well. The first edition appeared in 1931, and was immediately recognized as work of major importance. In the present edition the work is being completely rewritten. The volume described here is the only one yet published of the second edition, but second part of Volume is in preparation and Volume II of the first edition has been reprinted, 961 p., $10.00.

POPPER, HANS AND DANIEL S KUSHNER, editors

Clinical pathologic conferences of Cook County Hospital. Volume I Cardiovascular renal problems. New York McGraw Hill Book Company Inc. 1954 325 p illus 24 cm. $5 00. 3336

Contents: Part I, Cardiac problems: Aortic insufficiency with sudden death Chronic congestive failure in [illegible] alcoholic. Cyanotic congenital heart disease. Chronic pulmonary insufficiency in [illegible] [illegible] Fever jaundice, and congestive failure. Dyspnea, shock, and sudden death. Severe congestive failure in child. Hypertension with congestive failure and sudden death. Differential diagnosis of pulsating thoracic mass. Complications of coronary artery disease. Differential diagnosis of pericardial effusion. Part II, Vascular problems: Post-partum shock Hemorrhagic diathesis and [illegible] [illegible] Polyarthritis, polyneuritis, and peripheral neuropathy Congestive failure, peripheral neuropathy and fever. Pulmonary [illegible] Deforming arthritis and edema. Renal insufficiency with hematuria. Part III, Renal problems Post-partum coma. Convulsions and fever in child. Differential diagnosis of uremia. Pyelonephritis with uremia. Hypertension, uremia, and hematuria. Lower urinary tract obstruction in young man. Differential diagnosis of shock. Anemia and [illegible] in child. Final pathologic diagnoses.

Note As indicated in the title, this volume has its origin in clinical-pathological conferences at Cook County Hospital in Chicago. In these conferences, "the attempt is made to select broad, clinical problem, often represented by an unusual manifestation, for which the pathologic solution is either unusual or if typical, presents uncommon aspects. This provides the opportunity to combine the exhibition of the art of clinical association with the teaching of pathology to learn about the usual from the unusual." The book is composed largely of compact presentations of case histories and the discussions of these at conferences. The pattern of presentation for each case is, clinical data clinical diagnoses pathologic observations; clinical pathologic correlation; final pathologic diagnosis; and literature references. The book is another example of an effective teaching device now used primarily in graduate instruction in medical schools and large hospitals in the United States of America.

REQUARTH WILLIAM

Diagnosis of acute abdominal pain. Chicago The Year Book Publishers, Inc., 1953 243 p illus. 21 cm. $5.00. 3337

Contents: Examination of the abdomen. Differential diagnosis from standpoint of location and type of pain. Acute intestinal obstruction. Diseases for which immediate operation is imperative Diseases for which operation can be delayed. Diseases for which operation is contraindicated or harmful. Traumatic wounds of the abdomen. Diagnosis of acute abdominal lesions in infants. Differential diagnosis of acute gastro-esophageal hemorrhage. Index.

Note A compact and useful manual on the diagnosis, and particularly the differential diagnosis, of both traumatic and non-traumatic acute abdominal emergencies. General techniques of examination and diagnosis are covered in the first two chapters. The remainder of the book is devoted to specific diseases and wounds. In these chapters, specific diagnostic techniques are discussed, along with clinical description of the disease or disorder The chapters

tion of the circulatory system. Physical signs in certain diseases of the heart and great vessels—correlative data. Examination of the abdomen. The gynecologic examination. Examination of the male genitalia, and of the anus, rectum and rectosigmoid colon. Examination of the extremities. Neurologic examination. Psychiatric survey The history Index.

Note. A medical college textbook in which the underlying principles and the basic routines of physical diagnosis are emphasized rather than clinical manifestations of diseases. A concise, clearly written text is supplemented by high number of illustrations, many of which are reproductions of photographs. The author is Associate Professor of Clinical Medicine in the School of Medicine of the University of Pennsylvania. A second edition was published in 1957 537 p., $9.00.

LEVINSON, SAMUEL A , AND ROBERT P MACFATE

Clinical laboratory diagnosis Fifth edition, thoroughly revised, with 244 illustrations and 13 plates, 11 in color 142 tables Philadelphia Lea & Febiger, 1956 1,246 p illus. (part col'd) 24 cm. $12 50 *3328*

Contents The mouth. The stomach. The duodenum and related organs. The intestine. Metabolism. Chemical analysis of the blood. The kidneys. Chemical analysis of the urine. Hematology Immunology and serology Cerebrospinal fluid. Transudates and exudates. General bacteriology The sputum. Skin tests and other biologic examinations. Laboratory methods in pediatric procedures. Tropical diseases. Milk and water analysis. Histologic technic. Legal medicine and toxicology Appendix. Index.

Note. A standard work, outstanding for its comprehensiveness and its detailed descriptions of laboratory procedures. The first named author is Director of Laboratories f the University of Illinois Research and Educational Hospitals, the co-author is Chief f the Division of Laboratories of the Chicago Board of Health and the methods described are used in the laboratories that they direct. Several of the chapters and parts of chapters were contributed by other authors. An outstanding example of contributed chapter is the one on hematology which is 228 pages long and is the work of four authors other than the authors of the volume. Descriptions f individual laboratory diagnostic tests and procedures are given primary emphasis, but much background and supplementary material is included also. The appendixes contain among other material useful, alphabetical arrangement under the names of diseases of important laboratory tests for the individual diseases Page references are made from this tabulation to the discussion of the test in the body of the book. The fourth edition was published in 1951 This fifth edition is exactly 100 pages longer and it contains many revised and augmented sections.

MACBRYDE, CYRIL MITCHELL, editor

Signs and symptoms applied pathologic physiology and clinical interpretation Second edition With 98 illustrations 50 charts and 8 color plates Philadelphia J B Lippincott Company 1952 783 p illus (part col d) 24 cm *3329*

Contents Introduction by C M MacBryde. Pain, by C. M. MacBryde. Headache by H. G. Wolff. Sore tongue and sore mouth, by R. W Vilter Thoracic pain, by J R. Smith and R. Paine. Abdominal pain by S. M Jordan. Backache and back pain, by R. H. Freyberg. Joint pain by R H. Freyberg Pain in the extremities, by R. D Williams. Clubbed fingers and hypertrophic osteoarthropathy by B S. Lipman and E. Massie. Palpitation and tachycardia, by E. Massie. Cough, by D M. Skilling, Jr Hemoptysis, by D M Skilling Jr Dyspnea, by D. P Barr Cyanosis, by D P Barr Anorexia, nausea and vomiting by J L. Horner Constipation and diarrhea, by J L. Horner Hematemesis and melena, by L. Schiff Jaundice, by S. A. Portis Nervousness and fatigue by E. F Gildea. Fever by P B Beeson. Disturbances f consciousness and of muscle movement, by W O. Leanne. Fainting, by E. A. Stead, Jr Vertigo and dizziness, by H H. Hyland. Dehydration, by C. M MacBryde. Edema, by H A. Schroeder Obesity by C M. MacBryde. Weight loss and undernutrition, by C. M. MacBryde. Pathologic bleeding, by B Alexander Pigmentation of the skin by H. Jeghers and E. A. Edwards. Itching (pruritus) by S. Rothman and A L. Shapiro. Index.

Note A textbook and practical guide to physical diagnosis in medicine. It is composed f a series of original monographs which deal separately with the interpretation of various classes or types of pain and other symptoms and signs. The discussions are systematic and concise. Each chapter is accompanied by a selected bibliography of literature in which fuller discussions of particular points are to be found. The first edition appeared in 1947 A third edition was published in 1957 975 p. $12.00.

MAJOR, RALPH H , AND MAHLON H DELP

Physical diagnosis Fifth edition. Illustrated Philadelphia W B Saunders Company, 1956 358 p illus 26 cm $7 00 3330

Contents Introduction History taking and recording. Pain. General inspection. Examination of the head and neck. Inspection, palpation and percussion of the chest. Auscultation of the lungs The physical findings in diseases of the lungs. Inspection, palpation and percussion of the heart. Auscultation f the heart. The pulse. Blood pressure. Physical findings in cardiovascular diseases. Abdomen and genitalia. The extremities. Examination of the nervous system. Index.

Note. A standard work used primarily as a medical college text book since the publication of the first edition in 1937 Its purpose is to provide students and practicing physicians with practical information regarding methods of physical examination, history taking, *and the interpretation of signs and symptoms. The normal* and abnormal are contrasted, and emphasis is placed on the need for careful observation of physical signs, and an understanding of the underlying physical causes if a correct diagnosis is to be reached. The fourth edition was published in 1951 This fifth edition *was th first to bear the name of co-author In comparison* to the preceding edition there has been some reorganization of the material and considerable revision and augmentation There are now 334 figures.

MEAKINS, JONATHAN CAMPBELL

Symptoms in diagnosis Second edition. Illustrated Baltimore The Williams & Wilkins Company, 1948 542 p 24 cm $7.50 3331

Contents Skin. Skeletal system. Gastro-intestinal system. Respiratory system. Circulatory system. Genito-urinary system. Ocular symptoms and signs. Ear nose and throat. Nervous system. Symptoms in psychiatry Index.

Note An exceptionally comprehensive presentation of pain and other patients' symptoms in diagnosis. The author has found in long medical experience that such symptoms are of considerable importance, particularly in the preliminary steps in diagnosis, and he has presented this extensive accumulation of facts about them *to aid general practitioners nd clinicians in interpreting* and coordinating the patients' symptoms with the findings of laboratory tests and other modern methods of diagnosis. In preparing the second edition, the entire text was extensively revised and it now includes several chapters written by other specialists on the interpretation of special types of symptoms, such as the chapter on symptoms in psychiatry written by Dr Karl Stern.

MERCK AND COMPANY, INC

The Merck manual of diagnosis and therapy Ninth edition Editorial Board Charles E Lyght editor, and others. Rahway, N J Merck & Company Inc. 1956 1,870 p 17 cm $6 75 *3332*

Contents Part I. Allergy Blood and lymphatic Cardiovascular Deficiency and metabolic. Dental and oral. Ear nose and throat. Endocrine. Eye. Gastrointestinal. Genitourinary Gynecologic and obstetric. Infectious and parasitic. Liver and biliary Musculoskeletal. Nervous system. Neuropsychiatric. Physical and chemical. Respiratory Skin and connective tissue. Venereal. Part II. Routine immunization procedures. Clinical procedures. Bedside procedures. Office laboratory Preoperative and postoperative routines. Diets. Office laboratory procedures. The physician bag. Ready reference guides. Part III Index.

Note A long-established reference manual designed primarily for general practitioners of medicine. Basic physiology pathology diagnosis and treatment are emphasized. Prescriptions for drugs are given. Surgical procedures are not covered. The entire book is concisely written and is fully cross referenced and indexed. The first edition was published in 1899 and the eighth edition in 1950. In comparison to the eighth edition, this ninth edition contains a wide range of new and revised material. It was carefully compiled under the direction of distinguished five-member editorial board. It is *printed on thin paper of good quality and, in spite f its length,* is of size that can be conveniently carried in physician's bag

RADIOLOGY

ARCHER, VINCENT WILLIAM

The osseous system a handbook of roentgen diagnosis. Chicago The Year Book Publishers, Inc., 1945 320 p. illus. 21 cm. $7.00 3343

Contents (abridged) Technic. General principles of interpretation. Normal bones and joints and their variations. Differentiation of fractures from anatomic standards. Injuries to the skeletal system other than the spine. Shoulder and clavicle. Elbow joint. Carpal bones. Phalanges. Ribs. Pelvis. Sacrum and coccyx. Ankle joint. Spine—general considerations. Bone diseases and abnormalities in childhood. Bone diseases occurring principally in adult life. Joints between. Index.

Note This volume covers the X-ray examination of the skeletal system and is intended to serve as a concise guide for the physician who only occasionally carries out radiologic examinations. The discussion of technique is very brief and limited to mention of special points in connection with bone films. The remainder of the book deals with interpretation of roentgenograms, and the presentation is in atlas form with reproduction of roentgenograms on right hand pages and analyses of them on the facing left-hand pages. The author is Professor of Roentgenology in the Department of Medicine of the University of Virginia.

BEARD, DONALD E., AND OTHERS

Radiologic diagnosis of the lower urinary tract. By Donald E. Beard, William E. Goodyear and H. Stephen Weens. Springfield, Ill. Charles C Thomas, 1952 143 p. illus. 24 cm. $6.50. 3344

Contents Introduction. The normal urethrogram. Diseases of the anterior urethra. The membranous urethra. The posterior urethra. The bladder. Urethrography and cystography in children. References. Index.

Note A practical introduction to urethrography and cystography as diagnostic techniques in studying disorders of the lower urinary tract. The authors present a simplified technique for urethrography based on the use of a contrast medium consisting of 77 per cent sodium iodide in gum acacia. Essentially the book is an atlas of approximately 300 pictures, most of which are reproductions of roentgenograms. The pictures are accompanied by descriptive captions and a brief, clearly written text.

BENDICK, ARTHUR J

Diagnostic advances in gastrointestinal roentgenology selected methods with clinical evaluation. New York Grune & Stratton 1954 131 p. illus. 26 cm. $6.00 3345

Contents Advances in X-ray equipment. Technic of mucosal films, crib sois and complete filling. Diseases of the esophagus. Diseases of the stomach. Diseases of the duodenum. Diseases of the small bowel. Colon—technic and diseases. Technic of intestinal infusion. Diseases of the gall bladder and pancreas. Roentgen examination of the newborn. Index.

Note Addressed to practicing gastroenterologists and radiologists rather than to students or medical graduates just beginning practice, the book is devoted largely to new and special techniques. It stresses the value of mucosal films in diagnosis in the stomach and several other areas of the gastrointestinal tract and has much to say about the use of soda water as a source of carbon dioxide gas for distending the stomach or selected regions of the intestines. Techniques developed by the author. Many other techniques are discussed, usually in the light of the author's clinical experience with them. The 75 figures are nearly all reproductions of radiographs. The author is Director of Radiology for Beth Israel Hospital in the City of New York.

BRAASCH, WILLIAM FREDERICK, AND JOHN L. EMMETT

Clinical urography an atlas and textbook of roentgenologic diagnosis. Philadelphia W B Saunders Company 1951 736 p. illus. 26 cm. $25.00 3346

Contents Methods in urographic diagnosis. The plain film of the urinary tract. The normal urogram. Dilation of the urinary tract. Urinary stasis, the obstructive uropathies, urinary anomalies and urinary stasis, neuromuscular dysfunction. Urinary calculi. Nontuberculous infections of the urinary tract. Tuberculosis of the genito-urinary tract. Renal cysts. Tumors of the genito-urinary tract. Anomalies of the urinary tract. Urethrography, seminal vesiculography, arteriography and other special methods of examination. Miscellaneous. Index.

Note A comprehensive, lavishly illustrated treatise. There are 2,381 figures, most of which contain reproductions of more than one roentgenograph. Throughout the book the textual discussions are directly related to the roentgenograms. Nevertheless the text is expanded so that it constitutes a monograph of urographic diagnosis. Selected bibliographies are appended to the chapters.

BUCKSTEIN, JACOB

The digestive tract in roentgenology Second edition. Two volumes. 1,534 illustrations in 897 figures Philadelphia J B Lippincott Company 1953 2 v illus 26 cm. $30.00 3347

Contents (abridged) Volume one. Introduction. History of roentgenology of the alimentary tract. The hypopharynx and the esophagus. The stomach. The duodenum. Volume two. The small intestine. The large intestine. Herniation and eventration of the diaphragm. The gallbladder and the bile ducts. Bibliographic index. Subject index.

Note A monumental work based on 33 years' experience in Bellevue Hospital in New York City. The wealth of illustrative matter is indicated in the subtitle. The illustrations are accompanied by as many case histories. Many rare conditions are included as well as common ones. The diagnostic features of each roentgenogram are expertly demonstrated and discussed, and the roentgenograms are supplemented by numerous photographs of gross pathology. Literature references are included. The first edition was published in 1941. In this second edition, the work has been expanded from a single volume of 639 pages to two volumes totalling 1,702 pages, and the number of illustrations has been increased from 1,035 to 1,534.

CAFFEY, JOHN

Pediatric X-ray diagnosis a textbook for students and practitioners of pediatrics surgery & radiology Third edition. Chicago The Year Book Publishers, Inc., 1956 1,059 p. illus 27 cm. $28.00 3348

Contents Section I. The head and neck. Skull. Individual cranial structures. Intracranial structures. Intracranial pneumography. Extracranial structures. Neck. Section II. The thorax. External thorax. Thoracic walls. Respiratory tract. Pathologic intrathoracic changes. Primary pulmonary tuberculosis. Mediastinum. Heart. Section III. The abdomen & gastro-intestinal tract. Abdomen. Diseases of the abdominal walls. Liver. Biliary tract. Spleen. Pancreas. Mesentery and omentum. Abdominal lymph nodes. Digestive tract. Section IV. The pelvis and genito-urinary tract. Pelvis. Urinary tract. Adrenal glands. Reproductive system. Section V. The extremities. Soft tissues. Bones. Joints. Section VI. The vertebral column. Normal vertebral column. Congenital disturbances. Traumatic lesions. Calcification of intervertebral disks. Diseases involving vertebrae. Index.

Note A comprehensive treatment based in part on many years of collective experience in the Babies Hospital, New York. Information and illustrations from the periodical literature have also been incorporated, and in this third edition, the section on the urinary tract is based in part on the files of Dr. Frederic N. Silverman, pediatrician and radiologist to the Children's Hospital in Cincinnati. Under each of the anatomical regions named in the chapter titles, conditions which are of interest in roentgenology are discussed. Generally speaking, there is a brief description of the specific disease or abnormality and this is followed by a longer discussion of the anatomy and pathology in relation to roentgen diagnosis. Normal roentgen appearances are described and illustrated for purposes of comparison. The second edition was published in 1950. The book has been extensively revised and enlarged in this third edition. The number of pages has been increased by almost 200 and there are 350 new illustrations.

DE LORIMIER, ALFRED ALEXANDRE

The arthropathies a handbook of roentgen diagnosis. Second edition. Chicago The Year

include also such miscellaneous information as comments on incidence of specific disorders correlated with age and sex, on symptoms that have no diagnostic significance, and on emergency care of the patient during diagnosis. Extensive references to the literature are included in all of the chapters.

RUBIN, ELI H

The lung as a mirror of systemic disease Springfield Ill Charles C Thomas, 1956 288 p illus 29 cm. $12 50 3338

Contents Chest roentgenography in mass surveys. Diseases of metabolism. Diseases of the blood. Allergic diseases. Diseases of the skin and mucous membranes. *Pulmonary manifestations of certain abdominal and metastatic diseases. Pulmonary manifestations of cardiovascular diseases.* Diagnosis—the changing scene—symptoms and signs. The chest X-ray—anatomical and technical considerations. Pitfalls in *roentgen diagnosis. Laboratory and exploratory aids.* Index.

Note The chest X-ray when fully exploited for diagnostic purposes is a useful means for discovering not only pulmonary diseases, but diseases of other systems of the body which have pulmonary manifestations. This fact is the reason for the present monograph, which, however is not limited either to chest X-rays in diagnosis or t roentgenographic manifestations of lung diseases. What can be seen in the chest roentgenogram is the primary topic, but correlation with the results of other diagnostic studies is also covered. The general clinical features of a ide range of diseases are described. There are 92 figures, most of which are reproductions of roentgenograms. Literature references are included. The author is member of the faculty of the Albert Einstein College of Medicin of Yeshiva University

SUNDERMAN, FREDERICK WILLIAM, AND FREDERICK BOERNER

Normal values in clinical medicine Philadelphia W [redacted] Saunders Company, 1950 845 p illus (part col'd) 26 cm $15 00 3339

Contents (abridged) Section I, Circulatory system (normal values in cardiology) *Electrocardiogram. Roentgen cardiac measuration.* Circulation time. Blood pressure. Section III, Chemical components and physical properties of blood (normal values in blood, extracellular fluids and lymph) *Protein and nonprotein components of blood plasma.* Blood sugar Lipids. Hemoglobin porphyrins and related compounds. Blood vitamins. Body fluids. The lymph. Enzymes and miscellaneous constituents of the blood. Section Digestive system (*normal values in gastroenterology*) *The esophagus and stomach.* The small intestine. The colon. The liver Th gallbladder The pancreas. Section VI, The nervous system (normal values in neurology) Encephalogram. The cerebrospinal fluid. Section XV Endocrines (normal alues in endocrinology) Androgens and 17-ketosteroids. Estrogens. Progesterone. Gonadotrophic hormones. Section XVIII Teeth and saliva (normal values in dentistry) Formation and eruption of teeth. *Chemistry of teeth. Relative hardness of teeth.* Section XIX, Miscellaneous data *Statistical methods.* Food values. Drugs and their doses. Isotopes. Life and actuarial tables. Appendix Tables of weights, measures and standards. Index.

Note A reference book of wide scope. There are 400 tables, some of which are several pages in length, and 237 figures. These compact presentations of data ar supplemented by considerable verbal discussion Some sections, for instance the chapter on normal body temperature consist entirely of verbal discussion and literature references. Both the discussions and the tabulated data hav been selected chiefly from published literature to which references are carefully given. In selecting th material the uthors had the assistance and advice of an impress group of collaborators.

TODD, JAMES CAMPBELL, AND OTHERS

Clinical diagnosis by laboratory methods a working manual of clinical pathology Twelfth edition With 946 illustrations 197 in color on 403 figures By James Campbell Todd Arthur Hawley Sanford and Benjamin B Wells Philadelphia W B Saunders Company, 1953 998 p illus (part col d) 24 cm $8 50 3340

Contents The microscope. The sputum. *Urine.* Blood. Clinical chemistry Gastric and duodenal contents. *Feces. Animal parasites.* Pus, puncture fluids and animal inoculation. Nose mouth, pharynx, ear and eye. Viruses and rickettsiae. Bacteriologic methods. Milk and water Introduction to serodiagnostic methods. Serologic tests for syphilis. Serologic tests for diseases other than syphilis. Medical mycology Vaccines. Antibiotics. Biologic skin tests. Semen and hormones. Appendix. An index-outline of laboratory findings in important diseases. Index.

Note A standard ork, used in its various editions for half a century It is comprehensive manual of laboratory tests and techniques useful in the diagnosis of disease and methods of interpreting the findings. Test procedures are described in detail. The *Index-outline* "lists the diseases alphabetically giving their outstanding laboratory characteristics and citing the pages on which the pertinent tests are to be found. The eleventh edition published in 1948 was a thorough revision and most of its text has been carried over to this t elfth edition. However important changes were made in five chapters resulting in an increase of 45 pages in the length of the vol me

WAKEFIELD, ELMER G

Clinical diagnosis New York Appleton-Century Crofts, Inc. 1955 1,611 p illus. 25 cm. $22 50 3341

Contents Part Regional diagnosis Descriptive terms. The complaint and the history Examination Topography and regional diagnosis of diseases of the head and organs of special sense. Topography and regional diagnosis of diseases of the neck. Diseases affecting locomotion *Diseases of the anorectal regions and genitalia.* Diseases of the skin subcutaneous tissues and breasts. Part II, The systemic diseases. Diseases of the thoracic wall, pleurae, mediastinum, bronchi and lungs. Disorders of the heart, blood pressure, *pulmonary arteries and thoracic aorta.* Diseases of the urinary organs. Diseases of the hemic system. Diseases of the esophagus, abdominal wall and abdominal contents exclusive of the endocrine glands, spleen and genitourinary tract. *Diseases of the endocrine system.* Some disorders in ol ing the cranial portion of the central nervous system. Part III, The body as a whole The constitution. Communicable and infectious diseases. The allergic state. Diseases due to trauma, physical agents and chemical agents. Injuries and diseases due to animals and plants. The physical effects of heat and cold on the body as hole. Diseases due to or associated with disorders f metabolism. The utonomic (egetative) nervous system. Index.

Note A textbook and reference book of broad scope. The organization places emphasis on topography or region in undertaking diagnosis. Visual and manual techniques of examination which may be carried out in the physician s office are fully described. References are made to such diagnostic procedures as roentgenology and their applications in the diagnosis of specific diseases are indicated, but their techniques are not described in detail *Prognosis* and treatment are discussed for some conditions but not all. An unexpected feature is the inclusion of emergency treatment and related measures in cases of poisoning Rather extensive literature lists are included [illegible] most of the chapters.

WALKER, HARRY

Physical diagnosis With 126 illustrations. St. Louis The C. V Mosby Company, 1952 461 p illus 26 cm. $5 00 3342

Contents (abridged) Physical diagnosis. Diseases of the respiratory system, by E. S. Ray Diseases of the circulatory system, by R. R. Porter Index.

Note A textbook for use in medical colleges The author emphasizes that physical examination is still the foundation for diagnosis He states, when the physical examination is well done, the ext step in determining the diagnosis can be taken with more logic and the diagnosis can be arrived at in more direct manner The more one know about physical diagnosis, the better diagnostician he is certain to be. The first section of the book is divided into 26 hapters, most of which deal ith the examination of character istic such as build, or region such as the thorax. In this section the chapter on the abdomen was written by H C. Lee the chapter on diagnosis of female pelvic disease was written by R. H. Hoge that on neurologic examination by R. A. Adams and the chapter on psychiatric examination by P H. Drewry Jr Section three also contains six chapters on such topics as the diagnosis of the abnormalities of the heart beat and the diseases of the pericardium Throughout the book the examination techniques are described step by step, and the significance of physical signs is indicated.

EPSTEIN BERNARD S AND LEO M DAVIDOFF

An atlas of skull roentgenograms. 603 illustrations on 315 engravings. Philadelphia Lea & Febiger 1953 415 p. illus. 26 cm. $15 00 3354

Contents. The normal skull. Congenital variations, anomalies and malformations Trauma Infections. Brain tumors. Gliomas, primary sarcomas, Tumors of the brain. Craniopharyngiomas and pituitary adenomas Miscellaneous tumors. Tumors of the vault of the skull. Non-neoplastic diseases of the skull. Index.

Note As the title states, this work is an atlas, not a treatise or textbook. The roentgenograms reproduced in it have been taken largely from the authors' own extensive files. They are organized under the headings given in the above Contents. Each of the "chapters" contains a brief discussion of the topic of the particular chapter, but the main emphasis is on the reproduced roentgenograms and their legends. The legends are concisely phrased and explicit. The chapter entitled "Brain tumors" contains an extensive series of meningiomas.

ETTER, LEWIS E.

Atlas of roentgen anatomy of the skull. Springfield, Ill. Charles C Thomas, 1955 215 p. illus. (part col'd) 29 cm. $14 75 3355

Contents Section I, General views of the skull. Section II, General views of the skull with analysis of individual bone components The sphenoid bone components of the skull. Frontal and ethmoid bone components of the skull. Parietal bone components of the skull. Occipital bone components of the skull. Section III, The paranasal sinuses and mandible: The Granger view of the sphenoid sinuses. Section IV Radiographic anatomy of the temporal bone and petrous mastoid portions, by J R. Facon. Radiographic anatomy of the temporal bone—petrous and mastoid portions. Section [illegible] The orbits and optic foramina: The frontal and ethmoid bone components of the orbits in the PA view The frontal and ethmoid bone components of the orbits in the lateral view. The frontal and ethmoid bone components of the orbits in the PA oblique (Waters') projection The oblique orbital line. The zygomatic bone components of the orbit in the basal (vertico-submental) view The zygomatic bone components of the orbits in the PA oblique (Waters') view. The orbit and optic foramina (Rhese projection) Section VI, Maxillo-facial components of the skull Section VII, The roentgen anatomy of the skull in the newborn infant, by S Rosenbaum and L J Sherman The roentgen anatomy of the skull in the newborn infant. Index.

Note A valuable addition to the literature on the anatomy of the skull as revealed in radiography. It is largely a fresh study based on a special technical approach. The technique and its purpose are described in the author's own words thus: "… the various component bones of dry skulls were disarticulated and radiographs were made of each, first posed separately in various standard projections and then replaced in the respective skulls similarly oriented for routine radiography. In this way it has been possible to determine exactly which features each of the bones studied contributed to the image of the intact skull." Not all of the radiographs reproduced in the book were made by this technique, but a large proportion of them were so made, and all of them are designed to make more clear the interpretation of skull radiographs. As noted above, two of the sections were contributed by other authors. Both sections are substantial contributions to the correlation of radiographs with skull anatomy although not made by the aforementioned special technique. The volume contains 219 plates, practically all of which are reproduced clearly and in large scale.

FELDMAN MAURICE

Clinical roentgenology of the digestive tract. Third edition. Baltimore The Williams & Wilkins Company 1948. 901 p illus. 24 cm 3356

Contents The esophagus The stomach. The duodenum. The small intestine The colon. Hernia Diaphragm The appendix. The gall bladder The biliary ducts. The liver The pancreas. The peritoneum. The omentum. The mesentery and retroperitoneal tumors. Lymphogranuloma Hodgkin's disease The abdominal vessels. The spleen. Deficiency diseases. Miscellaneous.

Note A comprehensive reference book of information useful in the interpretation of roentgenograms of the digestive tract. It is used primarily by roentgenologists but is also valuable to specialists in gastroenterology and internal medicine who wish to understand the interpretation of such roentgenograms. Specific disorders and diseases are discussed concisely In practically all instances the following points are covered etiology pathology incidence, sex and age of typical patients, clinical aspects, symptoms, associated conditions, roentgen diagnosis, and differential diagnosis. References to related literature then follow immediately In comparison to the second edition, published in 1945, the present edition has been very substantially revised. The main chapter headings are the same, but within the chapters, there are numerous discussions of conditions not treated in the earlier edition, and discussions of conditions considered there have in many cases been rewritten. There are 641 illustrations. A fourth edition was published in 1957 778 p., $13 00.

GENERAL ELECTRIC X RAY CORPORATION CHICAGO TECHNICAL SERVICE DEPARTMENT

Medical radiographic technic, prepared by the Technical Service Department of General Electric X ray Corporation under the editorial supervision of Glenn W Files, director in association with these contributors John R. Armstrong, George A Ashworth Charles H Buckingham and others Springfield Ill. Charles C Thomas, 1943 365 p illus 26 cm. $7.50 3357

Contents: Fundamental electrical concepts. Electron theory and the X-ray tube. Basic X-ray generating circuits. X-ray apparatus. Radiographic calibration. Factors affecting the quality of the radiograph The processing room Stereoscopy Planigraphy Foreign-body localization. Fluoroscopy Soft-tissue radiography Anatomy Positioning and technic. Dental technic. Photograph of the fluorescent screen image. Index.

Note This book will interest radiologists and technicians. In it the fundamentals of electricity and physics are explained in simple terms, aided by the liberal use of illustrations. Factors affecting the quality of radiographs are considered in detail, while the following subjects are treated briefly: stereoscopy planigraphy foreign-body localization, fluoroscopy soft-tissue radiography and photofluorography The atlas on positioning and technique is of special value for technicians. A photograph of each standard position is shown on a separate page, with views of the patient from both the top and side, obtained simultaneously by means of a mirror On the same page appear a reproduction of the radiograph and a description of the position. Full-page anatomical plates are also provided. The book contains 381 original figures and has an excellent cross index.

GOLDEN ROSS editor

Diagnostic roentgenology Baltimore Williams and Wilkins Co 1936–1956 3 v illus. 26 cm $60.00 3357A

Contents (abridged) Volume I Diagnosis of diseases of the skull and intracranial contents, by C. G. Dyke and A. E. Childe. Examinations of the paranasal sinuses and the mastoids, by G. W Grier. Radiology of the heart and great vessels, by C. E. Rubin. Clinical roentgenology of the cardiovascular system, by H. Roesler Examination of the digestive tract, by R. Golden. Diagnosis of diseases of bones, by F C. Hodges and others. Volume II Diagnosis of spinal cord tumors, by C. G. Dyke. Diagnosis of diseases of the urinary tract, by L. Jacobs and M. L. Sussman. Pneumoperitoneum by R. A. Rubin and A. A. Rosenberg. The use of the Roentgen ray in obstetrics, by H. C. Moloy and P C. Steinberg. Volume III Diagnosis of fractures and dislocations, by L. K. Garland Dental roentgenology by L. M. Ennis. The soft tissues of the air and food passages of the neck, by B R. Young The abdomen, by R. Golden. Roentgen diagnosis in infants and children, by J Caffey Soft-tissue roentgenography by J. R. Lingley and W J. Elliott. Development and implications of body section radiography by S. Moore. Angiography by J D Camp and E. V Allen. Index.

Note: A comprehensive summary of the theory and practice of Roentgen examination in both normal and pathologic conditions, intended as a guide and reference work for the radiologist, pathologist, surgeon, and general practitioner The editorial policy of the work is to lay stress on the importance of training and experience, upon the necessity for continuous study of groups of cases and the correlation of the Roentgen manifestations of disease with the pathology disclosed at the operation or necropsy. There are exten-

Book Publishers, Inc., 1949 335 p illus 21 cm $7 00 3349

Contents Part I, The peripheral joints Developmental malformations. Osteochondritis. Group in which changes are essentially concerned with mechanical stresses. Group essentially concerned with protein reactions, toxins or actual bacterial invasion of the joint—the true arthritides. Part II The joints of the spine: Developmental malformations. Spondylolisthesis. Osteochondritis. Group in which changes are essentially concerned with mechanical stresses. Group essentially concerned with protein reactions, toxins or actual bacterial invasion of the joint. Ochronosis. Neoplasms. Spinal arthralgias—miscellaneous causes. Part III, The temporomandibular joints. Arthropathies. Selected references. Index.

Note A thorough work on the use of X-ray in diagnosis of diseases of the joints. In this edition, there are 57 plates, and the majority of them contain reproductions of two or more roentgenograms. The plates are accompanied by descriptions f the abnormalities and disease manifestations which can be seen in them. The chapters on diseases are preceded by an introduction in which th techniques of producing high-quality roentgenograms of the joints and surrounding tissues are described. The first edition was published in 1943 Both the text and the illustrations have been extensively revised and augmented.

DE LORIMIER, ALFRED A, AND OTHERS

Clinical roentgenology By Alfred A. De Lorimier, Henry G Moehring, and John R. Hannan. Springfield, Ill Charles C Thomas, 1954–56 4 v illus 29 cm. Vols I and II, $18 50 per vol, vol. III, $20 50, vol. IV $24 50 3350

Content (abridged) Volume I, Developmental and systemic conditions and local lesions in the extremities The extremities. Developmental malformations. Traumatic lesions. Metabolic disorders. Endocrinopathies. Infections. Neoplasms. Blood dyscrasias. Miscellaneous Arthropathies. Special studies. Index. Volume II The head, neck and spinal column The skull. Intracranial lesions. The skull differential aspects. Skull fractures. Maxillo—facial fractures. Foreign bodies. Temporo-mandibular joints. The para-nasal sinuses and mastoids. Teeth. Neck. The spine. Index. Volume III, The lungs and the cardiovascular system emphasizing differential considerations Thorax. Diaphragm. Mediastinum. Pleura. Lung. Mediastinal tumors. Heart and great vessels. Congenital malformations of the heart and great vessels. Acquired heart disease. Cardiac trauma. Cardiac failure. Tumors and cysts f the heart and pericardium. Pericarditis. The aorta. Index. Volume IV The digestive tract, the gall bladder liver and pancreas, the excretory tract and special studies emphasizing differential considerations The abdomen. Gastrointestinal tract. Small intestine. The colon Gallbladder and biliary ducts. The urinary tract. Miscellaneous. Obstetrical roentgenology Gynecological roentgenology Index.

Not A work of cyclopedic scope, suitable for use as text in medical schools and as a reference work in the offices of practicing roentgenologists, pathologists, and general practitioners. The authors have had extensive experience in roentgenology Throughout their careers they have in addition systematically collected material from other specialists in the field The emphasis is strongly on diagnosis and roentgenographic techniques are given relatively little space. The importance of considering as many diagnostic features as possible is emphasized, and criteria are considered not only in relation to one condition but also in relation to others that may be indicated. The number f illustrations in each volume varies from 734 in the second volume to 1,112 in the fourth volume. Literature references are included for all conditions and diseases that are discussed. Each volume contains its own index and may be used independently of the others

DEUTSCHBERGER OTTO

Fluoroscopy in diagnostic roentgenology With an introduction by Frank J Borrelli 888 illustrations on 523 figures Philadelphia W B Saunders Company 1955 771 p illus 27 cm $22 00 3351

Content Part I, General considerations f fluoroscopy Development of fluoroscopy The fluoroscopic equipment. The conventional fluoroscopic image. The electronically amplified fluoroscopic image. Physical evaluation of the fluoroscopic image. Clinical evaluation of the fluoroscopic image. The hazards of fluoroscopy Foreign bodies and their localization. Part II, Clinical considerations. Fluoroscopy of the head—neck—chest. Abdomen. Extremities. Appendix Compilation f fluoroscopic findings. Index of authors. Index of subjects.

Note One of the few modern books on fluoroscopy this is a full-scale treatise of interest to specialists in radiology and in other fields as well as to general practitioners. The advantages and disadvantages of fluoroscopy in comparison to radiographic techniques that require the taking and development of photographic image are clearly set forth. Equipment is described and pictured, and unusual apparatus, such as that required to project fluoroscope on a large screen for an audience, is described along with standard office equipment. Other chapters in the introductory part deal with the general aspects named in their chapter titles. The greater part of the space is devoted to the clinical uses of fluoroscopy In the clinical chapters, specialized fluoroscopic techniques, including interpretation of the image, are discussed thoroughly from the viewpoint of medical practitioners. The illustrations are well reproduced. Extensive literature references included in most of the chapters are made the more useful by the index of authors in which the names of all authors of cited literature are brought together The author is a member of the faculty of New York Medical College.

ECKER, ARTHUR, AND PAUL A RIEMENSCHNEIDER

Angiographic localization of intracranial masses Springfield Ill Charles C Thomas, 1955 433 p illus. 24 cm. $13 50 3352

Content Part I, Orientation Introduction. Part II, Localization Intrasellar masses with parasellar extension. Suprasellar masses. Presellar masses. Arterial pressure on the optic nerve. Frontobasal masses. Frontocentral masses. Frontopolar masses. Frontomedial and anterior callosal masses. Frontolateral masses. Frontoparasagittal masses. Frontoparietal parasagittal masses. Parietal parasagittal masses. Posterior callosal masses. Suprasylvian parietal masses. Frontoparietal extracerebral masses. Intersylvian (parietal) masses. Infrasylvian (parietotemporo-occipital) including posterior basal ganglia masses. Masses of the occipital lobe. Posterior temporal masses. Middle temporal masses. Inferomedial temporal masses. Masses of the interpeduncular cistern. Temporal extracerebral masses. Pinealomas. Masses f the brain stem. Masses in the cerebellopontine angle. Cerebellar masses. References. Index.

Note An important addition to the professional literature of cerebral angiography Essentially it is an atlas with most of the space given to the 431 figures (representing a considerably higher number of illustrations because of the inclusion of several pictures in one figure) Most of these figures are reproductions of angiograms and X-ray pictures made by the angiographic technique and related techniques such as pneumoencephalography Two or more views are shown for most cases. In many instances the X-ray pictures are supplemented by reproductions f ordinary photographs of gross pathology and by line drawings which facilitate interpretation of the X-ray views. Most of the material has come from the case files of the Neurological Service of the Upstate Medical Center of Syracuse Memorial Hospital in Syracuse, New York. Details of techniques and descriptions of normal angiograms are not included because they have already been covered in the senior author's *The normal cerebral angiogram* 1951 described above.

ECKER, ARTHUR

The normal cerebral angiogram Springfield Ill Charles C Thomas 1951 190 p. illus 24 cm. $7.25 3353

Content Part I, Technic. General technical considerations. Specific technic. Complications. Part II, Angiographic anatomy Arteriographic anatomy Venographic anatomy Artifacts. Vascular relations to the tentorial notch and foramen magnum. References. Index.

Note. A short but valuable monograph on the radiography of the blood vessels f the brain. In the first part, specific and detailed descriptions of techniques are supplied The second part is built around series of remarkable X-ray photographs of blood vessels in the brain. The purpose of the work is to describe the normal (and "normal variations") anatomy of the major blood vessels of the brain as these are seen in angiograms and to describe the techniques f angiography for the guidance of neurologists and neuroradiologists.

—— Visceral radiology By Emerick Markovits. New York The Macmillan Company 1951 612 p. illus. 26 cm. $12.50. 3364

Contents (abridged) Part i. The chest and the respiratory system. Part ii. The circulatory system. Part iii. The digestive system. Part iv. The abdomen and abdominal organs. Part v. The genitourinary system. Part vi. The central nervous system. Bibliography. Index.

Note This and the preceding title are [illegible] in organization and [illegible]. However, they may be used independently. In each the basic plan of organization is by systems. Under each system there is, first, [illegible] discussion of the anatomy and physiology, then [illegible] discussion of diseases and, finally, there is some information on radiographic techniques and specific information on the interpretation of radiographs. Both books are fully illustrated. They are based on [illegible] long experience in radiology [illegible] in Vienna and Budapest, but part of [illegible] in the United States of America.

MESCHAN ISADORE

An atlas of normal radiographic anatomy With the assistance of R. M. F. Farrer-Meschan. 1,044 illustrations in 367 figures. Philadelphia W. B. Saunders Company 1951 393 p. illus. 26 cm. $15.00 3365

Contents Fundamental background for radiographic anatomy. Introduction to the radiographic anatomy of the skeletal system. Radiographic anatomy of the upper extremity. The radiographic anatomy of the pelvis and lower extremity. Radiographic anatomy of the skull. Detailed consideration of certain areas of the skull. The radiographic study of the brain. The radiographic anatomy of the vertebral column and subarachnoid space. Radiographic anatomy of the respiratory system. The radiographic anatomy of the mediastinum. Special studies of the heart and major blood vessels. The radiographic anatomy of the upper gastrointestinal tract. Radiographic anatomy of the intestines beyond the duodenum. Radiographic anatomy of the abdomen and peritoneal space. The urinary tract. The genital system. Index.

Note As indicated in the title, this textbook is concerned with normal anatomy as [illegible] appears in radiographs. In their discussions of the various regions and systems, the authors combine verbal descriptions with drawings and radiographs. Many of the drawings are assembled in sets consisting of (1) [illegible] diagram of the positioning of the subject, (2) [illegible] reproduction of [illegible] radiograph made in this position and (3) [illegible] line drawing in which the various parts visible in the radiograph are identified.

MESCHAN ISADORE

Roentgen signs in clinical diagnosis. With the assistance of R. Farrer-Meschan. 2,216 illustrations on [illegible] 80 figures Philadelphia W. B. Saunders Company 1956 1,058 p. illus. 26 cm. $20.00 3366

Contents Background fundamentals [illegible] radiographic technique. Protection from roentgen irradiation. The radiograph—its basic [illegible] and terminology. Introduction to the radiography of the skeletal system. Fractures of the extremities [illegible] and complications. Fracture healing, complications from fractures, and general summary of treatment methods. Congenital and hereditary abnormalities of the extremities. Radiolucent bone [illegible] of multiple occurrence. Radiolucent bone disease of [illegible] occurrence. Osteosclerotic and hypertrophic bone changes of the extremities. The pathology of joints. Radiography of the skull. Diseases of the facial bones, paranasal sinuses, and temporal bones. [illegible] lesions within the cranium. The radiography of the vertebral column. Introduction to analysis of the chest. Roentgen signs of abnormality of the [illegible], pleura and thoracic cage. Radiographic differentiation [illegible] pulmonary diseases characterized by [illegible] shadows on the lungs. Nodular lesions of the lung parenchyma. Lesions of the lungs characterized by increase in linear markings. Lung lesions characterized by increased radiolucency in the lung fields. Radiography of the mediastinum excluding the heart. The radiography of the heart. Congenital heart disease. The value of the plain survey of the abdomen. Radiography of the urinary tract and suprarenal glands. Radiography of the gallbladder. Upper gastrointestinal tract: oropharynx, laryngopharynx, esophagus. Stomach, duodenum, and pancreas. Radiology of the small intestine. Radiography of the colon. Radiography in obstetrics and gynecology. Index.

Note A textbook for the instruction of advanced undergraduate and graduate medical students [illegible] diseases on the basis of [illegible] signs that can be seen by the techniques of fluoroscopy and roentgenography. Special attention is paid to radiographic features that are significant in differential diagnosis, and there is some discussion of the correlation of these [illegible] other clinical signs and symptoms. It is complementary to the author's Atlas of normal radiographic anatomy and is addressed to students and medical practitioners [illegible] have acquired some knowledge of the appearance [illegible] normal anatomy in radiographs. However it may be used independently [illegible] the Atlas. As noted in the title, it is fully illustrated. The illustrations include drawings as well as reproductions of radiographs. They are accompanied by [illegible] organized and readable text. The author is Director of the Department of Radiology at the Bowman Gray School of Medicine of Wake Forest College.

MORGAN RUSSELL H., editor

Handbook of radiology Associate editor Kenneth E. Corrigan. Chicago The Year Book Publishers Inc., 1955 518 p. illus. 19 cm. $10.00 3367

Contents (abridged) Section i. Definitions of physical terms and units (including conversion [illegible] and [illegible]). Section ii. General physical information (including [illegible] data). Section iii. Radiotherapeutic data. Section iv. Radioisotopes. Section v. Radiography and fluoroscopy. Section vi. Radiation protection. Appendix. Index.

Note An authoritative and useful reference [illegible] some native data and descriptions of techniques in radiography and fluoroscopy. Most of the data are assembled in tables, but some are presented in graphical form. Fluoroscopic techniques are illustrated in small pictures. The appendices contain [illegible] list of drugs commonly used in radiology [illegible] series of mathematical tables and schematic diagrams of X-ray generators and particle accelerators. The editor of the volume is Radiologist-in-Chief of the Johns Hopkins Hospital.

PENDERGRASS EUGENE P., AND OTHERS

The head and neck in Roentgen diagnosis. Second edition. By Eugene P. Pendergrass J. Parsons Schaeffer and Philip J. Hodes Springfield, Ill. Charles C Thomas 1956. 2 v. illus. (part col d) 26 cm. $37.50 3368

Contents Volume i: The skull. Fractures of the skull. Diseases of the bone. Tumors of the scalp and skull. The teeth and jaws. The nose, lacrimal passageways, and paranasal sinuses. The external ear, the temporal bone and structures of the mastoid and petrous. The eye and orbit. Index. Volume ii: Intracranial tumors and other lesions. Cerebral pneumography. Cerebral angiography. The neck. Diseases of the bones and joints and tumors of the cervical spine. Tumors and other lesions involving the vertebrae, spinal cord. Index.

Note A comprehensive treatise useful as [illegible] textbook at the graduate level and as [illegible] reference book for neuroradiologists, otolaryngologists, dentists, neurologists, and general practitioners of medicine. Although the strictly roentgenological aspects of the subject, such as positioning, interpretation of radiographs, etc., are thoroughly covered, the work is not limited to such topics but includes also much related information from anatomy, pathology and physiology. The illustrations, most of [illegible] the negative reproductions of radiographs, are of high quality and are well reproduced. In this second edition, there is much new matter of both textual and illustrative nature. Also, [illegible] of the literature published since the first edition was written has been added to the bibliography. There are 1,243 figures, many of which contain more than one illustration. A subject index covering the contents of both volumes [illegible] included in each volume.

POPPEL, MAXWELL H., AND OTHERS

The roentgen aspects of the papilla and ampulla of Vater By Maxwell H. Poppel Harold G. Jacobson, and Robert W. Smith. Springfield, Ill. Charles C Thomas 1953 195 p. illus. 24 cm. $5.50. 3369

Contents Introduction. Historical. The major papilla. The ampulla of Vater. Sphincter of Oddi (muscular program or musculature of the Vaterian segment). The congenital variants of the Vaterian segment. Roentgen methods. The roentgen manifestations

tive bibliographies at the end of most of the chapters plus 1,617 reproductions of roentgenograms and clinical photographs. The loose-leaf feature permits insertion of periodic revisions issued by the publisher

HODGES, FRED JENNER

The gastro-intestinal tract, a handbook of Roentgen diagnosis. Chicago Year Book Publishers Inc, 1944 320 p illus 21 cm $7 00 3358

Contents (abridged) The esophagus Cardiospasm, diverticulum neoplasm, foreign body intrinsic lesions identity indefinite, miscellaneous findings. Upper gastro-intestinal tract Normal stomach and duodenum, diverticulum ulcer neoplasia, fistulae, miscellaneous findings. Biliary tract Cholecystography abnormal liver shadow cholangiography miscellaneous findings. Colon Normal diverticulitis, ulcerative colitis, neoplasm and fistula, intrinsic lesion, indefinite identity sinus tract injection. The abdomen generally Calcium deposits, extra-alimentary mass, intestinal obstruction subphrenic abscess, diaphragmatic hernia, miscellaneous findings. Findings of particular interest Esophagus stomach and colon jejunum and ileum biliary tract miscellaneous.

Note Five methods of approach are available to the radiologist engaged in gastro-intestinal diagnosis: 1 abdominal scout film 2 upper gastro-intestinal examination 3 cholecystogram 4 colon examination 5 examination other than those mentioned. The application of these methods is discussed in general roentgenography of the various regions of the gastro-intestinal tract as outlined above, is then set forth in detail. Each section is very copiously illustrated by X-ray pictures of the conditions discussed. Short case histories are introduced as examples. *Bibliographies*, mostly referring to clinical application of roentgenography to the gastro-intestinal tract accompany each section. While the book covers the entire field of roentgenologic examination more attention is paid to fluoroscopic work.

HODGES, FRED JENNER, AND OTHERS

Radiology for medical students By Fred Jenner Hodges Isadore Lampe and John Floyd Holt. Second edition Chicago The Year Book Publishers Inc 1954 439 p illus 21 cm $8 00 3359

Content Introduction. Part I, Diagnostic radiology General view of diagnostic radiology The head. The spine and extremities. The thorax. The gastrointestinal tract. The genitourinary tract. Part II, Therapeutic radiology General view of therapeutic radiology Skin, lips and oral cavity The head and neck. The breast and female genital tract. Male genitalia and urinary tract. Lymphoblastomas and leukemias. Bone chest gastrointestinal tract central nervous system. Infections and miscellaneous conditions Index.

Note This concise text for undergraduate medical students covers basic principles and techniques of both diagnostic and therapeutic uses of X-rays, radium and radioactive isotopes The first part on diagnostic radiology is 265 pages long, while the part on therapeutic radiology is 158 pages in length The first edition was published in 1947 In preparing this second edition, the authors—all faculty members of the Department of Radiology of the Medical School of the University of Michigan—rewrote extensively and added to the discussion of therapeutic radiology There are now 106 plates, most of which contain reproductions of several radiographs or in a few instances, photographs.

HOLMES, GEORGE W AND LAURENCE L ROBBINS

Roentgen interpretation Eighth edition thoroughly revised with 371 illustrations Philadelphia Lea & Febiger 1955 525 p illus 24 cm. $10 00 3360

Contents Introduction Confusing shadows, calcium deposits and artefacts. Anatomical variations and development Fractures and dislocations. Diseases of bone The skull. The spine Joints, tendons and bursae. The chest. The abdomen. The gastro-intestinal tract. The genito-urinary tract. Fluoroscopy Glossary

Note A standard textbook for use in medical school courses offered to students who have completed courses in pathology It provides a comprehensive introduction to the essentials of roentgen diagnosis without emphasis on any special area of the body However the books on specialties are listed in the bibliographies. These bibliographies include also references to a selection of journal articles. The radiographs—of which there are 371 in the present edition—are accompanied by a concise and explicit text. The first edition of the book, written by Holmes and Howard E. Ruggles, was published in 1919 and the seventh edition, written by Holmes and Robbins, appeared in 1947 In comparison to the seventh edition, this eighth edition contains important revisions in both text and illustrations. The discussions of roentgen diagnosis of the heart, lungs, and gastro-intestinal tract have been rewritten, and new material has been added in other sections. The most obvious change is in the illustrations which are now printed as negatives rather than as positives, as in earlier editions.

LEVITIN, JOSEPH, AND BEN COLLOFF

Roentgen interpretation of fractures and dislocations Springfield, Ill Charles C Thomas 1956 265 p illus 24 cm $7 75 3361

Content Part I, Upper extremity Fractures and dislocations of the hand. The wrist. Fractures of the forearm. Fractures and dislocations of the elbow The arm The shoulder Part II, The thorax Fractures of the ribs. Fractures of the sternum. Part III, The lower extremity Foot. Fractures of the bones of the lower extremity Fractures of the ankle. Fractures of the shaft of the tibia and fibula. Fractures of the knee. The thigh. The hip. Part IV Pelvis Fractures of the pelvis. Part Spine Fractures and dislocations of the spine. Appendixes Bone age charts. Common appliances used in internal fracture fixation. Bibliography Index.

Note Addressed primarily to roentgenologists, this book explains in a simply written text, which is supplemented by clear vivid diagrams, the positions "that bones usually assume when they are fractured. Information on the estimating the age of fractures is included, and there is considerable emphasis on describing what constitutes satisfactory reduction in specific varieties of fractures. There are 238 figures and an extensive bibliography The first named author is Chief of the Department of Radiology of Mount Zion Hospital in San Francisco, and his collaborator is a member of the staff of the Department of Orthopedic Surgery of the same hospital.

LEWIS, RAYMOND W

The joints of the extremities a radiographic study Notes on non routine methods, non routine ideas and less-common pathology Springfield Ill Charles C Thomas 1955 108 p illus 29 cm $8 50 3362

Content The shoulder The elbow The wrist and hand. The hip. The knee. The ankle and foot. Index.

Note The sub-title of this book accurately indicates its scope It presents briefly but in sufficient detail for practical use by experienced roentgenologists and orthopedists a number of uncommon techniques and, in addition describes some uncommon pathological conditions that can be detected by a study of radiographs of the bones and of the soft tissues surrounding them. Typical of the material is a technique of making a radiographic study of the shoulder with the patient in a standing position. The volume contains 102 figures, most of which are reproductions of radiographs Many of the figures contain more than one picture. In some instances the additional pictures are reproductions of radiographs, in others they are diagrams included for the purpose of pointing out salient features of the X-ray picture The book is complementary to the larger standard treatises in the field.

MARKOVITS EMERIK

Bone and joint radiology New York The Macmillan Company 1949 446 p illus. 26 cm $12 50 3363

Content (abridged) Part I, General part. Section A—Anatomy physiology and radiologic anatomy of bones and joints. Section B—Diseases of the bones Section C—Diseases of the joints. Section D—Diseases of the muscles and of the soft tissues. Part II, Regional part. The skull. The spine. The pelvis and the hip joint. The femur The knee joint. Tibia and fibula. The ankle joint. Tarsal and metatarsal bones and phalanges of the foot. The thorax (ribs, clavicle, sternum, and scapula) The shoulder joint. The humerus. The elbow joint. Radius and ulna. The wrist joint. Carpal and metacarpal bones and the phalanges of the hand. Bibliography Index.

Note A thorough treatise based on the author's life-long experience in the Department of Radiology of Boston City Hospital and in private practice. It covers specifically and in detail the diagnosis by means of roentgenography of diseases and disorders of the chest and neck. Although the greater part of the space is devoted to diseases of the heart and lungs and the tissues directly associated with them, there are discussions of other tissues, for instance, the breast, which are not always included in books devoted to the chest. Discussions of diseases are not limited to diagnosis, but include also such aspects as pathology and general clinical manifestations. The harmful effects of X-rays in diagnosis of the chest are discussed as well as their uses. Specialized techniques such as bronchography are included. The first edition was published in 1931. Although some of the material in this second edition has been carried over from the first, revisions and augmentations are to be found in all of the sections; and in the discussion of such topics as the congenital anomalies of the heart there is much new material. In this edition as in the preceding one most of the illustrations are reproductions of roentgenograms. The literature references have been revised to include a selection of the more important publications since 1930.

RITVO MAX AND L. A. SHAUFFER

Gastrointestinal X-ray diagnosis. 470 illustrations, with 2 in color Philadelphia Lea & Febiger 1952 838 p. illus. (part col'd) 24 cm. $20.00 3376

Contents. General considerations. The pharynx—the esophagus. The stomach. The duodenum. The jejunum and the ileum. The colon. The appendix. The gallbladder. The liver. The pancreas, spleen, urinary calculi, peritoneum and abdomen. Hernia. Index.

Note A comprehensive treatise in which both common and rare gastrointestinal conditions subject to diagnosis by X-ray are covered. It is addressed primarily to graduate roentgenologists and gastroenterologists. Although limited largely to diagnosis, a certain amount of background and incidental information useful in diagnosis is included, for instance "There is a distinction between erosions, acute ulcers and chronic ulcers. An acute ulcer is a localized loss of tissue which penetrates deeper than the muscularis mucosae. A more superficial loss of tissue is referred to as an erosion." Extensive lists of the related literature are included. Most of the illustrations are reproductions of roentgenograms. In some instances, a larger scale would have been desirable, but in general the reproductions are clear.

RITVO MAX

Roentgen diagnosis of diseases of the skull. With four hundred and sixty-six illustrations. Foreword by George W Holmes. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers 1949 409 p. illus. 27 cm. (Annals of roentgenology a series of monographic atlases. Vol. XIX) $16.00. 3377

Contents The roentgenologic examination of the skull. Congenital, hereditary and developmental anomalies. Traumatic and postoperative changes. Infections. Nutritional, endocrine, and metabolic disturbances. Roentgen study of the fetal skull during pregnancy. Intracranial calcifications, foreign bodies, intracranial air. [illegible] intraocular calcifications. Neoplasms. Cerebral angiography. Index.

Note Most of the illustrations in this work are reproductions of roentgenograms selected from the files of the Boston City Hospital. The author has made a special effort to represent rare conditions as well as common ones. Another useful feature is the inclusion for purposes of comparison of roentgenograms of normal skulls, both infant and adult. The illustrations take up most of the space, but the long legends which accompany them and the more generalized text are valuable also. The author is a member of the faculty of the Medical School of Harvard University.

SCHWARTZ CHARLES WADSWORTH AND LOIS COWAN COLLINS

The skull and brain roentgenologically considered. Springfield, Ill. Charles C Thomas, 1951 386 p. illus. 24 cm. $10.50 3378

Contents: Technique. Normal skull. Practical considerations. Congenital anomalies. Traumatic disorders. Neoplastic diseases—skull—intracranial. The meningiomas. The gliomas. Tumors of the hypophysis cerebri. Tumors of the acoustic nerve. Lesions of blood vessel origin. Miscellaneous tumors. Infectious diseases. Miscellaneous diseases. Index.

Note: A reference manual on the interpretation of roentgenograms of the skull and brain. It is organized around more than 300 excellent reproductions of roentgenograms. The pictures are accompanied by concise discussions of the anomalies and diseases manifested in them. Roentgenograms that are clearly typical of the disorders represented were chosen, rather than borderline cases. However, special points useful in differential diagnosis are included in the discussions and in three charts. The authors are members of the faculty of the College of Physicians and Surgeons of Columbia University

SCHWEDEL, JOHN BERNARD

Clinical roentgenology of the heart. With seven hundred and forty nine illustrations on two hundred and thirty-two figures. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1946 380 p illus. 27 cm. (Annals of roentgenology Vol. XVIII) $12.50. 3379

Contents: Methods of examination. Cardiac measurements. Normal cardiac contours. Normal variations in the heart. Left ventricle. Right ventricle. Left auricle. Right auricle. General cardiac enlargement. Aorta. Venae cavae and brachiocephalic vessels. Lungs in heart disease. Pericardium. Congenital heart disease. Cardiac displacement. Cardiac and extracardiac calcification. Index.

Note: As indicated in the title the outstanding feature of this important work is the large collection of roentgenograms. Based on an analysis of over 20,000 fluoroscopic and roentgenographic examinations, the volume outlines the methods of roentgenology as applied to cardiology and provides the physician with a practical aid in his clinical diagnosis of heart disease. The textual material is closely integrated with the numerous illustrations, and most plates carry explanatory paragraphs. Selective bibliographies are given at the end of each chapter.

SHURTLEFF FORREST E.

Children's radiographic technic. Philadelphia Lea & Febiger 1951 80 p. illus. 26 cm. $3.75 3380

Contents: Equipment and accessories. Children's radiographic positions. Special radiographic procedures. Children's technic. Index.

Note. A brief but clear description of the special techniques which have been developed at the Children's Medical Center in Boston for X-ray examinations of children. Thirty-two figures illustrating positions and apparatus are included. The final chapter tabulates the procedures according to the part of body being X-rayed and age of the child.

SNOW WILLIAM

Principles in roentgen study of the chest. Springfield Ill. Charles C Thomas, 1946 414 p. illus. 26 cm. $10.50 3381

Contents (abridged) The average lung. The role of the bronchial tree. Lobar pneumonia. Broncho-pneumonia. Bronchitis. Foul lung abscess. Staphylococcus sepsis. Tuberculosis. Neoplasms of the chest. Chest injury. The diaphragm. Mediastinitis. Pulmonary allergy. Post-operative atelectasis. Pneumoconiosis. Infection with higher organisms. Special chest problems in children. Circulatory system. Bibliography. Index.

Note: A well-organized and clearly written treatise. The author emphasizes the importance of correlating a knowledge of physiology and pathology with the information available from the patient's history and physical symptoms in interpreting chest roentgenograms. His chapter on the role of the bronchial tree reviews both functions and important symptoms, and the chapter on the thoracic cage interprets bone abnormalities and diseases that are sometimes detected on chest roentgenograms. More than 300 roentgenograms are reproduced and interpreted.

of diseases of the Vaterian segment (including the normal roentgen anatomy and physiology) Diseases of the Vaterian segment. Differential diagnosis between the various etiological factors capable of producing a small mass in the region of the Vaterian segment. Bibliography Index.

Note A monograph on " those structures which extend obliquely downward on the outer superior margin of the duodenal window to the orifice on the duodenal surface of the major papilla (including its caudally appended fold or frenulum) Although there is a bibliography of 133 references to the literature, the book is based primarily on original study which included the examination of anatomical material from 100 autopsies. The anatomic specimens were free of disease as determined by the history gross evidence, and microscopic examination. Surgical cases of Vaterian disease also were included in the study which was aimed at establishing criteria of normality and abnormality of major papilla and Vaterian ampulline that would be useful in roentgen diagnosis of disease in this region. The authors' findings are described explicitly and in detail. There are 104 figures, including photographs of gross pathology microphotographs, and roentgenograms.

POPPEL, MAXWELL H.

Roentgen manifestations of pancreatic disease. Springfield, Ill Charles C Thomas, 1951 389 p illus. 25 cm $11 50 3370

Contents General considerations. The pancreas. The duodenum. Roentgen methods of examination Roentgen manifestations. Calcareous diseases of the pancreas. Primary pancreatic tumors. Pancreatic infections. Pancreatic (exocrine) insufficiency Lesions of the pancreas of secondary origin Differential diagnosis. Statistics. References. Index.

Note A series of 166 reproductions of roentgenograms, some of which illustrate conditions never portrayed before, are a feature of this valuable monograph. The work is not limited to pancreatic disease but includes diseases and abnormalities of the surrounding viscera as well.

RABIN, COLEMAN B

X ray diagnosis of chest diseases Baltimore The Williams & Wilkins Company, 1952 208 p illus 26 cm $12 00 3371

Content (abridged) Part I, General considerations The value of special examinations. The use of accessory apparatus. The use of contrast media. Fluoroscopy Part II, General Roentgen pathology —the roentgenologic manifestations of single pathologic processes. The normal chest. Conditions bordering on the normal. Congestion of the lungs. Pulmonary infiltration. Cavitation. Calcification. Part III, Regional Roentgen pathology—roentgenologic manifestations of the diseases. Part IV Differential diagnosis of certain Roentgen shadows Abnormalities of the pulmonary markings. Sharply defined linear shadows. Round circumscribed shadows. Differential diagnosis of pulmonary cavities. Interpretation of Roentgen artifacts. Bibliography Index.

Note A thorough treatment addressed primarily to specialists in radiology What can be seen of chest abnormalities and diseases by fluoroscopy and roentgenography is discussed thoroughly and in detail. Diseased conditions that do not show on roentgenograms but must be diagnosed by other techniques are also mentioned. As might be expected, most of the space is devoted to roentgenography but fluoroscopy is given about 37 pages. There are 188 figures and an extensive bibliography The importance of studying series of roentgenographs of the same patient is stressed.

RHINEHART, DARMON ARTELLE

Roentgenographic technique a manual for physicians, students and technicians Fourth edition thoroughly revised with 520 illustrations on 216 engravings Philadelphia Lea & Febiger 1954 454 p illus 19 tables 24 cm $8 50 3372

Contents. Electricity and electric currents. Roentgen-ray machines. Roentgen-rays or X-rays. Dark-room equipment and technique. The operating characteristics of X-ray machines, and the laws that govern X-ray exposures. A basic roentgenographic technique. Advanced experiments Roentgenograms. Combination of exposure factors Roentgenographic technique with smaller X-ray machines. Miscellaneous instructions. The upper extremity The lower extremity The vertebral column, thorax, and pelvis. The head. The teeth. The thoracic viscera. The gastrointestinal tract. The urinary tract. Miscellaneous examinations. Index.

Note A book useful to X-ray technicians, students who are preparing to become X-ray technicians, and physicians who use X-ray equipment infrequently It serves to introduce the reader to the principles of X-rays and X-ray machines and to techniques of roentgenography Basic principles are only outlined, but equipment is covered more thoroughly while such matters as the positioning of patients and film, calculations of exposures, and other techniques of production of good roentgenograms are covered in considerable detail. The third edition was published in 1941. The organization and purpose of this fourth edition are unchanged, but revised and newly added sections are to be found in many of the chapters. A selection of the literature published since the third edition was written has been added to the bibliographies in the chapters that have been revised. There has been some substitution of new illustrations for older ones, and the total number of illustrations has been slightly increased.

RIGLER, LEO G

The chest, a handbook of Roentgen diagnosis Second edition Chicago The Year Book Publishers Inc., 1954 380 p. illus. 21 cm $8 00 3373

Contents Introduction Methods of examination. Normal observations. Normal chest. Physiology of respiratory tract. Pathologic conditions Diseases of bronchi and lungs. Diseases of mediastinum. Diseases of pleura. Interpretation of roentgenograms of chest. Lungs and bronchi. Mediastinum. Pleura. Thorax—post operatively Lungs—postoperatively Bibliography Index.

Note. A concise guide to the interpretation of roentgenograms of the chest. It is intended primarily for graduate medical practitioners who are not specialists in roentgen diagnosis. Most of the presentation is in atlas form, with reproductions of actual roentgenograms on right-hand pages and analyses of them on the facing left-hand pages. The first edition was published in 1946. About 30 pages of new matter have been added in this second edition. The author is Chief of the Department of Radiology of the University of Minnesota Medical College.

RITVO, MAX

Bone and joint X ray diagnosis. 568 illustrations on 398 engravings Philadelphia Lea & Febiger 1955 752 p illus 27 cm. $20 00 3374

Contents. General considerations. Hereditary congenital and developmental disturbances of the skeleton. Traumatic lesions. Infections. Glandular nutritional and metabolic disturbances. Bone changes due to chemical substances and physical agents. Diseases of the joints and the periarticular tissues. Bone tumors. Diseases of the spinal canal. Soft tissue roentgenography General references. Index.

Note. An outstanding work on the diseases and abnormalities of bones and joints in which X-rays are a useful diagnostic tool. It is not limited to diagnosis as the title might be taken to indicate, but discusses the clinical picture signs and symptoms, pathology and differential diagnosis of each disease with particular reference to roentgen manifestations. As would be expected, most of the illustrations are reproductions of roentgenograms. Brief lists of Additional reading" are included. The book is intended for medical school graduates in training for the specialty of radiology and practicing roentgenologists, and it is of interest also to general and orthopedic surgeons.

RITVO, MAX

Chest X ray diagnosis Second edition thoroughly revised 633 illustrations on 426 engravings and 1 color plate. Philadelphia Lea & Febiger, 1956 640 p illus. 27 cm. $16 00 3375

Contents (abridged) Section I, Roentgen methods of examination of the lungs. Section II, The mediastinum. Section III, The diaphragm. Section IV The pleura. Section Diseases of the bony thorax and soft tissues of the chest wall the breasts. Section VI, The soft tissues of the neck. Section VII, The heart and great vessels. Section VIII, The aorta. Section IX, The pulmonary artery Section X, The innominate artery the azygos etc. Section XI, The pericardium. Index.

Note: A thorough treatise based on the author's life-long experience in the Department of Radiology of Boston City Hospital and in private practice. It covers specifically and in detail the diagnosis by means of roentgenography of diseases and disorders of the chest and neck. Although the greater part of the space is devoted to diseases of the heart and lungs and the tissues directly associated with them, there are discussions of other tissues, for instance, the breast, which are not always included in books devoted to the chest. Discussions of diseases are not limited to diagnosis, but include also such aspects as pathology and general clinical manifestations. The harmful effects of X-rays in diagnosis of the chest are discussed as well as their uses. Specialized techniques such as bronchography are included. The first edition was published in 1931. Although most of the material in this second edition has been carried over from the first, revisions and augmentations are to be found in all of the sections and in the discussion of such topics as the congenital anomalies of the heart there is much new material. In this edition as in the preceding one most of the illustrations are reproductions of roentgenograms. The literature references have been revised to include a selection of the more important publications since 1930.

RITVO MAX, AND I A. SHAUFFER

Gastrointestinal X ray diagnosis 470 illustrations with 2 in color Philadelphia Lea & Febiger 1952 838 p. illus. (part col d) 24 cm. $20.00. 3376

Contents: General considerations. The pharynx—the esophagus. The stomach. The duodenum. The jejunum and the ileum. The colon. The appendix. The gallbladder. The liver. The pancreas, spleen, secondary anomalies, peritoneum and abdomen. Bibliography.

Note: A comprehensive treatise in which both common and rare gastrointestinal conditions subject to diagnosis by X-ray are covered. It is addressed primarily to graduate roentgenologists and gastroenterologists. Although limited largely to diagnosis, certain amount of background and incidental information useful in diagnosis is included, for instance: "There is a distinction between common, acute ulcers and chronic ulcers. An acute ulcer is a localized loss of tissue which penetrates deeper than the muscularis mucosae. A more superficial loss of tissue is referred to as an erosion." Extensive lists of the related literature are included. Most of the illustrations are reproductions of roentgenograms. In some instances, a larger scale would have been desirable, but in general the reproductions are clear.

RITVO MAX

Roentgen diagnosis of diseases of the skull. With four hundred and sixty-six illustrations. Foreword by George W Holmes. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1949 409 p. illus. 2 cm. (Annals of roentgenology a series of monographic atlases. Vol. XIX) $16.00 3377

Contents: The roentgenologic examination of the skull. Congenital, hereditary and developmental anomalies. Traumatic and postoperative changes. Infections. Nutritional, endocrine, and metabolic disturbances. Roentgen study of the fetal skull during pregnancy. Intracranial calcifications, foreign bodies; intracranial or [illegible] of unusual [illegible] vascular calcifications. Neoplasms. Cerebral angiography. Index.

Note: Most of the illustrations in this work are reproductions of roentgenograms selected from the files of the Boston City Hospital. The author has made a special effort to represent rare conditions as well as common ones. Another useful feature is the inclusion for purposes of comparison of roentgenograms of normal skulls, both infant and adult. The illustrations take up most of the space, but the long legends which accompany them and the more generalized text are valuable also. The author is a member of the faculty of the Medical School of Harvard University.

SCHWARTZ, CHARLES WADSWORTH AND LOIS COWAN COLLINS

The skull and brain roentgenologically considered. Springfield, Ill. Charles C Thomas, 1951 386 p. illus. 24 cm. $10.50 3378

Contents: Technique. Normal skull. Practical considerations. Congenital anomalies. Traumatic disorders. Neoplastic diseases—skull—intracranial. The meningiomas. The gliomas. Tumors of the hypophysis cerebri. Tumors of the acoustic nerve. Lesions of blood vessel origin. Miscellaneous tumors. Infectious disease. Miscellaneous diseases. Index.

Note: A reference manual on the interpretation of roentgenograms of the skull and brain. It is organized around more than 300 excellent reproductions of roentgenograms. The pictures are accompanied by concise discussions of the anomalies and diseases manifested in them. Roentgenograms that are clearly typical of the disorders represented were chosen, rather than borderline cases. However, special points useful in differential diagnosis are included in the discussions and in three charts. The authors are members of the faculty of the College of Physicians and Surgeons of Columbia University.

SCHWEDEL, JOHN BERNARD

Clinical roentgenology of the heart. With seven hundred and forty-nine illustrations on two hundred and thirty-two figures. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers, 1946 380 p. illus 27 cm (Annals of roentgenology Vol. XVIII) $12.50 3379

Contents: Methods of examination. Cardiac measurements. Normal cardiac contours. Normal variations in the heart. Left ventricle. Right ventricle. Left auricle. Right auricle. General cardiac enlargement. Aorta. Venae cavae and brachiocephalic vessels. Lungs in heart disease. Pericardium. Congenital heart disease. Cardiac displacement. Cardiac and extracardiac calcification. Index.

Note: As indicated in the title the outstanding feature of this important work is the large collection of roentgenograms. Based on an analysis of over 30,000 fluoroscopic and roentgenographic examinations, the volume outlines the methods of roentgenology as applied to cardiology and provides the physician with a practical aid in his clinical diagnosis of heart disease. The textual material is closely integrated with the numerous illustrations, and most plates carry explanatory paragraphs. Selective bibliographies are given at the end of each chapter.

SHURTLEFF FORREST E

Children's radiographic technic. Philadelphia Lea & Febiger 1951 80 p. illus. 26 cm. $3 75 3380

Contents: Equipment and accessories. Children's radiographic positions. Special radiographic procedures. Children's technic. Index.

Note: A brief but clear description of the special techniques which have been developed at the Children's Medical Center in Boston for X-ray examinations of children. Thirty-two figures illustrating positions and apparatus are included. The final chapter tabulates the procedures according to the part of body being X-rayed and age of the child.

SNOW WILLIAM

Principles in roentgen study of the chest. Springfield Ill Charles C Thomas 1946 414 p illus. 26 cm. $10.50 3381

Contents (abridged): The average lung. The role of the bronchial tree. Lobar pneumonia. Broncho-pneumonia. Bronchitis. Fluid lung abscess. Staphylococcus sepsis. Tuberculosis. Neoplasms of the chest. Chest injury. The diaphragm. Mediastinitis. Pulmonary allergy. Post-operative atelectasis. Pneumoconiosis. Infection with higher organisms. Special chest problems in children. Circulatory system. Bibliography. Index.

Note: A well-organized and clearly written treatise. The author emphasizes the importance of correlating a knowledge of physiology and pathology with the information available from the patient's history and physical symptoms in interpreting chest roentgenograms. His chapter on the role of the bronchial tree reviews basic functions and important symptoms, and the chapter on the thoracic cage interprets bone abnormalities and diseases that are sometimes detected on chest roentgenograms. More than 300 roentgenograms are reproduced and interpreted.

STEEL, DAVID

Roentgen anatomy Roentgen anatomía Springfield, Ill Charles C Thomas, 1951 109 p illus 32 cm. $8 00 3382

Note. An atlas of reproductions selected so as to illustrate the appearance in roentgenograms of normal anatomic structures The book is organized so that each roentgenogram faces a diagram in which the structures are identified in both English and Spanish terms.

STORCH, CHARLES B

Fundamentals of clinical fluoroscopy, with essentials of Roentgen interpretation Second revised edition New York Grune & Stratton, 1956 305 p illus 26 cm $8 75 3383

Contents Basic concepts—mechanics, protection and dark adaptation. Fluoroscopy of the chest. Fluoroscopy of the pathological chest. Fluoroscopy of the heart Fluoroscopy of the pharynx, hypopharynx and esophagus. Fluoroscopy of the stomach. Fluoroscopy of the small bowel. Fluoroscopy of the colon. Intestinal obstruction. Fluoroscopy of the gallbladder Bibliography Index.

Note A comprehensive practical guide to the techniques of fluoroscopic examination. It is written for general practitioners and other physicians who are not specialists in roentgenology but who use the fluoroscope in diagnosis Each chapter includes descriptions of the anatomy of the regions under discussion, and covers preliminary preparation of the patient, positioning, examination procedures and diagnostic implications of the fluoroscope images. As an aid in self-instruction questions and answers pertaining to some of the fluoroscopic images reproduced in the book and designed to teach interpretation are included in the legends accompanying the illustrations. The first edition was published in 1951 In this second edition the book is more than 100 pages longer contains approximately 100 additional figures. The revised bibliography cites literature published as recently as 1955

UNITED STATES NATIONAL BUREAU OF STANDARDS NATIONAL COMMITTEE ON RADIATION PROTECTION SUBCOMMITTEE ON X RAYS UP TO TWO MILLION VOLTS

X ray protection recommendations of the National Committee on Radiation Protection Issued December 1 1955 Washington D C Government Printing Office, 1955 41 p illus 20 cm (United States National Bureau of Standards Handbook 60) $0 20 3384

Contents I. General Definitions. Planning, surveys, and inspections Working conditions. Structural details of protective barriers. Plans for an X-ray installation II Additional rules for specific applications Medical fluoroscopic X-ray installations Medical radiographic X-ray installations. Dental radiographic installations Special requirements for mobile medical diagnostic equipment Photographic equipment Therapeutic X-ray installations operated at potentials of 400 kv and below Therapeutic X-ray installations operated at potentials above 400 kv Appendix Determination of protective barriers References.

Note This handbook of recommendations for the protection of radiation workers and the public supersedes National Bureau of Standards Handbook 41 *Medical X-ray protection up to two million volts,* prepared by the National Committee on Radiation Protection in 1949 Because of the large number of copies of Handbook 41 in use, the sections of Handbook 60 have been numbered to correspond with the sections of Handbook 41 However Handbook 60 is complete in itself and reference to Handbook 41 is unnecessary Where major changes have been made asterisks are used. The section on electrical protection is omitted from the revision as not falling within the scope of the Handbook The word "medical" was dropped from the title, as many of the recommendations and suggestions can be used equally well for industrial applications.

WEYL, CHARLES, AND S REID WARREN JR

Radiologic physics Second edition With a foreword by Eugene P Pendergrass. Springfield, Ill Charles C Thomas, 1951 491 p. illus 24 cm $11.25 3385

Contents Part I, Scientific method, electromagnetism and electromagnetic devices Discussion of scientific method. The experimental basis of electromagnetism tentative atomic theories for correlating the observed phenomena. The quantitative analysis of electric circuits. Electrical measuring instruments. Transformers, generators, and motors electric power distributing systems. Principles of electronics. Electronic devices. High-voltage generators for X-ray equipment. Part II Radiant energy and its interactions with matter The theory of radiant energy—a historical survey X-rays and matter Radioactivity and nuclear physics. The measurement and control of X-rays and radioactive emissions. Physical aspects of therapeutic and tracing techniques equivalent dose for X-rays and radioactive emissions protection. Physical aspects of fluoroscopic and roentgenographic techniques. The effects of variations of exposure factors on roentgenographic results. Fluoroscopic and roentgenographic techniques. Appendix. Mathematical tables. Name index. Subject index.

Note A standard text on general physics and on those aspects of physics which apply particularly to X-rays and other radiation used in medical diagnosis and therapy It is used primarily as a text in graduate courses offered to physicians who are preparing to specialize in radiology Although some rather advanced matters are taken up in the latter parts of the book, the authors have not assumed that their readers will have foundations in either mathematics or physics. The first edition was published in 1941 Changes and revisions made in preparing this edition include an expansion of the discussions of electronic phenomena and devices, of artificial radioactivity and of the uses of radioactive isotopes. Recent literature has been added to the chapter bibliographies.

YEAR BOOK OF RADIOLOGY (1955–1956 Year Book series) Radiologic diagnosis edited by *John Floyd Holt and Fred Jenner Hodges.* Radiation therapy edited by Harold W Jacox and Morton M Kligerman. Chicago The Year Book Publishers, Inc., 1955 413 p illus 23 cm. $9 00 3386

Contents Part I, Radiologic diagnosis Introduction. Technical developments. Head and neck. The spine and extremities. Chest. Gastrointestinal tract. Genitourinary tract. Part II, Radiation therapy Introduction. Head and neck. Thorax. Nervous system. Breast. Gynecology Genitourinary system. Blood dyscrasias and lymphomas. Miscellaneous conditions. Radioactive isotopes. Physics, dosimetry and treatment technics. Hazards and injuries. Radiobiology Index. Index to authors.

Note Similar in organization to the other annuals in this publisher's Year book series, this one presents in the form of abstracts the advances in radiology which have been reported in the international literature. Each abstract is long enough to give the gist of the original article. In each instance a reference is given to the publication of the original. Some of the abstracts are supplemented by brief notes written by the editor in which the findings reported are evaluated and are sometimes related to the work of other authors in the same field. As befits the subject, an exceptional number of illustrations is included in this particular annual, this specific issue containing 144 figures The articles abstracted in this 1955–56 issue were received by the editors between June, 1954 and June 1955

YOUNG, BARTON ROGERS

The skull, sinuses & mastoids, a handbook of roentgen diagnosis Chicago The Year Book Publishers Inc, 1948 328 p illus. 21 cm $7 00 3387

Contents (abridged) Part I, The skull Normal adult skull. Normal skull in infancy and childhood. Craniofacial disease. Fractures. Conditions involving the skull. Tumors. Deformities of sella turcica. Intracranial tumors. Brain abscess tuberculoma, cysticercosis, echinococcosis. Multiple brain calcifications. Part II, The nasal sinuses Roentgen diagnostic procedures. Normal adult sinuses; developmental variations. Normal sinuses in infancy and childhood. Maxillary sinus disease. Frontal sinus disease Sphenoid sinus disease. Part III, The mastoids Roentgen diagnostic procedures. Normal variations. Normal temporal bone in infancy and childhood. Mastoiditis. Paget's disease. Benign and malignant tumors. Bibliography Index.

Note Essentially a compilation of plates depicting the roentgen appearance of normal and diseased skulls, sinuses, and mastoids.

[illegible] each [illegible] is [illegible] of the particular features to be observed in the [illegible] of each normal or abnormal condition. Most of the illustrative material is from the files of Department of Radiology of Temple University [illegible] the author is Professor of Radiology. Descriptions of techniques and positions of the [illegible] for obtaining best results are also given. A five-page bibliography is included.

ALLERGY

COCA ARTHUR F AND OTHERS
Familial nonreaginic food-allergy Third edition. Springfield, Ill. Charles C Thomas, 1953 279 p. illus. 24 cm. $10.50 3388

Contents: Introduction. Classification of [illegible] diseases. Practical management of idioblaptic allergy. Definition of interpretation of the pulse-diet record. The art of interpreting the pulse-diet record. The idioblaptic shock-organ. The symptoms of idioblaptic allergy. Headache. Dermatologic manifestations of idioblaptic allergy. Idioblaptic diseases of the alimentary tract. [illegible] as an aid in the relief of idioblaptic food-allergy. Essential hypertension. Clinical versus etiological diagnosis. Idioblaptic allergy as [illegible] predisposing cause of low-grade infections. [illegible] The botanic groupings of food-allergens. List of foods and drugs arranged according to botanical orders, by [illegible] Price. The [illegible] [illegible] The specific mechanism of idioblaptic allergy. The normal human adult pulse. The statistical method in the study of the effects of idioblaptic allergy. Inheritance of idioblaptic allergy. Idioblaptic cigarette sensitivity. The incidence of idioblaptic allergy among persons affected with cancer of the breast. Is multiple sclerosis [illegible] manifestation of idioblaptic allergy? by M. G. Meyer and others. Concerning special problems of idioblaptic disease [illegible] affects women, by A. [illegible] and A. F. Coca. Allergy in glaucoma, by C. Berens and others. Author index. Subject index.

Note: In this book, the author is concerned with [illegible] relatively large group of allergic conditions and [illegible] number of other disorders hitherto unrecognized as allergic all of which are characterized by lack of reaction in the usual skin tests. It is the author's belief that this type of allergy is widespread. He states that it can be detected by an acceleration of the heart beat which follows ingestion or inhalation of the material which excites the allergic symptoms. He believes further that [illegible] (as he terms this kind of allergic disease) to be the primary cause of [illegible] disease, and [illegible] predisposing cause of some infectious diseases, and thus the condition has [illegible] hereditary basis. His conclusions have not as yet been widely accepted by the medical profession. The first edition was published in 1942 and the second edition in 1945. In comparison to the second edition, revisions and additions have been made in this third edition. The principal additions are the three contributed chapters at the end of the volume, but some matter has been added to other chapters.

FEINBERG SAMUEL MAURICE
Allergy in practice With the collaboration of Oren C Durham and Carl A. Dragstedt. Second edition, revised. Chicago The Year Book Publishers, Inc. 1946 838 p. illus. 23 cm. $10.50 3389

Contents: Introduction and history. Hypersensitiveness in animals—anaphylaxis. Hypersensitiveness in man. General causes of allergic disease. Epidermal allergens. Pollens and pollen allergy by Oren C. Durham. Allergy to [illegible] Miscellaneous inhalants. Food allergy. Allergy to drugs. Allergy to injected substances. Internal allergens (infectious allergy). Allergy to physical agents. Asthma—symptoms and pathology. Diagnosis—asthma and allergy. Treatment of [illegible] diseases—symptomatic and specific. Treatment of allergic [illegible] Hay fever—manifestations, causes, diagnosis. Hay fever treatment. Hyperesthetic rhinitis. Urticaria and angioneurotic edema. Atopic dermatitis and dermatophytids. Contact [illegible] Allergy of the digestive tract. Migraine and allergic headaches. Allergy of the eye. Miscellaneous manifestations. Preparation of allergens. Histamine in anaphylaxis & allergy by Carl A. Dragstedt. Histamine antagonists. Index.

Note: [illegible] comprehensive manual of the causes, diagnosis, and therapy of all types of allergies. Extensive literature references are included. The book [illegible] designed for use both as [illegible] textbook and as [illegible] reference manual for practitioners. In this edition the additions include new material on pollen counts and on histamine.

HANSEL, FRENCH K.
Clinical allergy With 86 illustrations and 3 color plates St. Louis The C V Mosby Company 1953 1,005 p illus. (part col d) 26 cm. $10 00 3390

Contents (abridged): Terminology of allergy. History of allergy. Basic concepts of anaphylaxis and allergy. Serum, allergy and anaphylactic shock. Allergy to biologic products. Extravagant [illegible] allergy. Allergy. Allergy to drugs. Foods as allergens. Pollens in hay fever. Allergy to inhalants (nonpollen). Methods of diagnostic testing in allergy. Nose and paranasal sinuses. Allergy in otolaryngology. Nasal and sinus manifestations of allergy. Cytology of the secretions in allergy. Diagnosis and differential diagnosis of the nasal and sinus manifestations of allergy. Local and surgical treatment of the nose and paranasal sinuses. Hay fever. Allergy in otology. Allergy in ophthalmology. Bronchial asthma. Bronchology in respiratory allergy. The antihistamines. ACTH and cortisone. Treatment of allergic manifestations by [illegible] methods. Allergy in children. Gastrointestinal allergy. Food allergy. Dermatological manifestations of allergy. Allergic dermatitis. Cerebral allergy: allergic headache: migraine. Relation of allergy to the cardiovascular system. Index.

Note: A reference book for graduate physicians, especially those who are not specialists in allergy. It presents from the clinical viewpoint [illegible] wide range of information on allergens and on the practical aspects of the management of allergic patients. It is organized in 53 chapters, of which eight chapters are devoted to allergens, about 15 to respiratory allergies, about five to allergy in children, two to food allergy, etc. The chapters on food allergy include various diets and recipes, also forms for patients' records of food eaten. Fairly extensive bibliographies are included in the chapters. The volume is thoroughly indexed for topics, but not for authors of cited literature.

RINKEL, HERBERT JOHN AND OTHERS
Food allergy By Herbert J Rinkel Theron G Randolph and Michael Zeller Springfield Ill Charles C Thomas, 1950 492 p. illus. 24 cm. $9.50 3391

Contents (abridged): Introduction. The clinical importance of the cyclic concept of food allergy. Etiology. Symptomatology. The specific diagnosis of food allergy. The treatment of food allergy. Specific foods as allergens. Recipes for use with therapeutic diets. Clinical case records. Appendix. Index.

Note: A monograph in which most of the emphasis is on the practical aspects of food allergy. However, the basic mechanism of food allergy are adequately discussed in the earlier chapters. From chapter four onwards, the book is devoted to recognition, specific diagnosis, and treatment. There are two chapters on symptomatology, five on specific diagnosis, and two on treatment. Also, there is [illegible] long chapter of recipes. The book is primarily of interest to general practitioners of medicine and other medical practitioners who do not specialize in allergy. Literature references are supplied with each chapter.

ROWE, ALBERT HOLMES
Elimination diets and the patient's allergies a handbook of allergy Second edition thoroughly revised. Philadelphia Lea & Febiger 1944 256 p. illus. 24 cm. $3.50 3392

Contents: Elimination, test [illegible] and other trial diets. [illegible] of allergy. Causes of allergy and their control. Clinical allergy and its control. The elimination diets. Appendix.

Note: The new edition stresses the importance of food allergy in the production of allergic manifestations. Emphasis is placed upon menus and special recipes with supplemental diets for unusual problems. Other causes of clinical allergy and methods of diagnosis and control are also discussed.

SAMTER MAX, AND OREN C DURHAM editors

Regional allergy of the United States Canada Mexico and Cuba a symposium of thirty-nine contributors. Springfield Ill.

Charles C Thomas, 1955 395 p illus 22 cm (American lecture series Publication no. 224 A monograph in the Bannerstone division of American lectures in allergy, edited by Max Samter) $8 50 3393

Contents (abridged) Part I, Eastern section. Part II, Central section. Part III, Western section. Appendix. Index.

Note. A reference book of information about pollens, molds, industrial dusts, weather and other meteorologic and climatologic features of interest in the practice of allergy It is addressed to physicians and is intended as an aid in advising patients on the allergenic features of specific geographical regions in which they may be contemplating taking up residence. It is arranged as shown in the above Contents. The sections are composed of signed chapters written by physicians practicing allergy in the regions discussed. Some of the chapters are devoted to a single state others cover a region that ignores state boundaries but has a fairly uniform climatic and allergenic pattern. For example, the state of Colorado, eastern Wyoming, and western Nebraska are discussed in one chapter.

TAUB, SAMUEL JAMES

Clinical allergy a practical guide to diagnosis and treatment. Second edition, revised and reset. New York Paul B Hoeber, Inc., Medical Book Department of Harper & Brothers 1951 276 p 24 cm $5 50 3394

Contents Introduction. Immunochemistry and its relation to clinical allergy The dynamics of allergy Seasonal pollinosis or seasonal hay fever Perennial hay fever Asthma. Etiologic diagnosis and treatment of asthma. Molds. Disturbances of the skin due to allergy *Drug allergy* *Miscellaneous allergic conditions.* Serum sickness and prophylaxis. Preparation of extracts. Appendix. Index.

Note In its second edition this useful work remains a brief practical manual suitable for the general medical practitioner or medical student who is unable to make a detailed study of allergic diseases. The main types of allergy are described concisely with reference to symptoms, tests diagnosis, methods of treatment. Summarized case histories are included. In this edition a number of useful additions and revisions have been made and the book is about 75 pages longer than the first edition.

TUFT, LOUIS

Clinical allergy Second edition, with 54 illustrations, 3 colored plates and 46 tables Philadelphia Lea & Febiger, 1949 690 p illus (part col'd) 24 cm. $12 00 3395

Contents (abridged) Section I, General principles Anaphylaxis. Methods of diagnosis. Methods and principles of treatment. Section II, Etiologic types Serum allergy Drug allergy Food allergy Pollen allergy Allergy to fungi. Allergy to other inhalants. Bacterial allergy Physical allergy Section III, Clinical manifestations. Asthma. Allergic rhinitis. Hay fever Gastro-intestinal allergy Migraine. Section IV Allergic dermatoses and allergy in relation to the specialties Allergic dermatoses—general principles and methods of diagnosis. Urticarial dermatoses. Atopic dermatitis. Contact dermatitis Allergy in children. Allergy in relation to the other specialties. Appendix. *Bibliography* Index.

Note An authoritative manual addressed primarily to general practitioners of medicine. The style is concise, and more information is included than the number of pages might indicate. Aspects of interest to the general practitioner such as clinical manifestations, diagnosis, and treatment are emphasized. However there are adequate discussions of general principles and etiology Typical histories are presented in synopsis form. A variety of useful information on laboratory methods, preparation of extracts, rules for patients, household and food allergies, and special diets is included in the appendix.

URBACH ERICH, AND PHILIP M GOTTLIEB

Allergy Second edition New York Grune & Stratton 1946 968 p illus 26 cm $15 00 3396

Contents (abridged) Part I Fundamentals of allergy Historical survey The phenomena of hyper and hyposensitiveness. Mechanism of allergy *Predisposing and contributory factors in allergy* The experimental basis of allergy Pathology of tissues and blood in allergy *Chemistry of allergy* Antigens (allergens) Antibodies. Diagnosis of allergic diseases. *Principles of treatment.* Part II, Etiologic agents of allergic diseases. Inhalants. Ingestants. Injectants. Contactants. Physical agents. Infectants. Part III, Symptomatology and therapy of allergic diseases. Allergic diseases of the respiratory tract. Allergic diseases of the gastro-intestinal tract. Allergic diseases of the liver and gallbladder Allergic skin diseases. Allergic diseases of the nervous system. Allergic diseases of the eye. Allergic diseases of the ear. Allergic diseases of the cardiovascular system. Allergic diseases of the joints. Allergic diseases of the urinary tract. Allergic manifestations due to functional and pathologic changes of the female genital organs. Allergy in the newborn, in infancy and in childhood. Allergy in the aged. Appendix. Index of authors. Index of subjects.

Note: A comprehensive presentation of the knowledge of allergy Fundamental principles, methods of diagnosis and treatment, and the more common etiological causes are discussed in detail. Afterwards there are thorough studies of the various allergic diseases from the clinical and therapeutic viewpoint. The authors' own experiences have been drawn upon as the foundation for many of the interpretations and opinions expressed, but the literature of the subject has also been surveyed and is abstracted in the text with keyed references from the text itself to the footnotes in which full citations are given. Although the number of pages is fewer in the present edition, the reduction is due to the adoption of a two-column format. The matter included has been increased by about 10 per cent. There is new material on such subjects as the psychosomatic aspects of allergy the Rh factor allergic bronchitis, allergic cough and the former discussions of such topics as antibiotics, toxic and allergic dermatitis, the allergy of infectious diseases, and the diagnosis of complications of asthma have been enlarged. The number of references to allied literature has been greatly increased.

VAUGHAN, WARREN T

Practice of allergy by Warren T Vaughan Revised by J Harvey Black. Third edition. St. Louis The C. V Mosby Company, 1954 1,164 p illus. 26 cm $12 50 3397

Contents (abridged) Part I, Steps in the development of our present understanding of clinical allergy Historical, Terminology. Experimental anaphylaxis. Immunology and pathology of clinical allergy Part II, General characteristics of clinical allergy Allergic diseases. Climate, environmental factors and social status. Heredity Part III, Physiology of allergy Part IV Allergic diagnosis. Skin testing. *Mucous membrane tests.* The patch test. Diagnostic study of the nasal and ocular secretions. Pulmonary function studies, by J Holman. The determination of vital capacity by J Holman. Part V Diagnosis and treatment of food allergy The diagnostic program in food allergy Trial diets. The food diary The elimination program. Treatment of food allergy Part VI, Food allergens: Food allergens and their avoidance. Foods and their avoidance. Edible animal foods. Part VII, Pollens and pollinosis, and other inhalant allergy Pollen distribution. Aerobiology—development and technic, *by O C Durham.* Etiologic diagnosis in pollinosis. Treatment extracts and dosage nomenclature. Preseasonal hyposensitization. Perennial pollen therapy Specific treatment of allergy to inhalants other than pollen. Part VIII, Bacteria. Part IX, *Fungi.* Part X, *Entomophthora and percutaneous or dermal allergy* Part XI, Anaphylactic shock. Part XII, Drugs. Part XIII, Contact allergy Part XV Pharmacology Part XVI, Allergic diseases Asthma. Hay fever and allergic rhinitis. Allergy of the nervous system. Skin diseases. Gastrointestinal allergy Cardiovascular disease. Allergy of the eye and ear Index.

Note A general treatise designed primarily as a guide for general practitioners of medicine. It is written in a leisurely style which is easy to read. Some information that might not be expected is included, such as botanical descriptions of plants that may cause allergies. Diagnostic aspects of the subject are well covered. Another useful feature is the inclusion of formulas for the treatment of such disorders as fungus infections which are sometimes associated with allergy The bibliography is an extensive one.

PSYCHOSOMATIC MEDICINE

ALEXANDER, FRANZ

Psychosomatic medicine its principles and applications. With a chapter on the functions of the sexual apparatus and their disturbances by Therese Benedek. New York W W Norton & Company, Inc., 1950 300 p. illus. 22 cm. $3 00 3398

Contents: Part I, General principles: Introduction. The role of modern psychiatry in the development of medicine. The influence of psychoanalysis upon the development of medicine. The contribution of Gestalt psychology, neurology and endocrinology. Conversion hysteria, vegetative neurosis, and psychogenic organic disturbances. Progress in etiological thought. Methodological considerations concerning the psychosomatic approach. Fundamental principles of the psychosomatic approach. Part II, Emotional factors in different diseases: Emotional factors in gastrointestinal disturbances. Emotional factors in respiratory disturbances. Emotional factors in cardiovascular disturbances. Emotional factors in skin diseases. Emotional factors in metabolic and endocrine disturbances. Emotional factors in the disturbances of the joints and skeletal muscles. The functions of the sexual apparatus and their disturbances. Therapy. Bibliography. Index of names. Subject index.

Note: The director of the Chicago Institute for Psychoanalysis has in this book presented an introductory survey of the basic concepts of psychosomatic medicine and of their implications in treating disease. The book is written in non-technical style. It may be read without much difficulty by sophisticated general readers and by professional workers in fields related to medicine. Also, its content is substantial enough to make it valuable to general practitioners of medicine in search of [illegible] generalized presentation. There is a bibliography of 240 references.

ALEXANDER, FRANZ, AND THOMAS MORTON FRENCH

Studies in psychosomatic medicine: an approach to the cause and treatment of vegetative disturbances. New York: The Ronald Press Company, 1948. 568 p. illus. 24 cm. $10.00. 3399

Contents: Part I, General principles: Fundamental concepts of psychosomatic research, by F. Alexander. Present trends in psychiatry and the future outlook, by F. Alexander. Training principles in psychosomatic medicine, by F. Alexander. Physiology of behavior and choice of neurosis, by T. M. French. Hypothalamic functions in psychosomatic interrelations, by R. R. Grinker. A note on the psychogenesis of organic symptoms, by L. J. Saul. The physiological effects of psychoanalytic therapy, by L. J. Saul. Part II, Disturbances of the gastrointestinal tract: Psychologic factors in gastrointestinal [illegible]. Gastrointestinal symptoms, by F. Alexander and others. A case of peptic ulcer and personality disorder, by F. Alexander. The influence of psychiatric [illegible] on the functioning of the gastrointestinal tract, by F. Alexander and W. C. Menninger. A study of [illegible] in two cases of peptic ulcer, by C. Van der Heide. The [illegible] from [illegible] to conversion hysteria, by G. W. Wilson. Part III, Disturbances of the respiratory system: Bronchial asthma in children, by M. W. Gerard. Psychogenesis in bronchial asthma, by T. M. French and A. M. Johnson. Report of a case of acute laryngeal [illegible] conversion symptom during analysis, by G. W. Wilson. A study of structural and instinctual conflicts in cases of hay fever, by G. W. Wilson. Part IV, Cardiovascular disturbances: Emotional factors in essential hypertension, by F. Alexander. Psychoanalytic study of a case of essential hypertension, by F. Alexander. Blood pressure findings in relation to inhibited aggressions in psychotics, by M. L. Miller. The [illegible] of the [illegible] to [illegible] and [illegible] with [illegible] on effort syndrome, by M. L. Miller and H. V. McLean. Hostility in cases of essential hypertension, by L. J. Saul. Part V, Endocrinology and metabolism: A psychosomatic study of hyperthyroid patients, by F. [illegible] and S. A. Portis. Correlation between emotions and carbohydrate metabolism in two cases of diabetes mellitus, by A. Meyer and others. Part VI, Skin diseases: A psychological study of a case of eczema and a case of neurodermatitis, by M. L. Miller. Incidental observations on pruritus ani, by L. J. Saul. The emotional settings of some attacks of urticaria, by L. J. Saul and C. Bernstein, Jr. Part VII, Joints and skeletal muscles: The psychogenic [illegible] in [illegible] development, by M. W. Gerard. Preliminary report on a psychosomatic study of rheumatoid arthritis, by A. M. Johnson and others. Part VIII, Miscellaneous studies: Enuresis—a study in etiology, by M. W. Gerard. Anorexia after [illegible], by M. Grotjahn and T. M. French. A case of migraine, by A. M. Johnson. A clinical note on a mechanism of psychogenic back pain, by L. J. Saul. Some observations on the relations of emotions and allergy, by L. J. Saul. Conclusion, from Ten years report by the Institute for Psychoanalysis. Index of names. Subject index.

Note: An authoritative collection of research papers written by staff members of the Institute for Psychoanalysis in Chicago. Most of the papers appeared originally in various scientific and medical journals, and are collected here mainly for the convenience of medical practitioners and psychiatrists, but also for the education of laymen.

AMERICAN PSYCHIATRIC ASSOCIATION

Research in psychosomatic medicine. Papers presented at the Southern Regional Research Conference held under the joint auspices of the American Psychiatric Association and Duke University School of Medicine, Department of Psychiatry, Durham, North Carolina, November 19–20, 1954. Washington, D. C.: American Psychiatric Association, 1956. 93 p. 23 cm. (American Psychiatric Association. Psychiatric Research Reports 3, February 1956. Edited by members of the Committee on Research, Jacques S. Gottlieb, chairman) $2.00 3400

Contents: Symposium, Problems in the laboratory study of emotions and bodily functions: Application of [illegible] methods in the field of psychosomatic research, by F. L. Engel. Electrical activity of the brain, by L. [illegible]. Stress, by J. E. Hill. Psychophysiologic variables in the study of the effect of LSD-25 on cerebral blood flow and metabolism, by S. [illegible]. Interdisciplinary research, with some special reference to cardio-vascular research, by K. L. White. Discussion of symposium, L. Thompson, moderator. Address: Reviewing and evaluating proposals in the field of psychosomatic medicine, by J. [illegible]. Symposium, Problems in the measurement, testing, and rating of psychological and social functioning: Definition of psychological variables in psychosomatic research, by E. [illegible]. A note on the separation of experiments, by L. D. Cohen. Response to anxiety and stress, by W. J. [illegible]. Effects of stressful situations on learning, by M. Thaler. Projective techniques, by O. [illegible]. Social science in psychosomatic research, by R. L. Smith. Discussion of symposium, D. A. Young, moderator. Symposium, Problems in establishing [illegible] psychodynamic explanation: The development of concepts and methods, by G. C. Ham. The use of the hypnotically induced complex in psychosomatic research, by G. Tourney. Psychodynamic certainty in psychosomatic research—problems of experimental design, by L. J. West. Research—data and design, by C. Watkins. Random remarks, by E. [illegible]. Certain of the problems in arriving at psychodynamic formulation of specific psychological factors producing psychosomatic illness, by R. H. Barnes. Individual [illegible] differentiated aspects of the field, by R. C. [illegible]. Comments on methodology, by W. G. Reese. Discussion of symposium, M. H. Greenhill, moderator.

Note: The conference of which this collection of papers is a product was planned to bring together investigators who were conducting research in psychosomatic medicine in a variety of ways and from a variety of points of view. The titles of the separate symposia given above indicate some of the approaches that were represented. It should be noted that psychologists and sociologists as well as physicians participated in the conference. Most of the papers are short and state a point of view or summarize a research approach. In other words, they are not reports of specific investigations or studies of a series of cases such as might be expected in a volume bearing the title that this one does. The publication is valuable primarily for its illustrations of the many facets of contemporary psychosomatic medicine.

BASOWITZ, HAROLD, AND OTHERS

Anxiety and stress. An interdisciplinary study of a life situation, by Harold Basowitz, Harold Persky, Sheldon J. Korchin, and Roy R. Grinker, from the *Institute for Psychosomatic and Psychiatric Research and Training of the Michael Reese Hospital, Chicago*. New York: McGraw-Hill Book Company, Inc., 1955. 320 p. illus. 24 cm. $8.50 3401

Contents: The problem of anxiety. Some pertinent previous studies. Rationale and purposes of the present study. Design of the studies. Methodological studies. Psychological functioning under stress of paratroop training. [illegible] functioning under stress of paratroop training. [illegible] experimental procedures. Consistency of performance on repeated measures. Differences among groups in basic measures of personality. Relationships between personal characteristics and experimental measures. Relationship of psychological [illegible] to adequacy in training. The study of inter-

individual variability Selected case studies. Synthesis and integration of the data. Implication of the results. References. Index.

Note Presented in this book are the results of a research project on anxiety The psychosomatic and psychiatric processes involved were examined by the interdisciplinary study of a special group *subject to anxiety and stress, namely healthy young American men* in paratroop training. The following questions are quoted to show the trend of the experiments "How are various types and quantities of anxiety related to psychosomatic functions, and which are the most significant systems participating in the whole patterned process? If we disturb a single peripheral cycle acting through the central nervous system, what effect does such a kick have on anxiety and on the other peripheral variables?

BAUER, JULIUS

The person behind the disease New York Grune & Stratton *1956 136 p 22 cm* $3 50 3402

Content Etiologic and pathogenetic factors in the diseased person Uniqueness of the individual Pathogenic and nonpathogenic mutations. Clinical syndromes and irregular polygenopathies. Constitutional biologic organ inferiority Holistic medicine—the parts and the whole. *Psychologic medicine. Bibliography* Index.

Note An essay in which the author presents a holistic concept of medicine based on the genetic uniqueness of each individual Support for the concept is derived from genetics and physiology

BELLAK, LEOPOLD, editor

Psychology of physical illness, psychiatry applied to medicine, surgery and the specialties New York Grune & Stratton, 1952 243 p 24 cm $5 50 3403

Contents Introduction by L. Bellak. Psychiatric considerations in general practice by M Malev Psychiatry applied to internal medicine, by E. Hammerschlag Psychiatric problems of malignancy by J A. M. Meerloo and A. Zeckel. Psychiatric problems in general surgery by V H Rosen Psychiatric aspects of plastic surgery by L. Linn. Psychiatric implications in gynecology and obstetrics, by S. Hans. Psychiatric aspects of diseases of the genitourinary system, by J M. Silagy Rehabilitation orthopedics and psychiatry by M. Grayson and A S. Rusek. Ear nose and throat diseases and psychiatry by A. Zeckel. Psychiatric and psychoanalytic aspects of neurological disease, by A Rosner Psychiatric aspects of pediatric practice, by M L Levine. Psychiatric aspects of dermatology by M. Hecht. Psychiatric aspects of dentistry by S. J Ewen The *personality of the physician as a factor by L. L. Altman. Index.*

Note Integration of medicine in such a way that the psychological aspects of illness will always be taken into account in diagnosis and treatment is the main theme of this book. The editor points out that a traditional separation of psyche and soma is out of date and states that "the alert and informed doctor will use the taking of the medical history as an occasion for appraising not only the psychosomatic aspects of the onset of symptoms, chief complaints, and the like, but also for a stock-taking of such emotional involvements as already mentioned. Most of the chapters are devoted to discussions of psychological or psychiatric aspects of specific classes of medical and surgical disorders. The book is addressed to general medical practitioners and general surgeons rather than to psychiatrists or specialists in psychosomatic medicine. Essentially it is a statement of a thesis and an outline of the main aspects with literature references for those who wish to pursue particular phases further

BENEDEK, THERESE

Psychosexual functions in women. New York The Ronald Press Company 1952 435 p illus (part col'd) 24 cm (Studies in psychosomatic medicine of The Institute for Psychoanalysis, Chicago Illinois Vol 2) $10 00 3404

Contents Introduction General survey of the material. Vaginal smear and basal body-temperature techniques of hormone evaluation. General aspects of the application of psychoanalytical method Interpretation and prediction. A study of 1 cycles. Critical evaluation of the methods and the discrepancies. The gonadal and the emotional cycle Personality structure and the sexual cycle. Variations in sexual cycles. Comments and conclusions. The psychosomatic implications of the primary unit mother-child. Climacterium a developmental phase. The functions of the sexual apparatus and their disturbances. Some psychophysiological problems of motherhood. Bibliography Index of names. Index of subjects.

Note A collection of studies based on psychoanalytic investigations of 15 women of child-bearing age, carried out in conjunction with physiologic observations over a period of several years. The aim of the studies was to discover whether a physiological function, such as ovulation, which in animals determines their "social behavior could be recognized in the emotions and behavior of a particular group of emotionally unbalanced women. Although the work does not purport to be a comprehensive presentation of the psychology of women the *findings of the studies are* basic information for psychiatrists, gynecologists, and general practitioners of medicine. The first 11 chapters are reprinted from a National Research Council monograph of 1942 of which the co-author was Boris B Rubenstein. The added chapters include one giving a brief comparison of the psychosexual problems of men and women.

CANTOR, ALFRED J , AND ARTHUR N FOXE, editors

Psychosomatic aspects of surgery The proceedings of the first annual meeting of the Academy of Psychosomatic Medicine, held in New York City, October 1954 New York Grune & Stratton, 1956 *220* p *22* cm $7.00 3405

Contents Presidential address—The physician's role in the preparation of a patient for surgery by W Kaufman. Psychosomatic aspects of anesthesia, by E. A. Rovenstine and E. B. Raginsky Psychosomatic aspects of cardiovascular surgery by L. F Bishop and others. Psychosomatic aspects of obstetrics and gynecology by W S. Kroger and E. Bergler Personality problems in cleft palate and orthodontic patients, by J A. Salzmann and J Short General semantics of ambulatory proctology by A. J Cantor and H. Gaze. Observations on psychosomatic implications of patients in neurosurgery by L M. Greenberg and S. Merlis. Some psychogenic factors in the pathogenesis of primary glaucoma, by T F Schlaegel Jr and M Straker Psychosomatic medicine and plastic surgery by A. J Barsky and others. Psychosomatic aspects of breast surgery by C. D Haagensen and J A. P Millet. Psychosomatic aspects of orthopedics, by L W Nachlas and E. Rosen. Recognition and management of post-traumatic psychosomatic manifestations, by I Neufeld. Panel discussion—What every doctor should know about the psychosomatic aspects of surgery by H. Conway and others. Summary by A. N Foxe. Index.

Note The papers presented and the discussions of them at the first annual meeting of the Academy of Psychosomatic Medicine are published in this volume. Most of the papers deal with matters which are closely related to the preparations of patients for surgery and to their psychological care after surgery

COBB, STANLEY

Emotions and clinical medicine With an introduction on semantics and definitions by John R Reid New York W W Norton & Company Inc 1950 243 p illus 21 cm $4 00 3406

Contents Physiology The anatomy of emotion. The hypothalamus. Caricatures of emotional expression. Docility sexuality and oral behavior Endocrinology and the autonomic nervous system. Classification of emotional reactions. *Lesions in man associated with* changes in emotional behavior Clinical application The normal functions of the emotions and psychosomatic medicine. Anorexia nervosa as a psychosomatic problem. Patterns of personality The problem of specificity in psychosomatic reactions— sensitization of conflict and choice of the organ Emotions and social psychiatry Bibliography Index.

Note. An interpretive synthesis of *recently gained knowledge* pertaining to the relations among the emotions, certain areas in the brain, and endocrinology The results of frontal lobotomy for instance are summarized, as well as the current *knowledge of the* function of the pituitary The book is written in a nontechnical style and is suited to mature general readers and to professional workers in such fields as child study where a fundamental knowledge of the bases of emotion is useful. The author is a member of the faculty of Harvard Medical School.

DUNBAR, HELEN FLANDERS

Emotions and bodily changes. A survey of literature on psychosomatic interrelationships, 1910–1953 Fourth edition, with supplementary material and additional bibliography New York Columbia University Press, 1954 1 192 p. 24 cm. $15.00. 3407

Contents: Part I, Orientation and methodology: Problems of integration and differentiation. Problems of acute and chronic illness. Problem of measurement. Part II: Organs or organ-systems: General considerations relating to organs or organ-systems. Nervous system. Musculature. Endocrines. General metabolism and heat regulation. Cardiovascular system. Respiratory system, including ear-nose-laryngology. Gastrointestinal system. Genitourinary system and gynecology. Special sense organs exclusive of skin. Skin. Bones, including stomatology. Part III, Therapeutic considerations and concluding remarks. Bibliography. Additional bibliography. Supplementary bibliography. Index. Chart: Personality profiles of eight psychosomatic diagnostic groups.

Note: This broad survey of the literature bearing on psychosomatic medicine has gained the status of a standard reference book in the field. Most of the text of the chapters consists of compact abstracts of published articles and quotations of passages from the abstracted articles. The text that is written around and between the abstracts contains many comments that aid in interpretation and evaluation such as: "Perhaps the most significant comment on recent literature relative to genitourinary symptoms and obstetrics is that many syndromes to which chapters were devoted some years ago appear to be fading out. Chlorosis in the adolescent girl is rarely encountered. Amenorrhea, dysmenorrhea, frigidity, morning sickness, and many complications of childbirth and of the menopause are on the wane. The abstracted literature has been selected, but a very large body of publication has been covered, nevertheless. The third edition was published in 1946. In this fourth edition, the combined bibliographies are 344 pages long. Much material has been added, raising the increase in the number of pages from 604 to 1,192. In some of the chapters, there is a separate discussion of developments since 1933.

DUNBAR, HELEN FLANDERS

Mind and body psychosomatic medicine. New enlarged edition. New York Random House, 1955 298 p. 21 cm. $3.50 3408

Contents: The child you were. Delayed-action mines of childhood. The beloved symptom. The doctor looks at the patient. The patient looks at the doctor. The patient's dilemma. The doctor's dilemma. The accident habit. The mind and the heart. "The hyphen of quiet mind." Nausea. Indigestion. Allergy. [illegible] Failure in chemistry. "Fall in love with [illegible] death." "Fall in love with life." The complete patient. Index.

Note: The author's successful experience in many phases of psychiatric practice and teaching served her well in writing this explanation of psychosomatic medicine for the layman. The scientific relationship of the mind to bodily ills is presented simply and clearly and the psychiatric procedures to effect cures are indicated although not explained in technical detail. Particular attention is given to the possibility of emotional causes of heart disease, accidents, diabetes, hypertension, the allergies, and stomach ulcers. The author is careful to insist that psychiatry [illegible] neither [illegible] nor techniques to be handled casually by the inexperienced. Throughout the book, the topics discussed are well illustrated by brief case histories. The first edition was published in 1947. Revisions for this second edition included the addition of a number of new topics such as obesity, senility and chronic illness, and several discussions of more than were in the first edition.

GRINKER, ROY R., AND FRED P ROBBINS

Psychosomatic case book. New York The Blakiston Division, McGraw-Hill Book Company Inc., 1954 346 p 24 cm. $6.50 3409

Contents: I, General considerations: Introduction to the field. Modern theoretical concepts. The field concept of psychosomatic medicine. Anxiety. The [illegible] of the psychosomatic field. II, The problems of diagnosis. Methods of examination. Differential diagnosis. Formulation of the case problem. III, Special syndromes: The head and special senses. Cardiovascular syndromes. Respiratory syndromes. Gastrointestinal syndromes. Endocrine syndromes. Genitourinary syndromes. Musculoskeletal syndromes. Dermatological syndromes. IV Therapy: Planning and beginning therapy. Some methods of treatment. The doctor-patient relationship in therapy. General summary. General bibliography. Index.

Note: An introduction to psychosomatic medicine written from the viewpoint of psychiatry. Its title is due to the inclusion of 79 selected case histories which carry most of the burden of exposition, but are nevertheless supplemented by a considerable amount of expository discussion. Some clinical details are included in the case histories, but no attempt is made to cover thoroughly the somatic aspects of disease. Techniques of treatment used by psychiatrists on psychosomatic patients are outlined. Literature references are given in short lists appended to the chapters and in the general bibliography. The book is directed to advanced medical students and graduate practitioners of medicine.

GRINKER, ROY R.

Psychosomatic research. New York W W Norton Company Inc., 1953 208 p 20 cm. $3.50. 3410

Contents: Introduction. Historical concepts. Current conceptual models. Evaluation of theoretical formulations and operational procedures. Empirical observations. Psychosomatic differentiation. Factors influencing psychosomatic differentiation in health and illness. The structure and functions of the mouth. The psychological implications of oral functions. Integration of field theory. Anxiety and psychosomatic transactions. Conclusions. Bibliography. Index.

Note: An authoritative survey of concepts, hypotheses and research in psychosomatic medicine as of approximately mid-1952. The author argues for a broader view of psychosomatic medicine, and points out lines of research which he believes would be more fruitful than narrow studies of relations between somatic systems and emotional states.

HINSIE, LELAND EARL

The person in the body an introduction to psychosomatic medicine. New York W W Norton & Company Inc., 1945 263 p. 21 cm. $3.50 3411

Contents: The interdependence of mind and body. The laws of emotional growth. The scope of psychosomatic medicine. The inner man emerges. Psychological versus organic one. The search for recognition. Sex becomes vitalized. Varieties of psychosomatic syndromes. Illness as a defense against homosexuality. Marriage as a cure for sickness. The body protects the person in it. Types of somatic personalities. The introvert. The extrovert. The [illegible] person. The change of life. The role of environmental forces. Your part in psychotherapy. Index.

Note: An elementary but authoritative presentation for general readers, particularly those who are being treated for physical disorders based upon emotional disturbances. Its purpose is to delineate some of the ways in which emotions can bring about illnesses that appear to be physical, and to do so in language that the patient can understand. Case histories as such are not presented, but the author has drawn frequently upon records of actual cases to illustrate his points. Also, the book provides for anyone interested good insight into the philosophy and methods of this new branch of medicine.

HOLMES THOMAS H., AND OTHERS

The nose an experimental study of reactions within the nose in human subjects during varying life experiences. By Thomas H. Holmes, Helen Goodell, Stewart Wolf and Harold G Wolff With a foreword by Warfield T Longcope. Springfield, Ill. Charles C Thomas, 1950 154 p. illus. 24 cm. $4.50. 3412

Contents: Review of nasal physiology; objective and method of present study. Range of nasal function in normal subjects. Alterations in nasal function following specific threats to respiratory apparatus. Alterations in nasal function following general threats to bodily integrity. Relation of nasal changes to bodily disturbances involving the eyes and deeper respiratory structures. Personality and background of an intensively studied subject. Alterations in nasal function occurring as part of the organism's pattern of adjustment to his environment. Temporal correlation of threatening life situations with nasal disturbances in one hundred patients with chronic or recurrent nasal disease. The relation of nasal to sexual function.

The relation of nasal to gastric function. Mechanisms involved in disorders of the nasal and paranasal spaces. Pain from the nasal and paranasal structures—the mechanism of "sinus headache. Considerations and formulation. Summary Index.

Note A technical report of a series of planned observations of the changes in color and other properties of the nasal mucosa and of alterations in nasal and respiratory functions in response to emotional stimuli. The observational methods are described, and the results of particular experiments and groups of experiments are summarized. A variety of detailed case histories are included. The presentation is technical and is addressed chiefly to medical graduates. The work is of particular interest in psychosomatic medicine.

KALINOWSKY, LOTHER B, AND PAUL H. HOCH

Shock treatments, psychosurgery, and other somatic treatments in psychiatry Second revised and enlarged edition Foreword by Nolan D C Lewis. New York Grune & Stratton 1952 396 p 24 cm. $8 75 3413

Contents Historical development. Insulin shock treatment. The convulsive therapies. Combined insulin-convulsive treatment. Psychosurgery Other somatic treatments. Theoretical considerations. Bibliography Index.

Note A survey of techniques and experience up to about mid-year 1951 It is based on the literature evaluated to the authors' experience, and the text is keyed to 55-page bibliography It is addressed to psychiatrists and to neurologists and neurosurgeons, and its purpose is to aid in the appraisal of the value of these relatively new therapies. Much important material has been added in this edition, especially in the chapter on *psychosurgery*

MASSACHUSETTS GENERAL HOSPITAL PSYCHIATRIC SERVICE

Case histories in psychosomatic medicine. By the staff of the Psychiatric Service, Massachusetts General Hospital, Boston. Edited by Henry H W Miles Stanley Cobb and Harley C Shands New York W W Norton & Company, Inc., 1952 306 p illus 22 cm $4 50 3414

Note. Twenty-one cases which illustrate considerable range of psychosomatic illnesses are discussed in this book. They illustrate not only varities and manifestations of psychosomatic medicine but also show expert techniques in diagnosing and treating such cases. Participants in the discussion are for the most part physicians associated with the Massachusetts General Hospital and faculty members of Harvard Medical School. Literature references are included for the most of the papers.

MILLER, HYMAN, AND DOROTHY W BARUCH

The *practice of psychosomatic medicine* as illustrated in allergy New York McGraw Hill Book Company Inc., 1956 196 p 23 cm. $5 00 3415

Contents Part I, Modern concepts in allergy The physical pattern of allergy The emotional pattern in allergy Part II, The etiologic approach to diagnosis and treatment Seeing the allergic individual in his family—an essential point of view *Trigger* mechanisms in the production of symptoms. Basic objectives in psychosomatic treatment. Part III, Diagnosis as the beginning of treatment The initial appointment with the adult patient. The initial appointment with the child patient and his parents. Emotional problems in diagnostic medical procedures with adults. Modifications in diagnostic medical procedures with children. Part IV Treatment in progress Treatment principles applied to the adult patient. Treatment principles applied to child patient and parent. Medication and regimen in the treatment of *adult and child. References.* Bibliography Index.

Note In the early chapters of this book, the authors marshall the evidence in support of the hypothesis that allergies arise from the emotions, or at least that psychologic factors are of fundamental importance in understanding and treating allergy The remainder of the space is devoted to discussions and illustrations of techniques in the practice of psychosomatic medicine, with the case histories drawn from an allergy practice. Interviews with patients and associated office procedures are discussed in detail and include numerous examples of conversations between patients and the physician. The first-named author is Associate Clinical Professor of Medicine in the University of California Medical School and specialist in allergy and psychosomatic medicine, and his collaborator is graduate psychologist.

OSBORN, LESLIE A.

Psychiatry and medicine an introduction to personalized medicine. New York McGraw Hill Book Company, Inc., 1952 494 p. 24 cm $7.50 3416

Contents (abridged) Part I, Theoretical considerations Section one, Nature of the subject Attitudes in illness. Origin and nature of symptoms. Adaptation and adjustment. Internal medicine and psychiatry Organic mental reactions, Section II, Development and relationship Developmental needs. Mating and parenthood. Maturing and independence. Individuality Friendship and rapport. Section III, Social living Self-assertion and freedom. Frustration and its effects. Heredity and its implications. Part II, Practical *application* Section I, Types of reaction to life experiences Descriptive and dynamic psychiatry Degree of reaction. Kind of reaction. Section II, The clinical study Observing and interviewing. The organic investigation. Psychological testing. Steps in correlation. Section III Therapy; Psychotherapy Change of environment. Psychosomatic considerations. Relatives and social work. Symptomatic treatment. Helping children. Part III, Mental hygiene Preventive medicine and psychiatry Appendix. Index.

Note Integration of psychiatry and general medical practice is the chief theme of this book, which was written for use as text in undergraduate courses in medical schools. No previous acquaintance with psychiatric concepts is assumed and nowhere does the author lean heavily upon technical terminology of psychiatry although he makes use *of it after defining it. More often, he uses the* common language in such passages as, "Each person has private thoughts, feelings, asides, and undeclared motives that he keeps to himself. The author who is Professor of Psychiatry and acting Director of the Wisconsin Psychiatric Institute in the Medical School of the University of Wisconsin, has had extensive experience in both the general practice of medicine and in psychiatry

SELYE, HANS

The stress of life. New York McGraw Hill Book Company, Inc. 1956 324 p illus. 22 cm. $5 95 3417

Contents Book I, The discovery of stress Precursors of the stress concept. My first glimpse of stress. How to question nature. The birth of the G. A. S. Book II, The dissection of stress: Why did we need blueprint for the dissection? Inventory of assets—( ) the facts—(b) the abstractions—( ) materials and techniques. How does one dissect biologic mechanism? Results of the dissection. Stress in nutshell. Stress and inflammation. Synoptic view of the whole *stress-mechanism. The nature of adaptation.* Book III, The diseases of adaptation Diseases of the kidney the heart, and the blood vessels. Inflammatory diseases. Other diseases. "When scientists disagree. Book IV Sketch for unified theory The search for unification. How could the stress concept lead to more unified interpretation of biology and medicine? *Apologia for* teleologic thought in biology and medicine. Book Implications and applications Medical implications of the stress concept. Psychosomatic implications. Philosophic implications. The road ahead. Glossary *Index.*

Note A popular book about the author' significant work in medical research. It takes its title from his concept of stress, defined as essentially the rate of all the wear and tear caused by life. This theory and the companion idea, the general "adaptation syndrome, are fully discussed, and their medical *and* other implications are described. Much space is also devoted to descriptions of the technique of the author's work, including discussion of how his *Annual report on stress* is compiled. A summary of the controversy over the *stress* concept is included.

SULLIVAN, ALBERT JOSEPH, AND THOMAS E MCKELL

Personality in peptic ulcer Springfield, Ill. Charles C Thomas, 1950 100 p illus 22 cm. $3 00 3418

Contents: Emotional factors in peptic ulcer. Physiologic [illegible] the [illegible] emotion in ulceration. Theory of multiple etiology. Clinical classification of cases. The ulcer personality. The craving for [illegible] The precipitating situation. Inter-relation of various etiologic factors. Observations and predictions. Treatment. Report of cases. References. Index.

Note: A short but valuable study of peptic ulcer from the psychosomatic viewpoint. It is based on clinical observation of over 1,000 cases and detailed analyses of over 200. On these bases the authors divide ulcer patients into four groups: (a) the typical ulcer personality (b) definitely psychoneurotic cases, (c) cases due to striking external precipitating situation, and (d) those with no personality or situational psychic factors. The typical ulcer personality is described in some detail under these subheadings: drive, [illegible] ability, emotional [illegible], self-reliance, [illegible] sexual adjustment, [illegible], age, sex, race, geography. Eighteen cases typical of the four groups are described in some detail.

WEIDER, ARTHUR, editor

Contributions toward medical psychology theory and psychodiagnostic methods. New York The Ronald Press Company 1953 2 v illus. 23 cm. $12.00 3419

Contents: Volume 1, Part I, Psychology and medicine. The [illegible] of psychology as seen by a doctor of medicine, by A Gregg. The psychological aspects of medicine, by F Alexander. Part II, Some aspects of psychology. Theoretical schools of psychology by A. Ellis. Human infancy and the embryology of behavior, by A Gesell. Needs and drives of organisms, by [illegible] Determinants and components of personality by C Kluckhohn. What is normal behavior? by O. H. Mowrer. Part III, Psychosomatic interrelationships. Concept of psychosomatic affection, by J. L. Halliday. Guide to interviewing and clinical personality study by J. C. Whitehorn. Techniques of interviewing a patient with psychosomatic disorder by S. Cobb. The general adaptation syndrome in its relationships to neurology, psychology and psychopathology by H. Selye. Psychosomatic aspects of childhood, by L. W. Sontag. Life situations, emotions, and genetic function—summary by S. Wolf and H. G. Wolff. Life stress and bodily disease, by H. G. Wolff. The concept of culture and the psychosomatic approach, by M. Mead. Personality and chronic illness, by J. Ruesch. Psychosurgery by M. Greenblatt. Rehabilitation and convalescence—the third phase of medical care, by H. A. Rusk. Volume II. Part IV. Psychodiagnostic methods and medical practice. [illegible]

[illegible]

Note: A well-selected anthology of significant recent writings pertinent to medical psychology. It provides readily accessible background reading for such professions (and students preparing for them) as clinical psychology, psychotherapy and the general practice of medicine. The contributors include some of the most eminent physicians and psychologists now working in the United States of America, in such fields as psychology, psychological testing, and psychiatry.

WEISS, EDWARD, AND O SPURGEON ENGLISH

Psychosomatic medicine the clinical application of psychopathology to general medical problems. Second edition. *Philadelphia* W B Saunders Company 1949 803 p. illus. 24 cm. 3420

Contents. Part I, General aspects of psychosomatic medicine. Psychosomatic medicine. Personality development and psychopathology. Psychosomatic diagnosis. Treatment—general principles of psychotherapy. Treatment—"normal" problems in psychotherapy. Treatment—special psychotherapeutic procedures. Training in psychosomatic medicine. Part II, Special applications to general medicine and the specialties. The cardiovascular system. The cardiovascular system—emotional factors in organic heart disease. The cardiovascular system—essential hypertension. The gastrointestinal system. Endocrine system and metabolism. The genito-urinary system and the sexual function. The respiratory system. The central nervous system. Ear and eye. Skin disorders and allergies. Deceptive arthritis and orthopedic problems. Appendix. References. Selected references. Index.

Note: A useful treatise based on extensive clinical experience and written in terms of average medical practice. Its purpose is to help graduate medical practitioners who are not specialists in psychoanalysis and psychopathology to differentiate between symptoms of psychic origin and those of organic etiology, to pick out the emotional factors complicating physical disease, to uncover the underlying causes of these emotional disturbances, and to institute therapy. The first-named author is Professor of Clinical Medicine and his associate is Professor of Psychiatry. The first edition appeared in 1943. The original text was rearranged and widely rewritten for this edition. Also, much material, derived partly from medical experience during World War II and partly from additional civilian practice has been added. The book is suitable for use as a survey and orientation guide for graduate physicians and as [illegible] in courses in psychosomatic medicine offered to advanced medical college students. A third edition was published in 1957. 557 p. $10.00.

WITTKOWER, ERIC D, AND R. A CLEGHORN editors

Recent developments in psychosomatic medicine. Philadelphia J B Lippincott Company 1954 495 p 24 cm. $10.00 3421

Contents: Part I, General. Basic concepts of psychosomatic medicine, by A W Macleod and others. The problem of specificity in the psychosomatic process, by L. S. Kubie. Historical notes on psychosomatic medicine, by E. L. Margetts. Experimental research, by H. G. Wolff. Research—experimental and theoretical aspects, by R. B. Malmo. Studies on limbic system ("visceral brain") and their bearing on psychosomatic problems, by P. D. MacLean. The critical oversimplification of the symbolic process in relation to psychosomatic disorders, by L. S. Kubie. Psychotherapeutic principles in psychosomatic practice, by E. G. Margetts. Part II, Specific. The interplay between endocrine and psychological dysfunction, by R. A. Cleghorn. The thyroid, by T. Lidz. Psychological aspects of diabetes mellitus, by T. Lidz. Psychological aspects of gynecology and obstetrics, by D. O'Neill. Rheumatoid arthritis, by A. Q. Ludwig. Psychological aspects of skin diseases, by F. F. D. Seitz. Motivation and respiratory disorders, by L. J. Saul and J. W. Lyons. Psychological aspects of pulmonary tuberculosis, by J. Hartz. Cardiovascular disorders, heart disease, and hypertension, by M. F. Reiser and others. Psychosomatic aspects of patients with peptic ulcer by M. [illegible]. Psychological aspects of non-specific ulcerative colitis, by C. Mushatt. Venereal disease, by H. W. Brody. Psychosomatic medicine and pediatrics, by M. Sperling. Psychosomatic disorders and psychoses, by W. D. Ross. Disablement—the somatopsychological problem, by R. G. Barker and B. A. Wright. Psychosomatic disease due to battle stress, by A. E. Moll. Psychosocial medicine, by C. Cobb. Index of authors. Index of subjects.

Note: A broad survey of contemporary research in which the emphasis is on recent developments. Twenty-one of the contributors are from the United States of America, six are from Canada, and two from England. As to the choice of contributors, the editors have stated [illegible] number of individuals known for the excellence of their studies in their respective fields was requested to contribute. In some instances younger workers were invited who had recently been active in the field." The volume is addressed to graduate practitioners of medicine and is designed for reading rather than reference.

WOLFF, HAROLD G

Stress and disease Springfield, Ill. Charles C Thomas, 1953 199 p illus 22 cm. (American lecture series Publication no 166 A monograph in the Bannerstone division of American lectures in physiology, edited by Robert F Pitts) $5 50 3422

Contents The nature of stress for man. Experimentally observed effects of stress in man. The patient-physician relationship and the alteration of attitudes and bodily reactions. Epitome. Bibliography Author index. Subject index.

Note. In this book, stress is defined as " the interaction between its external environment and organism, with the past of experience of organism as a major factor " The general nature of stress for man and its concomitant bodily effects is covered, together with detailed analysis of experimental results of specific reactions of various organs of the body to stress. How attitudes and goals engendered by cultural pressures and individual experiences relate to offensive and defensive reactions in human functioning, producing diseases such as asthma, acne, diarrhea, hypertension headache, ulcers, and vasomotor rhinitis, is discussed on the basis of experimental and clinical evidence. Also discussed from the same viewpoint is the occurrence of epidemics in populations subjected to stress during war mass emigration from rural to industrial areas, and other transplantations from a known cultural milieu to a unaccustomed one. The book is based on the literature, including the author's own extensive writings on the subject, and includes a bibliography of 210 references.

YACORZYNSKI, GEORGE K.

Medical psychology, a basis for psychiatry and clinical psychology New York The Ronald Press Company, 1951 535 p illus 24 cm $6 00 3423

Content Introduction. Part I Basic psychobiological principles Biological needs. Emotions. Learning. Perception. Motives. Adjustment to conflicts. Part II, Inheritance and maturation Introduction to genetic psychology Inheritance of behavioral responses. Maturation related to physical and physiological factors. Maturation of more complex functions. Part III Integration—structure and structuralization of personality Introduction to personality The biological substratum of personality Behavioral manifestations of personality The structuralization of personality A partial list of some of the more recent texts in psychiatry and clinical and abnormal psychology Index of names. Index of subjects.

Note A succinct, introductory presentation of the generally accepted principles of human behavior written for medical college students who are preparing for further study of psychiatry and clinical psychology The style is more technical and the level of treatment more advanced than would be appropriate in a text intended for general college students. Also, there is more emphasis on the underlying physiology References to papers in which important experiments and clinical studies have been reported are carefully given. The author is Associate Professor of Nervous and Mental Diseases in the Medical School of Northwestern University

HEMATOLOGY

BIRCH, MRS CARROLL (LAFLEUR)

Hemophilia, clinical and genetic aspects Urbana The University of Illinois, 1937 151 p illus. 28 cm. (Illinois medical and dental monographs Vol I no 4) $2 00 3424

Contents History Clinical manifestations. Blood findings. Diagnosis. Course of the disease. Transmission. Hemophilia in the female. Summary of ninety-eight cases. Interesting facts found in family histories. Death rate. Genealogical charts. Bibliographical references. Index.

Note: This monograph presents data collected by the writer during period of nine years at the Research and Educational Hospital of the University of Illinois. Following a discussion of the various aspects of the disease, the case reports are presented with graphs and genealogical charts, the latter compiled with great care and limited largely to verified data. The book is well illustrated. It is intended for all students and practitioners of medicine.

BLACKFAN, KENNETH D, AND LOUIS K DIAMOND

Atlas of the blood in children. With illustrations by C Merrill Leister Cambridge, Mass Harvard University Press, 1944 320 p illus. (part col'd) 28 cm. $12.00 3425

Contents The blood cells. The erythrocytes in anemia. The leukocytes in disease. Leukemia. The platelets. Bibliography Plates. Index.

Note A work of interest to pediatricians and also to practitioners of medicine concerned with blood disorders in adults. It is based on the authors' clinical experience in the Infants' and Children's Hospitals in Boston. It does not represent an attempt to cover all of the blood disorders of childhood, but it does cover the diseases encountered by the authors in approximately 20 years of experience at these hospitals. The text occupies 144 pages, but it is supplemented by selected bibliography of pertinent literature. The 70 plates are reproduced in color.

CARTWRIGHT, GEORGE E

Diagnostic laboratory hematology New York Grune & Stratton, 1954 104 p. illus. 22 cm $3 00 3426

Contents (abridged): The equipment and its care. Obtaining the specimen of blood. Determination of hemoglobin. Volume of packed red cells. Calculation of corpuscular constants. The blood smear Examinations concerned with coagulation of blood. Examinations concerned with hemolysis. Examination of bone marrow Examination of blood pigments related to hemoglobin. Examination of urine pigments related to hemoglobin. Examination of stool pigments related to hemoglobin. Other examinations. Preparation of solutions. Index.

Note A useful, compact manual of diagnostic procedures in hematology It is limited to methods that can be carried out in the offices of general medical practitioners and in student laboratories with simple, low-cost equipment. Techniques are described explicitly and in detail, and the interpretation of the results also is discussed where necessary The volume is not for specialists, nor are the methods described necessarily those that would be followed in a fully equipped diagnostic laboratory

CUSTER, RICHARD PHILIP

An atlas of the blood and bone marrow 285 illustrations 42 in color Philadelphia W B Saunders Company, 1949 321 p. illus. (part col'd) 29 cm. $18 00 3427

Contents. Part I, The hemolytopoietic system: Terminology Hematopoiesis. Normal blood and bone marrow Part II, Disorders of the blood and bone marrow: Classification. Deficiency anemias. Aplastic and hypoplastic anemias. Displacement of bone marrow Hypersplenism. Hemolytic anemias. Ill-defined anemias. Hemorrhagic states. Effects of physical and chemical agents. Leukocytosis, leukemoid reactions, and leukopenia. Infections. The leukemias. Polycythemia. Technic. Index.

Note: A considerable number of excellent reproductions of microphotographs made at high orders of magnification and showing rather large microfields are main feature of this book. Some of the microphotographs have been reproduced in color. The illustrative matter is accompanied by full textual discussions of points that are important in diagnosis in diseases of the blood and bone marrow. Special attention is given to the correlation of changes in the bone marrow with changes in the blood.

DALAND, GENEVA A

A color atlas of morphologic hematology with a guide to clinical interpretation. By Geneva A. Daland edited by Thomas Hale Ham. Illustrations by Etta Piotti From the second and fourth (Harvard) medical services and the Thorndike Memorial Laboratory Boston City Hospital. Cambridge Mass. Harvard University Press 1951 74 p. illus. (part col'd) 29 cm $5 00 3428

Contents: Value and limitations of the blood film in diagnosis. Preparation of blood films. Preparation of the color plates. General characteristics of formed elements of blood stained with Wright's stain. Plate I, The red cells and the erythrocytic series. Plate II, The white cells. The platelets and the thrombocytic series. Case studies of various disorders of the blood. Plate III, Pernicious anemia. Plate IV Hypochromic anemia (iron-deficiency anemia) Plate V Cooley's anemia (thalassemia major, Mediterranean anemia). Plate VI, Sickle-cell anemia. Plate VII, Hemolytic anemia —chronic and acute. Plate VIII, Erythroblastosis fetalis. Plate IX, Acute blood loss; chronic lead poisoning. Plate X, Myelogenous leukemia. Plate XI, Monocytic leukemia. Histiocytic leukemia and leukocytes in other conditions. Plate XII, Lymphocytic leukemia. Plate XIII, Plasma-cell leukemia. Plate XIV Infectious mononucleosis. Bibliography. Index.

Note: The 14 plates in full color, the titles of which are given above, are the heart of this book. Its purpose is to facilitate the detection of abnormalities of blood cells in blood films stained with Wright's stain. The plates are accompanied by detailed interpretations. The plates and the specific interpretations are prefaced by descriptions of techniques of preparing blood films or glass slides and of the types of blood cells.

DAMESHEK, WILLIAM AND C. STUART WELCH

Hyperspleniam and surgery of the spleen. Based on exhibits presented at the annual meetings in *1947 and 1951* of the American Medical Association. New York Grune & Stratton, 1953 84 p. illus. (part col'd) 31 cm. $10.00. 3429

Contents: The spleen. Hypersplenism. Hemolytic anemia. "Idiopathic" thrombocytopenic purpura. Splenectomy. Surgery of the spleen—splenectomy. Portal hypertension and its therapy. Summary and conclusions. Bibliography.

Note: Display material created for the two exhibits mentioned in the title has been assembled in this volume with little modification. The aspects of the subject which are treated in the above contents are covered, not in narrative text designed for straightforward reading but by presenting the information in graphs, microphotographs, colored photographs and explanatory legends. It affords an authoritative view of hypersplenism and surgery of the spleen which can be looked through in less than an hour, but the main point of interest is in the techniques of teaching by display which it illustrates. The volume does not have conventional format, but consists of leaves printed on one side and held together with plastic ring binding strip.

DAMESHEK, WILLIAM editor

Morphologic hematology New York Grune & Stratton, 1947 200 p. illus. 26 cm. (Blood, the journal of hematology Special issue no. 1) *$4 75* 3430

Contents: The histopathology of lesions in the bone marrow of patients having active brucellosis, by R. D. Sundberg and W. Spink. In vitro study of bone marrow: I. A method for marrow culture—II. Studies of erythropoiesis, by C. M. Plum. Normal bone marrow as obtained by sternal puncture, by S. L. Vaughan and F. Brockmyre. Hemopoiesis and myelopoiesis of the healthy female mice of C-57 brown and CFW strains, by K. M. Endicott and H. Gump. Cytomorphological observations in Hodgkin's disease, by J. Furtado. A physiological study of erythroblasts in the duck, by R. E. Rebuck and R. H. Rigdon. A method for the separation of leukocytes from whole blood by flotation on serum albumin, by B. L. Vallee and others. The preparation of morphologically intact leukocytes from peripheral blood by means of [illegible] and lysolecithin, by T. F. Singer and others. Comparative studies of phagocytosis in normal and in anemic blood, by L. J. Berry and others. The influence of anemia on phagocytic functions in rats, by L. J. Berry and E. C. Ritter. The influence of anemia on phagocytic function and resistance to infection in mice, by L. J. Berry and E. C. Ritter. Certain characteristics of the leukocytes of guinea pig blood with particular reference to the Kurloff body, by E. Smith. Studies on the adhesion of human blood platelets and bacteria, by R. B. Houlihan. The adhesion of dog platelets to bacteria, by R. B. Houlihan. Studies on platelets: The effect of platelets on the surface tension of saline solutions and heparinized plasmas, by A. L. Copley and D. F. Glass. The isolation of platelets from human and dog blood. The agglutination of platelets isolated from human, dog and [illegible] blood, by A. L. Copley and R. B. Houlihan. Index.

Note: A collection of papers prepared by scientists and research workers associated with some of the leading medical schools in the United States of America. Each paper is based on investigations carried out by the writer. Bibliographies or lists of references are given at the end of each paper and general index has been provided.

FOWLER, WILLIS MARION

Hematology for students and practitioners. Revised second edition. With 184 illustrations, eight plates in full color New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers 1949 535 p. illus. (part col d) 24 cm. $8.50. 3431

Contents: The hematopoietic system. The erythrocytes. The leukocytes. The blood platelets or thrombocytes. Normal hematologic values. Leukocytosis and leukopenia. Classification and general discussion of anemia. Pernicious anemia and related macrocytic anemias. Iron deficiency anemias. Aplastic anemia. Myelophthisic anemias and anemias secondary to other diseases. Anemia due to acute blood loss—blood donors. Hemolytic anemias. Banti's syndrome. Polycythemia. Hemorrhagic diseases. Leukemia. Lymphomata. Agranulocytosis. Infectious mononucleosis. Multiple myeloma and lipoid dystrophies. Hematology in infancy and childhood. Transfusion of whole blood and blood derivatives, by E. L. DeGowin. Hematologic methods. Index.

Note: A practical textbook developed from material used in teaching in the Medical School of the University of Iowa. The author treats hematology as part of internal medicine and not as specialized field. Controversial issues are avoided. This revision of the 1945 edition incorporates new developments in the field with emphasis on clinical aspects and treatment. Among others, the therapeutic values of folic acid, urethane, nitrogen mustard, and radiophosphorus are discussed and evaluated. There are extensive citations of periodical literature documenting each chapter.

LAWRENCE, JOHN H

Polycythemia physiology a diagnosis and treatment based on 303 cases. New York Grune & Stratton, 1955 136 p. illus. (part col d) 23 cm. (Modern medical monographs. No 13) $5.50 3432

Contents: Introduction. Polycythemia vera. Relative polycythemia. Secondary polycythemia. Summary. Case histories. References. Index.

Note: The disorders of the blood discussed in this monograph are uncommon but are of considerable physiologic and clinical interest. In the case of secondary polycythemia vera, there is correlation between incidence and high altitudes. The book is based partly on the literature and partly on the author's experience and investigations. Polycythemia vera is discussed in regard to clinical picture, physiology, incidence, pathology, therapy, prognosis, etc., and the chapter on it includes the results of studies by the author and his associates on more than 150 patients, including patients treated with radioactive phosphorus, therapeutic technique introduced by the author. The chapter on secondary polycythemia includes the findings made in studies by the author and others on people living between 14,000 and 16,400 feet altitude in Peru. The clinical features of the three diseases, polycythemia vera, relative polycythemia, and secondary polycythemia, are concisely surveyed in the summary chapter. A comprehensive bibliography is included.

LEJWA ARTHUR, editor

Nutritional anemia. Springfield, Ill. Charles C Thomas, 1948 194 p. illus. 23 cm. (Symposia on Nutrition of The Robert Gould Research Foundation. Vol. 1) $2 75 3433

Contents: Introductory remarks, by E. V. McCollum. Physiological implications of the anemic state, by M. M. Wintrobe. The physiology of folic acid, by C. A. Elvehjem. The treatment of nutritional anemias with folic acid, by W. J. Darby. The syndrome of megaloblastic anemia in infancy, by W. W. Zuelzer. Some biochemical aspects of metabolism of iron and copper, by M. O. Schultze. Studies on the iron-binding capacity of serum, by G. E. Cartwright. Iron metabolism and hypochromic anemia, by C. V. Moore. Hypochromic anemia in infancy, by G. M. Guest. The vitamin B complex and anemia, by W. H. Sebrell. Vitamin C and anemia, by R. W. Vilter.

Wolff, Harold G

Stress and disease. Springfield Ill. Charles C Thomas, 1953 199 p. illus 22 cm. (American lecture series Publication no 166 A monograph in the Bannerstone division of American lectures in physiology, edited by Robert F Pitts) $5.50 3422

Contents. The nature of stress for man Experimentally observed effects of stress in man. The patient-physician relationship and the alteration of attitudes and bodily reactions. Epitome. Bibliography Author index. Subject index.

Note In this book, stress is defined as the interaction between its external environment and organism, with the past of experience of organism as a major factor The general nature of stress for man and its concomitant bodily effects is covered, together with a detailed analysis of experimental results of specific reactions of various organs of the body to stress. How attitudes and goals engendered by cultural pressures and individual experiences relate to offensive and defensive reactions in human functioning, producing diseases such as asthma, acne, diarrhea, hypertension, headache, ulcers, and vasomotor rhinitis, is discussed on the basis of experimental and clinical evidence. Also discussed from the same viewpoint is the occurrence of epidemics in populations subjected to stress during war, mass emigration from rural to industrial areas, and other transplantations from a known cultural milieu to a unaccustomed one. The book is based on the literature, including the author's own extensive writings on the subject, and includes a bibliography of 210 references.

Yacorzynski, George K.

Medical psychology, a basis for psychiatry and clinical psychology New York The Ronald Press Company, 1951 535 p illus. 24 cm. $6 00 3423

Contents Introduction. Part I, Basic psychobiological principles Biological needs. Emotions. Learning. Perception Motives. Adjustment to conflicts. Part II, Inheritance and maturation Introduction to genetic psychology Inheritance of behavioral responses. Maturation related to physical and physiological factors. Maturation of more complex functions. Part III, Integration—structure and structuralization of personality Introduction to personality The biological substratum of personality Behavioral manifestations of personality The structuralization of personality A partial list of some of the more recent texts in psychiatry and clinical and abnormal psychology Index of names. Index of subjects.

Note A succinct, introductory presentation of the generally accepted principles of human behavior written for medical college students who are preparing for further study of psychiatry and clinical psychology The style is more technical and the level of treatment more advanced than would be appropriate in a text intended for general college students. Also, there is more emphasis on the underlying physiology References to papers in which important experiments and clinical studies have been reported are carefully given. The author is Associate Professor of Nervous and Mental Diseases in the Medical School of Northwestern University

HEMATOLOGY

Birch, Mrs Carroll (LaFleur)

Hemophilia, clinical and genetic aspects. Urbana The University of Illinois 1937 151 p illus 28 cm. (Illinois medical and dental monographs Vol I, no 4) $2 00 3424

Contents History Clinical manifestations. Blood findings. Diagnosis. Course of the disease. Transmission. Hemophilia in the female. Summary of ninety-eight cases. Interesting facts found in family histories. Death rate. Genealogical charts. Bibliographical references. Index.

Note. This monograph presents data collected by the writer during a period of nine years at the Research and Educational Hospital of the University of Illinois. Following discussion of the various aspects of the disease, the case reports are presented with graphs and genealogical charts, the latter compiled with great care and limited largely to verified data. The book is well illustrated. It is intended for all students and practitioners of medicine.

Blackfan, Kenneth D, and Louis K. Diamond

Atlas of the blood in children With illustrations by C. Merrill Leister Cambridge, Mass. Harvard University Press, 1944 320 p illus. (part col'd) 28 cm. $12.00 3425

Contents The blood cells. The erythrocytes in anemia. The leukocytes in disease. Leukemia. The platelets. Bibliography Plates. Index.

Note. A work of interest to pediatricians and also to practitioners of medicine concerned with blood disorders in adults. It is based on the authors' clinical experience in the Infants' and Children's Hospitals in Boston. It does not represent an attempt to cover all of the blood disorders of childhood, but it does cover the diseases encountered by the authors in approximately 20 years of experience at these hospitals. The text occupies 144 pages, but it is supplemented by a selected bibliography of pertinent literature. The 70 plates are reproduced in color.

Cartwright, George E

Diagnostic laboratory hematology New York Grune & Stratton, 1954 104 p. illus. 22 cm. $3 00 3426

Contents (abridged) The equipment and its care. Obtaining the specimen of blood. Determination of hemoglobin. Volume of packed red cells. Calculation of corpuscular constants. The blood smear Examinations concerned with coagulation of blood. Examinations concerned with hemolysis. Examination of bone marrow Examination of blood pigments related to hemoglobin. Examination of urine pigments related to hemoglobin. Examination of stool pigments related to hemoglobin. Other examinations. Preparation of solutions. Index.

Note: A useful, compact manual of diagnostic procedures in hematology It is limited to methods that can be carried out in the offices of general medical practitioners and in student laboratories with simple, low-cost equipment. Techniques are described explicitly and in detail, and the interpretation of the results also is discussed where necessary The volume is not for specialists, nor are the methods described necessarily those that would be followed in a fully equipped diagnostic laboratory

Custer, Richard Philip

An atlas of the blood and bone marrow 285 illustrations 42 in color Philadelphia W B Saunders Company 1949 321 p. illus. (part col'd) 29 cm. $18 00 3427

Contents Part I, The hemolytopoietic system Terminology Hematopoiesis. Normal blood and bone marrow Part II, Disorders of the blood and bone marrow Classification. Deficiency anemias. Aplastic and hypoplastic anemias. Displacement of bone marrow Hypersplenism. Hemolytic anemias. Ill-defined anemias. Hemorrhagic states. Effects of physical and chemical agents. Leukocytosis, leukemoid reactions, and leukopenia. Infections. The leukemias. Polycythemia. Technic. Index.

Note: A considerable number of excellent reproductions of microphotographs made at high orders of magnification and showing rather large microfields are main feature of this book. Some of the microphotographs have been reproduced in color The illustrative matter is accompanied by full textual discussions of points that are important in diagnosis in diseases of the blood and bone marrow Special attention is given to the correlation of changes in the bone marrow with changes in the blood.

Daland, Geneva A

A color atlas of morphologic hematology with a guide to clinical interpretation. By Geneva A. Daland edited by Thomas Hale Ham Illustrations by Etta Piotti. From the second and fourth (Harvard) medical services and the Thorndike Memorial Laboratory Boston City Hospital. Cambridge Mass. Harvard University Press 1951 74 p. illus. (part col d) 29 cm. $5 00 3428

E. Gasser. Abnormal hemorrhage with normal platelet count and normal clotting, by R. L. Haden and others. Clinical aspects of hypoprothrombinemia, by C. S. Davidson and H. J. Tagnon.

Note: The papers comprising this volume were prepared by medical authorities and research workers in the field of hematology and were first presented at a conference sponsored by the New York Academy of Sciences. Based on the original investigations of the authors, and in some cases on a survey of literature of the subject, they provide a review of current knowledge and some new information regarding various aspects of the mechanism and physiology of blood coagulation and hemorrhage. Most of the papers include brief bibliographies. There is no index.

STEFANINI, MARIO, AND WILLIAM DAMESHEK

The hemorrhagic disorders a clinical and therapeutic approach. *New York* Grune & Stratton 1955 368 p. illus. (part col'd) 26 cm. $12.50 3440

Contents: The normal hemostatic process. Classification of hemorrhagic diseases. Hemorrhagic disorders due to defects of the vascular factor of hemostasis. The thrombocytopenic states. Disorders due to deficiency of factors participating in the blood coagulation mechanism. Hemorrhagic diseases of complex etiology with involvement of multiple hemostatic mechanisms. Hemorrhagic disorders due to circulating anticoagulants. Bleeding tendency due to fibrinolysis ("fibrinolytic purpura"). The bleeding tendency of obstetric accidents—Of dysproteinemias. General considerations on the treatment of hemorrhagic disorders. Hereditary aspects of the hemorrhagic disorders. Appendix: Technics in the study of hemorrhagic disorders. Addendum. References. Index.

Note: A monograph of broad scope addressed primarily to [illegible] physicians. The range of hemorrhagic disorders covered is apparent from the chapter titles which are listed above. The first chapter is an extensive discussion of the normal hemostatic mechanism, and it concludes with a statement of a working hypothesis offered as a step-by-step description of the coagulation mechanism in vivo. Most of the book is devoted to the known hemorrhagic disorders. Generally speaking, each disease is described as to pathogenetic mechanism, clinical picture, laboratory findings, management and prognosis. Techniques of laboratory clinical study of hemorrhagic disorders are fully described in the 24-page appendix. There are 127 figures and a bibliography of 413 references.

STURGIS CYRUS C

Hematology Second edition. Springfield, Ill. Charles C Thomas, 1955 1,222 p. illus (part col'd) 26 cm. $19.50 3441

Contents: Classification and general remarks concerning the anemias. Simple chronic anemia. Iron deficiency anemia (hypochromic, microcytic anemia). Anemias of pregnancy. The hemolytic anemias. Pernicious anemia and other macrocytic anemias. Chronic congestive splenomegaly (Banti syndrome). Aplastic and allied anemias. Sickle cell anemia. Ovalocytosis. Hereditary leptocytosis (Mediterranean anemia). Erythroblastosis fetalis. Hemorrhagic states due to changes in the normal clotting elements of the blood. Hemorrhagic states (platelet deficiencies). Changes in leukocytes. The leukemias. Malignant lymphoma. Infectious mononucleosis. Agranulocytosis. Polycythemia. The lipidoses. Sternal puncture. Blood transfusion and blood substitutes. Index.

Note: A comprehensive, well-organized text and reference book on pathological conditions of the blood and on related topics. About half of the space is devoted to the various anemias. Synonyms, definitions, history, etiology, symptoms and signs, laboratory problems, treatment and prognosis are covered for each disorder. The first edition was published in 1948. The extent of revision and augmentation can be gauged by the fact that, in spite of the deletion of some material, there has been an increase of approximately 300 pages. Again, there is extensive citation of the literature. However the comprehensive bibliography has been [illegible] up and the bibliographies now are included in the chapters. In [illegible] the published contributions of others, the author often interprets criticism of his own in such terms as the following: "I have had no experience with this form of therapy and would not employ [illegible] the patient were seriously ill, and only after [illegible] had been given a trial."

STURGIS CYRUS C

Hypersplenism a clinical evaluation. The Beaumont Lecture, Wayne County Medical Society January 21 1952 Springfield Ill. Charles C Thomas, 1953 97 p. illus. 22 cm. (A monograph in American lectures in medicine. Publication no. 175) $3.25 3442

Contents: Introduction. Hypersplenism. Structure and function of the spleen. Circulation of the spleen and the relation of the spleen filter to [illegible]. Changes resulting from removal of the normal accessories spleen. The effect of splenectomy on pregnancy in women of the child-bearing age. The mechanism of hypersplenism—the theory supported by Dameshek. The theory that hypersplenism is due to a humoral effect on the bone marrow. Auto-antibody theory in relation to hypersplenism. Classification and types of hypersplenism. The diagnosis of hypersplenism. Hereditary spherocytosis. Acquired hemolytic anemia. Idiopathic thrombocytopenic purpura. Banti's syndrome. Splenic neutropenia. Primary and secondary acquired splenic panhematopenia. Miscellaneous conditions in which hypersplenism may play a role. Recurrence following splenectomy. Summary of indications for and contraindications against splenectomy. Bibliography. Index.

Note: A brief and readable survey written primarily from the clinical viewpoint but including also an outline of the physiological knowledge. A bibliography of 64 citations is included.

SUNDERMAN, F WILLIAM AND OTHERS

Clinical hemoglobinometry by F William Sunderman R. P MacFate D A. MacFadyen, G F Stevenson and B E Copeland. Baltimore The Williams & Wilkins Company 1953 79 p. illus. 26 cm. $2.50 3443

Contents: Part I, General considerations. Part II, Hemoglobinometry. Part III, Appendix: Methodology and practical considerations. Bibliography.

Note: Although only a thick pamphlet in format, this work is a contribution of importance to its subject. Its purpose is to point out the need for the establishment of uniform techniques and standards of measurement in hemoglobinometry. It presents background information, describes current techniques, and presents full descriptions of methods recommended for practical use in clinical laboratories. A bibliography of 449 references lists the pertinent international literature. The material was originally prepared for a symposium at a joint meeting of the American Society of Clinical Pathologists and the College of American Pathologists.

THANNHAUSER, SIEGFRIED J

Lipidoses diseases of the cellular lipid metabolism. Edited by Henry A. Christian. (Reprinted from Oxford loose-leaf medicine with the same page numbers as in that work) Second edition New York Oxford University Press 1950 595 10 p. illus. (part col'd) 24 cm. $18.00 3444

Contents (abridged): Part I, The physiology and chemistry of lipid metabolism. Part II, Hyperlipemia. Part III, Xanthomatoses: Hypercholesteremic xanthomatoses. Hyperlipemia (accumulation of neutral fat in serum) with secondary eruptive xanthoma. Normocholesteremic xanthomatoses. Part IV Gaucher's disease (reticular and histiocytic cerebrosidosis). Part V Niemann-Pick's disease (reticular and histiocytic sphingomyelinosis). Supplement: Infantile amaurotic idiocy. Hurler-Pfaundler syndrome (gargoylism). Index.

Note: A monographic review of the groups of diseases named in the part-titles. The first chapter is an outline with key-numbered references to the literature of the knowledge of the biochemistry of lipid metabolism. Comprehensive lists of international literature pertaining to each group of diseases are a special feature. There are 124 figures. The first edition was published in 1940. Moderately extensive revisions are evident in several parts of this edition.

TOCANTINS LEANDRO M., editor

The coagulation of blood methods of study Prepared with the help and under the sponsorship of the Panel on Blood Coagulation of the Committee on Medicine and Sur

Note This volume is made up of papers prepared for the Symposium on Nutritional Anemia organized by The Robert Gould Research Foundation and held in Cincinnati on October 16–18, 1947 under the auspices of the College of Medicine of the University of Cincinnati. The program was prepared in collaboration with members of the Scientific Advisory Committee of the Foundation, 11 specialists being invited to present various aspects of their particular fields of research.

POLLAK, OTAKAR JAROSLAV

Grouping, typing and banking of blood. Springfield, Ill Charles C Thomas, 1951 163 p illus 24 cm $5 75 3434

Contents Theoretical background of blood grouping. Technic of blood grouping. The Rh factors. Technic of Rh testing. Erythroblastosis fetalis. Compatibility tests. The blood bank. Whole blood transfusion. The use of blood fractions. References. Charts. Index.

Note A compendium of technical information designed primarily for use by such personnel as nurses, hospital house officers, and physicians who are concerned with the management of blood banks. The various aspects of blood bank administration and blood transfusion that are named in the chapter titles are discussed practically and with relative simplicity The list of 100 references is a selected one. There are 40 tables of reference data in the text itself and 10 charts at the end of the book printed so that they may be removed and mounted more conveniently

PONDER, ERIC

Hemolysis and related phenomena With 69 illustrations New York Grune & Stratton, 1948 398 p illus 23 cm $10 00 3435

Contents Introduction. Shape changes unaccompanied by volume changes. Shape changes accompanied by volume changes. Cytochemistry and architecture. The kinetics of hemolysis. Inhibition and acceleration of hemolysis. Hemolysis in vivo. Appendices The red cells of the Camelidae. Hemolysis and related phenomena observed in nucleated red cells. Red cell counting. Red cell metabolism. References. Author index. Subject index.

Note An exhaustive account of the present status of knowledge of the red blood cell and the hemolytic processes in mammals. Following the chapters on the shape changes, the cytochemistry and the architecture of the erythrocyte, hemolysis is explained from the viewpoint of kinetics and discussed in connection with phenomena preceding, accompanying, and following the lysis. A major part of the text is devoted to the description and analysis of measuring methods and tabulation of data. Addressing himself primarily to specialists in the field, the author supplies a critical evaluation of methods and results in each of the problems discussed, stressing the inadequacy of present solutions and the need for further investigations. The bibliography contains references to more than 600 articles.

PONDER, ERIC AND OTHERS

Some aspects of red cell production and destruction. New York New York Academy of Sciences 1947 128 p illus 24 cm (New York Academy of Sciences Annals Vol. 48 p 577–704 1947) $2 00 3436

Content Red cell cytochemistry and architecture by E. Ponder The endocrine system and hemopoiesis, by A. S Gordon and H. A. Charipper Hemoglobin and red cell production in experimental hemorrhagic anemia, by F S. Robscheit Robbins. Iron and porphyrin metabolism in relation to the red blood cell by S. Granick. Etiologic considerations in macrocytic anemias, by W B Castle. Hemolytic mechanisms, by W Dameshek.

Note A collection of papers presented at a conference held in April, 1946, under the auspices of the New York Academy of Sciences. Each paper has been prepared by an authority in the field of hematology Together the papers provide a review of studies regarding the formation and destruction of red blood cells. The results of experiments and various hypotheses are critically evaluated and lines of future research indicated. Bibliographies are included.

PROGRESS IN HEMATOLOGY Volume I 1956 Edited by Leandro M Tocantins with 27 contributors New York Grune & Stratton 1956 336 p illus 26 cm $9 75 3437

Contents Introduction, by L. M. Tocantins. Gastric intrinsic factor and vitamin B₁₂ interrelationships, by C. C. Ungley and K. B Thompson. Parenterally administered iron in the treatment of hypochromic anemia, by E. B Brown and C. V Moore. Exchange transfusion as a therapeutic measure with special reference to its use in erythroblastosis fetalis, by T R. Boggs, Jr The life span of erythrocytes and their post-transfusion survival, by M. M. Strumia. Abnormal hemoglobins, by W R Zeller and others. Radioactive colloidal gold in the treatment of severe acquired hemolytic anemia refractory to splenectomy by L. M. Tocantins and G. C. Wang. Radioactive phosphorus in the treatment of primary polycythemia (vera) by L. A. Erf. The autoimmune thrombocytopenias, by W J Harrington and others. Guiding principles in the surgery of hemophilic patients, by A. F DePalma. Mechanisms of production of acute fibrinogen deficiencies, by C. L Schneider Local environmental factors affecting hemostasis in bleeding from the gastrointestinal tract, by T Bódi and others. Systemic lupus erythematosus and the blood, by M. M. Hargraves and R. W Opfell. Chemotherapy of human leukemia, by J. H Burchenal and R. R. Ellison. The biochemistry and enzymatic activities of leukocytes in health and disease by W N Valentine. Hematologic recovery from irradiation injury by L. O. Jacobson Agammaglobulinemia—congenital, acquired and transient forms, by D Gitlin and C. A. Janeway Index.

Note The first volume of a series. Apparently the frequency of appearance of further volumes had not been determined when this volume was sent to press. The titles and authors' names of the papers contained in it are listed above. The papers are topical reviews based on extensive literature surveys, and each is accompanied by a long list of references to the international literature. Unlike some review series, the authors were not limited to reviewing the literature of a stated period, but ranged over as much of the field as was necessary in order to present an adequate account of the current state of their topics. Some literature published as long ago as the 19th century is cited in some of the papers. However, publications of recent years predominate The reviews are addressed to graduate physiologists and graduate physicians.

SEEGERS, WALTER HALTER, AND ELWOOD A. SHARP

Hemostatic agents, with particular reference to thrombin, fibrinogen and absorbable cellulose. Springfield, Ill. Charles C Thomas, 1948 131 p illus (part col'd) 23 cm. $4 75 3438

Contents Clotting of the blood. Mechanics of topical hemostasis with thrombin. Thrombin. Fibrinogen. Oxidized cellulose. Fibrin foam and gelatin sponge. References. Index.

Note A brief but useful evaluation from the viewpoint of practical clinical medicine of some recent developments and discoveries regarding the chemistry of blood clotting and hemorrhage control. The book is based on a survey of literature of the subject and deals primarily with the properties, methods of preparation and clinical use of various hemostatic agents. The references, cited throughout the text, are keyed to a 25-page bibliography which includes mainly literature published in the period 1936–1946.

SHWARTZMAN GREGORY AND OTHERS

Hemorrhage. New York New York Academy of Sciences 1948 178 p illus 24 cm. (New York Academy of Sciences. Annals. Vol 49 p 483–660 1948) $3 00 3439

Content Introductory remarks, by G. Shwartzman. A review of some basic facts of blood coagulation by J H. Ferguson. Heparin in blood clotting and thrombosis, by C H. Best and L. B. Jaques. The relationship of Vitamin K to hemorrhage and coagulation, by S. A. Thayer. Hemorrhagic manifestations observed in experimental deficiency of pantothenic acid, choline and cystine, by P György The effects of hemorrhage on the circulation, by W Richards, Jr Experimental studies on traumatic and hemorrhagic shock, by M. I. Gregersen. Vasomotion in the hemodynamics of the blood capillary circulation, by R. Chambers. Reactions of peripheral blood vessels in experimental hemorrhage by B W Zweifach and others. Hepato-renal factors in circulatory homeostasis III The influence of humoral factors of hepato-renal origin on the vascular reactions to hemorrhage by E. Shorr and others. Effects of hemorrhage on the kidney by D D. Van Slyke Metabolic changes associated with hemorrhage by A. E. Wilhelmi and C. N H. Long Certain anatomopathologic aspects of hemorrhage by P Klemperer Hemorrhagic manifestations of bacterial and virus infections experimental studies and pathological interpretations, by G Shwartzman and L.

E. Gerber. Abnormal hemorrhage with normal platelet count and normal clotting, by R. L. Rosen and others. Clinical aspects of hypoprothrombinemia, by C. E. Davidson and H. J. Tagnon.

Note: The papers comprising this volume were prepared by medical authorities and research workers in the field of hematology and were first presented at a conference sponsored by the New York Academy of Sciences. Based on the original investigations of the authors, and in some cases on a survey of literature of the subject, they provide a review of current knowledge and some new information regarding various aspects of the mechanism and physiology of blood coagulation and hemorrhage. Most of the papers include brief bibliographies. There is no index.

STEFANINI, MARIO AND WILLIAM DAMESHEK

The hemorrhagic disorders a clinical and therapeutic approach. New York Grune & Stratton, 1955 368 p. illus. (part col'd) 26 cm. $12.50. 3440

Contents: The normal hemostatic process. Classification of hemorrhagic diseases. Hemorrhagic diseases due to defects of the vascular factor of hemostasis. The thrombocytopenic states. Diseases due to deficiency of factors participating in the blood coagulation mechanism. Hemorrhagic diseases of complex etiology with involvement of multiple hemostatic mechanisms. Hemorrhagic diseases due to circulating anticoagulants. Bleeding tendency due to fibrinolysis ("fibrinolytic purpura"). The bleeding tendency of [illegible] accidents—Of dysproteinemias. General considerations on the treatment of hemorrhagic disorders. Hereditary aspects of the hemorrhagic disorders. Appendices: Technics in the study of hemorrhagic disorders. Addendum. References. Index.

Note: A monograph of broad scope addressed primarily to graduate physicians. The scope of hemorrhagic disorders covered is apparent from the chapter titles which are listed above. The first chapter is an extensive discussion of the normal hemostatic mechanism, and it concludes with a statement of a working hypothesis offered as a step-by-step description of the coagulation mechanism in vivo. Most of the book is devoted to the known hemorrhagic disorders. Generally speaking, each disease is described as to pathogenetic mechanism, clinical picture, laboratory findings, management and prognosis. Techniques of laboratory clinical study of hemorrhagic disorders are fully described in the [illegible]-page appendix. There are 117 figures and a bibliography of [illegible] references.

STURGIS CYRUS C.

Hematology Second edition. Springfield, Ill. Charles C Thomas 1955 1,222 p. illus. (part col'd) 26 cm. $19.50. 3441

Contents: [illegible] and general remarks concerning the anemias. Simple chronic anemia. Iron deficiency anemia. Chlorosis. Macrocytic anemia[illegible]. Anemias of pregnancy. The hemolytic anemias. Pernicious anemia and other macrocytic anemias. Chronic congestive splenomegaly (Banti's syndrome). Aplastic and allied anemias. Sickle cell anemia. Ovalocytosis. Hereditary leptocytosis (Mediterranean anemia). Erythroblastosis fetalis. Hemorrhagic states due to changes in the normal clotting elements of the blood. Hemorrhagic states (platelet deficiencies). Changes in leukocytes. The leukemias. Malignant lymphoma. Infectious mononucleosis. Agranulocytosis. Polycythemia. The [illegible]. [illegible]. Blood transfusion and blood substitutes. Index.

Note: A concentrated, well-organized text and reference book on pathological conditions of the blood and on related topics. About half of the space is devoted to the various anemias. Synonyms, definitions, history, etiology, symptoms and signs, laboratory findings, treatment and prognosis are covered for each disorder. The first edition was published in 1948. The extent of revision and [illegible] can be judged by the fact that, in spite of the [illegible] of some material, there has been an increase of approximately [illegible] pages. Again, there is extensive citation of the literature. However, the comprehensive bibliography has been given up and the bibliographies now are included in the chapters. In summarizing the published contributions of others, the author often interjects [illegible] of his own in such terms as the following: "I have had no experience with this form of therapy and would not employ it unless the patient were severely ill, and only after [illegible] had been given a trial."

STURGIS CYRUS C

Hypersplenism a clinical evaluation. The Beaumont Lecture, Wayne County Medical Society January 21 1952 Springfield, Ill. Charles C Thomas, 1953 97 p. illus. 22 cm. (A monograph in American lectures in medicine. Publication no. 175) $3.25 3442

Contents: Introduction. Hypersplenism. Structure and function of the spleen. Circulation of the spleen and the relation of the [illegible] to [illegible]. Changes resulting from removal of the normal [illegible] spleen. The effect of splenectomy on pregnancy in women of the child-bearing age. The mechanism of hypersplenism—the theory supported by Dameshek. The theory that hypersplenism is due to a hormonal effect on the bone marrow. Auto-antibody theory in relation to hypersplenism. Classification and types of hypersplenism. The diagnosis of hypersplenism. Hereditary spherocytosis. Acquired hemolytic anemia. Idiopathic thrombocytopenic purpura. Banti's syndrome. Splenic neutropenia. Primary and secondary acquired splenic panhematopenia. Miscellaneous conditions in which hypersplenism may play a role. Recurrences following splenectomy. Summary of indications for and contraindications against splenectomy. Bibliography. Index.

Note: A brief and readable survey written primarily from the clinical viewpoint but including also an outline of the physiological knowledge. A bibliography of 64 citations is included.

SUNDERMAN F WILLIAM AND OTHERS

Clinical hemoglobinometry by F William Sunderman, R. P MacFate, D A MacFadyen, G F Stevenson and B E. Copeland. Baltimore The Williams & Wilkins Company 1953 79 p. illus. 26 cm. $2.50. 3443

Contents: Part I. General considerations. Part II. Hemoglobinometry. Part III. Appendix: Methodology and practical considerations. Bibliography.

Note: Although only a thick pamphlet in format, this work is a contribution of importance to its subject. Its purpose is to point out the need for the establishment of uniform techniques and standards of measurement in hemoglobinometry. It presents background information, describes current techniques, and presents full descriptions of methods recommended for practical use in clinical laboratories. A bibliography of [illegible] references lists the pertinent international literature. The material was originally prepared for a symposium at a joint meeting of the American Society of Clinical Pathologists and the College of American Pathologists.

THANNHAUSER, SIEGFRIED J

Lipidoses diseases of the cellular lipid metabolism. Edited by Henry A. Christian. (Reprinted from Oxford loose-leaf medicine with the same page numbers as in that work) Second edition. New York Oxford University Press, 1950 595 10 p. illus. (part col'd) 24 cm. $18.00 3444

Contents (abridged): Part I. The physiology and chemistry of lipid metabolism. Part II. Hyperlipemia. Part III. Xanthomatoses: Hypercholesteremic xanthomatosis. Hyperlipemia (accumulation of neutral fat in serum) with secondary eruptive xanthoma. Normocholesteremic xanthomatosis. Part IV. Gaucher's disease (cellular and [illegible]). Part V. Niemann-Pick's disease (cellular and [illegible] sphingomyelinosis). Supplement. Infantile amaurotic idiocy. Hurler-Pfaundler syndrome (gargoylism). Index.

Note: A monographic review of the groups of diseases named in the part-titles. The first chapter is an outline with key-numbered references to the literature of the knowledge of the biochemistry of lipid metabolism. Comprehensive lists of international literature pertaining to each group of diseases are a special feature. There are 13 figures. The first edition was published in 1940. Moderately extensive revisions are evident in several parts of this edition.

TOCANTINS LEANDRO M., editor

The coagulation of blood methods of study Prepared with the help and under the sponsorship of the Panel on Blood Coagulation of the Committee on Medicine and Sur

gery of the National Academy of Sciences, National Research Council. New York Grune & Stratton, 1955 240 p illus 24 cm $6 25 3445

Contents (abridged): Processing of blood, preparation of glassware and reagents, by L. M Tocantins and others. Introductory exercises, by L. M. Tocantins. Determination of the clotting time of whole blood, by L. B. Jaques. Measurement of the rate and extent of clot retraction, by L. M. Tocantins. Blood platelets, by L. M. Tocantins and others. Plasma thromboplastin and precursors, by R. R. Holburn and others. Thrombin and precursors, by B Alexander and others. Accessory plasma or serum coagulant factors, by R. T Carroll and others. Fibrin and precursors, by L. M. Tocantins and others. Fibrinolysin precursors and inhibitors, by R. R. Holburn and E. C. Loomis. Tissue coagulants, by J F Johnson and W H. Seegers. Anticoagulants in the blood, plasma and serum, by R. R. Holburn and others. Anticoagulants of tissue origin, by L. B Jaques and others. Appendix. Index.

Note A manual of methods of study of blood coagulation. Its purpose is indicated in these words selected from the foreword "It is not offered as an authoritative selection of standard methods—the subject is too fluid for standardization—but rather as a compilation of what appeared to the Panel to be the more satisfactory procedures for general use described in sufficient technical detail to be of value to workers in the field. The chapter titles are listed in the above table of contents. In most instances, each chapter is composed of a number of signed sections, each of which describes a specific technique. For instance, the chapter on thrombin and precursors contains eight sections written by 10 contributors. The individual techniques are described very specifically from the viewpoint of laboratory workers. Specific literature references are given for most of them and, in addition, there is a list of general references in the appendix.

WALL, ROBERT L

Practical blood grouping methods a manual of immunohematology Springfield, Ill. Charles C Thomas, 1951 175 p 22 cm (American lecture series. Publication number 122 A monograph in the Bannerstone Division of American lectures in hematology, edited by Russell L Haden) $5 00 3446

Contents: The development of the blood groups. Materials and methods. The ABO blood group system. The Rh blood group system. The MN(S) and P blood group system. Other blood group systems. Autoagglutinins, panagglutinins, "cold-type" agglutinins. Antibodies associated with hemolytic type anemias. The cross-matching tests. Differential agglutination tests. Recent advances and trends in immunohematology Appendix. Bibliography Index.

Note A compact manual of basic information and tested methods. It is addressed primarily to laboratory and hospital personnel and to medical practitioners, but its scope and organization make it useful as a reference book to anyone with professional interests in the field.

WAUGH, THEODORE ROGERS

White blood cell differential tables. New York D Appleton-Century-Croft Company, Inc. 1943 126 p 18 cm $1 60 3447

Content The white blood cells. Enumeration of the leukocytes. The differential count. Use of the tables. Specific examples of use of the tables. The tables.

Note These tables are designed to aid in computing rapidly the actual number per cubic millimeter of each type of white blood cell from the differential percentages. They are intended for the use of clinicians, pathologists, and laboratory workers. The introductory notes and description of their use are written in very simple style for the benefit of less-experienced workers and may be disregarded by trained technicians.

WIENER, ALEXANDER S

Rh–Hr blood types applications in clinical and legal medicine and anthropology Selected articles in immunohematology New York Grune & Stratton, 1954 763 p illus. 26 cm $11 50 3448

Contents (abridged) Historical background. Fundamental observations. Pathogenesis of erythroblastosis fetalis. Rh antibodies—technic. Rh-Hr types and their heredity Nomenclature of the Rh-Hr types. Anthropologic aspects. Erythroblastosis fetalis and exchange transfusion. The M N-S blood types. Medicolegal applications. A-B-O incompatibility in pregnancy Autoantibodies and disease. Blood transfusion. Fundamental principles. Technic of tests. General. Author's bibliography Author index. Subject index.

Note A collection of previously published articles by Dr. Wiener one of the leading hematologists of the world. The author himself made the selection. The articles have been reprinted by a photolithographic process from the original publication therefore, the pages are not uniform, and the appearance of the volume, as the pages are turned, is unusual and esthetically unsatisfactory However all the reproductions are clear enough for easy reading, and the full author and subject indexes give the volume considerable reference value. The "Author's bibliography" is comprehensive, chronologically arranged list of Dr. Wiener's published writings down to late 1953 It contains 113 entries.

WIENER, ALEXANDER S

An Rh Hr *syllabus*, the *types* and their applications New York Grune & Stratton, 1954 82 p illus 22 cm. (Modern medical monographs No 9) $3 75 3449

Contents. Fundamentals. Rh antibodies. Serology and genetics of the Rh-Hr types. Erythroblastosis fetalis. Blood transfusion. Autosensitization. Anthropologic aspects. Medicolegal applications. Index.

Note. A brief but authoritative presentation of the accumulated knowledge on Rh-Hr types. The eight chapters, whose titles are given above, are organized in the form of compact paragraphs set off by distinctive typography and written in a style that suits them for use in review or reference. Included are 19 tables in which additional data are presented. The book is well indexed.

WINTROBE, MAXWELL M

Clinical hematology Fourth edition, thoroughly revised. 236 illustrations and 20 plates, 18 in color Philadelphia Lea & Febiger, *1956 1,184 p illus. (part col d) 24* cm. $15 00 3450

Contents The origin and development of the cells of the blood in the embryo, infant and adult. The erythrocyte—morphology and normal values—the production and the destruction of red corpuscles. The leukocytes. Blood platelets and coagulation. The blood as a whole. Blood groups and blood transfusion. The principles and technic of blood examination. Anemia—general considerations and treatment. Pernicious anemia and related macrocytic anemias. The normocytic anemias—acute post-hemorrhagic, primary refractory simple chronic and myelophthisic anemias—hemolytic anemias—sickle cell disease, thalassemia and the abnormal hemoglobin syndromes. Hypochromic microcytic (iron deficiency) anemia. Anemia and other disorders in infancy and childhood. Polycythemia. The purpuras. Hemophilia and other hemorrhagic disorders. Leukemia. Tumors and tumor-like conditions involving the blood-forming organs. Agranulocytosis and infectious mononucleosis. Appendices. Bibliography Index.

Note A standard, comprehensive treatment, based on the literature of the subject and written primarily to meet the needs of general practitioners. Although written in sufficient detail to serve the intended readers in most instances, all important statements, formulas, and data are number-referenced to the listing of the source articles in the bibliography Emphasis is placed on basic knowledge and on diagnosis. Laboratory procedures which may be carried out in the office of the average physician are considered in detail. There is also adequate discussion of the interpretation of the findings of tests made in diagnostic laboratories. The third edition was published in 1951 Revisions and augmentations made for this fourth edition were based on a comprehensive review of the literature published since the writing of the third edition. Two new chapters were added. Several others were thoroughly rewritten, and most of the others contain extensively revised sections. The bibliographies, which continue to be a prominent and most useful feature include references to literature published as recently as 1955.

UROLOGY

Addis, Thomas

Glomerular nephritis diagnosis and treatment. New York The Macmillan Company 1948. 338 p. illus. 24 cm. $8.00. 3451

Contents: Special clinical laboratory methods for the physical examination of patients with renal disease. Special clinical diagnostic methods. Inferences as to the nature of the renal lesion. Inferences as to the extent of the renal lesion. The theory of the differentiation of glomerular nephritis from other diseases. The differentiation of glomerular nephritis from other diseases. Glomerular nephritis. Theory and practice in the treatment of glomerular nephritis. Appendix. References. Index.

Note: This book is based on the author's own extensive experience in the treatment of renal disease. Furthermore, the author contends that accepted present-day methods of treatment are inadequate. The main point of his theory is that rest, supplemented by an adequate diet which does not impose an unnecessary burden on the kidneys, is essential. After a preliminary section which deals with laboratory and clinical observations, the book is devoted to discussion of practical clinical application of the author's method. The methods and work of other authors are not discussed in the text but are referred to in the bibliography.

Barnes, Roger W and Henry L. Hadley

Urological practice. With contributions by R. Theodore Bergman, Clyde W Collings Emil J Krahulik, Walter E. MacPherson, John R. Paxton, and Murray Russell. St. Louis The C. V Mosby Company 1954 494 p. illus. 26 cm. $10.00 3452

Contents (abridged) Part 1, Leading symptoms, signs and findings in urological disease—an index of urological symptoms outlined for use in diagnosis. Symptomatic treatment of common urological complaints—an index of urological complaints outlining the symptomatic treatment of each. Part 2, A Compendium for the general practitioner of genitourinary disease. Genitourinary diagnostic procedures. Urogenital infections. Urinary calculi (urolithiasis, urinary stones) Diseases of the penis. Diseases and lesions of the anterior urethra. Lesions of the scrotum and its contents. Infertility. Chronic congestion (toxic hypertrophy) of the prostate. Infections of the posterior urethra, prostate and seminal vesicles. Benign prostatic hypertrophy. Carcinoma of the prostate. Surgery of the prostate. Urethral and bladder disorders in women. Cystitis and infections of the bladder. Vesical calculi (bladder stones). Tumors of the bladder (vesical neoplasms) Surgical procedures applied to the urinary bladder. Enuresis (bed-wetting) Diseases, injuries and malformations of the ureter. Hydronephrosis (pyelonephrosis) Nonsurgical diseases of the kidney. Movable kidney (nephroptosis) Kidney stones (nephrolithiasis, renal calculi) Tumors and cysts of the kidney and perirenal space. Malformations (anomalies) of the kidney. Injuries and surgery of the kidney. Index.

Note: A practical work written primarily as a guide for graduate medical practitioners who are not specialists in urology. It begins with a tabular arrangement of symptoms and symptomatic treatment which together run to 81 pages. Diagnosis and differential diagnosis are discussed concisely but adequately. The material on individual diseases is arranged conventionally with attention paid primarily to symptoms, diagnosis and treatment. Surgical techniques, such as circumcision, which may be carried out in the physician's office, are fully described, but only the principles and general nature of surgical techniques that require hospitalization are covered. There are 145 figures but no literature references. The authors are members of the faculty of the School of Medicine of the College of Medical Evangelists.

Bell, Elexious Thompson

Renal diseases. Second edition, thoroughly revised, with 123 illustrations and 4 color plates Philadelphia Lea and Febiger 1950 448 p. illus. (part col'd) 24 cm. $8.00 3453

Contents: Introduction—Classification of renal diseases. Normal histology. Normal and pathological physiology. Developmental anomalies. Obstruction of the urinary tract—hydronephrosis. Glomerulonephritis. Tubular disease. Lower nephron nephrosis. Embolic glomerular nephritis (pyelonephritis) Diseases of the blood vessels. Diseases of the kidney related to metabolic disorders. Tumors of the kidney. Index.

Note: The purpose of this monograph is to bring about closer co-operation between the pathologist and the clinician in the understanding of renal disease. Accordingly for each disease covered the structural changes in the kidney are correlated with the clinical manifestations. In the case of diseases where the pathology is not fully understood, the crush syndrome for instance, the views of various authorities are concisely stated. The book is based on experimental studies and a very extensive series of cases. In this second edition the basic plan has not been changed, but several chapters have been revised and the bibliographies brought up to date.

Butt, Arthur J compiler and editor

Etiologic factors in renal lithiasis. Springfield, Ill. Charles C Thomas, 1956 401 p. illus. 26 cm. $12.50 3454

Contents: Historical survey of etiologic factors in renal lithiasis, by A. J. Butt. Anatomy by A. J Butt. Calcium and phosphorus metabolism and its relationship to nephrolithiasis, by I. Snapper and E. Gechman. On calcium oxalate stones, by G. Hammarsten. Uric acid metabolism in relation to renal calculi, by W. E. Kittredge and T. K. Waite. The biochemical background of cystine lithiasis, by H. E. Dent. Sulfonamide concretions and calculi, by E. F. Poppe. Relationship of upper urinary tract obstruction and stasis, to calculus disease and their surgical correction, by F. E. B. Foley. Role of infection in the etiology of renal lithiasis, by J. McCarthy. Randall's plaques and their relationship to the etiology of urolithiasis, by V. Vermooten. Geographic, racial, and climatic factors in etiology of urolithiasis, by V. Vermooten. The importance of colloid science in the etiology of kidney stones, by E. A. Brunner. A study of the urinary colloids in normal male subjects by electrophoresis by D. E. Schenker and S. Bay. The mucopolysaccharide structure of the kidney by W. E. Ehrich. The ground substance of the mesenchyme—old and newer data, by F. Duran-Reynals. The effect of hyaluronidase on human urine, by J. Seifter and D. Baeder. Pathogenesis of renal lithiasis—a working hypothesis, by A. J. Butt. Analysis of urinary calculi—using flame photometry for calcium determinations, by R. H. Leonard and A. J. Butt. Bibliography. Name index. Subject index.

Note: The current state of knowledge pertaining to the formation of calculi in the urinary tract is surveyed in this volume which is a collaborative effort by 23 eminent investigators. The titles of the individual papers or chapters together with the authors' names are given above. The historical survey which appears first covers from prehistoric times to the present and includes a bibliography of 148 references. The chapter on anatomy is a short one, comprised only of illustrations and identifying legends. The chapter on the effect of hyaluronidase describes an important discovery made by the editor of this volume and outlines the subsequent research. In a chapter that immediately follows this one the volume editor offers a hypothesis to explain the formation of urinary calculi and marshals the evidence in support of it. The book is an important addition to the literature of its subject.

Callomon, Fritz T., and John F Wilson

The nonvenereal diseases of the genitals etiology differential diagnosis and therapy Springfield, Ill. Charles C Thomas 1956 352 p. illus. 26 cm. $17.50 3455

Contents: Part I: Pyogenic diseases of the anogenital region. Dermatomycoses of the anogenital region. Diseases of the genital region due to animal parasites. Nonvenereal diseases of the genitals related to filtrable viruses. Aphthosis of the genitals, ulcus vulvae acutum (Lipschütz) and Stevens-Johnson syndrome—their possible relationship to erythema multiforme exudativum. Behçet's syndrome. Neurodermatitis of the anogenital region. Involvement of the genital region in drug eruptions. Other dermatoses involving the anogenital region. Pigmentary changes of the genital region. Changes of the penis and genital hair. Reaction of the genital region to nutritional deficiencies. General principles of treatment. Part II: The "nonvenereal ulcer" of the genitals. Diffuse inflammation of the glans and prepuce and of the vulva. Progressive sclerotic atrophic processes of penis and vulva. Neoplasms of the external genitals. Nonvenereal affections of the lymphatic system of the anogenital region. Part III: Nongonococcal (nonspecific) urethritis. Nonvenereal diseases of Cowper's and Bartholin's glands. Infections of Skene's ducts. Nonvenereal diseases of the testes, epididymis and spermatic cord. Nonvenereal diseases of the urogenital organs. Index.

Note: A reference book directed to general practitioners in medicine and specialists in dermatology. It deals with diseases other

gery of the National Academy of Sciences, National Research Council New York Grune & Stratton, 1955 240 p illus 24 cm $6 25 3445

Contents (abridged) Processing of blood, preparation of glassware and reagents, by L. M. Tocantins and others. Introductory exercises, by L. M. Tocantins. The mucopolysaccharide structure of the kidney by W. E. Ehrich. The ground substance of the mesenchyme—old and newer data, by F. Duran-Reynals. The effect of hyaluronidase on human urine, by J. Seifter and D. Baeder. Pathogenesis of renal lithiasis—a working hypothesis, by A. J. Butt. Analysis of urinary calculi—using flame photometry for calcium determination, by R. E. Leonard and A. J. Butt. Bibliography. Name index. Subject index.

Note: The current state of knowledge pertaining to the formation of calculi in the urinary tract is surveyed in this volume which is a collaborative effort by 20 eminent investigators. The titles of the individual papers or chapters together with the authors' names are given above. The historical survey which appears first covers from prehistoric times to the present and includes a bibliography of 118 references. The chapter on anatomy is a short one, comprised only of illustrations and identifying legends. The chapter on the effect of hyaluronidase describes an important discovery made by the editor of this volume and outlines the subsequent research. In a chapter that immediately follows this one the volume editor offers a hypothesis to explain the formation of urinary calculi and marshals the evidence in support of it. The book is an important addition to the literature of its subject.

CALLOMON FRITZ T AND JOHN F WILSON

The nonvenereal diseases of the genitals etiology differential diagnosis and therapy Springfield, Ill. Charles C Thomas, 1956 382 p Illus. 26 cm. $12.50 3455

Contents: Part I: Pyogenic diseases of the anogenital region. Dermatomycoses of the anogenital region. Diseases of the genital region due to animal parasites. Nonvenereal diseases of the genitals related to filterable viruses. Aphthosis of the genitals, ulcus vulvae acutum, pluriorificialis and Stevens-Johnson's syndrome—their possible relationship to erythema multiforme exudativum. Behçet's syndrome. Neurodermatitis of the anogenital region. Involvement of the genital region in drug eruptions. Other dermatoses involving the anogenital region. Pigmentary changes of the genital region. Changes of the pubic and genital hair. Reaction of the genital region to nutritional deficiencies. General principles of treatment. Part II: The "nonvenereal ulcer" of the genitals. Diffuse infiltrative inflammation of the glans and prepuce and of the vulva. Progressive sclerotic atrophic processes of penis and vulva. Neoplasms of the external genitals. Nonvenereal affections of the lymphatic system of the anogenital region. Part III: Non-gonococcal (nonspecific) urethritis. Nonvenereal diseases of Cowper's and Bartholin's glands. Infections of Skene's ducts. Nonvenereal diseases of the testis, epididymis and spermatic cord. Nonvenereal diseases of the corpora cavernosa. Index.

Note: A reference book directed to general practitioners in medicine and specialists in dermatology. It deals with diseases other

than syphilis, chancroid and gonorrhea that affect the genital organs and adjacent regions. Each of the diseases is considered in relation to its etiology diagnosis, and therapy and in the discussions of some diseases, other aspects also are covered, such as incidence and histology Particular attention is given to differential diagnosis, including differentiation from the venereal infections. There are 150 figures and fairly extensive references to the literature.

CLARKE, B G, AND LOUIS R. M DEL GUERCIO

Urology New York The Blakiston Division, McGraw Hill Book Company, Inc. 1956 245 p illus 24 cm $6 50 3456

Content Part I, Diagnosis of genitourinary disorders History taking. Physical examination Laboratory diagnosis. X-ray diagnosis. Part II Physiologic disturbances Physiology of the kidney by J M. Hayman, Jr Diseases of the nephron, by J M. Hayman, Jr Physiology of urine transport. Neurogenic dysfunction of the bladder Physiology of semen conduction and male infertility Part III, Principles of treatment Surgical anatomy catheterization, and surgical technic. Embryology of the urogenital tract and treatment of malformations. Urinary and genital infections, by J J Finn, Jr and B G Clarke. Urinary disturbances in the female Genito-urinary tuberculosis. Physiology and treatment of urinary calculi. Urinary obstructions. Urogenital wounds and injuries. Tumors of the urogenital organs. Index.

Note A brief but fully illustrated textbook. It is designed for use in undergraduate courses in medical school. The illustrations, of which there are 162 are principal feature. Included are photographs illustrating examination techniques, reproductions of line drawings, reproductions of radiographs and reproductions of photomicrographs of normal and pathological histology Most of the illustrations are accompanied by long, explanatory legends which make it obvious that the authors view them as a primary medium of exposition. The accompanying text is brief but well written. The bibliographies are extensive.

COLBY, FLETCHER H.

Essential urology Third edition. Baltimore The Williams & Wilkins Company, 1956 656 p illus (part col d) 24 cm $8 00 3457

Contents Part I, Embryology anatomy and physiology of the genito-urinary organs Development of the kidneys and ureters. Physiology of the kidney The ureters. The bladder The penis. The male urethra. The female urethra. The prostate. The testis and epididymis. The seminal vesicles. The scrotum. Part II, Examination of the urological patient Methods of examination. Part III, Diseases of the genitourinary organs Kidney Ureter Bladder Prostate. Seminal vesicles. Male urethra. Female urethra. Penis. Scrotum. Testis. Epididymis. Male sterility Tuberculosis of the genito-urinary organs. Index.

Note A standard work used both as textbook by students in medical colleges and as an office reference book by general practitioners. The basic information on embryology anatomy and physiology is covered concisely in Part I, which in this edition is 121 pages long. Methods of examination of patients are discussed for the benefit of students and general practitioners in a 15-page chapter Beginning with the 13th chapter and page 143 the space is devoted to specific diseases, and these are described individually according to the following pattern etiology pathology symptoms, diagnosis, treatment, and prognosis. Illustrations, which include many pictures of gross and microscopic pathology number 358 in this third edition. The second edition was published in 1950. The length of the work has been increased, and important changes have been made in both text and illustrations. Literature published as recently as 1955 has been added to the bibliography

CORDONNIER JUSTIN J

Clinical urology for general practice. Illustrated St Louis The C V Mosby Company 1956 252 p illus 26 cm. $6 75 3458

Contents. Steps for urologic diagnosis. Obstructive uropathy Neoplasms of the genitourinary tract. Infections of the genitourinary tract. Renal failure Urinary calculi. Neurogenic bladder dysfunction Senescence fertility and impotence in the male Injuries of the genitourinary tract. Female urology Congenital anomalies. Index.

Note A concise text addressed to general practitioners and more particularly to advanced students in medical colleges who are preparing for general practice It deals with diagnosis, types of urologic disorders, and with the diseases and disabilities that the practitioner is most likely to see in general practice. It does not cover rare diseases. Selected literature references are given, and there are 67 figures including considerable number of roentgenograms reproduced in large scale. The author is Professor of Urology in Washington University School of Medicine.

FARR, LEE E

Treatment of the nephrotic syndrome. Springfield Ill. Charles C Thomas, 1951 61 p 22 cm (American lecture series. Publication no 64 A monograph in American lectures in circulation, edited by Irvine H. Page and Arthur Curtis Corcoran) $2 25 3459

Content Treatment of edema. Treatment of malnutrition. Treatment of the renal lesion. Treatment of complications Nephrotic crises. Cortisone, ACTH and nitrogen mustard. General comments. References.

Note A brief survey addressed primarily to the general practitioner of the various treatments currently used on patients with nephrotic syndrome. It is based both on an analysis of published experiments and on clinical practice. Advantages and disadvantages of each treatment are discussed. There is a bibliography of 71 citations.

GROLLMAN, ARTHUR

Acute renal failure. Springfield, Ill. *Charles C Thomas 1954 92 p illus. 22 cm.* (American lecture series Publication no 192 A monograph in American lectures in internal medicine, edited by Roscoe L Pullen.) $4.00. 3460

Contents: Introduction. Etiology Pathology Physiology Clinical course. Treatment. Epilogue. Bibliography Index.

Note A short but valuable monograph in which the accumulated knowledge pertaining to the pathogenesis of acute renal failure and its management is presented together with references to the literature. The chapter on treatment includes discussion of the artificial kidney but it emphasizes other methods of treatment. The book concludes with the following statement "On the basis of our present knowledge acute renal failure should become rare occurrence with a low mortality except in such cases where it is merely an accompaniment of irreversible and fatal damage elsewhere than in the kidney The bibliography contains 103 literature references.

HERBUT, PETER ANDREW

Urological pathology 527 illustrations, including 2 in color Philadelphia Lea & Febiger *1952 2 v* illus (part col d) 24 cm. $24 00 3461

Content Volume I Embryology of urinary system. Urethra. Bladder Ureters and pelves. Kidneys. Index. Vol. II Adrenals. Embryology of male genital system Penis. Prostate. Seminal vesicles. Spermatic cord. Epididymides. Testes. Scrotum. Index.

Note A comprehensive, well-illustrated work It is arranged by region, and under each region the individual diseases are discussed under the following subheadings definition, distribution, cause, clinical manifestations, microscopic appearance gross appearance complications, clinicopathologic correlation, diagnosis, treatment and prognosis Extensive literature references are included. Although suitable for use in instruction, the book is essentially reference work rather than textbook. The author is Professor and Head of the Department of Pathology of Jefferson Medical College.

LIPPMAN RICHARD WILLIAM

Urine and the urinary sediment a practical manual and atlas. Springfield Ill Charles C *Thomas 1952 124* p. illus (part col d) *26* cm 3462

Contents: Preliminaries and elements of the urinary sediment. Observations on the urine in disease. General considerations and technique. References. Index.

Note: The main feature of this short monograph is a series of 37 reproductions in color of photographs of urinary sediments. These photographs are original and were made by the author. In the text of the book the author has discussed the examination of urine from the standpoint of the clinician interested in the diagnosis of disease. Also he has described specifically and in detail selected clinical laboratory procedures. The list of references includes 93 citations. A second edition was published in 1937. 190 p., $3.50.

LOWSLEY, OSWALD SWINNEY, AND THOMAS JOSEPH KIRWIN

Clinical urology. Drawings by William P Didusch. Third edition. Baltimore: The Williams & Wilkins Company, 1956. 2 v. illus. (part col'd) 29 cm. $32.50 3463

Contents (abridged): Volume I. History-taking and physical examination. Examination of the urine. Tests of renal function. Instrumental examination. Roentgenography of the genito-urinary tract. Anesthesia in urology. Embryology, anatomy, anomalies, and physiology of the penis. Injuries and diseases of the penis. Operative treatment. Embryology, anatomy, anomalies, and physiology of the scrotum and scrotal contents. Injuries and diseases of the scrotum and the scrotal contents. Operative treatment. Embryology, anatomy, anomalies, and physiology of the vas deferens, seminal vesicle, and ejaculatory duct. Injuries and diseases. Operative and postoperative treatment. Embryology, anatomy, anomalies, and physiology of the male urethra. Injuries and diseases. Operative treatment. Embryology, anatomy, anomalies, and physiology of the female urethra. Injuries and diseases. Operative treatment. Embryology, anatomy, anomalies, and physiology of the prostate gland. Injuries and diseases. Operative and postoperative treatment. Volume II. Embryology, anatomy, anomalies, and physiology of the bladder. Injuries and diseases. Operative and postoperative treatment. Embryology, anatomy, anomalies, and physiology of the ureter. Injuries and diseases. Operative treatment. Embryology, anatomy, anomalies, and physiology of the kidney. Injuries and diseases. Operative and postoperative treatment. The adrenal gland. Chemotherapy and antibiotics in urology. Index.

Note: A comprehensive, fully illustrated treatment, which presents the modern views of the authors. It is used both as a textbook for the instruction of advanced students in medical colleges and as a reference book for general practitioners of medicine and general surgeons. Some portions are of interest to graduate specialists in urology. Basic information, such as general techniques of diagnosis, history taking, anatomy and descriptions of diseases, are adequately covered. The textual descriptions of surgical techniques are somewhat brief, but the illustrations portray lucidly to surgical operations and include many step-by-step sequences of preferred techniques. The second edition was published in 1944 and was also in two volumes. The work was extensively revised for this third edition, with much new matter added in both text and illustrations. The two-volume format has been retained, but there are now three columns of print on a page. The total number of pages in the two volumes is 999, and the total number of figures 599. Extensive bibliographies in the chapters are noteworthy features, and these now contain many references to literature published since the second edition was written.

MCCREA, LOWRAIN EDWARD

Clinical cystoscopy: technic, procedures, diagnosis, treatment. Drawings by R. Engle Shafter. With 742 illustrations, 201 in color. Second edition. Philadelphia: F. A. Davis Company, 1949. 585 p. illus. (part col'd) 26 cm. $28.00 3464

Contents (abridged): Vol. I. The cystoscope. Introduction of the cystoscope. The normal bladder. Cystitis. Miscellaneous disorders of bladder. Tumors of the bladder. Vesical calculus. The neurogenic bladder. Prostatic hypertrophy. The urethra. Ureteral catheterization. Bibliography. Index. Vol. II. Renal anomalies. Renal function tests. Hydronephrosis. Nonobstructive infections of the kidney. Medical diseases of the kidney. Specific infections of the kidney. Renal cysts. Tumors of the kidney. Retroperitoneal cysts and tumors. Urology in the female. Urology in children. Urological roentgenography. Bibliography. Index.

Note: A comprehensive, fully detailed treatise addressed to upper-class and graduate medical college students, general practitioners of medicine, roentgenologists, and specialists in urology. The various cystoscopic manipulations and procedures are both described in the text and shown in the illustrations. The illustrations are a special feature. Not only are they numerous but they are clear and well reproduced. Many of the colored illustrations are reproductions of photographs taken in color. The first edition was published in 1945. Many useful revisions and augmentations have been made in this edition. Both the textual material and the illustrations have been increased. The index has been much improved.

MACLEAN, JOHN T

Acute renal failure, including the use of the artificial kidney. Springfield, Ill.: Charles C Thomas, 1952. 114 p. illus. 24 cm. $4.00 3465

Contents: Factors concerned in the production of acute renal failure. The role of acid-base balance in renal failure. Renal circulation—intrarenal circulation—renal anoxemia. Lower nephron nephrosis. The diagnosis of acute renal failure due to lower nephron nephrosis. The treatment of acute renal failure due to an intrinsic lesion of the lower nephron nephrosis type. Methods of removing the excess waste products from the blood. Dialysis with the artificial kidney. Adreno-cortico trophic hormone. Index.

Note: A useful brief summary addressed to general practitioners. The causes and physiology of renal failure are discussed with particular emphasis on the biochemical and clinical aspects. Methods and treatment within the scope of the practitioner with limited hospital and laboratory facilities are described compactly, and literature references are given to fuller discussions. Although the artificial kidney is not an instrument available to physicians practicing in small communities, its principles and applications are described so that the general practitioner will know what may be accomplished by its use. The author is a prominent Canadian urologist.

MCMANUS, JOSEPH FORDE ANTHONY

Medical diseases of the kidney (an atlas and introduction). 100 illustrations. Philadelphia: Lea & Febiger, 1950. 176 p. illus. 26 cm. $6.00 3466

Contents: The nephron in general. Connective tissue, vessels and nerves. The glomerular rest. General reactions of the kidney to injury. Acute renal failure—clinical features—acute glomerulonephritis—the crush kidney—acute hypertension—eclampsia—acute pyelonephritis; the toxic nephroses. Chronic renal failure. The problem of the shrunken kidney. Chronic pyelonephritis. Chronic glomerulonephritis. Intercapillary glomerulosclerosis. Polycystic kidneys. Incidental diseases. The kidney in hyperparathyroidism—in diabetes—in amyloidosis—in its evolution—in syphilis. References. Index.

Note: An introductory work in the form of an atlas containing 100 pictures, many of which are reproductions of microphotographs. Most of the photomicrographs are taken from sections prepared by the periodic acid-Schiff's reagent technique. The illustrations are accompanied by many discussions and rather long legends. The book is divided in the two main groupings of acute renal failure and chronic renal failure. The bibliography is selected. The author is Professor of Pathology in the Medical College of Alabama.

MARSHALL, VICTOR F

Textbook of urology. New York: Paul B Hoeber, Inc., Medical Book Department of Harper & Brothers, 1956. 268 p. illus. 24 cm. $5.50 3467

Contents: Introduction. Obstruction-infection. Obstructions in the upper urinary tract. Diseases of the prostate. Urinary calculi. Congenital anomalies. Neurogenic bladder. Unusual tuberculosis. Trauma. Urethritis. Local genital lesions and disorders. Miscellaneous diseases. Impotency and infertility in men. Neoplasms of the penis, scrotum, and testes. Neoplasms of the bladder. Cancer of the prostate. Neoplasms of the kidney. Hematuria. Urologic surgery. Appendix. Index.

Note: A well-written and comparatively simple introduction to urology. It contains much less information than the conventional orthopedic treatises, but is authoritative and up to date. It is designed for use as a textbook in undergraduate courses in medical colleges and is suitable also for reading and reference by graduate general practitioners who undertake urological diagnosis and simple operations in the course of their practice. The 64 figures are all reproductions of line drawings. A briefly annotated list of books for further reading is supplied in the appendix. The author is a member of the faculty of Cornell University Medical College.

MERRILL, JOHN P

The treatment of renal failure, therapeutic principles in the management of acute and chronic uremia. New York Grune & Stratton, 1955 238 p illus 23 cm. $6 75 3468

Contents Normal renal function. Normal composition of body fluids. The diseased kidney Signs and symptoms of renal failure Acute renal failure. Chronic renal failure. Treatment of renal failure by extrarenal routes. Intestinal lavage. Peritoneal lavage. Replacement transfusions. The artificial kidney Transplantation of the human kidney Appendix. References. Index.

Note. Experience and studies in the Cardiorenal Service of the Peter Bent Brigham Hospital in Boston were the basis for this monograph, which is designed to guide general practitioners and other physicians who are not specialists in nephrology in the treatment of renal insufficiency and renal failure. Renal physiology etiology and pathophysiology are covered in outline, and the chapters devoted to them are intended only as background for the chapters on treatment. All currently useful methods of treatment are discussed, including the artificial kidney and kidney transplantation. In the chapter on the artificial kidney the author devotes several paragraphs to contra-indications, and points out the various factors that must be considered in addition to the therapeutic ones. In the chapter on transplantation he makes it clear that much work remains to be done on this technique. The literature of the field is extensively cited. The technique of short term continuous transperitoneal dialysis is described in an appendix.

MOORE, JOSEPH EARLE

Penicillin in syphilis. Springfield, Ill Charles C Thomas, 1946 319 p illus. 24 cm. $5.50 3469

Contents Introduction. Penicillin and its chemistry The pharmacology of penicillin in relation to its use in syphilis. The toxicity of penicillin in animals and man. The activity of penicillin against various infections in vivo and in vitro Penicillin in experimental syphilis. The mechanism of action of penicillin and its implications in syphilis. Penicillin administered for other purposes as source of confusion in the diagnosis of syphilis. Penicillin in the treatment of early syphilis. Penicillin in the treatment of early syphilis resistant to arsenic and bismuth. Penicillin in the treatment of latent syphilis. Penicillin in the treatment of benign late (gummatous) syphilis, including hepatic syphilis and acute syphilitic nephrosis. Penicillin in the treatment of cardiovascular syphilis. Penicillin in the treatment of ocular syphilis. Penicillin in the prevention of prenatal syphilis by treatment of the syphilitic pregnant woman. Penicillin in congenital syphilis. Penicillin in neurosyphilis. The post-treatment observation of syphilitic patients treated with penicillin. Streptomycin in syphilis. Author index. Subject index.

Note: A valuable supplement to the author's *Modern treatment of syphilis*, Springfield, Charles C Thomas, second ed., 1941 It serves as practical guide to the use of penicillin in syphilis, as developed up to the time of publication. Almost half the space is devoted to basic information concerning the chemistry pharmacology and therapeutic action of penicillin. The remaining chapters, which describe clinical methods and procedures of treatment, are based on information derived from a nation-wide study conducted by 44 co-operating groups and clinics. The author states that the references given at the end of each chapter constitute an exhaustive bibliography of the subject through October 1946.

NARATH, PETER ALFRED

Renal pelvis and ureter New York Grune & Stratton, 1951 429 p illus 26 cm. $12 50 3470

Content Terminology The embryology of the ureter and the renal pelvis. The final form of the renal pelvis. The normal anatomy of the ureter and the renal pelvis. The normal histology of the renal pelvis and the ureter. The dynamics of the upper urinary tract. The tonus of the urinary tract. Resorption and absorption in the upper urinary tract. Various forms of extravasations. The roentgenography of the upper urinary tract. Bibliography Index of authors. Index of subjects.

Note: A monograph on the embryology gross and microanatomy and the physiology of a major part f the urinary system. Basic knowledge is emphasized, but since the book is designed to be of practical aid to urologists, considerable information that is directly related to diagnosis is included. The book is based both on the literature and on the author's own investigations. The bibliography covers publications from 1677 to 1950 and is arranged chronologically The 264 figures include reproductions of many exceptional roentgenographs.

PRATHER, GEORGE CALVIN

Urological aspects of spinal cord injuries. Springfield, Ill. Charles C Thomas, 1949 146 p illus 22 cm. (American lecture series. Publication no 30 A monograph in American lectures in neurosurgery, edited by Michael E DeBakey and R. G Spurling. Division of neurosurgery, editor, Barnes Woodhall) $3 75 3471

Contents The bladder. Changes in upper urinary tract after spinal cord injury Changes in sexual organs after spinal cord injury. Genito-urinary complications. Results of treatment. Military policy Suggested program for treatment. References. Subject and author index.

Note: An authoritative résumé of the pertinent neurological and urological knowledge, of methods of treatment, and of experience, especially in World War II. Essentially it is a digest of previously published literature including the author's own contributions. Since references are incorporated in the text to the citations of source articles in the extensive bibliography the book is also a guide to the literature of the subject.

SMITH, HOMER WILLIAM

The kidney, structure and function in health and disease. New York Oxford University Press, 1951 1,049 p. illus (part col'd) 24 cm. $17.50 3472

Contents (abridged) Anatomy Studies on individual nephrons. Measurement f the filtration rate. Excretion of urea. Clearances involving active tubular reabsorption. Clearances involving tubular excretion. Other clearances. Excretion of protein. The reliability of inulin as measure of glomerular filtration. The antidiuretic hormone and the excretion of water Excretion of sodium and other strong electrolytes. The adrenal cortex and Addison's disease. Acid-base equilibria in plasma and urine. The control f the renal circulation and the action of pharmacodynamic agents. Trophic and other factors related to renal function. Renal function in infancy and childhood. Renal hemodynamics. Limitations of clearance methods during disturbed renal function. Disturbances of renal function in non-renal disease. Chronic congestive heart failure. Essential hypertension. Acute renal failure related to traumatic and toxic injuries. The juxtamedullary circulation. Diseases of the kidney and urinary tract. Diuretics. Bibliography Index.

Note A comprehensive monograph of the current knowledge of renal function and dysfunction. It covers both the physiology of the kidney and the part played by the kidney in the physiology of the body The work is based on a comprehensive survey of the literature and good part of the text consists of concise digests of previously published papers including the author's own. *Statements in the text* are key numbered to the bibliography and as an added reference feature the page numbers on which references are made to a particular publication are noted in the bibliography The books and papers listed in the bibliography number 2,300.

THOMAS, EVAN WELLING

Syphilis, its course and management. Foreword by John F Mahoney Chapter on "Public health aspects of syphilis" by Theodore J Bauer New York The Macmillan Company 1949 317 p. illus. 24 cm $5 50 3473

Contents Etiology of syphilis. A general description of the course of untreated syphilis. Immunology of syphilis. Interpretation of quantitative serologic tests for syphilis (STS) Iodides, bismuth, arsenicals, and fever therapy Antibiotics in the treatment of syphilis. Principles underlying antisyphilitic treatment. The examination and education f the patient. The diagnosis and treatment of early infectious syphilis. Latent syphilis. Late benign syphilis. Cardiovascular syphilis. Neurosyphilis. Syphilis and pregnancy Congenital syphilis. The public health aspects of syphilis. Index.

Note: A comparatively short presentation in which modern diagnostic tests and treatment with antibiotics, especially penicillin, are stressed. Many data are presented in tabular form to save space. The book is based largely on an extensive experience with the rapid treatment of early syphilis at Bellevue Hospital.

TRUSSELL, RAY E.

Trichomonas vaginalis and trichomoniasis. With an introduction by E. D Plass. Springfield, Ill. Charles C Thomas, 1947 277 p. illus. (part col'd) 23 cm. $6.00. 3474

Contents (abridged): Part I, Trichomonas vaginalis: Morphology. Growth requirements. Culture media. Viability and the effect of physical and chemical agents. Pathogenicity. Classification and the question of the identity of species. Part II, Trichomonas vaginalis infestation: Rate and incidence of infection. Sources of infection—methods of transmission—prevention. Duration of infection. Symptoms. Laboratory diagnosis. Clinical findings associated with Trichomonas vaginalis. Trichomonas vaginalis and puerperal morbidity. Trichomonas vaginalis and abortion. Part III, Treatment: Alphabetical index and description of chemicals utilized in efforts to eradicate Trichomonas vaginalis. Bibliography. Index.

Note: A monographic survey of the current knowledge of this parasite. In addition to incorporating all of the experimental work of the author and his colleagues, the literature has been reviewed and digested, with references from the text to the numbered bibliography. The number of references in the bibliography, 1,314, is indicative of the scope of the work. Included is a long, alphabetically-arranged list of drugs which have been tried. Results with these drugs which have been reported in the literature are summarized briefly. In his preface the author points out that the book does not contain the final answer to the medical problems caused by this parasite.

ULLERY JOHN C.

Stress incontinence in the female. New York Grune & Stratton, 1953 149 p. illus. (part col'd) 26 cm. $6 75 3475

Contents: Stress incontinence in the female. Embryology and anatomy. The physiology of micturition and continence. Etiology of stress incontinence. Diagnosis of stress incontinence. Treatment of stress incontinence in the female. Results of treatment—evaluation of the present day operative procedures. Summary. Bibliography. Index.

Note: The information on involuntary loss of urine under conditions of stress such as coughing, sneezing, and emotional stress which has been published in the international literature is presented in this monograph, together with hitherto unpublished information from the experience of the author and his associates in the Division of Obstetrics and Gynecology of the Pennsylvania Hospital in Philadelphia. Essentially all of the chapters but the last one, whose title begins "Results of treatment, are based on the literature. The information of the original publications is expertly abstracted and integrated with little critical comment by the author. Operative techniques published in the literature are described in considerable detail with illustrations. In the terminal chapter, experience in the Pennsylvania Hospital with several operative techniques on two series of cases, one numbering 28 and one numbering 39, are described and, on the basis of this experience, the author makes certain recommendations and also points to the need for more research.

UNITED STATES. PUBLIC HEALTH SERVICE. VENEREAL DISEASE RESEARCH LABORATORY CHAMBLEE, GEORGIA

Serologic tests for syphilis 1955 manual. U S. Department of Health, Education, and Welfare, Public Health Service, Bureau of State Services, Division of Special Health Services, Venereal Disease Program. Washington, D C. Government Printing Office, 1955 106 p. illus. 23 cm. (United States. Public Health Service. Publication no 411) $1.00. 3476

Contents: General information. General equipment. APHA reference microflocculation test. Hinton tests. Kahn tests. Kline tests. Kolmer tests. Mazzini tests. Rein-Bossak tests. VDRL tests. Appendix: Collection and preservation of sheep blood. Preparation of hemolysin (sheep red cells). Preparation and preservation of complement. Use of merthiolate as bacteriostat. Quantitative determination of spinal fluid protein.

Note: This is the fifth edition of a manual originally issued by the U. S. Public Health Service in 1939 as Supplement 9 to *The journal of venereal disease information.* This edition, like the preceding editions, brings together in one place the technical procedures to be observed in the performance of each of eight groups of reliable serologic tests for syphilis now employed in the United States. It is hoped so that serologists and serologic technologists may keep themselves abreast of the latest developments in this field without the necessity of searching in journals and other scattered sources. The manual was prepared with the assistance of the originators of each of the test techniques.

VOGL, ALFRED

Diuretic therapy the pharmacology of diuretic agents and the clinical management of the edematous patient. Baltimore The Williams & Wilkins Company 1953 248 p illus. 24 cm. $5.00. 3477

Contents: Edema—classification, pathogenesis and principles of treatment. Indications for diuretic treatment. Pharmacology of the diuretic drugs (their action and relative effectiveness). Antidiuretic agents. The practice of diuretic therapy. Closing remarks. Bibliography. Index.

Note: Written by the physician who was the first to observe the diuretic properties of an organic mercurial compound, this book has indisputable quality of authority. It is based on the clinical experience of the author and other clinicians in the three and one-half decades since that discovery was made. It covers diuretic therapy comprehensively from the clinical standpoint, including not only pharmacology—which is the subject of a 30-page chapter—but also such everyday matters as diets. The historical aspects of the subject also are covered. Throughout the book, the text is key-numbered to citations of the source articles listed in the bibliography.

THE YEAR BOOK OF UROLOGY (1955–1956 Year Book series) Edited by William Wallace Scott. Chicago The Year Book Publishers, Inc., 1956 397 p illus. 20 cm. $6.50 3478

Contents: The tenth congress of the International Society of Urology at Athens. General considerations. The kidney. The adrenals. The ureter. The bladder. The prostate. The genitalia. Index. Index to authors.

Note: This annual publication is organized similarly to the other year books in this publishers' [illegible] Year Book series. The chapters consist of abstracts from the world medical literature. The volume at hand covers journals received by the editor between November, 1954, and October 1955. In most cases the abstracts are long enough to be read without reference to the original literature. However, reference to the source article is given in all cases. The abstracts are supplemented in many instances by short editorial comments written by the editor in which he has related them to other work or offers evaluatory comments. In this issue there are 82 illustrations.

ONCOLOGY

ACKERMAN LAUREN V., AND JUAN A. DEL REGATO

Cancer diagnosis, treatment, and prognosis. With 02 text illustrations and 23 color reproductions. Second edition. St. Louis The C. V Mosby Company 1954 1,201 p. illus. (part col'd) 26 cm. $22.50. 3479

Contents: Part I, Introduction. Cancer research, by M. R. [illegible]. Pathology of cancer. Surgery of cancer, by E. M. Bricker. Radiotherapy of cancer. Cancer of the skin. Cancer of the respiratory system and upper digestive tract. Tumors of the thyroid gland. Tumors of the mediastinum. Cancer of the digestive tract. Cancer of the genitourinary tract. Cancer of the male genital organs. Tumors of the suprarenal gland. Cancer of the female genital organs. Cancer of the mammary gland. Malignant tumors of bone. Sarcomas of the soft tissues. Cancer of the eye. Hodgkin's disease. Leukemia. Index of authors. Index of subjects.

Note: An exceptionally comprehensive presentation of the modern clinical knowledge of cancer. Among the more general chapters at the beginning of the book, the one on radiotherapy—which in this

edition is 44 pages long—is outstanding. The greater part of the space is devoted to discussions of cancer according to systems and anatomic types. For each type the modern knowledge as to its anatomy incidence, etiology pathology clinical evolution diagnosis, treatment, and prognosis is presented clearly and fully Lymphatics are given special attention and the lymphatic system of each potential cancer type is represented diagrammatically Details of surgical and radiotherapeutic techniques are not covered. The first edition was published in 1947 In preparing this second edition the chapters contributed by Dr M. V Shimkin and by Dr E. M. Bricker were rewritten and revised, and added sections have been inserted in many of the other chapters. Illustrations were revised and new ones added, although the total number has been reduced. Literature published since the first edition was written was added to the extensive chapter bibliographies.

ADVANCES IN CANCER RESEARCH Edited by Jesse P Greenstein and Alexander Haddow Volume I New York Academic Press, Inc., 1953 590 p illus 23 cm. $12 00 3480

Contents: Electronic configuration and carcinogenesis, by C. A. Coulson. Epidermal carcinogenesis, by E. V Cowdry The milk agent in the origin of mammary tumors in mice, by L. Dmochowski. Hormonal aspects of experimental tumorigenesis, by W U Gardner Properties of the agent of Rous No. 1 sarcoma, by R. J C. Harris. Applications of radioisotopes to studies of carcinogenesis and tumor metabolism, by C. Heidelberger The carcinogenic aminoazo dyes, by J A. Miller and E. C. Miller The chemistry of cytotoxic alkylating agents, by W C. J Ross. Nutrition in relation to cancer by A. Tannenbaum and H. Silverstone. Plasma proteins in cancer by R. J Winzler Author index. Subject index.

—— Volume II New York Academic Press, Inc., 1954 517 p illus 23 cm. $11 00 3481

Contents. The reactions of carcinogens with macromolecules, by P Alexander Chemical constitution and carcinogenic activity by G M. Badger Carcinogenesis and tumor pathogenesis, by I. Berenblum. Ionizing radiations and cancer by A. M. Brues. Survival and preservation of tumors in the frozen state, by J Craigie. Energy and nitrogen metabolism in cancer, by L. D Fenninger and G. B. Mider Some aspects of the clinical use of nitrogen mustards, by C. T Klopp and J C. Bateman. Genetic studies in experimental cancer by L. W Law The role of viruses in the production of cancer by C. Oberling and M. Guérin. Experimental cancer chemotherapy by C. C. Stock. Author index. Subject index.

—— Volume III New York Academic Press, Inc., 1955 369 p illus 23 cm. $8 50 3482

Contents Etiology of lung cancer by R. Doll. The experimental development and metabolism of thyroid gland tumors, by H. P Morris. Electronic structure and carcinogenic activity and aromatic molecules—new developments, by A. Pullman and B Pullman. Some aspects of carcinogenesis, by P Koller. Pulmonary tumors in experimental animals, by M. B Shimkin. Oxidative metabolism of neoplastic tissues, by S. Weinhouse. Author index. Subject index.

—— Volume IV New York Academic Press Inc. 1956 416 p illus 23 cm $10 00 3483

Contents Advances in chemotherapy of cancer in man, by S. Farber and others. The use of Myleran and similar agents in chronic leukemias, by D A. G. Galton. The employment of methods of inhibition analysis in the normal and tumor-bearing mammalian organism, by A. Goldin. Some recent work on tumor immunity, by P A. Gorer Inductive tissue interaction in development, by C. Grobstein. Lipids in cancer by F L. Haven and W R. Bloor The relation between carcinogenic activity and the physical and chemical properties of angular benzacridines, by A. Lacassagne and others. The hormonal genesis of mammary cancer by C. Mühlbock. Author index. Subject index.

Note An annual series in which are published monographic reviews of advances in the understanding and treatment of cancer The individual papers are monographs based on the literature and are essentially critical reviews of the experimental results and other information published in it. Each one is accompanied by an extensive bibliography Although recent literature is emphasized, the authors are not limited to reviewing the literature of a specific year or even of a specific term of years, but each one covers those publications which he considers essential to the presentation of an adequate review of his specific topic. The series affords to scientists and others who are engaged in cancer research and to practitioners of medicine who are interested in progress in the field a means of keeping abreast of the major developments and the significant literature.

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Antimetabolites and cancer A symposium presented on December 28–29, 1953, at the Boston meeting of the American Association for the Advancement of Science. Edited by Cornelius P Rhoads Washington, D C. American Association for the Advancement of Science, 1955 312 p illus 23 cm. $5 75 3484

Contents Metabolic facts of the cancer cell, by S. Weinhouse. Competitive inhibition of microbial growth by normal metabolites, by B. D. Davis. Antimetabolites in study of biochemistry of purines and pyrimidines, by E. M. Lansford, Jr and W Shive. Antimetabolites of nucleic acid precursors, by D W Visser. Metabolic requirements for formation of citrovorum factor and studies of mechanism of resistance to A-methopterin, by C. A. Nichol and A. D. Welch. The seeing eye in science, by C. P Rhoads Mammalian fetal development and antimetabolites, by M. M. Nelson. Effects of antigrowth substances in normal and atypical plant growth, by L. G. Nickell. Antimetabolite studies on bone marrow in vitro by J R. Totter Obliteration of spontaneous cancer through discovery and application of some fundamentals about antimetabolites, by D W Woolley Antimetabolite studies in Tetrahymena and tumors, by R. E. Parks, Jr Some aspects of the metabolism of 8-azaguanine, by H. G. Mandel. Mechanism of drug resistance to metabolic antagonists in neoplastic cells, by H E. Skipper Studies on analogs of purines and pyrimidines, by G. H. Hitchings. Tumor-destroying effects of viruses, by D. R. Ginder. Antimetabolite principle as applied to hormone-induced tissue growth and to hormonal control of neoplasms, by R. Hertz. Antimetabolite treatment of leukemia, by J H. Burchenal. Metabolic basis for optimism regarding chemotherapy with nucleic acid derivatives, by G. B Brown. Discussion.

Note. The status in 1953 of the role of antimetabolites in the control of cancer is well surveyed in this collection of papers originally presented at a symposium. The authors and titles of all papers are listed in the above contents. The editor of the volume—who is also the contributor of one paper—is associated with the Sloan-Kettering Institute for Cancer Research in the city of New York, and the other contributors are eminent scientists currently engaged in cancer research, biochemistry or closely related fields. In most of the papers, recent research is emphasized. The volume is useful as a portrayal of the field at the time the papers were composed and as a guide to the significant literature published up to that time. It is also a prime example of a scientific symposium which drew contributions from several areas of science to a relatively new and active area of research.

AMERICAN CANCER SOCIETY

Bladder tumors a symposium. Philadelphia J B Lippincott Company 1956 97 p. illus. 27 cm $4 00 3485

Contents Current clinical problems regarding bladder tumors, by V F Marshall. The prognosis with untreated bladder tumors, by G. R. Prout and V F Marshall. The treatment of bladder carcinoma by local excision and fulguration, by J A. Nichols and V F Marshall. Treatment of histologically benign papilloma of the urinary bladder by local excision and fulguration, by J A. Nichols and V F Marshall. Survival of patients with bladder carcinoma treated by simple, segmental resection, by V F Marshall and others. Permanent cutaneous ureterostomy by G. A. Humphreys. Simple total cystectomy for carcinoma of the urinary bladder, by M. Bryce, II and others. A technique for radical total cystectomy by A. J Paquin, Jr Radical surgery for carcinoma of the urinary bladder by W F Whitmore, Jr and V F Marshall. The surgical treatment of cancers of the urinary bladder by V F Marshall and W F Whitmore, Jr Pelvic exenteration for polypoid myosarcoma (sarcoma botryoides) of the urinary bladder of an infant by V F Marshall. Hormonal influences on the experimental production of bladder tumors in dogs, by V F Marshall and others. Secondary carcinoma of the penis, by A. J Paquin and S. L. Raines. Index.

Note: A valuable survey of the present state of bladder tumor therapy. It is based on the experience and methods of five medical research institutions and hospitals in New York City. Several of the authors point out that some of the reports in the literature which seem to indicate good recovery rates from this disease are due to the confusion of bladder papillomas with cancers. Surgical treatments with details of the operations are specifically described, and [illegible] considerable body of experience is reviewed, but the truth pointed out in the Foreword—"that medicine has only [illegible] little bit of the answer to bladder cancer"—is not glossed over.

BARZILAI, GEMMA

Atlas of ovarian tumors. Preface by Fred W. Stewart. New York, Grune & Stratton, 1943 261 p. illus. (part col'd) 30 cm. $15.00 3486

Contents: Preface. Introduction. Classification. Granulosa cell tumor. Theca cell tumor. Arrhenoblastoma. [illegible] lipoid cell tumor. Dysgerminoma. Teratoma, adult and embryonal. Fibroma. Sarcoma and fibrosarcoma. Brenner tumor. [illegible]. [illegible] carcinoma. Pseudomucinous adenoma. [illegible] or papillary. Pseudomucinous adenocarcinoma. [illegible]. Secondary tumors of the ovary.

Note: This book, written especially for pathologists and clinicians, is primarily a diagnostic atlas. The authors' stated purpose is to present a systematic, clear, and complete survey of the complex field of ovarian oncology in order to help in reducing the number of ovarian neoplasms that defy [illegible] correct diagnosis. The illustrations have detailed legends. Short chapters in which each tumor is systematically defined and its histopathologic characteristics are described accompany the illustrations. Also included are data on the [illegible] frequency and age incidence, outstanding gross pathologic features, clinical signs and symptoms, and treatment.

CAMERON, CHARLES S.

The truth about cancer. Englewood Cliffs, N. J. Prentice-Hall, Inc., 1956 268 p. illus. (part col'd) 24 cm. $4.95 3487

Contents: Preface, by Elmer Hess, President, American Medical Association. The big IF. Part I, The over-all picture: What is cancer? Cancer in the world. The causes of cancer. Some misconceptions about cancer. Diagnosing cancer. Treating cancer. The cancer quacks. Cancer research. Part II, A closer look: Cancer of the skin. Cancer of the lip and mouth. Cancer of the larynx. Cancer of the esophagus and stomach. Cancer of the intestine and rectum. Cancer of the breast. Cancer of the uterus. Cancer of the lung. Cancer of the bladder and kidney. Cancer of the [illegible]. Cancer of the prostate. The [illegible] diseases. Bone [illegible]. Cancer in children. The responsibility is yours. Index.

Note: A popular presentation of facts about cancer by a medical doctor who [illegible] Medical and Scientific Director of the American Cancer Society. The first half of the book contains introductory [illegible] of [illegible] general nature on cancer. The second half describes cancer in various parts of the body with specific information concerning detection and treatment. The colored illustrations show [illegible] in various stages. The book is written in a non-technical style and is useful to medical and social workers as well as being of potential practical importance to every individual.

CANTRIL, SIMEON THEODORE

Radiation therapy in the management of cancer of the uterine cervix. Springfield, Ill. Charles C Thomas 1950. 196 p. illus. 22 cm. (The American lecture series. No. 55. A monograph in American lectures in radiation therapy, edited by Milton Friedman) $5.50. 3488

Contents: Introduction. Clinical considerations. The pathology and spread of cancer of the cervix. The complications of cervical cancer. [illegible] of cancer of the cervix. [illegible] Radium therapy. Cancer of the cervical stump. Cancer of the cervix in pregnancy. The [illegible] of surgery in the management of carcinoma of the cervix. Appendixes. The staging of cancer of the uterine cervix. Dosimetry in intracavitary radium therapy. [illegible]. Index.

Note: This monograph serves a dual purpose in reviewing those features of cancer of the cervix [illegible] by [illegible] and radium therapy and its prognosis. [illegible] history of the development of radiation therapy based on the concepts as evolved from the Swedish and French schools of radiotherapy. Some emphasis is placed on X-ray therapy and the technics of application as well as on problems of dosimetry. Excellent diagrams and X-ray photographs and [illegible] summary of worldwide results of radiation treatment make this volume a useful reference work. The author is Director of the Tumor Institute of the Swedish Hospital in Seattle, Washington.

COLEY, BRADLEY LANCASTER

Neoplasms of bone and related conditions: their etiology, pathogenesis, diagnosis, and treatment. With 622 illustrations and 53 tables. New York, Paul B. Hoeber, Inc., Medical Book Department of Harper & Brothers, 1949 765 p. illus. 26 cm. $17.50 3489

Contents (abridged): Section I, Classification, etiology, and diagnosis: Diagnostic survey in suspected cases of bone tumor. Differential diagnosis. Blood chemistry in the diagnosis of diseases of bone, by H. Q. Woodard. Section II, Benign tumors and tumorlike lesions of bone: Osteoma. Nonosteogenic fibroma of bone. Chondroma. Benign chondroblastoma of bone. Hemangioma of bone. Solitary bone cyst. Fibrous dysplasia of bone. Giant cell tumor. Adamantinoma. Chordoma. Section III, [illegible] development in benign lesions of bone. Section IV, Primary malignant tumors of bone. Section V, Tumors invading bone by extension. Section [illegible], Metastatic tumors involving bone. Section VI, Tumors of bone in special locations: Tumors of the skull—jaw bones—thoracic wall—pelvic bones—vertebral column—hands and feet. Tumors of bone in childhood. Section VII, Surgical treatment. Section VIII, Radiation therapy. Section IX, Constitutional therapy: Effects of bacterial products on tumors of bone. Biochemical treatment of tumors of bone. Treatment with radioactive isotopes. Section X, Lesions of the skeletal system that may simulate neoplasms of bone. Section XI, Miscellaneous pathologic fractures. Medicolegal aspects of trauma in tumors of bone. The experimental production of bone sarcoma. Index.

Note: A comprehensive work written from the clinical viewpoint. The [illegible] subsections cover all facets of the subject which are pertinent to diagnosis, prognosis, and treatment. Most of the conditions discussed are shown also in the illustrations. An unusual feature is the inclusion of more than 50 tables in which data from case histories are summarized. The book is based primarily on the author's extensive experience in the Bone Tumor Department of Memorial Hospital for Cancer and Allied Diseases in New York City. However, here he has also searched the literature and has incorporated the pertinent results of other workers in the field. Each of the sections concludes with a bibliography.

CONWAY, HERBERT

Tumors of the skin. Springfield, Ill. Charles C Thomas 1956 267 p. illus. (part col'd) 27 cm. (American lecture series. Publication no. 270. A monograph in the Bannerstone division of American lectures in surgery, edited by Michael E. DeBakey and R. Glen Spurling. Plastic surgery division, editor James Barrett Brown) $13.50. 3490

Contents: Part I, Benign tumors of the skin: Cysts, sinuses and fistulas. Foreign body tumors. Warts. Keratoses. Fibroma. Nevi. Hemangioma. Tumors of the [illegible]. Tumors of muscle. Neuromas. Lymphangioma. Rare benign epithelial tumors. Miscellaneous benign tumors of the skin. Part II, Malignant tumors of the skin: Carcinoma of the skin. Intraepidermal and superficial carcinoma. Carcinoma in cutaneous scars and sinuses. Post-radiation dermatitis and malignancy. Melanoma. Sarcoma of the skin. Lymphoblastoma. Author index. Subject index.

Note: A fully illustrated work based in part on the literature and in part on the case records of the New York Hospital-Cornell Medical Center. The space is almost evenly divided between the material on benign tumors and that on malignant tumors. Diagnosis, clinical features, and treatment are the principal topics, but information is included also on incidence, prognosis, etc. Although the book is addressed to surgeons and is not designed to teach surgery, surgical operations are described and illustrated. Another noteworthy feature is the inclusion of numerous before-and-after sets of photographs of patients showing the cosmetic effect of surgical treatment to remove tumors from the face and adjacent regions.

CORSCADEN, JAMES A

Gynecologic cancer Second edition Baltimore The Williams & Wilkins Company, 1956 546 p illus 24 cm. $10 00 3491

Contents. Introduction. Diagnosis. Cancer of the vulva. Cancer of the vagina. Cancer of the cervix. Cancer of the endometrium. Cancer of the myometrium. *Neoplastic disease of the chorion.* Cancer of the ovary The menopause. Management of the cancer patient. The nature of cancer Index.

Note A comprehensive work addressed to general practitioners of medicine and to specialists, including both specialists in gynecology and oncology The author believes strongly in the effectiveness of early diagnosis and treatment, and in his introductory chapter carefully demolishes the arguments of those who contend that these are ineffective on a statistical basis. Techniques of diagnosis and of therapy are thoroughly covered. The latter are covered critically and the author does not hesitate to stat that certain therapies are ineffective if he so believes. The first edition was published in 1951 *This second edition represents a thorough revision and extension* of the original work. Changes have been made in the text, the illustrations and the bibliographies. The number of pages has been substantially increased.

COWDRY, E V

Cancer cells. 137 illustrations Philadelphia W B Saunders Company, 1955 677 p. illus. (part col'd) 26 cm $16 00 3492

Contents Cancers defined. Malignant growth of cancer cells. Cytoplasm of normal and malignant cells compared. Nuclei and division of normal and malignant cells compared. Chemical properties of cancerous tissues. Occurrence of cancers in animals and plants. Agents causing cells to become malignant. Single trauma cancers. Viruses as cancer agents. Mutations as cancer producers. Cellular susceptibility to cancer Heredity and susceptibility to cancer Age and sex susceptibility of cells to cancer. Latency in cancer development. Modifying factors in cancer development. Geographic frequency of different types of cancer. Cancer prevention. Cancer diagnosis and treatment. Unexplained disappearance and changes in malignancy of cancer cells. Cancer research. Appendices Names of tumors. Cancer registries. Cancer journals. Reviews. Books. Conferences and symposia. Reports. Bibliography Index.

Note. An expert survey of accumulated knowledge on cancer The title notwithstanding, it is not limited to the knowledge on cells, but includes, in the later chapters especially many other aspects of cancer It is not an exhaustive compendium, but it is a cyclopedic one. The assembled information is presented largely in the form of chapters whose titles are given above. The facts are conveyed in a readable text, and there are only 30 tables in the entire volume. *The survey of cancer research in the terminal chapter* is international in scope. The bibliography which is a list of cited literature contains approximately 2,500 entries. The author is Director of the Wernse Cancer Research Laboratory of Washington University

CUNEO, HENRY M , AND CARL W RAND

Brain tumors of childhood Springfield, Ill Charles C Thomas, 1952 224 p. illus 23 cm (American lecture series Publication no 104 A monograph in American lectures in neurosurgery) $5 75 3493

Contents Astrocytoma. Medulloblastoma. Craniopharyngioma. *Ependymoma. Pinealoma.* Papilloma of the choroid plexus. Glioblastoma (spongioblastoma) multiforme. Meningioma. Glioma of the optic nerve. Metastatic and malignant invasive tumors. Eosinophilic granuloma of bone, xanthomatosis and reticulo-endotheliosis. Infectious granulomata. *General considerations.* Index.

Note: A monograph based primarily on a decade of experience in the Children's Hospital in Los Angeles during which "83 verified cases of brain tumor and/or granulomatous lesions were encountered" and secondarily on the literature. The classes of tumors named in the table of contents above are discussed against background of actual case histories. The 60 illustrations are largely drawn from the same cases. The book is of interest to tumor specialists and pediatricians.

DONNER FOUNDATION

Index to the literature of experimental cancer research 1900–1935 Philadelphia. Donner Foundation, Inc., 1948 1,057 p. 27 cm. $10 00 3494

Note. The unsigned introduction to this bibliography contains the *following statement* on its scope "Our objective was the inclusion of every publication with adequate bearing on experimental cancer research, between the years 1900 and 1935. The importance or significance of the paper was not considered, as this is in no way a *critical bibliography*." This statement notwithstanding, certain classes of articles were omitted. These included philosophical discussions, articles in which no new work was reported, and early articles on a topic on which later articles on the same topic by the same author were listed. There are two main alphabets in the volume. First, there is an author index in which under the names of authors are listed the titles of their publications, together with the journal titles, volume numbers, pages and years of publication. *This index is followed by a subject index* in which the same writings are listed under subjects. The scope of the work is international, and titles of articles are given in the original language, except that titles in non-Latin alphabets have been translated into a language such as French or English using the Latin alphabet.

DYER, HELEN MARIE

An index of tumor chemotherapy A tabulated compilation of data from the literature *on clinical and experimental investigations.* Washington, D C. Government Printing Office, *1950 329* p 23×29 cm (United States. Federal Security Agency Public Health Service) Gratis. 3495

Contents Historical resumé. Selection of material for the Index. Classified index of therapeutic data. Inorganic compounds. Metal- and halogen—containing organic compounds. Organic sulfur compounds and sulfur derivatives of miscellaneous organic compounds. Organic compounds. *Aliphatic compounds. Aromatic compounds.* Miscellaneous carbocyclic compounds. Miscellaneous heterocyclic compounds. Aldehydes. Alkaloids. Antibiotics. Carbohydrates. Carcinogenic compounds. Dyes. Lipids. Mustard gas and nitrogen mustards. Miscellaneous oils. *Proteins* and protein derivatives. *Sulfonamides* and related substances. Vitamins, provitamins and vitamin antagonists. *Peroxides.* Radioactive agents. Miscellaneous materials: Coagulants and anticoagulants of blood. Enzymes. Hormones. Plant products. Venoms. *Alphabetical* index of agents. *References.*

Note: A comprehensive survey of the literature on the treatment of tumors by chemical methods is presented in this index for investigators in cancer research. The work consists of four parts: (1) 11 pages of introductory text, (2) 168 pages of the classified tabulated index of chemotherapeutic tests, comprising 3031 numbered items, (3) 58 pages of alphabetic index, and (4) 96 pages containing 3313 bibliographical citations of periodicals and other sources for the indexed items. Tabulated for each of these 3031 reported experiments are the *following*: its number the name of the chemical agent, the type of tumor the species (whether man, dog, rabbit, rat, mouse, etc.) of the host, the number of hosts involved in the experiment, the dosage, the number and period of treatments, the route (whether oral, local, injected, subcutaneous, inhaled, etc.) of the treatment, the effect (or effects) claimed, the reference number to the bibliographical list, and the date of the report.

ELLER, JOSEPH JORDON, AND WILLIAM DOUGLAS ELLER

Tumors of the skin benign and malignant. *Second edition, thoroughly revised* and enlarged. 550 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1951 697 p. illus. (part col d) 24 cm $15 00 3496

Contents General considerations. Benign tumors of the skin Tumors of connective tissue origin. Tumors originating from muscle or nerve tissue. Nevi and other developmental disturbances of the skin. Tumors of infectious origin. *Precancerous* conditions of the skin. Malignant tumors of the skin Carcinoma of the skin. Malignant melanoma. Sarcomas. Lymphomas (leukemia) Cutaneous surgery and plastic repair in skin tumors. Radiation physics. Author index. Subject index.

Note: Skin tumors and tumors of other tissues, such as those of the mouth, which are often first seen by the dermatologist are covered in this book. The treatment is comprehensive, with emphasis on diagnosis and treatment. The book is based both on the authors' own extensive experience and on the literature. A considerable fraction of the illustrations are photographs selected from [a] wide range of cases. Extensive bibliographies are included. The revisions and additions made in the text, illustrations, and bibliographies for this edition are substantial.

FARBER, SEYMOUR MORGAN AND OTHERS
Cytologic diagnosis of lung cancer By Seymour M Farber Milton Rosenthal, Edwin F Alston, Mortimer A. Benioff and Allen K. McGrath, jr Springfield, Ill. Charles C Thomas, 1950 59 p. illus. 29 cm. $7.50 3497

Contents: Introduction. Evolution of cytologic technique. Technique. Histology of the respiratory tract in normal and benign pathologic conditions. Pathology of bronchogenic carcinoma. Technical advantages for the study of cell detail with wet smears. Identification of non-malignant cells. Cytologic criteria of malignancy. Clinical material and data. Clinical and pathologic results. Conclusion. Bibliography. Color plates.

Note: An authoritative work on the diagnosis of lung cancer by examination of sputum and bronchial washings, [a] technique which affords much earlier diagnosis than is possible with other diagnostic procedures. The work is based on [a] study of 1,328 cases. Cytologic diagnosis was found to be fully as accurate as bronchoscopy. However, the authors point out that it is [a] sensitive method that is reliable only after the cytologist has gained considerable experience with it. A bibliography lists 94 references. There are 40 reproductions in color of microphotographs of tissues and cells.

GATES OLIVE, AND SHIELDS WARREN
A handbook for the diagnosis of cancer of the uterus by the use of vaginal smears. With a foreword by George N Papanicolaou. Third edition. Cambridge, Mass. Harvard University Press 1950 214 p illus. 28 cm. $5.50. 3498

Contents: General considerations relating to the vaginal smear method. Technique. Morphology of genital tract. Normal cytology of the vaginal smear. Pathology of cancer of the uterus. Characteristics of malignant cells in smears. Diagnosis of smears taken following radiation therapy. Sources of error in diagnosis. General aids in use of the vaginal smear method. Current appraisal of the vaginal smear method. The vaginal smear in relation to carcinoma in situ and early carcinoma. References. Plates. Index.

Note: A standard laboratory guide written for both the practicing pathologist and the laboratory technician. The material is presented so as to be of particular value to those who must resort to self-training in learning this technique for detecting cancer in its incipient forms. The third edition reflects further experience with the technique and some extension of its applications. Changes have been made in the text of all but two of the chapters. The wide interest in the technique is reflected in the 78 references which have been added to the bibliography. Eighteen illustrations have been added.

GENGERELLI JOSEPH A. AND FRANK J KIRKNER
The psychological variables in human cancer A symposium presented at the Veterans Administration Hospital, Long Beach, California, October 23 1953 Berkeley University of California Press 1954 135 p. illus. 22 cm. $3.00. 3499

Contents: The nature of the cancer process in relation to [a] possible psychosomatic influence, by M. Cutler. Origin and development of the psychological approach to the cancer problem, by F M. West. Results of the psychological testing of cancer patients, by E. M. Blumberg. Comparative case summaries with psychological profiles in representative rapidly and slowly progressive neoplastic diseases, by F W Ellis and E M Blumberg. A preliminary report on autonomic functions in neoplastic disease, by T. L. Cleveland. Cancer—host-resistance and host-acquiescence, by J. K. L. Jacobs.

Note: Physicians and psychologists participated in the symposium of which this book is [a] product. For the most part the papers are reports of preliminary investigations of the psychosomatic aspects of cancer, with emphasis on [a] possible psychological factor in the genesis of cancer. They are accompanied by transcripts of discussion and by literature references.

GREENSTEIN JESSE P
Biochemistry of cancer Second edition revised and enlarged. New York Academic Press Inc., 1954 653 p. illus. 24 cm. $12.00 3500

Contents: Introduction—the oncological sciences. The general phenomena and taxonomy of cancer. The induction of tumors. Extrinsic factors. Intrinsic factors. Attempts at control of tumor induction and of tumor growth. Nutrition. Endocrinology. Chemotherapy. The properties of tumors. Chemistry of tumors. Chemistry of the tumor-bearing host. The present status of the problem. Author index. Subject index.

Note: This monograph provides [a] comprehensive digest of the current knowledge of the biochemical aspects of cancer. Although it is essentially [a] literature survey the author's own comments and interpretations are valuable. The interdependence of the various research approaches to the cancer problem is stressed, and many of the gaps in our chemical knowledge are pointed out. The eighth and ninth chapters, "Chemistry of tumors," and "Chemistry of the tumor-bearing host," taken together are [illegible] pages long in this edition and summarize, partly in tables, the published information on the topic. The first edition was published in 1947 and contained 389 pages. The substantial increase in length reflects the large amount of literature published since the first edition was written. Some material has been deleted, and much has been added to most of the chapters. The author is Chief of the Laboratory of Biochemistry of the National Cancer Institute of the United States Public Health Service.

HAAGENSEN, C D
Diseases of the breast. Illustrated with 962 illustrations on 404 figures and 25 charts. Philadelphia W B Saunders Company, 1956 751 p illus. 26 cm. $16.00 3501

Contents: Anatomy of the mammary gland. The physiology of the breasts. Hypertrophy of the breast. The detection of breast disease. Methods of diagnosis of breast disease. The technique of excision of benign tumors of the breast. Cystic disease of the breast. Adenosis. Fibrous disease of the breast. Mammary duct ectasia. Fat necrosis in the breast. Adenofibroma of the breast. Intraductal papilloma. Non-epithelial tumors of the breast. Tumors of the skin and the accessory glands of the skin over the breast. Infections in the breast. The etiology of breast cancer. The frequency and age distribution of mammary carcinoma. The natural history of breast carcinoma. The symptoms of mammary carcinoma. The diagnosis of breast carcinoma. The papillary type of mammary carcinoma. Paget's carcinoma of the breast. Inflammatory carcinoma. Special pathological forms of breast carcinoma. The choice of treatment for breast carcinoma. The surgical treatment of mammary carcinoma. The radiotherapy of breast carcinoma. The hormonal treatment of mammary carcinoma. Carcinoma of the male breast. The problem of breast carcinoma in profile. Index of authors. Index of subjects.

Note: A comprehensive and important work. It is based on 23 years of interest in the subject on the part of the author and on the extensive experience of the Columbia Presbyterian Medical Center which has had [a] follow-up system for surgical patients in operation since 1915. Although all diseases of the breast are covered, more than 400 of the pages are devoted to breast cancer. All aspects of this subject are covered fully. Surgical techniques are fully described. Many data are presented in tables, of which there are 144 in the volume. Selected but extensive bibliographies are included in the chapters.

HAHN PAUL F editor
Therapeutic use of artificial radioisotopes. New York John Wiley & Sons, Inc. 1956 414 p. illus. 24 cm. $10.00. 3502

Contents: Introduction to the therapeutic radiation problems, by G Hevesy. Introductory radiological physics, by C. W Sheppard.

Dosimetry of therapeutic use of internally administered radioisotopes, by A. A. Yalow Availability and procurement of isotopes, by D L. Tabern, Production and handling of therapeutic isotopes, by P F Hahn and others. Synergistic effect of radioisotopes used in combination, by H. L. Friedell and P R. Salerno. Treatment of the leukemias and polycythemia vera with radioactive phosphorus, by E. E. Osgood. Treatment of chronic leukemias by intravenously administered radioactive colloids, by P F Hahn and others. Treatment of thyrotoxicosis by radioiodine, by N B Myant. Radioiodine treatment of thyroid carcinoma, by E. E. Pochin. Carcinoma of the cervix treated with radioactive gold colloids, by A. L Sherman. The treatment of carcinoma of the prostate with radioactive colloidal gold, by R. H. Flocks and others. Intraperitoneal application of radioactive colloids, by J H. Muller Treatment of pleural effusion with radioactive colloids, by G. A. Andrews. Use of radioactive isotopes in the treatment of patients with bladder tumors, by D W Smithers and others. Radioactive isotopes for β- and γ-ray applicators, by M. Lederman and W K. Sinclair Silver-coated radioactive colloids as adjuvants in the surgical treatment of bronchiogenic tumor by P F Hahn. Interstitial implantation with radioisotopes, by U K. Henschke. Teletherapy with cobalt⁶⁰ by G. H. Fletcher Index.

Note Together the 19 chapters in this volume present broad survey of progress and experience to approximately the end of 1954 in the use of radioactive isotopes in the treatment of the malignancy The view presented is an international one. Although the majority of contributors are resident in the United States of America, one is from Sweden, one is from Switzerland, and seven from England. A wide range of techniques is described. Although most of the papers are based on clinical experience in which the author had a part, literature references are included in all In his preface the editor states: "If any plea is to be made at the present time, it should be that a wider use of isotopes in therapy be directed toward the commonly occurring tumors.

HARTWELL, JONATHAN LUTTON

Survey of compounds which have been tested for carcinogenic activity Second edition. Washington, D C Government Printing Office 1951 583 p illus 24 cm (United States Federal Security Agency Public Health Service. Publication no 149) $4 25 3503

Contents Introduction Tabular review Inorganic compounds. Organic compounds Aliphatic. Monocyclic. Bicyclic. Tricyclic. Tetracyclic. Pentacyclic. Hexacyclic and higher Azo compounds. Steroids. Heterocyclic compounds. Unclassified. Addenda. Bibliography Compound index. Route index. Site-of-application index. Species index. Tumor-site index. Vehicle index.

Note This book lists in systematic fashion 1,329 chemical compounds which have been tested on animals, chiefly mice and rats, for carcinogenic activity as reported in the literature of the subject through 1947 Only chemical compounds are listed. Mixtures such as tars, irradiated sterols and articles of diet were excluded. Also excluded were reports where the observations extended for period of less than one month from the first administration. Tabulated for each compound are the following reference to the literature by author and date, animal and number of animals, strain or type of animal, sex, preparation and dose, site and route, number of animals with tumors and the type of tumor if any survival records, and duration of the experiment. The first edition of the survey was published in 1941 The second edition included the tests that were listed in the first edition and about as many more the results of which were published from 1940 to 1947

IASON, ALFRED H.

Gastric cancer Illustrations by Alfred Feinberg New York Grune & Stratton 1953 316 p illus 26 cm $7 50 3504

Contents Anatomy Histology Incidence. Etiology Pathology Symptomatology Diagnosis and differential diagnosis. Presurgical preparation. Anesthesia. Surgery Postsurgical treatment. Complications. Prognosis. References. Index.

Note. A concise monograph directed to medical college students and graduate physicians and surgeons who are beginning a study of gastric cancer A rather wide range of information is covered, although the author did not attempt cyclopedic treatment. The principal subject is gastric cancer but some information is included on cancer f the esophagus. However operations on the esophagus are not covered. Approximately half of the space in the volume is devoted to the first seven chapters in which the basic information on anatomy etiology symptomatology etc., is presented. The 33-page chapter on diagnosis and differential diagnosis is a very thorough discussion. Surgical techniques and pre- and post-operative care are covered succinctly but in considerable detail. Surgical techniques are described step by step. The illustrations though small are of high quality and are clearly reproduced. The bibliography is a selected one containing 187 references.

INGALLS, RAYMOND G

Tumors of the orbit and allied pseudo tumors an analysis of 216 case histories. Springfield Ill. Charles C Thomas, 410 p. illus 24 cm $11.50 3505

Contents: Introduction. Angioma, hemangioma-lymphangioma. Pseudo tumors. Lymphosarcoma. Dermoid cyst. Retinoblastoma. Meningioma. Melanoma. Neurofibroma. Cholesteatoma. Rhabdomyosarcoma. Neuroblastoma. Hematoma. Myoblastoma. Fibroma. Osteoma. Neurinoma. Leiomyosarcoma. Lipoma. Dermolipoma. Glioma. Sarcoma of the orbit. Carcinoma of the orbit, Extension from accessory nasal sinus. Extension from lacrimal gland. Carcinoma—extension from lids. Metastic carcinoma of the orbit. References. Index.

Note The basis of this outstanding book is material originally assembled for exhibition at the 1947 meeting of the American *Academy of Ophthalmology and Otolaryngology The material* included both biopsies and specimens of 216 orbital tumors of 37 types. Not all the known types of tumors of the orbit are represented, but the collection is a rich one, nevertheless. Most of it came from the pathology laboratories f the Institute of Ophthalmology of the *Presbyterian* Hospital. The data on each case were analyzed in detail and the results of the studies are presented in this book.

LEWISON, EDWARD F

Breast cancer and its diagnosis and treatment. Baltimore The Williams & Wilkins Company 1955 478 p. illus. (part col'd) 26 cm $15 00 3506

Contents The history of breast cancer and its treatment. The surgical anatomy of the breast, by R. E. Handley Physiology of the breast, by F H. Trimble. Experimental aspects of mammary cancer in mice, by J J. Bittner The pathology of cancer of the breast, by R. C. Hora Jr The *relationship between benign breast* disease and cancer. The psychological aspects of breast cancer. Diagnosis. Breast biopsy A *review* of the surgical treatment of breast cancer The surgical treatment of breast cancer Extended radical mastectomy by J A. Urban, Postoperative care. Prognosis. Radiotherapy of breast cancer by V P Collins. Hormonal alterations in the palliative treatment of breast cancer by R. A. Huseby Breast cancer and pregnancy or lactation. *Self-examination* of the breast. The statistics of breast cancer Cancer of the breast in the male. Index.

Note A comprehensive and authoritative treatise. It is not an exhaustive survey of all the available knowledge but it contains and presents very wide range of *carefully selected information*. All of the facets of the subject which are named in the chapter titles listed above are treated at length. T cite few examples, the chapter on history is 37 pages long the chapter on physiology 27 pages long the chapter on diagnosis 57 pages long and the three chapters on surgical treatment, including extended radical mastectomy total nearly 100 pages long. Bibliographies are included in the chapters, and there are 181 figures representing considerably higher number of illustrations. The author is member of the faculty of the *Johns Hopkins University School of Medicine* and surgeon on the staff of the *Breast Clinic of Johns Hopkins Hospital.*

MAYER, EDGAR, AND HERBERT C MAIER, editors

Pulmonary carcinoma pathogenesis diagnosis and treatment. New York New York University Press distributed by J B Lippincott Company Philadelphia 1956 540 p illus (part col d) 24 cm $15 00 3507

Contents Foreword, by C. S. Cameron. Editors' preface. Modern concepts f cancer research, by C. P Rhoads. The history of cancer with special reference to the cancer of the lung—experimental studies, by W E. Smith. Environmental and occupational factors

in the development of lung cancer, by E. C. Hammond and [illegible]. Pathologic aspects, by A. A. Liebow. Clinical aspects, by E. Mayer, and others. [illegible] diagnosis of lung cancer, by [illegible]. Bronchoscopic examination, by H. C. Maier. Exfoliative cytology in diagnosis of lung cancer, by G. N. Papanicolaou and [illegible] A. A. Liebow. The search for the early case, by W. E. O'Donnell and E. Day. Differential diagnostic aspects, by E. Mayer and I. Rappaport. Functional aspects of pulmonary disease as applied to the management of cancer of the lungs, by I. Rappaport and H. C. Maier. Surgical treatment, by H. C. Maier. Radiotherapy in lung cancer, by J. J. Nickson and B. Roswit. Radioisotope therapy in lung cancer, by B. Roswit. Chemotherapy of lung cancer, by D. A. Karnofsky. Medical management of the surgically incurable patient, by E. Mayer and J. LaDue. Secondary cancers of the lung, by B. Roswit and J. LaDue. The psychological aspects of cancer of the lung, by A. M. Sutherland. Benign tumors of the lung—benign and malignant tumors of the trachea—tumors of the pleura, by H. C. Maier. The outlook for cancer, by C. P. Rhoads. Appendix: A list of case presentations—pitfalls in diagnosis and lessons learned in retrospect, by E. Mayer and others. Index.

Note: An authoritative work whose authors include eminent specialists in cancer pathology, [illegible], medicine, radiology and surgery now teaching and practicing in the United States of America. It is directed primarily to general practitioners of medicine and to general surgeons, and those aspects of lung cancer which are named in the chapter titles are dealt with rather fully. The first three chapters present useful background information on the present state of knowledge of the etiology of cancer, including a résumé of the evidence supporting cigarette smoking as one of the causative factors in lung cancer. The principles of surgical treatment, including indications and contraindications, are covered, but the techniques of operations on the lung are not described. Inclusion of a chapter on the management of incurable patients is noteworthy. Selected but nevertheless extensive bibliographies are included in most of the chapters.

Meigs, Joe V., editor

Surgical treatment of cancer of the cervix. New York, Grune & Stratton, 1954. 462 p. illus. (part col'd) 26 cm. $14.00. 3508

Contents: The anatomy and blood vessels of the pelvis—the observations of W. C. Quinby, Jr. The lymph nodes and lymph channels of the pelvis—I, the observations of [illegible]—II, the observations of C. T. Javert. The physiologic and pathophysiologic nerves of the ureters and bladder—the observations of L. R. McCrea. Hysterectomy for carcinoma in situ—the method of R. W. T. Lindo. Radical hysterectomy with bilateral dissection of the pelvic lymph nodes—I, the method of F. R. Cattell—II, the method of J. V. Meigs—III, the method of Wertheim [illegible] operation, by P. Werner and J. Sederl. Radical vaginal hysterectomy—I, the Schauta-Amreich operation, by E. Navratil—II, the Schauta operation, by M. A. van B. [illegible]—III, the Schauta operation, by S. Mitra. Retroperitoneal lymph node dissection (Taussig)—the method of D. C. Morton. Total exenteration of the pelvic organs—I, the method of A. Brunschwig—II, the method of L. Parsons—III, the method of E. M. Bricker. Resection of the anterior female pelvic organs—the method of J. M. Ingersoll. Resection of the posterior female pelvic organs—the method of H. Ulfelder. The treatment of uterine or vaginal recurrence of cancer of the cervix—I, the treatment by [illegible] of recurrent cancer of the cervix following radiation, by R. L. Kottmeier—II, report of [illegible] and [illegible] following [illegible] of recurrent cancer of the cervix after radiation, by A. [illegible]—III, recurrent cancer of the cervix following surgery and its treatment, by J. R. Graham. The ureters and bladder in radical pelvic surgery—urinary tract complications of radical pelvic surgery—their prevention and treatment, by F. H. Colby. Index.

Note: An authoritative and comprehensive monograph covering all aspects of surgical treatment of cancer of the cervix and the [illegible]. In the 24-page introduction the editor outlines the history of treatment of cancer of the cervix including the early surgical approaches with their high mortality, the almost complete abandonment of surgery in favor of radiation therapy and the resurgence of surgical treatment in recent years. Discusses the question of surgical operation versus radiation treatment, defines the types and classifications of cancer of the cervix, and discusses briefly anatomy, diagnosis, and related topics. The contents of the other chapters are apparent from the titles given above. Full discussions and descriptions are characteristic of all of the chapters. Surgical techniques are fully described and illustrated. There are several hundred illustrations, some of which are reproductions of well-executed drawings. Literature references are given throughout the book. The editor is Clinical Professor of Gynecology on the faculty of the Harvard Medical School. Three of the contributors are from Austria, two from Sweden, one from Holland, and one from India; the others are from the United States of America.

Miner, Roy Waldo editor

Ascites tumors as tools in quantitative oncology. Conference chairman and consulting editor Theodore S. Hauschka. New York, Published by the Academy, 1956. 637–1030 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 63 art. 5) $4.50. 3509

Contents: Introductory remarks, by H. Koprowski. Part I. Growth and population analysis: Conversion of solid neoplasms into ascites tumors, by G. Klein and E. Klein. Prospects for [illegible] genetics of somatic and tumor cells, by J. Lederberg. Growth of cell suspensions in tissue culture, by W. R. Earle and others. Immunoselection of polyploids from predominantly diploid cell populations, by T. S. Hauschka and others. Serological differences between comparable diploid and tetraploid lines of three mouse ascites tumors, by D. R. Amos. Growth characteristics of free tumor cells in various body fluids and tissues of the mouse, by H. Goldie. Measurement and nature of ascites tumor growth, by H. M. Patt and R. L. Straube. Part II. Cytologic nature of ascites tumors: Exfoliative cytology in the study of ascites tumors, by I. Koprowska. Electron microscope studies of ascites tumor cells, by C. C. Selby and others. Chromosomes in cancer tissue, by A. Levan. Cytological variability in human carcinomatosis, by P. C. Koller. Further evidence favoring the concept of the stem cell in ascites tumors of rats, by S. Makino. Changes in nuclear DNA in normal and ascites tumor cells, by R. M. Richards and others. Film demonstration of in vitro growth of the Yoshida ascites sarcoma, by A. Schleich. Contributions of the ascites hepatoma to the concept of malignancy of cancer, by T. Yoshida. The value of ascites tumors in problems of tumor immunity, by P. A. Gorer. Part III. Ascites tumors as assay tools: Ascites tumors as culture media in quantitative growth studies of viral agents, by H. Koprowski. Ascorbic acid studies with mouse Ehrlich ascites tumor, by S. Harvey and A. Howard. Radiation effects on ascites tumor chromosomes, by A. D. Conger. Study of metabolism with the aid of labeled ascites tumor cells, by J. L. Ambrose and others. Models of ascites tumors for chemotherapeutic screening, by K. Sugiura and H. J. Creech. Part IV. Advantages of free-cell suspensions for metabolic studies: Comparative metabolic study of MCIM ascites and [illegible] suspensions of [illegible] cells obtained from MCIM solid tumors, by L. P. Kaltenbach and M. H. Kaltenbach. Comparative uptake of amino acids by free-cell populations, by H. N. Christensen and others. Aminopterin-induced [illegible] as correlated with chromosome constitution in sublines of the Ehrlich ascites tumor, by E. K. Patterson and L. Podber. Studies of nucleic acid synthesis in ascites tumor cells, by G. A. LePage and others. On the control of metabolism in ascites tumor cell suspensions, by B. Chance and B. Hess. Carbohydrate metabolism in ascites tumor cells, by E. Racker. Resistance to colchicine, hypochlorite, and [illegible] in selected sublines of the Ehrlich ascites tumor, by H. Lettré. Concluding remarks, by A. Haddow.

Note: Papers first presented at [illegible] conference held and supported jointly by the Section of Biology of the New York Academy of Sciences and the Damon Runyon Memorial Fund for Cancer Research, Inc., in May 1955, are published in this monograph and are listed above by titles and authors. Described in the papers are [illegible] wide range of research results which have flowed from the techniques of tumor transplantation by ascitic fluid and from the study of ascites tumors. Discussion and literature references are included for most of the papers.

Miner, Roy Waldo editor

Cancer cytology and cytochemistry. Conference chairman and consulting editor: M. J. Kopac. New York, Published by the Academy, 1956. 1033–1462 p. illus. 22 cm. (New York Academy of Sciences. Annals. Vol. 63 art. 6) $4.50. 3510

Contents: Introductory remarks, by H. Koprowski. Part I. General problems in cancer cytology: The Conference on Cancer Cytology and Cytochemistry—its aims and results, by M. J. Kopac. The history of the Inter-society Cytology Council, by J. V. Meigs. Malignant properties of cancer cells, by L. V. Ceroty. Early uterine cancer detection by cytologic screening, by C. C. Erickson. Teamwork between pathologists and cytologists, by L. S. Lipid and P. Klemperer. Accomplishments and shortcomings of cancer cytology, by E. Day. Part II. Morphologic features of malignancy on cells: Observations of nucleoli in tumor cells, by E. C. MacCarty. Chromosome anomalies in human neoplasms with special reference to the mechanisms of polyploidization and aneuploidization in the HeLa strain, by T. C. Hsu and P. S.

Dosimetry of therapeutic use of internally administered radioisotopes, by A. A. Yalow Availability and procurement of isotopes, by D L. Tabern. Production and handling of therapeutic isotopes, by P F Hahn and others. Synergistic effect of radioisotopes used in combination, by H. L. Friedell and P R. Salerno. Treatment of the leukemias and polycythemia vera with *radioactive phosphorus*, by E. E. Osgood. Treatment of chronic leukemia by intravenously administered radioactive colloids, by P F Hahn and others. Treatment of thyrotoxicosis by radioiodine, by N B. Myant. Radioiodine treatment of thyroid carcinoma, by E. E. Pochin. Carcinoma of the cervix treated with radioactive gold colloids, by A. L Sherman. The *treatment of carcinoma of the prostate* with radioactive colloidal gold, by R. H. Flocks and others. Intraperitoneal application of radioactive colloids, by J H. Muller Treatment of pleural effusion with radioactive colloids, by G. A. Andrews. Use of radioactive isotopes in the treatment of patients with bladder tumors, by D W Smithers and others. Radioactive isotopes for β- and γ-ray applicators, by M. Lederman and W K. Sinclair Silver-coated radioactive colloids as adjuvants in the *surgical treatment* of bronchiogenic tumor by P F Hahn. Interstitial implantation with radioisotopes, by U K. Henschke. Teletherapy with cobalt[60] by G. H. Fletcher Index.

Note Together the 19 chapters in this volume present broad survey of progress and experience to approximately the end of 1954 in the use of radioactive isotopes in the treatment of the malignancy The view presented is an international one. Although the majority of contributors are resident in the United States of America, one is from Sweden, one is from Switzerland, and seven from England. A wide range of techniques is described. Although most of the papers are based on clinical experience in which the author had a part, literature references are included in all. In his preface the editor states "If any plea is to be made at the present time, it should be that a wider use of isotopes in therapy be *directed toward* the commonly occurring tumors.

HARTWELL, JONATHAN LUTTON

Survey of compounds which have been tested for carcinogenic activity Second edition Washington, D C Government Printing Office, 1951 583 p illus 24 cm (United States Federal Security Agency Public Health Service. Publication no 149) $4.25 3503

Contents Introduction. Tabular review Inorganic compounds. Organic compounds Aliphatic. Monocyclic. Bicyclic. Tricyclic. Tetracyclic. Pentacyclic. Hexacyclic and higher Azo compounds. Steroids. Heterocyclic compounds. Unclassified. Addenda. Bibliography Compound index. Route index. Site-of-application index. Species index. Tumor-site index. Vehicle index.

Note This book lists in systematic fashion 1,329 chemical compounds which have been tested on animals, chiefly mice and rats, for carcinogenic actively as reported in the literature of the subject through 1947 Only chemical compounds are listed. Mixtures such as tars, *irradiated sterols* and articles of diet were excluded. Also excluded are reports where the observations extended for period of less than one month from the first administration. Tabulated for each compound are the following reference to the literature by author and date, animal and number of animals, strain or type of animal, sex, preparation and dose, site and route, number of animals with tumors and the type of tumor if any survival records, and duration of the experiment. The first edition of the *survey* was published in 1941 The second edition included the tests that were listed in the first edition and about as many more, the results of which were published from 1940 to 1947

IASON, ALFRED H.

Gastric cancer Illustrations by Alfred Feinberg New York Grune & Stratton, 1953 316 p illus 26 cm $7 50 3504

Contents. Anatomy Histology Incidence. Etiology Pathology Symptomatology Diagnosis and differential diagnosis. Presurgical preparation. Anesthesia. Surgery Postsurgical treatment. Complications. Prognosis. References. Index.

Note A concise monograph directed to medical college students and graduate physicians and surgeons who are beginning study f gastric cancer A rather wide range of information is covered, although the author did not attempt cyclopedic treatment. The principal subject is gastric cancer but some information is included on cancer of the esophagus. However operations on the esophagus are not covered. Approximately half of the space in the volume is devoted to the first seven chapters in which the basic information on anatomy etiology symptomatology etc., is presented. The 55-page chapter on diagnosis and differential diagnosis is a very thorough discussion. Surgical techniques and pre- and post-operative care are covered succinctly but in considerable detail. Surgical techniques are described step by step. The illustrations though small are of high quality and are clearly reproduced. The bibliography is selected one containing 187 references.

INGALLS, RAYMOND G

Tumors of the orbit and allied pseudo tumors, an analysis of 216 case histories. Springfield, Ill Charles C Thomas, 410 p. illus 24 cm $11 50 3505

Contents Introduction. Angioma, hemangioma-lymphangioma. Pseudo tumors. Lymphosarcoma. Dermoid cyst. Retinoblastoma. Meningioma. Melanoma. Neurofibroma. Cholesteatoma. Rhabdomyosarcoma. Neuroblastoma. Hematoma. Myoblastoma. Fibroma. Osteoma. Neurinoma. Leiomyosarcoma. Lipoma. Dermolipoma. Glioma. Sarcoma of the orbit. Carcinoma of the orbit. Extension from an accessory nasal sinus. Extension from lacrimal gland. Carcinoma—extension from lids. *Metastic carcinoma of the orbit.* References. Index.

Note The basis of this outstanding book is material originally assembled for exhibition at the 1947 meeting of the American Academy of Ophthalmology and Otolaryngology The material included both biopsies and specimens of 216 orbital tumors of 37 types. Not all the known types of tumors of the orbit are represented, but the collection is rich one, nevertheless. Most of it came from the pathology laboratories of the Institute of Ophthalmology f the Presbyterian Hospital. The data on each case was analyzed in detail and the results of the studies are presented in this book.

LEWISON, EDWARD F

Breast cancer and its diagnosis and treatment. Baltimore The Williams & Wilkins Company, 1955 478 p illus. (part col d) 26 cm. $15 00 3506

Contents The history of breast cancer and its treatment. The surgical anatomy of the breast, by R. S. Handley *Physiology of the breast, by F H. Trimble. Experimental aspects of mammary* cancer in mice, by J J Bittner The pathology of cancer of the breast, by R. C. Hora, Jr The relationship between benign breast disease and cancer The psychological aspects of breast cancer Diagnosis. Breast biopsy A review of the surgical treatment of breast cancer The surgical treatment of breast cancer Extended radical mastectomy by J A. Urban. Postoperative care. Prognosis. Radiotherapy of breast cancer by V P Collins. Hormonal alterations in *the palliative treatment of breast cancer* by R. A. Huseby Breast cancer and pregnancy or lactation. Self-examination of the breast. The statistics of breast cancer Cancer of the breast in the male. Index.

Note. A comprehensive and authoritative treatise. It is not an exhaustive survey of all the available knowledge but it contains and presents very wide range of carefully selected information. All of the facets of the subject which are named in the chapter titles listed above are treated at length. T cite a few examples, the chapter on history is 27 pages long the chapter on physiology 13 pages long the chapter on diagnosis 37 pages long and the three chapters on surgical treatment, including *extended* radical mastectomy total nearly 100 pages long. Bibliographies are included in the chapters, and there are 181 figures representing considerably higher number of illustrations. The author is member of the faculty of the Johns Hopkins University School of Medicine and surgeon on the staff of the Breast Clinic of Johns Hopkins Hospital.

MAYER, EDGAR, AND HERBERT C MAIER, editors

Pulmonary carcinoma pathogenesis diagnosis, and treatment. New York New York University Press distributed by J B Lippincott Company Philadelphia 1956 540 p illus (part col d) 24 cm. $15 00 3507

Content Foreword, by C. E. Cameron. *Editors' preface* Modern concepts f cancer research, by C. P Rhoads. The biology of cancer with special reference to the cancer of the lung—experimental studies, by W E. Smith. Environmental and occupational factors

suffering from uterine cancer and from the relatives of 313 control probands, total of 4,443 individuals. The methods of study are fully described, and the results are analyzed in series of more than 80 tables. Among the conclusions is, "the evidence supports the conclusion that heredity factors affect the frequency with which cancer appears in the uterus. The author is Associate Professor of Obstetrics and Gynecology at the University of Pennsylvania.

NATIONAL CANCER CONFERENCE

Proceedings of the Second National Cancer Conference. American Cancer Society Inc., National Cancer Institute of the U S Public Health Service, and American Association for Cancer Research. New York American Cancer Society Inc., 1954 2 v illus. 24 cm. Gratis. 3514

Contents (abridged) Part I, Introductory remarks. Part II, General sessions: Virus pneumonia, tuberculosis, cancer—that is the problem, by R. H. Overholt. Clinical cancer chemotherapy by A. Gellhorn. Discussion, by D. A. Karnofsky. Viruses and the cancer problem, by W. M. Stanley. Radiation therapy in cancer by R. H. Chamberlain. Present status and future trends of exfoliative cytology by G. N. Papanicolaou. The problem of malignant melanoma, by G. T. Pack. The cancer potential of the silent lung shadow by E. P. Pendergrass. Recent progress in the study of chemical carcinogenesis, by A. Haddow. The present status and likely future accomplishments of surgery of alimentary tract cancer by O. H. Wangensteen. Part III, Round table discussions: Significance of statistical analysis of end-results in the treatment of breast cancer. Joint meeting of breast, female genital tract, genitourinary and steroid endocrinology panels. Part IV Panel meetings: Breast. Genitourinary. Head and neck. Lymphoma-leukemia. Female genital tract. Gastrointestinal. Lung. Radiobiology. Genetics. Cytology. Chemotherapy. Virology. Steroids. [illegible] Index.

Note: The contents of these volumes present a comprehensive view of the state of cancer research, diagnosis, and therapy as of approximately March, 1952. The papers listed by title and author above are short surveys of the topics named in their titles, and together they occupy less than 100 pages. Most of the space in both volumes is devoted to the round table discussions and to the proceedings of the panels. The latter consist of series of short papers and transcripts of discussions. Illustrations and statistical tables are included in many of these papers. The index covers both authors and subjects. The Proceedings of the Third National Cancer Conference was published by J. B. Lippincott in 1957 951 p., $9.00.

NETTLESHIP ANDERSON

Basic principles of cancer practice a book on diagnosis prognosis, and treatment of human neoplasms for the general practitioner and medical student. Baltimore The Williams & Wilkins Company 1952 398 p. illus. 24 cm. $7.00. 3515

Contents (abridged) The status of present day cancer practice. Clinical behavior of neoplasms. Methods of cancer diagnosis. The clinical pathology of neoplasms. Local and systemic effects of cancer. Treatment of cancer. Neoplasms of children. Neoplasms of the skin. Neoplasms of the gastro-intestinal tract, liver, and pancreas. Neoplasms of the breast. Neoplasms of the female genital system. Neoplasms of the male genito-urinary system, kidney, bladder, and prostate. Neoplasms of blood forming organs. Neoplasms of the lung, nasopharynx, larynx, trachea, and bronchi. Neoplasms of bone, muscle, and connective tissue. Neoplasms of the central nervous system. Neoplasms of the endocrine organs. A review of the biochemistry of cancer. Relation of occupation and trauma to cancer. Index.

Note The expressed purpose of this book is to make available to advanced medical college students and general practitioners of medicine the highlights of the contemporary status of cancer diagnosis and treatment. The physician is offered information on general aspects, such as the pathological behavior of tumors and also on very specific topics, such as the current status of hormone therapy. No subject is covered exhaustively. Good literature lists are included for those physicians who wish to read further. There are 106 figures. The purpose of the book is to alert the general physician to the detection of cancer and to inform him about therapies and about the prognosis of various types. The author is Professor of Pathology in the University of Arkansas.

NIEBURGS, H. E

Cytologic technics for office and clinic. New York Grune & Stratton, 1956 233 p. illus. (part col d) 24 cm. $7 75 3516

Contents: Introduction. Oral cavity. Laryngeal mirror. Cytologic diagnosis of cancer of the maxillary sinuses. Cytologic diagnosis of pulmonary carcinoma. Esophagus. Stomach. Duodenal drainage. Descending colon and rectum. Vulva. Cervix uteri. Prognosis of cervical tissue response to radiation. Endometrium. Carcinoma of the fallopian tube. Ovarian carcinoma. Office procedures for the estimation of hormonal activity. Breast. Serous effusions. Urine. Prostate. Skin. Histocytology and operating room procedures. Mailing of specimens. Organization and function of cytologic laboratory. Inter- and intradepartmental coordination. Considerations on the training of cytotechnicians, cytologists and cytopathologists. Laboratory procedures. References. Appendix. Index.

Note: Techniques related to the collection of cellular material for use in the diagnosis of cancer and other disorders that may be detected by the examination of cells washed or abraded from living tissues are the subject of this book. The primary emphasis is on collection, but such related matters as the preparation of smears and staining are covered also. Interpretation of the microscopic findings when the collected material is examined is discussed briefly in most of the chapters, but diagnosis is not covered as thoroughly as it would be in a specialized monograph on cytologic diagnosis. The book contains 171 figures, of which some are diagrams of steps in techniques while others are reproductions of microphotographs of cellular material. The author is Director of the cytology laboratory of a large hospital in New York. The book is of interest to physicians in charge of such laboratories, technicians working in them as well as to physicians who are interested in cytological techniques as diagnostic procedures.

PAPANICOLAOU, GEORGE NICHOLAS

Atlas of exfoliative cytology Cambridge Mass. Published for The Commonwealth Fund by Harvard University Press 1954 227 p. illus. (part col d) 29 cm. $18.00. 3517

Contents: Introduction. Technique. Criteria of malignancy. Female genital system. Urinary and male genital systems. Respiratory system. Digestive system. Pleural, peritoneal and pericardial exudates. Breast. Plates. Bibliography. Index.

Note: A more general work than the author's earlier monographs *Diagnosis of uterine cancer by the vaginal smear* and *The epithelia of women's reproductive organs*, it extends the techniques of exfoliative cytology to the alimentary tract and other systems. The 54 plates are divided as follows: female genital system, 12; urinary and male genital organs, 4; respiratory system, 5; alimentary tract, 11; pleural, peritoneal and pericardial exudates, 2; breast secretions, 2; leukocyte cells, 1; cells related to pregnancy, 1; cells affected by radiation, 11; undetermined cells of various types, 1; mitotic figures found in normal and malignant cases, 2. All of the plates are reproduced in color; some of them from paintings by the artist, Hashime Murayama, and some of them from photomicrographs. Identifying legends are supplied for all of the figures in the plates; and in addition, short discussions by the author of the characteristics and diagnostic significance of some of the cells illustrated are included. The plates are preceded by the chapters whose titles are given above. In these chapters a history of the development of exfoliative cytology is outlined; procedures of preparing and staining exfoliative material are described, criteria for normality and abnormality in exfoliated cells are discussed, and normal and abnormal cells associated with various body systems are described with some emphasis on neoplastic cell types. The volume is published in a looseleaf binder to facilitate the addition of new material.

PAPANICOLAOU GEORGE NICHOLAS AND HERBERT F TRAUT

Diagnosis of uterine cancer by the vaginal smear Cambridge Mass. Harvard University Press 1943 46 p. illus. (part col d) 28 cm. $5.00 3517A

Contents: Diagnosis of uterine cancer by means of vaginal smears. General classification of the epithelial cells of the vagina and cervix found in the vaginal fluid. The cellular contents of the vaginal fluid at different periods of the normal sex cycle. Effect of modified physiological and of pathological conditions on the cellular contents of the vaginal fluid. Clinical material and

Moorhead. Nuclear variability in human neoplastic cells, by M. E. Long and H. C. Taylor Jr. Intraepithelial carcinoma of the uterine cervix—a histochemical and cytomorphological approach, by A. G. A histocytologic and electron microscopic study of effusions associated with malignant disease, by S. A. Luse and J W Reagan. Aspiration biopsy—technique and application, by J T Godwin. Cytology of pulmonary carcinoma, by P A. Herbut. Newer advances in the exfoliative cytology of the gastrointestinal tract, by C. E. Rubin. The cytology of endometrial cancer by E. L. Hecht. Cytological evaluation of breast secretions, by G. N Papanicolaou and others. The exfoliative cytology of the mammary gland during pregnancy and lactation by D G Holmquist and G. N Papanicolaou. Cytologic tissue culture studies on cervical epithelium, by C. G. Grand. Exfoliative cytology as applied to the quantitative evaluation of oncolysis induced by viruses, by I. Koprowska. Studies on nucleoprotein patterns in radiosensitivity testing, by S. B Gusberg and others. The sensitization response in the vaginal smear by J B Graham and R. M. Graham.

Note Papers first presented at a conference held and supported jointly by the Section of Biology of the New York Academy of Sciences and the Damon Runyon Memorial Fund for Cancer Research Inc., in May 1955 have been made available in this publication. All are listed by title and author above. Taken together they represent an important body of current knowledge on the cancer cell and on the techniques of studying it. The illustrations include reproductions of numerous microphotographs of cancer cells. Literature references are included in most of the papers.

Moulton, Forest Ray, editor

Approaches to tumor chemotherapy A symposium of papers and discussions on various aspects of tumor chemotherapy, developed from the summer meetings of the Section on Chemistry (C) of the American Association for the Advancement of Science at Gibson Island Maryland, 1945–1946 Washington, D C American Association for the Advancement of Science 1947 442 p illus 26 cm. $7 75 3511

Contents (abridged) I, Historical introduction General review of cancer therapy by W H. Woglom. II, Special methodology: The transparent chamber technique as a tool in experimental tumor therapy by G. H. Algire. Some cellular and surface chemical aspects of tumor chemotherapy by M. J Kopac. A method of producing oncolysis in rats that conferred certain immunity against homologous tumors, by P Aptekman. The chemistry of substances specific for the stimulation of lymphopoiesis and myelopoiesis, by D. L. Turner and F R. Miller. A myeloid metaplasia factor from human urine, by R. W Heinle and others. III, Nutritional factors The role of nutrition in the origin and growth of tumors, by A. Tannenbaum. The influence of diet on the production of hepatic tumors induced by p-dimethylaminoazobenzene, by E. L. Opie. Chemotherapeutic regressions of transplanted and spontaneous cancers in mice, by R. Lewisohn and others. Effect of intravenous injection of yeast and barley extracts and *L. Casei* factor upon spontaneous mammary adenocarcinomas in mice, by K. Sugiura. IV Bacterial products. A review of the treatment of malignant tumors by Coley bacterial toxins, by H. C. Nauts and B L. Coley Some aspects of joint institutional research program on chemotherapy of cancer: current laboratory and clinical experiments with bacterial polysaccharide and with synthetic organic compounds, by M. J Shear and others. V Nitrogen mustards: The relation between chemical constitution and biological action of the nitrogen mustards, by F S. Philips and A. Gilman. Experimental observations on the use of the nitrogen mustards in the treatment of neoplastic disease, by D. A. Karnofsky and others. An evaluation of methyl-bis(β-chloroethyl) amine hydrochloride and tris(β-chloroethyl) amine hydrochloride (nitrogen mustards) in the treatment of lymphomas, leukemia and allied diseases, by D A. Karnofsky and others. Use of methyl-bis(β-chloroethyl) amine hydrochloride and tris(β-chloroethyl) amine hydrochloride ("nitrogen-mustards") in the therapy of Hodgkin's disease, lymphosarcoma, leukemia and certain allied and miscellaneous disorders, by L. S. Goodman and others. Clinical experiences with nitrogen mustard therapy by M. M. Wintrobe and others. VI, Various clinical aspects: Anti-androgenic treatment of prostatic carcinoma in man, by C. Huggins. The treatment of blood dyscrasias, lymphomas, and other malignant diseases with radioactive phosphorus. clinical and experimental results, by E. H. Reinhard and N A. Womack. Effects of urethane upon acute lymphatic leukemia in a dog, by H. B. Parry and J R. M. Innes. Administration of oil-soluble organo-metallic compounds in malignancy by C. F Geschickter and E. E. Reid.

Note Many of the papers in this volume are monographic in style, in the sense that they summarize the extant knowledge of a specific topic and give references to the pertinent literature. Also, most of them contain reports of recent research. The volume is of interest primarily to active workers in cancer research.

Moulton, Forest Ray, editor

A symposium on mammary tumors in mice, by members of the staff of the National Cancer Institute, National Institute of Health. United States Public Health Service. Washington, D C American Association for the Advancement of Science, 1945 223 p. illus. 27 cm (American Association for the Advancement of Science Publication no 22) $3.50 3512

Contents General and historical introduction, by M. B. Shimkin. Cytology of mammary tumors of the mouse, by A. J. Dalton. Morphology and histogenesis of mammary tumors, by T B. Dunn. Histogenesis of the mammary gland of the mouse, by A. J. Dalton. The vascular supply of mammary gland carcinomas, by G. H. Algire and H. W Chalkley Genetics of mammary tumors in mice, by W E. Heston. Hormones and mammary cancer in mice, by M. B. Shimkin. The milk influence in the genesis of mammary tumors, by H. B. Andervont. Diet and some other environmental influences in the genesis and growth of mammary tumors in mice, by H. P Morris. The chemistry of the mammary tumors, by J P Greenstein. Experimental treatment of mammary tumors in mice, by H. M. Dyer Conclusions—including discussion of the possible implications for man, by M. B Shimkin.

Note The purpose of this co-operative work is two-fold—first to present a review of existing knowledge regarding cancer of the breast in mice, and second to stimulate further research into the problem. Thus each section consists essentially of survey of outstanding research carried out in one particular phase of the subject and an evaluation of the results obtained, as based on a review of the literature of the field. In most cases extensive bibliographies are included. There is no index.

Murphy, Douglas Power

Heredity in uterine cancer Cambridge, Mass Harvard University Press 1952 128 p 22 cm. $2.50 3513

Contents (abridged) Section I, The literature Study by Rybeck of familial incidence of uterine cancer Other reports of familial occurrence of cancer and related diseases. Discussion of the literature. Section II, Materials and methods Purpose of investigation. Pilot and main studies. Plan of investigation. Cancer probands. Control probands. Sources of information for locating individuals. Family visiting. Compilation of family record. Coding of histories. Section III, The results The tables. Characteristics of probands. Characteristics of relatives. Section IV Discussion Selection of the families. Methods employed in collecting data. Results. Conclusions. References. Index.

Note A report of a study conducted to find out whether predisposition toward cancer is inherited. Data were collected on the occurrence of cancer among the relatives of 201 women who were

ological, and statistical aspects in Caucasoids, Mongoloids Negroids and Mexicans. Baltimore The Williams & Wilkins Company 1954 363 p. illus. 24 cm. $5.00. 3523

Contents: Introduction. Sources, materials, racial composition, age, sex, methods, comments, and comparisons with other data. All cancers. Carcinoma of the stomach. Carcinoma of the large intestine. Malignant lymphatic diseases. Carcinoma of the lung. Carcinoma of the uterus. Intracranial tumors. Carcinoma of the prostate—of the breast—Of the pancreas—of the urinary bladder—Of the gallbladder—Of the ovary—of the skin. Sarcoma of soft parts. Carcinoma of the mouth—Of the esophagus—Of the kidney—Of the larynx. Bone tumors. Carcinoma of the liver. Miscellaneous tumors. General summary. Concluding comments. References. Index.

Note: A statistical study based on [illegible] necropsies performed [illegible] at the Los Angeles County Hospital, a hospital devoted primarily to caring for the indigent part of the community. Among the series of necropsies were [illegible] cancer cases. These cases were the ones subjected to analysis and study. Included also are data from the literature pertaining to cancer in other persons belonging to the three principal racial groups studied, the Caucasoids, the Mongoloids and Negroids. The purposes of the study are well described in the introductory chapter. However, the principal purpose was to investigate the etiological implications of racial and geographical differences in incidence of cancer and especially in the incidence of its various kinds. Among the author's concluding statements: "In general, the observed racial differences in cancer tend on critical analysis to indicate environmental rather than hereditary factors in etiology. The geographical differences tend to prove to be environmental rather than racial per se. The hereditary differences tend to be explained by cultural rather than genetical factors. A [illegible]-page list of references to the international literature is included.

UNITED STATES ARMED FORCES INSTITUTE OF PATHOLOGY

Atlas of tumor pathology Section 1, fascicle 2 Tumors of the skin. By Herbert Z. Lund. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the Division of Medical Sciences of the National Academy of Sciences—National Research Council. Washington, D C. American Registry of Pathology 1957 330 p. illus. (part col d) 26 cm. $3.00 3524

Contents (abridged): Introduction. Benign tumors and hyperplasias of the epidermis ([illegible]) Tumors and hyperplasias of or resembling the accessory structures of the skin. Cysts of the skin. Precancerous dermatoses. Carcinoma of the skin. Secondary carcinomas of the skin. Mesodermal tumors of the skin.

—— Section II, fascicle 5 Tumors of the soft tissues. By Arthur Purdy Stout. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. Armed Forces Institute of Pathology 1953 135 p. illus. (part col'd) 26 cm. $?.00 3525

Contents (abridged): Benign tumors and tumor-like proliferations. Malignant tumors of the soft tissues. Desmoids and [illegible]. References.

—— Section II, fascicle 6 Tumors of the peripheral nervous system. By Arthur Purdy Stout. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. American Registry of Pathology 1949 57 p. illus. 26 cm. $0.60 3526

Contents: Tumors of the peripheral nerves. Tumors of sympathetic ganglia. Tumors of paraganglionic cells. Complex malignant neoplasms. Neoplasms of the [illegible] central nervous system tissues. References.

—— Section III, fascicle 7 Tumors of the cardiovascular system. By Benjamin H. Landing and Sidney Farber Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the Division of Medical Sciences of the National Academy of Sciences—National Research Council. Washington, D C. American Registry of Pathology 1956 138 p. illus 26 cm $1.50. 3527

Contents: Introduction. Tumors of the pericardium. Tumors of the heart. Tumors of the blood vessels. Tumors of the lymphatic vessels.

—— Section III, fascicle 9 Teratomas. By Rupert A. Willis. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. American Registry of Pathology 1951 58 p. illus. 26 cm. $0.50 3528

Contents: Nomenclature. Definition. Classification. Incidence. Hypotheses of the origin of teratomas. Growth. Histologic. Highly organized structures. Malignant teratomas. References.

—— Section IV fascicle 11 Tumors of the major salivary glands. By Frank W Foote jr and Edgar L. Frazell. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. American Registry of Pathology 1954 149 p. illus. 26 cm. $1.50. 3529

Contents: Introduction. Mixed tumor. Mucoepidermoid tumor. Squamous cell carcinoma. Adenocarcinoma. Capillary cystadenoma lymphomatosum. Oxyphil cell adenoma. Benign lymphoepithelial lesion.

—— Section IV fascicle 14 Tumors of the thyroid gland. By Shields Warren and William A. Meissner Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D. C. American Registry of Pathology 1953 97 p. illus. $1 75 3530

Contents (abridged): Introduction. Benign tumors. Malignant tumors.

—— Section IV fascicle 15 Tumors of the parathyroid glands. By Benjamin Castleman.

data method of study Characteristics of vaginal smears in cancer of the cervix. Characteristics of vaginal smears in cancer of the fundus of the uterus. Discussion of the use of the vaginal smear as a diagnostic procedure. Bibliography Plates.

Note Study of the vaginal smear has proved valuable in many ways and, as an aid in the diagnosis of cancer of the cervix and body of the uterus, it has been particularly useful. Although the procedure involved is simple, exact techniques and special knowledge of the minutiae of cellular morphology are required. These matters are set forth in detail by Dr Papanicolaou and Dr Traut, who present descriptions and many illustrations in color of cells which were derived from various kinds of cancer of the uterus and, for comparison, descriptions and illustrations of the cells normally present in the vagina at various stages of the menstrual cycle and during and after menopause.

RANKIN, FRED WHARTON, AND A STEPHENS GRAHAM

Cancer of the colon and rectum its diagnosis and treatment Second edition. Springfield, Ill Charles C Thomas, 1950 427 p illus. 24 cm. $8 50 3518

Contents Part I General considerations Anatomy and physiology Incidence, occurrence and etiology Pathology Symptoms and diagnosis. Differential diagnosis. Part II, Treatment Operability resectability and prognosis. Choice of operation. Radiotherapy of carcinoma of the rectum. Operative mortality and end-results. Preoperative and postoperative treatment. Part III, Operative procedures Historical considerations. Procedures for overcoming obstruction. Procedures for extirpation of lesions of the colon. Procedures for extirpation of lesions of the rectosigmoid, rectum, and anus. Palliative and miscellaneous procedures. Author index. Subject index.

Note A treatise for graduate physicians and surgeons. The importance of early diagnosis is emphasized, and the authors describe the various techniques of diagnosis and differential diagnosis fully. About half of the book is devoted to descriptions of the surgical techniques and related matters of concern to the surgeon. The book is based on the authors' own extensive experience and also on the experience of others as reported in the literature. A wide range of data on such details as frequency of symptoms, accuracy of diagnosis and mortality rates is presented in more than 100 tables. Extensive bibliographies are included. The first edition appeared in 1939 Much important material has been added in this edition.

ROSENBLATT, MILTON B, AND JAMES R. LISA

Cancer of the lung pathology diagnosis and treatment. New York Oxford University Press, 1956 330 p illus 24 cm $15 00 3519

Contents Introductory considerations. Prevalence. Pathology Clinical manifestations. Physical diagnosis. The Roentgen examination. Bronchoscopy by C. L. Jackson. Exfoliative cytology by G. N Papanicolaou and N C. Foot. Accessory diagnostic procedures. Surgical therapy by J M. Chamberlain and C. F Daniels. Bronchial adenoma, by J M. Chamberlain and C. F Daniels. Palliative treatment, by S. Roswit. Subject index. Author index.

Note An authoritative book addressed primarily to general practitioners of medicine, but useful also to specialists. One of the purposes is the "development of a high index of suspicion by the clinician and the radiologist," so that more lung cancers will be detected before they reach the inoperable stage. The book provides in compact and useful form not only the information that will facilitate early diagnosis but also some information on treatment. It is not, however, a complete work on therapy The chapter on surgical theory—to take an example—although written by two eminent specialists in this field and containing explicit descriptions of techniques is only about 30 pages long, and the chapter on palliative treatment is about 35 pages long. The book is adequately illustrated and contains extensive bibliographic lists. The chapters without authors' names in the above contents were written by Drs. Rosenblatt and Lisa.

SCHIFFRIN, *M J*, *editor*

Management of pain in cancer Foreword by Warren H Cole. Chicago The Year Book Publishers, Inc., 1956 245 p 18 cm $4 50 3520

Contents. Systemic analgetics, by M. J Schiffrin and E. G. Gross. Nerve blocks for pain in malignancy by M. S. Sadove and R. C. Balagot. Neurosurgical aspects of pain management, by O. Sugar Humoral and chemical palliation of malignancy by S. G. Taylor III, and M. J Schiffrin. Surgical procedures in control of pain in advanced cancer by H. Schwarz, II. Radiation therapy in the relief of pain in malignant disease, by J W J. Carpender Psychological aspects of pain in terminal malignancies, by V E. Zarling. Index.

Note A small authoritative manual written as a guide to general practitioners of medicine. Its purpose is to inform these physicians who usually have charge of patients during the terminal stages of incurable malignancies. The available techniques for pain relief which are practical in such cases are discussed from the standpoint of informing the physician and guiding him in their choice. Related aspects of malignancies, such as physiological effects, also are discussed briefly and the final chapter is a helpful discussion of the psychological aspects. There are no literature references as the book is intended to be self-contained.

SHARP, GEORGE S, AND OTHERS

Oral cancer and tumors of the jaws, by George S Sharp, Weldon K Bullock, and John W Hazlet. New York The Blakiston Division, *McGraw Hill Book Company, Inc.*, 1956 561 p illus 23 cm $15.00 3521

Contents: Part I, Introductory principles for neoplastic disease: The history of cancer Origin of cancer Classification of oral neoplasms. The biopsy Precancerous pathology Part II, Tumors, benign and malignant, of the oral mucosa and accessory oral structures: Lesions of the lips—tongue—floor of the mouth—gingivae—cheeks—hard and soft palate—nasal cavities and paranasal sinuses. Part III, Neoplasms, benign and malignant, of the jaws. Tumors of the epithelium. Benign neoplasms of connective tissue. Malignant neoplasms of connective tissue. Neoplasms of reticuloendothelial tissue. Lesions of vascular and nerve tissue. Metastatic bone tumors. Part IV Quasi-tumors of the jaws: The exostoses. Fibrous dysplasia. The reparative granulomas. Other diseases of bone simulating tumor Odontogenic hamartomas. Part V Cysts of the jaws: Nonodontic cysts. Odontic cysts. Index.

Note A comprehensive, fully illustrated work written by faculty members of the School of Dentistry and the School of Medicine of the University of Southern California. It is addressed to advanced students in dental colleges and to graduate dentists and physicians. The importance of early recognition of malignant growth is stressed, and, in accord with this emphasis, the book is illustrated with several hundred photographs and roentgenograms. Benign tumors, diseases of bone that simulate tumor cysts, etc., are also described. Incidence, etiology histopathology clinical characteristics, diagnosis, and prognosis are concisely discussed for most of the diseases covered. Literature references are furnished.

SNAPPER, I, AND OTHERS

Multiple myeloma, by I Snapper, Louis B Turner, and Howard L. Moscovitz. New York Grune and Stratton 1953 168 p illus. (*part col d*) 23 cm. $6 50 3522

Contents. The myeloma cell. Incidence and survival. The peripheral blood picture. Clinical manifestations. Roentgenologic changes in the bones. Metabolic abnormalities in multiple myeloma. Solitary myeloma. Multiple plasmacytomas. Extramedullary plasmacytomas. Pathology Differential diagnosis. Treatment of myeloma. Summary Bibliography Index.

Note Ninety-seven cases of multiple myeloma—41 of which were autopsied—studied in the wards of Mount Sinai Hospital in New York City forms the basis for this monograph. The authors have also drawn case histories and related information from the literature to the extent that their bibliography of literature citations runs to 217 references. The authors' style is both concise and precise Their coverage of the disease is more comprehensive than the small number of pages in the volume might be taken to indicate In the summary chapter at the end of the work, they present in very compact form what is known about myeloma, the treatment of which is "still highly unsatisfactory and of which the "nature and pathogenesis remain completely unknown.

STEINER, PAUL E

Cancer Race and geography some etiological environmental, ethnological epidemi-

the National Research Council. Washington, D C. American Registry of Pathology 1952. 177 p. illus. 26 cm. $1.50. 3541

Contents: Tumors of the prostate. Tumors of the testis. Tumors of the testicular appendages—epididymis, spermatic cord and testicular tunics. Tumors of the urethra. Tumors of Cowper's glands. Tumors of the seminal vesicles. Tumors of the penis. Tumors of the scrotum.

—— Section IX, fascicle 33 Tumors of the female sex organs. Part 1 Hydatidiform mole and choriocarcinoma. By Arthur T Hertig and Hazel Mansell. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. American Registry of Pathology 1956 63 p. illus. (part col'd) 26 cm. $1.00. 3542

Contents (abridged): Hydatidiform mole and choriocarcinoma of the uterus. Hydatidiform mole and choriocarcinoma, extrauterine. References.

—— Section IX, fascicle 34 Tumors of the breast. By Fred W Stewart. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. American Registry of Pathology 1950. 114 p. illus. (part col'd) 26 cm. $1.10 3543

Contents: Introduction. Paget's disease of nipple. Carcinoma of breast. Malignant variant of fibroadenoma cystosarcoma phyllodes. Miscellaneous sarcomas of breast. Lesions simulating tumors. Benign tumors. References.

—— Section X, fascicles 35 and 37 Tumors of the central nervous system. By James W Kernohan and George P Sayre. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington, D C. American Registry of Pathology 1952 129 p. illus. 26 cm. $0.90 3544

Contents: Introduction. Tumors of nervous tissue. Tumors of mesenchymal tissue. Blastomas. Tumors of developmental defects. Tumors of the pineal body

—— Section X, fascicle 36 Tumors of the pituitary gland and infundibulum. By James W Kernohan and George P Sayre. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the Division of Medical Sciences of the National Academy of Sciences—National Research Council. Washington, D C. American Registry of Pathology 1956 81 p. illus. (part col'd) 26 cm. $1.00 3545

Contents (abridged): Primary tumors of the pituitary gland. Hyperpituitarism not associated with primary tumors of the pituitary gland. References.

—— Section X, fascicle 38 Tumors of the eye and adnexa. By Algernon B Reese. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the Division of Medical Sciences of the National Academy of Sciences—National Research Council. Washington D C. American Registry of Pathology 1956 205 p. illus. (part col'd) 26 cm. $2.00 3546

Contents: Epithelial tumors of the eye. Neuroectodermal tumors. Melanomas. Mesodermal tumors. Tumors of the lacrymal gland. Metastatic tumors. Orbit neoplasms and lesions simulating them.

Note: A monumental reference work of oncology based largely on the pathologic material in the Armed Forces Institute of Pathology. It is primarily devoted to illustrations. These include both gross pathology and microscopic, but the latter predominate as would be expected. Great care has been taken with the illustrations, and the reproductions are of excellent quality. A concise text accompanies them, and literature references are included in each fascicle. The work is planned for completion in approximately 40 fascicles, of which those listed above have been published to approximately the close of 1957

Vincent Memorial Hospital

The cytologic diagnosis of cancer By the staff of the Vincent Memorial Laboratory of the Vincent Memorial Hospital, a gynecologic service affiliated with the Massachusetts General Hospital, Boston, Massachusetts. The Department of Gynecology Harvard Medical School. Published under the sponsorship of the American Cancer Society Philadelphia. W B Saunders Company 1950. 229 p. illus. (part col'd) 25 cm. $9.00. 3547

Contents: Normal cells from cervical and vaginal squamous epithelium. Normal cells from columnar epithelium of endocervix and endometrium. Cells not originating from epithelium of female genital tract. Squamous cell carcinoma of the cervix. Adenocarcinoma of the endometrium. Adenocarcinoma of uterus. Other tumors of the female genital tract. Radiation changes in normal and malignant cells of the vaginal secretion. Cells of squamous epithelium of respiratory tract. The columnar epithelium of respiratory tract. Cells of non-epithelial origin in sputum. Squamous cell carcinoma of the lung. Other types of pulmonary carcinoma. Normal cells from gastric washings. Carcinoma of the stomach. Normal cells of the urinary tract. Carcinoma of the genito-urinary tract. Normal cells of pleural and peritoneal fluid. Malignant cells in pleural and peritoneal fluid. Technic. Appendix. Bibliography. Index.

Note: A reference and study guide for physicians, cytologists, and other persons who are concerned with the interpretation of smears taken in the diagnosis of not only genital cancer but cancer of the lung and respiratory tract, cancer of the stomach, etc. A considerable part of the space has been devoted to reproductions of photomicrographs, some of which are reproduced in color. Specific discussions of the microphotographs are preceded in each chapter by background discussion of the histology of the tissue that forms the subject of the particular chapter. Special emphasis is given to the interpretation of cervical smears and to the correct identification of cells that are deviations from normal forms. The book is based on very extensive experience with cytologic diagnosis at the Vincent Memorial Hospital Laboratory

Ward Grant Eben and James W Hendrick

Diagnosis & treatment of tumors of the head and neck (not including the central nervous system) Baltimore The Williams & Wilkins Company 1950. 832 p. illus. 26 cm. $15.00. 3548

Contents: Introduction. The early development of the head and neck. Benign tumors and premalignant lesions of skin of the head

Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council Washington, D C. American Registry of Pathology, 1952 74 p illus. (part col'd) $0 65 3531–32

Contents Introduction. Primary hyperparathyroidism. Secondary hyperparathyroidism (secondary hyperplasia) Non-functional enlargement. $0.65

—— Section IV, fascicle 16 Tumors of the carotid body and related structures (chemoreceptor system) By Philip M LeCompte. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council Washington, D C American Registry of Pathology, 1951 40 p illus (part col'd) 26 cm $0 45 3533

Contents Introduction. Tumors of the carotid body Tumors of the aortic bodies. Tumors of the glomus, jugulare and paraganglion tympanicum. Tumors arising in the ganglion nodosum of the vagus. Tumors of the "paraganglion ciliare. References.

—— Section V, fascicle 17 Tumors of the lower respiratory tract. By Averill A. Liebow Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington D C American Registry of Pathology, 1952 189 p illus (part col'd) 26 cm $1.25 3534

Contents Introduction. Primary tumors of the bronchi and lungs. Neoplastic lesions of the lung other than primary tumors. Tumors of the pleura. Tumors of the diaphragm.

—— Section V fascicle 18 Tumors of the mediastinum By Hans George Schlumberger Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington D C American Registry of Pathology 1951 88 p illus (part col'd) 26 cm. $0 75 3535

Contents Introduction. Tumors of nervous systems. Tumors of mesenchymal derivatives. Tumors of displaced tissues. Tumors of hematopoietic tissues. Cysts of the mediastinum. Miscellaneous space-consuming lesions.

—— Section V fascicle 19 Tumors of the thymus gland By Benjamin Castleman Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council. Washington D C American Registry of Pathology, 1955 82 p illus (part col d) 26 cm $1 00 3536

Contents Introduction. Thymoma. Tumors resembling thymoma. Other tumors of the thymus gland.

—— Section V, fascicle 20 Tumors of the esophagus. By Arthur Purdy Stout and Raffaele Lattes Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the Division of Medical Sciences of the National Academy of Sciences—National Research Council. Washington, D C. American Registry of Pathology, 1957 105 p. illus (part col d) $1.00. 3537

Contents (abridged) Benign tumors, cysts and malformation. Malignant tumors of the esophagus.

—— Section VI, fascicles 23 and 24 Tumors of the retroperitoneum, mesentery, and peritoneum By Lauren V Ackerman. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council Washington D C American Registry of Pathology, 1954 136 p illus (part col'd) $1 50 3538

Contents (abridged): Tumors of the retroperitoneum. Tumors of the mesentery and omentum. Tumors of the peritoneum.

—— Section VIII fascicle 29 Tumors of the adrenal By Howard T Karsner Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the National Research Council Washington D C American Registry of Pathology, 1950 60 p illus. (part col d) 26 cm $1 00 3539

Contents Introduction. Tumor-like lesions. Cortical tumors. Medullary tumors. Melanoma. Secondary tumors.

—— Section VIII fascicle 30 Tumors of the kidney, renal pelvis and ureter By Balduin Lucké and Hans G Schlumberger Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of the Division of Medical Sciences of the National Academy of Sciences—National Research Council Washington D C. American Registry of Pathology 1957 208 p. illus. (part col d) 26 cm $2.25 3540

Content Introduction. Tumors of the kidney Tumors of the renal pelvis. Tumors of the ureter

—— Section VIII, fascicles 31b and 32 Tumors of the male sex organs By Frank J Dixon and Robert A. Moore. Published by the Armed Forces Institute of Pathology under the auspices of the Subcommittee on Oncology of the Committee on Pathology of

which constitutes the main body of the book. In this part prognosis and treatment also are covered, with medical therapy given the most emphasis. However, indications for surgical treatment are fully described, and there is some description of surgical therapy. The third part is relatively brief. However, it does contain material, physiologic, and other basic information of importance to the physician who wants to be well informed on peripheral vascular disorders. The book is adequately illustrated, and literature references are included in the chapters. The author is Head of the Department of Physical Medicine and Rehabilitation of the College of Medicine of the University of Illinois.

ALLEN EDGAR V AND OTHERS

Peripheral vascular diseases. Second edition. By Edgar V Allen, Nelson W Barker Edgar A. Hines, jr., with associates in the Mayo Clinic and Mayo Foundation. 316 illustrations 7 in color Philadelphia W B Saunders Company 1955 825 p. illus. (part col'd) 25 cm. $13.00 3553

Contents (abridged) An approach to the diagnosis of vascular diseases of the extremities. Technic of arteriography by J. C. Ivins and J. M. Janes. Raynaud's phenomenon and allied vasospastic conditions. Scleroderma. Diseases of the vascular system which primarily result from environmental temperature. The scalenus anticus syndrome with and without cervical rib, by J. G. Love. Sudden occlusion of the arteries. The degenerative arteriopathies—arteriosclerosis and atherosclerosis. Coarctation of the aorta. Periarteritis nodosa and temporal arteritis, by R. M. Shick and W F Kvale. Hypertensive ischemic ulcers of the leg. Aneurysms. Tumors of blood and lymph vessels. Purpura, by E. D. Bayrd. Thrombophlebitis and pulmonary embolism. Varicose veins, by T. T. Myers. Chronic venous insufficiency. Lymphedema. Medical treatment. Surgical treatment. Surgical procedures on the sympathetic nervous system for peripheral vascular diseases, by C. S MacCarty. Amputations for peripheral vascular diseases, by J C. Ivins and J M. Janes. Embolectomy, arteriectomy and thromboendarterectomy by J C. Ivins and J. M. Janes. Surgical treatment of coarctation of the aorta, by O T. Clagett. Surgical treatment of aneurysms of the aorta, by J W Kirklin and J. M Waugh. Surgical treatment of peripheral arterial aneurysms, by J. M. Janes and J C. Ivins. Surgical treatment of varicose veins, by T T. Myers. Surgical treatment of lymphedema, by J. M. Janes and J. C. Ivins. Index.

Note: A comprehensive treatment based on much pioneer work and [illegible] wide range of experience in the study of the peripheral vascular diseases at the Mayo Clinic and Mayo Foundation. The field of peripheral vascular diseases is broadly defined to include diseases of all blood vessels distal to the heart and, also, the lymph system. However, [illegible] few topics have been omitted, such as hypertension, vascular diseases of the central nervous system and certain vascular diseases of internal organs. In general, the following aspects of each disease or group of related diseases is covered: history, etiology, pathology, physiological effects, symptoms, complications, examination of the patient, diagnosis, differential diagnosis, and treatment. Extensive bibliographies are included in most of the chapters. The first edition was published in 1946. Some material that appeared in it has been deleted. However, new procedures and new topics have been added in abundance on such conditions and techniques as coarctation of the aorta, hypertensive ischemic ulcers of the leg, aortography and sympathectomy. There are now 27 chapters, and the terminal one on surgical treatment is actually composed of 14 signed subchapters on individual surgical techniques. A high proportion of the 316 figures are reproductions of photographs.

ALTSCHUL, RUDOLF

Selected studies on arteriosclerosis. Springfield Ill. Charles C Thomas, 1950. 182 p. illus. 24 cm. $5.50 3554

Contents: Relationship between human and experimental arteriosclerosis. Experimental cholesterol arteriosclerosis. Cytology of endothelium. Dedifferentiation and metaplasia of endothelium. On the formation of cells in arteriosclerosis. Experimental [illegible] of [illegible] in [illegible] and [illegible] On the [illegible] of experimental arteriosclerosis. [illegible] of intima and upper [illegible] in experimental arteriosclerosis. On various other factors in arteriosclerosis. Systematic [illegible] of cholesterol in tissues and organs. Results from modified experimental approaches. Attempts to influence the intensity of cholesterolemia. Summary and comment. Bibliography. Author index. Subject index.

Note: The author of this book describes its purpose as follows: "Several different aims were pursued in the preceding chapters: to bring out more distinctly some unsolved morphological problems in human and experimental arteriosclerosis to attempt an accurate analysis of cellular pathology in various angiopathies and to correlate them; to report on findings in human and in experimental arteriosclerosis which had hitherto been overlooked, and also to describe results in experimental cholesterol arteriosclerosis which had not previously been obtained, and to modify the technique of experimental arteriosclerosis with the idea of obtaining new results. In it he has correlated certain results of his own experimental investigations with the findings of other workers in the field.

ALTSCHULE, MARK D

Physiology in diseases of the heart and lungs. Revised edition Cambridge, Mass. Harvard University Press, 1954 554 p. 21 cm. (Harvard University monographs in medicine and public health. No. 10. Editorial committee A. Baird Hastings, chairman) $7.50 3555

Contents: Chronic cardiac decompensation. Acute pulmonary edema—cardiac asthma. Angina pectoris—myocardial infarction. Cardiac arrhythmias. Pericarditis. Congenital and acquired cardiac defects. Pulmonary fibrosis. Chronic pulmonary emphysema. Bronchial asthma. Pleural effusion. Pneumothorax. Pneumonia. Index.

Note: A critical, comprehensive review of published physiologic studies which have bearing on the diseases of the heart and lungs in man. It is organized in short sections and is compactly written. Each of the sections is followed by [illegible] comprehensive bibliography. The book is designed for the information of advanced undergraduate students in medical schools. It is used also by medical practitioners and others in need of [illegible] synopsis and literature guide. The first edition was published in 1949. In the second edition, the organization is unchanged—in fact, the chapter titles are identical with those of the first edition. However every chapter has been revised so as to incorporate the findings reported in the literature since the first edition was written. This material has been worked into the text of each chapter and citations of the source articles have been added in correct alphabetical order to the bibliographies in the chapters. An adequate subject index is included, but the much-needed index to names of authors of the source literature is still lacking.

AMERICAN HEART ASSOCIATION

Cerebral vascular diseases. Transactions of a conference held under the auspices of the American Heart Association, Princeton New Jersey January 24–26 1954 Irving S Wright, chairman, E. Hugh Luckey editor New York Published for the American Heart Association by Grune & Stratton, 1955 167 p. 26 cm. $5.50 3556

Contents: The neurologic, economic, and personal significance of cerebral vascular diseases, by I. S. Wright. The embryology of the cerebral circulation, by G. von Bonin. The anatomy of the cerebral circulation and its clinical significance, by H. F. Mossman. Pathology of cerebral vascular diseases by R. D. Adams. Physiology of the cerebral circulation, by S. S. Kety. Brain chemistry by W. M. Sperry. Hypertension and its effect on the cerebral circulation, by I. H. Page. Atherosclerosis and its effect on the cerebral circulation, by D. P. Barr. Neurologic aspects of cerebral vascular diseases and therapeutic approach, by H. H. Merritt. The emotional problems of cerebral vascular diseases, by E. Weiss. Electroencephalographic studies and their significance in cerebral vascular disorders, by R. S. Schwab. Neurosurgical aspects and therapeutic approach to cerebral vascular diseases, by F. C. Berry. Anticoagulants and their place in the treatment of cerebral vascular diseases, by F. McDevitt. Rehabilitation, by H. Rusk. Index.

Note: The papers presented and the discussion at the conference described in the main title are published in this volume. Most of the papers are short and somewhat informal, whereas the transcripts of discussion are comparatively long and are apparently reproduced verbatim. Since the participants in the discussion included some of the most eminent researchers in physiology and medicine in the United States of America, the discussions are well worth reading. Only [illegible] few of the papers include literature references, and there are no illustrations.

and neck. Malignant neoplasms of the skin of the head and neck. Benign tumors and premalignant lesions of the lips. Cancer of the lips. Benign tumors and premalignant lesions of the oral cavity. Malignant tumors of the oral cavity. Cancer of the tongue and floor of the mouth. Tumors of the jaws. *Salivary tissue tumors.* Tumors of the tonsils, pharynx and base of tongue. Tumors of the paranasal sinuses and nasal mucous membrane. Tumors of the eye and adnexa. *Tumors of the ear. Tumors of the larynx. Tumors primary in the* neck. Tumors primary in the lymph tissues of the head and neck. Metastatic tumors of the neck. Tumors of the skull. Rehabilitation. Index.

Note: A full-scale treatment of clinical aspects designed both for general practitioners and specialists. The senior author organized the tumor clinics at the Johns Hopkins Hospital and the University of *Maryland Hospital), and the junior author was associated with him* at both institutions. The book is based mainly on the extensive experience of the authors, but information has been included from the published literature. Also some sections, for instance the one on malignant tumors of the nasal pharynx, ha been written especially for this book by other specialists. The work is lavishly illustrated, and there are extensi reference lists.

Weller, Carl V

Causal factors in cancer of the lung The Beaumont lecture, Wayne County Medical Society, February 7, 1955 Springfield, Ill. Charles C Thomas, 1956 113 p. illus 22 cm. (American lecture series Publication no 277 A monograph in American lectures in chest diseases edited by J Arthur Myers) $3 00 3549

Contents Introduction. General considerations. The first theme Bergkrankheit in the Erzgebirge—Schneeberg and Joachimsthal (Jáchymov) The second theme The search for the causes of increasing pulmonary cancer in the twentieth century The third theme Tobacco on trial—guilt by association. Epicrisis. References. Index.

Note *A critical outline of accumulated knowledge pertaining to* causal factors in cancer of the lung. The historical development of this knowledge is sketched and the current status of such matters as the role of tobacco smoking is appraised. On the latter question the author concludes   I have been resistant to   ready acceptance of the association between cigarette smoking and bronchiogenic carcinoma. I have searched the literature for other reasonable explanations or for recognizable fallacies. I have found none of importance. As of today I must agree with many of the specialists in statistical analysis and the epidemiology of cancer that this association has been established. The author is Chairman of the Department of Pathology of the Medical School of the University of Michigan.

Zimmerman, H M , *and others*

Atlas of tumors of the nervous system By H M Zimmerman, Martin G Netsky Leo M Davidoff With 277 illustrations, 233 in color Philadelphia Lea & Febiger, 1956 191 p illus. (part col d) 27 cm $25 00 3550

Contents (abridged) Introduction Incidence. Terminology of gliomas. Methods of histologic study of neural tumors. Cerebral swelling and edema Treatment of brain tumors by roentgen irradiation. Intracranial tumors Gliomas. Meningiomas. Neurinomas. Pituitary tumors. Congenital tumors. Sarcomas. Choroid plexus tumors. Miscellaneous tumors. Metastatic neoplasms. Granulomas. Spinal tumors. Gliomas. Meningiomas. Perineurial fibroblastoma. Congenital tumors. Metastatic neoplasms. Effects of compression of the spinal cord Tumors of the peripheral nerves. Tumors of sympathetic ganglions. Tumors of paraganglionic cells. Bibliography. Appendix Incidence of intracranial tumors. Incidence of intracranial gliomas. Special staining methods. Synonyms. Index.

Note. The collections of five large hospitals were drawn upon to *make this book, which is an exceptionally comprehensive atlas of* tumors of the nervous system. Most of the space in the volume is devoted to the illustrations. These are reproductions of both drawings and photographs, with the latter predominating. Each illustration is accompanied by   short caption which identifies it and, in cases of microphotographs, gives the degree of magnification and the kind of stain. The illustrations and their legends are supplemented by a few pages of text most of which are to be found in sections that precede the illustrations on specific classes of tumors. The illustrations of pituitary tumors, to cite an example, are introduced by four pages of verbal discussion.

CARDIOVASCULAR SYSTEM

Abrams, Herbert L , and Henry S Kaplan

Angiocardiographic interpretation in congenital heart disease. Springfield, Ill. Charles C Thomas, 1956 233 p. illus. 29 cm. (American lecture series. Publication no 279 A monograph in the Bannerstone Division of American Lectures in Pediatrics. Edited by John A. Anderson) $11 75 3551

Contents Section I, General considerations Introduction. Angiocardiographic technique and equipment. The opaque media and reactions to angiocardiography General principles of angiocardiographic interpretation. *Aortography Section II, Diagnosis of specific* anomalies. The tetralogy of Fallot. Pulmonic stenosis with intact ventricular septum. Congenital tricuspid atresia. Ebstein's anomaly of the tricuspid valve. Truncus arteriosus. Complete transposition of great vessels. The Taussig-Bing complex. The Eisenmenger complex. Cor triloculare. Anomalies of the great veins. Atrial septal defect. Atrioventricularis communis. Ventricular septal defect. *Patent ductus arteriosus. Aortic septal defect.* Coarctation of the aorta. *Anomalies of the aortic arch.* Congenital aortic and subaortic stenosis. Agenesis or atresia of a pulmonary artery Congenital pulmonary artery aneurysm. Congenital pulmonary arteriovenous fistula. Endocardial fibroelastosis. Other rare anomalies. Appendix Table of differential diagnosis. Glossary of abbreviations. Index.

Note. The diagnostic technique which is the subject of this book is based on roentgenography used in conjunction with a contrast material for the visualization of the interior of the heart and great blood vessels. The subject is covered from the viewpoint of graduate medical students and graduate physicians and surgeons entering the specialty of cardiology The book is based on a series of over 350 cases of congenital heart disease most of hich were infants and children under three years of age when studied. Furthermore, the diagnoses in most of the cases were later confirmed by surgery or by pathologic or physiologic studies. A rather wide range of congenital abnormalities is covered. The authors have drawn related material from the literature and most of their chapters include rather extensive bibliographies. Most of the 141 figures in the book are reproductions of angiograms and a clarifying diagram. Each figure consists of the reproduced angiogram on the left-hand column of the page with the explanatory diagram drawn to the same scale reproduced in the right-hand column. The authors are members of the faculty of the School of Medicine of Stanford University

Abramson, David I

Diagnosis and treatment of peripheral vascular disorders. New York Paul B Hoeber Inc Medical Book Department of Harper & Brothers 1956 537 p. illus. (part col d) 26 cm. $13 50 3552

Contents (abridged) Part I, Differential diagnosis of symptoms and signs. Differential diagnosis of pain in the extremities. Procedures for study of arterial circulation in the extremities. Procedures for study of venous circulation in the extremities. Differential diagnosis of physical findings. Part II, Peripheral vascular diseases: Vascular entities primarily affecting the arterial tree. Vascular disorders affecting the venous system. Vascular entities produced by trauma or noxious agents. Rare vascular disorders affecting the extremities. *Disorders of the lymphatic system.* Congenital anomalies. Peripheral vascular entities not affecting the extremities. Technics or therapeutic measures requiring special equipment or skill. Part III, Anatomic, physiologic, pharmacologic, and pathologic considerations of the peripheral circulation. Anatomy and physiology of blood vessels in the extremities. Sympathetic nervous system. Variations in circulation in the extremities under different physiologic and pathologic states. Intravascular blood clotting and its prevention. Pharmacologic action of agents that play a role in peripheral vascular disorders. Appendix. Sources of proprietary drugs, instruments, and surgical or laboratory supplies. Index.

Note An authoritative book addressed to general practitioners of medicine and to specialists in some areas of medicine, such as orthopedics where   knowledge of the signs of peripheral vascular disorders is important. *It is not intended for specialists in peripheral* vascular disorders. Diagnosis and differential diagnosis are emphasized not only in the first part, but also in the longer second part

BURCH GEORGE E., AND TRAVIS WINSOR

A primer of electrocardiography Third edition, thoroughly revised, with 281 illustrations. Philadelphia Lea & Febiger 1953 286 p. illus. 24 cm. $5.00 3562

Contents: Principles of electrocardiography. An analysis of [illegible] components of the electrocardiogram and their clinical significance. Precordial leads. Disorders of the heart beat. Clinical syndromes of the electrocardiogram. Appendix. Index.

Note: Written in the same style as the senior author's *Primer of cardiology*, described above, this book is an introduction to electrocardiography. In its various editions it has been widely used and has been translated into French and Spanish. It is directed primarily to medical college students, but is useful also as a guide or review to graduate practitioners who are not specialists in cardiology. It is written in a direct style that is easy to comprehend, and the verbal text is supplemented by an exceptionally high number of illustrations. The second edition was published in 1949. The addition of a 30-page section on spatial vectorcardiography is the principal change in this third edition, although minor revisions have been made in the text of several chapters, and some new illustrations have been added.

BURCH GEORGE E. AND OTHERS

Spatial vectorcardiography By George E. Burch, J A. Abildskov and James A. Cronvich. With 121 illustrations. Philadelphia Lea & Febiger 1953 173 p. illus. 24 cm. $5.00 3563

Contents: The concept of vectorcardiography. Methods of recording. Spatial vectorcardiography and reference frames. The [illegible] [illegible] [illegible]. Standardizing factors. The relation of vectorcardiography to electrocardiography. Materials and methods. The normal spatial vectorcardiogram. The spatial vectorcardiogram in pregnancy—in left ventricular hypertrophy—in complete left bundle branch block—in right bundle branch block—in anterior myocardial infarction—in posterior myocardial infarction. Summary. Bibliography.

Note: Published in this book is material originally prepared for display among the scientific exhibits at the meeting of the American Medical Association in Chicago in June, 1952. The titles of the chapters are headings that were used in the exhibit, and they indicate the arrangement of the material. Illustrations, of which there are 121, are utilized in telling much of the story. There is also a compactly written but clear text. The authors are all members of the faculty of Tulane University. The School of Medicine of Tulane University has taken an active part in the development and study of vectorcardiography.

BURSTEIN JULIUS AND NATHAN BLOOM

Illustrative electrocardiography Third edition. New York D Appleton-Century Company Inc., 1948 309 p. illus. 24 cm. $7.50 3564

Contents: Fundamentals of electrocardiography. The normal electrocardiogram and disturbances of the pacemaker. Premature contractions. Paroxysmal tachycardia. Flutter and fibrillation. Auriculoventricular block (heart block). Bundle branch block. S-T and T abnormalities—the electrocardiogram in myocardial infarction. Ventricular strain. The electrocardiogram in pericarditis. The electrocardiogram under various influences. The fourth and other precordial leads. The phonocardiogram. Multiple abnormalities. Miscellaneous [illegible]. Radiology of the heart. Index.

Note: A standard work on the subject, known to the medical profession since 1938. The present edition incorporates a new chapter on cardiac radiology written by Philip Bauer and an almost entirely new set of illustrative plates. In all, several hundred cardiogram-reproductions of normal and abnormal heart conditions are included, together with 23 cardiac roentgenograms. The volume is intended as a systematic textbook and atlas for the beginner and a recent survey of the field for the specialist. In order to provide an essentially practical book, theory is omitted, the emphasis being entirely on the clinical interpretation of electrocardiograms and roentgenograms.

BUTTERWORTH, J SCOTT AND OTHERS

Cardiac auscultation including audio-visual principles. By J Scott Butterworth, Maurice R. Chassin and Robert McGrath. New York Grune & Stratton, 1955 111 p. illus 23 cm. $4.50 3565

Contents: Historical aspects of auscultation of the heart. Importance of cardiac auscultation—audio-visual equipment. The physical principles of sound. Origin of heart sounds. Modification of heart sounds. Routine of auscultation of the heart. Variations of heart sounds in health and disease. Definition, classification and timing of murmurs. Disorders of heart rhythm. Clinical entities and their auscultatory findings. References. Index.

Note: A textbook and manual on auscultation of the heart, particularly with an audio-visual instrument, such as the Audio-Visual Heart Sound Recorder manufactured by the Cambridge Instrument Company of New York. The basic principles of cardiac auscultation and normal and abnormal sounds are described clearly from the clinical viewpoint. The book is illustrated largely with "stethograms," which are visual tracings of the sound patterns of the heart. Each of the stethograms is discussed from the clinical viewpoint in a long caption that accompanies it. All of the authors of the book are members of the faculty of the Post-Graduate Medical School of New York University.

CABOT, BLAKE

The motion of the heart the story of cardiovascular research. New York Harper & Brothers 1954 173 p. 21 cm. $2.00 3566

Contents: Toward the unknown. Lifestream. Arterial blockade. Pressure and flow. Peculiar rhythm. The failing heart. Surgical attack. Temples of the future.

Note: A well-written elementary account of progress made to date and of current research related to the basic causes of cardiovascular diseases. It describes also some of the therapy now used in the treatment of cardiovascular disorders. It includes a noteworthy account of heart surgery on "blue babies." It is intended for reading by laymen.

DAVIS HARRY AARON

Shock and allied forms of failure of the circulation. New York Grune & Stratton, 1949 595 p. illus. 24 cm. $12.00 3567

Contents: Historical introduction and classification. The diagnosis of shock and shocklike states. Pathogenesis of traumatic shock and hemorrhage. Physiologic changes in traumatic shock and hemorrhage. Biochemical changes in traumatic shock and hemorrhage. Pathology of traumatic shock and hemorrhage. The effects of anoxia and hypoxia in man and lower animals. Irreversible shock. Circulatory failure associated with intoxication and infections. Medical and obstetrical shock. Circulatory failure associated with diseases of the liver and of the adrenal glands. The nervous system in relation to failure of the circulation. Failure of the circulation due to derangement of the thorax and its contents. Failure of the circulation resulting from burns and from other forms of thermal injury. Failure of the circulation resulting from anesthesia. The circulatory [illegible]. Treatment of shock and allied forms of circulatory failure. Index.

Note: A comprehensive treatise on acute circulatory failure. It appears to have been based on a very extensive literature survey and most of the chapters include long bibliographies. The chapter on treatment is one of the longest in the book. It includes detailed descriptions of procedures for cases of circulatory failure under all of the common clinical and surgical conditions. The technique of cardiac massage is included. The book is addressed to surgeons, obstetricians, general practitioners, and anesthesiologists. It has some interest also for physiologists.

DE TAKATS GEZA

Thromboembolic disease. Springfield, Ill. Charles C Thomas, 1955 55 p. 22 cm. (American lecture series. Publication no. 286 A monograph in American lectures in surgery edited by Michael E. DeBakey) $2.25 3568

Contents: Introduction. Clinical forms of thromboembolic disease. The prevention of thromboembolic disease. Method of treatment. Discussion. Summary. Bibliography.

Note: Essentially this short book is a report addressed to practitioners of medicine of research carried out by the author and his

BARKER, JOSEPH M

The unipolar electrocardiogram, a clinical interpretation By Joseph M Barker, assisted by Joseph J Wallace, advised by Wallace M Yater Foreword by Frank N Wilson New York Appleton-Century-Crofts, Inc., 1952 655 p illus 25 cm $12 50 3557

Contents (abridged) General considerations of electrocardiography and of the electrocardiogram. Fundamental electric phenomena and the electrocardiogram. *The components of* normal electrocardiogram. The standard extremity leads. Electrophysiology—basis for interpretation of the electrocardiogram. The normal myocardium. The potential variations of the extremities. Bundle branch block and other types of intraventricular block. Myocardial infarction. Transient myocardial ischemia and injury Ventricular hypertrophy or ventricular enlargement. The auricular (atrial) complex and introductory considerations of the *cardiac arrhythmias*. The *arrhythmias* disturbances of cardiac rhythm due to impulses arising from homogenetic foci—disturbances of impulse conduction (heart block) —disturbances of cardiac rhythm due to impulses arising from heterogenetic foci. Anomalous atrioventricular conduction. Reading, reporting and coding electrocardiograms. Bibliography Index.

Note A substantial treatise written from the standpoint of practical use of the electrocardiogram in the *diagnosis and study of heart* disease. Basic matters, such as the electrical fundamentals, definitions, and descriptions of electrocardiographic instruments, are well covered in the first six chapters. The remainder of the book consists of chapters based on and consisting chiefly of discussions of particular case histories and the electrocardiograms made in the course of their diagnosis and treatment. However the author has invariably drawn conclusions from the cases of which the following is typical "There is no way to be sure of right ventricular hypertrophy from the extremity leads alone. The precordial electrocardiogram is more reliable in revealing the definitive diagnosis of either condition." There are 456 figures, of which the majority are reproductions of cardiograms discussed in the text. The bibliography is an extensive one.

BARROW, DAVID WOOLFOLK

The clinical management of varicose veins With a foreword by Arthur W Allen. New York Paul B. Hoeber, Inc., Medical Book Department of Harper & Brothers 1948 155 p illus (part col d) 24 cm 3558

Contents Foreword by Arthur W Allen. History and anatomy Physiology and etiology Pathology Symptomatology Examination of the patient. Treatment of varicose veins by injection. Treatment of varicose veins of the long saphenous system. Treatment of varicose veins of the short saphenous system. Treatment of incompetent veins communicating between deep and superficial venous systems. Complications. Thrombophlebitis. After-care of the varicose extremity References. Index.

Note Although relatively short for a medical treatise, this book provides a detailed discussion of diagnosis, therapy and after-care of varicose veins. The author has made a specialty of the subject and has based the book on an intensive critical experience. It is not, however addressed to specialists but to medical students and general practitioners. Certain therapies which are discussed in greatest detail are those which the author and others have found to be the best. Practically no space is given to techniques of historical interest only There are fifty-eight illustrations. The bibliography contains 177 entries. A second edition was published in 1957 169 p., $6.00.

BELLET, SAMUEL

Clinical disorders of the heart beat. With 164 illustrations. Philadelphia Lea & Febiger, 1953 373 p illus 26 cm $8.50 3559

Contents (abridged) Section I, General considerations. Section II, Discussion of individual arrhythmias Sinus irregularities. Auricular flutter and fibrillation. Premature contractions (extrasystoles) Auricular tachycardia. Disturbances in region of A V node. Wolff Parkinson-White syndrome. Ventricular premature contractions. Paroxysmal ventricular tachycardia. Ventricular flutter and fibrillation. Cardiac arrest. Alternation of the heart. Effect of clinical disorders of the heart beat upon the ballistocardiogram. Section III, Arrhythmias in certain clinical states Syncopal attacks. Arrhythmias in infants and children. Congenital cardiac anomalies. Rheumatic fever. Acute infections. Thyroid disease. Pregnancy Anesthesia and surgery Angiocardiography Cardiac catheterization. Cardiac trauma. Electrolyte alterations. Myocardial infarction and coronary disease. Section IV Drugs used in therapy of arrhythmias: Digitalis. Quinidine. Procaine amide (Pronestyl) References. Index.

Note: The segment of cardiology covered by this book has been described by the author in the following terms "Under the term clinical disorders of the heart beat, we include those *disorders* in rhythm in which the origin of the pacemaker is in some portion of the heart other than the normal site of origin in the sinoauricular node, and also the sinus irregularities which are produced by some disturbances within the sinoauricular node. These conditions may be associated with a regular or irregular rhythm, or a combination of the two. The subject as described is covered in detail. The first section supplies background information on such matters as the factors in regulation of cardiovascular function, classification of the arrhythmias, pathologic and etiologic relationships, and general principles of therapy The section devoted to *individual arrhythmias is approximately 200 pages long*, and the section on arrhythmias in clinical states runs to 60 pages. Treatment is discussed in the second section for each of the arrhythmias, and the drugs used are discussed more fully in the fourth section. The author is Director of the Division of Cardiology of the Philadelphia General Hospital and a member of the faculty of the School of Medicine of the University of Pennsylvania.

BROWN, HERBERT RUTHERFORD JR., AND OTHERS

Clinical ballistocardiography, by Herbert R. Brown jr, Vincent deLalla, jr, Marvin A. Epstein and Marvin J Hoffman. New York The Macmillan Company, 1952 188 p. illus. 22 cm. $4 00 3560

Contents Part one, Normal section What is the ballistocardiogram and what is its value? The history of the ballistocardiograph. Types of apparatus used in recording the ballistocardiogram. Physical considerations in the construction of a ballistocardiograph. The normal ballistocardiogram. Cardiac output. Respiratory variation of the ballistocardiogram. Part two, Abnormal section Significance of normal and abnormal patterns. Abnormal respiratory variation of the IJ stroke. Hypertension. Myocardial infarction. Angina pectoris. Congestive failure. Rheumatic heart disease. Miscellaneous disorders. Index.

Note: Ballistocardiograph apparatus has only recently become available as a clinical means for the identification of circulatory and cardiac disorder The monograph was written by four medical doctors who made a special study of the technique and its applications over the period 1946–1952 at the University of Rochester. The authors present all pertinent data in the field as a guide to other doctors interested in the use of ballistocardiograph apparatus. Included are many examples of normal and abnormal ballistocardiograms and the summarized findings of records made in the laboratory of the authors.

BURCH, GEORGE E

A primer of cardiology Second edition, thoroughly revised, with 214 illustrations. Philadelphia Lea & Febiger 1953 339 p. illus. 24 cm $5 50 3561

Contents General anatomic considerations. Approach to the diagnosis of heart disease. The approach to clinical cardiac evaluation. The common types of heart disease. Bedside diagnosis of cardiac irregularities. Appendix. Index.

Note An introduction to cardiology intended for the instruction of students in medical colleges and as orientation for practicing physicians who are not specialists in this field. It emphasizes diagnosis and the management of the common types of heart disease. It is written in a direct and vivid style, of which the following is an example "The murmur is a soft flowing, high-pitched systolic murmur of varying intensity which occurs early in systole, barely extends through systole and tends to disappear on deep inspiration. There are 206 illustrations, most of which are reproductions of well-conceived diagrams. The appendix contains a miscellany of useful material on nomenclature, theoretical transverse diameters of heart silhouettes for various heights and weights, diets used in cardiac disease, etc.

Note: A brief but authoritative presentation of the principal clinical aspects of coronary heart disease. The diseases named in the chapter titles are discussed as to pathology, symptoms, signs, diagnosis, differential diagnosis, complications, prognosis, and treatment. References are given to 71 related books and articles. The book is most suitable as review or "refresher" for general practitioners of medicine.

FISHBERG, ARTHUR M

Hypertension and nephritis. Fifth edition enlarged and thoroughly revised. 49 illustrations. Philadelphia Lea & Febiger 1954 986 p. 24 cm. $12.50. 3575

Contents: The individual processes in formation of urine. Impaired renal function. Anatomic. Tests of renal function. Proteinuria and cylindruria. Edema. Uremia. Arterial hypertension—the measurement of blood pressure, the range of normal blood pressure, and the occurrence of hypertension—pathological anatomy—pathogenesis. Hypertensive encephalopathy.—Hypertensive pathology. The subdivision of Bright's disease. Orthostatic proteinuria. The necrotizing nephroses. Chronic nephrosis. Diabetic glomerulosclerosis. The amyloid kidney. Acute glomerulonephritis—etiology bacteriology pathological anatomy and pathogenesis—clinical picture, diagnosis, prognosis, and treatment. Chronic glomerulonephritis. Chronic pyelonephritis. Focal nephritis—acute interstitial nephritis, and focal glomerular lesions in subacute bacterial endocarditis. Essential hypertension—course and pathological anatomy—etiology and pathogenesis—clinical picture—diagnosis and prognosis—treatment management and diet—pharmacologic treatment and management of individual symptoms—surgical treatment. Hypertension in the Cushing syndrome and pheochromocytoma. Renal and hypertensive disease in pregnancy. Index.

Note: This book has enjoyed the status of standard work for many years. It deals with the clinical aspects of hypertension and nephritis but includes also much background from physiology and experimental physiology. It is written from the clinical viewpoint and is addressed primarily to graduate medical practitioners. It is used also by advanced medical students and internes. It is compactly written, but the directness of the style makes it relatively easy to read. The chapters contain very extensive bibliographies, and the text is referenced to them. The fourth edition was published in 1939. In this edition, the work is some 100 pages longer even though considerable material has been deleted. There are seven new chapters and revised and augmented sections in many others. A selection of literature published since the fourth edition was written has been added to the bibliographies.

FRIEDBERG, CHARLES K.

Diseases of the heart. Second edition. Philadelphia W B Saunders Company 1956. 1 161 p. illus. 27 cm. $18.00. 3576

Contents (abridged): Part I, Graphic methods of cardiac examination. Roentgenologic examination of the heart. Electrocardiography and vectorcardiography. Ballistocardiography, phonocardiography, cardiac catheterization and other graphic methods. Part II Circulatory failure. Cardiac function and cardiac failure. Clinical and pathologic features of chronic (congestive) heart failure. Circulatory and related measurements. The treatment of congestive heart failure. Acute circulatory failure—shock, syncope and sudden death. Part III The cardiac arrhythmias. Disturbances in impulse formation. The ectopic tachycardias. Disturbances in conduction. Part IV Diseases of the coronary arteries and coronary heart disease. Part V Structural abnormalities of the heart. Acute pericarditis. Adhesive pericarditis, chronic constrictive pericarditis. Myocarditis and myocardial disease of obscure origin. Endocarditis and endocardial disease. Mitral valvular disease. Aortic insufficiency (aortic regurgitation). Aortic stenosis. Tricuspid and pulmonic valvular disease. Part VI Etiologic forms of heart disease. Congenital heart disease. Rheumatic fever. Bacterial endocarditis. Syphilis of the heart and aorta. The heart in infections. The heart in hypertension and renal disease. Pulmonary embolism and acute cor pulmonale. Chronic pulmonary heart disease. The heart in hyperthyroidism. The heart and circulation in myxedema. Other endocrine variants and nutritional disturbances. The heart and circulation in anemia. Traumatic heart disease. Cardiac tumors. Part VII Special problems in heart disease. Pregnancy and heart disease. Surgical procedures in the cardiac patient. Insurance and medicolegal problems in cardiac disease. Index.

Note: A comprehensive treatise in which the main emphasis is on pathologic physiology and the clinical manifestations of cardiac disease. The treatment is even more detailed than the above abridged table of contents indicates. For example, three chapters are devoted to the various facets of acute coronary occlusion and myocardial infarction. All chapters are supplemented by lengthy bibliographies and numbered references are made from statements in the text to the schools and as reference book in the office libraries of graduate medical practitioners. Rather extensive additions and revisions were made in preparation this second edition. The first part, for example, on graphic methods of cardiac examination is newly added, and important changes have been made in the discussions of such topics as surgery coronary atherosclerosis, cardiopulmonary disease etc. Literature published since the first edition was written has been added to the bibliographies. The author is member of the faculty of the College of Physicians and Surgeons of Columbia University.

GERTLER, MENARD M AND PAUL D WHITE

Coronary heart disease in young adults a multidisciplinary study With the aid, advice, and editorial assistance of E. F Bland and others. Cambridge Mass. Published for the Commonwealth Fund by Harvard University Press 1954 218 p. illus. 24 cm. $5.00 3577

Contents: Introduction—the problem and the procedure. Clinical appraisal of the coronary group. Family incidence—the role of heredity and race. Anthropometric and morphological appraisal of physique. Athletic activity and occupations. Findings on masculinity. Endocrine findings. Biochemical findings—the interrelations of serum lipids—the role of serum uric acid. Diet—cholesterol ingestion and atherosclerosis. The oxidation-reduction potentials of saliva. Summary and conclusions. Appendices: Terman-Miles masculinity-femininity test. Heredity record. Summary of heredity data. Diet record. Summary of case histories. Follow-up study of coronary and unmatched control groups. Index.

Note: Presented in this important book are the results of an intensive study of coronary heart disease carried out at the Massachusetts General Hospital on group of 100 patients who met the following qualifications (among others): Forty years old or less at the time of the myocardial infarction; satisfactory physical condition; absence of diabetes, syphilis, and other serious infections and of hypertension. The 100 coronary patients were matched as closely as possible with controls who were free of coronary disease. The chapter titles listed above indicate the breadth of the study which was carried out by means of both interviews and diagnostic tests. The findings are presented in detail, and the main features of each case history are presented in summary form in an appendix. References to related literature are included in each of the chapters.

GOLDBERGER, EMANUEL

Heart disease its diagnosis and treatment. Second edition, thoroughly revised with 298 illustrations on 107 figures. Philadelphia Lea & Febiger 1955 781 p illus. 24 cm. $12.50. 3578

Contents (abridged): Section I, The normal heart: Physical examination of the cardiovascular system. X-ray examination of the heart. Electrocardiographic examination. Ballistocardiographic examination. Tests of circulatory efficiency. Section II, The abnormal heart: Symptoms referable to the cardiovascular system. Abnormal findings on fluoroscopic and X-ray examination. Abnormal electrocardiographic findings. Abnormal ballistocardiographic findings. Section III, Cardiac syndromes: Congestive heart failure. The shock syndrome. The anginal syndrome. The cardiac arrhythmias, sinus rhythms, nodal rhythm, A-V block, A-V dissociation, Auricular flutter and auricular fibrillation. Section IV Systematic description of cardiac abnormalities: Congenital heart disease. Auricular septal defects. Ventricular septal defects. Congenital valvular and endocardial lesions, and congenital abnormalities of the veins. Abnormalities of the branchial (aortic) arches. Rheumatic fever. Bacterial endocarditis. Disseminated lupus erythematosus. Rheumatic heart disease. Hypertensive heart disease. Arteriosclerosis. Coronary artery disease. Diseases of the pericardium. Diseases of the aorta, pulmonary artery and other blood vessels. The heart in nutritional, metabolic and other diseases. Tumors of the heart. Cardiac trauma. Section V Special conditions complicating heart disease. Pregnancy and heart disease. Surgery, anesthesia, and heart disease. Employment and heart disease. Index.

Note: A standard work used as textbook in medical colleges and as an office reference book by general practitioners. It ex-

colleagues at the *College of Medicine* of the University of Illinois and St. Luke's Hospital in Chicago. It presents a co-ordination of this research and the published work of other investigators written in the form of a manual of information rather than in the usual style of scientific reports. Among other things, the author shows that "many of the clinical syndromes which are regarded and treated as being due to thromboembolic disease are really due to arterial stenoses, with sudden occlusion due to hemodynamic conditions or vascular changes in the wall. Another conclusion "We have favored the use of anticoagulants for prophylaxis and treatment in all patients, except those in whom such treatment has failed to prevent an infarct, and in whom they were not feasible, Finally long term anticoagulant therapy carried on for months or years, has no place in the treatment of patients whose clotting mechanism is undamaged.

DOCK, WILLIAM, *AND OTHERS*

Ballistocardiography, the application of the direct ballistocardiograph to clinical medicine. By William Dock, Harry Mandelbaum, and Robert A Mandelbaum. With 153 illustrations. St. Louis The C V Mosby Company 1953 293 p illus. 23 cm. $6 50 3569

Contents. Springs and forces. Ballistocardiographs and technics for their use. Diagrams of cardiac structure and functions. The physiological ballistocardiogram. The effect of respiration of the ballistocardiogram. The changing ballistic pattern in disease. Taking and standardizing the ballistocardiogram. Reading and classifying the ballistocardiogram. The ballistocardiogram i "normal" subjects and some factors which modify the pattern. The ballistic pattern resulting from pulmonary diseases, and disorders affecting minute volume flow The ballistocardiogram in patients with acute myocarditis or with heart failure with normal or reduced cardiac output. The ballistocardiogram in patients with disease of the coronary arteries. The ballistic patterns in patients with arterial hypertension. The ffect of smoking on the ballistocardiogram. The ballistic patterns in patients with congenital and acquired valvular lesions, and in pericarditis. The ballistocardiogram in patients with conduction defects and cardiac arrhythmias. The ballistocardiograph in surgery obstetrics, industrial medicine, and insurance examinations. Appendixes: The calculus and the condenser The construction of simple photoelectric and electromagnetic ballistocardiographs. Quantitative aspects of ballistocardiography References. Index.

Note This book is both an introduction to ballistocardiography and an account of the work f the authors and other medical researchers in developing the method and applying it to the study of normal and diseased hearts. The senior author designed simplified apparatus that made it possible to use the technique wherever there was an electrocardiograph that is to say in doctors' offices as well as in hospitals. There is some discussion of ballistocardiographic technique as well as an outline of the basic mechanical principles but most of the book is devoted to the diagnostic interpretation of the ballistic record. Numerous ballistocardiograms are reproduced and are discussed in terms of the heart abnormalities or disorders with which they were associated. A full description of the simple ballistocardiograph developed by the author and his colleagues is included in the appendix. There is bibliography of approximately 370 entries.

DOCK, WILLIAM

Heart sounds, cardiac pulsations and coronary disease Lawrence University of Kansas Press 1956 98 p illus. 22 cm (University of Kansas Porter lectures Series 21) $2 50 3570

Contents The clinical significance of pulsations evoked by the heartbeat. The production of sounds by normal and diseased hearts. Coronary disease—the professor's friend. References. Index.

Note The lectures collected in this book are not only readable but are worth reading. For the most part they describe recent developments in cardiology against the historical background of their development. The final lecture is an expert discussion of relations between coronary disease and diet.

DRESSLER WILLIAM AND HUGO ROESLER

An atlas of electrocardiography Springfield, Ill. Charles C Thomas 1949 503 p illus. 21 cm. $14 00 3571

Contents (abridged) Electrocardiographic patterns (not including disturbances of rhythm) Patterns of disturbance of rhythm. Advances in the electrocardiographic diagnosis f myocardial infarction. Interpretation of the electrocardiogram with the aid of unipolar limb leads. Index.

Note. More than 400 electrocardiograms have been reproduced without retouching in this ork. The book is organized so that the reproductions appear on right-hand pages, and textual interpretation and clinical data appear on the facing left-hand pages. Special attention is given to the interpretations of electrocardiograms with similar patterns, and points that aid in differential diagnosis are mentioned.

EDWARDS, JESSE E, AND OTHERS

An atlas of congenital anomalies of the heart and great vessels By Jesse E. Edwards, Thomas J Dry Robert L Parker Howard B Burchell Earl H. Wood, and Arthur H. Bulbulian Springfield Ill Charles C Thomas, 1954 202 p illus (part col'd) 29 cm $13.50. 3572

Contents Cor biloculare. Cor triloculare. Tricuspid atresia. Ebstein's malformation of the tricuspid valve. Mitral atresia. Cor triatriatum. Endocardial sclerosis. Persistent common atrioventricular canal Atrial septal defect. Anomalous drainage of pulmonary veins. Pulmonary arteriovenous fistula. Ventricular septal defect. Eisenmenger complex. Stenosis of ostium infundibuli. Tetralogy of Fallot. Pulmonary stenosis with intact ventricular septum. Pulmonary atresia with intact ventricular septum. Complete transposition of the great vessels. Corrected transposition of the great vessels. Isolated dextrocardia. Persistent truncus arteriosus. Patent ductus arteriosus. Aorticopulmonary septal defect. Aneurysm of the aortic sinus. Subaortic stenosis. Aortic atresia. Coarctation of the aorta. Arachnodactyly Vascular rings. Anomalies of coronary vessels. Biographic sketches. Bibliography Index.

Note. A successor the Thomas J Dry and others, *Congenital anomalies of the heart and great vessels* Springfield, Ill 1948. It contains all of the material in the original work—which was only 68 pages long—and much more Most of the articles of anomalies described are named in the above Contents. The material included on each one varies. In the cases with the most material, there are photographs in color of models f the abnormal heart, photographs of gross anatomy of dissected specimens, line drawings of anatomical details, reproductions of roentgenograms and of electrocardiograms. I all instances, there is a condensation of the case history and in many instances literature references. The "Biographic sketches" near the end of the volume is section of capsule biographies and portraits of anatomists and others who have made contribution to the knowledge of congenital abnormalities of the heart. At the time the book was written, the authors were all on the staff of the Mayo Clinic and Mayo Foundation, and most of the material came from the files of the Mayo Clinic.

ENGEL, GEORGE LIBMAN

Fainting, physiological and psychological considerations Springfield Ill Charles C Thomas, 1950 141 p illus. 22 cm (American lecture series Publication number 37 edited by Charles D Aring) $3 50 3573

Contents: Introduction. Fall in arterial blood pressure. Cardiac standstill. Cerebral vascular disorders. Disturbances in cerebral metabolism. Hysterical fainting Hyperventilation. Cardiac disease. Fainting during air travel. Sudden death. Incidence and diagnosis of syncope. Differential diagnosis. References. Index.

Note In this book the clinical aspects of fainting, including fatal syncopes, are discussed against the background of the underlying physiology and psychology There is bibliography of 78 references. The book is of interest to a wide range of medical practitioners.

ERNSTENE, ARTHUR CARLTON

Coronary heart disease. Springfield Ill Charles C Thomas, 1948 95 p. 22 cm. $2 50. 3574

Contents: Introduction. Angina pectoris. Acute myocardial infarction. Acute coronary failure. Paroxysmal cardiac dyspnea. Heart block and disturbances of cardiac rhythm. Congestive heart failure. The risk of anesthesia and surgical operation in patients with coronary disease. References. Index.

York McGraw Hill Book Company Inc., 1951 149 p. illus. 22 cm. $4.50 3583

Contents: Part I, The spatial vector method of interpretation. The vectors of the heart. The limb leads as vector measurements. The precordial leads as vector measurements. The method for calculating the spatial vectors from conventional leads. Part II, The clinical application of the spatial vector method. The characteristics of the spatial vectors in the normal subject. The abnormal ECG. Abnormalities of the QRS vectors. Abnormalities of the T vector. The vectors in myocardial infarction. The ventricular gradient. Broader implications of the spatial vector method. Bibliography. Index.

Note: This little volume is not intended to serve as a textbook on electrocardiography, but rather to explain how vector methods may be applied in the clinical interpretation of electrocardiograms. The book is written for the general practitioner and does not require any special training in physics or mathematics. Technical terminology has been avoided, and only those theoretical aspects of the subject which are essential to a clear understanding of the clinical applications are included.

GRAYBIEL, ASHTON AND OTHERS

Electrocardiography in practice, by Ashton Graybiel, Paul D. White, Louise Wheeler, Conger Williams. Third edition with 294 figures. Philadelphia W B Saunders Company 1952 378 p. illus. 28 cm. $10.00 3584

Contents (abridged): Part I, Introduction. Physiologic principles. Principles of operation of the galvanometer. Part II, Methodology. Methodology. Part III, The typical normal electrocardiogram and its variations. Electrical orientation of the heart. Chest and esophageal leads. Limb leads. Electrocardiographic variations due to physiologic factors. Artifacts and technical errors. Part IV, Disorders of rhythm and conduction. Part V, Electrocardiographic alterations due to drugs and chemicals. Part VI, Electrocardiographic patterns. Part VII, Etiologic types: Congenital heart disease. Rheumatic heart disease. Subacute bacterial endocarditis. Cardiovascular syphilis. Diphtheria. Endocrine disorders. Hypertensive heart disease. Cor pulmonale. Coronary heart disease. Part VIII, Electrocardiograms for practice in interpretation. Index.

Note: A useful book for the general medical practitioner. The first three parts are introductory to the subject, however, following these most of the space is given to reproductions of electrocardiograms. Each electrocardiogram is accompanied by a concise description and a fairly detailed interpretation. The range of cases illustrated is sufficiently varied to lend the book some interest for the specialist. The second edition was published in 1946. This third edition represents an extensive revision. Now the first chapter outlines the historical development of electrocardiography, the principles of vector cardiography are explained although the reader is warned that this technique is not yet ready for general clinical use, and many new electrocardiograms have been included. The format of the volume has been improved.

GREGG DONALD EATON

Coronary circulation in health and disease. 73 illustrations Philadelphia Lea & Febiger 1950 227 p. illus. 24 cm. $4.50. 3585

Contents: Introduction—a statement of the problem. General coronary considerations. Experimental approaches to the coronary circulation. Preparations. Cardiac pressures and their determination. Experimental approaches to the coronary circulation. Coronary [illegible] determination. Distribution of coronary blood flow. Phasic flow curves. The determination of coronary blood flow and their evaluation. Metabolism and work. The coronary circulation in heart disease and heart failure. Index.

Note: In this original monograph the author has summarized the results of his own [illegible] years of experimental investigation of coronary circulation and the related work of other scientists. After outlining the nature of the heart disease problem, he proceeds to analyze and discuss experimental findings and techniques. Most of the experiments covered were made on animals, especially the dog, but in the final chapter the author considers human heart disease and especially atherosclerosis in man. Each chapter has an extensive bibliography of [illegible] done throughout the world during the past [illegible] years. The author [illegible] Chief of the Department of Cardio-respiratory Diseases, Army Medical Service Graduate School.

GROSS, HARRY AND ABRAHAM JEZER

Treatment of heart disease: a clinical physiologic approach. Philadelphia W B Saunders Company 1956 549 p. illus. 26 cm $13.00 3586

Contents: Part I, The basic mechanisms of cardiac symptoms and their management. Pathologic physiology of myocardial insufficiency. Digitalis. Quinidine. Arrhythmias. Congestive heart failure. Diet in heart disease. Part II, Hypertensive heart disease and arteriosclerotic heart disease. Hypertension and hypertensive heart disease. Arteriosclerotic heart disease. Part III, Diseases of the heart secondary to inflammation. Rheumatic fever. Subacute bacterial endocarditis. Syphilitic heart disease. Cor pulmonale. Nonspecific myocarditis. Pericarditis. Part IV, Congenital heart disease. Part V, Surgery in the cardiac patient. Anesthesia in heart disease. Surgery in heart disease. Pregnancy in heart disease. Cardiac trauma. Part VI, Diseases of the heart secondary to metabolic disorders. Hyperthyroidism and heart disease. Beriberi heart disease. Part VII, Emotions, adjustments, and rehabilitation in heart disease. Psychosomatic aspects of heart disease. Living with a sick heart. Rehabilitation of the cardiac patient. Appendix: Diets, menus, recipes, and table of sodium and potassium contents. Index.

Note: An authoritative and up-to-date work addressed primarily to graduate general practitioners. Treatment is the main topic; however, the various therapies are correlated with the underlying physiology so as to enable the physician to [illegible] treatment on a sound basis. When several methods of medical treatment are available, the authors indicate which is preferred on the basis of their own experience. A section entitled "Procedures and drugs of unconfirmed efficacy" is included in some chapters in order to inform the physician about all available therapies. Surgical operations on the heart are not described in detail, but there is a short chapter in which care before and after heart operations is outlined. The chapter entitled "Living with a sick heart" is a discussion of problems of living, such as the use of alcohol, sexual activity, travel, and work, on which physicians must advise cardiac patients. Fairly extensive references to the literature are included.

HENRY FORD HOSPITAL

International symposium on cardiovascular surgery: studies in physiology, diagnosis and techniques. Proceedings of the Symposium held at Henry Ford Hospital, Detroit, Michigan, March 1955. Edited by Conrad R. Lam. Philadelphia W B Saunders Company 1955 543 p. illus. (part col'd) 26 cm. $12.75 3587

Contents: Diagnostic techniques. Cardiac catheterization, by R. J. Bing. The electrocardiogram in congenital vascular disease, by E. F. Ziegler. Recent developments in angiocardiography, by J. Lind and others. Pulmonic stenosis: Panel on the diagnosis and treatment of pulmonic stenosis, by W. J. Potts and others. Adjustments between the systemic and pulmonary circulation. Clinicoanatomic correlations, by J. F. Dammann, Jr., and C. Ferencz. Pathologic considerations in adjustments between the systemic and pulmonary circulation, by J. E. Edwards. Left to right shunts in infancy, by H. B. Taussig. "Atypical" patent ductus arteriosus. Evaluation of transposition operations, by W. T. Mustard. Mitral stenosis and mitral insufficiency: Physiologic studies in mitral valvular disease, by R. M. Harvey. Diagnosis of mitral stenosis by electrokymography of the left atrium, by O. M. Harling and others. Panel discussion on late results of mitral commissurotomy, by E. C. Andrus and others. The technique of mitral commissurotomy, by R. P. Glover. The surgical treatment of mitral insufficiency, by D. E. Harken. Method of surgical treatment for valvular insufficiency of the heart, by C. P. Bailey and others. Aortic stenosis and aortic insufficiency: Aortic stenosis—a post mortem cineplastographic study of valve action, by L. K. R. McMillan. Surgical treatment of aortic stenosis, by C. P. Bailey. Experimental bypass of the aortic valve by valvular conduits between apex of the left ventricle and thoracic aorta, by S. J. Sarnoff and R. B. Case. Surgical treatment of aortic insufficiency, by C. A. Hufnagel. Physiologic considerations relating to the [illegible] [illegible] operation with special reference to postoperative anemia, by S. J. Sarnoff and R. B. Case. Septal defects: Panel discussion on interatrial septal defects, by H. B. Shumacker and others. Direct vision intracardiac surgery—by means of controlled cross circulation or continuous arterial reservoir perfusion for correction of ventricular septal defects, atrioventricularis communis, isolated

presses the point of view that physical techniques are still the most useful in diagnosis when the patient is first seen, and that they can be employed to provide a wide range of dependable information about the heart disorders of most patients. However due attention is paid also to instrumental techniques, such as electrocardiography and ballistocardiography. Most of the space is devoted to the individual heart diseases. The discussions of most are concise and cover as a general rule pathology, pathological physiology, signs and symptoms, findings and fluoroscopic X-rays, angiocardiographic, catheterization and electrocardiographic studies, diagnosis, course and prognosis, and treatment. Many of the illustrations are diagrammatic representations of important diagnostic features of fluoroscopic and X-ray pictures and of electrocardiograms. The first edition was published in 1951. Much information not in the first edition has been added in this second edition, and some of the material carried over has been revised. Literature published since the first edition was written has been added to the bibliographies, which are again an important feature.

GOLDBERGER, EMANUEL

Unipolar lead electrocardiography and vectorcardiography, including the standard leads, the aV and V leads, the cardiac arrhythmias and the principles of vectorcardiography. Third edition, thoroughly revised. With 312 illustrations. Philadelphia. Lea & Febiger, 1953. 601 p. illus. 24 cm. $10.00 3579

Contents (abridged) Section I, The principles of electrocardiography: The method of taking augmented unipolar extremity leads and unipolar precordial leads. The relations between unipolar extremity leads and standard leads and the relations between unipolar precordial leads and ordinary precordial leads. The physiological basis of unipolar leads. Section II The normal electrocardiogram. The basic normal unipolar lead patterns. The effect of the position of the heart on the normal electrocardiogram. Section III, Abnormal electrocardiography patterns. Functional changes in the RS-T segment and T wave. The effects of hypertrophy of the heart on the electrocardiogram. Bundle branch block. Myocardial injury. Pulmonary embolism. Section IV Normal and abnormal cardiac rhythms: Sinus rhythms. A-V nodal rhythm. A-V block and A-V dissociation. Premature contractions. Paroxysmal tachycardia. Section V Vectorcardiography. The principles of vector cardiography. The normal vectorcardiogram. The vectorcardiogram in ventricular hypertrophy—In bundle branch block—In myocardial infarction—In pulmonary embolism. The open QRS loop of the vectorcardiogram and the deviation of J. The abnormal T loop of the vectorcardiogram. Appendices. References. Index.

Note. For some years this work has been recognized as the standard treatise on electrocardiography with unipolar leads, that is to say leads arranged so as to record the potential from a single region of the body. It is addressed to medical college students taking graduate-level courses in heart diseases, or who are beginning the practice of cardiology. The author has taken a considerable part in the development of the technique, and the book is based on the literature and on his own work. The second edition was published in 1949. The major change in this third edition is the addition of the section on vector cardiography which is about 120 pages long. Other revisions and augmentations have been made in the text, and the recent literature has been added to the list of references.

GOLDBLATT, HARRY

The renal origin of hypertension. Springfield, Ill. Charles C Thomas. 1948. 126 p. illus. 24 cm. (American lecture series. Paul R. Cannon editor. Publication no. 14) $2.75 3580

Contents (abridged) Production of experimental renal hypertension by various methods. Production of experimental renal hypertension by constriction of main renal artery. Pathologic changes in the organs of animals with persistent hypertension. Pathogenesis (mechanism of development) of experimental renal hypertension. The humoral mechanism of experimental renal hypertension. Renin. Hypertensinogen. Hypertensin. Hypertensinase. The juxtaglomerular apparatus. The treatment of hypertension—medical treatment—surgical treatment. Summary of the similarities and differences between human essential and experimental human hypertension. Bibliography. Index.

Note: The main feature of this short book is the fairly detailed discussion of the author's own experiments on animals in which hypertension was induced by a mechanical restriction of one or both main renal arteries. The results of these experiments are related to the experimental findings of other investigators and to the pertinent literature of the topic.

GOLDRING, WILLIAM, AND HERBERT CHASIS

Hypertension and hypertensive disease. Cambridge, Mass. Harvard University Press, 1944. 253 p. illus. (part col'd) 24 cm. $3.50. 3581

Contents Definition of hypertension. Clinical aspects of hypertensive disease. Systemic hemodynamic alterations in hypertension. Renal functional and renal hemodynamic alterations in hypertension. Function of the separate kidneys in hypertension. Role of a primary renal mechanism in the genesis of hypertension. Evaluation of medical and surgical treatment. The management of hypertensive disease. Blood pressure measurement: direct method. Cardiac output measurement. Peripheral resistance measurement. Methods for determining rate of glomerular filtration, effective renal plasma flow, maximal tubular excretory capacity, and maximal tubular reabsorptive capacity. Composite kidney function test. Functional and hemodynamic measurements in the separate kidneys. Presentation and discussion of renal functional data in hypertensive patients. Index.

Note: The authors present a review of current information and concepts of hypertension and hypertensive disease. They clearly show that hypertension is a symptom and, as such, distinguish it from hypertensive disease. They interpret the hypertensive phenomena in physiological terms, discuss the significance of blood pressure levels and the interpretation of kidney function tests, and point out the fallacies of many of the accepted therapeutic procedures. They have written primarily for the general practitioner and the medical student, but for the specialist they present in appendices full information about the hemodynamic methods used in their study and their pioneer observations on the techniques and interpretation of methods for the measurement of renal blood flow, glomerular filtration rate, and maximal tubular excretory capacity in normal subjects and hypertensive patients.

GOULD, S. E., editor

Pathology of the heart. Springfield, Ill. Charles C Thomas. 1953. 1,023 p. illus. (part col'd) 26 cm. $25.50 3582

Contents: History of the pathology of the heart, by E. R. Krumbhaar. The development of the heart, by B. M. Patten. The structure of the adult heart, by A. Barry and B. M. Patten. Physiology of the heart, by H. D. Green. Congenital malformations of the heart and great vessels, by J. E. Edwards. Degenerative diseases, by W. B. Wartman and W. T. Hill. Vascular lesions of the heart by B. E. Dodd. Rheumatic disease of the heart, by A. H. Baggenstoss. Nonrheumatic inflammatory diseases of the heart, by O. Saphir. Parasitic diseases of the heart, by W. A. Stryker. Injuries of the heart and pericardium by physical violence, by A. R. Moritz. Neoplasms of the pericardium and heart, by O. Saphir. Clinicopathologic correlations, by O. B. Myers. Appendix. Gross examination of the heart. Injection of coronary arteries, weights and measurements of heart, by O. Saphir. Author index. Subject index.

Note An outstanding treatise, essentially comprehensive for the pathology of the heart. Its wide scope is obvious from the titles of the chapters listed above. The principal emphasis is on the clinical aspects. However the chapters in the first part of the volume on embryology, anatomy and physiology are full reviews of these basic topics. In addition to these chapters, most of the specialized chapters contain some preliminary paragraphs on anatomy and pathology. All of the chapters include extensive bibliographies, references to which are included in the texts of the chapters. The illustrations are of high quality although not large. According to the publisher's account, there are 690 in black and white and six plates in color. Inclusion of an index to the authors of cited literature makes the book useful as a literature guide, but its primary uses are as a textbook for medical college students at the graduate level and as a reference volume for graduate pathologists, clinicians and cardiologists.

GRANT, ROBERT P., AND E. HARVEY ESTES JR.

Spatial vector electrocardiography: clinical electrocardiographic interpretation. New

ed school graduates who are beginning the study of electrocardiography. The first section accounts for only approximately one-tenth of the book's length; nevertheless it provides an adequate discussion of the theoretical aspects. The discussions in the second and third sections are exceptionally full, and they are supplemented by reproductions of hundreds of electrocardiograms, each one of which is discussed in a separate paragraph or caption. Each of the three sections is equipped with an extensive bibliography. In this edition the work has been very extensively revised and augmented. There are now 23 chapters instead of 16 as in the first edition, and the total number of pages has been increased by about one-half. The author states that 140 of the illustrations in this edition are new. A change of considerable interest is the introduction of a third chest lead, designated as CF. The author's *Reasoning in electrocardiographic interpretation*, second edition revised, illustrated with 141 engravings, Philadelphia, Lea & Febiger, 1946, 288 p., $4.00 is a companion work.

KATZ, LOUIS N AND JEREMIAH STAMLER

Experimental atherosclerosis. Springfield, Ill. Charles C Thomas 1953 375 p. illus. 22 cm. (American lecture series. Publication no. 124 A monograph in the Bannerstone Division of American Lectures in Metabolism edited by Paul György and others) $10.50. 3593

Contents: Introduction. Human clinico-pathology—background and foundation of experimental atherosclerosis. Atherosclerosis and the plasma lipoprotein colloidal complex (the state of aggregation of cholesterol in plasma). Experimental atherosclerosis. V. Conclusion. Bibliography. Author index. Subject index.

Note: An important monograph based on the results of an extensive program of experimental investigation carried out in the Cardiovascular Department of the Medical Research Institute, Michael Reese Hospital, Chicago, and on a review of the literature. It is concerned only with atherosclerosis and not with the other forms seldom also classified as arteriosclerosis. Its primary thesis is that atherosclerosis in human beings is due to alterations in cholesterol metabolism. The conflict between this theory and the view that atherosclerosis is an inevitable by-product of senescence is reviewed in the first chapter. Included in the second chapter is a wide range of information bearing on relations between diet and atherosclerosis and on other relationships, such as among hypertension and atherosclerosis. Most of the remainder of the book is devoted to an organized review and analysis of results from experimental investigations. There are 713 references in the bibliography.

KERR, ANDREW

Subacute bacterial endocarditis. Springfield, Ill. Charles C Thomas, 1955 343 p. illus. 23 cm. (American lecture series Publication no. 274 A monograph in the Bannerstone Division of American Lectures in Internal Medicine edited by Roscoe L. Pullen) $6.50 3594

Contents: History. Definition and incidence. Clinical picture—portal of entry and mode of onset. Fever, murmur, evidence of bacteremia. Infarction, emboli, or emboli-like manifestations—internal organs. Infarction, emboli, or emboli-like manifestations—cutaneous manifestations, emboli to large arteries, mycotic aneurysms. Special features—cardiac with types of heart disease, special age groups, and other conditions. Other special features. Course of the disease, spontaneous cure, early diagnosis, differential diagnosis. Pathogenesis. Antibiotic therapy—general considerations—administration—course of treatment—special considerations, other therapeutic measures, prognosis. [illegible] sequelae, prophylaxis. Bibliography. Name index. Subject index.

Note: A monograph based on an extensive survey of the literature. It is written from the viewpoint of clinical medicine, with some attention paid to background subjects such as landmarks in the development of the current knowledge. The information available from the literature, plus some of the experience of the Charity Hospital of Louisiana at New Orleans in the decade 1944–1953, is organized under the chapter titles listed above. References are given from statements and data in the text to the citations of the source articles in the bibliography.

LEPESCHKIN EUGENE

Modern electrocardiography Volume 1 The P-Q-R-S-T U complex. *Foreword by* Frank N Wilson. Baltimore The Williams & Wilkins Company 1951 598 p illus. 26 cm. $12.00 3595

Contents: Electrocardiographic artifacts and their prevention. The leads of the electrocardiogram and their laws. Electrical activity of heart muscle as the basis of the ECG. The electrocardiogram of animals. The normal human electrocardiogram and its interpretation. Influence of physiological factors on the electrocardiogram. Influence of physical agents. Chemical, pharmacological and toxicological influences. Vitamins and hormones. Intraventricular conduction disturbances. Ventricular hypertrophy and strain. Myocardial infarction. Coronary insufficiency. Pericarditis. Myocarditis in acute infections and allergic states. Bibliography and author index. Subject index.

Note: The first volume of a comprehensive, well-organized presentation of the information on electrocardiography that has appeared in the periodical literature from the beginning of 1934 to May 1950. Generally speaking, under each heading and subheading, enough information is included on specific points to satisfy the needs of the medical practitioner who is seeking information on diagnosis and techniques. On the other hand, the specialist (or general practitioner) who desires more information on a particular point can find it by means of the numbered references to the particular source articles. The bibliography contains more than 10,000 references to the international literature. The author is at present a member of the faculty of the University of Vermont College of Medicine.

LEVINE, SAMUEL ALBERT AND W PROCTOR HARVEY

Clinical auscultation of the heart. Illustrated. Philadelphia W B Saunders Company 1949 327 p. illus 24 cm. $6.50 3596

Contents: Heart sounds. Cardiac irregularities. Cardiac murmurs. Miscellaneous auscultatory findings. Index.

Note: The diagnostic value of the sounds of the heart as heard in the stethoscope and recorded by the phonocardiograph is the main theme of this thorough book. The authors stress the importance of informed use of the stethoscope and deplore the tendency to neglect its use in present-day diagnostic examination. They discuss heart sounds in detail from the standpoint of general practitioners of medicine and clinicians. Most of the 246 figures in the work illustrate electrocardiograms and phonocardiograms taken simultaneously on the same patient. Correlations between the two kinds of records are discussed. Both authors are associated with the Harvard Medical School.

LEVINE, SAMUEL ALBERT

Clinical heart disease. Fourth edition, illustrated. Philadelphia W B Saunders Company 1951 556 p. illus. 25 cm. $7 75 3597

Contents: Rheumatic fever. The development of rheumatic heart disease—mitral valve disease. Diseases of the aortic and tricuspid valves. Diseases of the pericardium. Angina pectoris and coronary thrombosis. Hypertensive heart disease, arteriosclerosis, "chronic myocarditis," and rare forms of heart disease. Thyroid heart disease. Syphilitic heart disease. Bacterial endocarditis. Congenital heart disease. Functional heart disease. Paroxysmal rapid heart action. Acute cardiovascular emergencies. The significance of bronchial and other factors in the production of dyspnea. The clinical significance of the systolic murmur. The patient with heart disease as a surgical or obstetric risk. Nature and treatment of congestive heart failure. Clinical electrocardiography. Index.

Note: A standard work in which heart disease is presented for the general practitioner of medicine rather than the specialist or student preparing for a specialty. Not so many conditions are covered as in the full-scale treatises, but the presentation is simpler and better suited to the needs of the physician concerned with the ordinary care of a few heart patients. The main emphasis is on diagnosis and prognosis. Medical treatments are discussed for the information of the general practitioner but surgical techniques are not described. The discussion of electrocardiography covers 200 pages, and most of the illustrations in the book are reproductions of electrocardiograms. In the present edition, revisions have been made to incorporate the major advances of recent years, such as surgery in the treatment of congenital heart disease, anti-coagulants in the treatment of coronary thrombosis, and antibiotics in the treatment of bacterial endocarditis.

infundibular pulmonic stenosis and tetralogy of fallot, by C. W Lillehei and others. Cardiac arrest, by F Gerbode. Hypothermia: Panel discussion on advantages and disadvantages of various methods of inducing hypothermia, by W G. Bigelow and others. Aneurysms and occlusive diseases of the aorta: Surgical treatment of thoracic aneurysms, by H. T Bahnson. Aneurysms of the abdominal aorta—analysis of cases treated by excision, by D A. Cooley and others. Surgical treatment of occlusive arterial disease, by C. Rob. Aneurysms and occlusive diseases of the aorta—analysis of 203 cases treated by resection and homograft replacement, by M. E. DeBakey and others. Rapid vessel anastomoses with transient arterial interruption employing suture methods over a removable bivalve prosthesis, by J D Fryfogle and others. An introduction to atherosclerosis (for surgeons) by I. H. Page. Panel discussion on substitutes for arterial segment, by C. A. Hufnagel and others. Index of participants and discussants. Index of subjects.

Not The proceedings of an important international symposium are presented in this volume Thirty-five states of the United States of America and 22 other countries are represented among the contributors to the volume. Both the papers presented and transcripts of the discussion of them are included. Most of the papers describe important advances such as recently developed techniques.

HOLDEN, WILLIAM D

Acute peripheral arterial occlusion. Springfield, Ill. Charles C Thomas, 1952 illus 66 p 22 cm. (American lecture series Publication no 141 A monograph in American lectures in circulation, edited by Irvine H Page and A. C. Corcoran) $2.35 3588

Contents. The etiology of acute arterial occlusion. Hemodynamic changes following an acute arterial occlusion. Clinical manifestations. Management of acute arterial occlusion. Bibliography Index.

Note. A brief but valuable presentation of medical and surgical therapies and related knowledge bearing on acute peripheral arterial occlusion. It is addressed to general physicians and surgeons, and the final chapter consists of very specific suggestions for emergency and restorative treatments of patients stricken with this disorder The author is Professor of Surgery in the School of Medicine of Western Reserve University

HURST, JOHN WILLIS, AND GRATTAN C WOODSON, JR.

Atlas of spatial vector electrocardiography New York McGraw Hill Book Company Inc., 1952 214 p illus. 16 cm. $6 00 3589

Contents. Part one, The spatial vector method The spatial vector method. Part two, Clinical application of vector electrocardiography The normal ventricular electrocardiogram. Right and left ventricular hypertrophy Myocardial infarction. QRS conduction defects. Effects of digitalis. Pericarditis. Pulmonary embolism. Summary Appendix. Bibliography Index.

Note This work is largely a pictorial presentation of techniques of interpreting, by the vector method, standard electrocardiograms. It is designed as a companion work to R. Grant and H. Estes, *Spatial vector electrocardiography* described above. The first chapter of the Atlas is concise outline of the principles and techniques of the spatial vector method. The rest of the book is made up largely of reproductions of electrocardiograms which are accompanied by interpretive diagrams and descriptions. There are 90 figures, and most of them are full page in size.

KAPLAN HENRY S AND SAUL J ROBINSON

Congenital heart disease an illustrated diagnostic approach Drawings by Zena Kavin. New York McGraw Hill Book Company Inc 1954 126 p illus 28 cm $12 50 3590

Contents Section one, Orientation Clinical evaluation history and presenting manifestations. General laboratory procedures. The conventional roentgen examination. Electrocardiographic diagnosis of chamber hypertrophy in congenital heart disease. Special diagnostic procedures. Treatment. Section two, Atlas Part I, Cyanotic congenital defects. Part II, Noncyanotic congenital defects. References. Index.

Note Diagnosis by physical findings, blood count. X-ray examination, electrocardiography angiocardiography cardiac catheterization etc. of congenital heart defects in children is the subject of this book, addressed to general medical practitioners in the diagnosis of congenital heart defects for which surgical therapies have been developed. Many of the techniques discussed cannot be carried out by the general practitioner but he is taught the interpretation of the results. In the first section which the authors describe as an orientation in the salient principles of differential diagnosis there are 45 figures. In the atlas portion of the book there are 101 In many instances the reproduction of a roentgenogram is supplemented by an anatomical drawing which shows more clearly the position of the heart and its associated vessels. These are included as aids in studying heart roentgenograms.

KATZ, LOUIS N , AND ALFRED PICK

Clinical electrocardiography Part I, The arrhythmias, with an atlas of electrocardiograms Illustrated with 415 engravings. Philadelphia Lea & Febiger, 1956 737 p. illus. 27 cm $17 50 3591

Contents Section I, General considerations and the theoretical background of arrhythmias Introduction. The special anatomy and physiological properties of the heart, and their bearing on the electrocardiogram in arrhythmias. Classification and frequency of arrhythmias. The dynamics of arrhythmias. The recognition of arrhythmias. General principles in the therapy of arrhythmias. Section II, Systematic description of arrhythmias: Sinus rhythm. Ectopic impulse formation—Escape, nodal rhythm, fusion beats, reciprocal rhythm—Premature beats—Paroxysmal tachycardia—Auricular flutter and fibrillation, and the nature of flutter and fibrillation in general—Chaotic heart action, ventricular flutter and fibrillation the dying heart. Heart block—Block in general—Auriculo-ventricular (A-V) block—Sino-auricular (S-A) block. Disturbances of rhythm in the preexcitation (WPW) syndrome. Appendices The approach to an unknown arrhythmia. A classified coding system of normal and abnormal rhythms. Index.

Note A successor to the senior author's *Electrocardiography*, second edition, 1946. The change in title is due to reorganization and expansion of the work, rather than a change in its scope and purpose. It is still a relatively comprehensive text directed to advanced undergraduates and graduate students in medical colleges and to graduate physicians who are beginning the practice of electrocardiography The first section is brief, but it includes a six-page bibliography of other works on the theory and general aspects of electrocardiography More than nine-tenths of the volume is devoted to the descriptions of arrhythmias, which are detailed and written from the clinical viewpoint. Each of the chapters on arrhythmias is divided into three sections: narrative discussion, a section of electrocardiograms, and an extensive bibliography The electrocardiograms are accompanied by lucid explanatory legends, which enable them to be studied independently of the text. The senior author is Director of the Cardiovascular Department of the Michael Reese Hospital in Chicago, and the co-author is in charge of the Heart Station of the same hospital Much of the material in the work has come from the records in this station. A second volume devoted to the electrocardiographic contour is scheduled for publication.

KATZ, LOUIS N

Electrocardiography including an atlas of electrocardiograms Second edition thoroughly revised illustrated with 525 engravings Including over 1000 electrocardiograms. Philadelphia Lea & Febiger 1946 883 p. illus. 26 cm. $12 00 3592

Contents (abridged) Section I, Theory of electrocardiography: The origin and distribution of the electrical currents generated by the heart The special anatomy and the physiological principles of the heart, and their bearing on the electrocardiogram. The recording of the electrocardiogram and its place in clinical practice. Section II, Systematic description of electrocardiographic contour: Electrocardiographic terminology and the approach to a record. The normal electrocardiogram. The abnormal electrocardiogram General considerations of coronary insufficiency and the electrocardiogram of coronary disease. The electrocardiogram of chronic coronary disease and in angina pectoris, genesis of coronary contour The electrocardiogram in chronic diseases. Section III, Systematic description of the electrocardiogram in the arrhythmias. Appendix. Index.

Note A comprehensive treatise written by the Director of Cardiovascular Research at the Michael Reese Hospital in Chicago. It is intended primarily for use by advanced medical students and medi-

Charles C Thomas, 1950. 418 p. illus. 24 cm. $9.50. 3603

Contents (abridged) Section I, Thromboembolic phenomena in clinical medicine: Venous thrombosis and pulmonary embolism. Thromboembolic phenomena in cardiovascular diseases. Thromboembolic phenomena in coronary occlusion with myocardial infarction. Section II, Rationale for the use of the anticoagulants: Heparin and experimental thrombosis. Dicumarol and experimental thrombosis. Section [illegible] Technics in the administration of the anticoagulants: The administration of heparin. The administration of dicumarol. Section IV, Miscellaneous observations. Heparinemia, or hyperheparinemia. The effect of anticoagulants on the erythrocyte sedimentation rate. The effect of anticoagulants on the electrocardiogram. Appendices. Method of determining the coagulation time of whole blood. The determination of prothrombin. Two-stage prothrombin determination. Method for the determination of the prothrombin clotting time. The protamine titration. References. Index.

Note: A monograph based partly on an extensive survey of the literature and partly on the author's own clinical experience. It makes available to medical practitioners and to research workers in medicine and allied fields the gist of the more important literature down to approximately the end of 1949. Apparently considerable time elapsed between the writing of the original part of the book and its publication, for the section titled "Recent developments" is 105 pages long and is based mainly on the publications of 1949. The arrangement of the book makes it necessary for the reader to consult both [illegible] chapter and [illegible] supplement to it under "Recent developments" in order to cover [illegible] specific topic.

MARRIOTT HENRY J

Practical electrocardiography Illustrated by Marcie Ethridge Perry Baltimore The Williams & Wilkins Company 1954 171 p. illus. 24 cm. 3604

Contents: Electrodes and leads. Rhythm and rates. The normal complexes and intervals. Axis deviation. Genesis of the precordial pattern—the intrinsicoid deflection. Ventricular hypertrophy and strain. Bundle branch block. The arrhythmias—ventricular arrhythmias. Auricular arrhythmias. A-V nodal arrhythmias. Sino-auricular and auriculo-ventricular block. Myocardial infarction and coronary insufficiency. Miscellaneous conditions. The augmented unipolar limb (aV) leads. Index to illustrative electrocardiograms. General index.

Note: A simplified introduction, designed primarily for the instruction of medical students, but useful also to graduate physicians who, although not specialists in cardiology, feel [illegible] need for understanding the principles and terminology of electrocardiography. A second edition was published in 1957 226 p. $5.00.

MASTER, ARTHUR MORRIS AND OTHERS

Cardiac emergencies and heart failure prevention and treatment. By Arthur M. Master, Marvin Moser and Harry L. Jaffe. Second edition, thoroughly revised. Illustrated. Philadelphia. Lea & Febiger 1955 203 p. illus. 20 cm. $3 75 3605

Contents: Arrythmias. Acute pulmonary edema and congestive heart failure. Angina pectoris, coronary insufficiency and coronary occlusion. Syncope. Rheumatic fever and heart disease. Hypertensive encephalopathy and [illegible] Dissecting aneurysm. Traumatic heart disease. Surgical emergencies in cardiovascular disease—their prevention and treatment. Bibliography. Index.

Note: A small but useful and authoritative manual. It is addressed primarily to graduates and general practitioners of medicine, and its purpose is to provide such readers with the basic and technical information that will enable them to give proper treatment to heart failure and other cardiac emergencies. It emphasizes diagnostic signs and therapeutic treatment, but includes some important information. An unexpected feature in [illegible] book of this kind is an extensive bibliography which in this second edition runs to 144 entries.

MASTER, ARTHUR MORRIS AND OTHERS

Normal blood pressure and hypertension new definitions. By Arthur M Master Charles I Garfield and Max B Walters. With 36 illustrations. Philadelphia Lea & Febiger 1952 144 p. illus. 24 cm. $4.00 3606

Contents: History of principles and methods of clinical sphygmomanometry. History of blood pressure, evolution of normal limits. Factors affecting the blood pressure level. The need for increasing the range and limits of normal blood pressure—new limits of hypertension. Presentation of new limits of normal blood pressure. Interpretation and clinical application of new blood pressure limits. Index.

Note: The currently accepted values of "140–150 mm. mercury as the upper limit of the normal systolic pressure, and 90–95 mm. as the upper limit of the normal diastolic pressure, irrespective of age and sex" are shown in this book to be based on [illegible] selected rather than representative population. New values based on [illegible] statistical study of 74,000 unselected individuals, representative of the average healthy working population, are offered. The authors state that "these new limits have been found to be definitely higher than those heretofore used, and to vary with the age, the sex, and the weight of the subject." The importance of correlating blood pressures with other elements of the clinical picture is stressed. The results of the study are presented in considerable detail in 25 tables, and the findings are related to other data in the literature. Each chapter contains an extensive bibliography.

MENDLOWITZ, MILTON

The digital circulation. New York Grune & Stratton, 1954 182 p illus. (part col d) 26 cm. $6.75 3607

Contents: Anatomy Physiology Pharmacology Pathology Methods. Peripheral vascular disease. Clubbing. Hypertension, hypothyroidism [illegible] and coronary occlusion. Anemia and polycythemia. Miscellaneous conditions. References. Index.

Note: Essentially this book is an organized digest of the information in the literature, including the author's own extensive publications, pertaining to the circulation of the blood in the fingers and the toes. The subject is of interest partly because of the diagnostic and physiologic value of the phenomena of circulation observable at these extremities and partly because of the ease with which measurements and studies can be made at these sites. The chapter headings under which the material is organized are listed above. The pertinent international literature is covered. Statements and data in the text are referenced to the citations of [illegible] articles in the bibliography. The latter contains 636 references. There are 31 tables and 60 figures.

MORAGUES VINCENT AND CHESTER P LYNXWILER

Cardiac anomalies a clinicopathologic correlation. Baltimore The Williams & Wilkins Company 1954 92 p. illus. 29 cm. $6.50 3608

Contents: Malpositions of the heart. Defects of the cardiac septa. Valvular anomalies. Anomalies of septation of truncus arteriosus. Transposition complexes. Anomalies of the aortic arch. Ebstein's malformation of the tricuspid valve.

Note. An atlas of congenital defects of the heart. It is organized in the chapters or sections whose titles are given above. In each of the sections, there is illustrative matter composed of photographs of dissected defective hearts and related material, such as roentgenograms and electrocardiograph tracings. Microphotographs of associated lung and great vessel tissue are sometimes included. The total number of figures including all variables is 157. Each figure is accompanied by [illegible] short legend in which it is described and sometimes briefly discussed. All of the material is from cases in which the diagnosis was verified either at surgery or autopsy.

MOVITT ELI RODIN

Digitalis and other cardiotonic drugs. Second edition, revised and enlarged. New York Oxford University Press, 1949 245 p. illus. (part col'd) 24 cm. $5 75 3609

Contents (abridged) I, Digitalis folium: Historical data. Source and chemical structure. Pharmacology. Clinical applications. II, Digitalis lanata: Source and chemical structure. Pharmacology. Clinical applications. III, Lanatoside C: Chemical structure. Pharmacology. Clinical applications. IV Other cardiotonic glycosides from digitalis plants: Digitalin, Gitalin, Digoxin. Ouabain (strophanthin)

LIPMAN, BERNARD S, AND EDWARD MASSIE

Clinical unipolar electrocardiography Third edition. Chicago The Year Book Publishers, Inc., 1956 397 p illus. 23 cm. $6 50 3598

Contents Introduction. Physiologic principles. Electrical position of the heart. Ventricular enlargement. Bundle branch block. Myocardial infarction. Abnormal electrocardiographic pattern. Congenital heart disease. General comments on interpretation. Spatial vector interpretation Cardiac arrhythmias. Illustrative unipolar electrocardiograms. Ashman and Hull tables. Bibliography Index.

Note. A relatively brief and simple introduction to "V lead" electrocardiography It is designed for use as textbook in undergraduate courses in medical college and is useful also to graduate physicians who are not specialists in cardiology but feel the need for a simple and authoritative view of principles and techniques. The second edition was published in 1951 In this edition the scope and level of treatment have not been changed, but several chapters have been added, and chapters carried over have been revised and augmented, some of them rather extensively A major addition is the 161-page section Illustrative unipolar electrocardiograms" which consists entirely f reproduced electrocardiograms and their accompanying legends.

LUISADA, ALDO A

Heart, a physiologic and clinical study of cardio-vascular diseases With a foreword by Herman L. Blumgart Second edition Baltimore The Williams & Wilkins Company 1954 680 p illus (part col'd) 26 cm. $15 00 3599

Contents History of cardiology Development and structure of the cardiovascular system. The normal function of the heart and vessels. The clinical study of the cardiac patient. The technical study of the cardiac patient. Causes of cardiovascular diseases—mode of origin of cardiovascular disturbances. Classification of cardiovascular diseases. The rheumatic disease. Cardiovascular syphilis. Diseases of the endocardium. The valvular defects of the left heart. The valvular defects of the right heart. Simple shunts between the greater and the lesser circulation. Combined defects f the heart. Complex malformations of the heart. Disturbances of the heart rate and of the heart rhythm. Clinical syndromes due to diffuse myocardial lesions. The heart in metabolic, vitamin and endocrine disturbances. The diseases f the coronary system and myocardial infarction. Diseases of the pericardium. Diseases of the large vessels. Hypertension of the greater circulation and hypertensive heart disease. Hypertension of the lesser circulation and pulmonary heart disease. Hypotension—shock. Diseases of the peripheral arteries Diseases of the veins. Border-line syndromes of cardiology Associated and complex cardiac diseases. Paroxysmal cardiorespiratory attacks. Heart failure. The cardiac patient as an obstetrical and surgical risk Action of drugs useful for the cardiac patient. Social and legal aspects of heart diseases. Prognosis of cardiovascular diseases. Management of the cardiac patient. Medical treatment of common cardiac conditions. Prescriptions. Diets. Summary of treatment in cardiovascular emergencies. Index.

Note A medical-college textbook of wide scope. The subject is diseases of the cardiovascular system rather than of the heart alone. Some aspects of the subject, for example, diagnostic studies of cardiac patients, are covered thoroughly and in detail others, such as medical treatment, are covered briefly Surgical techniques are not included. Extensive literature references, especially to the European and American literature, are an important feature. The first edition was published in 1948 For this second edition, rather extensive revisions have been made in both text and illustrations. Ten chapters were thoroughly rewritten, and others were revised in part. One-hundred-sixty of the figures in the original edition were deleted, and 100 not in that edition have been added. A generous selection of the literature published since the first edition was written has been added to the bibliography

LUISADA, ALDO A

The heart beat graphic methods in the study of the cardiac patient With 311 illustrations New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1953 527 p. illus. 26 cm. $12 00 3600

Contents (abridged) Part I, Introduction Historical outline. The heart beat. Part II, Normal tracings—technic and interpretation Vibrations of the thoracic and abdominal walls due to cardiovascular action. Vibrations of the body due to cardiovascular action. Venous pulsations. Intrathoracic tracings. Arterial pulsations. Pressure tracings. Radiography of the motions and volume changes of the heart and large vessels. Respiratory tracings. Tracings of electrical phenomena of the heart and vessels. Part III, Physiologic variants of the graphic tracings. Part IV Clinical applications of graphic methods. Appendix, Descriptions of various apparatus Electrocardiographs. Phonocardiographs or stethographs. Ballistocardiographs. Electromanometers. Electrokymographs. Index.

Note The several methods which have been developed to record graphically the various actions of the heart are surveyed in this monograph, together with discussions of their clinical application. All such techniques as phonocardiography phlebography ballistocardiography aortography plethysmography and electrokymography are described. Historical development, technique apparatus, the nature of the graphic record produced, and literature references are discussed for each method. In most instances, special points, such as possible artifacts, are discussed also. The parts on physiological variants of the tracings and clinical applications of the various methods together account for about half of the length of the volume. Literature references are included in all of the 34 chapters.

LUISADA, ALDO A, AND CHI KONG LIU

Cardiac pressures and pulses, a manual of right and left heart catheterization. New York Grune & Stratton, Inc, 1956 116 p. illus 26 cm. $6 50 3601

Contents The cardiac cycle. Technique of catheterization. Normal pressures of the cardiac chambers and large essels. Normal patterns of pressure in the cardiac chambers and large ssels. Abnormal pressure patterns. Artifacts. Formulas used in cardiac catheterization. Bibliography Index.

Note. Several techniques of catheterization of both the right and the left heart are described in detail in this book. The chapter on techniques also contains a description of new and more accurate method f recording. Following this chapter the subject is shifted to the patterns of the pressures and pulses of the heart and associated large vessels. Numerous tracings of patterns obtained by the method of recording proposed by the authors are reproduced, and their clinical significance is made clear Artifacts, such as faulty connections, blood clots, movements of the catheter which may affect the accuracy of the recording are discussed. Mathematical equations and formulas used in calculations pertaining to the results of catheterization are the subject of one chapter The bibliography runs to four pages. The uthors are members of the faculty of the Chicago Medical School, and the senior uthor is Director f its Division of Cardiology

LYON, ERNEST

Virus diseases and the cardiovascular system a survey New York Grune & Stratton 1956 215 p. 22 cm. $5 75 3602

Contents Part I, General remarks on iruses, iral infections and associated cardiovascular involvement. Present concepts of virus diseases. Part II, Exanthematous diseases. Diseases of the eye. Respiratory diseases Liver diseases. Neurotropic virus diseases. Diseases of the muscular system. Fevers of viral origin spread by arthropods. Diseases of the rickettsia but possibly viral etiology Part III, Pathology and clinical features of rickettsial infections, with special reference to the cardiovascular system Addendum. Index.

Note The primary subject of this book is the involvement of the cardiovascular system in the various irus diseases. The general aspects of the subject are covered in Part I, and the cardiovascular defects in specific virus diseases are described in Part II. In discussing the individual diseases, the author not only delineates the cardiovascular aspects, but also includes general account of the disease, particularly in regard to its etiology and general clinical features. References to the literature are given for each disease. The book is of interest to graduate physicians specializing in cardiology specialists in virology and general practitioners.

MARPLE, CHARLES DALLIBA, AND IRVING S WRIGHT

Thromboembolic conditions and their treatment with anticoagulants. Springfield, Ill.

Charles C Thomas, 1952 387 p. illus. (part col'd) 29 cm. $16.50 3614

Contents: The normal auricles. Auricular premature systole. Auricular paroxysmal tachycardia. Experimental production of auricular premature systoles and auricular paroxysmal tachycardia in man. The motion of the auricles in auricular flutter. Electrocardiographic studies of auricular flutter. An electrocardiographic analysis of the structure of the auricular deflections of auricular flutter and tachycardia. Electrocardiographic observations of spontaneous auricular flutter and auricular paroxysmal tachycardia in man. Further clinical observations on auricular flutter and tachycardia. Examples of physiologic diagnosis of auricular tachycardia and flutter. Clinical aspects of auricular fibrillation. The motion of the auricles in auricular fibrillation. The electrical activity of fibrillating auricles. Further considerations on the nature of auricular fibrillation. Ventricular aberration in the auricular arrhythmias. Pharmacologic considerations in the auricular arrhythmias. Treatment of the auricular arrhythmias. The unitary nature of the auricular arrhythmias. Appendix—methods and equipment. Bibliography. Index.

Note: A contribution of major importance. It is based on an extensive series of experimental and clinical observations in which the high-speed cinematograph was applied for the first time to the study of auricular arrhythmias. Studies with this instrument were supplemented by studies with the dual-beam cathode ray oscillograph and the multiple-channel electrocardiograph. The original observations were made on experimental animals, but these were later supplemented by observations on human beings. A much more complete and more accurate picture of the auricular arrhythmias is presented than there was available hitherto. There are 114 illustrations, of which 22 are reproduced in color and a bibliography of 646 references. The book is potentially of interest both to specialists in cardiology and to medical practitioners in other branches of medicine including general practice.

RAAB WILHELM

Hormonal and neurogenic cardiovascular disorders endocrine and neuro-endocrine factors in pathogenesis and treatment. Baltimore The Williams & Wilkins Company 1953 722 p illus. 24 cm. $15.00 3615

Contents: I, Experimental cardiovascular effects of hormones and neurohormones: Adreno-sympathogenic catecholamines (epinephrine and nor-epinephrine). Adrenocortical hormones. Thyroid hormone. Pituitary hormones. Insulin. Gonadal steroids. Parathyroid hormone. Synopsis of experimentally produced functional and morphologic cardiovascular effects of the hormones and neurohormones. II, Cardiovascular features in endocrine syndromes: Adrenals. Thyroid. Pituitary-hypothalamic system. Gonads. Pancreas. Parathyroids. Synopsis of cardiovascular features in endocrine syndromes (tabulated). III, Endocrine factors in cardiovascular syndromes: Hypertension. Arteriosclerosis and related vascular lesions. "Essential" hypertension. "Malignant" hypertension. Primary cardiogenic hypertension. "Essential" hypotension. Postural hypotension. Carotid sinus syndrome. "Vasovagal" and related forms of syncope. Shock. Neurocirculatory asthenia. Regulatory disorders of peripheral circulation. Pulmonary edema. Angina pectoris. Anoxic myocardial necrosis (and myocardial infarction). Cardiac death without morphological substrate. Disturbances of ventricular rhythm. Beriberi heart disease. Idiopathic cardiac hypertrophy ("cardiomegaly"). Athletes' heart. "Hyperexcitatory" heart disease. The heart in growth. Congestive heart failure. Synopsis of neurohormonal and hormonal pathogenic factors in cardiovascular syndromes. General summary. References. Index.

Note: The accumulated knowledge, mostly from research investigations on endocrinology that relates to cardiovascular disorders is presented in this book, which is an organized literature review frequently critical and with references from important statements in the text to the citations of the source articles in the bibliography. The latter contains more than 3,700 references to the European and American literature. The first part is a condensed summary of basic knowledge established by experimental investigations. The second section, 134 pages long, covers those aspects of the subject of particular interest in clinical endocrinology. In the third and longest part, the cardiovascular syndromes are taken up one by one, and the information on their endocrine and neuro-endocrine factors is presented from the clinical viewpoint. Some previously unpublished work from the author's own research is included.

REICH NATHANIEL E.

The uncommon heart diseases. Springfield, Ill. Charles C Thomas, 1954 516 p. illus. 24 cm. $10.50 3616

Contents: Constructed cardiovascular abnormalities. Trauma of the heart. Tumors of the heart. The so-called "idiopathic" [illegible] of the heart. Acute nonspecific myocarditis. Acute nonspecific pericarditis. Chronic constrictive pericarditis. Syphilis of the myocardium and valves. Tuberculous myocarditis. Mycotic infections of the heart. Cardiac diseases of parasitic origin. Cor pulmonale. Nutritional disturbances. The vitamins and heart disease. The effects of metabolic disorders on the cardiovascular system. The heart in blood dyscrasias. The association of neuromuscular diseases and cardiopathies. The effects of drugs, electrolytes, and toxins on the cardiovascular system. Nonarteriosclerotic diseases of the coronary arteries. Miscellaneous diseases of the myocardium. Miscellaneous diseases of the pericardium. Miscellaneous diseases of the venous system. Index.

Note: Designated by the author as a supplement to standard treatises on heart disease, this work is devoted, as indicated by its title, to uncommon and obscure disorders. The chapter titles indicate the wide range of topics covered. Etiology, clinical picture, diagnosis, and treatment are covered for many of the diseases. However when the etiology is unknown or when there is no known treatment, only the anatomy and clinical picture are discussed. Fairly extensive bibliographies are included in the chapters. The book is of interest to graduate practitioners. The author is a member of the faculty of the College of Medicine of the State University of New York.

RINZLER, SEYMOUR H.

Cardiac pain. Springfield Ill. Charles C Thomas, 1951 139 p. illus. 22 cm (American lecture series. Publication no 113 A monograph in American lectures in circulation edited by I H. Page and A. C. Corcoran) $3 75 3617

Contents: History. Nerve pathways of the heart. Mechanism of production of cardiac pain. Medical therapy. Surgical therapy. Summary. References. Index.

Note: A short but well-documented review of the contemporary status of diagnosis and treatment of cardiac pain. The author views the clinical and pathological knowledge as fairly complete, and states: "We are entering a brighter more hopeful period of therapeutics. Both medicine and surgery are making rich contributions to the relief of pain of cardiac origin." The principal studies which have contributed to current therapies are described, and the source articles are cited. The medical and surgical therapies of demonstrated value are critically evaluated. The book is addressed to general practitioners and to specialists in clinical medicine.

RISEMAN JOSEPH EPHRAIM FRANK

P-Q-R-S-T a guide to electrocardiogram interpretation. Third edition New York The Macmillan Company 1952 123 p illus. 15 cm. $4.00 3618

Contents: Introduction. The standard leads. The single apical precordial lead. The four lead ventricular patterns. Unipolar and precordial leads. Physiological considerations. Case histories. Techniques. Glossary. Table of cardiac rates.

Note: A successful, pocket-sized reference book for the medical student or clinical technician who is beginning the study of electrocardiograms. The purpose of the work is to instill confidence in the beginner by showing him how to make accurate diagnoses of heart conditions through correct interpretation of the cardiograph tracings. It is organized so as to facilitate the analysis of unknown tracings at the bedside. Tracings representative of normal and diseased heart conditions are included together with accompanying explanatory text. The second edition was published in 1947. For this third edition, the book was enlarged by 40 pages without, however changing its purpose or organization.

ROBB GEORGE PORTER

An atlas of angiocardiography Prepared for the American Registry of Pathology Armed Forces Institute of Pathology Washington D C. American Registry of Pathology 1951 141 p. illus. 22 cm. $7.50 3619

Contents: Introduction. The technique of angiocardiography. The clinical value of angiocardiography. Angiocardiographic interpretation. The normal angiocardiogram. Lesions of the superior vena cava and

Strophanthus. Historical data. Source and chemical structure. Pharmacology. Clinical applications. VI. Squill. Historical data. Source and chemical structure. Pharmacology. Clinical applications. VII. Other cardiotonic agents of plant origin: Thevetin. Various glycosides of plant origin. VIII. Cardiotonic glycosides of animal origin and a cardiotonic alkaloid. Toad poisons. Erythrophleine. Conclusions. Appendixes. Index of subjects. Index of authors.

Note. A survey for the general medical practitioner of current knowledge regarding the chemical, pharmacological, and clinical behavior of drugs used in the treatment of heart diseases. It is based on a survey of the literature, and each chapter concludes with an extensive bibliography. Important revisions and additions have been made both in the text and in the bibliography and the length of the book has been increased by about 40 pages.

National Research Council. Division of Medical Sciences

Symposium on Atherosclerosis, held under the auspices of the Division of Medical Sciences, National Academy of Sciences—National Research Council, at the request of the Human Factors Division, Air Force Directorate of Research and Development, 22–23 March 1954. Washington, D. C. National Academy of Sciences—National Research Council, 1954. 249 p. illus. 26 cm. (National Academy of Sciences—National Research Council Publication 338) $2.00 3610

Contents. Part I. Anatomical and biochemical aspects of heredity in reference to atherosclerosis, by B. Glass. The blood supply of the vessel wall, by M. C. Winternitz. Observations on vascular structure in relation to human and experimental arteriosclerosis, by O. M. Hass. Functional anatomy of the blood vessel wall—adaptive changes, by G. L. Duff. The lipid and protein content of tissue fluid in normal and hyperlipemic rabbits, by A. Kellner. Experimental studies on arteriosclerosis, by A. I. Lansing. Summary of Part I, by B. Glass. Part II. The reaction of the arterial wall to intramural haemorrhage, by J. C. Paterson. The reaction of arteries to injury by physical agents, with a discussion of factors influencing arterial repair, by C. B. Taylor. The reaction of the artery wall to injury by chemicals or infection, by L. L. Waters. Metabolic factors in vascular disease, by G. M. C. Masson. Regeneration of the elements of the vessel wall, by M. E. DeBakey and others. The reaction of the artery wall to hypertension and to hypervolemia, by L. L. Waters. Summary of Part II, by G. L. Duff. Part III. An evaluation of electron microscopy in the study of blood vessels, by J. Gross. The application of newer techniques to the study of blood vessels, by F. O. Schmitt. Summary of Part III, by F. O. Schmitt. Part IV. Lipids, lipid metabolism, and the atherosclerosis problem—a general introduction, by A. L. Lehninger. Sterol metabolism and its control, by R. G. Gould. Nutrition and atherosclerosis, by G. V. Mann and F. J. Stare. The relationship of the diet to the development of atherosclerosis in man, by A. Keys and J. T. Anderson. Summary of Part IV, by R. G. Gould. Part V. Extracellular lipoproteins, by D. M. Surgenor. Lipoproteins in the arterial wall, by W. H. Batchelor. Physiological aspects of lipid transport, by C. B. Anfinsen, Jr. Plasma lipoproteins in atherosclerosis and related diseases, by H. A. Eder. The role of hormones in atherosclerosis, by L. N. Katz and others. Summary of Part V, by C. B. Anfinsen, Jr. Concluding remarks.

Note. The etiology of atherosclerosis was the principal but not the only subject of this conference, as the titles of the papers show. The papers include results of recent research, accounts of research in progress, and surveys of accumulated knowledge. Transcripts of the discussions at the meeting accompany most of the papers, and literature references are included in most of them.

Neuhof, Harold

Venous thrombosis and pulmonary embolism. New York, Grune & Stratton, 1948. 159 p. illus. 26 cm. (Mt. Sinai Hospital monograph no. 2) $4.50 3611

Contents (abridged). Part I. Venous thrombosis and peripheral pulmonary embolism. Diagnosis of venous thrombosis in the lower extremities. Atypical forms of venous thrombosis. Postoperative pulmonary embolism. Venous thrombosis and pulmonary embolism in childhood. Surgical treatment of venous thrombosis. An evaluation of the present status of anticoagulant therapy. Part II. Massive pulmonary embolism based in part on a study of 83 fatal cases. The mechanism of death in pulmonary embolism. The problem of diagnosis of massive pulmonary embolism. Prophylaxis of pulmonary embolism. Treatment of massive pulmonary embolism—embolectomy. Index.

Note. In this monograph the author has attempted to clarify the large literature of this controversial subject. The first part of the book is the result of studies of patients in the wards at Mt. Sinai Hospital, New York. The second part of the book is the result of studies carried out with Dr. Samuel Klein which led to the development of a surgical treatment by way of the right ventricle. Selected cases are described in detail, and the results of the studies are summarized in a number of tables. The bibliography contains references to 131 books and articles.

New York Academy of Medicine

Disorders of the circulatory system: a symposium presented at the twenty-fourth graduate fortnight of the New York Academy of Medicine, October eighth to nineteenth, 1951. Edited by Robert L. Craig. New York, The Macmillan Company, 1952. 305 p. illus. 23 cm. $5.50 3612

Contents. The role of the connective tissue in diseases of the cardiovascular system, by P. Klemperer. Contraction in the heart muscle fiber, by A. Szent-Györgyi. Lipid metabolism and atherosclerosis, by A. Kellner. Diet and lipotropic agents in atherosclerosis, by J. W. Gofman. Coronary disease—clinical-pathologic correlations and physiology, by H. L. Blumgart. The clinical recognition of coronary heart disease, by R. L. Levy. The importance of cardiac arrhythmias, by L. N. Katz. Pathologic physiology of mitral stenosis and its surgical implications, by L. Dexter. Surgery of acquired valvular disease, by E. H. Wylie. Surgical revision in congenital cardiovascular disease, by G. H. Humphreys II. The electrocardiographic effects of myocardial and pericardial injury, by C. E. Kossmann. Edema and dyspnea of heart failure, by E. A. Stead, Jr. The mechanism and management of circulatory failure, by W. Dock. The treatment of some bacterial infections of the heart and pericardium, by T. H. Hunter. Humoral and vasomotor controls of blood vessels, by I. H. Page. Endocrine factors in hypertension, by G. A. Perera. The medical management of acute and chronic arterial occlusion, by A. W. Duryee. The surgical therapy of acute and chronic arterial occlusion, by J. W. Lord, Jr. Circulatory responses to life situations, by S. Wolf. List of committees. Subjects of past fortnights, 1928–1951.

Note. The papers collected in this book were presented on the occasion named in the book's title, and were part of a course addressed to graduate practitioners. The course included, besides these lectures, panel discussions, hospital clinics, and a scientific exhibit. The lecturers were drawn, for the most part, from the faculties of leading medical schools in the City of New York and elsewhere in the United States. Some of the authors described developments and techniques not previously published and all presented authoritative surveys of their special topics.

Page, Irvine H.

Hypertension: a manual for patients with high blood pressure. Second edition. Springfield, Ill., Charles C Thomas, 1956. 109 p. illus. 10 cm. $3.00 3613

Contents. The purpose of the book. The disease. The examination. The management of hypertension. Research on hypertension. Index.

Note. A successful little book, written by an expert. Its purpose is correctly indicated in the title. It explains hypertensive disease in the common language and provides reliable advice on daily living, including such points as the use of tobacco.

Prinzmetal, Myron, and others

The auricular arrhythmias. By Myron Prinzmetal, Eliot Corday, Isidor C. Brill, Robert W. Oblath, H. E. Kruger, and associate authors Joshua Fields, Walter Flieg, Alfred Goldman, Harold Karpman, S. Rexford Kennamer, John A. Osborne, Alvin L. Sellers, and L. Allen Smith. Springfield, Ill.

from the International Practice. The book is significant, worthy of the attention of any physician interested in electrocardiography. The translation into English was made by the original author and was then edited by Dr. Cutler. The result is a faithful, idiomatic, and readable translation.

STROUD WILLIAM DANIEL, editor

Diagnosis and treatment of cardiovascular disease. Fourth edition. 808 illustrations—five full-page color plates. Philadelphia F A. Davis Company 1952 2 v illus 27 cm. $25.00. 3625

Contents: Volume 1. Some historical comments pertaining to cardiology, by F. A. Willius. The prevention and control of heart disease as a public health problem, by H. M. Marvin. Introduction to diseases of the cardiovascular system, by H. B. Sprague and P. D. White. The normal heart—its output and the circulatory rate, by J. T. King, Jr. Heart sounds, by C. C. Wolferth and A. Margolies. Congenital cardiovascular abnormalities, by R. Ash. Epidemiology of rheumatic fever, by J. R. Paul. Rheumatic fever—evidence of active infection, by T. D. Jones. Rheumatic heart disease, by C. McEwen. Bacterial endocarditis, by W. Dock. Cardiovascular syphilis, by J. E. Moore and W. B. Mlcheik. Treatment of cardiovascular syphilis, by J. H. Stokes and M. F. Falk. The heart in diseases of the endocrine glands, by D. P. Barr. The heart in hyperthyroidism, by H. M. Thomas, Jr. The heart in anemia, by W. B. Porter. The heart in pulmonary disease, by T. M. Durant. Chronic valvular heart disease, by J. R. Vander Veer. Cardiac hypertrophy and dilatation (cardiac failure) by H. Roesler. Congestive heart failure, by A. W. Brown. Digitalis, by A. W. Brown. Effects of digitalis on the electrocardiogram, by T. M. McMillan and S. Bellet. Pathogenesis and treatment of edema, by R. M. Landis. Left ventricular failure and paroxysmal cardiac dyspnea, by A. W. Brown. The cardiac patient as an operative risk, by S. A. Levine. The cardiovascular patient in pregnancy, by B. E. Hamilton. Acute pericarditis, by W. B. Porter. Chronic constrictive pericarditis, by P. D. White. Surgery of the heart and pericardium, by C. S. Beck. Normal blood pressure and its physiologic variations, by E. V. Allen and E. A. Hines. Low arterial pressure, by J. H. Musser. Venous pressure, by K. G. Schaffer. Psychic factors in essential hypertension, by W. H. Kessler. Index. Volume 2. Arterial hypertension, by I. H. Page. Arterial hypertension, by E. J. Stieglitz. The cardiovascular system with relation to the kidneys, by J. M. Hayman, Jr. Capillary circulation, by A. C. De Graff and A. M. Oshlag. The diagnosis of coronary insufficiency, by R. L. Levy. Coronary disease including angina pectoris, by W. D. Stroud and M. W. Stroud. Relief of pain in angina pectoris, by F. C. Grant. Revascularization of the heart by channels other than the coronary arteries, by S. Bellet. Disturbances of the heartbeat, by D. F. Bergmann. Use of quinidine in cardiac irregularities, by W. J. Kerr and J. R. Carson. Cardiac neuroses, by L. A. Conner. Psychosomatic aspects of cardiovascular disease, by E. Weiss. Tumors of the heart, by H. Barber. Shock, by T. E. Freeman. Physical therapy in cardiovascular disease, by C. R. Comstock and W. D. Stroud. The rehabilitation of cardiac patients and their placement in industry, by W. D. Stroud and H. A. Ruth. Form of the electrocardiogram, by F. N. Wilson and F. D. Johnston. The vectorcardiography, by S. Bellet and T. M. McMillan. The ballistocardiogram, by I. Starr. Roentgenology of the heart and great vessels, by H. L. Cryenholder and R. R. Gubner. The heart in diphtheria and other conditions, by J. A. Warner and J. E. Strong. Peripheral vascular disease, by R. Fitz. Thromboangiitis obliterans, by H. Montgomery. Erythermalgia, erythromelalgia of the extremities, by E. V. Allen. Lymphedema of the extremities, by E. V. Allen. Sudden embolism and thrombosis of arteries of the extremities, by E. V. Allen. Thrombophlebitis, by N. W. Barker. Acquired arteriovenous fistula, aneurysm, and aneurysm, by E. A. Hines. Arteriosclerosis obliterans, by I. S. Wright. Raynaud's syndrome and acrocyanosis, by I. S. Wright. Vascular anomalies, by G. de Takats. Varicose veins by G. de Takats. Index.

Note: A comprehensive treatise made up of 64 monographic chapters authored and titled as noted above. Literature references are included in the chapters. One of the most useful changes appearing in the present edition is a new index which does justice to the contents of the two volumes.

SYMPOSIUM ON HYPERTENSION

Hypertension a symposium held at the University of Minnesota on September 18 19 and 20 1950 in honor of Elexious T Bell, Benjamin J Clawson and George E. Fahr Minneapolis University of Minnesota Press 1951 573 p. illus. 24 cm. $7.50 3626

Contents: Anatomical considerations of hypertension, by H. Goldblatt. Experimental studies on hypertension, by A. Grollman. Experimental hypertension in the rabbit, by G. W. Pickering. The renin-angiotonin pressor system, by I. H. Page. The participation of hypertensive factors in experimental renal hypertension, by E. Braun-Menéndez. Blood volume and extracellular fluid volume in experimental hypertension, by E. Braun-Menéndez. The role of the adrenal cortex in the pathogenesis of experimental hypertension, by H. Selye. The mechanism of hypertension due to desoxycorticosterone, by E. Braun-Menéndez. Sympatho-adrenal factors in hypertension, by M. Nickerson. Experimental hypertension, by E. Braun-Menéndez. The pathological anatomy in primary hypertension, by E. T. Bell. Some observations on renal vascular disease in hypertensive patients based on biopsy material obtained at operation, by R. H. Smithwick and B. Castleman. The mechanism of hypertension in chronic glomerulonephritis, by G. E. Fahr. Renal hemodynamics in essential hypertension, by H. Chasis. The heart in essential hypertension, by B. J. Clawson. The adrenal cortex and hypertensive vascular disease, by G. A. Perera. Hereditary factors in essential hypertension in man, by E. Shaw. Pulmonary hypertension, by R. V. Ebert. A summary of experimental evidence relating life stress to the pathogenesis of essential hypertension in man, by S. Wolf and H. G. Wolff. Vascular reactivity and hypertensive disease, by E. A. Hines, Jr. Cerebral attacks in hypertension, by G. W. Pickering. The natural history of hypertensive vascular disease, by G. A. Perera. Blood lipid transport in hypertensive patients and its relation to atherosclerotic complications, by J. W. Gofman. The hemodynamic effects of various types of therapy in hypertensive patients, by R. W. Wilkins. Sympathetic blockade in the therapy of hypertension, by M. Nickerson. The effect of sympathectomy upon the mortality and survival rates of patients with hypertensive cardiovascular disease, by R. H. Smithwick. The management of hypertensive patients: observations on the pertinence of life situations, attitudes, and emotions to variations in the course of essential hypertension and to the occurrence of cerebral symptoms, by H. G. Wolff and S. Wolf. Recent experience with the pharmacologic treatment of hypertension, by R. W. Wilkins. Some effects of the rice-fruit diet in patients with essential hypertension, by C. B. Chapman. Pyrogens in the treatment of malignant hypertension, by I. H. Page and others. Bibliography

Note: A collection of original papers prepared for the occasion mentioned in the book title. Many of the papers describe the results of recent investigations or describe concisely the current status of recent developments in which the author of the paper played a conspicuous part. Excerpts from the discussions of the papers at the meetings are included. Bibliographies for each paper are included at the end of the volume. There is no index.

UNITED STATES. ARMY MEDICAL SERVICE GRADUATE SCHOOL

Symposium on circulation and homeostasis 5-9 October 1953 Army Medical Service Graduate School Walter Reed Army Medical Center Washington, D C. Washington, D C. Government Printing Office, 1954 367 p. illus. 23 cm. (Medical science publication no. 3) $1.25 3627

Contents: Major circulatory problems, cardiac stress, peripheral stress, by M. B. Visscher. Vascular architecture, structure and compartments, by H. D. Green. Laws of physics and flow in blood vessels, by A. C. Burton. Chemical and molecular processes in contractile activity, by W. F. H. M. Mommaerts. Humoral and neural mechanisms of circulatory control, by A. C. Corcoran. Means of evaluating state of performance of heart and of peripheral circulation, by M. B. Visscher. Transfer of water and of other substances across capillary walls, by J. R. Pappenheimer. Circulation and metabolic exchange: renal function in electrolyte and water balance, by A. V. Wolf. Collateral circulation of the lung: bronchial, and beyond, by A. A. Liebow. Coronary circulation of the heart, by R. J. Bing. The peripheral collateral circulation, by C. W. Hughes. Cardiac catheterization technics, instrumentation and measurements, by J. R. Hickam. Red cell and plasma volume, by W. H. Crosby. Blood flow in muscle as measured by the clearance of radioactive substances, by S. S. Kety. Uses and abuses of intravenous catheterization, by J. B. Hickam. The metabolism of the human heart in vivo, by R. J. Bing. Cardiac circulation, by S. R. M. Reynolds. The brain circulation, by M. E. McDowell. Cerebral circulation, by S. S. Kety. Management of cardiac arrest, by J. R. Kay. Use of the intra-aortic balloon catheter compounds, by C. W. Hughes. Cardio-respiratory problems during

tributaries. Congenital heart disease. Acquired heart disease. Disorders of the pericardium. Acquired aortic disease. Intrathoracic tumors. Lesions of arteries. References. Index of cases.

Note In this work, the technique, clinical uses, and other basic aspects of angiocardiography are discussed by the originator of the currently used technique. The preliminary basic material extends in and includes the section on the normal angiocardiogram and occupies nearly half of the book. The remainder of the space is devoted to illustrations and discussions of 40 individual cases in which angiocardiography was used. In each of these case histories, there are reproductions of one or two angiocardiograms.

RUSHMER, ROBERT F

Cardiac diagnosis, a physiologic approach Philadelphia W B Saunders Company, 1955 447 p illus. 26 cm. $11 50 3620

Contents Part I, Function of the normal cardiovascular system Functional anatomy of cardiac contraction. Functional characteristics of the systemic circulation. Circulatory response to arising. Functional characteristics of the pulmonary circulation. Part II, Regulation of the cardiovascular system Principles of peripheral vascular control. Regulation of cardiac output. The factors which determine stroke volume. Part III, Congestive heart failure The cardiac reserve. The etiology of congestive failure. Part IV Methods of cardiac diagnosis The measurement of pressure. The size and configuration of the heart. The estimation of cardiac output. Heart sounds and murmurs. Electrocardiographic interpretation—abnormalities of rate, conduction and rhythm. Electrocardiographic interpretation Changes in configuration of the complexes. Part V Diagnosis of cardiac disease Myocardial ischemia. Myocarditis. Valvular disease. Congenital heart disease. Possible heart disease. Index.

Note This book teaches the diagnosis of cardiac disease from the standpoint of basic physiology Such aspects of the cardiovascular system, as the regulation of the cardiac output and the cardiac reserve, are given much space, while the traditional descriptions of individual diseases are relegated to the final one-third of the book. Many results from experimental physiology are incorporated. The physiologic approach with its emphasis on thorough understanding of basic knowledge reflects the growing importance in cardiology of more accurate diagnoses. The chapters on electrocardiographic interpretation are introductory to this technique and are exceptionally clear The descriptions of individual diseases are fuller than usual and are thoroughly modern in viewpoint. Extensive lists of references to the literature appear throughout the volume. The illustrations include many well-conceived diagrams.

SAMUELS, SAUL SIMON, editor

Diagnosis and treatment of vascular disorders (Angiology) Baltimore The Williams & Wilkins Company, 1956 621 p illus. 26 cm $16 00 3621

Contents The anatomy of the peripheral circulation, by L. N Atlas. *The innervation of the peripheral blood vessels*, by L. N Atlas. Physiology *of sympathetic innervation* of peripheral blood vessels, by H L Abramson. Examination of the patient, by R. H. Goetz. Angiography by F B. Wagner Local cold injuries, by H. B Shumacker jr and R. E. Lempke. Arterial injuries, by F A. Simeone. Senile obliterative arteritis (arteriosclerosis obliterans) by A. M. Boyd and A. H. Ratcliffe. Arteriosclerosis—atherosclerosis in relation to diabetes, by D W Kramer and P K. Perlstein Endarteritis obliterans, by D W Kramer Treatment of gangrene of the extremities, by S. S. Samuels. Thromboangiitis obliterans, by S. S. Samuels. Raynaud's disease and Raynaud's phenomenon, by R. H. Goetz. Erythermalgia, by R. H. Goetz. Arterial aneurysms, by M. G. Fischer Arteriovenous fistulae, by R. H. Goetz. Embolism and thrombosis, by G. H. Yeager Anticoagulant therapy by S. Shapiro. Varicose veins, by E. J Orbach. Glomus tumors, by R. H Goetz. The scalenus anticus *syndrome, by* G H. Yeager Chronic edema of the legs, by S. S. Rose. Periarteritis nodosa, by D W Kramer and P K. Perlstein. Medical legal aspects, by S. S. Samuels. Index.

Note Edited by the editor-in-chief of the journal *Angiology* this volume is an up-to-date treatise and reference book basic to the diagnosis and treatment of vascular disorders. It is the editor's contention that this field deserves recognition as a separate specialty from cardiology In other words, that the old specialty of cardiovascular disorders should be divided. The volume was planned to emphasize the unity *and scope of the new specialty* It contains the monographic chapters whose authors and titles are given above all of which are written at the level of graduate students of medicine and graduate practitioners. There are numerous illustrations. Literature references are supplied for the individual chapters.

SAMUELS, SAUL SIMON

Management of peripheral arterial diseases New York Oxford University Press, 1950 345 p illus 23 cm $7 75 3622

Contents. General considerations. Symptoms of occlusive arterial disease in the extremities. Objective evidence of occlusive disease of the arteries of the extremities. Oscillometry Thrombo-angiitis obliterans. Arteriosclerosis obliterans. Raynaud's disease. Erythromelalgia. Acrocyanosis. Periarteritis nodosa. Essential thrombophlebitis. Embolism. Cervical ribs and scalenus anticus syndrome. Thrombosis of the axillary vein. Frostbite. Ergotism. Glomus tumor Aneurysm of the peripheral vessels. Medico-legal aspects of peripheral arterial disease Index of authors. Subject index.

Note. As in the earlier edition, the author argues for conservative therapy rather than amputations in the treatment of gangrene and other conditions of arterial insufficiency in the extremities. The book is based on an experience extending over a period of 25 years, and the details of many case histories are given. Most of the 111 illustrations are from case records. Short bibliographies are included with the chapters.

SCHROEDER, HENRY A.

Hypertensive diseases, causes and control. 164 illustrations and 3 colored plates. Philadelphia Lea & Febiger, 1953 610 p. illus. (part col'd) 24 cm $10 00 3623

Contents Introduction—general theory of pathogenesis of hypertension. Factors regulating blood pressure Definitions. Historical. Etiological factors—fundamental traits—environmental influences. Etiological factors—emotions, personality and hypertension, by B S. Grosset. Pathogenesis—neurogenic factors. Compounds of nitrogen, by H. M. Perry jr Hormonal factors in hypertension, by D F Davies. The effects of chronic arterial hypertension. Clinical types—neurogenic hypertension. Pheochromocytoma, by D. F Gibbs. Clinical types—nephrogenic hypertension—the endocrine hypertensive syndrome. Other varieties of hypertension. General diagnostic procedures. Treatment of the various factors influencing hypertension. Treatment of hypertension by Hyphex. Directions for research. Appendix. Author index. Subject index.

Note A contribution of major importance to the literature of hypertension. It is based on a long study including both experimental investigations and clinical experience. The author's theory of the pathogenesis of hypertension is presented in the first chapter and the chapters that follow including those contributed by other authorities, support this theory The greater part of the book is devoted to exploring the causative factors and to descriptions of the varieties of hypertension. Diagnosis and treatment as such are not taken up until the 18th chapter is reached, but are then dealt with explicitly and in detail. The chapter "Treatment of hypertension by Hyphex" deals at length with treatment by a combination of 1 hydrazinophthalazine and hexamethonium, a method of treatment in the development of which the author played a major role. Although the book is not a literature survey a wide selection of literature is cited, including the author's own extensive publications.

SODI PALLARES, DEMETRIO

New bases of electrocardiography, by Demetrio Sodi Pallares with the collaboration of Royall M Calder, editor English translation. With 520 illustrations St. Louis The C V Mosby Company, 1956 727 p. illus. 25 cm $18 50 3624

Contents Principles of electricity Electrophysiology The electrical axis of the heart—the Einthoven triangle. Unipolar limb leads. Injured muscle. The precordial leads. The activation process of the human heart. Concerning the electrical and anatomical position of the heart. Vectorcardiography and stereovectorcardiography. The ventricular gradient. The intracavitary potential. Appendix. References. Index.

Note Before publication of the English translation, this book had already achieved considerable success in the original Spanish version The author describes it as summary of the research work done during the last seven years in our Department of Electrocardiography of the Mexican Institute of Cardiology Nevertheless, most topics are discussed fully and explicitly rather than concisely Also, there are many references to the work of investigators not associated with the Institute. As evidence of this, the bibliography contains references to almost 1,000 articles selected

the concept of medical orientation and to include ... discussion of the arrhythmias. The author is a member of the faculty of Harvard Medical School.

WRIGHT IRVING SHERWOOD

Vascular diseases in clinical practice. Second edition. Chicago The Year Book Publishers, Inc., 1952 552 p. illus. 21 cm. (General practice manuals) $8.50. 3632

Contents (abridged) Classification of diseases and abnormalities of blood and lymph vessels of the extremities. Methods of study of the patient. Arteriosclerosis of obliterans-thrombotic type. Thromboangiitis obliterans. Ergotism. Raynaud's syndrome and related syndromes. Essential polyangiitis (periarteritis nodosa; Kussmaul-Maier disease). Cranial arteritis (temporal arteritis) Lupus erythematosus disseminatus. Neurovascular syndromes of the shoulder girdle. Aneurysms. Arteriovenous aneurysms. Syndromes produced by temperature changes (excluding Raynaud's syndrome) Livedo reticularis (cutis marmorata) Erythema pernio. Erythema induratum. Acrocyanosis. Erythromelalgia (erythermalgia) Acute arterial occlusion (arterial embolism—acute arterial thrombosis) Thrombophlebitis. Acute axillary or subclavian venous thrombosis. Dependency edema. Varicose veins. Thrombocytic neuralgia. Tumors of the blood and lymph vessels. Industrial and occupational medicine—in relation to peripheral vascular disease and injury. Amputation—psychologic and physical care. Appendix: Method for determining plasma prothrombin. Index.

Note: This book is addressed to graduate medical practitioners and ... planned for use both as ... guide and reference manual in diagnosis and treatment. The author states that it is intended as ... supplement to existing volumes on heart disease and not as ... full-scale treatise. Study of the whole patient in order to get the correct clinical picture is emphasized, and the author includes ... suggested lines for history taking. The style of presentation is concise. Selected literature references are appended to the chapters. There are 114 figures.

RESPIRATORY SYSTEM

ALTSCHULE, MARK D

Acute pulmonary edema. New York Grune & Stratton, 1954 68 p. 22 cm. $3.50 3633

Contents: Clinical manifestations. Basic physiologic considerations. Pathologic physiology. Treatment. Bibliography. Index.

Note: A brief but valuable monograph on ... clinical condition of ... origin and prognosis. It is devoted primarily to the physiological aspects, even though it begins with ... chapter on clinical manifestations and concludes with one on treatment. The chapter on clinical manifestations contains not only ... clear description of the signs and symptoms of pulmonary edema, but also ... useful discussion of differential diagnosis. Various therapeutic measures are discussed critically and are related whenever possible to the basic physiology. There is ... bibliography of 83 entries, but the references are limited to literature on physiological aspects.

BANYAI, ANDREW L., editor

Nontuberculous diseases of the chest. Sponsored by the American College of Chest Physicians. Editorial Committee Seymour M Farber and others. Springfield, Ill. Charles C Thomas, 1954 1 139 p. illus. 25 cm. $18.75 3634

Contents (abridged) The physiology and pathologic physiology of respiration. Inflammatory bronchial diseases and bronchiolitis. Pulmonary abscess. The pneumonias. Pulmonary mycoses. Pulmonary manifestations of systemic infections and infectious diseases. Tropical and parasitic diseases of the lungs. Tumors. Lung diseases of vascular origin. Bronchial asthma. Emphysema of the lungs. Foreign bodies in the air and food passages. Extrapulmonary diseases caused by physical, chemical and thermal injuries. Atelectasis. Pulmonary fibrosis. Industrial diseases of the lung. Congenital diseases of the lungs. Collagen diseases of the lung. Miscellaneous diseases of the lung. Diseases of the mediastinum. Diseases of the esophagus. Diseases of the pleura. Diseases of the diaphragm. Diseases of the chest wall. Index.

Note: A comprehensive treatise written by 87 specialists, including physicians resident in Argentina, England, India, Mexico and the United States of America. It is organized in more than 30 sections and chapters, of which only the section titles are given above. Authorship of all the chapters is given in the volume. The book's purpose is to provide reliable information to advanced students of medicine and graduate practitioners, including specialists in chest diseases. Except for the first section on the physiology of respiration, all of the space is devoted to specific diseases and to the pulmonary manifestations of systemic diseases. Generally speaking, the material on each disease is organized under subheads, such as etiology, pathology, symptoms, physical signs, clinical course, prognosis, and treatment. Selected literature references are included in each chapter. The book is complementary to *Fundamentals of pulmonary tuberculosis and its complications.*

BARACH ALVAN L.

Physiologic therapy in respiratory diseases. 74 illustrations. Second edition. Philadelphia J B Lippincott Company 1948 408 p. illus. 24 cm. $10.00. 3635

Contents (abridged) Historical background. Acute asthma. Additional studies on asthma and its treatment. Pneumonia. Edema of the lungs. War gas poisoning and lung irritants. Bronchial asthma. Obstructive lesions in the larynx, trachea and bronchi. Pulmonary emphysema. Bronchiectasis. Pulmonary embolism and infarction. Massive collapse of the lung. Postoperative atelectasis. Passive pulmonary congestion and congestive heart failure. Accidental asphyxia and resuscitation. Asphyxia of the newborn. Paralysis of the respiratory musculature. Anesthesia and anoxia. Chronic pulmonary tuberculosis. Aerial transportation of patients with pulmonary and cardiac disease. Blast injuries of the lungs. Syndromes characterized by ischemic anoxia. Bibliography. Methods of physiologic therapy including apparatus for inhalational therapy, the use of pressure and administration of aerosols. Respirators. Oxygen analyzers. An accurate method for obtaining the oxygen and carbon-dioxide concentration of the inspired air in oxygen masks and other oxygen-therapy equipment. Index.

Note: A handbook for physicians, outlining the principles and practices utilized in the treatment of respiratory diseases and disorders. Techniques of inhalation therapy and other therapeutic measures are considered in detail, with emphasis on the pathologic physiology of each condition. The book is ... revision of the author's earlier work, *Principles and practices of inhalational therapy.* Philadelphia, J. B. Lippincott Co., 1944 ... which has been rewritten to include not only the therapeutic use of gases but also other measures which have value in counteracting clinical disorders of breathing. New chapters on methods of physiologic therapy and syndromes characterized by ischemic anoxia have been added. Bibliographies given at the end of each chapter have been revised.

BARACH ALVAN L., AND HYLAN A BICKERMAN editors

Pulmonary emphysema. Baltimore The Williams & Wilkins Company 1956 543 p. illus. 23 cm. $10.00 3636

Contents: Pathogenetic and allied influences in chronic pulmonary emphysema, by A. L. Barach. The application of respiratory physiology to therapeutic procedures in pulmonary emphysema, by A. L. Barach. Restoration of diaphragmatic function and breathing exercises, by A. L. Barach. Senile emphysema, by H. A. Bickerman. Corticotropin and the adrenocorticosteroids in the treatment of pulmonary emphysema, by H. A. Bickerman. Pharmacologic therapy in the management of pulmonary emphysema, by H. A. Bickerman. Methods of aiding bronchial drainage in pulmonary emphysema, by G. J. Beck. Aerosol therapy in the management of bronchopulmonary infection, including use of antibiotics, by E. R. Levine. The mechanics of breathing, by H. G. Dayman. Administration of bronchodilator aerosols and the use of intermittent positive pressure breathing (IPPB) by H. D. Miller and others. Psychologic considerations in management relative to the development of acidosis and to the work of breathing, by J. K. Alexander. The role of infection in chronic hypercapnic pulmonary emphysema, by F. Knight and A. C. White. The diffusing capacity of the lungs in patients with pulmonary emphysema, by R. L. Riley. Respiratory acidosis, by R. M. Cherniack. Cor pulmonale in chronic pulmonary emphysema, by D. W. Richards, Jr., and A. Fishman. Surgical procedures in pulmonary emphysema, by R. A. Deterling. Respiratory function tests, by G. R. Meneely and J. K. Calloway. Comments on preceding chapters, by A. L. Barach. Index.

Note: Primarily this book is ... survey of therapeutic measures in the treatment of pulmonary emphysema, together with closely related topics such as the mechanics of respiration. The two editors and four other contributors are associated with the College of Physicians and Surgeons of Columbia University. The purpose of medical

thoracic operations, by R. D Dripps. Lymphatic circulation, by H. S. Mayerson. Functions of circulation related to internal and external movement of heat, by F N Craig. Normal physiology of respiration by R. L. Riley *Physiology and peculiarities of* pulmonary circulation, by A. F Cournand. Treatment of pulmonary diseases, by C. S. Christianson. Circulatory and respiratory adjustments to altitude, acute and chronic, by O. H. Gauer Experimental studies on hemorrhagic shock, by S. J Sarnoff Circulatory responses to stress transfusions fate and distribution of plasma and red cells, by W H. Crosby Current status and uses of the plasma expanders, by C. P Artz. Current concepts on etiology and mechanisms of atheroma, by J M. Blumberg. Current status of thinking regarding shock, by J M Howard. Circulatory changes during anesthesia and hemorrhage, by H. E. de Wardener Effects of trauma and operative procedures on the circulation by C. P Artz. Circulation and blood volume problems in the seriously wounded casualty by T C. Prentice. Wound ballistics and experimental wound shock, by W A. Ochsner Jr

Note Published in this volume are 27 papers presented at the symposium named in the volume title, together with transcripts of the discussions. The basic purpose of the symposium was to *increase understanding of man's adaptive physiological mechanisms in various environments, particularly when subject to severe trauma* and injury Many of th papers were devoted to the results of recent research.

WHITE, PAUL DUDLEY

Clues in the diagnosis and treatment of heart disease Second edition. Springfield, Ill Charles C Thomas, 1955 186 p illus 23 cm. (American lecture series No 242 A monograph in the Bannerstone division of American lectures in Circulation Edited by Irvine H Page and A. C Corcoran) $5 50 3628

Contents General clues. Past history *Family history Symptoms* breathing difficulties. Pain. Palpitation. Other symptoms. Signs. Heart sounds and murmurs. Blood pressure. Roentgenology Electrocardiography Therapeutic clues. Appendix. Index.

Note An unusual and useful book written by a noted authority on heart disease. It is addressed primarily to general practitioners. Its subject is clues" In other words information from the patient's history signs, symptoms and results of clinical diagnostic techniques that are significant in diagnosis, prognosis and therapy Good techniques of history-taking and physical examination, in order to turn up clues, is a prominent theme. Techniques are critically evaluated, as in the following passage "Once in while, although actually in but a small minority of patients, X-ray study of the heart, great vessels, and lungs affords the clue to the diagnosis. The book complements the larger treatises on the heart disease.

WHITE, PAUL DUDLEY

Heart disease Fourth edition New York The Macmillan Company 1951 1 015 p illus (part col'd) 24 cm. $12 00 3629

Contents (abridged) The evolution of our knowledge of the heart and its diseases. Part I, Cardiovascular examination, symptoms and signs The range of the normal heart. The patient's history and symptoms. Physical examination. Cardiovascular roentgenology The palpation of heart and blood vessels Electrocardiography Part II, The significance, prevalence, causes, and types of heart disease The social and economic aspects of heart disease. Prevalence of heart disease and of its etiologic types. Congenital cardiovascular defects. Rheumatic heart disease acute and chronic. Acute and subacute bacterial (infective) endocarditis. Cardiovascular syphilis. The heart in diphtheria, scarlet fever and tuberculosis and in other bacterial infections, infestations, and virus diseases. Hypertensive heart disease. Pulmonary heart disease. Coronary heart disease. Neurocirculatory asthenia. Part III, Structural cardiovascular abnormalities Myocardial disease. Endocardial and valvular disease. Pericardial disease. Vascular disease. Part IV Disorders of cardiovascular function The circulation of the blood. Myocardial insufficiency Disorders of vascular function. Disorders of cardiac rhythm. Atrial fibrillation and flutter Ventricular fibrillation and flutter Quinidine therapy Bradycardia and heart block—sinoatrial, atrioventricular intraventricular Ventricular escape. Atrioventricular nodal rhythm. Wide QRS wave with short P-R interval. Sudden death. Subject index.

Note A well-known, standard treatise in which the subject is surveyed primarily from the clinical viewpoint. Presentation is concise, but is adequately detailed for ordinary uses. The diseases included are discussed as to incidence, mechanism, etiology pathology symptoms, signs, course of prognosis, complication, treatment, differential diagnosis. In addition, extensive literature references are furnished. *Important and fairly extensive changes have* been made in this edition. A number of parts have been compressed in order to make room for new material, without lengthening the book. In some instances, the accounts of new developments—for instance, ballistocardiography—are very brief but are supplemented by numerous references to the literature. The comprehensiveness of the work is indicated by the length of the index which runs to 52 pages.

WOLF, STEWART, AND OTHERS

Life stress and essential hypertension, a study of circulatory adjustments in man. By Stewart Wolf, Philippe V Cardon, jr., Edward M Shepard, and Harold G Wolff. Baltimore The Williams & Wilkins Company, 1955 253 p illus 24 cm $7 50 3630

Contents: Scope of the problem and methods of study Circulatory adjustments associated with muscular effort. Circulatory adjustments involving rhythm of the heart. Circulatory adjustments involving peripheral vessels. Essential hypertension—natural history and symptomatology The ballistocardiograph. Measurement of hemodynamics in essential hypertension. A survey of 114 patients with essential hypertension followed up to eight years. Treatment of essential hypertension. General summary and formulation. References. Index.

Note Studies of an *extensive* group of patients who were followed over a number of years in a special clinic at Cornell New York Hospital were the basis for this book. *The methods of the* study are fully described, and the results are summarized in considerable detail, with rather full reports of the more significant cases. In the chapter entitled "Treatment of essential hypertension, the authors critically review the various therapies that have been advocated for this disorder and summarize the published *results in the light of their own results in this study* Among the conclusions, Antipressor drugs and surgical operation on various portions of the sympathoadrenal system have not gone far towards solving the problem of therapy in essential hypertension. Perhaps the most promising therapeutic approach is towards the patient as a whole and his general life adjustment. Even here, however, the results of therapy are only suggestive, and it remains to be shown that the pathophysiologic process in essential hypertension can be significantly altered by any currently available measures. A bibliography of 158 references is included.

WOLFF, LOUIS

Electrocardiography fundamentals and clinical application Second edition. Philadelphia W B Saunders Company 1956 342 p illus 26 cm $7 00 3631

Contents (abridged) Part I, The basic principles of electrocardiography Electrical phenomena and muscle contraction electrical properties of the cell membrane. Volume conductors, unipolar and bipolar leads. Deflections which represent depolarization. Vector representation of dipoles. The electrical effects of the simultaneous excitation of two muscle masses in a volume conductor The electrical field around the heart. Primary and secondary T wave changes. The precordial electrocardiogram. Unipolar limb leads. standard limb leads. The Einthoven equilateral triangle hypothesis. The effect of muscle injury on the electrocardiogram. Current of injury Myocardial infarction. Part II, Clinical electrocardiography Instruments. Technique. Nomenclature. The normal electrocardiogram. Bundle branch block. Left ventricular hypertrophy Right ventricular hypertrophy Coronary heart disease myocardial infarction. Persistent S-T segment displacement. Pericarditis pulmonary embolism abnormal electrolyte patterns. Part III, The normal and abnormal cardiac mechanism digitalis and quinidine The cardiac mechanism. Normal and abnormal S-A nodal mechanisms. Ectopic arrhythmias. Atrial flutter and fibrillation. Etiology of paroxysmal rapid heart action. A-V nodal rhythm. Carotid sinus stimulation Index.

Note: An introduction to the interpretation of electrocardiograms It is primarily textbook for study in medical schools, however, it is written in full direct style that makes it an excellent book for self-instruction and review Spatial orientation of the cardiac vector is mentioned from time to time, and in few instances is diagrammed but spatial vectorcardiography is not included. The first edition was published in 1950 Fairly extensive *revisions* were made in preparing this second edition, in order to introduce

emphysema. Pulmonary cysts, bullae and blebs—spontaneous pneumothorax. Mediastinal diseases. Bronchogenic carcinoma. Bronchial adenoma and some other intrathoracic tumors. Intrathoracic metastases. Pulmonary congestion and edema. Pulmonary embolism. Congenital anomalies. T / / A. Inhalation and pathogenesis. Pulmonary tuberculosis—diagnostic procedures and classification. Treatment of tuberculosis—rest and general management—specific antibacterial drugs. Treatment of pulmonary tuberculosis—collapse therapy—pulmonary resection. Medical aspects of thoracic surgery. Diseases of the pleura. Sarcoidosis. Pulmonary and associated changes in the collagen diseases. Coccidioidomycosis, by W. A. Winn. Actinomycosis, nocardiosis and blastomycosis. Histoplasmosis and some other pulmonary mycoses. Parasitic and other tropical pulmonary diseases. Pulmonary diseases of occupational origin. Index.

Note: The authors of this book, both faculty members of the School of Medicine of Stanford University, are respectively specialist in internal medicine and specialist in radiology. Their collaboration has produced a modern textbook of comprehensive scope suitable for the instruction of advanced undergraduate students and of interest to practicing physicians. Techniques of diagnosis and treatment are emphasized. As would be expected, radiologic diagnosis is covered fully and most of the illustrations are reproductions of roentgenograms. A total of 151 pages are devoted to pulmonary tuberculosis of these 84 are devoted to treatment. Bibliographies selected to emphasize recent literature, and papers containing extensive bibliographies are included in most of the chapters.

Jackson, Chevalier, and Chevalier L. Jackson

Bronchoesophagology. Philadelphia, W. B. Saunders Company, 1950. 366 p. illus. (part col'd) 26 cm. $13.00. 3643

Contents: Part I, Bronchology: Notes on the anatomy of the tracheobronchial tree and lungs. Instruments. Foreign bodies in the air and food passages. Direct laryngoscopy. Laryngoscopy for foreign body. Bronchoscopy. Bronchoscopy for foreign body. Tumors of the tracheobronchial tree. Obstructive laryngotracheal diseases. Obstructive conditions of the bronchial tree. Part II, Esophagology: Notes on the anatomy and physiology of the esophagus. Esophagoscopy. Esophagoscopy for foreign body. Diseases and abnormalities of the esophagus. Appendix. Bibliography. Index.

Note: A very compact presentation of current techniques and related basic information. The book is designed for use as a text and also for use as a reference manual of diagnosis and practice. Common problems such as the removal of safety pins are discussed in detail, and the descriptions are supplemented by an abundance of helpful illustrations. Most diseases are covered under the following headings: definition, incidence, etiology, pathology, symptoms, diagnosis, treatment and prognosis. References in the text are keyed to citations in the extensive bibliography.

Kraetzer, Arthur Furman

Procedure in examination of the lungs with especial reference to the diagnosis of tuberculosis. Third edition. Revised and with a preface by Jacob Segal. New York, Oxford University Press, 1947. 150 p. illus. 21 cm. (Oxford medical publications) $3.75. 3644

Contents: The normal sounds. The examination of the chest. Inspection. Palpation. The heart in relation to pulmonary examination. Percussion. Auscultation. Diminished intensity of breath-sounds. Broncho-vesicular and bronchial breath-sounds. Rales. The types of tuberculosis. Appendix. Auscultation. Bronchoscopy. Bronchography. Laboratory tests. X-ray commentary. Sample technique in differential diagnosis. Index.

Note: This book is known as a simple, well-organized textbook. Originally it dealt with the physical examination only, but some material on the use of the X-ray has now been added. In the opinion of the reviser of the present edition, the original text cannot be improved upon as a simple, basic introduction to physical examination of the lungs. Accordingly, he has not changed the original chapters, but instead has added to the appendix short statements on later techniques and other developments which the undergraduate student should learn. Among the additions are short discussions of "the wheeze," tuberculin tests, bronchoscopy and the interpretation of roentgenograms.

Medlar, E. M.

The behavior of pulmonary tuberculous lesions: a pathological study. New York, National Tuberculosis Association, 1955. 244 p. illus. (part col'd) 25 cm. (American review of tuberculosis and pulmonary diseases. Vol. 71 no 3 pt. II) $1.50. 3645

Contents: Statement of the problem. The experimental approach. Necropsy studies of human pulmonary tuberculosis. Preliminary discussion of resected specimens. Behavior of the parenchymal tuberculous lesion. A study of resected minimal tuberculosis. Bronchial lesions in tuberculosis. Tuberculosis and bronchiectasis. Bacteriologic observations. Re-examination of the problem. Postscript. Bibliography.

Note: The author, now Chief Pathologist, Division of Tuberculosis, New York State Department of Health, and formerly Director of the Hegeman Memorial Laboratory, devoted more than 25 years to studies of the pathology of tuberculosis, particularly pulmonary tuberculosis. The results of his researches are published in this work, which is a major contribution to the subject. Of the 134 figures in the volume, all but a few are microphotographs reproduced in color.

Mount Sinai Hospital, New York

Symposium: The management of tuberculosis. Editor: Irving J. Selikoff. Baltimore, Waverly Press Inc., 1956. 330–646 p. illus. 26 cm. (Mt. Sinai Hospital Journal, July/August 1956) 3646

Contents: Introduction, by I. J. Selikoff. The chemotherapy of tuberculosis, by I. J. Selikoff. The management of pulmonary tuberculosis, by I. J. Selikoff and C. R. Rubin. Pulmonary function in tuberculosis—medical and surgical considerations, by M. E. Bader and R. A. Bader. The treatment of tuberculous pleurisy with effusion, by C. R. Rubin and J. L. Werther. The treatment of tuberculosis in childhood, by G. J. Ginandes. Resectional therapy for pulmonary tuberculosis, by A. H. Aufses. Present status of collapse therapy in pulmonary tuberculosis, by G. P. Seley. Tuberculoma of the lung, by P. A. Kirschner. Tuberculous meningitis—general review and experience at the Mount Sinai Hospital, by M. Kushner. Renal tuberculosis, by A. Sporer and G. D. Oppenheimer. The chemotherapy of peripheral tuberculous lymphadenitis, by G. R. Friedman and I. J. Selikoff. Changing therapy in cutaneous tuberculosis, by A. W. Glick. The active management of pulmonary tuberculosis in pregnancy, by I. J. Selikoff and others. Genital tuberculosis in females, by A. M. Davids. Skeletal tuberculosis, by J. P. Katz. Bronchial tuberculosis [illegible] in diagnosis in the absence of florid pulmonary involvement, by S. Kagan and H. D. Janowitz. Management of tuberculosis of the larynx, by L. M. Arnold. Some remarks on diabetes and tuberculosis, by E. H. Jackson and H. Dolger. Relapse and rehabilitation in the era of antituberculosis drugs, by I. E. Hilbrook. Long term observation following isoniazid therapy—two case reports, by I. J. Selikoff.

Note: The symposium published in this volume reflects the changes brought about in recent years in the management of tuberculosis by the discovery of effective chemotherapeutic agents—changes that have brought the treatment of tuberculosis back into the province of general medicine. All of the papers are by members of the staff of the Mount Sinai Hospital in New York City, a large general hospital, and are based on clinical experience in this Hospital with the new chemotherapeutic agents and methods.

Myers, Jay Arthur

Tuberculosis among children and adults. Third edition. An introduction by Allen K. Krause. Springfield, Ill., Charles C Thomas, 1951. 894 p. illus. 24 cm. $13.50. 3647

Contents (abridged): Introduction to first and second editions, by A. K. Krause. Part I, Tuberculosis in infancy: Recent progress in tuberculosis and its practical application in diagnosis, treatment, and prevention. Incubation and immunity. Congenital tuberculosis. Results of exposure to tuberculosis. First infection type of tuberculosis in infants. Other forms of tuberculosis in infancy. Tuberculous meningitis, by C. A. Stewart. Part II, Tuberculosis in childhood: Diagnosis and treatment of first infection type of tuberculous lesions in the chest in childhood. Prognosis and prevention of first infection type tuberculosis in childhood. Other tuberculous lesions

management followed at the *Presbyterian Hospital in New York*—which is associated with this medical college—is fully described, while other medical and surgical therapies are described by authors associated with other medical colleges and hospitals. All of the chapters are written at the level of practice In other words, the book is not text for undergraduate students. Literature references are included in the chapters. The terminal chapter in which the present status of management of pulmonary emphysema is expertly summarized is valuable feature.

CHADWICK, HENRY DEXTER, AND ALTON S POPE

The modern attack on tuberculosis. Revised edition Cambridge, Mass. Harvard University Press, 1946 142 p. illus. 21 cm. $1 00 3637

Contents Tuberculosis yesterday and today Epidemiological aspects of the disease. Diagnostic procedures. The sanatorium as a means of control and treatment. Case finding in the community A community campaign of eradication. Bibliography Index.

Note A useful, concise handbook of proved techniques in combating tuberculosis. It is written from the public health viewpoint and provides, among other things, information on the organization of mass X-ray examinations and follow-up systems.

THE CHEST AND THE HEART Section I, The chest, edited by J Arthur Myers Section II, The heart, edited by C A McKinlay Springfield Ill. Charles C Thomas 1948 2 v illus (part col d) $25 50 3638

Contents (abridged) Section I, The chest Part I, Development, anatomy physiology and examination of the chest. Part II, The pleura, diaphragm, mediastinum, bronchi and chest injuries. Part III, Tumors of the chest. Part IV Non-tuberculous infections of the respiratory tract and allergy Part V Non-tuberculous pulmonary conditions, bronchoscopy and pulmonary surgery Part VI, Pulmonary mycoses. Part VII, Air contaminants. Part VIII, Tuberculosis. Section II, The heart Part I, The anatomy physiology and examination of the heart. Part II, Congenital heart disease, cor pulmonale and diseases of the great vessels. Part III, The heart in pregnancy functional cardiovascular disturbances and cardiac arrhythmias and the heart in thyroid disease. Part IV Infectious heart disease. Part V Hypertension and degenerative heart disease. Part VI, Prevention and treatment of heart disease. Appendix The pathogenesis of tuberculosis. Index.

Note Fifty-nine of this country's medical authorities have collaborated to prepare this comprehensive work on the diseases of the chest and the heart. Intended especially for the guidance of practicing physicians and for the use of students in this special field, each chapter provides concise review of modern knowledge regarding methods of examination, diagnosis, and treatment of the diseases and conditions discussed. Surgical techniques are also described and, where necessary detailed studies of embryology anatomy and physiology are included. Although some historical material is provided, the greater part of the book is based on the experience of the authors. Chapter bibliographies are included.

COMROE JULIUS H., JR , AND OTHERS

The lung clinical physiology and pulmonary function tests. (Based on the 1954 Beaumont lecture) By Julius H Comroe, Jr., Robert E Forster II, Arthur B Dubois William A. Briscoe, Elizabeth Carlsen. Chicago The Year Book Publishers Inc. 1955 219 p. illus. 24 cm $5.50 3639

Contents Part I, Introduction to pulmonary physiology Lung volumes. Pulmonary ventilation. The pulmonary circulation and ventilation/blood flow ratios Diffusion. Arterial oxygen, carbon dioxide and pH. Mechanics of breathing. Part II, Clinical applications of pulmonary function tests. Part III (Appendix) Useful data, equations, and calculations. Alveolar ventilation and pulmonary blood flow Alveolar-capillary diffusion. Mechanics of breathing. Selected references. Index.

Note Written by physiologists, this book is an exposition of pulmonary physiology for advanced students of medicine and medical graduates who are not specialists on the lung. The illustrations, of which there are 56 in the volume are a primary medium of the exposition. Most of them are reproductions of graphic diagrams, well conceived to convey such concepts as non-uniform ventilation uniform blood flow and lung compliance. The illustrations are complemented by compact but readable text. In the main body of the work there is no difficult mathematics, in fact, few figures outside the tables of data. Equations and typical calculations are, however explained in the appendix. The selected bibliography is classified in a way that enhances its usefulness for the intended audience.

DRINKER, CECIL KENT

Pulmonary edema and inflammation an analysis of processes involved in the formation and removal of pulmonary transudates and exudates. Cambridge, Mass. Harvard University Press, 1945 106 p illus. 22 cm. (Harvard University monographs in medicine and public health) $2.50 3640

Contents. The relation of lung structure to edema and inflammation. Physiological factors in pulmonary edema and inflammation. Breathing movements and pulmonary edema. Preventive and therapeutic measures in asphyxiating pulmonary disease. Artificial respiration

Note. The first four chapters, which comprise the major portion of this monograph, originated as series of lectures presented at the Bowman Gray School of Medicine in Winston-Salem, North Carolina. Based on the author's clinical experience and experimental work, they discuss the various anatomical and physiological factors which account for the formation of excessive fluid in the lungs, and methods which have been adopted for relieving this condition. The final chapter is a cogent examination of theories and methods of artificial respiration. In it the author stresses the importance of Hering-Breuer reflex mechanism, and also reviews briefly some of the mechanical respirators in use.

HAYES, EDWARD WILLIAM

Tuberculosis as it comes and goes, with chapters by Laurence de Rycke. Second edition Springfield, Ill Charles C Thomas, 1947 220 p illus. 23 cm $4.50 3641

Contents (abridged) History The tubercle bacillus. Theories of infection. Control of infection. Classification. Diagnosis. Treatment. Diet. Climate. Heliotherapy Mechanical therapy The use of drugs in treatment. Complications. Pulmonary hemorrhage. Pregnancy and tuberculosis. Prognosis. Rehabilitation. Suggestions to patients, by L. de Rycke. Suggestions to visitors, by L. de Rycke. Bibliography Index.

Note The purpose of this little volume is to provide the tubercular patient with general knowledge of the cause and nature of tuberculosis so that he may co-operate fully with the physician during his course of treatment. Physicians and tuberculosis workers will also find the volume a source of reliable information regarding the disease. The author writes from his experience both as physician specializing in tuberculosis and as former tubercular patient. In this edition, two new chapters have been added, which emphasize the need for the development of a favorable and then peaceful mental attitude.

HINSHAW, H CORWIN, AND L HENRY GARLAND

Diseases of the chest. 634 illustrations on 277 figures Philadelphia W B Saunders Company, 1956 727 p illus 27 cm. $15 00. 3642

Contents Diagnostic procedures—clinical history and evaluation of complaints—physical examination and bronchoscopy—laboratory studies—radiologic examination of the thorax. Segmental anatomy of the tracheobronchial tree and lungs Measurement of pulmonary function by R. H. L. Wilson. The bacterial pneumonias. Pneumonias of viral and rickettsial etiology—summary of nonlobar pneumonias. Pulmonary inflammation and fibrosis due to ... in pneumonia. Pulmonary abscess. Inflammatory, physical, chemical and obscure causes. Pulmonary abscess. Inflammatory and suppurative diseases of the bronchi. Postoperative pulmonary atelectasis. Foreign bodies in the larynx and tracheobronchial tree by W E. Heck. Thoracic injuries. Diseases of the diaphragm. Bronchial asthma and related conditions. Pulmonary

the specific diagnostic laboratory procedures used by the authors and their co-workers in the Department of Inhalational Therapy of Boston City Hospital are specifically described.

SINGER, JACOB JESSE
Differential diagnosis of chest diseases with 171 illustrations Philadelphia Lea & Febiger 1949 344 p. illus. 24 cm. $7.50. 3653

Contents (abridged) Diagnostic methods: Laboratory methods. Mechanical aids. Roentgenology. Thoracic cage. Deformities, fractures and inflammations of the thoracic cage. Tumors of the chest wall. Diseases of the pleura. Mediastinum. Diaphragm. Tracheobronchial tree and lungs: Anatomy and miscellaneous diseases. Bronchiectasis. Bronchopneumonia. Lobar pneumonia. Lipoid pneumonia. Virus (atypical) pneumonia. Pulmonary abscess. Pneumoconiosis. Pulmonary mycosis. Hodgkin's disease. Tuberculosis. Benign tumors of the lung. Cancer of the lung (carcinoma). Sarcoidosis. Index.

Note: A concise work designed primarily for the guidance of general practitioners of medicine. The main theme is accurate differential diagnosis based on information obtained from all applicable techniques. Roentgenology is included, but its value is not overemphasized. Generally speaking, each disease is discussed under the following heads: etiology, pathology, clinical symptoms, physical signs, Roentgen-ray findings, laboratory findings, and differential diagnosis. The presentation is concise, but a bibliography of selected books and periodicals is given for each disease.

SWEANY, HENRY CLARIS
Age morphology of primary tubercles. Springfield, Ill. Charles C Thomas 1941 265 p. illus. 24 cm. $6.00 3654

Contents: The relationship of morphology to age in primary tubercles. In patients whose the contact began and ended before seven years of age. In cases having an accurate history of contact at any time during life. Age characteristics of primary tubercles [illegible] calcified lesions, with special reference to those in the spleen. Practical application of the age-morphology principle. A group of [illegible]. The application of "morphology" criteria in determining the time of infection in a group of [illegible] cases. The use of the age-morphology system in placing the time of infection in groups of [illegible] and hospital attendants. Certain [illegible] in [illegible] tubercles. The age criteria of primary tubercles revealed by [illegible] study. General summary. Bibliography. Index.

Note: The author reviews the results of a close and meticulous study of "primary" tuberculous deposits lasting many years. The pathological material came from the Chicago Municipal Tuberculosis Sanitarium. It was thoroughly studied in the attached research laboratory and the data carefully correlated to the tuberculous history of the case. The author has taken a large view of the development processes and episodes of tuberculosis and has been able to present the evolution of the disease on a definite time scale. He finds remarkable agreement in the age characteristics of a large series (several hundred cases) of three or more groups and confidently describes the steady march of tubercle through all its phases. Radiologists, clinicians, and pathologists alike can appreciate and apply this work's clinical value. [illegible] reproductions of X-ray films and of microscopic sections are included.

UNGER, LEON
Bronchial asthma. Introduction by Morris Fishbein. Springfield, Ill. Charles C Thomas, 1945 724 p illus. (part col'd) 25 cm. $10.50. 3655

Contents (abridged) Part I. Clinical section: The language of allergy. The history of bronchial asthma. Etiology of bronchial asthma. Exciting factors. Pathology of bronchial asthma. Symptomatology of bronchial asthma. The diagnosis of bronchial asthma. Prevention of asthma in children of allergic parents. Specific treatment of bronchial asthma. Results of treatment of bronchial asthma. The military aspects of bronchial asthma and other allergic conditions. Part II. Laboratory section: Preparation of extracts. Technic of estimation of [illegible] of pollen and mold counts. Technic of [illegible]. Index. Part III. Appendices: Sources of allergens. Information and special instructions for patients. Instructions to avoid house dust. Instructions for making [illegible]. Elimination diets and food charts. Instructions for physical exercises for asthma. Oral hyposensitization to foods. Index.

Note: A comprehensive treatment in which etiology, diagnosis, and treatment are emphasized. The clinical section accounts for the bulk of the text. It introduces the reader to the terminology and history of the disease before entering upon the fundamental discussion of its etiology, exciting factors, pathology, symptomatology, diagnosis, and treatment. Particular stress is placed on the importance of specific diagnosis, including skin tests, and specific treatment. Every chapter is summarized and accompanied by bibliographical references. Most extensive are the bibliographies referring to nonspecific treatment of allergies, pathology of bronchial asthma, and inhalants. A special feature is a chapter on the military aspects of allergies, which includes a report on allergic factors in various countries. There are about 120 illustrations, numerous bibliographies, and much useful supplementary information such as the tabulation of sources of allergies.

VORWALD, ARTHUR J editor
Pneumoconiosis Beryllium bauxite fumes, compensation. Leroy U Gardner memorial volume. (Sixth Saranac symposium) Edited by Arthur J Vorwald with the collaboration of Manfred Bowditch, Thomas M. Durkan, and Theodore C. Waters. New York Paul B Hoeber Inc., Medical Book Department of Harper & Brothers 1950 659 p. illus. (part col'd) 24 cm. $7.50 3656

Contents: Part I. The beryllium problem: history, industrial aspects: History of the beryllium problem, by T. L. Shipman. Beryllium alloys, by A. J. Jackson. The manufacture of fluorescent lamps, by R. C. Boyer. Present and future uses of beryllium, by C. B. Sawyer. A common denominator, by C. K. Williams. Part II. The beryllium problem: the acute disease: Acute beryllium poisoning, by H. E. VanOrdstrand. Acute pneumonitis in beryllium workers with case histories, by J. DeNardi. Part III. The beryllium problem: the chronic or delayed disease: Clinical and epidemiological aspects, by H. L. Hardy. Roentgenologic aspects, by S. A. Wilson. Physiologic aspects, by G. W. Wright. Pathologic aspects, by A. J. Vorwald. Differential diagnosis, by J. C. Aub. The chronic disease in neon tube workers, by G. A. Snyder. Postmortem observations in cases in which the patients had been exposed to beryllium, by H. S. Martland. Part IV. The beryllium problem, toxicity studies in connection with atomic energy production: Introduction, by J. W. Howland. Biochemical studies of workers exposed to beryllium, by J. L. Kitchen and E. J. Katz. Pathology of acute experimental beryllium poisoning; changes resulting in animals killed from the intravenous administration of beryllium sulfate, by J. K. Scott. Preliminary data on rat feeding with beryllium, by E. A. Maynard and others. Certain aspects of the acute toxicity of beryllium injected intravenously, by H. C. Hodge and others. Preliminary studies in the toxicology of beryllium, the effect of intratracheal injection of beryllium in experimental animals, by C. W. LaBelle and M. R. Cucci. Initial studies of the toxicity of inhaled beryllium sulfate dust and beryllium metal fume, by G. F. Sprague and others. A review of analytical methods for beryllium, by W. F. Neuman. An analysis of dust and fume hazards in a beryllium plant, by E. Laskin and others. Summary of the beryllium problem in connection with atomic energy production, by J. W. Howland. Part V. The beryllium problem: experimental aspects: Animal methods, by A. J. Vorwald. Chemical methods, by T. M. Durkan. Spectroscopic methods, by A. Peresky. A further program, by W. Machle. Conclusion of seminar on the beryllium problem, by R. L. Vedova. Part VI. Shaver's disease: Clinical aspects of Shaver's disease, by A. R. Riddell. Chemical aspects of Shaver's disease, by C. M. Jephcott. Summary, by T. F. Hatch. Part VII. Compensation for occupational disease: Introduction, by T. C. Waters. The industrial medical practitioner's point of view, by L. C. McGee. Viewpoint of workmen's compensation administration as to occupational disease, by M. Durkan. The insurance viewpoint, by H. D. Sayer. The management viewpoint, by A. Fletcher. Medical adviser's point of view, by D. O'Hara. Synthesis of viewpoints, by T. C. Waters. Participants in the sixth Saranac symposium. General bibliography on beryllium. Index.

Note: In the 1940's two disease entities, one caused by the inhalation of dust containing beryllium and the other by fumes arising from bauxite furnaces, were first noted among industrial employees. This book, which contains the papers and discussion at a symposium in which representatives of medicine, chemistry, law, insurance, and labor participated, offers a comprehensive and authoritative exposition of present knowledge concerning the two pneumoconioses and of the medico-legal problems they raised. The bibliography records 414 items of pertinent literature concerning beryllium which appeared to 1950 and notes where they are abstracted.

in childhood. Chronic nontuberculous basal pulmonary diseases in childhood, by C. A. Stewart. Part III, Tuberculosis among young adults and other considerations First infection type of tuberculosis among young adults. Diagnosis of reinfection type of pulmonary tuberculosis among young adults. Treatment, prognosis and prevention of reinfection type of pulmonary tuberculosis among young adults. Dangers to children from tuberculosis among elderly persons. Part IV Recent progress in tuberculosis control: The diagnosis. Mass surveys and the detection of tuberculosis. Children and tuberculosis control. Control of tuberculosis among students. Tuberculosis and war Treatment of pulmonary tuberculosis by mechanical therapy by R. C. Matson and W B. Conklin. Cavernostomy in the treatment of pulmonary tuberculosis, by J D Steele. Extrapleural thoracoplasty in the treatment of pulmonary tuberculosis, by J R. Head. Resection in the treatment of pulmonary tuberculosis, by O. T Clagett. Effectiveness of tuberculosis control measures. Index.

Note. A standard treatise in which both clinical and public health aspects are covered. The author has been one of the most active American workers in the advancement of the control of tuberculosis, and he has incorporated in this book the gist of not only his own writings but of those of other authorities in the United States of America and abroad. The book is addressed to graduate medical practitioners and public health personnel rather than to undergraduate students. The second edition was published in 1938. Much material reflecting the great advances in the control of tuberculosis and its decline as a major disease among children and young adults has been added in this edition. The additions include the whole fourth part.

NATIONAL TUBERCULOSIS ASSOCIATION

Diagnostic standards and classification of tuberculosis 1955 edition. New York National Tuberculosis Association, 1955 79 p. illus. 23 cm Single copies gratis 3648

Contents Pathogenetic development of pulmonary tuberculosis. Clinical course of tuberculosis correlated with pathological concepts. Diagnosis of pulmonary tuberculosis. Classification of pulmonary tuberculosis. Diagnosis and classification of nonpulmonary tuberculosis. The tuberculin test. Laboratory procedures—demonstration of tubercle bacilli. Bacteriology as it relates to chemotherapy The isolation and identification of pathogenic fungi. Roentgenologic diagnosis. Screening classifications for mass chest-roentgenologic surveys.

Note A widely accepted authority on terminology classification, and laboratory diagnostic tests pertaining to pulmonary tuberculosis. In its preceding editions, it has been concerned primarily with pulmonary tuberculosis, and that is still the principal subject. However its scope has been expanded in this edition by the inclusion of a chapter on diagnosis and classification of non-pulmonary tuberculosis and another chapter on the isolation and identification of pathogenic fungi, particularly those that produce diseases that resemble tuberculosis.

PULLEN, ROSCOE L., editor

Pulmonary diseases 195 illustrations, 4 plates 1 in color Philadelphia Lea & Febiger 1955 669 p. illus. (part col'd) 24 cm. $15 00 3649

Contents: The physiologic basis of pulmonary disease, by F C. Macey Interacting mechanisms in the respiratory and circulatory systems, by R. F Rushmer An introductory consideration of respiratory infections, by R. L. Pullen. Bronchitis, by R. L. Pullen Bronchial obstruction, by C. L. Jackson and C. M. Norris. Bronchiectasis, by R. F Francis. Bronchial asthma, by V J Derbes. Benign tumors of the lung, by A. Lambert. Bronchiogenic carcinoma, by J. S. LaDue. Pulmonary infections—pneumonias, by C. S. Keefer and W L. Hewitt. Tuberculosis, by R. J Davies. Pulmonary mycoses, by J H. Seabury Animal parasitic infections of the lungs, by W A. Sodeman. Structural alterations of the lungs, by J L. Wilson and J K. Bradford. The pleura, by T M. Durant. The mediastinum, by T H. Burford and L. H. Bosher The diaphragm, by T H. Burford and J H. Mayer Injuries of the thorax and its contents, by T H. Burford. Index.

Note. Pulmonary diseases are presented from the clinical point of view in this volume. Reviews included for background of the basic physiology and anatomy are provided in the early chapters. Most of the chapters deal, as their titles indicate, with specific diseases. The average length of these chapters is nearly 40 pages, and the account given in each of the diseases or group of diseases covered is exceptionally full for a cyclopedic volume of this nature. Such aspects as incidence pathology etiology clinical manifestations, diagnosis, differential diagnosis, treatment (both medical and surgical where both are applicable) and prognosis are covered. In addition, there are extensive references to the literature. The book is of interest to graduate practitioners of medicine including surgeons, internes, and general practitioners.

REIMANN, HOBART A

Pneumonia. Springfield, Ill Charles C Thomas, 1954 236 p. illus 22 cm. (American lecture series. Publication no 160 A monograph in the Bannerstone division of American lectures in chest diseases edited by J Arthur Myers) $5 75 3650

Contents Pneumonia in general. Specific forms of pneumonia. Pneumonias as separate entities according to pneumococcus type. Complications. Prevention. Management of pneumonia. Other bacterial pneumonias. The viral pneumonias. Pneumonias of probable viral origin. Pneumonias caused by fungi. Diseases accompanied by specific pneumonias. Pneumonias in other systemic diseases. Pneumonias in protozoal infections. Pneumonia in metazoal diseases. Pneumonias caused by mixed infection secondary to acute and chronic diseases, shock, senility mechanical causes, etc. Special forms of secondary pneumonia. Pneumonias not caused by infection. Index.

Note A survey of the accumulated knowledge of the pneumonias, written by an eminent authority on the subject. It is based in part on his *The pneumonias* 1938 but contains much information developed since that work was written. Literature references are included.

RICH, ARNOLD RICE

The pathogenesis of tuberculosis. Second edition. Springfield, Ill Charles C Thomas, 1952 1,028 p. illus. 26 cm. $15 00 3651

Contents (abridged) The relation of the chemical constituents of the tubercle bacillus to pathogenesis. The different types of tubercle bacilli. The nature and effects of virulence. Native resistance—species and racial resistance—individual resistance—the influence of heredity—the influence of sex and age. The mechanism of native resistance. Hypersensitivity Desensitization. Acquired resistance. The mechanism of acquired resistance. Factors that influence resistance. The influence of the number of bacilli. The factors responsible for the characteristics of tuberculous lesions and symptoms. Exogenous or endogenous reinfection—is an arrested primary infection protective or deleterious? Application of the principles of pathogenesis, as illustrated by tuberculous lesions of the lungs, meninges and serous cavities. The decline in the mortality from tuberculosis, and the outlook for the future. Bibliography Author index. Subject index.

Note. A comprehensive presentation of the valid knowledge of tuberculosis with particular attention given to the mechanisms of infection, resistance to infection, and the arrest of infections. Essentially it is an expert critical survey of the literature, and references are carefully made from statements in the text to the bibliography The scope and much of the content of the work are unchanged in this edition. Nevertheless, the revision has been carefully done in order to include all of the significant results published in the literature since the writing of the first edition. The author is a member of the faculty of Johns Hopkins University School of Medicine and Pathologist in-Chief of the Johns Hopkins Hospital.

SEGAL, MAURICE S., AND M J DULFANO

Chronic pulmonary emphysema physiopathology and treatment. New York Grune & Stratton 1953 180 p illus. 22 cm. $5.50. 3652

Contents Introduction and classification. The development of chronic pulmonary emphysema. Pulmonary function tests in chronic pulmonary emphysema. Clinical concepts. The carbon dioxide intoxication syndrome. Symptomatic treatment. Therapeutic aerosols and the management of infection. The use of ACTH and cortisone. Oxygen therapy Mechanical respiration. Pneumoperitoneum therapy Breathing exercises. Appendix. Bibliography Index.

Note The various conditions classified as emphysema, both pulmonary and nonpulmonary are briefly described in the first chapter of this book. The whole of the remainder of the volume is devoted to chronic pulmonary emphysema. This condition is thoroughly covered in all the aspects of interest to the clinician. Clinical manifestations, tests of pulmonary function, psychosomatic aspects, and complications are described in detail About one-third of the volume is devoted to the chapters on treatment. In

conditions affecting the esophagus. Paralytic dysphagia. Functional disorders of swallowing. Part III, Gastroscopy: Anatomy, physiology and gastroscopic appearance of normal stomach. Technic. Indications, contraindications and complications. Gastritis. Gastric ulcer. Benign tumors. Carcinoma. Other malignant tumors involving the stomach. Specific infectious diseases. Miscellaneous conditions affecting the stomach. Part IV, Peritoneoscopy: History, technic and indications. Evaluation of the method and analysis of results. Endoscopic photography. Index.

Note: The fitting of endoscopic techniques into the whole picture of diagnosis and treatment is an outstanding feature of this authoritative work. The chapter on bronchogenic carcinoma—to take an example—is organized under the following subheadings: definition, occurrence, etiology, pathology, symptomatology, diagnosis, differential diagnosis, bronchoscopy, bronchoscopic determination of operability, exploratory thoracotomy, cytologic study, treatment, prognosis, and literature references. Endoscopic techniques are correlated with other diagnostic techniques, especially radiography. Discussions of case histories are included in most of the chapters. There are 131 illustrations in color and 137 in black and white. The author is Endoscopist of the Massachusetts General Hospital and a member of the faculty of Harvard Medical School.

Bockus, Henry L., and others

Gastro-enterology. Philadelphia, W. B. Saunders Company, 1943–46. 3 v. illus. (part col'd) 25 cm. Set of 3 v. and index vol., $45.00. 3663

Contents (abridged): Volume I, Esophagus and stomach: Examination. Esophagus and diaphragm. Affections of the stomach. Volume II, Small and large intestines and peritoneum, mesentery and omentum. Volume III, Diagnosis and treatment of disorders of the liver, gallbladder, biliary tract and pancreas—intestinal parasites and secondary gastro-intestinal disorders. The liver. Affections of the gallbladder and bile ducts. Affections of the pancreas. Gastro-intestinal parasites. Secondary affections of the gastro-intestinal tract and metabolism. General index.

Note: A treatise of primary importance and authority. It is primarily medical and does not include actual surgery. However, it discusses the surgical aspects of gastrointestinal diseases, giving indications for operative treatment and suggestions for operative procedures. Diagnosis is fully covered. Constitutional and other disorders affecting the function of the gastrointestinal tract are given extensive attention. A number of chapters were contributed by the author's colleagues at the University of Pennsylvania Graduate School of Medicine. The vast scope of the work is indicated by the fact that the General index runs to 197 pages of small type.

Boyce, Frederick F

Regional enteritis: diagnostic and therapeutic considerations. Philadelphia, J. B. Lippincott Company, 1955. 84 p. illus. 19 cm. $2.35 3664

Contents: Introduction. Present incidence. Etiologic considerations. Pathologic process. Anatomic distribution. Clinical and diagnostic considerations. Therapy. Recurrence. Regional enteritis in childhood. Summary. Bibliography. Bibliographic index. Subject index.

Note: A brief and useful summary of the accumulated knowledge on regional enteritis, also known as regional ileitis. It covers the history of the discovery of this disease, discusses various hypotheses as to its etiology, but gives most attention to diagnosis and therapy. A number of case histories are described. It was based on wide literature survey and includes a bibliography of 71 citations of literature published 1932–1953.

Cantor, Alfred Joseph

Ambulatory proctology. With a foreword by Beaumont S. Cornell. Second edition, revised. With 382 illustrations. New York, Paul B. Hoeber Inc., Medical Book Department of Harper & Brothers, 1952. 563 p. illus. 24 cm. $10.00 3665

Contents: Clinical anatomy. Diagnosis. Anesthesia, analgesia, hemostasis, sutures. Preoperative and postoperative management. Sclerosing and occlusive therapy. Surgery by electric current or thermal cutting unit. Pediatric proctology. Pruritus ani. Cryptitis and papillitis. Anorectal fistula. Perianal and perirectal abscesses and infections. Anal ulcer. Hemorrhoids. Prolapse and procidentia. Diarrhea—diagnostic methods and general therapy. Enterocolitis and colitis. Thrombosis colitis. Bacillary dysentery. Tuberculosis. Lymphogranuloma venereum. Venereal diseases. Intestinal parasites. Constipation. Melanosis coli. Diverticulosis and diverticulitis. Benign tumors. Multiple adenoma. Malignant neoplasms. Pilonidal dimple, sinus, cyst, and abscess. Coccygodynia. Rectal stricture and anal stenosis. Anal incontinence. Foreign bodies and rectal trauma. Index.

Note: By "ambulatory proctology" the author designates the diagnosis and treatment of diseases of the anus, rectum, and sigmoid bowel by techniques which do not confine the patient to bed. The text is divided about equally between conditions which can be treated by surgical methods in the doctor's office and conditions which can be treated medically. Also there is considerable material on conditions which can be diagnosed in the office, but require hospitalization for treatment. The book is addressed particularly to general practitioners of medicine. Two new chapters and other important additions have been made in this edition. Also recent literature has been added to the bibliographies and there are many new illustrations.

Cantor, Meyer O

Intestinal intubation. Springfield, Ill., Charles C Thomas, 1949. 333 p. illus. 24 cm. $7.50 3666

Contents: Introduction. The history of the invention and development of the gastro-intestinal tubes. Normal anatomy of the gastro-intestinal tract as related to intubation. Intestinal physiology as related to intestinal intubation. Distention in the gastro-intestinal tract. Intestinal decompression tubes in use today. Technic of intestinal intubation. Role of mercury in intestinal decompression tubes. Disorders of the small bowel requiring intubation. Intestinal intubation in lesions of the colon. Errors and safeguards in the use of intestinal decompression tubes. Nursing care of patient with intestinal intubation. Types of suction and methods of use. Responsibility of the surgeon in the use of intestinal intubation. The role of the roentgenologist in patients to be intubated. Intubation in infancy and childhood. Effect of intestinal gases upon balloons of intestinal decompression tubes, by E. R. Phelps and others. Effect of hydrogen sulphide gas upon the balloons of intestinal decompression tubes. References. Bibliography. Author index. Subject index.

Note: A comprehensive presentation of a major technique in the treatment of intestinal obstruction, written by the inventor of the Cantor tube. Most of the space is devoted to matters pertaining to the use of gastro-intestinal tubes, but the history and other background aspects are also fully covered. There are 147 illustrations and extensive bibliographies. The book is of interest to internists as well as to surgeons, roentgenologists, and specialists in gastroenterology.

Cheney, Garnett

Medical management of gastrointestinal disorders. Chicago, The Year Book Publishers Inc., 1950. 478 p. illus. 21 cm. $7.00 3667

Contents (abridged): Part I, The patient approach: Examination of the patient. Clinical laboratory procedures. Endoscopic and biopsy examinations. X-ray examination. Part II, Symptom diagnosis and treatment: Sore mouth and tongue. Loss of appetite. Dysphagia and substernal distress. Indigestion, belching of gas and heartburn. Nausea and vomiting. Hematemesis. Management of the peptic ulcer problem. Severe abdominal pain and colic. Management of liver disease. Management of gallbladder and bile duct disease. Lower abdominal distress and symptoms. Abdominal distention. Abdominal tumors. Constipation—mild and severe. The acute diarrheas. Loss of weight and undernutrition. The local x-ray problem. Index.

Note: Gastrointestinal disorders are discussed in this book from the viewpoint of general practitioners of medicine rather than specialists. Diagnosis and differential diagnosis are fully discussed. Somewhat less space is given to treatment, but the currently used medical treatments are adequately described. Considerable point is made of correlating a carefully taken history with the results of physical examination and laboratory tests, as well as with roentgenographic studies in appropriate cases. Indications for surgical therapy are described but surgical techniques are not covered.

Coller, Frederick A., and others

Indications for and results of splenectomy. By Frederick A. Coller, Alexander Blain III, and Gould Andrews. Springfield, Ill., Charles

The book is illustrated with 196 photographs and diagrams and five colored plates.

WASSON, WILLIAM WALTER

The auxiliary heart Springfield, Ill. Charles C Thomas, 1954 184 p illus (part col'd) 26 cm $10 50 3657

Contents. Anatomy of the lungs. Physiology of the lungs. Physiodynamics of the lungs. *Evaluation* of the Roentgen film. Diseases of the chest influencing the auxiliary heart. Diaphragmatic syndrome. Historical sketch, by M. W Stein. Addendum. *Additional bibliography Author index. Subject index.*

Note A book about the auxiliary heart f the lesser circulation in other words, the chest. It is based on a lifelong study by the author and on the literature. A wide range f information is presented very compactly with copious footnotes and literature references. A majority of the ?? figures are reproductions of roentgenograms. The book is of interest primarily to clinicians and surgeons and secondarily to physiologists.

WILLIS, HENRY STUART, AND MARTIN MARC CUMMINGS

Diagnostic and experimental methods in tuberculosis Second edition Springfield, Ill. Charles C Thomas, 1952 373 p illus. 24 cm $10 00 3658

Contents Part I, Laboratory diagnosis: Description of the secretions, excretions and constituents of the body in tuberculosis. The tubercle bacillus. Demonstration of the tubercle bacillus by staining methods. Demonstration of the tubercle bacillus by methods of concentration and cultivation. Culture media. Demonstration of the tubercle bacillus by inoculation of animals. The non-pathogenic acid-fast bacteria. Part II, Related clinical and laboratory methods. Protective vaccination. Antibacterial agents—methods of determining sensitivity The preparation and application of tuberculin. Serological diagnosis. *Part III, Some methods of value in the study of tuberculosis experimentally produced.* Inoculation of animals with the tubercle bacillus. Induced tuberculosis in animals. Methods of studying induced tuberculosis in animals. Histological technique. Bibliography Author index. Subject index.

Note About one-third of this work is devoted to descriptions of laboratory techniques which are useful in the diagnosis of tuberculosis, and the remaining two-thirds is devoted to related clinical and experimental methods. It is addressed to upperclass students in medical schools, to graduates in clinical medicine, to public health workers, and to beginners in medical research. Techniques are described in adequate detail for most purposes, and formulas are included for culture media, etc. Moreover the text is cross-referenced to the bibliography of 501 literature citations for the benefit f those workers who need fuller information on specific points. The first edition was published in 1928. The work was almost wholly rewritten for this edition in order to incorporate the great advances in this field in the past two decades.

GASTROENTEROLOGY

BACON, HARRY E , AND OTHERS

Proctology By Harry E Bacon Stuart T Ross and Porfirio Mayo Recio With 228 illustrations and 5 plates in full color Philadelphia J B Lippincott Company 1956 441 p illus. (part col'd) 24 cm $11 00 3659

Contents Anatomy and physiology History Examination Anesthesia. Preoperative and postoperative treatment Proctologic nursing Cryptitis and papillitis. Fissure in ano or anal ulcer Fistula. Proctocolitis or colitis. Diverticulosis and diverticulitis. Tuberculosis of anus, rectum and colon. Gonorrhea and syphilis of the anorectum. Granulomas of the anorectum and the colon Pruritus ani. Hemorrhoids. Inflammatory stricture of the rectum. Colostomy transverse colostomy cecostomy appendicostomy Benign tumors. Malignant tumors of the anus, rectum and colon. Tumors, cysts and sinuses of the sacrococcygeal area. Volvulus f the sigmoid colon. Malformations of the anus, the rectum and the colon. Stenosis of the anal canal. Incontinence Wounds, injuries and rupture of the rectum. Foreign bodies in the rectum. Intestinal parasites. Index.

Note A successor to the senior author's *Essentials of proctology*, 1941. It is directed to general practitioners of medicine and surgery rather than to specialists in proctology The discussion of anatomy and physiology in the first chapter is very brief. The second chapter deals briefly and practically with not the history of proctology but the taking of the history of the individual patient's illness or complaint by the physician. Techniques of diagnosis, anesthesia, treatment before and after operation, etc., are described succinctly but adequately Beginning with the seventh chapter, the book is devoted to specific diseases and disorders. The individual diseases are discussed in regard to incidence, etiology symptoms, diagnosis, differential diagnosis, complications and treatments. Both medical and physical therapies are covered, and the descriptions of surgical procedures are detailed and fully supplemented by illustrations.

BARBORKA, CLIFFORD J , AND E CLINTON TEXTER, JR

Peptic ulcer, diagnosis and treatment. With 33 illustrations Boston Little, Brown and Company, 1955 290 p. illus. 22 cm. $7 00 3660

Contents Introduction. Anatomy and physiology Etiology Pathogenesis. Symptomatology Diagnosis. Medical treatment. Dietary management. Anticholinergic drugs. Other therapeutic adjuncts. Prevention of recurrences and complications. Complications and their management. Surgical treatment. Gastric ulcer and the ulcer-cancer problem. Appendix. Index.

Note. A relatively short handbook directed primarily to general practitioners of medicine. Both of the authors are specialists in gastroenterology and have had extensive experience in the treatment of peptic ulcer I spite of its brevity the book is an adequate presentation of the information needed by the average medical practitioner in the diagnosis and treatment of this disorder Nonsurgical therapies, including dietary management and the anticholinergic drugs are discussed at some length. A brief review is included of current research on additional chemical agents in the treatment of peptic ulcer Literature references are included in all chapters, and there are 33 illustrations.

BARGEN, JACOB ARNOLD

Chronic ulcerative colitis (thrombo-ulcerative colitis) Springfield, Ill Charles C Thomas, 1951 62 p. illus. 22 cm (American lecture series Publication no 101 A monograph in American lectures on abdominal viscera, edited by Lester R Dragstedt.) $2 25 3661

Contents Introduction. Pathologic changes. Diagnosis. Complications. Treatment. Summary and conclusions. References

Note In this monograph on single intestinal disease, each phase of the disease from diagnosis through final treatment is carefully explained in terms f the author's general and clinical experience. The chapter on treatment includes medical and surgical therapies and includes three illustrations of skin-grafted ileostomy constructed according to Dragstedt's technique The author is member of the Mayo Clinic staff

BENEDICT EDWARD BENSON

Endoscopy as related to diseases of the bronchus esophagus stomach and peritoneal cavity Baltimore The Williams & Wilkins Company 1951 373 p illus. (part col'd) 24 cm. $10 00. 3662

Content (abridged) History of endoscopy *Part I*, Bronchoscopy Anatomy and physiology of the tracheobronchial tree Technic. Indications, contraindications and complications Bronchial obstruction Specific infectious diseases. Foreign bodies in the tracheobronchial tree. Bronchogenic carcinoma. *Metastatic malignant disease* of the bronchus. Tumors of the trachea. *Part II* Esophagoscopy Anatomy and physiology of the esophagus. Technic. Indications, contraindications and complications. Esophagitis. Hiatus hernia. Esophageal ulcer Benign stricture Lye stricture. Web Achalasia (cardiospasm). Diverticulum. Varices. Benign tumor Carcinoma Foreign bodies in the esophagus. Extrinsic pressure. Trauma. Bronchoesophageal and tracheoesophageal fistula. Specific infectious diseases. Miscellaneous

colonic motor patterns in man, by C. F Code and others. The action of autonomic drugs upon the human colon, by F Kern, Jr. and others. The roentgenological aspects of the normal and abnormal colon, by [illegible]. Panel discussion. Part II, Etiology of colonic disorders: Childhood experiences and colonic disorder, by [illegible]. Functional colitis and constipation, by [illegible]. Congenital and acquired colonic [illegible], by [illegible]. Life stress and chronic ulcerative colitis, by W. J Grace. Physiological and psychological factors in the production of constipation, by T. P Almy. Discussion of the papers. Panel discussion. Pharmacology of the abnormal colon: Introductory remarks on pharmacology of the abnormal colon, by M. Cattell. Pharmacology of stimulant laxatives, by J. Travell. Some factors in the design of laxative studies, by J. C. Reed and R. Harris. Quantitative comparison of colloidal laxatives, by M. L. Tainter and O. H. Buchanan. Clinical comparison of bulk and stimulant laxatives, by L. J. Cass and W. S. Frederik. Antispasmodic therapy for the hypermotive colon, by A. P Ingegno. Antibacterial and steroid therapy in ulcerative colitis, by R. J. Gray and K. W. [illegible]. Panel discussion. Part IV Therapeutic management of colonic disorders: The natural history of ulcerative colitis, by B. V White. The medical management of chronic idiopathic ulcerative colitis, by T. E. Machella. The treatment of chronic constipation, by F. J. Ingelfinger. Changes in the colonic function and use of laxatives in the aged, by [illegible] and L. J. [illegible]. The problem of constipation in the institutionalized patient, by R. C. Batterman. Psychologic aspects of constipation and diarrhea, by R. [illegible]. Panel discussion.

Note: Papers prepared for a conference held by the Section of Biology of the New York Academy of Sciences in May 1953 are published in this volume. They are listed above by author and title.

NESSELROD JERROLD PRESMAN

Proctology in general practice. Philadelphia W B Saunders Company 1950. 276 p. illus. (part col'd) 24 cm. $6.50. 3674

Contents: Anatomy and physiology. Diagnostic procedures. Anal infection. Hemorrhoidal disease. Anal fissure. Anal [illegible] and anal fistula. Complications of [illegible] inflammatory disease. Preoperative management. Postoperative care. Prolapse of the rectum. Anorectal malformations. Clinical proctoscopy. Neoplastic disease. Anal pruritus. Miscellaneous subjects. Index.

Note: A compact treatise in which the main emphasis is on diagnosis and on the surgical management of diseases that do not require abdominal surgery. There are 64 figures including two in color. A second edition was published in 1957 296 p. $7.00.

PORTIS SIDNEY A. editor

Diseases of the digestive system. Third edition, thoroughly revised. With 269 engravings and 5 color plates. Philadelphia Lea & Febiger 1953 1 119 p. illus. (part col'd) 26 cm. $20.00 3675

Contents (abridged): The anatomy of the gastrointestinal tract, by C. F De Garis. The physiology of the stomach, by H. Necheles. Physiology of the liver bile and gallbladder by A. C. Ivy. The physiology of the small and the large intestine, by J. P Quigley. Neurological aspects of gastrointestinal disease, by A. D. [illegible] and S. Cobb. Allergy of the gastrointestinal tract, by G. [illegible]. Dietetic concepts of gastrointestinal disease, by K. [illegible]. The relation of the teeth to gastrointestinal disease, by E. H. Hatton. Diseases of the esophagus, by P P Vinson. Gastritis, by R. Schindler. Peptic ulcer, by W L. Palmer. Cancer of the stomach, by S. M. Jordan and R. S. [illegible], jr. Benign tumors, by [illegible]. Syphilis of the stomach, by G. B. Eusterman. Treatment of diseases of the gallbladder and extrahepatic bile ducts, by J. E. Berk. Diseases of the liver by S. A. Portis. Diseases of the pancreas, by [illegible]. Diseases of the small intestine, by F. J. Ingelfinger. The problem of the vermiform appendix, by O. H. Wangensteen. Nonspecific or indeterminate ulcerative colitis, by M. Paulson. Bacillary dysentery, by J. Felsen. Protozoan infections of the intestine, by [illegible]. The metazoan parasites of the gastrointestinal tract, by E. C. Faust. Intestinal tuberculosis, by [illegible]. Effect of sulfonamides and antibiotics on the intestinal flora, by [illegible]. Diverticulosis and diverticulitis, by [illegible]. Gastrointestinal manifestations of arthritis, gout and diabetes, by [illegible]. Gastrointestinal manifestations of endocrine disorders, by [illegible] and W. E. [illegible]. The relation between the gastrointestinal and cardiovascular systems, by P. D. White. Pellagra, with special reference to the role of the digestive tract, by V. P. Sydenstricker. Index.

Note: There are 54 chapters, written by 57 authors, in this third edition of a standard textbook and reference work. The titles and names of the authors of some of them are given above. The chapters vary considerably in organization and length, but all are written from the clinical viewpoint, and most are based on extensive experience of the author's as well as on the literature. An unusual feature is the inclusion of short but valuable chapters on such specific topics as needle biopsy of the liver. Compared to the second edition, this third edition exhibits some reorganization and extensive revision and augmentation. There is somewhat more emphasis on the psychosomatic aspects of gastroenterology.

RETTGER, LEO FREDERICK, AND OTHERS

Lactobacillus acidophilus & its therapeutic application by Leo F Rettger Maurice N Levy Louis Weinstein and James E. Weiss. New Haven Yale University Press, 1935 203 p. illus. 21 cm $2 50 3676

Contents: *Lactobacillus bifidus* and its relation to *Lactobacillus acidophilus*. Oral and dental types of lactobacilli and their relation to Lactobacillus acidophilus. Influence of storage temperature, metals and metallic salts on the viability of acidophilus milk. Lactose feeding and acidophilus "implantation" experiments with albino rats and with normal human subjects. Acidophilus therapy and some of the factors governing its successful application. Therapeutic application of acidophilus milk in hospitalized cases. Therapeutic application of acidophilus milk in simple constipation. The therapeutic application of acidophilus milk in constipation accompanied by biliary symptoms. The therapeutic application of acidophilus milk in so-called "mucous colitis" or "irritable colon" and in idiopathic ulcerative colitis. Bacteriological and clinical follow-up work on successfully treated cases of simple constipation and of constipation accompanied by biliary symptoms. Theory of "implantation." General discussion and summary. Appendix: Brief description of media and methods. Bibliography

Note: This volume constitutes a series of reports on investigations conducted by the authors, four years preceding publication of the book. A number of the chapters include clinical studies.

SANDWEISS DAVID JACOB, editor

Peptic ulcer clinical aspects, diagnosis, management. Editorial committee A. H. Aaron and others. Philadelphia W B Saunders Company 1951 790 p. illus. 26 cm. o.p 3677

Contents (abridged): Section I, Anatomy and physiology of the upper gastro-intestinal tract: Embryology of the upper alimentary tract, by C. F De Garis. Physiology of the upper gastro-intestinal tract as it relates to peptic ulcer by J. E. Thomas and M. H. F Friedman. Regulation of gastric functions by cortical and subcortical centers, by R. F Rehfuss[illegible]. The mucous barrier in the stomach, by F Hollander. Gastric motility and gastric evacuation, with special reference to peptic ulcer by J P Quigley. The mechanism of pain in peptic ulcer, by G. W Pickering. Section II, Pathogenesis and etiology of peptic ulcer: A critical analysis of the various experimental (experimentally produced) ulcers (peptic) and their relationship to human ulcer by F C. Mann. The pathology of ulcerations in the upper alimentary tract of infants, by P Gruenwald. Heredity and peptic ulcer by [illegible]. Allergic factors, by A. F R. Andresen. Psychosomatic aspects of peptic ulcer by [illegible]. A critical analysis of current theories of the pathogenesis of peptic ulcer by M. I. Grossman. Section III, Diagnosis and differential diagnosis of uncomplicated gastroduodenal ulcer: Symptomatic and physical diagnosis of uncomplicated gastric and duodenal ulcer, by H. L. Bockus. Roentgenologic diagnosis of gastric ulcer, by [illegible]. Roentgenologic diagnosis of duodenal ulcer by [illegible]. Gastroscopic diagnosis of gastric ulcer by R. Schindler. Gastric analysis procedures and other laboratory aids, by T. E. Machella. Differential diagnosis between benign and malignant gastric ulcer, by W L. Palmer. Section IV Medical treatment of uncomplicated gastroduodenal ulcer: Physiologic principles underlying treatment, by D. J. Sandweiss. Medical treatment, by G. B. Eusterman and M. K. [illegible]. Dietary management of peptic ulcer by C. J. [illegible]. Drugs commonly used, and the mechanism of their action, by J. E. Berk. Continuous intragastric drip therapy for peptic ulcer, by A. Winkelstein. Radiation therapy in peptic ulcer by W E. Ricketts and W L. Palmer. The status of hormones in peptic ulcer therapy by D. J. Sandweiss. The role of psychotherapy by [illegible]. Section [illegible] Surgical treatment of gastroduodenal ulcer: History of the surgical treatment of gastroduodenal ulcer by [illegible] and [illegible] Marshall. Indications for operation, by C. M

C Thomas, 1950 100 p. illus 22 cm (American lecture series Publication no 86 A monograph in American lectures in surgery, edited by Michael E DeBakey and R. Glen Spurling) $2 50 3668

Contents (abridged) Clinical material used in study Essential thrombocytopenic purpura. The hemolytic anemias. Hereditary spherocytic anemia. Idiopathic acquired hemolytic anemia. Banti's syndrome. Cruveilhier Baumgarten disease. Splenic neutropenia and panhematopenia. Hypoplastic anemia. Hypersplenism with congestive splenomegaly and atypical reticuloendothelial hyperplasia. Felty's syndrome Disseminated lupus erythematosis with splenomegaly and leukopenia. Gaucher's disease. Cysts of the spleen. Splenomegaly of miscellaneous or unknown etiology Infectious mononucleosis with spontaneous splenic rupture. Technique of splenectomy Anesthesia. Accessory spleens. Pathologic features of the spleen Summary Bibliography

Note A study based on 132 splenectomies performed by the authors during the period 1934–1949 The cases are classified under the headings given above and the experience in each group is summarized. In addition, the authors present the current concepts of normal physiology of the spleen, the rationale for splenectomy the various disorders of the spleen etc. There are 16 illustrations and a selected bibliography

FRADKIN, WILLIAM ZEV

The diagnosis and treatment of diarrheal diseases New York Grune & Stratton, Inc., 1947 254 p illus. 23 cm $6 00 3669

Contents (abridged) General considerations: The diarrhea problem. Anatomic and physiologic considerations. Bacteriology and pathology Etiologic classification of diarrheal diseases. Diagnostic procedures. Complications of diarrheal diseases. General treatment and prevention of diarrheal diseases. Specific diarrheal diseases *Diarrhea caused by Protozoa. Diarrhea caused by bacteria. Diarrhea* caused by regional enteritis. Diarrhea caused by idiopathic or nonspecific chronic ulcerative colitis. Diarrhea caused by mechanical factors. Allergic diarrhea. Psychogenic diarrhea. Vitamin deficiency diarrheas. Diarrhea caused by intestinal worms. Glandular diarrheas. Diarrhea caused by metal poisoning, chemicals and deep X-ray therapy Diarrheas of infants and children. Index.

Note The author brings together here all of the important information availabl on diarrhea in its various forms, including the laboratory and clinical aspects, diagnostic problems, and the therapeutics involved. Photographs, photomicrographs, roentgenograms, and drawings supplement the text. Chapter bibliographies are provided for readers requiring further amplification. The work is written for the medical practitioners and students.

GRACE, WILLIAM JOSEPH, AND OTHERS

The human colon, an experimental study based on direct observation of four fistulous subjects. By William J Grace, Stewart Wolf and Harold G Wolff Foreword by Alan Gregg With 112 illustrations, 31 in full color New York Paul B Hoeber, Inc., Medical Book Department of Harper & Brothers, 1951 239 p illus (part col'd) 24 cm $7 50 3670

Contents Methods of study The role of the colon in bodily economy and common colonic disorders. Personalities and reactions of the four fistulous subjects. *Life situations, emotions, and colonic function. The effects* of common pharmacologic and physical agents on the colon. Variations in the concentration of lysozyme in colonic secretions and in feces. *Effect of vagotomy on colonic function.* Ulcerative colitis. General discussion. Résumé. Index.

Note. Access to four human subjects with "large segments of colon eventuated and permanently exposed on the abdominal wall" provided the opportunity for this study by four faculty members of Cornell University Medical College and New York Hospital in New York City The book *is primarily* contribution to psychosomatic medicine, for the authors' chief interest was in the effects of such experiences as anger satisfaction, fear and pain upon the colon. However as the chapter titles indicate, they also made studies of the effects of drugs and physical agents and of vagotomy The book is of primary interest to specialists in psychosomatic medicine gastroenterology and physiology

GRANET, EMIL

Manual of proctology Chicago The Year Book Publishers, Inc., 1954 346 p. illus. 21 cm $7 50 3671

Contents Anatomy Anorectal symptoms, examination, and diagnosis. Anesthesia. General therapy Pediatric proctology Pyogenic infections of the anorectum. Anal fissure. Hemorrhoids. Benign tumors. Malignant tumors. Ulcerative colitis. Specific infections of the anorectum. Pruritus ani. Proctalgias and anorectal dyscrasias. Prolapse. Diverticula of the colon. Pilonidal disease. Marchery Index.

Note: A useful, well-written manual addressed to general practitioners of medicine and designed as a guide in the diagnosis of anorectal disorders, and in their medical management, including the preoperative and postoperative management of patients whose conditions require surgery Diseases, such as hemorrhoids, which may be managed entirely by the general physician are discussed at length, and operative techniques are described. On the other hand, major operations are not described in detail. However, the management of patients with colostomies is discussed in some detail. The volume is *adequately* illustrated, and literature references are included.

LICHTMAN, S S

Diseases of the liver, gallbladder and bile ducts Third edition, thoroughly revised, with 220 illustrations and 3 color plates. Philadelphia Lea & Febiger, 1953 2 v illus. (part col'd) 24 cm. $22 00 per set. 3672

Contents Volume I. Part I, Diseases of the liver The structure of the liver Physiology of the liver The pathogenesis and pathology of jaundice. The symptoms and signs of liver disease Liver function tests and procedures—interpretation and results. Acute and subacute inflammatory diseases of the liver Acute, subacute and subchronic forms of infectious hepatitis. Acute and subacute liver necrosis. Volume II. Cirrhosis of the liver Hemolytic jaundice. New growths of the liver Echinococcus disease of the liver Liver abscess. The liver in hyperthyroidism. The liver in pregnancy Metabolic hepatomegalies. The liver in heart disease. Diseases of the blood vessels of the liver Specific infections of the liver. Hepatic disease and the hematopoietic apparatus. Differential diagnosis—general considerations. The treatment of liver disease. Part II, Diseases of the gallbladder and biliary passages Anatomic features. Physiology of the extrahepatic biliary tract. Diseases of the gallbladder Diseases of the extrahepatic bile ducts. Diagnostic procedures in extrahepatic biliary tract disease. The treatment of biliary tract disease. Index.

Note. A comprehensive work used both as a textbook in medical colleges and as a reference book for graduate general practitioners of medicine and specialists in gastroenterology For each disease attention is paid to etiological factors, pathogenesis, pathologic features, clinical features, treatment and prognosis. The general chapters in Volume I include one on the physiology of the liver which runs to 143 pages and one on liver function tests which is 110 pages long There is extensive citation of the literature. A number of the chapters have bibliographies containing several hundred citations. The second edition was published in 1949 and consisted of a single volume of 1 135 pages. Additional information and references to literature published since the second edition was written appear in many of the chapters of this third edition. The number of illustrations has been increased by 73 and the number of pages by 180, to a total of 1315 pages plus index.

MINER, ROY WALDO, editor

The colon its normal and abnormal physiology and therapeutics. Organizing chairman, M L Tainter conference chairman, Thomas P Almy consulting editor M L. Tainter New York New York Academy of Sciences, 1954 293–540 p. illus 22 cm (New York Academy of Sciences. Annals Vol 58, art. 4) $4.50 3673

Contents. Introduction to the colon—its normal and abnormal physiology and therapeutics, by T P Almy Part I, Physiology and pharmacology of the colon: Normal physiology of the colon of animals, by J P Quigley Autonomic and pharmacologic control of colonic activity by G. B. Karlin. Normal and some abnormal

SPELLBERG, MITCHELL A.

Diseases of the liver New York. Grune & Stratton, 1954 646 p. illus. (part col'd) 28 cm. $16.50 3682

Contents: Clinical laboratory tests as indices of hepatic function. The morphological approach to the diagnosis of liver disease. The differential diagnosis of jaundice. Neoplasms and cysts of the liver. The response of the liver to chemical agents (toxic hepatitis). The effect of infectious agents on the liver. [illegible] in liver disease. Anatomy of the liver and its vascular supply—diseases of the liver resulting from disturbances in the portal system. Cirrhosis. The role of the endocrine glands in diseases of the liver. Hepatorenal relationship. The liver in various diseases. Diseases of the liver associated with inborn errors of metabolism. Bibliography. Index.

Note: A distinguished treatise written from the viewpoint of clinical medicine. It covers both diseases of the liver and the effects upon the liver of diseases and disorders of other parts of the body. Diagnosis is emphasized, and much space is given to such diagnostic aids as clinical laboratory tests. Pathology, anatomy and diagnosis are covered not in separate chapters but in the chapters and sections on specific diseases. There are 93 figures. It is based extensively on the literature, including the author's own publications, and the bibliography includes approximately 2,500 references.

SPIESMAN, MANUEL GEORGE

Essentials of clinical proctology Foreword by Anthony Bassler New York Grune & Stratton, 1946 238 p. illus. (part col'd) 22 cm. 3683

Contents (abridged): Embryology and applied anatomy of the anorectum. Congenital malformations of the anorectum. Examination and instrumentation. Stool analysis. Preoperative and postoperative care. Treatment of complications. Anesthesia for anorectal operations. The rectum, the pecten band, pectenosis and pectenotomy. Hemorrhoids. Fissures of the anus, rectum, and sigmoid. Management of the anus, rectum, and rectosigmoid. Venereal diseases of the anorectum. Tuberculosis of the anus, rectum and colon. Constipation. Differential diagnosis of common anorectal conditions. Polyposis and diets in proctologic work.

Note: A very concise, practical manual that is suitable chiefly for general practitioners of medicine. There are 39 chapters in all, and the typical chapter defines and describes a specific disease, then discusses [illegible] incidence, etiology, pathology, symptoms, diagnosis, and treatment, including simple surgical procedures. A third edition was published in [illegible]

STERLING, JULIAN A.

The biliary tract with special reference to the common bile duct. Baltimore The Williams & Wilkins Company 1955 424 p. illus. (part col'd) 24 cm. $10.00. 3684

Contents: Introduction. Anatomy. Physiology. Pathology. Lesions of the pancreas. Clinical manifestations of bile duct disease. Laboratory observations. Radiology. Medical management. Anesthesia for biliary tract surgery by L. E. Frederick. Cholecystectomy. Surgical procedures concerning the common bile duct (including tumors). Surgical procedures for tumors of the biliary tract. Other procedures concerning the bile ducts. Postoperative period. Index.

Note: A concisely written, very comprehensive monograph on the basic anatomy, physiology and pathology as well as the clinical aspects of the biliary tract. Diseases of the pancreas and bile tree are thoroughly described, with some emphasis on diagnosis. Surgical techniques are discussed in the light of the author's extensive experience and the individual operations are described step by step. Selected bibliographies of considerable length are included in most of the chapters. There are 94 figures.

THOMAS, JACOB EARL

The external secretion of the pancreas. Springfield, Ill. Charles C Thomas, 1950 149 p. illus 22 cm. (American lecture series Robert F Pitts editor Publication no. 45) $3.50 3685

Contents: Morphology. Experimental methods. Pancreatic juice. The functions of the external secretion. Stimuli for the pancreas. Secretin and pancreozymin. The functional innervation of the pancreas. The mechanism of pancreatic secretion. Author index. Subject index.

Note: A condensed monograph in which is outlined the current knowledge of pancreatic secretion and the pancreatic juice. It is designed not only to inform general practitioners on matters of value in their practice but also to give them an insight into the basic physiologic knowledge and the experimental techniques by which it has been gained. Each chapter is illustrated with clear line illustrations and is followed by a list of references selected for historical significance, usefulness and availability. Some unpublished works have also been cited.

THOREK, PHILIP

Diseases of the esophagus. 102 Illustrations Drawings by Carl T Linden. Philadelphia J B Lippincott Company 1952 140 p illus. 26 cm. $10.00. 3686

Contents: Anatomy. Physiology. Examination and diagnosis. General surgical considerations. Congenital defects. Diverticula. Achalasia (cardiospasm). Esophageal hiatus hernia (diaphragmatic hernia). Esophageal varices (portal hypertension). Malignant tumors. Benign tumors. Miscellaneous lesions. Bibliography. Index.

Note: A guide to the diagnosis and treatment of diseases and deformities of the esophagus. Surgical procedures are emphasized, but the discussions of anatomy, physiology, methods of diagnosis, and variations in treatment are addressed primarily to the general practitioner. Excellent annotated drawings and an extensive bibliography are included.

TWISS, JOHN RUSSELL, AND ELLIOT OPPENHEIM

Practical management of disorders of the liver pancreas and biliary tract. With 136 illustrations and 7 plates 3 in color Philadelphia Lea & Febiger 1955 653 p. illus. (part col'd) 24 cm. $15.00 3687

Contents (abridged): Section I. General considerations: History and physical examination. Section II. Disorders of the gallbladder and extrahepatic biliary tract: Normal and pathologic physiology of the bile. Diagnostic procedures. Disorders affecting the filling and emptying mechanism of the gall bladder. Disorders in the concentrating function of the gallbladder. Biliary tract calculi. Tumors and strictures of the biliary tract. The typhoid carrier state. Section III. Disorders of the liver: Anatomy and physiology. Diagnostic procedures. Hepatitis—acute, subacute, and chronic. Cirrhosis of the liver. Liver cysts, tumors, infections and abscesses. Jaundice—pathogenesis, classification, and differential diagnosis. Metabolic diseases of the liver. Parasitic diseases of the liver, by F. J. Brady and W. H. Wright. Section IV. Disorders of the pancreas, by W. T. Berger: Diagnostic procedures. Acute diseases of the pancreas. Chronic diseases of the pancreas. Benign tumors of the pancreas. The malignant diseases of the pancreas. Section [illegible] Appendix—technical procedures: Cholecystography. Cholangiography—surgical. Needle biopsy of the liver by A. A. [illegible]. Serum enzyme tests. Intravenous cholangiography. Oral cholangiography. Index.

Note: An important book based in part on the literature and in part on the experience over a number of years of the staff of the Combined Medical and Surgical Biliary Tract Clinic of the former Post-graduate Hospital and the clinic of similar scope of present New York University Hospital. It is written from a practical clinical viewpoint. However, each of the major sections begins with a discussion of some length of the anatomy and physiology of the organs under discussion. Individual diseases are discussed under the customary sub-headings of incidence, pathology, etiology, diagnosis, etc. Medical treatments are described in full detail, but surgical treatments are not. In the case of the latter, the descriptions are generalized, although indications for surgery are clearly delineated. Throughout the volume the style is concise, and a wide range of information is presented. Each chapter contains a selected bibliography of some length.

WANGENSTEEN, OWEN H.

Intestinal obstructions physiological, pathological and clinical considerations with emphasis on therapy including description of

Jones. Criteria of an adequate and acceptable gastric resection for ulcer by O H. Wangensteen The rationale and technic of vagotomy by L. R. Dragstedt. Immediate preoperative and postoperative care of the ulcer patient—partial resection, subtotal gastrectomy gastroenterostomy by L. K. Ferguson. Immediate preoperative and postoperative care—vagotomy simple and combined, by G. Crile, Jr Present status of vagotomy by S. M. Jordan. Section VII, Peptic ulcer other than gastroduodenal ulcer: Esophageal ulcer by E. B Benedict. Gastroscopic diagnosis of gastrojejunal ulcers, by J F Renshaw Gastro-ileal ulcer by L. A. Smith and W Walters. Gastrojejunocolic fistula, by F H Lahey and C. E. Sedgwick. Peptic ulcer in Meckel's diverticulum, by J A. Bargen. Section VIII, Complications of gastroduodenal ulcer Gastro-intestinal hemorrhage, by L. Schiff and N Shapiro. Gastric retention by S. A. Wilkinson and E. W Hellerson. Electrolyte disturbances in peptic ulcer by J B. Kinsner Acute perforation of ulcer by R. Colp and L. J Druckerman. Index.

Note An authoritative work sponsored by the American Gastroenterological Association. It contains altogether 64 papers written by 77 eminent authorities, the majority of whom are members of faculties of medical colleges in the United States of America. The typical paper is a concise survey of the current status of the aspect of the field named in its title. Each paper is supplemented by a substantial list of references. The book is of interest to specialists in the field and also to general practitioners of medicine.

SCHIFF, LEON, editor

Diseases of the liver With a foreword by Cecil J Watson Philadelphia J B Lippincott Company, 1956 738 p illus (part col'd) 26 cm $18 00 3678

Contents Anatomic considerations, by A. M. Rappaport. Physiology of the liver by J L. Bollman. Biochemical considerations of the liver by D Seligson. Experimental hepatic injury by W S. Hartroft. Liver function tests, by N F Maclagan. Needle biopsy of the liver by L. Schiff and E. A. Gall. Jaundice, by L. Schiff Portal hypertension by R. R. Linton. Hepatic coma, by C. S. Davidson Pathology of hepatitis, by H. Sborov. Viral hepatitis, by J R. Neefe Toxic hepatitis, by G. Klatskin. Hepatitis associated with systemic infections, by G. Klatskin. Portal cirrhosis (Laennec's cirrhosis) by A. J Patek, Jr. Post necrotic cirrhosis, by A. J Patek, Jr Biliary cirrhosis, by H. G. Kunkel. Hemochromatosis, by T L. Althausen and V M. Sborov Hepato-lenticular degeneration by W B Matthews. The liver in circulatory failure, by S. Sherlock. Syphilis of the liver by F M. Hanger Tumors of the liver by E. A. Gall. Hepatic abscess, by M. E. De Bakey and O. Creech, Jr Liver diseases in infancy and childhood, by W W Zuelzer Parasitic diseases of the liver by E. Koppisch. Amyloidosis of the liver by M. H. Stauffer and D C. Dahlin Diseases of the gallbladder and extrahepatic bile ducts, by R. M. Zollinger and others. Index.

Note Essentially a reference book, this work contains the chapters whose authors and titles are given above A wide range of information on diseases of the liver together with background anatomy physiology etc is covered from the clinical viewpoint. Although composed of individual chapters that are essentially independent monographs, each with its own bibliography the book was planned as a whole, and the chapters were written specially for it. There is little repetition of information and the fully detailed subject index does justice to the contents of all of the chapters. There is, however no comprehensive index of the literature cited. Physicians and surgeons teaching in medical colleges of the United States of America predominate in the lists of contributors, but there are two contributors from England. There are 244 figures.

SCHINDLER, RUDOLF

Gastritis New York Grune & Stratton 1947 462 p illus. 23 cm. $10 00 3679

Contents Introduction History of gastritis. Definitions. Pathologic part Methods and material used. Classification of gastritis. The normal histology of the stomach. Histopathology Gross pathology Clinical part Acute simple exogenous gastritis. Acute corrosive gastritis. Acute hematogenous gastritis. Acute phlegmonous gastritis. The clinical picture of chronic idiopathic gastritis Gastritis of the postoperative stomach. Concomitant diseases and sequelae. Gastritis in military medicine. Summary of 55 selected cases. Bibliography Plates and illustrations. Indexes.

Note In this monograph the author who is Clinical Professor of Internal Medicine at the College of Medical Evangelists, Los Angeles, and a specialist in gastroenterology has reviewed and cited the pertinent literature, but has based his conclusions on his own experience which includes the examination of more than 3,500 cases of uncomplicated gastritis. He describes the histology and gross pathology of the stomach in various stages of inflammation and discusses symptoms, diagnosis, and methods of treatment not involving surgery As a further aid to practitioners and students he includes photomicrographs of normal and diseased stomach sections. The 17-page selected bibliography is keyed to the textual material.

SCHINDLER, RUDOLF

Gastroscopy, the endoscopic study of gastric pathology Second edition Chicago The University of Chicago Press, 1950. 433 24 p. illus (part col'd) 25 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $20 00 3680

Contents. History of gastroscopy. Anatomy of the pharynx, the esophagus, and the stomach. Technic of gastroscopy Orientation in the stomach. The gastroscopic picture of the normal stomach. The relationship between gastroscopy and X-ray examination. Disturbances in motility and secretion. Disturbances of circulation. Chronic gastroduodenal ulcer Gastritis. Gastric allergy Specific granulomata. Benign tumors. Malignant tumors. The postoperative stomach. *Alterations of the shape of the stomach. Foreign bodies.* Bibliography Index of names. General index.

Note The standard work on the gastroscope and the techniques which have been developed on the use of this instrument. The subject is treated comprehensively with an outline of the historical development, descriptions of the instrument and its optical principles, a full discussion of techniques including the use of other techniques, such as radiography in differential diagnosis. Related aspects such as the operability of carcinoma at various stages of development are covered also. The first edition in the English language was published in 1937 and it was the successor to the German edition published in 1923 For this edition, the 1937 edition was extensively rewritten, and many new or revised illustrations were added. The changes reflect the acceptance of gastroscopy as standard diagnostic technique. The total number of colored illustrations is 120, reproduced on 10 plates. There are now 166 black-and-white figures. The revised bibliography contains 1,015 citations. The author is Clinical Professor of Medicine at the College of Medical Evangelists.

SMITH, LUCIAN A , AND ANDREW B RIVERS

Peptic ulcer pain patterns, diagnosis and medical treatment. Foreword by George B. Eusterman New York Appleton-Century Crofts Inc., 1953 576 p illus. 25 cm. $12.50 3681

Contents History The anatomy of abdominal pain. Pathologic anatomy Physiology Etiology Clinical history and physical examination. Laboratory aids in the diagnosis of peptic ulcer Symptoms and diagnosis of esophageal ulcer *Symptoms and diagnosis of* gastric ulcer Symptoms and diagnosis of duodenal ulcer Ulcer associated with Meckel diverticulum. Postoperative peptic ulcer and other postoperative complications. Symptoms and diagnosis of gastrojejunal and gastroileal ulcer Hemorrhage—systemic manifestations and differential diagnosis. Obstruction—systemic manifestations and differential diagnosis. Acute free perforation of peptic ulcer—systemic manifestations and differential diagnosis. Subphrenic abscess. The endoscopic evaluation of ulcerating lesions in the stomach, by H. W Schmidt. Roentgenologic diagnosis, by C. A Good. Approach to the medical treatment of peptic ulcer. Treatment of gastric ulcer Treatment of uncomplicated duodenal ulcer Approach to treatment of intractable pain. Treatment of perforation of duodenal ulcer Treatment of pyloric obstruction. Treatment of hemorrhage. Appendix. Index.

Note. A thorough work on the diagnosis and nonsurgical treatment of peptic ulcer Much space is given to symptomatology The significance of sites of pain in relation to the site of the ulcer both simple and complicated cases is discussed at length and the discussions are supplemented by illustrations. Other aspects of diagnosis and differential diagnosis are discussed fully Causative factors in relation to treatment is another aspect given much attention. The techniques of surgical treatment are not covered, but it is made clear when surgical measures are indicated. Diet for gastric and duodenal ulcer and for obstruction gastric lesions are described explicitly in the appendix. Literature references are included in all chapters, and there are 208 figures. When the book was written all authors but one were associated with the Mayo Foundation and Mayo Clinic.

SPELLBERG MITCHELL A.

Diseases of the liver New York Grune & Stratton, 1954 646 p. illus. (part col'd) 28 cm. $16.50 3682

Contents Clinical laboratory tests as indices of hepatic function. The morphological approach to the diagnosis of liver diseases. The differential diagnosis of jaundice. Neoplasms and cysts of the liver. The response of the liver to chemical toxins (toxic hepatitis). The effect of infectious agents on the liver. Role of diet in liver disease. Anatomy of the liver and its vascular supply—Diseases of the liver resulting from disturbances in the portal venous. Cirrhosis. The role of the endocrine glands in diseases of the liver. Hepatorenal relationship. The liver in various diseases. Diseases of the liver associated with inborn errors of metabolism. Bibliography Index.

Note A distinguished treatise written from the viewpoint of clinical medicine. It covers both diseases of the liver and the effects upon the liver of diseases and disorders of other parts of the body. Diagnosis is emphasized, and much space is given to such diagnostic aids as clinical laboratory tests. Pathology, anatomy and diagnosis are covered not in separate chapters but in the chapters and sections on specific diseases. There are 93 figures. It is based extensively on the literature, including the author's own publications, and the bibliography contains approximately 2,400 references.

SPIESMAN MANUEL GEORGE

Essentials of clinical proctology Foreword by Anthony Bassler New York Grune & Stratton, 1946 238 p. illus. (part col'd) 22 cm. 3683

Contents (abridged) Embryology and applied anatomy of the anorectum. Congenital malformations of the anorectum. Examination and instrumentation. Stool analysis. Preoperative and postoperative care. Treatment of complications. Anesthesia for anorectal operations. The perineum, the pectinate band, pectenosis and pectenotomy. Hemorrhoids. Fissure of the anus, rectum, and sigmoid. Malignancies of the anus, rectum, and rectosigmoid. Venereal diseases of the anorectum. Tuberculosis of the anus, rectum and colon. Constipation. Differential diagnosis of common anorectal conditions. Ethics and fees in proctologic work.

Note A very concise, practical manual that is suitable chiefly for general practitioners of medicine. There are 39 chapters in all, and the typical chapter defines and describes a specific disease, then discusses briefly incidence, etiology, pathology, symptoms, diagnosis, and treatment, including simple surgical procedures. A third edition was published in 1957 316 p. $5.75.

STERLING JULIAN A.

The biliary tract with special reference to the common bile duct. Baltimore The Williams & Wilkins Company 1955 424 p. illus. (part col'd) 24 cm. $10.00. 3684

Contents Introduction. Anatomy Physiology Pathology Lesions of the pancreas. Clinical manifestations of bile duct disease. Laboratory observations. Radiology. Medical management. Anesthesia for biliary tract surgery by L. E. Fredericks. Choledochotomy Surgical procedures concerning the common bile duct (excluding tumors). Surgical procedures for tumors of the biliary tract. Other procedures concerning the bile ducts. Postoperative course. Index.

Note A concisely written, very comprehensive monograph on the basic anatomy, physiology and pathology as well as the clinical aspects of the biliary tract. Diseases of the pancreas and bile ducts are thoroughly described, with great emphasis on diagnosis. Surgical techniques are discussed in the light of the author's extensive experience and the individual operations are described step by step. Selected bibliographies of considerable length are included in most of the chapters. There are 94 figures.

THOMAS, JACOB EARL

The external secretion of the pancreas. Springfield, Ill. Charles C Thomas 1950 149 p. illus. 22 cm. (American lecture series Robert F Pitts editor Publication no. 45) $3.50 3685

Contents Morphology Experimental methods. Pancreatic juice. The functions of the external secretion. Stimuli for the pancreas. Secretin and pancreozymin. The functional innervation of the pancreas. The mechanism of pancreatic secretion. Author index. Subject index.

Note A condensed monograph in which is outlined the current knowledge of pancreatic secretion and the pancreatic juice. It is designed not only to inform general practitioners on matters of value in their practice but also to give them an insight into the basic physiologic knowledge and the experimental techniques by which it has been gained. Each chapter is illustrated with clear line illustrations and is followed by a list of references selected for historical significance, usefulness and availability. Some unpublished works have also been cited.

THOREK, PHILIP

Diseases of the esophagus. 102 illustrations Drawings by Carl T Linden. Philadelphia J B Lippincott Company 1952 140 p. illus. 26 cm. $10.00 3686

Contents Anatomy Physiology Examination and diagnosis. General surgical considerations. Congenital defects. Diverticula. Achalasia (cardiospasm). Esophageal hiatus hernia (Esophagogastric hernia). Esophageal varices (portal hypertension). Malignant tumors. Benign lesions. Miscellaneous lesions. Bibliography Index.

Note A guide to the diagnosis and treatment of diseases and deformities of the esophagus. Surgical procedures are emphasized but the discussions of anatomy, physiology, methods of diagnosis, and variations in treatment are addressed primarily to the general practitioner. Excellent anatomical drawings and an extensive bibliography are included.

TWISS JOHN RUSSELL, AND ELLIOT OPPENHEIM

Practical management of disorders of the liver pancreas and biliary tract. With 136 illustrations and 7 plates 3 in color Philadelphia Lea & Febiger 1955 653 p. illus. (part col'd) 24 cm. $15.00 3687

Contents (abridged) Section I, General considerations: History and physical examination. Section II, Disorders of the gallbladder and extrahepatic biliary tract. Normal and pathologic physiology of the bile. Diagnostic procedures. Disorders affecting the filling and emptying mechanisms of the gall bladder. Disorders in the concentrating function of the gallbladder. Biliary tract calculi. Tumors and strictures of the biliary tract. The typhoid carrier state. Section III, Disorders of the liver Anatomy and physiology Diagnostic procedures. Hepatitis—acute, subacute, and chronic. Cirrhosis of the liver. Liver cysts, tumors, abscesses and diseases. Stauffer and D C. Dahlin. Diseases of the gallbladder and extrahepatic bile ducts, by R. M. Zollinger and others. Index.

Note Essentially reference book, this work contains the chapters whose authors and titles are given above. A wide range of information on diseases of the liver together with background anatomy physiology etc., is covered from the clinical viewpoint. Although composed of individual chapters that are essentially independent monographs, each with its own bibliography the book was planned as whole, and the chapters were written specially for it There is little repetition of information, and the fully detailed subject index does justice to the contents of all of the chapters. There is, however no comprehensive index f the literature cited. Physicians and surgeons teaching in medical colleges of the United States f America predominate in the lists of contributors, but there are two contributors from England. There are 244 figures.

SCHINDLER RUDOLF

Gastritis New York Grune & Stratton, 1947 462 p illus 23 cm $10 00 3679

Contents Introduction History f gastritis. Definitions Pathologic part Methods and material used. Classification of gastritis. The normal histology of the stomach. Histopathology Gross pathology Clinical part Acute simple exogenous gastritis. Acute corrosive gastritis. Acute hematogenous gastritis. Acute phlegmonous gastritis. The clinical picture of chronic idiopathic gastritis. Gastritis of the postoperative stomach. Concomitant diseases and sequelae. Gastritis in military medicine. Summary of 55 selected cases. Bibliography Plates and illustrations. Indexes.

Note. In this monograph the author who is Clinical Professor of Internal Medicine at the College f Medical Evangelists, Los Angeles, and specialist in gastroenterology has reviewed and cited the pertinent literature but has based his conclusions on his own experience which includes the examination of more than 2,500 cases of uncomplicated gastritis. He describes the histology and gross pathology of the stomach in various stages of inflammation and discusses symptoms, diagnosis, and methods of treatment not involving surgery As a further aid to practitioners and students he includes photomicrographs of normal and diseased stomach sections. The 17-page selected bibliography is keyed to the textual material.

SCHINDLER, RUDOLF

Gastroscopy, the endoscopic study of gastric pathology Second edition. Chicago The University of Chicago Press, 1950 433, 24 p. illus (part col'd) 25 cm. (The University of Chicago Committee on Publications in Biology and Medicine) $20 00 3680

Contents History of gastroscopy Anatomy of the pharynx, the esophagus, and the stomach. Technic of gastroscopy Orientation in the stomach. The gastroscopic picture of the normal stomach. The relationship between gastroscopy and X-ray examination. Disturbances in motility and secretion. Disturbances of circulation. Chronic gastroduodenal ulcer Gastritis. Gastric allergy Specific granulomata. Benign tumors. Malignant tumors. The postoperative stomach. Alterations of the shape of the stomach. Foreign bodies. Bibliography. Index of names. General index.

Note The standard work on the gastroscope and the techniques which have been developed on the use of this instrument. The subject is treated comprehensively with an outline of the historical development, descriptions of the instrument and its optical principles, a full discussion of techniques including the use of other techniques, such as radiography in differential diagnosis. Related aspects such as the operability of carcinoma at various stages of development are covered also. The first edition in the English language was published in 1937 and it was the successor to the German edition published in 1923 For this edition, the 1937 edition was extensively rewritten and many new or revised illustrations were added. The changes reflect the acceptance of gastroscopy as a standard diagnostic technique. The total number of colored illustrations is 170 reproduced on 10 plates. There are now 366 black-and-white figures. The revised bibliography contains 1,015 citations. The author is Clinical Professor f Medicine at the College of Medical Evangelists.

SMITH, LUCIAN A, AND ANDREW B RIVERS

Peptic ulcer, pain patterns, diagnosis and medical treatment. Foreword by George B Eusterman New York Appleton-Century Crofts Inc, 1953 576 p illus. 25 cm. $12.50. 3681

Contents History The anatomy of abdominal pain. Pathologic anatomy Physiology Etiology Clinical history and physical examination. Laboratory aids in the diagnosis of peptic ulcer. Symptoms and diagnosis of esophageal ulcer Symptoms and diagnosis of gastric ulcer Symptoms and diagnosis of duodenal ulcer. Ulcer associated with Meckel's diverticulum. Postoperative peptic ulcer and other postoperative complications. Symptoms and diagnosis of gastrojejunal and gastroileal ulcer Hemorrhage—systemic manifestations and differential diagnosis. Obstruction—systemic manifestations and differential diagnosis. Acute free perforation of peptic ulcer—systemic manifestations and differential diagnosis. Subphrenic abscess. The endoscopic evaluation of ulcerating lesions in the stomach, by H. W Schmidt. Roentgenologic diagnosis, by C. A. Good. Approach to the medical treatment of peptic ulcer. Treatment of gastric ulcer Treatment of uncomplicated duodenal ulcer. Approach to treatment of intractable pain. Treatment of perforation of duodenal ulcer Treatment of pyloric obstruction. Treatment of hemorrhage. Appendix. Index.

Note A thorough work on the diagnosis and nonsurgical treatment of peptic ulcer Much space is given to symptomatology The significance of sites of pain in relation to the site of the ulcer in both simple and complicated cases is discussed at length and the discussions are supplemented by illustrations. Other aspects of diagnosis and differential diagnosis are discussed fully Consideration of factors in relation to treatment is another aspect given much attention. The techniques of surgical treatment are not covered, but it is made clear when surgical measures are indicated. Diet for gastric and duodenal ulcer and for obstructive gastric lesions are described explicitly in the appendix. Literature references are included in all chapters, and there are 208 figures. When the book was written, all authors but one were associated with the Mayo Foundation and Mayo Clinic.

operative procedures. Third edition. Springfield, Ill Charles C Thomas, 1955 838 p illus. 26 cm. $15 50 3688

Contents (abridged) Part I, Intestinal obstructions—physiological, pathological and clinical considerations with emphasis on therapy including description of operative procedures Effects of distension. Part II, General diagnostic considerations in the recognition of bowel obstruction. Part III, General therapeutic considerations in the management of bowel obstructions Guiding principles in the treatment of acute abdominal lesions. Adjuvant (indirect) measures in the treatment of bowel obstruction. Decompression by application of suction to duodenal tubes in obstruction. Operation in bowel obstructions. The closed aseptic resection. Postoperative treatment. Part IV The special obstructions Congenital atresia and stenosis of the intestine. Imperforate anus. Intestinal obstruction due to tumors and strictures of the bowel wall. Obturation obstruction. Congenital megacolon. Intestinal obstruction due to compression of the bowel. Intestinal obstruction due to adhesions and bands. Intestinal obstruction due to hernia. Volvulus. Intussusception. Inhibition ileus (paralytic) (adynamic obstruction) Spastic ileus (dynamic obstruction) Intestinal obstruction due to vascular causes, mesenteric thrombosis and embolism. Index of authors. Index of subjects.

Note An outstanding treatise written by one of America leading authorities on the management of intestinal obstruction. Diagnosis and therapy are emphasized, but physiology and pathology also are adequately covered. Results are incorporated from animal experimentation as well as from extensive experience with human patients. In its previous editions the book was a strong advocate of suction therapy In the present edition, much space is still devoted to the use of suction, but its proper role is carefully defined. On the matter of choice of therapy the author states. "Operation still is, and probably will continue to be, the chief mainstay of therapy in most forms of bowel obstruction. It is, however apparent that some cases need not be operated upon, particularly patients with partial simple obstruction of the small intestine. The classes of cases which demand urgent operation are (1) Instances of strangulating obstruction, and (2) acute obstruction of the colon with great distension. Both suction and surgical techniques are thoroughly discussed and specifically described. The first edition was published in 1937 and the second edition in 1942 Revision and augmentations made in preparing this third edition were very extensive and to use a phrase of the author's, the result is "a more mature book. The author is Professor of Surgery in the Medical School of the University of Minnesota, and much of the new information incorporated has resulted from a detailed study by Dr Grafton A. Smith and a team of fellows and internists f the University of Minnesota Hospitals of the experience with bowel obstruction cases. Literature published since the second edition was written has been added to the extensive chapter bibliographies. There are now 200 figures.

ENDOCRINOLOGY

ALBRIGHT, FULLER, AND EDWARD C REIFENSTEIN, JR.

The parathyroid glands and metabolic bone disease selected studies Baltimore The Williams & Wilkins Company 1948 393 p illus 23 cm $8 00 3689

Contents. The parathyroid glands—normal and pathologic physiology Clinical hypoparathyroidism. Clinical hyperparathyroidism. Mode of action of vitamin D and dihydrotachysterol. Metabolic bone disease—general considerations. Metabolic bone disease—osteoporosis. Metabolic bone disease—osteomalacia. Polyostotic fibrous dysplasia (osteitis fibrosa disseminata) Paget disease (osteitis deformans) Appendix Bibliography Author index. Subject index.

Note As yardstick for their selection of the studies summarized in this book, the authors hav used the experience which they accumulated during their 24 years' association with the Massachusetts General Hospital. The importance of the book lies mainly in its treatment of the subject from the viewpoint of differential diagnosis and its exhaustive documentation and discussion of the underlying hypotheses. Roentgenograms, photomicrographs, charts and diagrams, along with tables and case histories, form a substantial part of the evidence. There are 21 pages of bibliography and 34 pages of subject index. Information pertaining to test techniques is contained in the appendix.

AMERICAN DIABETES ASSOCIATION

Diabetes guide book for the physician. Second edition. New York American Diabetes Association, Inc., 1956 95 p. 16 cm. $1 00 3690

Contents (abridged): Part I, The clinical problem. Part II, Dietary regulation. Part III, Insulin. Part IV Complications. Part V Diabetes in children. Appendix.

Note. An authoritative manual designed as an aid to general practitioners of medicine in treating diabetic patients. It states very succinctly the essentials of diagnosis, objectives in treatment, management of diet, management of complications, etc. More space is given to dietary management and to diet than to any other topic. Nine standard diets designated as ADA diets are included, and there is much supplementary information on diets, all of it designed to aid the physician in working out diets for individual diabetic patients. The book was developed by committee of the American Diabetes Association, with the co-operation of the American Dietetic Association and the Diabetes Section of the United States Public Health Service.

AMERICAN MEDICAL ASSOCIATION COUNCIL ON PHARMACY AND CHEMISTRY

Glandular physiology and therapy Fifth edition, completely revised and rewritten. Philadelphia J B Lippincott, 1954 611 p. illus (part col'd) 26 cm. $10 00 3691

Contents. Integration of endocrinology by H. Selye and P J. Rosch. The adenohypophysis, by G. Sayers and R. W Brown. Hypophysis—posterior lobe, by C. W Lloyd and J Lobotsky The adrenal cortex, by E. H. Venning, and others. Adrenal medulla, by J R. Cook and R. W Schneider The ovary by J. W Jailer and E. T Engle. Physiology of menstruation and ovulation, by D Phelps. Pregnancy and lactation, by J E. Markee. The testes, by E. P McCullagh and C. A. Schaffenburg. The thyroid, by L. N Rosenberg and others. The parathyroid glands, by E. C Reifenstein, Jr and R. P Howard. The pancreas, by R. W Schneider The thymus, by A. Segaloff. Abnormalities of body weight, by W Q Wolfson. Endocrine management of neoplastic diseases, by L. T Nathanson. Abnormalities of sexual behavior, by R. B. Greenblatt. Therapeutic uses of cortisone and corticotropin (ACTH) in nonendocrine conditions, by F C. Bartter Behavior and intelligence, by W C. Young. Common misconceptions in endocrine therapy by J E. Howard. Diagnostic aids, by F H. Forsham. The chemistry of hormones, by R. R. Greenblatt. Modes of administration of hormones, by R. A. Shipley Index.

Note. A treatise of wide scope and indisputable authority A first edition was published in 1924 and the fourth edition in 1942. It contains the monographic chapters whose authors and titles are given above in place of the more numerous and shorter articles f the fourth edition. It is still directed to graduate physicians, particularly general practitioners of medicine and practitioners of specialties other than endocrinology The chapters vary in length and organization, but most of them cover anatomy physiology and treatment as well as other appropriate topics. All are based on extensive literature surveys and include long bibliographies.

BEARDWOOD, JOSEPH T , JR., AND HERBERT T KELLY

Simplified diabetic management. Sixth edition Philadelphia J B Lippincott Company 1954 194 p illus. (part col'd) 20 cm. $3.25 3692

Contents History and general consideration of diabetes. Dietary principles of treatment. Unit method charts. Adaptations of the unit system. Calculated recipes and commercially prepared foods. Treatment of juvenile diabetics and suggested menus. Treatment by insulin. Hypoglycemic reaction (insulin shock) Diabetic acidosis (coma) Complications of diabetes. Surgery in diabetes. Pregnancy in diabetes. Diabetic hygiene. Laboratory tests. Composition of foods—common household units. Index.

Note. A useful manual of elementary information. It is addressed primarily to diabetic patients and is designed to guide them in managing their diet and insulin administration, and to inform them generally about their disease. It is used also by practicing physicians as convenient source of data on food values in terms of common household units and other elementary information to be passed along to the patient. The authors are members of the

SPELLBERG, MITCHELL A.

Diseases of the liver New York Grune & Stratton, 1954 646 p. illus. (part col d) 28 cm. $16.50. 3682

Contents: Clinical laboratory tests as measures of hepatic function. The morphological approach to the diagnosis of liver disease. The differential diagnosis of jaundice. Neoplasms and cysts of the liver. The response of the liver to chemical toxins (toxic hepatitis). The effect of infectious agents on the liver. Role of diet in liver disease. Anatomy of the liver and its vascular supply—diseases of the liver resulting from disturbances in the major vessels. Cirrhosis. The role of the endocrine glands in diseases of the liver; hepato-renal relationship. The liver in various diseases. Diseases of the liver associated with inborn errors of metabolism. Bibliography. Index.

Note A distinguished treatise written from the standpoint of clinical medicine. It covers both diseases of the liver and the effects upon the liver of diseases and disorders of other parts of the body. Diagnosis is emphasized, and much space is given to such diagnostic aids as clinical laboratory tests. Pathology, anatomy and diagnosis are covered not in separate chapters but in the chapters and sections on specific diseases. There are 93 figures. It is based extensively on the literature, including the author's own publications, and the bibliography contains approximately 2,400 references.

SPIESMAN MANUEL GEORGE

Essentials of clinical proctology Foreword by Anthony Bassler New York Grune & Stratton 1946 238 p. illus. (part col d) 22 cm. 3683

Contents (abridged) Embryology and applied anatomy of the anorectum. Congenital malformations of the anorectum. Examination and instrumentation. Stool analysis. Preoperative and postoperative care. Treatment of complications. Anesthesia for anorectal operations. The rectum, the pectin band, pectenosis and pectenotomy. Hemorrhoids. Prolapse of the anus, rectum, and sigmoid. Malignancies of the anus, rectum, and rectosigmoid. Venereal diseases of the anorectum. Tuberculosis of the anus, rectum and colon. Constipation. Differential diagnosis of common anorectal conditions. Fistulas and abscesses in proctologic tract.

Note A very concise, practical manual that is suitable chiefly for general practitioners of medicine. There are 39 chapters in all, and the typical chapter defines and describes a specific disease, then discusses briefly incidence, etiology, pathology, symptoms, diagnosis, and treatment, including simple surgical procedures. A third edition was published in 1957 316 p. $8.75.

STERLING JULIAN A.

The biliary tract with special reference to the common bile duct. Baltimore The Williams & Wilkins Company 1955 424 p. illus. (part col d) 24 cm. $10.00 3684

Contents Introduction Anatomy Physiology Pathology Lesions of the pancreas Clinical manifestations of bile duct disease. Laboratory observations. Radiology. Medical management. Anesthesia for biliary tract surgery by L. S. Frederickson. Cholecystectomy. Surgical procedures concerning the common bile duct (excluding tumors). Surgical procedures for tumors of the biliary tract. Other procedures concerning the bile ducts. Postoperative status. Index.

Note A concisely written, very comprehensive monograph on the basic anatomy, physiology and pathology as well as the clinical aspects, of the biliary tract. Diseases of the pancreas and bile ducts are thoroughly described, with some emphasis on diagnosis. Surgical techniques are discussed in the light of the author's extensive experience, and the individual operations are described step by step. Selected bibliographies of considerable length are included in most of the chapters. There are 94 figures.

THOMAS JACOB EARL

The external secretion of the pancreas. Springfield Ill. Charles C Thomas, 1950. 149 p. illus. 22 cm. (American lecture series Robert F Pitts, editor Publication no 45) $3.50. 3685

Contents: Morphology. Experimental methods. Pancreatic juice. The functions of the external secretion. Stimuli for the pancreas. Secretin and pancreozymin. The functional innervation of the pancreas. The mechanism of pancreatic secretion. Author index. Subject index.

Note A condensed monograph in which is outlined the current knowledge of *pancreatic secretion and the pancreatic juice*. It is designed not only to inform general practitioners on matters of value in their practice but also to give them an insight into the basic physiologic knowledge and the experimental techniques by which it has been gained. Each chapter is illustrated with clear line illustrations and is followed by a list of references selected for historical significance, usefulness and availability. Some unpublished works have also been cited.

THOREK, PHILIP

Diseases of the esophagus. 102 illustrations. Drawings by Carl T Linden. Philadelphia J B Lippincott Company *1952* 140 p. illus. 26 cm. $10.00 3686

Contents: Anatomy Physiology Examination and diagnosis. General surgical considerations. Congenital defects. Diverticula. Achalasia *(cardiospasm)*. *Esophageal hiatus hernia (diaphragmatic hernia)* Esophageal varices (portal hypertension) Malignant tumors. Benign lesions. Miscellaneous lesions. Bibliography. Index.

Note: A guide to the diagnosis and treatment of diseases and deformities of the esophagus. Surgical procedures are emphasized; but the discussions of anatomy, physiology, methods of diagnosis, and variations in treatment are addressed primarily to the general practitioner. Excellent anatomical drawings and an extensive bibliography are included.

TWISS JOHN RUSSELL, AND ELLIOT OPPENHEIM

Practical management of disorders of the liver pancreas and biliary tract. With 136 illustrations and 7 plates 3 in color Philadelphia Lea & Febiger 1955 653 p illus. (part col d) 24 cm. $15.00 3687

Contents (abridged) Section I, General considerations: History and physical examination. Section II, Disorders of the gallbladder and extrahepatic biliary tract: Normal and pathologic physiology of the bile. Diagnostic procedures. Disorders affecting the filling and emptying mechanism of the gall bladder. Disorders in the concentrating function of the gallbladder. Biliary tract calculi. Tumors and strictures of the biliary tract. The typhoid carrier state. Section III, Disorders of the liver: Anatomy and physiology. Diagnostic procedures. Hepatitis—acute, subacute, and chronic. Cirrhosis of the liver. Liver cysts, tumors, strictures and abscesses. Jaundice—pathogenesis, classification, and differential diagnosis. Metabolic diseases of the liver. Parasitic diseases of the liver, by F. J. Brady and W. H. Wright. Section IV, Disorders of the pancreas, by W. V. Berger: Diagnostic procedures. Acute diseases of the pancreas. Chronic diseases of the pancreas. Benign tumors of the pancreas. The malignant diseases of the pancreas. Section, Appendix—technical procedures: Cholangiography. Cholangiography—operative. Needle biopsy of the liver by A. R. Hauck. Serum enzyme tests. Intravenous cholangiography. Oral cholangiography. Index.

Note An important book based in part on the literature and in part on the experience over a number of years of the staff of the Combined Medical and Surgical Biliary Tract Clinic of the former Post-graduate Hospital and the clinic of similar name of present New York University Hospital. It is written from a practical clinical viewpoint. However each of the major sections begins with a discussion of some length of the anatomy and physiology of the organs under discussion. Individual diseases are discussed under the customary sub-headings of incidence, pathology, etiology, diagnosis, etc. Medical treatments are described in full detail, but surgical treatments are not. In the case of the latter, the descriptions are generalized, although indications for surgery are clearly delineated. Throughout the volume the style is concise and wide range of information is presented. Each chapter contains a selected bibliography of some length.

WANGENSTEEN OWEN H.

Intestinal obstructions physiological, pathological and clinical considerations with emphasis on therapy including description of

operative procedures Third edition Springfield, Ill. Charles C Thomas, 1955 838 p illus 26 cm. $15 50 3688

Contents (abridged) Part I, Intestinal obstruction; physiological, pathological and clinical considerations with emphasis on therapy including description of operative procedures. Effects of distension. Part II, General diagnostic considerations in the recognition of bowel obstruction. Part III General therapeutic considerations in the management of bowel obstructions Guiding principles in the treatment of acute abdominal lesions. Adjuvant (indirect) measures in the treatment of bowel obstruction. Decompression by application of suction to duodenal tubes in obstruction. Operation in bowel obstructions. The closed aseptic resection. Postoperative treatment. Part IV The special obstructions Congenital atresia and stenosis of the intestine. Imperforate anus. Intestinal obstruction due to tumors and strictures of the bowel wall. Obturation obstruction. Congenital megacolon. Intestinal obstruction due to compression of the bowel. Intestinal obstruction due to adhesions and bands. Intestinal obstruction due to hernia. Volvulus. Intussusception. Inhibition ileus (paralytic) (adynamic obstruction) Spastic ileus (dynamic obstruction) Intestinal obstruction due to vascular causes, mesenteric thrombosis and embolism. Index of authors. Index of subjects.

Note An outstanding treatise written by one of America's leading authorities on the management of intestinal obstruction. Diagnosis and therapy are emphasized, but physiology and pathology also are adequately covered. Results are incorporated from animal experimentation as well as from extensive experience with human patients. In its previous editions the book was a strong advocate of suction therapy In the present edition, much space is still devoted to the use of suction but its proper role is carefully defined. On the matter of choice of therapy the author states "Operation still is, and probably will continue to be, the chief mainstay of therapy in most forms of bowel obstruction. It is, however apparent that some cases need not be operated upon, particularly patients with partial simple obstruction of the small intestine. The classes of cases which demand urgent operation are (1) Instances of strangulating obstruction, and (2) acute obstruction of the colon with great distension. Both suction and surgical techniques are thoroughly discussed and specifically described. The first edition was published in 1937 and the second edition in 1942 Revision and augmentations made in preparing this third edition were very extensive and to use a phrase of the author's, the result is "a more mature book. The author is Professor of Surgery in the Medical School of the University of Minnesota, and much of the *new information incorporated has resulted from a detailed study* by Dr Grafton A. Smith and a team of fellows and internists of the University of Minnesota Hospitals of the experience with bowel obstruction cases. Literature published since the second edition was written has been added to the extensive chapter bibliographies. There are now 200 figures.

BEARDWOOD, JOSEPH T, JR. AND HERBERT T KELLY

Simplified diabetic management. Sixth edition. Philadelphia J B Lippincott Company 1954 194 p illus. (part col'd) 20 cm. $3.25 3692

Content History and general consideration of diabetes. Dietary principles of treatment. Unit method charts. Adaptations of the unit system. Calculated recipes and commercially prepared foods. Treatment Treatment of juvenile diabetics and suggested menus. Treatment by insulin. Hypoglycemic reaction (insulin shock) Diabetic acidosis (coma) Complications of diabetes. Surgery in diabetes. Pregnancy in diabetes. Diabetic hygiene. Laboratory tests. Composition of foods—common household units. Index.

Note A useful manual of elementary information. It is addressed primarily to diabetic patients and is designed to guide them in managing their diet and insulin administration, and to inform them generally about their disease. It is used also by practicing physicians as convenient source of data on food values in terms of common household units and other elementary information to be passed along to the patient. The authors are members of the

JACKSON HENRY, JR. AND FREDERIC PARKER, JR.

Hodgkin's disease and allied disorders. New York. Oxford University Press, 1947 177 p. illus. 29 cm. (Oxford medical publications) $7.25. 3705

Contents: Hodgkin's disease. Reticulum-cell sarcoma. Lymphocytoma and lymphoblastoma. Lymphosarcoma. Giant-follicle lymphoma. Plasmocytoma. Endothelioma. Index.

Note: The brief monograph covers a group of pathologic conditions usually—and in the authors' opinion wrongly—denoted as "lymphomas." To avoid confusion, no general term has been used for the various diseases discussed in separate chapters, despite their obvious relationship. A new term, "Hodgkin's paragranuloma," was introduced to designate a condition which often precedes "Hodgkin's granuloma." The importance of differentiating between these two and the third type, "Hodgkin's sarcoma," is especially emphasized. Two-thirds of the book deals with *Hodgkin's disease*, the rest being devoted to brief discussion of the "allied diseases," as listed in the table of contents. Illustrative cases, selected bibliographical references, and a few microphotographs or X-ray pictures are given for each type of disease under consideration. In spite of the existence of an extensive literature on the subject, this new attempt to bring more light into the clinical picture, pathology and prognosis of the discussed conditions may be considered a valuable contribution.

JOSIAH MACY JR. FOUNDATION

Adrenal cortex. Transactions of the Fifth Conference, November 4 5 and 6 1953 Princeton, N J Edited by Elaine P Ralli. New York Sponsored by the Josiah Macy Jr Foundation, 1954 187 p. illus. 24 cm. $3.75. 3706

Contents: The salt and water factor of the adrenal cortex, by [illegible]. Group interchange. References. The metabolism of labeled steroids, by R. I. Dorfman. Group interchange. References. ACTH—a single substance or a mixture of hormones, by F. G. Young. Group interchange. References. Cumulative index.

Note: In this conference—as in other conferences sponsored by the Josiah Macy Jr. Foundation—there were no formal papers. Instead, the scientists whose names are given in the above contents began the discussions by reporting informally on their recent work. In the course of their reports, other participants in the conference asked questions and mentioned related work or results. These discussions are considerably more extensive than the reports upon which they were focused, and the transcripts of these constitute most of the volume. Participants in the conference represented various scientific disciplines, including medicine, physiology and biochemistry. Literature references cited in the usual pattern are included, and there is a full detailed subject index. The first conference on the adrenal cortex was held in 1949 and the others followed at yearly intervals. The 1953 conference was the final one on this subject.

JOSLIN ELLIOTT P

Diabetic manual for the doctor and patient. Ninth edition. Philadelphia Lea & Febiger 1953 315 p. illus. 21 cm. $3.00. 3707

Contents (abridged): The story of diabetes and insulin. Questions and answers for diabetic patients. Diabetic arithmetic. Hygiene for the diabetic. The diet of diabetic individuals. The treatment of diabetes. Acid intoxication—acidosis—diabetic coma. Care of the teeth. Gangrene—infections of the skin. Constipation and diarrhea. Surgery in diabetes. Expectation of life—prognosis. The prevention of diabetes. The marriage of diabetics. Dogs, diabetics and their friends. Diabetic children. Tuberculosis. Neuritis (neuropathy). Complications in the eyes. Selected laboratory tests useful in diabetic treatment. Foods and their composition. What can you do to help yourself and other diabetics and to conquer the disease. Index.

Note: One of the standard guides for diabetic patients. Living with diabetes is covered in detail from the viewpoint of affected individuals. Obesity, diet, exercise, administration of insulin, and tests of other kinds are discussed very specifically. The book is written in a [illegible] style, and the author does not hesitate to use asterisks to emphasize important points.

MEANS, J H

Lectures on the thyroid. Cambridge, Mass. Harvard University Press, 1954 113 p. illus. 22 cm. $3.00 3708

Contents. The integrated action of the endocrine system. The thyroid hormone—certain aspects of its elaboration in the body, the significance of its structure, and of its action on end organs. The use of hormones, drugs, and radiations in the management of thyroid diseases. Clues to the etiology of Graves's disease. The need for iodine. References. Index.

Note. Fifteen lectures by the founder and former head of the Thyroid Clinic of the Massachusetts General Hospital have been collected in this small book. They were delivered on various occasions from June, 1949 to April, 1953, and all of them have been previously published in journals. However the author revised four of them for publication in the book; hence, in these cases, the texts are not identical with those in the journals. All of them are written in a light style that is pleasant to read. Nevertheless, they present a considerable mass of information on hormones in general and the thyroid in particular. General practitioners of medicine and specialists in fields other than endocrinology who feel the need for more knowledge of the thyroid and associated hormones will find the book rewarding reading.

NEW YORK DIABETES ASSOCIATION

Newer concepts of the causes and treatment of diabetes mellitus proceedings of the symposium on diabetes sponsored by the New York Diabetes Association and held at Memorial Hospital and the New York Academy of Sciences, New York City October 8 1953 New York The National Vitamin Foundation Inc., 1954 181 p. illus. 23 cm. $2.50. 3709

Contents: The hereditary obese-hyperglycemic syndrome in the mouse, by J. Mayer. Lipogenesis in experimental diabetes, by S. Gurin. The endocrine regulation of carbohydrate metabolism, by C. N. H. Long. Some hormone interrelationships in experimental diabetes, by B. A. Houssay. The action of insulin, by W. C. Stadie. The hyperglycemic glycogenolytic factor of pancreas, by G. A. Wrenshall. Control of the complications of diabetes, by H. O. Mosenthal. Disturbances in the metabolism of vitamin B12 in diabetes and their significance, by B. F. Chow. Indications for the use of various insulins, by F. B. Peck. The management of diabetes during pregnancy, by D. Barnes. The effects of life situations and emotions upon the management of diabetes, by L. E. Hinkle, Jr. The management of surgical infections in diabetes with special reference to staphylococcus-streptococcus, by W. R. McCarty. The nutritional management of diabetes, by H. Pollack.

Note: The papers published in this volume are devoted largely to describing research still going on or concluded not long before the symposium was held in 1953. They afford insights into the nature of the problems being studied and some of the results. The papers are accompanied by transcripts of the discussions at the meeting and most of them include literature references. Applications to medical practice are discussed in some papers, in others they are only implied.

RIFKIN HAROLD, AND OTHERS

Diabetic glomerulosclerosis the specific renal disease of diabetes mellitus. By Harold Rifkin, Louis Leiter and James Berkman. Springfield, Ill. Charles C Thomas 1952 102 p. illus. 22 cm. (*American lecture series. Publication number 130. A monograph in American lectures in metabolism edited by Paul György and others*) $3.50 3710

Contents. *The clinical syndrome.* Pathology. Pathogenesis. Analysis of clinical data. Laboratory aids in diagnosis. Differential diagnosis. Treatment. Bibliography. Index.

Note. A short monograph based partly on studies made by the authors at Montefiore Hospital, New York City, and partly on the published studies of other clinicians. It covers a complication of diabetes mellitus on which relatively little has been published. The

selected though rather extensive bibliography of the international literature. In comparison to the preceding edition published in 1947 this edition exhibits considerable *rewriting and augmentation*. The chapter on porphyrin metabolism *is new* Several chapters have been thoroughly rewritten and expanded others have been condensed. The bibliographies have been completely overhauled.

ESCAMILLA, ROBERTO F

Laboratory aids in endocrine diagnosis. Springfield Ill Charles C Thomas, 1954 131 p illus (part col'd) 22 cm. (American lecture series *Publication no 212* A monograph in the Bannerstone division of American lectures in endocrinology, edited by Willard O Thompson) $4 75 3699

Contents Introduction. Information concerning endocrine diseases from the usual routine laboratory tests. Special tests of blood. Special tests of urine (excluding hormone assays) Basic metabolic rate, radioactive-iodine uptake, gastric analysis, electrocardiogram, blood pressure tests. Roentgen ray examinations. Urine hormone tests. Vaginal smear-cervical mucus. Endometrial biopsy Semen examination. Testes biopsy Endocrine disease index.

Note In this book, clinical laboratory tests in use in the University of California Hospital Medical School are described, primarily from the standpoint of their usefulness in the clinical diagnosis of endocrine diseases. Methods are described in specific detail, but the book is not addressed to laboratory technicians. Its value lies primarily in its critical discussions of the individual tests as to their difficulty reliability and factors to be considered in interpreting results. The author emphasizes the fact that laboratory tests should not be given too much weight in diagnosis in endocrinology

FARQUHARSON, RAY FLETCHER

Simmonds' disease extreme insufficiency of the adenohypophysis Springfield, Ill. Charles C Thomas, 1950 93 p. illus 22 cm (American lecture series Publication no. 34 A monograph in American lectures in endocrinology edited by Willard O Thompson) $2 00 3700

Contents. Initial recognition. Pathogenesis and pathology The clinical picture. Summary and conclusion. Bibliography Index.

Note A presentation of "the pathological and clinical picture of the syndrome of extreme insufficiency of the adenohypophysis. It is based on reports of cases in the published literature which contain adequate descriptions of the clinical and pathological features including the findings in autopsies.

GARGILL, SAMUEL L, AND MARK FALCON LESSES

Diseases of the thyroid gland New York Oxford University Press, 1955 [498] p illus. 24 cm $12 00 3701

Contents Part I, Anatomy biochemistry and physiology of the thyroid. Part II, The interrelations of the thyroid with the other endocrine glands. Part III, Antithyroid goitrogens. Part IV The metabolism *of iodine and its relation* to the structure and function of the thyroid. Part Classification *of* diseases of the thyroid methods of examination of patients with thyroid disease. Part VI, Non-toxic goiter Part VII, Toxic goiter Part III, Myxedema, juvenile hypothyroidism, and cretinism. Part IX, Thyroiditis. Part X, Benign and malignant neoplasms of the thyroid. Index.

Note: Although reprinted from larger work *The Oxford loose-leaf medicine*, this book is full-length monograph based on the literature and on the author's extensive clinical experience in the Endocrine Clinic of the Beth Israel Hospital in Boston. Approximately one-third of the volume is devoted to the basic anatomy and physiology The remainder *of the space is devoted* to descriptions of specific diseases. These are covered from the clinical standpoint and are described as to distribution, incidence etiology pathology symptoms and signs, clinical course diagnosis, and treatment. Medical and radiation therapies are *fully* described, but the details of surgical techniques are not included. Each of the parts includes a bibliography

GORDAN, GILBERT S, AND H. LISSER

Endocrinology in clinical practice. Chicago Year Book Publishers, 1953 407 p. illus (part col'd) 23 cm. $10 50 *3702*

Contents (abridged) General principles, by H. Lisser and others. The thyroid gland, by H. Lisser and others. The parathyroid glands, calcium metabolism, and metabolic bone diseases, by G. S. Gordan and others. *The pituitary gland, by H. Lisser and others.* The adrenals, by P H. Forsham and others. Carbohydrate metabolism, by H. T Moffitt and others. Obesity and leanness, by R. F Escamilla. The gonads, by H. Lisser and others. Infertility by E. *W Page and D R. Smith.* Endocrine therapy in neoplastic diseases, by G. S. Gordan Appendix Useful endocrine preparations, trade names and doses, by G. S. Gordan and others. Index.

Note. This book is based in considerable part on a series of *lectures presented in 1952 in postgraduate course under the* auspices of the University of California School of Medicine. Although many of the 30 contributors are specialists in endocrinology, it is specifically addressed to general practitioners. *Diagnosis and medical therapy are emphasized. Selected literature references are* included.

GREENBLATT, ROBERT BENJAMIN

Office endocrinology Fourth edition. With a foreword by G Lombard Kelly Springfield, Ill. Charles C Thomas, 1952 561 p. illus (part col'd) 24 cm. $10 50 3703

Contents (abridged) Section one General endocrinology: Part I, The pituitary Part II, The thyroid and parathyroids. *Part III,* The adrenals. Part IV Miscellaneous—endocrine headaches. Acne. Obesity and leanness. Section II, Female endocrinology: *Part I,* Disorders of menstruation. Part II, *Sterility* and allied disorders. Part III, Disorders in the sexual sphere. Part IV Miscellaneous—Nausea and vomiting of endocrine origin. *Disorders of micturition* due to endocrine imbalance. Section III, *Hormonology: Chemistry of steroid* hormones. Estrogens. Androgens. Adrenal cortical hormones. Pellet implantation Section IV *Diagnostic procedures:* The vaginal smear. The correlation of basal temperature and ovarian activity Laboratory procedures. Tests for pregnancy and their practical application. Section V Male endocrinology: *Hypogonadism. Male sterility* and impotence. Testicular *biopsy* by W O Nelson. Estrogen therapy in the male. Index.

Note A standard treatment which is primarily designed for office use by physicians who are not specialists in endocrinology but who do require in their regular practice knowledge of the common manifestations of endocrinological malfunction. *Each of the 65* chapters is a concise discussion of specific disorder or of diagnostic or therapeutic technique. *Diagnostic* techniques and therapies which are available to the general physician, who must work with limited laboratory facilities, are described explicitly Literature references are included, some of which are to articles on more specialized techniques. In the present edition approximately one-third of the chapters are new and other chapters which have been carried over have been extensively *rewritten.* There are many new illustrations, and the literature references have been extended.

HAUGAARD NIELS AND JULIAN E MARSH

The action of insulin. Springfield Ill. Charles C Thomas 1953 *113 p. illus. 22 cm.* (American lecture series Publication 194 A monograph in the American lecture series in endocrinology Edited by W O *Thompson)* $3 75 *3704*

Contents Introduction, by W Stadie. Essentials of intermediary metabolism. The chemistry of insulin. The physiology of insulin action. Experimental diabetes. Diabetic metabolism. The relationship of anterior pituitary and adrenal cortical factors to the action of insulin. *Some clinical aspects* of the action of insulin. The mechanism of action of insulin. Index.

Note The results of an extensive series of studies carried out to throw light on the action of insulin in the biochemistry of the body are synthesized and presented in the monograph. A considerable part of the research was done by the authors and their associates at the School of Medicine of the University of Pennsylvania. However the published results of other workers have been incorporated also. The book is of interest to biochemists, specialists in the treatment of diabetes and medical researchers, among others. Literature references are included in the chapters.

are described in passing. Specifically the problem posed was: "How does the thyroid safeguard hormone manufacture despite great difficulties in obtaining adequate amounts of the necessary raw material, iodine?" The techniques used and the results obtained are fully described. In addition, there is a brief discussion of physiological problems still unsolved. The chapters include selected bibliographies.

WARREN SHIELDS AND PHILIP M. LECOMPTE

The pathology of diabetes mellitus. Third edition, thoroughly revised. 112 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1952 336 p. illus. (part col'd) 24 cm. $7.50. 3716

Contents (abridged) Diabetes mellitus and the pancreas. Lesions of the pancreas in nondiabetic individuals. Pathological evidences of abnormal carbohydrate metabolism. Pathological evidences of abnormal fat metabolism. The pathology of acidosis and coma. Diabetes and infection. Vascular disease in diabetes. Gangrene. The heart. The kidney. The eye. The nervous system. The pituitary. The adrenal glands. Other endocrine glands. The pathology of diabetes in children. Hemochromatosis. The pathology of insulin-resistant cases. Hyperinsulinism and the pathological effects of insulin. Infants of diabetic mothers. Cancer and diabetes. Experimental diabetes. The etiology and pathogenesis of diabetes. A unifying concept of the pathology of diabetes. Appendices. Index.

Note: The current knowledge of the pathology of diabetes mellitus is presented very compactly in this work. The historical development of the insular hypothesis of the etiology of the disease is outlined in the seven pages of the first chapter, but the outline is supplemented by 70 literature citations. This combination of brief text keyed to a large number of literature citations is typical. There is considerable emphasis on the experimental and clinical evidence which underlies the current knowledge. Controversial issues and aspects which require further investigation are discussed. The second edition was published in 1944 and ran to 244 pages. Much material was added, and the discussions of numerous topics were revised in preparing this edition. Recent literature was added to the bibliographies.

WERNER, SIDNEY C editor

The thyroid a fundamental and clinical text. With sixty contributors. New York Paul B Hoeber Inc. Medical Book Department of Harper & Brothers, 1955 789 p. illus. 24 cm. $20.00. 3717

Contents (abridged) Part I, The normal thyroid: Section I, Physiology of the thyroid. Section II, Thyrotropic secretion of the anterior pituitary; effects of stimuli and of stress. Section III, Biochemistry of the thyroid hormones, comparative and microscopic anatomy of the thyroid. Part II, Laboratory methods. Section I, Basal metabolism, serum precipitable iodine, serum cholesterol. Section II, Radioiodine, miscellaneous tests. Part III, Diseases of the thyroid. Section I, Embryologic development, surgical anatomy, physical examination; pathology. Section II, Nontoxic goiter and thyroid cancer. Section III, Hyperthyroidism. Section IV, Hypothyroidism. Section V, Thyroiditis. Index.

Note: An authoritative, comprehensive work. It is organized in three parts, ten sections, and 43 chapters, of which only the section titles are given in the above contents. The authorship of each chapter is given in the book. The contributors are all eminent surgeons, pharmacologists, internists, biochemists, etc. Although the greater part of the space is devoted to diseases of the thyroid, there is due emphasis on the basic physiology and biochemistry. Treatment is covered fully with information included on surgical, radiation, and medical therapies. Literature references are included in all chapters, and in some they are very extensive.

WILLIAMS ROBERT H. editor

Textbook of endocrinology. Second edition. Illustrated. Philadelphia W B Saunders Company 1955 776 p. illus. (part col'd) 24 cm. $13.00. 3718

Contents: General principles of the physiology of the endocrines, by R. H. Williams. The pituitary, by R. H. Williams. The thyroid, by R. H. Williams. The adrenals, by P. H. Forsham and G. W. Thorn. The testes, by J. E. Howard and W. W. Scott. The ovaries, by G. V. Smith. The pancreas, by P. H. Forsham and G. W. Thorn. Diseases of the parathyroid glands, by E. C. Reifenstein, Jr. The influence of the endocrine glands upon growth and development, by L. Wilkins. Neuroendocrinology, by H. R. Friedgood. Obesity, by W. H. Daughaday. Laboratory diagnostic and assay procedures, by R. H. Williams and others. Diagnosis and treatment of endocrinopathies: hormone preparations, by R. H. Williams. Index.

Note: A standard textbook used in undergraduate courses in medical schools. Each of the chapters is, in effect, a condensed monograph of the specific facet of endocrinology which is named in its title. Background information in anatomy, physiology and chemistry is included, but the emphasis is on the clinical aspects, particularly diagnosis, treatment and prognosis. Some of the authors have included very specific information, such as dosages and sample diets. These features and others, including extensive literature lists, make the book useful in the office libraries of graduate practitioners. The first edition was published in 1950. In this second edition, the terminal chapter is new; several other chapters have been completely rewritten, and still others have been revised in part. Literature published since the first edition was written has been added to the bibliographies.

YEAR BOOK OF ENDOCRINOLOGY

The Year Book of endocrinology (1955–1956 Year Book series) Edited by Gilbert S. Gordan. Chicago The Year Book Publishers, Inc., 1956 367 p. illus. 20 cm $6.00 3719

Contents: Introduction. The pituitary gland. The thyroid gland. The parathyroid glands, calcium metabolism and metabolic bone diseases. The adrenal glands. The reproductive system. Carbohydrate metabolism. Endocrine treatment of neoplastic diseases. Index. Index to authors.

Note: As is true of other volumes of this publisher's useful Year Book series, this one is an organized assembly of abstracts of recent periodical literature. In the volume at hand, the literature published during the calendar year 1955 is covered. The abstracts are long enough for informative reading without reference to the source articles. However, a reference to the original article is given in every case. Each section of the book is opened with a concise review written by the editor of the salient points covered in the section. Also, there are additional editorial comments inserted at the ends of some abstracts. In these, the editor elucidates, criticizes or relates the subject matter of the abstract to other work. In this issue there are 61 illustrations.

OPHTHALMOLOGY

ADLER, FRANCIS HEED

Gifford's textbook of ophthalmology. Fourth edition. Illustrated with 281 figures and 26 color plates. Philadelphia W B Saunders Company 1953 488 p. (part col'd) 24 cm. 3720

Contents: External examination of the eyes and adnexa. Examination of the eye by ophthalmoscopy. Examination of the eye by other objective methods. Functional examination of the eye. The orbit. The eyelids. The lacrimal apparatus. The conjunctiva. The cornea. The sclera. Iris, ciliary body, pupil. The choroid and vitreous body. The lens. Glaucoma. The retina. The optic nerve. Ocular disorders due to diseases of the central nervous system. Ocular manifestations of general disease. Orientation of surgical operations on the eye and adnexa. Therapeutic agents used in ophthalmology. Index.

Note: A standard work for the instruction of medical-college students and the guidance of physicians who are not specialists in ophthalmology. Emphasis is placed on the etiology, diagnosis, and treatment of the more common diseases, injuries, and disorders of the eye. Surgical techniques are not described, but there is a chapter on indications for surgery. Medical management is covered, even to the point of including formulas for some medicines. A sixth edition was published in 1957. 499 p., $8.00.

AMERICAN OPHTHALMOLOGICAL SOCIETY

Transactions of the American Ophthalmological Society ninetieth annual meeting,

authors stress the importance of early diagnosis and also of further study of the condition. Under treatment they offer no specific therapy but point out the necessity of a high level of control of the patient's diabetes so as to delay and possibly prevent degenerative vascular changes.

ROOT, HOWARD F, AND PRISCILLA WHITE
Diabetes mellitus, handbook for physicians. New York Landsberger Medical Books, Inc. distributed solely by The Blakiston Division of the McGraw Hill Book Company, Inc., 1956 346 p illus. 21 cm. $7 00 3711

Content Nature of diabetes. Treatment with diet. Insulin. Use of insulin in treatment. Hypoglycemia due to the administration of insulin. Insulin resistance. Oral treatment of diabetes with sulfonamides. Diabetic acidosis and coma. Tuberculosis and diabetes. Urinary tract infections. Treatment of skin complications. Diabetic neuropathy Treatment of eye disorders. Management of cardiovascular disease. Diabetic nephropathy Management of diabetes with surgical complications. Diabetes and pregnancy Management of juvenile diabetes. Children born to diabetic mothers, their prenatal, perinatal and subsequent course. The examination of the urine and blood. Determinations of pregnanediol, 17 keto and 17 hydroxysteroids, and assays for chorionic gonadotrophin. Index.

Note. Written by an eminent authority on diabetes and by a specialist in pediatrics, both of whom are staff members of the Joslin Clinic, Boston this book is directed to general practitioners of medicine. It is a practical and reliable guide to the management of diabetic patients. Aspects of this management which usually are the responsibility of general practitioners, such as dietary management are fully covered. Special problems such as the management of diabetic children also are discussed in some detail. There are no illustrations other than graphs and tables, and no references to literature.

SINDONI, ANTHONY M, JR.
The diabetic's handbook how to work with your doctor treatment by diet and insulin. Introduction by Rufus S Reeves, with a foreword by Charles C Wolferth. New York The Ronald Press Company, 1948 194 p 21 cm. $3 00 3712

Contents (abridged) Section I, Questions the diabetic asks, and the physician's answers. Section II, Causes and symptoms of diabetes. Section III, Complications of diabetes. Section IV Insulin. Section V Foods. Section VI, Laboratory tests, specific care, and general hygiene. The future for the diabetic. Index.

Note Several authorities have combined to make this useful handbook for diabetic patients and members of their families. Basic practical information for the diabetic is supplied in Section I in question-and-answer form. Medical aspects of the disease and its complications, simply described, include discussions by authorities of eye conditions, skin conditions, and mouth disorders respectively The administration and effect of insulin and details of some simple urine tests are presented in nontechnical language. Approximately one-third of the book is devoted to a discussion of foods and recipes.

SOFFER, LOUIS J
Diseases of the adrenals. Second edition, thoroughly revised with 45 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1948 320 p. illus. (part col'd) 24 cm. $6 50 3713

Contents The anatomy morphological structure, and embryology of the adrenals. Chemical and mechanical techniques important in the diagnosis of adrenal cortical disease. Physiology of the adrenals. Addison's disease. The treatment of Addison's disease. Adrenogenital syndrome. Blood electrolyte and hormonal studies. Sympathogoniomas, neuroblastomas, and ganglioneuromas of the adrenal. Pheochromocytoma and paraganglioma of the adrenal. Bibliography Index.

Note: A monograph which aims to put into the hands of clinicians and endocrinologists the most recent knowledge regarding the physiology and diseases of the adrenals. The discussions of symptoms, diagnosis, and treatment are based on the literature of the subject and on the author's experience in the field. Each topic is illustrated with detailed case histories. This edition has been revised to include later findings relating primarily to the identification of adrenal cortex steroids excreted in the urine the effects of these secretions on other tissues, and the effects of the secretion of the adrenal medulla on other endocrine glands through its action on the anterior lobe of the hypophysis. Extensive bibliographies are given at the end of each chapter.

SOFFER, LOUIS J, AND OTHERS
Diseases of the endocrine glands By Louis J Soffer, with J Lester Gabrilove, and the section on the gonads by Arthur R. Sohval. Second edition, thoroughly revised. 102 illustrations and 3 colored plates. Philadelphia. Lea & Febiger, 1956 1,032 p. illus. (part col'd) 24 cm $16 50 3714

Content (abridged) Section I, The hypophysis: The embryology anatomy and histology The physiologic functions. Diseases. Section II, The adrenals: The anatomy morphologic structure, and embryology Physiology Addison's disease. The treatment of Addison's disease. Adrenocortical hyperfunction. Sympathogoniomas, neuroblastomas and ganglioneuromas. Pheochromocytoma and paraganglioma. Section III, The gonads. The testis. Physiology of the testis. Diseases of the testis. The ovary Physiology of the ovary Diseases of the ovary The virilizing syndrome. Section IV The thyroid Embryology gross and microscopic anatomy and the physiology of the thyroid gland. The value of laboratory aids in the diagnosis of thyroid disease. Inflammatory diseases of the thyroid gland. Hypothyroidism. Tumors of the thyroid gland. Section V The thymus, and parathyroids: The thymus. Anatomy physiology and diseases of the parathyroids. Appendix. Index.

Note A comprehensive work in which common as well as rare diseases are covered from the viewpoint of the clinician. Discussions of embryology and anatomy are covered in each of the sections, but the treatment of these aspects is relatively brief. On the other hand, diseases are described in some detail. Throughout the book, important statements in the text are key-numbered to the chapter bibliographies, which in many instances run to several hundred entries. The book is used both as a graduate text in medical colleges and a reference manual by graduate physicians. The first edition was published in 1951 In preparing this second edition, the former section of hypoglycemia has been deleted, hence, the decrease of about 100 pages in the length of the volume. All of the sections retained have been revised and augmented by the addition of information from the literature published since the first edition was written.

STANBURY, JOHN B, AND OTHERS
Endemic goiter the adaptation of man to iodine deficiency By John B Stanbury, Gordon L. Brownell Douglas S Riggs, Hector Perinetti Juan Itoiz Enrique B Del Castillo Cambridge, Mass. Harvard University Press 1954 209 p. illus. 22 cm. (Harvard University monographs in medicine and public health. No 12 Editorial Committee A Baird Hastings, chairman) $4.00 3715

Contents Part I, Introductory: The Mendoza endemic. Methods. Pathways of iodine metabolism. Part II, Functional interrelations: The uptake and excretion of iodine in the Mendoza patients. The effects of supplementary iodide on the retention of iodine. The effects of desiccated thyroid. Additional observations. Part III, Dynamics of iodine metabolism Theoretical aspects of iodine metabolism. The metabolism of iodine in the Mendoza patient. The effects of methimazole and thyrotropin. The effect of large doses of iodide on the metabolism of iodine. Recapitulation and suggested studies. Appendices. Index.

Note Presented in this work are the results of an investigation participated in by the Departments of Medicine and of Pharmacology of the Harvard Medical School, the Department of Medicine of the Massachusetts General Hospital, the Departments of Medicine, Biochemistry and Surgery of the University of Cuyo, and the Central Hospital of Mendoza, Argentina, and conducted in the province of Mendoza in Argentina, a region in which goiter is endemic, due to a deficiency of iodine in the local water and soil. The studies were focused on the physiological rather than the therapeutic problems, although in the book therapeutic measures

Note: The standard work on slit lamp microscopy of the living eye. It combines clinical guide, textbook and atlas, and describes practically every known condition of the eye which may be studied by slit lamp microscopy. Detailed directions for actual handling of the biomicroscope and for interpretation of what is seen are given. In the finding and describing of various clinical entities, the practical clinical applications of this method of examination are stressed. The illustrations are a special feature. There are more than 500 in the first volume and over 1,200 in the second volume. The colored illustrations, of which there are several hundred, have been carefully printed in eight colors so as to faithfully reproduce the colors of the paintings.

CALLAHAN ALSTON

Surgery of the eye—injuries. Springfield, Ill. Charles C Thomas, 1950. 217 p. illus. (part col'd) 29 cm. $12.50. 3726

Contents: Injuries of the cornea, conjunctiva and sclera. Injuries of the iris and ciliary body. Injuries of the lens. Intraocular foreign bodies. Traumatic separation of the retina. Removal of the eye. Lacerations of the eyelids. Injuries of the lacrimal system. Retraction of the upper lid after removal of the eye. Wiring of the canthus. Pedicle flaps. Tube pedicles. Free skin grafts. Major reconstruction of the lids. Traumatic ptosis. Reconstruction of the socket. Fractures of the orbit. Reconstruction of bony orbit. Ophthalmoscopic and ocular prostheses. Appendix. Preparation. Index.

Note: A book of techniques selected on the basis of the author's experience in [illegible] United States Army ophthalmic center and at the [illegible] Eye Hospital, Birmingham, Alabama. According to the author various methods were tried on similar cases at the ophthalmic center, and therefore an unusual opportunity for comparative evaluation was presented. Generally speaking, in each of the book's chapters, there are general discussions and then descriptions of specific surgical techniques. The word descriptions are supplemented by many illustrations, the majority of which were made from photographs of actual cases. Altogether, there are [illegible] figures and [illegible] plates reproduced in color. As the title indicates, the book is limited to the repair of injuries.

COGAN DAVID G.

Neurology of the ocular muscles. Second edition. Springfield, Ill. Charles C Thomas 1956. 296 p. illus. (part col d) 24 cm. $8.50 3727

Contents: Gross anatomy and actions of the extraocular muscles. [illegible] of the extraocular muscles. Characteristics of the extraocular muscles. Nerves to the extraocular muscles. Supranuclear connections of the ocular motor system. Pupil. Nystagmus. References. Index.

Note: [illegible] short, clearly-written book whose purpose is to aid the beginning practitioner in ophthalmology in the making of accurate diagnoses of the causes of disturbances of the ocular motor system by relating the clinical signs and symptoms to the underlying neurophysiology and neuroanatomy. Correlation of the clinical pattern with the physiology and anatomy of the neural centers and tracts that control the eye is covered thoroughly. [illegible] that suits the book for use in postgraduate courses in medical schools and as [illegible] work for the library of ophthalmologists. The first edition was published in [illegible] and contained 214 pages and [illegible] figures. In the second edition, there are [illegible] pages and [illegible] figures. Largely by the addition of literature published since the first edition was written, the bibliography has been extended from [illegible] references to 1,141. The author [illegible] Professor of Ophthalmology at Harvard Medical School and Director of the [illegible] Laboratory of Ophthalmology.

COWAN ALFRED

Refraction of the eye. Third edition. thoroughly revised, with 187 illustrations and 3 colored plates. Philadelphia Lea & Febiger 1948 287 p illus. (part col d) 24 cm. $5.50 3728

Contents: Introductory. Reflection at plane surfaces. Refraction at plane surfaces. Reflection at spherical surfaces. Refraction by spheric surface. Lenses. Thick lenses. Cylindric lenses. Ophthalmic [illegible]. [illegible] of prisms and lenses. The normal static eye. [illegible] eye. Apertures of the system. [illegible] tions of the eye. Accommodation. Visual acuity. Ametropia. The eye and lens. Accessory effects of the correcting lens. Methods for the determination of the refraction of the eye. The management and optical treatment of anisotropia. Contact glasses. Telescopic spectacles. Bibliography. Index.

Note: An acknowledged contribution to ophthalmic optics. In [illegible] general alignment of the optical system of the eye are analyzed against [illegible] background of physical optics. The corrective measures which can be embodied in spectacle lenses are presented from the same viewpoint. The book is designed for medical students who are preparing for this specialty and also for practitioners already at work in the field. The treatment is practical but [illegible] presented. Much more space is given to the physical aspects than to ophthalmoscopic practices, but the latter phase is adequately covered also. In the present edition there are 187 figures and an eight-page bibliography which includes references to literature published from about 1830 to 1946.

CUSHMAN BEULAH

Strabismus diagnosis and treatment. Philadelphia Lea & Febiger 1956 203 p. illus. 25 cm. $6.00. 3729

Contents: Part I, Diagnosis: Classification and [illegible]. Anatomy of the individual muscles. Dysfunction [illegible]. Part II, Treatment. Monocular and binocular functions. Surgery. Case histories.

Note: The objective methods of Drs. Alexander Duane and James W White, which place emphasis on careful analysis of the muscle imbalance in strabismus and correction of it by surgery, were the basis for this outstanding book. Written at the post-graduate level, it presents the Duane-White approach in full practical detail, particularly in regard to diagnosis. Although there is some discussion of nonsurgical treatments as well as surgical, only the latter are described in detail. Sixty-two case histories are described in a special section of the book. Selected literature references are included in the chapters. The author is a practicing ophthalmologist and member of the faculty of Northwestern University Medical School.

ELWYN HERMAN

Diseases of the retina. Second edition, revised and augmented. With 243 illustrations of which 20 are in color New York The Blakiston Division, McGraw Hill Book Company, Inc., 1953 713 p. illus. (part col d) 23 cm. $12.00. 3730

Contents (abridged): Part I, Diseases of retina resulting from disturbances in circulation. Arteriosclerosis. Occlusion of central artery and its branches. Obstruction of central vein. Spastic contraction of retinal arteries. Angiospastic retinitis in kidney diseases. Fundus changes in diabetes. Retinal changes in diseases of the blood. Part II, Diseases of retina resulting from vascular malformations. Coats' disease. [illegible] disease. Angioid streaks of retina ([illegible] disease). Retrolental fibroplasia. Part III, Degenerative diseases of retina on a hereditary basis. Hyaline bodies of [illegible]. Dominant degeneration of macula lutea ([illegible]). Retinitis pigmentosa. Niemann-Pick disease. Gyrate atrophy of choroid and retina. Congenital night blindness without fundus changes. Tuberous sclerosis ([illegible] disease). Part IV, Inflammatory diseases of retina. Retinal changes in septicemia—subacute bacterial endocarditis. Tuberculosis. Retinal periphlebitis. Syphilis of retina. Part [illegible] Tumors of retina. Part VI, Diseases of retina leading to retinal detachment. Part VII, Developmental anomalies of retina. Part VIII, Radiation injuries of retina. Index.

Note: A large number of conditions and diseases, both common and rare, are described in the book. Diseases and pathological conditions of the retina associated with systemic disorders, especially those of the vascular system and the central nervous system, as well as diseases which are primarily of the eye and the retina, are considered. Diagnosis, especially what the author terms "the clinical picture," is emphasized, but prognosis, treatment and related subjects are also covered. The discussion of each topic is always followed by a general list of references to the pertinent literature. The first edition was published in 1946. Several new chapters have been added in this edition, including chapters on retrolental fibroplasia and on retinal periphlebitis. Several chapters carried over have been completely rewritten, and lesser changes have been made in many others. A selection of literature published since 1945 has been added to the bibliographies, and the number of illustrations has been much increased.

Glacier Park Montana, 1954 New York Published for the American Ophthalmological Society by Columbia University Press, 1955 952 p. illus (part col'd) 24 cm $18 00 3721

Contents (abridged) Congenital alacrima in familial autonomic dysfunction, by J H. Dunnington. Moore's lightning streaks—a discussion of their innocuousness, by C. Berens and others. Scleral changes induced by diathermy in the treatment of retinal detachment, by K. C. Swan and L. Christensen. Harada's disease treated with cortisone—report of a typical case, by F C. Cordes. Perimetry with ultra violet (black-light) radiation and luminescent monochromatic blue test objects—a method for the early detection of conduction disturbance in the retina and optic nerve, by D O. Harrington and W F Hoyt. A rare form of hereditary epithelial dystrophy of the cornea—a genetic, clinical, and pathologic study by F W Stocker and L. B. Holt. Uses and abuses of adrenal steroids and corticotropin, by M. J Hogan and others. Seborrheic blepharitis, by P Thygeson and D G. Vaughan, Jr Medullated corneal nerves and plexiform neuroma associated with pheochromocytoma, by A. E. Braley Infection in ophthalmic surgery by M. H. Post, Jr and W A. Moor. Occult meningiomas, by H. L. Birge and B. B Whitcomb. The fluid exchange in the successfully cyclodialyzed eye, by P C. Kronfeld. Angle-closure glaucoma—subacute types, by P A. Chandler and R. R. Trotter Epipapillary tissues, by A. J Bedell and A. Jokl. The role of developmental anomalies in vertical muscle defects, by W H. Fink. Malignant melanoma of the iris—a case report, by G. V Simpson. Proteins and hyaluronic acid of beef vitreous humor by R. Brunish and others. External and gonioscopic visibility of the ring of Schwalbe and the trabecular zone—an interpretation of the posterior corneal embryotoxon and the so-called congenital hyaline membranes on the posterior corneal surface, by H. M. Burian and others. The pathologic physiology of intermittent exotropia, by H. W Grant. Hemifacial spasm, by J N Greear Jr New instruments and apparatus Light clip-on plastic prisms for the temporary correction of heterophoria and heterotropia, by C. Berens. Instrument designed [illegible] test diplopia fields, by W H. Fink. Index.

—— Ninety first annual meeting, White Sulphur Springs West Virginia, 1955 New York Published for the American Ophthalmological Society by Columbia University Press, 1956 522 p illus. 24 cm. $18 00 3722

Contents (abridged) The importance of ophthalmoscopic photographs in forensic medicine—Kodachromes, by A. J Bedell. Atrophy of the stroma of the iris, endothelial dystrophy corneal edema, and glaucoma, by P A. Chandler Some semiautomatic and automatic trephines, including an electric trephine with automatically retracting blade, by F H. Verhoeff Permanent bilateral blindness following the use of hexamethonium chloride by G. M Bruce Absence of the medial rectus and its successful treatment by vertical tendon transplants, by H. F Hill. Results of combination operation for cataract with glaucoma, by W L. Hughes. Periorbital fibrous dysplasia, by R. O. Rychener and F Murphey Use of carbonic anhydrase inhibitor acetazoleamide (Diamox) for endothelial corneal dystrophy and diseased corneal grafts, by F W Stocker A safe section for cataract extraction, by W S. Atkinson. A comparative study of gonioscopic methods, by R. N Shaffer and R. L. Tour Glial tumors of the retina in relation to tuberous sclerosis, by J. M. McLean. Myopia caused by prematurity by H. L. Birge. Some causes of enucleation after cataract extraction, by B. F Payne and others. Hereditary congenital ophthalmoplegia, by W J Holmes. Paredrine hydrobromide—intraocular pressure evaluations, by F L. P Koch and others. Tonography in the clinical management of glaucoma, by H. G Scheie and others. Aqueous pathways in some cases of glaucoma, by G. Dvorak-Theobald and H. Q Kirk. Corneoscleral lesions in periarteritis nodosa and Wegener's granulomatosis, by D G. Cogan. New instruments and apparatus Fluorescent materials for orthoptic training, by L. H. Quinn Thoma. Intracranial arterial aneurysms—a study of 119 cases, with special reference to the ocular findings, by J W Henderson. Tonometry and the cornea, by J W Jervey Jr Reactions of the iris to injury by A. C. Snell, Jr Index.

Note. The main feature of each of these annual *Transactions* is the section of papers. The authors and titles of papers included in the 1954 and 1955 volumes are listed above. For the most part, the papers represent advances in ophthalmology or describe interesting cases. Some are extensive reviews of a specific topic. An example is Roper's "Suturing in cataract surgery" which combines historical review with critical evaluation of the technique under discussion, is 163 pages long, and includes a bibliography of 548 references. The papers are accompanied by illustrations, literature references and transcripts of discussion.

ATKINSON, WALTER S

Anesthesia in ophthalmology Springfield, Ill. Charles C Thomas, 1955 101 p. illus. 22 cm. (American lecture series. Publication no 251 A monograph in American lectures in ophthalmology, edited by Donald J Lyle) $3 25 3723

Contents. Preanesthetic preparations. Sedatives. Analgesics. Nausea and vomiting. Summary of preanesthetic preparation. Topical anesthesia. Infiltration and block anesthesia. Hyaluronidase. Instruments. Anatomy Intradermal wheal. Akinesia of the orbicularis. New block of facial nerve. Alcohol injection for facial tic. Retrobulbar or cone injection. Subconjunctival injection. Cases. Field block for anesthesia of the lids. Anesthesia for operations on the lacrimal sac. Anesthetic emergencies. General anesthesia. Pentothal sodium—intravenously—rectally Bibliography Index.

Note. A useful, relatively brief presentation of basic information and generally accepted techniques of anesthesia in ophthalmology. It is directed to ophthalmologists rather than to anesthesiologists and deals primarily with local anesthesia. There are 44 illustrations and a bibliography of 57 literature references. The author is Associate Clinical Professor of Ophthalmology in the Post-Graduate Medical School of New York University

BERENS, CONRAD, AND JOSHUA ZUCKERMAN

Diagnostic examination of the eye, step-by step procedure. 410 illustrations including 48 in full color on 13 plates. Philadelphia. J B Lippincott Company, 1946 711 p. illus. (part col'd) 24 cm. $15 00 3724

Contents (abridged) Part I, Examination during first visit: General survey of patient and special survey or examination of eye. Palpation. Visual acuity Motor function. Biomicroscopy with the standard slit lamp. Ophthalmoscopy Transillumination. Retinoscopy and refraction. Tonometry Part II, Examination during second or final visit Postcycloplegic test (completion of refraction). Color vision. Fusion sense and depth perception. Perimetry and campimetry Part III, Supplementary part of examination: Supplementary information. Supplementary examinations and methods used in the examination of the outer eye. Supplementary instruments. Index.

Note. The purpose of this text is to assist medical students, ophthalmologists, and general practitioners to develop a systematic and thorough method of eye examination. Little space is thus devoted to discussions of embryology anatomy and treatment, but examination procedures and methods of recording, correlating, and interpreting the information obtained are presented in great detail. The entire text is well organized, and the brief sections and paragraphs arranged in outline form facilitate its use for rapid reference. Equipment, methods of examination, charts, and pathological conditions are fully illustrated. Each chapter concludes with a selective bibliography

BERLINER, MILTON LIONEL

Biomicroscopy of the eye slit lamp microscopy of the living eye New York Paul B. Hoeber Inc. Medical Department of Harper & Brothers 1943–49 2 v illus. (part col'd) 26 cm $50 00 3725

Contents (abridged) Volume I. Development of biomicroscopy Biomicroscope. Technic of biomicroscopy Normal conjunctiva. Inflammatory lesions of the conjunctiva. Inflammatory and traumatic lesions of the conjunctiva. Tumors of the conjunctiva. Margins of the eyelids. Episcleritis and scleritis. Normal cornea, biomicroscopic appearance. Developmental anomalies of the cornea. Senile degenerations, dystrophies, and pigmentation of the cornea. Biomicroscopy of corneal changes. Inflammatory lesions of the cornea. Traumatic injuries to the cornea. The anterior chamber Gonioscopy by H. S. Sugar Bibliography Index. Volume II. The iris. Congenital anomalies of the iris. Inflammation of the iris. Special types of iritis. Traumatic lesions, cysts, and tumors of the iris. The normal lens, biomicroscopic appearance. Developmental lens changes. Presenile and senile cataract. Complicated cataract. Injuries to the lens. Radiation cataract. Secondary cataract. The capsule. The vitreous. Biomicroscopy of vitreous opacities. Bibliography Index.

Ophthalmology

Early operative extraction of congenital cataract. The incision. The postoperative treatment of the iris. Conservation of surfaces. Extracapsular extraction. Intracapsular extraction. Complications of cataract surgery. The results of advanced surgery of cataract; the adjustment of the patient to aphakia; summary and conclusions. Bibliography. Index.

Note: During his lifetime, the author of this book achieved international eminence as an authority on the techniques of cataract surgery. His book *Surgery of cataract*, 1950, was a landmark in the literature on this technique, and this complementary work presents the advances made in surgical techniques, treatment of complications, etc., from 1939 through 1953. It is based on the literature, including the author's own publications, but is a critical presentation. Some references are made from it to the earlier book, but it may be used independently by experienced surgeons. Most of the illustrations show steps in operative techniques. Great care has obviously been taken in the preparation and reproduction of the colored illustrations. The book is a publication of primary importance, and it has been handsomely produced.

KIRBY DANIEL B

Surgery of cataract. 339 illustrations, including 52 subjects on 21 color plates. Philadelphia J B Lippincott Company 1950 695 p. illus. (part col'd) 26 cm. $30.00. 3738

Contents (abridged): Part one, The development of cataract surgery: The early history of cataract surgery. The development of cataract extraction. The theme and the organization of the book. Basic sciences applied to cataract surgery, by L. S. Stone. Preoperative examination of the eye and prognosis for restoration of vision. Standards for judging the prognosis or the arrest of cataract. The nonsurgical treatment of cataract. Classification of cataract. Part two, Preparation for cataract surgery. Part three, Present-day cataract surgery: The removal of soft cataract. Extracapsular extraction of cataract. Intracapsular extraction of cataract. The removal of luxated and subluxated lenses. The prevention of complications during and after cataract extraction—also their handling should they arise. Traumatic cataract. After-cataract. Part four, The correction of aphakia. The use of glasses in aphakia. Part five, Results obtained in cataract surgery. Index.

Note: A comprehensive treatment in which the historical background, the pertinent anatomy and embryology, and many other related topics are covered, in addition to the surgical techniques. Operative methods are not restricted to those which the author uses but include also procedures of other ophthalmologic surgeons. The book is intended for use as a text in graduate courses offered to medical college graduates and as a reference book for graduate surgeons who are beginning to operate in this specialty.

KRIMSKY EMANUEL

Children's eye problems. New York Grune & Stratton, Inc., 1956 175 p. illus. 26 cm. $6.00 3739

Contents: Introduction. Examining the child. Eye disorders mainly of local origin. Other eye disorders. Eye disorders of systemic origin. Problems in management. Index.

Note: A useful book directed to ophthalmologists, pediatricians, and general practitioners. The special problems of examining children's eyes are discussed, and a practical screening method designed to detect eye disorders in very young children is fully explained. Techniques of diagnosis and management which do not depend upon co-operation on the part of the child are described. Common eye disorders in children are fully discussed, and rare ones are at least mentioned. The importance of taking into account psychologic, environmental, and hereditary factors is pointed out. Literature references are given throughout the book.

KRIMSKY EMANUEL

The management of binocular imbalance. 200 illustrations. Philadelphia Lea & Febiger 1948. 464 p. illus. 26 cm. $12.50 3740

Contents: The corneal light reflex. Ocular function. The positions of gaze. Ocular movements. The physiology of the extraocular muscles. The phoria tendency. Prisms. The Maddox rod. Binocular image alignment. Binocular accommodation. Horizontal binocular imbalance. Vertical imbalance. Neurological considerations. Squint problems in children. Miscellaneous considerations. Prisms in the treatment of binocular imbalance. The stereoscope. The surgical management of binocular imbalance. Authors index. Subject index.

Note: A practical treatise written for the professional ophthalmologist and designed to clarify his understanding of the nature of binocular cooperation, to assist him in making practical measurements, evaluating his findings, and deciding on suitable treatment with lenses, medical or psychological methods, or surgery. The author has developed extensively in his practice and research the use of the corneal light reflex as a means of interpreting binocular imbalance, and to a large extent the volume is a demonstration of the practical value of his method. The 200 illustrations include numerous photographs of eyes exhibiting various types of imbalance. There is a generous number of citations of related literature.

LANCASTER, WALTER B

Refraction correlated with optics and physiological optics and motility limited to heterophoria. Springfield Ill. Charles C Thomas, 1952 310 p. illus. 24 cm. $7 75 3741

Contents (abridged): Part I, Optics and physiological optics: Light—combination of lenses. Shadows—reflection by plane surfaces—image formation by mirrors—magnification. Refraction of light. Refraction by curved surfaces. Cylindrical lenses. Prismatic effects of lenses. The eye as an optical instrument. Accommodation. Skiascopy. Part II, Errors of refraction and motility: Myopia. Hypermetropia. Astigmatism. Measurement of ametropia. Subjective methods. Presbyopia. Ocular motility an essential part of subjective techniques. Vergence. Classification of phorias as a basis for treatment. Eyestrain. Appendix. Index.

Note: In this book, the author has related refraction and motility to the daily work of the graduate ophthalmologist. The book is intended as a supplement to standard treatises and therefore devotes little space to aspects that are in the author's opinion adequately treated in other works. The treatment of basic optics is selective and is related as directly as possible to the eye and to spectacle lenses. His discussions of such ophthalmological conditions as presbyopia are couched in the terminology of ophthalmologic office practice.

LYLE DONALD J

Neuro-ophthalmology Second edition Springfield Ill. Charles C Thomas, 1954 591 p. illus. 26 cm. $17.50 3742

Contents: The visual system—the retina—the optic nerve—structure of the visual cortex and association tracts and areas. The autonomic system. Structures of the midbrain and brain stem concerned with ocular motility. Motor nerves of the eyes. The sensory nerve of the eye, orbit and eyelids (trigeminal nerve). The motor nerve to the eyelids and brow (facial nerve). The auditory nerves (acoustic and vestibular). The autonomic nervous system. The arterial vascular system of brain and eye. The venous vascular system of brain, eye and orbit. The cerebrospinal fluid system of the brain. Meningitis and brain abscess. Encephalitis. The demyelinating disorders. Syphilis of the central nervous system. Clinical diagnosis of increased intracranial pressure. Eye manifestations of head injuries. Tumors of the orbit. Tumors of the optic nerve. Intracranial tumors. Syndromes which include eye symptoms. Appendix: Histology. Index.

Note: In this book—one of the early texts to reflect the increasing interest of ophthalmology in neurology—material from various branches of neurology is brought together for the instruction of students of ophthalmology and practicing ophthalmologists. Both in such chapters as those on the structures of the midbrain and brain stem and on the cerebrospinal fluid system, and those on specific [illegible] disorders, there is emphasis on the neurological aspects. Interrelations between such systems as the auditory nerves and the eye are made clear. The neurological aspects of eye diseases and the ocular aspects of systemic diseases, such as encephalitis, are both described. The first edition was published in 1945. A large amount of new material has been added in this second edition. More than half of the text is new, and 141 of the 333 figures are newly added. A selection of literature published since the first edition was written has been added to the bibliography.

MEDICAL CLINICS OF NORTH AMERICA

Symposium on the eye, ear nose and throat for the general practitioner Philadelphia W B Saunders Company 1956 1573–1876 p. illus. 23 cm. Sold only by a year of six consecutive numbers. $18 per year 3743

Contents: The eyes: Foreword, by F. H. Adler. Functional examination of the eye, by H. S. Weaver, Jr. First aid in eye in-

EPSTEIN, GEORGE J

Strabismus, a clinical handbook. New York McGraw-Hill Book Company, Inc., 1948 214 p. illus. 23 cm. $6 00 3731

Contents. Anatomy and physiology of the extraocular muscles. Physiology of binocular vision. Normal muscle balance. Concomitant strabismus. Paralytic strabismus. Strabismus surgery Index.

Note Although strabismus or cross-eyedness is primarily the concern of the ophthalmologist, this very practical manual is written for the guidance of the pediatrician and general practitioner It reviews and outlines present-day clinical methods of examination, diagnosis, and treatment, and discusses the more important theories regarding the causes and pathology of various forms of strabismus. Also included are a description of the anatomy and physiology of normal binocular vision and a brief outline of the fundamental surgical techniques which are applied in the correction of this deformity

GIFFORD, SANFORD ROBINSON

A hand book of ocular therapeutics. Fourth edition thoroughly revised with 66 illustrations Revised by Derrick Vail. Philadelphia Lea & Febiger, 1947 336 p. illus. 24 cm. $5 00 3732

Contents Equipment. Anesthetics, narcotics and hypnotics. Drugs and organ extracts used in ophthalmology Specific and non-specific protein therapy Physical therapy Diseases of the lids. Diseases of the conjunctiva. Diseases of the cornea. Diseases of the uveal tract. Diseases of the crystalline lens. Glaucoma. Diseases of the retina. Diseases of the optic nerves and central visual pathways. Diseases of the lacrimal apparatus. Diseases of the orbit. Injuries of the globe. Appendix. Conditions, the treatment of which is on an experimental or unsatisfactory basis. Index.

Note In this revision of a standard work, the intention of the original author to provide a practical and concise guide for the diagnosis and treatment of ocular diseases has been retained. New therapeutic agents and antibiotics which have been developed since the previous edition are fully discussed, and the chapters on physical therapy protein therapy and diseases of the retina have undergone considerable revision. As in the earlier edition, only minor surgical procedures are discussed, and brief selected bibliographies are given in each chapter The chapter on disorders of the muscular apparatus has now been omitted.

HARRINGTON, DAVID O

The visual fields a textbook and atlas of clinical perimetry With two hundred thirty four illustrations and nine color plates St. Louis The C V Mosby Company, 1956 327 p illus. (part col d) 25 cm. $16 00 3733

Contents. Part I, The examination of the visual field. Perimetry without special instruments. The instruments of perimetry and their use. Special perimetric techniques. The anatomy of the visual pathway The normal visual field. Part II, The interpretation of defects in the visual fields The abnormal visual field. Opacities of the media (cornea, lens, and vitreous) and their effect on the visual fields. Diseases of the choroid. Diseases of the retina. Glaucoma. The toxic amblyopias. The optic nerve. The chiasm. The postchiasmal visual pathway Disturbances of psychogenic origin. Bibliography Index.

Note. The quantitative examination of visual acuity in all portions of the visual field and the interpretation of the results are the subjects of this outstanding book, which is addressed to advanced students of ophthalmology and graduate practitioners. In the first part the instruments and techniques of perimetry are described and the anatomy of the visual pathways is covered rather briefly The second part, which accounts for two-thirds of the length of the volume, is devoted entirely to perimetry in relation to abnormal conditions and disease. Loss of visual acuity in specific areas of the visual field is correlated with the underlying causes. Scotomata are included among the defects that are discussed. A majority of the 234 figures in the book are representations of perimetric charts with isopters drawn to represent the results of tests in specific cases of abnormality and disease. The book contains some previously unpublished material but, as would be expected, the greater part of it is based on the literature, including the author's own publications.

HOGAN, MICHAEL JOHN

Ocular *toxoplasmosis.* New York Published for the American Ophthalmological Society by Columbia University Press, 1951. 86 p illus. 24 cm. $2 75 3734

Contents. Introduction. Toxoplasma. Clinical manifestations. Clinical ocular manifestations. Histopathology Diagnosis of toxoplasmosis. Serologic diagnosis. Differential diagnosis. Treatment of toxoplasmosis. Relationship between toxoplasmosis and uveitis. Case reports. Ocular findings in experimental toxoplasmosis. Therapeutic effect of drugs and antibiotics against toxoplasma. Discussion. Summary References.

Note A monograph based on both the literature and on original studies carried out by the author. One of its features is a tabulated list of ocular findings in 76 cases of proved or probably congenital toxoplasmosis, which have been reported in the literature. Detailed case reports are included for six cases. Among the author's conclusions is that a positive diagnosis of toxoplasmosis may be made on the basis of clinical findings plus isolation of toxoplasma from body fluids or observation of the parasite in suspected tissues. The monograph contains much information on diagnostic techniques.

HUGHES, WILLIAM F , JR.

Office management of ocular diseases. Chicago The Year Book Publishers, Inc., 1953 452 p. illus. *24 cm. $9 00* *3735*

Contents Vision. Refraction. Lids. Lacrimal apparatus. Orbit. Disorders of ocular motility Conjunctiva. Cornea. Sclera. Glaucoma. Intraocular inflammation. Lens and vitreous. Conditions of the ocular fundus. Neuro-ophthalmology Ocular injuries. Radiation treatment. Ophthalmic formulary Index.

Note. As the title is meant to indicate, this book is devoted to ophthalmological matters within the scope of a physician's office practice In other words, those diagnostic and therapeutic techniques which do not require hospitalization of the patient. Diagnosis and treatment are the primary subjects with only a minimum of space devoted to anatomy physiology and optics. To save space, much information pertaining to diagnosis has been condensed in tables. Methods of treatment have for the most part been limited to those which the author has used in his own practice. Selected literature references are included. The formulary gives formulas for antiseptics, astringents, fungicides, anticoagulants, local anesthetics, etc. The author is Head of the Department of Ophthalmology of the College of Medicine of the University of Illinois.

JOSIAH MACY, JR. FOUNDATION

Glaucoma. *Transactions* of the first conference, December 5, 6, and 7 *1955 Princeton* N J Edited by Frank W Newell. New York Josiah Macy jr Foundation 1956. *251 p illus. 23 cm. $4.50* 3736

Contents (abridged) Group interchange. References. Central control of intraocular pressure, by L. J K. von Sallmann. Group interchange. References. Physiologic and pharmacologic factors influencing the resistance to aqueous outflow by E. H. Kirby. Group interchange. References. Index.

Note The conference whose proceedings are published in this volume was organized similarly to conferences sponsored in other fields by the Josiah Macy Jr. Foundation. The participants are selected to represent several disciplines, although ophthalmology predominates. The proceedings were informal and most of the volume consists of recordings of the discussions among the conference participants. These afford an insight into some of the current research bearing on glaucoma.

KIRBY, DANIEL B

Advanced surgery of cataract. *138 figures and 96 illustrations (22 plates) in full color* Philadelphia J B Lippincott *Company* 1955 *271* p. illus (part col d) *26* cm $27.00 3737

Contents. Advances in surgery of cataract as found in the current literature. Classification of lens changes. Prognosis for restoration of vision. Preparation of the patient for cataract surgery The Perfected instrumentation and the healing of ocular tissues.

PROGRESS IN OPHTHALMOLOGY AND OTOLARYNGOLOGY: a quadrennial review Volume I. Part One—*Ophthalmology*, edited by Meyer Wiener and A. Edward Maumenee. Part Two—Otolaryngology edited by Percy E. Ireland and Joseph A. Sullivan. New York Grune & Stratton, 1952 666 p. illus. 24 cm. $15.00. 3748

Contents (abridged) I. Basic science in ophthalmology: Anatomy and embryology, by J. J. Pendergast. Biochemistry, pharmacology and toxicology of the eye, by W. M. Grant. Congenital anomalies, by A. M. Yudkin. Electrophysiology of vision, by S. H. Bartley. II. Diagnosis and treatment of diseases of the eye: The lids and lacrimal apparatus, by A. Callahan. Conjunctiva, by J. G. Bellows. Cornea and corneal lenses, by M. W. [illegible]. Retrolental fibroplasia in premature infants, by W. C. Owens and E. U. Owens. Orbital lesions, by J. W. [illegible]. Recent advances in the treatment of glaucoma with autonomic drugs, by G. B. Koelle. Tumors, by J. E. McGavic. Progress in neuro-ophthalmology, by M. Flax. ACTH and cortisone therapy in ophthalmology, by J. McLean. Antibiotics in ocular infection, by A. E. Braley. III. Surgery of the eye. Recent advances in surgery of the eye, by B. Y. Alvis and E. E. Alvis. The use of fibrin coagulum in ocular surgery, by A. L. Brown. Enucleation and the newer implants, by N. L. Cutler. IV Related subjects in ophthalmology: Industrial ophthalmology since World War II, by H. S. Kuhn. Education and rehabilitation of the blind, by M. E. Frampton. [illegible] The ear: Otitis media with effusion, by G. D. Hoople. Recent advances in the use of labyrinthine tests, by W. J. McNally and E. A. Stuart. Theories of hearing, by M. H. Lurie. Progress in the surgical treatment of otosclerosis, by J. A. Sullivan and J. K. B. Smith. Surgery of Meniere's disease, by F. D. Lathrop. Recent advances in the surgical treatment of facial paralysis and Bell's palsy, by J. A. Sullivan. The problem of noise in industry, by H. P. House. Therapeutic and toxic effects of streptomycin and other antibiotics on the ear, by A. Glorig. II. Nose, sinuses and nasopharynx. Nasal cilia and nasal medications, by G. E. Tremble. Treatment of acute frontal sinusitis, by R. L. Goodale. The modern conceptions of headache, by L. R. Boies. X-ray findings in malignancy of sinuses, nose and nasopharynx, by A. S. MacMillan and A. S. MacMillan, Jr. III. Larynx, tracheo-bronchial tree and esophagus: Treatment of carcinoma of the larynx, by L. H. Clerf. Recent advances in surgical treatment of lesions of the esophagus, by P. E. Ireland and D. P. Bryce. IV. Allergy. Outline on allergy as related to otolaryngology, by F. K. [illegible]. The basis for use of cortisone and ACTH in treatment of otolaryngologic conditions, by H. L. Williams. Index.

Note: A complementary volume to M. Wiener, *Ophthalmology in the war years*, Chicago, 1946–48. It covers the developments reported in the literature from July 1944, through 1951. Each of the 43 chapters is [illegible] concise literature digest accompanied by [illegible] bibliography. The purpose of the work is to aid general practitioners of medicine and other medical men in keeping abreast of developments.

SCOBEE, RICHARD GORDON

The oculorotary muscles. Second edition. St. Louis The C. V. Mosby Company 1952 512 p. illus. 25 cm. $7.00. 3749

Contents (abridged) Section I. The background of ocular deviations. Anatomy. Principles, antagonists, yoke muscles. Physiology and mechanics of the extraocular muscles. Neurophysiology of the oculomotor mechanism. Section II. Latent deviations. The position of rest. Orthophoria. Heterophoria. Esophoria. Exophoria. Hyperphoria. Cyclophoria. Section III. Manifest deviations. Heterotropia. Concomitant heterotropia. Noncomitant heterotropia. Section IV. Making the diagnosis. The history. Visual acuity. The cover test. Measuring the deviation. Ductions. Versions—primary and secondary deviations. Vergences. Diplopia fields. The diagnosis of hypertropia. Section V. Treatment of the deviation. The nonsurgical treatment of heterotropia. The surgical treatment of heterotropia. Reasons for failure in muscle surgery. Appendix. Specific testing techniques for the Maddox rod. Index.

Note: A discussion for postgraduate students and beginning practitioners in ophthalmology of the diagnosis and treatment of ocular muscle dysfunction. Diagnostic techniques are presented in great detail. Therapy is presented from the standpoint of the "orthoptic principle" which holds that [illegible] muscle is best treated as functionally by weakening an antagonistic muscle. There are 113 figures. The bibliography is limited to short lists of references to recent literature.

SCOBEE, RICHARD GORDON

Rehabilitation of a child's eyes. Second edition. Revised by Herbert M. Katzin. St. Louis The C. V. Mosby Company, 1955 133 p. illus. 22 cm. $2.55 3750

Contents. Part I. Orientation. The effect of crossed eyes on the personality. General information. The teamwork of the two eyes. How the eyes focus. Why eyes cross. The bad effects of crossed eyes. Part II. Rehabilitation of squint: Glasses in the treatment of crossed eyes. Treatment of amblyopia ex anopsia, the lazy eye. Eye exercises. Operations in the treatment of crossed eyes. The treatment of crossed eyes after an operation. Glossary.

Note: A sympathetic and authoritative discussion of crossed eyes or squint. It is addressed primarily to the parents of children who are affected with the condition. It deals with causes, effects, and treatments. No particular therapy is emphasized. Instead the author describes all therapies that might be considered by expert ophthalmologists in considering [illegible] cases of squint. Although the book is intended for laymen, physicians such as general practitioners who are not specialists in eye diseases sometimes include it in their office libraries because of the usefulness of its nontechnical explanations when dealing with parents. The first edition was published in 1948. The second edition, revised by the Director of the Eye Bank Laboratory of Manhattan Eye, Ear, and Throat Hospital in New York City places somewhat more emphasis on orthoptic training.

SOMMERS IGNATIUS GEORGE

Histology and histopathology of the eye and its adnexa. New York Grune & Stratton, 1949 784 p. illus. 22 cm. $12.00. 3751

Contents (abridged) Part one. Normal histology of the eye. Embryology of the eye. Senescence of the eye. Part two. General pathology in relation to the eye. Part three. Histopathology of the eye: Pathology of the cornea. Pathology of the sclera. Pathology of the uvea. Pathology of the retina. Pathology of the optic nerve. Pathology of the lens. Pathology of the vitreous body. Pathology of the conjunctiva. Pathology of the eyelids. Pathology of the lacrimal organs. Pathology of the orbit. Ocular developmental abnormalities. Glaucoma. Myopia. Injuries. Surgery and its complications. Index.

Note: The first two parts of this book on normal histology and on general pathology occupy only 129 pages, whereas 633 pages are devoted to the third part. In the chapters of this part disorders of the various elements of the eye are fully discussed, chiefly in terms of the histology. The organization of the chapters is unconventional. First, there [illegible] detailed discussion, then [illegible] concise summary of the pertinent literature identified only by authors' names and, finally [illegible] formal bibliography of the international literature. There are only 89 figures, but these are of good quality. According to the author, the book is an elaboration of lectures that he gave over [illegible] period of years to undergraduate medical students. The bibliographies taken together constitute [illegible] fairly comprehensive list of the world literature from 1920 to 1947 but unfortunately the authors' names have not been indexed.

SPAETH EDMUND BENJAMIN

Principles and practice of ophthalmic surgery Fourth edition, thoroughly revised with 649 illustrations, containing 1251 figures and 8 colored plates. Philadelphia Lea & Febiger 1948. 1,044 p. illus. (part col'd) 24 cm. $15.00. 3752

Contents (abridged) General pathology of the orbit. Surgery of the lacrimal apparatus. Enucleation and allied operations. Complete symblepharon. The physiology of strabismus. The anesthetic of reconstructive ophthalmological plastic surgery. Surgical conditions of the lids. Anatomical factors connected with surgical procedures on the eyeball. Surgical conditions of the conjunctiva. Surgery of the sclera and the cornea. Surgery of the iris and the anterior chamber. Etiology and differential diagnosis of cataract. The techniques of the cataract operations. The surgery of glaucoma in specific instances. The surgical treatment of retinal separation. Transplant of the globe and lids. Roentgen-ray and radium therapy. Author index. General index.

Note: A standard textbook for advanced students and [illegible] reference book for practicing surgeons. It is comprehensive in scope and covers all of the operations with which the author has had experience, as well as [illegible] selection of other procedures which are widely

juries, by J S. McGavic. Inflammatory conditions of the lids and conjunctiva that can be handled by the general practitioner by W E. Fry Arteriosclerosis of the intraocular blood vessels, by G. G. Gibson. Ocult diabetes, by H. W Forster jr. Strabismus in children, by F R. McDonald. What the general physician should know about corneal disease, by I. H. Leopold. What the general physician should know about diseases of the uveal tract, by I. H. Leopold. What the general practitioner should know about ocular surgery by H. G. Scheie. Ear nose and throat Foreword, by H. P Schenck, consulting editor Allergy of the nose and paranasal sinuses, by H. P Harkins. Hoarseness, by F J Putney Nontumorous lesions of the mouth, by L. E. Silcox. The unsolved problem of the tonsils and adenoids, by M. S. Ersner and S. S. Lerner Poliomyelitis in relation to tonsillectomy by B J Ronis. Hearing loss, by F Harbert. Tinnitus, by J Winston. Vertigo by B. H. Shuster Modern medication in otolaryngology by F A. Harden. Index to Volumes 38 39 and 40 (1954 1955 and 1956)

Note. Medical Clinics of North America is published six times a year Each issue appears in hard cover and has the features of an independent book, except for the continuous volume paging. Each issue is devoted to a symposium on a topic of current importance. The issue described here is the one for November 1956, and it contains the symposium named in the title. The volume consists of the papers whose authors and titles are listed above. The authors are specialists, but they have addressed themselves in this instance to general practitioners. Literature references are appended to the papers. During the year 1956 other symposia published in the series included "Medical problems of the age," "Medical aspects of cancer and "Hematologic disorders.

Pascal, Joseph I., and Harold G Noyes

The optometrist's handbook of eye diseases With 155 illustrations and 3 color plates St. Louis The C V Mosby Company, 1954 300 p illus (part col'd) 26 cm $9 50 3744

Contents. Basic principles of general and ocular pathology Examination techniques. Diseases of the eyelids. Diseases of the conjunctiva. Diseases f cornea and sclera. Diseases of iris and ciliary body Diseases of choroid and uveal tract. Diseases of the retina. Diseases f the optic nerve. Diseases of crystalline lens and vitreous humor Diseases of orbit and lacrimal apparatus. Glaucoma. Syphilis and the eye. Paralysis and spasm of the ocular muscles. Hemianopsia and the amblyopias. Night blindness and day blindness. Endocrines, vitamins, and allergies. Heredity and genetics as they affect the eyes. Refractive changes resulting from disease. Headaches f ocular origin. Nystagmus and color blindness. Hopes and helps for the blind and near blind. Eye syndromes and their significance. Eye injuries and first aid. Questions and problems on ocular pathology Appendices. Index.

Note. In the United States of America many optometrists, whose profession is the measuring of defects in vision and the prescription and fitting of eye glasses, are persons without degrees in medicine. However in the practice of their profession they have an unusual opportunity to recognize eye diseases and to advise patients who need medical treatment of the eyes to consult an ophthalmologist. This book, directed to advanced students of optometry and practicing optometrists, provides the information on eye diseases that will facilitate their detection. It covers a wide range f diseases, but discusses most of them briefly In general, the discussion of specific disease covers the basic anatomy and signs and symptoms. Some tangential material is included, for example, discussions f heredity and a long chapter on help for the blind, by not only optical devices, but also such aids as "talking books

Pascal Joseph I

Studies in visual optics St. Louis The C. V Mosby Company 1952 800 p. illus. 22 cm $9 50 3745

Contents (abridged) Lenses—physical and optical properties. Transposition of lenses. Toric lenses. The radian method in ophthalmic calculations A physiological approach to refractive errors. Ophthalmic calculations by the dam formula. Observations on fusal and orthoptic exercises. A non-geometric exposition of the theory of retinoscopy Principles and application of cylinder retinoscopy Specialized techniques in the practice of retinoscopy The concept of reduced vergence, reduced power and reduced distance. Axes and angles of the eye. The cardinal points and planes. Some observations on myopia. Calculating stereoscopic vergence The stereoscope as an aid in the correction of ametropia. The mechanism and measurement of accommodation. The mechanism and measurement of convergence. Binocular duction tests and their significance. A new approach to cross cylinder tests. Cross cylinder methods vs. line chart methods. True and spectacle correction of ametropia. Lens correction vs. lens correction in hyperopia. Specialized training of the visual functions. Refraction by prisms. Refraction by spherical surfaces. Refraction by thin lenses. Thick lenses and lens combinations. Lens form relative to lens power Optical oddities of contact lenses. Optical and visual effects of tilted lenses. A graphic study of the ocular muscles. Diplopia fields as charted from lenses ... Appendix. Index.

Note: Altogether there are 46 chapters in this book which is not a systematic treatise but a collection of writings on various topics. The wide range of topics is obvious from the selected titles given above. The author states, "I have chosen a number of topics which I felt needed clarification, and/or new interpretation and/or considerable amplification. Some of the chapters, for instance that on the dam formula, offer useful short cuts, others such as the one on "Optical oddities of contact lenses" attempt to clear up points that are poorly understood or misunderstood by ophthalmologists. The book is of interest primarily to graduate ophthalmologists and optometrists.

Paton, R Townley

Keratoplasty New York The Blakiston Division McGraw Hill Book Company, Inc., 1955 280 p illus (part col'd) 27 cm. $28.50. 3746

Contents. General survey History of corneal grafting. Anatomy of the cornea. Physiology of the cornea. Case selection. Donor material. Preoperative preparation. Operative technique. Postoperative care. Radiation therapy Cortisone therapy Histology of the healing cornea. Statistical summary Appendix. Visual aids. Index.

Note. A full-scale monograph on transplantation of the cornea. The author is one f the world's leading specialists in this operation and is co-founder of the Eye-Bank for Sight Restoration, Inc. More of the space is devoted to the surgical techniques and to preoperative and postoperative therapy However all other aspects of the subject are also discussed, including the history of corneal grafting, basic anatomy and physiology legal aspects of obtaining eyes, legislation needed in this connection, the activities of the Eye-Bank for Sight Restoration, Inc., descriptions of eye-banks in other countries, and references to the literature. The surgical techniques are described in detail and, furthermore, are illustrated in an extensive series of clearly drawn and well-reproduced illustrations. The appendix contains a series of tables in which are presented in detail the results of corneal grafts in various eye diseases.

Perera, Charles A

May's manual of the diseases of the eye for students and general practitioners. Twenty first edition revised and edited by Charles A. Perera. With 378 illustrations including 32 plates with 93 colored figures. Baltimore Williams & Wilkins Company 1953 512 p illus. (part col d) 20 cm. 3747

Contents External examination of the eye and its adnexa. Subjective or functional examination of the eye. Objective examination of the eye conducted in the dark room oblique illumination, the ophthalmoscope, transillumination and the corneal microscope with slit-lamp. Affections of the eyelids. Diseases of the lacrimal apparatus—orbit—conjunctiva—cornea—sclera—iris—ciliary body uveitis. Diseases of the choroid. Perforating wounds of the globe foreign bodies in the globe and orbit compensation for eye injuries. Intraocular tumors. Glaucoma. Diseases of the vitreous—lens—retina—optic nerve Amblyopia disturbances of vision without apparent changes visual standards for operating motor vehicles. General optical principles. Optical consideration of the eye. Errors of refraction Disturbances of motility of the eye. Ocular therapeutics, general rules for eye operations. The ocular manifestations of general diseases. Appendix. Index.

Note. A concise manual for medical students and general practitioners of medicine rather than specialists. It has been a standard work since the appearance of the first edition in 1900 and has been translated into many languages. The first edition by Charles H. May was published in 1900 and the 20th edition, the 21st, was revised and edited by Dr Charles A. Perera, member f the faculty of the College of Physicians and Surgeons of Columbia University and published in 1949 The 22nd edition was published in 1957 518 p., $4.00.

Contents: Physiology and pathologic physiology of the lacrimal system. Nasolacrimal [illegible]. Disorders of the canaliculus. Congenital atresia of the nasolacrimal duct. Etiology of dacryocystitis. Clinical manifestations and diagnosis of dacryocystitis. Conservative treatment of dacryocystitis. External operations of the lacrimal sac. Intranasal dacryocystorhinostomy. Tumors of the lacrimal sac. Disorders of the lacrimal gland. Tumors of the lacrimal gland. Index.

Note: A thorough, monographic study written from the clinical viewpoint, of the system that keeps the eyes moist and secretes the tears. The normal and pathologic physiology and the developmental anatomy are reviewed in the first two chapters. The remainder of the volume is devoted to disorders and their therapy. Surgical treatments are especially well covered. The book is based both on the literature and on the experience of the author, who is Professor of Medicine in the Post-graduate School of Medicine in the University of Texas.

WIENER, MEYER, AND HAROLD G SCHEIE

Surgery of the eye. Third revised edition. New York Grune & Stratton, 1952 449 p. illus. 26 cm. $15.00. 3759

Contents: Basic technics in ophthalmic surgery. Anesthesia. Preoperative and postoperative care. Cataract surgery. Glaucoma surgery. Retinal detachment. Intraocular foreign bodies. Operations on the cornea. Removal of eye. Operations on the conjunctiva. Operations on the lids and socket. Ptosis. Operations on the muscles of the eye. Operations on the tear apparatus. Index.

Note: A medical college textbook and reference manual for graduate surgeons. The techniques described have been critically selected by the authors on the basis of their experience and judgment. Although no attempt was made to present all known techniques, those which are covered are described explicitly and in full detail. The descriptions are supplemented by nearly 430 drawings of high quality. The second edition was published in 1949. For the third edition many changes were made in both the text and illustrations. Several chapters were completely rewritten, and sections describing new operative procedures have been added to others. Many new illustrations were added. There is no bibliography.

WOODS ALAN CHURCHILL

Allergy and immunity in ophthalmology Baltimore The Johns Hopkins Press, 1933 176 p. 23 cm. (The Wilmer Ophthalmological Institute, The Johns Hopkins Hospital and University Monograph no. 1) $2.25 3760

Contents: General considerations of anaphylaxis, allergy and immunity. Experimental studies on general ocular immunology. Relationship of allergy to focal reactions in the eye. Allergic conjunctivitis. Antigenic properties and reactions of lens protein and uveal pigment. Syphilis. Tuberculosis. Therapeutic procedures. Index.

Note: This monograph presents the knowledge and theories of allergy and immunity in ophthalmology current since 1933. The author has assembled all the most important work and has attempted to evaluate it impartially in the face of many conflicting and opposing views found in the literature. Although this monograph has been prepared chiefly for the ophthalmologist, the material will be of value to other workers in allergy and immunity in view of the importance of the allergic inflammatory reactions of the eye in the study of the general problem of allergy and immunity.

WOODS ALAN CHURCHILL

Endogenous uveitis. With illustrations by Annette Smith Burgess. Baltimore The Williams & Wilkins Company 1956 303 p. illus. (part col'd) 27 cm. $12.50. 3761

Contents: Nomenclature—classification—pathogenesis. The clinical picture and pathology of granulomatous and nongranulomatous uveitis. Etiologic diagnosis of uveitis. The treatment of uveitis. Bibliography. Index.

Note: In this work endogenous uveitis designates "nonpurulent inflammations of the uveal tract which are related to [illegible] systemic disturbances, either an infection or an acute sterile endogenous [illegible]. The author shows further that this disorder may be divided into two pathogenetically distinct entities which he chooses to call granulomatous and nongranulomatous. The subject is covered in [illegible] thorough manner although the book is directed more to medical-college students than it is to graduate practitioners of ophthalmology. The organization of the material is indicated by the chapter titles listed above. The chapter on the clinical picture and pathology is more than 80 pages long, and that on treatment is 70 pages long. In the latter [illegible] wide range of therapeutic measures is covered. The treatments are described in full detail, and the experience [illegible] each is summarized. There are forty-two plates in color and 81 monochrome figures in the text. The bibliography contains 303 references to the international literature.

ZUCKERMAN, JOSHUA

Perimetry With 156 illustrations. Philadelphia J B Lippincott Company 1954 391 p. illus. (part col d) 24 cm. $10.00 3762

Contents (abridged): Part I, Fundamentals in perimetry: The vocabulary and the language of perimetry. Fundamental concepts. Part II, Perimetric studies. Equipment. Anatomy and physiology. Procedure for the examination of the fields of vision. Lesions of the choroid and the retina and their field defects. Glaucoma and its field defects. Lesions of the optic nerve—optic chiasm—optic tract—external geniculate body—optic radiations—occipital visual cortex. Part III, Summary and supplementary data. Descriptive review of perimetry. Tabular review of perimetry. Defects which may be encountered in mapping the field of vision. The visual fields in some general or systemic diseases. Disturbances of vision or of the field of vision without external evidence of disease. Mathematical aids in perimetry. Bibliography. Index.

Note: A textbook designed for the instruction of undergraduate students in medical colleges who are making their first acquaintance with perimetry. It has several features designed to facilitate learning on the part of the beginning student. These include long chapters in Part I on the technical vocabulary and the fundamental concepts of the field and two reviews of the subject, including one in tabular form at the end of the volume. The principal part of the book deals explicitly and in detail with procedures and with the interpretation of their results in terms of clinical significance.

OTORHINOLARYNGOLOGY

ASH J E. AND MURIEL RAUM

An atlas of otolaryngic pathology. Published under the joint sponsorship of the American Academy of Ophthalmology and Otolaryngology The American Registry of Pathology The Armed Forces Institute of Pathology Washington, D C. American Registry of Pathology 1956. 572 p. illus. (part col d) 28 cm. $20.00 3763

Contents: General pathology: Acute inflammation. Granulomatous inflammation. Pigmentation and degeneration. Necrosis and vascular lesions. Deficiency in blood diseases. Lipid histiocytoses and miscellaneous diseases of bone. The effects of ionizing radiation. Tumors. Dermatoses. Tumors of the skin. Fungus diseases. Tropical diseases. Upper respiratory tract: Histology of the nose and paranasal sinuses. Rhinitis and sinusitis. Sinusitis. Nasal polyps. Specific inflammatory diseases of the nose. Tumors of the nose and sinuses. Pharynx. Tumors specific to pharynx. Malignant tumors of the nose, sinuses and pharynx. Tumors arising in bone. Tonsils. Lower respiratory tract: Larynx. Tumors of the larynx. Trachea, bronchi and lungs. Esophagus. Mediastinum and thymus. Neck: Cysts, lymph nodes and tumors of neck. Thyroid and parathyroid gland and carotid body. Salivary glands. Ear: External ear. Middle ear. Otitis media. Mastoid and mastoiditis. Temporal bone. Otosclerosis. Deafness and Ménière's disease.

Note: A reference book based on the wealth of material in the files of the Armed Forces Institute of Pathology. It is organized into the five parts and 36 chapters whose titles are given above. Most of the chapters consist of brief but useful text and a large number of illustrations. The illustrations depict both gross and microscopic pathology with the latter predominating. The part, which contains the general pathology which the specialist needs for background, accounts for approximately one-fifth of its length. All of the rest of the space is devoted to the specialized pathology of the respiratory tract, the neck, and the ear. The amount and variety of illustrations greatly [illegible] considerably exceeds that available in any other American book on this subject.

used. There has been no basic or organizational change in the work in the present edition, but amplification of material in various sections where recent developments demanded change has resulted in a lengthening of the work by about 100 pages. The number of illustrations has been essentially increased.

TAIT, EDWIN FORBES

Textbook of refraction Illustrated Philadelphia W B Saunders Company, 1951 418 p illus 25 cm $8 00 3753

Contents (abridged) Ocular reflexes. Accommodation stimulus-response mechanism. Emmetropia and ametropia. Hyperopia. Myopia. Astigmia. Presbyopia and aphakia. Isometropia and anisometropia. Aniseikonia. Amblyopia. Reading difficulties—alexia and dyslexia. Illumination and photophobia. Preliminary considerations in binocular coordination. Vergence stimulus-response mechanisms. Binocular fusion. Ocular dominance. Retinal correspondence. Ocular muscle anomalies. Orthophoria and heterophoria. Binocular anomalies at the near point. Heterotropia. Keratometry Skiametry Static skiametry Cycloplegics, mydriatics, and miotics. Subjective methods of refraction in normal and subnormal vision. Orthoptics. Accommodation tests. Stereopsis. A system of refraction with interpretation and correlation of data. Index.

Note. The author's critical selection of the material included and his authoritative comments on difficult points in diagnosis and correction are special features of this book. Disorders of refraction and neuromuscular abnormalities are covered comprehensively but controversial concepts and techniques not yet thoroughly established are omitted from the text, though papers on some of them are included in the literature lists. The book is addressed to medical college students who have acquired the basic knowledge of the anatomy and physiology of the eye and of physiological optics. History-taking and diagnostic procedures are compactly outlined in the final chapter. The author is Associate Professor of Ophthalmology in Temple University

THOMAS, CHARLES I

The cornea. Springfield, Ill. Charles C Thomas 1956 1,318 p illus. 23 cm $30 00. 3754

Contents Anatomy of the cornea. Embryology of the cornea. Physiology of the cornea. Pathologic physiology of the cornea. Methods of examination of the cornea. Congenital anomalies. Dystrophies of the cornea. Pigment deposits in the cornea. Inflammations and ulcers. Trachoma. Corneal mycosis. Epidemic keratoconjunctivitis. Corneal manifestations in generalized diseases—contagious diseases—diseases of the skin. Corneal lesions resulting from generalized metabolic disturbances. Corneal diseases of allergic origin. Tumors. Pterygium. Injuries of the cornea. General treatment. Radiation treatment. Historical development of corneal surgery with special reference to keratoplasty Keratoplasty Special problems in keratoplasty technic. Technic of lamellar keratoplasty Technic of total penetrating keratoplasty Technic of partial penetrating keratoplasty Partial penetrating keratoplasty Keratoplasty results. Miscellaneous procedures in corneal surgery References. Index.

Note A comprehensive work on the cornea in health and disease. The early chapters provide the essential background knowledge on anatomy embryology and physiology These chapters together account for only 140 pages. The rest of the volume is devoted to detailed discussions of pathology disease, injuries and techniques of treatment, both medical and surgical. There are 400 figures, many of which contain several illustrations. Included among these are a considerable number of illustrations of surgical techniques. The index to authors includes the names of all authors referred to in the text. The subject index is an exceptionally detailed one. The book is of interest to graduate ophthalmologists and to students preparing for this specialty

TOWER PAUL

Differential diagnosis of common diseases of the eye ground. New York Grune & Stratton 1953 243 p. illus. 27 cm. $11 00 3755

Content Introduction The normal fundus. Congenital anomalies Diseases of the retina. Diseases of the choroid. Diseases of the macula. Glaucoma. Diseases of the optic nerve. Myopia. Index.

Note. Differential diagnosis with the ophthalmoscope is presented in considerable detail in this book. Diseases of the fundus are the primary subject. However considerable attention is given to normal appearance of the eyeground and to variations not associated with disease. Another noteworthy feature is the inclusion of manifestations of systemic diseases, such as vascular disease, which may be observed in ophthalmoscopic examinations. Signs of diagnostic value are fully described in the text. The verbal text is supplemented by reproductions of 129 photographs of the fundus in various normal and diseased states. Statements in the text are carefully referenced to literature citations in the chapter bibliographies. An unusual feature is the inclusion near the end of each chapter of a "Literature discussion" containing abstracts of several of the more important articles bearing on the subject of the chapter.

TOWN, ARNO E

Ophthalmology 208 illustrations, and 4 colored plates. Philadelphia Lea & Febiger, 1951 511 p. illus (part col'd) 24 cm. $10.00. 3756

Contents. The objective examination of the eye. Physiology of vision, by I. H. Wagman. Correction of optical defects of the eye, by D. Naidoff. The extraocular muscles. The orbit. The lacrimal apparatus. The eyelids. The conjunctiva. The cornea, by I. H. Leopold. The sclera. The vitreous. The uvea, by W. F. Duggan. The crystalline lens. The retina. The optic nerve. Glaucoma, by I. H. Leopold. Neuro-ophthalmology by J. Waldman. Ocular changes in general diseases, by A. W. Howland. Symptomatic diagnosis. Ocular therapeutics. Standing orders for traumatic cases in industrial dispensaries: eye accidents and injuries. Surgery of the eye.

Note. In this concise work, the emphasis has been placed upon eye conditions which may come to the attention of the general practitioner in everyday practice and on the eye as a guide to diagnosis and prognosis of systemic infections elsewhere in the body. Over 200 illustrations direct attention to particular malfunctions and methods of diagnosis and treatment. Selected references are inserted at the ends of sections within chapters to aid those desiring more extensive information on the particular subject. The author is Professor of Ophthalmology in Jefferson Medical College, and his contributors are also teachers in the same or closely allied fields.

TRONCOSO, MANUEL URIBE

Internal diseases of the eye and atlas of ophthalmoscopy Second edition 285 illustrations including 94 full page color plates. Philadelphia F A. Davis Company 1950. 684 p. illus (part col d) *26 cm $22 00.* 3757

Contents (abridged) Part I, Ophthalmoscopy Methods and technic of ophthalmoscopic examination. Part II, Structural features of the internal eye. The normal fundus. The physiology and pathology of the circulation in the retinal vessels. Part III, The visual field. Field testing (campimetry) General pathology of the visual field. Part IV Anomalies of development. Part V Diseases of the optic nerve. Part VI, Atrophy of the optic nerve. Pressure atrophy. Glaucomatous and nutritional atrophies. Acute poisoning of the retina and optic nerve. Tumors of the optic nerve. Part VII, Vascular diseases of the retina. Part VIII, Diseases of the retina. Retinal lesions in diseases of the blood. Congenital systemic maladies. Exposure and tumors. Part IX, Diseases of macular region, area centralis and allied conditions. Part X, Retinitis in infectious diseases. Part XI, Pigmentary retinosis and allied diseases. Part XII, Retinal detachment, parasites and tumors. Part XIII, Diseases of the choroid. Part XIV Pathological changes in the vitreous body Part XV Injuries of the choroid, retina and optic nerve. Index.

Note. A standard textbook in which the author has treated the subject by emphasizing the pathological changes in physiopathology first, then deducing the symptoms from the lesions The purpose of the method is to show the student the importance of correlating pathology and symptomatology Descriptions of diseases are briefer than in many texts, but they are adequate. The color plates are a feature of particular value. The first edition was published in 1942 In the second edition the work has been enlarged by some 130 pages and now includes new sections on a considerable number of diseases and conditions which were not covered in the first edition. The number of illustrations has been increased somewhat.

VEIRS EVERETT R

The lacrimal system clinical application. New York Grune & Stratton, 1955 159 p. illus 26 cm. $7 50 3758

Contents (abridged) General physiology. Applied physiology. Functional tests. Spontaneous manifestations. Induced reactions. Evaluation of abnormal reactions. Differentiation of peripheral and central lesions. References. Index.

Note: A brief but well-written monograph on the non-acoustic part of the inner ear, that is to say the utricle, the saccule, and the three semicircular canals. The primary emphasis [illegible] on the clinical aspects, but the basic physiology is given only slightly less emphasis, and there [illegible] also some discussion of neurological aspects. Another useful feature is the critical discussions of the various theories and hypotheses that have been advanced to explain labyrinthine function. The chapter on functional tests runs to more than 100 pages and is organized under the subheadings noted in the above contents. Each of the chapters is provided with extensive lists of literature references. Formerly [illegible] member of the teaching staff in the Polyclinic at the University of Vienna, the author is now Clinical Professor in Otolaryngology in the School of Medicine of Tufts University

HELLER, MORRIS F

Functional otology the practice of audiology With Bernard M. Anderman and Ellis E. Singer New York Springer Publishing Company Inc., 1955 225 p. illus. 22 cm. $5.50 3769

Contents. Office testing room. Audiology centers. Equipment. The patient's history. Pure tone audiometry. Recruitment. Deafness of nonorganic origin. Tuning forks and [illegible]. Tinnitus. Infants and children. Speech audiometry. Hearing aids. Voice and speech production. Speech deviations in conductive deafness. Speech deviations in perceptive deafness. Auditory rehabilitation. Bibliography. Index.

Note: The author of this book is Chief of the Audiology Clinic of Mount Sinai Hospital in New York. The book is written from the viewpoint of practice in large audiology centers. The organization, equipment and staffing of such centers are discussed concisely in the first three chapters. Those that follow are devoted to the testing of hearing and other aspects of the treatment of patients [illegible] hearing disorders. These chapters contain much material that is applicable in any practice involving audiology whether the patient [illegible] in [illegible] large, organized center, or in private practice. A variety of tests is described. Many examples of audiograms are reproduced, and their interpretation is discussed.

HOLLENDER, ABRAHAM RISEL

Office treatment of the nose, throat & ear Third edition. Chicago The Year Book Publishers, Inc., 1950 620 p. illus. 21 cm. (The general practice manuals) $7.50 3770

Contents (abridged) Section one, Part I, General survey. Evaluation of office treatment of nose, throat and ear diseases. Immunization. Endocrine therapy. Nutritional management. Pharmacotherapy. Physical therapeutic procedures. Office surgery. Radiotherapy. Psychosomatic approach to otolaryngology. Section II, Part II, Diseases of the nose. Part III, Diseases of the paranasal sinuses. Part IV, Diseases of the mouth and pharynx. Part [illegible] Diseases of the larynx. Part VI, Diseases of the ear. Part VII, Neurologic disorders. Index.

Note: A widely used manual of the techniques of otolaryngology which can be carried out in practitioners' offices as distinguished from those which must be carried out in fully equipped hospitals. The style of presentation is compact, and [illegible] rather wide range of conditions is covered. As the author points out, [illegible] office treatment now comprises the larger part of the management of ear, nose and throat diseases. [illegible] Most of the therapies included are physical, such as the use of diathermy, but there is [illegible] chapter on minor surgical operations. The second edition was published in 1946. This volume is not only longer by some 70 pages, but substantial sections of text that were included in the second edition have been deleted or extensively rewritten.

HOLLENDER, ABRAHAM RISEL, editor

The pharynx basic aspects and clinical problems. Chicago The Year Book Publishers, Inc., 1953 560 p. illus. 24 cm. $15.00. 3771

Contents (abridged) Section I, Basic aspects: Anatomy of the mouth and pharynx, by E. M. Shabah. Pathology of the pharynx, by F. B. Lamb. Bacteriology of the pharynx in health and disease, by J. L. Goldman and J. Freeman. Roentgenographic examination of the pharynx, by H. K. Taylor. Section II, Clinical problems. A. The nasopharynx (epipharynx). Inflammatory diseases of the nasopharynx. Irradiation therapy of the nasopharynx: technic, results, cautions, by G. E. Fisher. B. The mouth and pharynx (oropharynx). Oral and pharyngeal manifestations of diseases of the blood, by H. J. Hara. Acute sore throat. Chronic sore throat. Surgical elimination of the tonsils and adenoids, by E. Almour. Tonsil tags and lingual tonsils: how to deal with them. Abscesses of the pharynx, by J. W. Bell. C. The oral salivary glands, and neck. The palatal uvular structure, function and significance, by E. M. Pullen and G. E. Richardson. Infections of the neck, by B. J. Schoenl. Pharyngeal diverticulum: characteristics and management, by P. H. Holinger. D. Tuberculosis, syphilis, neoplasms. Tuberculosis and syphilis of the pharynx: incidence and clinical significance. Neoplasms of the mouth and oropharynx—nasopharynx, by J. G. Schoelman. E. Miscellaneous considerations. The tonsil problem in rheumatic fever and other systemic diseases, by D. A. Nathan. Relationship of tonsillectomy and poliomyelitis, by E. E. Howard. Psychosomatic aspects of oral and pharyngeal diseases, by M. H. HeGroder. Index.

Note: There are 36 chapters written by 21 authors in this comprehensive treatise on the pharynx, [illegible] which is addressed to graduate practitioners. A selection of chapter titles with the names of authors is given above. In cases [illegible] where no author is given, the editor of the volume is also the author. The pertinent fundamentals of anatomy, physiology and bacteriology are discussed, as well as diseases and medical and surgical therapies. The primary emphasis is on the clinical and therapeutic aspects. There are approximately 200 illustrations. Fairly extensive lists of literature references are included.

LEDERER FRANCIS LOEFFLER, AND ABRAHAM R. HOLLENDER

Basic otolaryngology Fourth edition. Illustrations, 11 in color Philadelphia F A. Davis Company 1956 442 p. illus. (part col d) 23 cm. $6.75 3772

Contents (abridged) Section 1, General considerations. Section 2, The nose. Section 3, The paranasal sinuses. Section 4, The mouth. Section 5, The pharynx. Section 6, The larynx, trachea, bronchi, and esophagus. Section 7 The ear. Index.

Note. A concise, introductory textbook used in the instruction of undergraduate medical students. Earlier editions were entitled *Textbook of the ear nose and throat.* Many charts and tables are used to present briefly but in [illegible] form that is convenient to use, the high points of diagnosis and other matters. The illustrations, both those in monochrome and those in color, are of good quality

LEDERER, FRANCIS LOEFFLER

Diseases of the ear nose and throat. Principles and practice of otorhinolaryngology Clinical technics and procedures. Sixth edition. With 979 illustrations 20 in color Philadelphia F A. Davis Company 1952 1 430 p. illus. (part col d) 27 cm. $20.00. 3773

Contents (abridged) Section I. The ear. Anatomy of the ear. Examination and functional tests of the ear. Diseases of the external ear. Diseases of the tympanic membrane and middle ear. Chronic suppurative middle ear disease. Neoplasms of the middle and inner ear. Diseases of the mastoid region. Labyrinthitis. Diseases of the internal ear. Temporal bone fractures. Section II, The nose and paranasal sinuses. Diseases of the external nose. Chronic forms of rhinitis. Diseases of the nasal septum. Sinus disease. Naso-orbital infections. Section III, The mouth and pharynx: Infections and infectious diseases of the mouth. Diseases of the tongue. Acute diseases of the pharynx. Chronic pharyngitis. Neoplasms and paralyses of the pharynx. Section IV The larynx, trachea, bronchi and esophagus. Diseases of the larynx. Obstructive conditions of the larynx. Chronic forms of laryngeal disease. Tumors of the larynx. Surgery of the larynx and trachea. The trachea and bronchi. The esophagus. Section [illegible] General and correlated considerations: Progress in otolaryngology. Diagnostic and therapeutic facilities. Neuralgias of the head and neck. Allergy. Disorders of speech and voice. Ophthalmological aspects. Roentgenography of the head. Oncologic relations to otolaryngology. Index.

Note A comprehensive work suited to the needs of specialists and graduate medical college students preparing for specialization in otorhinolaryngology. Background information such as anatomy and physiology are covered very concisely. Almost all of the space [illegible] given to descriptions of diseases and to related matters, such as

BALLENGER, HOWARD CHARLES, AND JOHN J BALLENGER

A manual of otology, rhinology and laryngology Fourth edition, enlarged and thoroughly revised, with 136 illustrations and 3 color plates Philadelphia Lea & Febiger, 1954 365 p illus (part col'd) 24 cm $6 00 3764

Contents (abridged) Part I, The nose and accessory sinuses Acute inflammatory diseases of the nasal cavity and sinuses. The treatment of sinus infections. The complications of sinus disease. Hyperplastic rhinitis. Allergy: hay fever Headaches and neuralgias of the face and head. The nasal septum. Part II, The pharynx and fauces Clinical anatomy of the pharynx and tonsils. Diseases of the pharynx and fauces. Diseases of the tonsils. Diseases of the adenoid and lingual tonsil. *Deep neck infections. Part III,* Diseases of the larynx Acute inflammatory diseases of the larynx. Chronic diseases of the larynx. Paralysis and neuroses of the larynx. Tuberculosis and syphilis of the larynx, throat and nose. Part IV The ear The functional tests of hearing. Diseases of the auricle and external auditory canal. Diseases of the tympanic membrane and eustachian tube. Secretory (catarrhal) and adhesive diseases of the tympanic cavity Acute suppurative otitis media. Acute diseases of the mastoid. Chronic diseases of the middle ear and mastoid. Facial paralysis. Non-inflammatory diseases of the labyrinth and eighth nerve. *Physiology* functional tests and inflammatory diseases of the labyrinth. Physical therapy in otolaryngology Index.

Note A standard work which is used as a textbook in undergraduate medical colleges and as an office reference book for graduate physicians who are not specialists in the field. It deals with common disorders of the nose, throat, and ear from the clinical viewpoint. The discussions of the individual entities vary but generally speaking, it is brief and limited to etiology pathology symptomatology and treatment. The third edition was published in 1947 In preparing this fourth edition, some sections were rewritten and a few new sections added. However the general plan and scope of the book remain the same.

BALLENGER, WILLIAM LINCOLN, AND HOWARD CHARLES BALLENGER

Diseases of the nose, throat and ear Ninth edition, thoroughly revised assisted by John Jacob Ballenger With 597 illustrations and 16 plates Philadelphia Lea & Febiger, 1947 993 p illus (part col d) 24 cm 3765

Contents (abridged) Part I, The nose and accessory sinuses The surgical correction of facial deformities. The surgical correction of obstructive lesions of the septum. Allergy Headache—neuralgia of the face and head. *Etiology of inflammatory diseases of the nose,* throat and sinuses The general and local treatment of sinus infections. The surgical treatment of sinusitis. Part II The pharynx and fauces Surgical anatomy of the pharynx and tonsil The tonsils as foci of infection *Deep neck infections.* Functional neuroses of the pharynx. Part III, Diseases of the larynx Anatomy—laryngoscopy Acute inflammatory diseases of the larynx. Paralysis and neuroses of the larynx. *Defects of speech.* Surgical treatment of cancer of the larynx. Malignant neoplasms of the trachea, pharynx and nose. Part IV The ear The clinical anatomy and physiology of the ear *Malformations and neoplasms of the ear* Diseases of the auricle and external canal. Injuries and diseases of the tympanic membrane. Diseases of the eustachian tubes. Acute suppurative otitis media. Diseases of the mastoid process. Facial paralysis. Surgery of brain abscess. Deaf-mutism. *Inflammatory* diseases of the labyrinth. Surgery of the labyrinth. Part V Bronchology esophagology and gastroscopy Index.

Note A standard text written primarily for medical students, but of such practical nature that it is also of value to the general practitioner The presentation is comprehensive and concise and covers the anatomy physiology etiology diagnosis, and treatment of the diseases under discussion. A three-page bibliography on gastroscopy is included. The tenth edition was published in 1957 968 p., $17.50.

BOIES, LAWRENCE R

Fundamentals of otolaryngology a text book of ear nose and throat diseases By Lawrence R. Boies and associates Charles E Connor, Anderson C. Hilding, Jerome A. Hilger John J Hochfilzer, Conrad J Holmberg, Kenneth A. Phelps Robert E. Priest, George M Tangen. Second edition. Philadelphia W B Saunders Company, 1954 487 p 400 illus. on 197 figures. 24 cm. $7.00. 3766

Contents. Introduction to modern otolaryngology Part I, The ear Applied anatomy and physiology of the ear. Examination of the ear. Hearing loss. Diseases of the external ear and external auditory canal. Acute middle ear disease. Chronic middle ear disease. Complications of suppurative otitis media. Tinnitus. Vertigo. Aids to hearing—audiology Part II, The nose Applied anatomy and physiology of the nose. Examination of the nose. The common cold. Nasal allergy Chronic nasal obstruction. Acute and chronic sinus disease. Complications of sinusitis. Headache and neuralgia of nasal origin. Epistaxis. Atrophic rhinitis. Injuries to the nose. Part III, The throat: Applied anatomy and physiology of the throat. Examination of the throat. Diseases of the nasopharynx. Acute and chronic sore throat. Tonsils and adenoids. Hoarseness. Laryngeal obstruction. Dysphagia. Foreign bodies in the air and food passages. Bronchoscopy and bronchography in pulmonary disease. Tumors of the nose and throat. Modern medication in otolaryngology *Addendum: The possibilities of treatable disorders in otolaryngology—allergy* autonomic dysfunction, and endocrine imbalance. Index.

Note. A practical work used as a textbook in undergraduate courses in medical schools and as an office manual for general practitioners of medicine. *It is limited to diagnosis,* treatment and *related aspects that especially concern the practicing physician.* The first edition was published in 1949 In this second edition, the general plan and purpose of the book are unchanged. However revisions and additions have been made in many of the chapters. *The length of the book has been increased by 43 pages and a selection of the literature published since the last edition was written has been added to the bibliography There are 197* figures.

EGGSTON, ANDREW ANDERSON, AND DOROTHY WOLFF

Histopathology of the ear, nose, and throat. Baltimore The Williams & Wilkins Company 1947 1 080 p illus. (part col d) 26 cm. 3767 $18.00

Contents (abridged) The ear The temporal bone. The external ear The drum membrane. The middle ear. The mastoid. The petrous apex. Pneumatization. The anatomy of Eustachian tube. The eighth nerve. Histology of the ear *Physiology* Physiology of external ear, drum and hearing. Pathology Pathology of the external ear. Histopathology of the drum membrane. Inflammation of the middle ear Inflammation of the mastoid. Inflammation of the petrous Histopathology of the inner ear Chronic inflammatory changes in the temporal bone. Neoplasms of the ear The nose: Histology of the nose and accessory sinuses. Physiology of the nose and accessory sinuses. Pathology of the nose. *Intracranial complications.* Chronic specific infections of the nose and accessory sinuses. The pharynx and larynx Oral and pharyngeal pathology as manifestations of constitutional diseases. *Pathology* of the nasopharynx and larynx Lumps, swellings, or tumefactions of the neck. Cysts and tumors of the pharynx and larynx. Clinical pathology in its relationship to otorhinolaryngology Appendix Index.

Note A comprehensive treatment which is of interest to advanced medical students and interns who are preparing to specialize in either general pathology or otorhinolaryngology and is also useful as a reference book to specialists already practicing in the latter field. Not only is the immediate subject fully covered, but considerable attention is paid also to basic knowledge from the fields of embryology and anatomy There are 505 figures, many of which are reproductions of microphotographs and 28 plates, partly in color Extensive bibliographies are included with most of the chapters.

FISCHER JOSEPH J

The labyrinth physiology and functional tests. New York Grune & Stratton, 1956. 206 p. illus. 23 cm $6.50 3768

pharynx, larynx and neck. Tracheotomy. The trachea and bronchi. The esophagus. Allergy. Miscellaneous. Index. Index to authors.

Note: Edited and organized similarly to the other manuals in the publisher's Year Book series, this annual publication consists largely of abstracts of articles selected from the world's medical literature. The typical abstract is several hundred pages in length and in many instances is supplemented by a short editorial note sharing the author's conclusions or relating them to other work. Illustrations appearing in the original articles are sometimes reprinted, and in the issue at hand there are 121 figures. Each annual issue covers the literature of approximately one year. The issue described here contains abstracts of articles selected from journals received by the editor between October 1954, and September 1955.

DERMATOLOGY

AMERICAN ACADEMY OF DERMATOLOGY AND SYPHILOLOGY

Atlas of dermal pathology. Prepared by the Registry Committee on Dermal Pathology of the American Academy of Dermatology and Syphilology. Hamilton Montgomery, chairman. Illustrations selected by Arthur C. Allen. Fourth edition. Washington, D. C. American Registry of Pathology 1948. 155 p. illus. 25 cm. $5.00 3780

Note: Although designed for use in conjunction with a set of slides on dermal pathology, this work is also useful independently of the slides. It contains reproductions of 100 illustrations of pathological specimens selected from the files of the Armed Forces Institute of Pathology. All are microphotographs. The pictures are accompanied by descriptive legends of considerable length, some being as long as one page. Literature references are included in many of these legends.

ANDREWS, GEORGE CLINTON

Diseases of the skin: for practitioners and students. Fourth edition. With 777 illustrations. Philadelphia W. B. Saunders Company 1954 877 p. illus. 26 cm. $13.00 3781

Contents: General anatomy and pathology. Symptomatology and general diagnosis. Roentgen ray physics applied to dermatology. Roentgen ray therapy. Radium therapy. Surgical diathermy. Dermatoses due to physical causes. Pruritus and cutaneous neuroses. Contact dermatitis—eczema—atopic dermatitis. Erythema and urticaria. Seborrheic dermatitis and psoriasis. Parapsoriasis, pityriasis, pityriasis rubra pilaris. Lichen planus. Acne. [illegible]. Miscellaneous [illegible] infections. Diseases due to fungi. Tuberculosis cutis. Leprosy and other diseases due to bacilli. Syphilis, yaws and pinta. Diseases due to animal parasites. Some virus and rickettsial diseases. Pemphigus and dermatitis herpetiformis. Deficiency diseases. Collagen diseases—collagenoses. Miscellaneous erythemas and eruptions. Diseases of subcutaneous fat. Endocrine diseases, hyperhidrosis, atrophies. Cutaneous manifestations by products of metabolism. Some diseases of congenital origin. Dermal tumors. Epidermal tumors. Pigmented nevi and melanomas. Leukemias, lymphomas and mycosis fungoides. Diseases of the skin appendages. Diseases of the mucous membranes. Diseases of the cutaneous blood vessels. Disturbances of pigmentation. Tropical diseases of the skin. Index.

Note: A standard treatise on skin diseases written from the clinical viewpoint. It is used both as a textbook for undergraduate medical students and as a reference or office book for general practitioners of medicine who treat skin diseases or at least wish to differentiate them from other conditions with dermatological manifestations. Diseases are classified according to etiology and the commoner dermatoses are emphasized. The book is very fully illustrated, and the majority of the illustrations are reproduced from photographs of case histories. The first edition was published in 1930 and the third edition in 1946. This fourth edition represents an extensive revision with important changes in most chapters. The style is now more concise. Many diseases not described in previous editions have been added, and the chapters on [illegible] have been much revised and augmented. Although comparatively the number of illustrations has been reduced, many new illustrations have been added. A selection of literature published since the third edition was written has been added to the bibliographies.

BAER, RUDOLF L., editor

Atopic dermatitis. Philadelphia New York University Press distributed by J. B. Lippincott Company 1955 112 p. illus. 19 cm. $2.50 3782

Contents: The development of the concept of atopic dermatitis, by R. L. Baer. Atopic dermatitis—its clinical and histologic picture, by M. B. Sulzberger. Certain stigmata associated with atopic dermatitis, by R. R. Kierland. Atopic dermatitis—a discussion of certain theories concerning its pathogenesis, by A. Rostenberg, Jr. The management of atopic dermatitis, by T. H. Sternberg and V. C. Newcomer. Index.

Note: A small but valuable book on a common skin disease which is still far from completely understood. The six contributors are all eminent authorities on dermatology. Each one has written a compact and up-to-date survey of the facet of the problem assigned to him by the editor and in most cases has incorporated results from the literature as well as from his own experience. The terminal paper is a concise, critical survey of drugs and other measures in the treatment of atopic dermatitis. The book is useful to graduate general practitioners as a guide to the treatment of patients and to specialists as a critical survey of current knowledge with reference to the significant literature.

BLANK, HARVEY AND GEOFFREY RAKE

Viral and rickettsial diseases of the skin, eye and mucous membranes of man. With a foreword by Donald M. Pillsbury. 36 full color illustrations as 6 plates. 63 black and white illustrations. Full color insert "Reactions to smallpox vaccination." Boston Little Brown and Company 1955 285 p. illus. (part col'd) 24 cm. $8.50 3783

Contents: Introduction: the nature of viruses and rickettsiae. Diagnosis of viral and rickettsial infections. Herpes simplex. Chickenpox and herpes zoster. Smallpox, cowpox and vaccinia. Exanthematous diseases. The common cold. Herpangina. Warts. Molluscum contagiosum. Viral diseases contracted from animals. Epidemic keratoconjunctivitis. Chlamydozoaceae. Rickettsial diseases. Author index. Subject index.

Note: A comprehensive manual of the viral and rickettsial diseases that affect primarily the skin, conjunctiva and mucosae of the external orifices of the body. Also described are manifestations in the same regions of viral and rickettsial diseases of other parts of the body. The descriptions of the individual diseases vary considerably but clinical features, pathology, infectivity and treatment are always discussed as fully as the particular disease warrants. When there is no treatment, the authors so state in terms such as the following: "There is no specific treatment. fever may be controlled by use of salicylates." The illustrations, which are of high quality, are a principal feature. Selected but extensive references to the literature are given. The book is directed primarily to graduate practitioners of medicine, including general practitioners of medicine, including general practitioners, ophthalmologists and dermatologists.

EPSTEIN, ERVIN

Skin surgery. 242 illustrations on 101 figures. Philadelphia Lea & Febiger 1956 228 p. illus. 24 cm. $7.50 3784

Contents: Why dermatologic surgery? by M. B. Sulzberger and V. H. Witten. Part I, Cold steel surgery: General principles of skin surgery, by E. Epstein and R. S. Pollack. Scalpel surgery, by C. S. Lincoln and R. C. [illegible]. Indications and methods of skin grafting, by A. E. Smith and M. [illegible]. Oral-plastic surgery, by B. G. Sarnat. The surgical treatment of advanced visible cancer, by R. S. Pollack. The biopsy, by M. R. Caro. Part II, Electrosurgery: Endotherapy and electrocoagulation, by J. Ayres, Jr. and S. Ayres, III. Cautery excision, by E. Epstein. Electrodesiccation and curettage, by N. N. Epstein. Epilation, by C. S. Lincoln, Jr. Part III, Special techniques: The chemosurgical method for the microscopically controlled excision of cutaneous cancer, by F. E. Mohs. Dermabrasion, by C. R. Rein and G. [illegible]. Cryosurgery, by H. V. Allington and R. R. Allington. Therapeutic tattooing, by E. Epstein. Surgery of the nails, by E. Epstein. Index.

Note: A variety of techniques is described in this book, which is directed to graduate physicians including specialists in dermatol-

roentgenography which are of interest to the specialist. Specific diseases are fully discussed, and the textual discussion is supplemented by a variety of illustrations of good quality. The length of the work and its scope have been very substantially increased in the present edition, in order to maintain its purpose as an encyclopedic treatment. Literature references are not included.

MORRISON, WILLIAM WALLACE

Diseases of the ear nose and throat. Second edition Foreword by Arthur W Proetz. New York Appleton-Century Crofts, Inc., 1955 756 p. illus. 25 cm $10 00 3774

Content (abridged) Part I, General considerations. History of the patient. Equipment for the physical examination of the ear nose and throat—anesthesia. The use of chemotherapy the antibiotics, hormone and autonomic therapy in otolaryngology Part II, The diseases of the ear: Anatomy of the ear Physiology of the ear Diseases of the external ear the external auditory canal and the tympanic membrane. Acute inflammation of the tympanic cavity and mastoid cells. Chronic suppurative otitis media and chronic mastoiditis. Complications of otitic suppuration Endaural surgery of the temporal bone. Part III, Diseases of the external nose and the nasal cavities Diseases of the external nose and nasal vestibule. Diseases of the nasal septum. Diseases of the nasal cavities. Part IV The allergic diseases of the respiratory tract. Part V Diseases of the paranasal sinuses. Acute sinusitis. Headache, the neuralgias and cephalalgias of the head and neck. Part VI, Diseases of the throat Diseases of the pharynx. Diseases of the lymphatic structures of the pharynx. Part VII, Diseases of the larynx. Part VIII, Diseases of the trachea, bronchi, esophagus and mediastinum Diseases of the trachea and bronchi. Diseases of the esophagus. Foreign bodies in the larynx, trachea, bronchi and esophagus. Formulary—prescriptions for medications to be used by patients. Symptom index. Subject index.

Note Primarily a textbook for use in courses in medical colleges, this book is also a good office reference book for general medical practitioners. Common diseases are discussed simply practically and in adequate detail but rare ones are dealt with briefly Typical information about a disease covers the following points. definition, etiology pathology symptoms, physical signs and diagnosis, differential diagnosis, course and outcome, and treatment both medical and surgical. However only simple surgical techniques are fully described. There are 359 figures, all reproduced from drawings by the author The first edition was published in 1948. In this second edition the principal changes are in the lists of references included at the ends of chapters. A selection of recent literature has been added to some of these.

PALMER, EDDY D

The esophagus and its diseases. Illustrations by Phyllis Anderson New York Paul B Hoeber Inc, Medical Book Department of Harper & Brothers 1952 553 p. illus (part col'd) 24 cm $15 00 3775

Contents. Anatomy Clinical physiology Congenital atresias and fistulas. Diverticulosis. Diaphragmatic hernias. Achalasia and cardiospasm. Other mechanical disturbances. Foreign bodies. Ruptures and perforations. Esophagitides. The esophagus in acute infectious diseases. Tuberculosis. Syphilis. Mycoses. Animal parasites. Esophagitis due to corrosive agents. Ulcers. Strictures and webs. Benign epithelial tumors. Carcinoma. Benign nonepithelial tumors and cysts. Sarcomas. Varices and hemorrhage. Allergy drug damage the endocrinopathies. Diffuse collagen diseases. Deficiency diseases Extrinsic disease Index.

Note The disorders of the esophagus are covered comprehensively in this work The chapter titles indicate the wide scope. Diseases and their treatment are discussed fully and many illustrative cases are described. The text is based on a survey of the international literature including the author's own writings There are 95 illustrations. The author is Chief of the Gastrointestinal Section of Walter Reed Hospital of the United States Army Medical Center

PARKINSON, ROY HARVEY

Tonsil and allied problems New York The Macmillan Company 1951 432 p. illus. 26 cm $12 00 3776

Contents. The ancient tonsil and tonsil lore. Muscles of the pharynx and eustachian tube. Potential spaces around the tonsil. Nasopharynx, adenoid, lingual tonsil, and other allied lymphatic structures. Carotid arterial system. Veins draining the tonsil region. Nerve supply of tonsil and allied structures. Lymphatic drainage of the tonsil. Histology of the tonsil and allied structures. Embryology and postnatal cycles of the tonsil. Physiology of the tonsil. Acute inflammatory diseases of the tonsil. Chronic inflammatory diseases of the tonsils. Tumors involving the tonsil and adenoid region. Miscellaneous conditions involving the tonsils. Indications and contraindications for tonsillectomy Technique of tonsillectomy Complications following tonsillectomy Index.

Note A comprehensive study of a small part of the body that is responsible, according to one authority for one-third of all operations performed on the urban population of the United States of America. Currently employed surgical techniques are fully described, but there is no special emphasis on this phase of the subject. Equal emphasis is given to diagnosis, and the discussions of the circulatory system, nerve supply histology etc., are as full as the subject requires. There are 150 figures and a bibliography of 53 references.

VAN ALYEA, OLIVER EDMOND

Nasal sinuses an anatomic and clinical consideration Second edition. Baltimore The Williams & Wilkins Company, 1951 327 p. illus (part col'd) 23 cm. $9 00 3777

Contents. Histopathology Nasal physiology Acute nasal infection. Maxillary sinus. Frontal sinus. Ethmoid sinus. Sphenoid sinus. Sinus disease in children. Allergy Tumors. Complications. Relation of sinuses to other conditions. General therapeutic measures. Subject index. Author index.

Note A detailed treatise of interest to advanced medical students, general practitioners, and specialists in rhinology It is based both on the author's own studies and clinical observations and on the pertinent literature. In the present edition it has been fully revised. The chapter on allergy is new Tumors are discussed at greater length and the discussion of therapeutic matters and measures has been revised to include the antibiotics and other important advances. Each of the chapters is now accompanied by revised selected references. There are 141 figures.

WILLIAMS, HENRY L

Ménière s disease. Springfield Ill. Charles C Thomas, 1952 349 p illus. 22 cm. (American lecture series Publication no 129 A monograph in The Bannerstone Division of American lectures in otolaryngology, audiology and broncho-esophagology edited by Norton Canfield) $7 00 3778

Contents. Ménière's description and some misconceptions. Anatomy and physiology of the labyrinth. Histopathology and physiopathology Etiology vertiginous crisis and loss of hearing. Diagnosis and differential diagnosis. Fundamental identity of allergy and autonomic dysfunction. Medical treatment. Surgical treatment. Recapitulation and conclusions. Index.

Note. A comprehensive, critical monograph on the ear disease named after Prosper Ménière. In the first chapter the author compares Ménière's original papers with the misconceptions that have grown up about the syndrome. In the succeeding chapters he covers the basic anatomy physiology and pathology then goes on to present a critical survey of contemporary diagnosis and treatment, based partly on the literature and partly on his own experience. Substantial bibliographies are included in the chapters.

YEAR BOOK OF THE EYE, EAR NOSE AND THROAT (1955–1956 Year Book series) The eye edited by Derrick Vail The ear, nose and throat, edited by John R. Lindsay Chicago Year Book Publishers, Inc. 1956. 471 p illus. 20 cm $6 50 3779

Contents. The eye The orbit and adnexa. The conjunctiva and cornea. The uvea. Refraction and motility The lens and cataract. The retina. Glaucoma. Surgery The Neurology and visual fields. The retina. Glaucoma. Surgery The ... any Miscellaneous. The ear Vestibular function and vertigo. Tubal function and inflammatory ... Hearing and hearing tests. Fenestration and stapes mobilization. Ménière's disease. Otosclerosis. ... cellaneous. The nose and throat The nose and sinuses. The mouth. The salivary glands. The hypopharynx and nasopharynx.

750 illustrations and 18 colored illustrations on 11 plates. Philadelphia Lea & Febiger, 1954 1,503 p. illus. 26 cm. $22.00 3790

Contents (abridged) Introduction. Diseases of the skin. Class I, Hyperemias and inflammations. Class II, Cutaneous vascular disease. Class III, Hypertrophies. Class IV Atrophies. Class V, Pigmentary affections. Class VI, Diseases of metabolism. Class VII, Neoplasms. Class VIII, Chronic specific inflammations. Class IX, Neuroses. Class X, Parasitic affections. Diseases due to plant parasites. Diseases due to animal parasites. Class XI, Diseases of the appendages. Diseases of the sweat glands. Diseases of the sebaceous glands. Diseases of the hair and hair follicles. Diseases of the nails. Diseases of the mucous membranes in proximity to the skin. Index.

Note A long-established text and reference book, the first edition of which was published in 1913 and the seventh edition in 1948. Its coverage of diseases is encyclopedic and includes rare as well as common diseases. However, the treatment of individual diseases is uneven. In some instances, it is obvious that the reader is expected to turn to ... cited paper or text for an adequately full discussion. Hundreds of references to the international literature are included, but references to older literature predominate. Comparing the eighth edition to the seventh, much information has been added and some older material has been deleted, but the book has not been given the thorough revision from beginning to end that is needed.

PECK, SAMUEL MORTIMOR AND GEORGE KLEIN

Therapy of dermatologic disorders Including a guide to diagnosis and a dermatologic pharmacopeia. Philadelphia Lea & Febiger 1951 383 p. illus. 24 cm. $6.50. 3791

Contents (abridged) Part I, Guide to diagnosis. Part II, Classification and treatment of the various skin disorders. The broad principles underlying dermatologic therapy. Physical therapy in dermatology. Diagnosis and treatment of venereal diseases, by W. Leifer. Part III, Dermatologic pharmacopeia. Removal of medical stains. Index.

Note A compact reference book for the office libraries of medical practitioners. It covers the most common skin diseases in regard to their etiology clinical characteristics, and treatment. Much of the specific data on diagnosis is organized in ... 10-page table entitled "Differential diagnosis of the most common skin diseases." The pharmacopeia section contains an alphabetically arranged list of drugs and of selected proprietary compounds which are useful in dermatologic therapy. In each instance, the drug is described in chemical and physical terms, and its usages and dosage are stated. According to the authors, the contents of the book have been selected on the basis of their own experience. The first-named author is ... member of the faculty of the College of Physicians and Surgeons of Columbia University the second-named, ... member of the faculty of New York Medical College.

PILLSBURY DONALD M AND OTHERS

Dermatology By Donald M Pillsbury Walter B Shelley and Albert M Kligman. Philadelphia W B Saunders Company 1956 1,331 p. 1,117 illus. on 564 figures. 26 cm. $20.00. 3792

Contents Section ... Applied basic principles in diseases of the skin General considerations. The epidermis. Pigment formation. Keratinization. The permeability of skin. Nails. Hair. The glands of the skin. The corium and the subcutaneous tissue. The blood vessels and nerves of the skin. Basic pathologic patterns. Fundamentals of cutaneous mycology. Fundamental cutaneous bacteriology. Section II, Basic principles and clinical applications of allergy and hypersensitivity. Introduction—definition and classification of allergic diseases. Serum sickness—anaphylaxis, atopy. Allergy of infection. Drug allergy. Contact dermatitis of the allergic type. Section III, Principles of diagnosis. The medical history in dermatologic patients. Clinical examination and regional diagnosis. Diagnosis—types of skin lesions. Distribution patterns as an aid to diagnosis. Section IV Dermatologic therapy. Topical and systemic therapy. Ionizing radiation therapy. Surgical dentistry and ultraviolet light therapy. Section ... Cutaneous medicine. Dermatitis and eczema. Bacterial infections of the skin. Systemic bacterial infections. Spirochetal infections. Fungal infections. Viral and rickettsial infections. Papulosquamous eruptions. Diseases of the blood vessels. Chronic vesiculobullous eruptions. Acne, acneiform eruptions and rosacea. Diseases of the eccrine sweat glands. Diseases of the apocrine glands. Disturbances in pigmentation. Drug eruptions. Disturbances in keratinization. Diseases of the corium and subcutaneous fat. Lupus erythematosus, scleroderma, dermatomyositis, and sarcoidosis. Metabolic and nutritional diseases. Diseases of the hair. Disorders of the nails. Dermatologic parasitology. The lymphomas. Tumors of the skin. Hereditary cutaneous disorders. Psychocutaneous medicine. Reactions to physical agents. Industrial dermatoses. Index.

Note An outstanding work designed for use as ... textbook in medical colleges and as ... reference book by graduate physicians, especially general practitioners. Although it is not cyclopedic, ... wide range of information is presented, the chief emphasis being very rare diseases. The first 10 chapters present basic information on normal human skin. The 42 chapters that follow are all devoted to skin disorders. Both diseases of the skin and the skin manifestations of systemic diseases are covered, but the emphasis is decidedly on the first-mentioned group. Only the most useful methods of diagnosis and treatment are included, and these are discussed in ... straightforward style. There are 564 figures, many of ... hich contain more than one illustration. Most are reproductions of photographs or radiographs, and are well reproduced. The authors are all faculty members of the Department of Dermatology of the School of Medicine of the University of Pennsylvania.

SCHMIDT FREDERICK REHM

Clinical selections in dermatology and mycology With contributions by thirty six specialists from various lands. Springfield Ill Charles C Thomas, 1956 505 p. illus. 23 cm. $10.50 3793

Contents Treponema as an etiologic factor in disease by W F Duggan. Treponema and skin disease. The "collagen diseases," by J. Almeida. Psychosomatic dermatology with specific reference to pruritus and its treatment, by F E Cormia. Eczematous dermatitis, by V Pardo-Castello. Neurodermatitis—circumscribed, disseminated, and acute exudative, by H. L. Arnold, Jr. Comparative pathogenesis of the deep mycoses—the influence of the port of entry by J W Wilson. Latin American contributions to medical mycology with special reference to paracoccidioidomycosis, by L. Mendonça. Coccidioidomycosis (Posada's disease) by P Negroni. Sporotrichosis, by E. Bonilla-Diaz. Chromoblastomycosis, by A. Trejos. Rhinosporidiosis, by D. O. Harbil. Neotropical blastomycoid granulomatosis (South American blastomycosis) Keloidal blastomycosis, by A. Trejos. North American blastomycosis, cryptococcosis, chromoporotrichosis, and geotrichosis. Mucocutaneous candidiasis (moniliasis) Concerning the superficial mycoses. Tuberculosis of the skin, by O. Rizzi. Leprosy—symptomatology diagnosis, and treatment, by A. Romero. Leprosy—bacteriology immunology pathologic anatomy and prophylaxis, by J. M. M. Fernandez. A syndromic synthesis. Miscellaneous bacterial diseases with cutaneous manifestations. Treatment of syphilis, by M. A. Marcial. Yaws (frambesia tropica) by T A. Furtado. Pinta, by F Marquez and C. R. Ross. Viral diseases of interest to the dermatologist, by O. Canizares. The anergic ... lesions, by E. R. Peterson and H. M. Lewis. Rhinoscleroma, by E. Reyes. American mucocutaneous leishmaniasis, by A. Pena-Chavarria. The cutaneous manifestations of onchocerciasis, Chagas' disease, and toxoplasmosis. The pigmentary dermatoses, by L. E. Pardal. Epithelial and melanin ... of melanoma, by M. I. Quiroga. Pigmented nevus and melanoma, by S. W Becker. Familial benign chronic pemphigus, by H. Hailey. Scleroderma-dermatomyositis, by J. M. Borda. Cutaneous manifestations of diseases of lipid metabolism, by S. J. Zakon and H. F Weisberg. Sunlight and skin diseases in the tropics, by H. Carrión-Pablo. Hot climate ... disease or sign? by F Sequest ... and H. Khalily. The deficiency (nutritional) dermatoses. The exanthematic rickettsial fevers. Bartonellosis. Skin diseases caused by arthropods. The cutaneous helminthiases. Odds and ends of dermatology. Books especially consulted by the editor. Index.

Note The titles of all the 53 chapters in this book are given above, and the names of the authors are given for the chapters not written by Dr. Frederick R. Schmidt. The authors of the contributed chapters include physicians practicing in various nations of the Americas, both North and South. In addition, there is one contributor from Hawaii and one from Austria. Dermatologic diseases common to the region extending from the northern border of Mexico to the northern border of Argentina are emphasized. In the typical paper, the clinical picture of ... specific disease is explicitly described, and diagnosis and treatment are discussed. Treatment with simple and readily available remedies is emphasized. Literature references are included in most papers. The volume is directed to general practitioners of medicine and is well indexed for reference use.

ogy The majority are simple procedures which can be carried out in the physician's office however some radical procedures, for instance, removal of an advanced intra-oral cancer are described. Some procedures are alternative therapies for conditions that may be treated by nonsurgical methods. In such instances, the authors point out the advantages of the surgical method. The illustrations include series of step-by-step diagrams of techniques and before-and-after photographs of the results of surgery Literature references are included.

FRAZIER, CHESTER N, AND IRVIN H. BLANK

A formulary for external therapy of the skin Springfield, Ill Charles C Thomas, 1954 118 p illus 22 cm. (American lecture series. Publication no 201 A monograph in the Bannerstone division of American lectures in dermatology, edited by Arthur C. Curtis) $3 25 3785

Content Evolution of the formulary Objectives of external therapy Some principles of treatment. Cleaning the skin. Ointment vehicles. Emollients and protectives. Antipruritics. Anti-infectives. Anti-eczematous and antiseborrheic agents. Antiperspirants. Formulary Index.

Note. A modern formulary developed at the Massachusetts General Hospital in Boston and official for use in its clinical services. Most of the space in the volume is devoted to discussions of the principles of action of the ingredients of dermatologic preparations. However formulas are presented, and their form is such that they can be followed by anyone ho is skilled in the compounding of pharmaceutical preparations. Well selected literature references are included.

LERNER, MARGUERITE RUSH, AND AARON BUNSEN LERNER

Dermatologic medications. Chicago The Year Book Publishers, Inc., 1954 183 p 18 cm $3 50 3786

Contents (abridged) Therapeutic agents. Antihistamines and agents to combat sensitivity and acute tissue reactions. Antipruritic lotions, liniments, ointments. Cleansers and baths. Depigmenting agent. Fungicidal and fungistatic agents. Gelatin for finger-nails. Heavy metal antagonists. Insecticides and insect repellents. Ion exchange resins. Ointment bases and lubricating agents. Protective agents against water oils, organic sol ents and sunlight. Rosacea preparations. Seborrheic dermatitis preparations. Vitamins. Wart removers, keratolytics and caustics. Treatment regimens. Acne vulgaris. Eczematous dermatitis. Chronic atopic dermatitis. Psoriasis. Lupus erythematosus. Punch biopsy procedure. References. Index.

Note A useful little manual of drugs, ointments, protective agents, etc., and of regimens for the treatment of specific skin diseases. It is divided into two parts as show in the above contents. The first part on therapeutic agents accounts for most f the book's length. It describes instances of short, formalized discussions of individual medicines, some of which are trademarked products. For each medicine, there is statement on its chemical nature and sometimes a structural diagram of the molecule. This is followed by notes on its use or uses, mode of action, method f application and other useful information such as cautions and contraindications. The much shorter section on treatment regimens outlines the medication, dosages, diets, etc., recommended for the treatment of specific skin disorders such as psoriasis. The authors are associated ith the Department of Dermatology of the Uni er sity of Oregon Medical School

LEVER, WALTER F

Histopathology of the skin. Second edition 281 illustrations with 8 in color Philadelphia J B Lippincott Company, 1954 518 p. illus. (part col d) 24 cm. $12 00 3787

Contents Introduction. Embryology of the skin. Histology of the skin. Laboratory methods. Morphology of the mesodermal cells. Congenital diseases (genodermatoses) Noninfectious vesicular and bullous diseases. Noninfectious inflammatory diseases. Eruptions due to drugs. Degenerative diseases. Bacterial diseases. Spirochetal diseases. Fungus diseases. Diseases caused by viruses. Metabolic diseases. Systemic diseases of unknown cause. Epidermal tumors. Mesodermal tumors. Pigmented nevi and malignant melanoma. Lymphoma and myelosis. Glossary Index.

Note. A book of primary interest to dermatologists and of some interest to pathologists as well. The background embryology normal histology and laboratory technology are briefly covered in the first three chapters. All of the other chapters are devoted to the pathology of diseases of the skin. Both gross and microscopic clinical features are described, but the emphasis is on the latter, and most of the illustrations are reproductions of photographs of microscopic pathology The book was developed in courses given by the author in Harvard Medical School to graduate students of dermatology A first edition was published in 1949 In preparing this second edition, important changes were made in text, illustrations, and bibliography The material on several diseases included in the first edition has been rewritten because of advances in the knowledge of them, and discussions of several additional diseases have been added. As was true of the first edition, the illustrations are of high quality and are well reproduced.

LEWIS, GEORGE MORRIS

Practical dermatology for medical students and general practitioners. Philadelphia. W B Saunders Company, 1952 328 p. illus. 25 cm. $7.50 3788

Contents. Diagnostic methods. Acne and the seborrheic dermatoses. Pruritus (symptomatic and essential psychogenic factor tions) The eczematous dermatoses. Urticaria, "toxic erythema, and drug eruptions. The so-called collagen diseases. The chronic vesiculo-bullous disorders. The maculo-papulo-squamous diseases. The pyodermas. Fungus infections. Tuberculosis and allied disorders. Syphilis. Virus and other infections. Diseases due to animal parasites. Hyperpigmentation; depigmentation; atrophy Congenital (small) anomalies. Disorders of the mucous membranes. Diseases of the nails and hair Diseases due to physical agents. The skin and other organs. Benign tumors. Metabolic disorders. Premalignant and malignant tumors, including lymphoblastoma. Dermatologic therapy. Dermatologic formulary Bibliography. Index.

Note: Ninety-nine plates, each made up of from one to six reproductions of original photographs, are special feature of the concise guide. The textual descriptions cover symptoms, etiology diagnosis, and treatment, with occasional variations in form. Lists of tests, terms, and a formulary of common medicines, plus a bibliography of general texts and special monographs, round out the usefulness of the book in the general practitioner's library

OBERMAYER, MAXIMILIAN E

Psychocutaneous medicine. Springfield, Ill. Charles C Thomas, 1955 487 p. illus. 22 cm. (American lecture series Publication no. 239 A monograph in the Bannerstone Division of American Lectures in Dermatology, edited by Arthur C. Curtis) $9 75 3789

Contents. Historical considerations. Constitutional factors. Dynamic considerations of the psyche. Theories of mechanisms and methods of study Classification. True dermatoneuroses. Dermatoses in which emotional factors usually constitute an important element. Miscellaneous dermatoses with psychic elements. Known or supposed infections in which psychogenic factors exist. Psychoses and disorders of the skin. Diagnostic approach Treatment. Bibliography Index.

Note A well-organized, critical survey of the literature in English and the recent literature in German bearing on the psychosomatic aspects f diseases of the skin. The author's own extensive publications in the field are included among the literature abstracted. The chapter on theories of mechanisms and methods of study is one of the longest in the book. In it the author classifies the research approaches to psychocutaneous medicine into five categories as follows. psychologic, neurophysiologic, biochemical, allergic, speculative combination of methods, and critically evaluates each approach. In the chapters on dermatoses, the individual disorders are described from the dermatologic and psychiatric viewpoints. Diagnosis and treatment are covered with relati brevity The bibliography contains about 800 references.

ORMSBY, OLIVER S, AND HAMILTON MONTGOMERY

Diseases of the skin. Eighth edition, thoroughly revised. With 666 figures containing

information on anatomy physiology and general care of the normal and diseased skin is outlined in the first three chapters which occupy the first 44 pages. All the rest of the book is devoted to diseases with the material on each disease organized under the subheads "Clinical picture," "Etiology" and "Treatment." Treatment is covered very specifically and in adequate detail. Formulas for ointments, lotions, etc., are included. Selected literature references are included in many of the chapters. There are 233 figures. The book is useful as a text for advanced students of medicine and as an office reference book for general physicians. The author is a member of the faculty of the Harvard Medical School.

TALBOTT JOHN H. AND R. MOLERES FERRANDIS

Collagen diseases including systemic lupus erythematosus polyarteritis dermatomyositis, systemic scleroderma thrombotic thrombocytopenic purpura. New York Grune & Stratton, 1956. 232 p. illus. (part col'd) [illegible] cm. $6.50 3800

Note: Described in this monograph is a group of diseases of connective tissue, all of which were thought to be rare not long ago, but which are now found, when sought, that they are [illegible]. The diseases discussed are named in the book title. All are covered separately from the clinical viewpoint, and such aspects as incidence, etiology and pathogenesis, pathology, clinical findings, laboratory findings, diagnosis, and treatment are discussed concisely. The bibliography contains 143 citations of the international literature. The illustrations include 4 plates reproduced in color.

TOBIAS NORMAN

Essentials of dermatology. Fifth edition. 211 figures 11 subjects in color. Philadelphia J B Lippincott Company 1956 651 p. illus. (part col'd) 21 cm. $8.00. 3801

Contents: Basic survey. The erythema group. The eczema group. Drug eruptions. Psoriasis. The [illegible] bullous diseases. The pyodermas. Diseases due to vegetable parasites. Diseases due to animal parasites. Diseases due to filtrable viruses. Dermatoses due to psychosomatic and nerve disorders. Lichen planus. Diseases due to physical agents. The deep [illegible] dermatoses. Tuberculosis of the skin. Syphilis. Benign tumors of the skin. Malignant growths of the skin. The [illegible] dermatoses. The atrophies of the skin. Keratoses and allied diseases. The peripheral vascular diseases of the skin. Pigmentations. The cutaneous lymphoblastomas. Dermatitis exfoliativa. Diseases of the hair and scalp—Of the sebaceous glands—Of the sweat glands—Of the nails—Of the mucous membranes. Congenital disorders. Dermatologic therapeutics. Eruptions of the hands. Reference library for dermatologists. Index.

Note: [illegible] standard, concise reference volume intended primarily for advanced students of medicine and graduate general practitioners. Most of the space is devoted to descriptions of specific diseases, arranged in groups, as the chapter titles show. The individual diseases are discussed as to etiology, pathology, diagnosis and treatment. Histology is not covered. Most of the illustrations picture the gross pathology of specific diseases. The fourth edition was published in [illegible]. The descriptions of many rare diseases were deleted in preparing this fifth edition; nevertheless, much material was added to result in an increase of 33 pages. Also, there are more illustrations both in color and in black-and-white.

URBACH ERICH

Skin diseases, nutrition and metabolism with the collaboration of Edward B LeWinn. New York Grune & Stratton, 1946. 634 p. illus. 23 cm. $10.00 3802

Contents: Part [illegible]. The influence of nutrition on the physiology of the skin. Metabolism and biochemistry of the skin. Influence of diet on metabolism of the skin. Part II. Nutritional causes of dermatoses. Skin diseases due to malnutrition. Food allergy as cause of skin diseases. Skin diseases due to secondary infections and laboratory [illegible]. Part III. Influence of diseases of the gastrointestinal tract, liver, and pancreas on the skin. Dermatoses due to diseases and dysfunction of the gastrointestinal tract. Dermatoses due to diseases of the liver and pancreas. Part IV. Nutritional therapy of skin diseases. Dermatitis (eczema). Urticaria and related conditions. Psoriasis. Skin diseases due to vitamin deficiency? [illegible]. Diseases of sebaceous and sudoriferous glands. Diseases of the cutaneous blood and lymph vessels. Purpura. Lichen planus. Light dermatoses. Pemphigus and associated diseases. Pyogenic infections of the skin. Cutaneous tuberculosis. Lipoid diseases of the skin. Wounds, ulcers, burns. Pigmentary diseases of the skin. Diseases of the nails. Part [illegible]. Nutritional tables. Index of authors. Index of subjects.

Note: A comprehensive presentation that is of value not only to general practitioners but to specialists in dermatology and allergy as well. It is based on the author's own experience and on an extensive review of the literature. There are 1,312 footnote references to pertinent literature and 66 illustrations. Most of the tables in the appendix are [illegible] in the planning of special diets.

WIENER, KURT

Systemic associations and treatment of skin diseases. With 90 text illustrations. St. Louis The C. V. Mosby Company 1955 556 p. illus. 26 cm. $13.50. 3803

Contents (abridged): Part I. Systemic associations of skin diseases: Systemic lupus erythematosus. Scleroderma. Dermatomyositis (polymyositis). Erythema multiforme exudativum (Hebra). Erythema nodosum. [illegible]. Eczema. Erythroderma exfoliativum (dermatitis exfoliativa). Urticaria. Pruritus. Psoriasis. [illegible] and [illegible] complication. Lichen planus. Pemphigus vulgaris. Dermatitis herpetiformis (Duhring's disease). Herpes zoster, simplex. Diseases of the [illegible]. Hair disorders. Vitiligo. Part II. Systemic treatment of skin diseases: ACTH (adrenocorticotropic hormone), cortisone, hydrocortisone. Hormones and organ extracts. Antibiotics. Sulfonamides. Antihistaminic agents. Metals. BAL (British anti-lewisite, dimercaprol). Quinine group. Vitamins—[illegible]. [illegible]. Diets. Spinal [illegible] therapy [illegible]. [illegible] therapy of skin diseases, [illegible] methods. Index.

Note: A complementary volume to the author's Skin manifestations of internal disorders, St. Louis, 1947. It deals with those diseases which are primarily dermatologic and have marked systemic effects. Both books are of interest to dermatologists and practitioners of internal medicine. In the first part of Systemic associations, individual diseases are described. Although the organization of the chapters varies, incidence, clinical picture, systemic reactions and treatment are discussed for most of the diseases. In the second part, the approach is from the standpoint of systemic treatment by drugs, vitamins, diet, etc. Both parts are based on the international literature and, in this book, there are more than 2,720 literature references. This feature makes the book as much a reference work as it is a manual of diagnosis and therapy. The author is a specialist in dermatology on the staff of Mt. Sinai Hospital and other hospitals in Milwaukee.

YEAR BOOK OF DERMATOLOGY AND SYPHILOLOGY (1955–1956 Year Book series) Edited by Rudolf L. Baer and Victor H. Witten. Chicago Year Book Publishers, Inc., 1956 480 p. illus. 20 cm. $6.50. 3804

Contents: Selected aspects of dermatologic therapy with superficial X-rays and grenz rays. Treatment and prevention. Endocrine therapy. Physical therapy. Other therapy. [illegible] dermatitis, atopic dermatitis and urticaria, allergy. Drug eruptions. Miscellaneous dermatoses. Cancers, precancerous, other tumors. Fungous infections. Other infections, infestations. Venereal diseases and their treatment (exclusive of gonorrhea). Investigative studies. Miscellaneous topics. Index. Index to authors.

Note: This annual publication is edited and organized similarly to the other volumes in the publisher's Year Book series. The chapters are composed of abstracts of articles selected from the world's medical literature. The typical abstract is several hundred words in length and in some instances is supplemented by an editorial note evaluating the author's results or relating them to other work. A reference to the original publication is given in all instances. Illustrative matter from the original publication is frequently reproduced. In this issue, the first article is not composed of abstracts but is a special article written by the editors of the volume. Each annual publication covers the literature of approximately one year, the issue described here being devoted to abstracts of articles in journals received by the editor from December, 1954, through November, 1955.

SHELLEY, WALTER B, AND JOHN T CRISSEY

Classics in clinical dermatology, with biographical sketches Introduction by John H. Stokes. Springfield, Ill Charles C Thomas, 1953 467 p illus 24 cm $10 50 3794

Contents (abridged) Part I, Early workers. Part II, The middle period. Part III A golden age. Part IV More recent observations. Index.

Note An anthology of landmark contributions to dermatology It begins with a selection from R. Willan's *On cutaneous diseases*, London, 1808 and concludes with the reprint of a paper "Tropical anhidrosis, by Stuart D Allen and John P O'Brien from the *Medical journal of Australia*, 1944 All of the selections are in English. Those originally published in other languages have been translated. They are accompanied by biographical sketches of the authors and some portraits.

STRATTON, ERNEST K, AND OTHERS

Atlas of regional dermatology, by Ernest K. Stratton Harry L Arnold, jr, Maurice J Costello, Lewis A Koplik, and Paul Fasal. Springfield, Ill Charles C Thomas, 1953 274 p illus (part col'd) 29 cm $15 00 3795

Content Diseases of the scalp Diseases involving the face and neck (including the ears and eyelids) Diseases of the mouth (including the lips and tongue) Diseases involving the trunk (including the axilla and buttocks) Diseases affecting the arms, forearms, wrists and hands. Diseases of the nails. Diseases affecting the inner thighs, penis, vulva, pubic and perineal areas. Diseases affecting the thighs, legs, feet Leprosy by H. L. Arnold, jr Skin manifestations of the acute infectious diseases, by M. J Costello and L. A. Koplik. Color reproductions of certain dermatoses, by P Fasal. Index.

Note Published in this volume are almost 600 black-and-white reproductions of photographs and 17 reproductions in color The illustrations show examples of micropathology and gross pathology with the latter predominating. They are organized under the headings given in the above contents and are accompanied by legends which describe the disease pictured. Some of the legends are short and serve merely to identify the disease, but most of them are about 20 lines long and provide compact information on etiology symptoms, diagnosis and treatment. The book is intended for graduate medical practitioners and is a valuable aid in rapid diagnosis.

SULZBERGER, MARION B, AND FRANZ HERRMANN

The clinical significance of disturbances in the delivery of sweat. Springfield Ill Charles C Thomas 1954 212 p illus 22 cm (American lecture series No 178 A monograph in the Bannerstone Division of American Lectures in Dermatology edited by Arthur C Curtis) $6 75 3796

Content Part I, In eathyth approaches Quantitative assays of "sensible sweating. Quantitative assays of insensible cutaneous perspiration. Part II, Pathogenesis and characteristics of disturbances in the delivery of sweat Hyperhidrosis Hypohidrosis or anhidrosis Dyshidrosis (disturbances in sweating which are not characterized by either purely excessive or purely diminished sweating) Part III, Therapy of the most common disturbances Therapy of hyperhidrosis. Therapy of anhidrosis (and hypohidrosis) Therapy of dyshidrosis. Summary and inferences. Bibliography Index.

Note A compact, monographic summary of the authors' experiments and observations in the Department of Dermatology and Syphilology of the New York University Post-graduate Medical School and of the related work of other researchers The first part describes both the methods of measuring sweat delivery and the results obtained by the authors with these methods on a number of subjects. The results are summarized under such headings as 'Quantity and regional distribution of thermal sweat on body surface and "Sex differences in the quantity of thermal sweat. Part II which presents the clinical aspects is the largest part. It describes a wide variety of disturbances and includes case histories. In the third part, the therapies, including some of the proprietary preparations that have been used or proposed are discussed. However the authors conclude that present therapies for control of disturbances of the sweat are unsatisfactory and suggest further basic study The bibliography lists 242 references. Three papers published in 1953 are listed, but the systematic coverage of the literature appears to have ended with that published in 1952.

SULZBERGER, MARION B, AND JACK WOLF

Dermatology essentials of diagnosis and treatment. Chicago The Year Book Publishers, Inc, 1952 592 p illus. 22 cm. $10.00 3797

Contents General dermatologic management. Eczematous dermatoses. Urticaria—giant hives. Atopic dermatitis. Dermatoses due to fungi. Acne vulgaris and other acneform dermatoses. Pyodermas. Sulfonamides—calciferol—cortisone-ACTH. Psoriasis and seborrheic dermatitis. Bullous and vesicular dermatoses. Zoonoses (diseases due to animal parasites) Common tumors of the skin. Miscellaneous dermatoses. Drug eruptions. Miscellaneous skin disorders. Early syphilis. Other forms of syphilis. Index.

Note A revision of the author's well-known *Dermatologic therapy in general practice*, of which the third edition appeared in 1948. Although it bears a new title, the purpose of the work is unchanged, and its content has been changed only to the extent necessary to bring it abreast of new developments. Most of the revised material pertains to the newer antibiotics, ACTH-cortisone etc. Chapter viii, for instance, has been completely rewritten. Although "sulfonamides still appears in its title, the authors state in its text that except in the rarest of exceptional circumstances, the topical application of sulfonamides no longer has a place in dermatologic therapy The book remains an introduction for medical college students and a reference book for general practitioners of medicine.

SUTTON, RICHARD L, JR.

Diseases of the skin Eleventh edition. With 1972 illustrations. St. Louis The C. V Mosby Company, 1956 1 479 p. illus. 27 cm. $29 50 3798

Contents Anatomy Embryology Physiology Symptomatology and pathology Etiology Diagnosis. Treatment. Dermatoses due to physical agents. Dermatoses due to chemical agents. Dermatoses due to viruses. Dermatoses due to rickettsiae. Dermatoses due to bacteria. Dermatoses due to fungi. Dermatoses due to animals. Dermatoses due to metabolic disorder Dermatoses due to senile disorder Dermatoses due to pigmentary disorder Dermatoses of neurologic and psychiatric origin. Dermatoses of undetermined cause. Malformations and neoplasms of the skin and adjoining mucosa. Diseases affecting especially the cutaneous appendages. Diseases affecting the mucosa adjoining the skin. Index.

Note The first edition of this work, written by the father of the author of the present edition was published in 1916. In its many editions the work has been recognized for four decades as standard and authoritative. Its style is concise, and its scope is cyclopedic. Generally speaking, it provides for every disease included, discussions of symptoms, etiology treatment, descriptions of selected cases and literature references In most instances, there is also one or more illustrations from photographs.

SWARTZ JACOB HYAMS

Dermatology in general practice Foreword by C Guy Lane. Baltimore The Williams & Wilkins Company 1953 581 p illus. 24 cm. $11 00 3799

Contents. General considerations. Care of the normal skin Care of the abnormal skin. Diseases of the hair and scalp Skin diseases of the face. Skin diseases of the trunk Skin diseases involving the extremities. Mycotic infections. Exanthemata Syphilis. Miscellaneous Index.

Note A successor to J H. Swartz and M G Reilly *Diagnosis and treatment of skin diseases*, New York, 1935. It is a concise presentation, written from the viewpoint of the general practitioner of medicine who is not a specialist in dermatology but nevertheless treats many cases requiring dermatologic knowledge The book

W. R. Johnson. The significance of localized vasoconstrictions in multiple sclerosis, by R. M. Brickner. Part Anatomic and chemical aspects of the myelin sheath. The ultrastructure of the nerve myelin sheath, by F O. Schmitt. The chemistry of myelination and demyelination, by W M. Sperry and H. Waelsch. Part vi, Pathologic aspects of the demyelinating diseases. Pathology of multiple sclerosis, by H. M. Zimmerman and M. Netsky. Diffuse sclerosis and other cerebral demyelinating processes, by C. Davison. The pathology and pathogenesis of encephalomyelitis associated with vaccination and the exanthems, by K. H. Finley. The naturally occurring demyelinating diseases of animals, by L. S. King and M. C. Meehan. Part vii, Symptoms and signs, clinical course and diagnosis of multiple sclerosis: Retrobulbar neuritis in multiple sclerosis, by F J. Lambdin. Sheathing of the retinal veins in multiple sclerosis, by C. W Rucker. The ocular findings in multiple sclerosis, by M. Bender and L. Rangell. The syndrome of the median longitudinal fasciculus, by M. B. Bender and E. A. Weinstein. The electro-encephalogram in multiple sclerosis, by H. Jasper and others. The cerebrospinal fluid in multiple sclerosis, by D. A. Freedman and H. H. Merritt. Cerebrospinal fluid examination in diagnosis of multiple sclerosis, with emphasis on the quantitative gold reaction, by T J. C. von Storch and others. The mental changes associated with multiple sclerosis, by F J. Braceland and M. E. Giffin. Some psychodynamic factors in multiple sclerosis, by R. R. Grinker and others. The results of psychometric and personality tests in multiple sclerosis, by M. Harrower. The course of multiple sclerosis as determined by autopsy proven cases, by S. Carter and others. Multiple sclerosis—prognosis for ambulatory and nonambulatory patients, by J. A. Lazarte. On the diagnosis of multiple sclerosis, by F. Kennedy. The effect of injuries and illness on the course of multiple sclerosis, by M. Kurtzke. The effect of pregnancy on multiple sclerosis and its management, by A. J. R. Tillman. Part viii, Current treatment of multiple sclerosis: The treatment of multiple sclerosis, by T J. Putnam. The problems of rehabilitation in multiple sclerosis, by H. A. Rusk. A survey of the maladjustment problems in multiple sclerosis and the possibilities of psychotherapy, by O. R. Langworthy. Cumulative bibliography. Index. List of members.

Note. A collection of original papers prepared for the meeting mentioned in the book's title. A very wide range of information is included. Many of the chapters are accompanied by excerpts of the discussions at the meeting and by lists of references.

BENDER, MORRIS B

Disorders in perception with particular reference to the phenomena of extinction and displacement. Springfield, Ill. Charles C Thomas, 1952 109 p. illus. 22 cm. (American lecture series. Publication number 120. A monograph in American lectures in neurology) $3.00. 3809

Contents. Introduction. Modes of stimulation and the phenomenon of extinction. Sensory phenomena obtained on simultaneous stimulation in the normal. Extinction phenomenon in disease. Special studies in extinction. Extinction and the phenomenon of sensory displacement. Theories on extinction. Summary. Bibliography. Index.

Note. The results of series of studies made by the author and his collaborators between 1943 and 1950 at the United States Naval Hospital in San Diego, California, and at the Laboratory of Psychophysiology of New York University-Bellevue Medical Center. Among the author's findings are (1) double simultaneous stimulation may reveal sensory changes not revealed by single stimulation, (2) spinal cord lesions as well as cerebral disorders may produce extinction of perception, ( ) there is well-defined spatial pattern among the areas which yield extinction, dominance, or displacement, and (4) extinction of sensation is never an isolated disorder.

BONICA, JOHN J

The management of pain with special emphasis on the use of analgesic block in diagnosis prognosis, and therapy 785 illustrations on 444 figures. Philadelphia. Lea & Febiger 1954 1,533 p. illus. 26 cm. $20.00 3810

Contents. Part i, Fundamental considerations. The anatomical bases of pain. Neurophysiological basis of pain. The physiopathological basis of pain (types and mechanisms of pain). The psychologic basis of pain, by H. S. Ripley. The mental and physical effects of pain. Part ii, Methods used in management of pain. Section i, Analgesic blocks: History and general principles of the management of pain with analgesic block. Fundamental considerations. Technic of nerve blocking—blocking the cranial nerves—blocking the somatic spinal nerves—the autonomic nervous system—subarachnoid block—peridural block—local block—the intravenous administration of local anesthetic agents in the management of pain. Section ii, Other methods used as adjuvants to analgesic blocking in management of pain. The use of opiates and other analgesics in the management of pain. Psychotherapeutic methods in the management of pain, by H. S. Ripley. Physical therapeutic methods in the management of pain, by C. Williams. Orthopedic methods in the management of pain, by W G. Peterson. Roentgen therapy in the management of pain, by F Rigos. Neurosurgical methods in the management of pain, by J. T. Rehme. Part iii, Pain syndromes. Section i, General principles of management. Examination of the patient. Regional pains and summary of etiology, differential diagnosis and examination. Section ii, Pain of neurogenic origin—the neuralgias. General considerations of neuritis and neuralgia. Neuralgias of the face, head, and neck. Cervicobrachial neuralgia. Thoracic neuralgia. Lumbar and lumbosacral neuralgia. Section iii, Pain of neurogenic origin—causalgia and other reflex dystrophies, pain after amputation, and central pain. Causalgia and other reflex dystrophies. Pain after amputation. Central pain. Section iv, Pain consequent to peripheral vascular diseases. General considerations of peripheral vascular disease. Diseases of the peripheral arteries—veins. Section Pain of somatic origin (pain due to disorders of the muscles, joints, bones, and skin). General considerations of musculoskeletal pain. Musculoskeletal pain of various bodily regions. Pain due to lesions of the skin (including postoperative pain). Section vi, Pain of visceral origin and allied disorders: Headache and other visceral disorders of the head and neck. Visceral pain and other visceral disorders of the chest. Abdominal visceral pain. Section vii, Pain associated with cancer and other neoplastic diseases. General considerations of cancer pain. Management of cancer pain in the head, neck and upper extremity. Management of cancer pain in the trunk and lower extremities. Index.

Note. A very comprehensive work directed to practitioners of medicine. It has special emphasis as noted in the subtitle, but is not limited to analgesic block or for that matter to anesthesia. Surgical methods are included also, and for such pain syndromes as major (primary) trigeminal neuralgia, it is made clear that surgery is the only known method of cure. Full discussions of pain mechanisms and etiology are included. The illustrations include many helpful diagrams of sites of pain and areas affected by specific nerve blocks. Selected and fairly extensive lists of literature references are included in the chapters.

BOWER, ALBERT G editor

Diagnosis and treatment of the acute phase of poliomyelitis and its complications. Baltimore The Williams & Wilkins Company 1954 257 p. illus. 24 cm. $6.50. 3811

Contents. A modern concept of the treatment of acute poliomyelitis with particular reference to cases with respiratory insufficiency, by A. G. Bower. Diagnosis and differential diagnosis of poliomyelitis, by W F Frank. Medical management of the patient with acute poliomyelitis—general considerations, by E. G. Kneel. The role of the otolaryngologist in the treatment of poliomyelitis, by E R. Cohen. Pulmonary complications of acute poliomyelitis with respiratory insufficiency from an X-ray standpoint, by G. Jacobson and others. Observations on prevention and treatment of pulmonary complications of the tracheotomized respirator patient, by R. Dunton. The detection and care of the patient with respiratory difficulty, by E. Austin. Special nursing procedures for respiratory poliomyelitis patients, by E. Austin and E. Kosk. Physical medicine in the treatment of acute poliomyelitis, by E. Austin. The role of the obstetrician in the management of poliomyelitis, by P Hara. Mechanical apparatus, by C. W Dail. Transfer of respirator patients to other locations, by C. W Dail and E. Austin. Biochemistry and electrolyte changes in poliomyelitis, by J. E. Cleveland. Orthopedic treatment, including bracing, by C. L. Lowman. Experience and experience of the poliomyelitis team of the Washoe County Medical Society Reno, Nevada, W A. O'Brien III, and associates. Index.

Note. An authoritative and practical manual addressed to graduate practitioners. It is based largely on the experience gained in the handling of approximately 17,000 cases of acute anterior poliomyelitis at the Los Angeles County Hospital. The various aspects of the care and treatment of this disease treated in the chapter titles given above are treated compactly and explicitly. Special problems, such as the transfer of patients in respirators from the hospital to another location or for care, are discussed. The terminal paper is an exception. It deals specifically with the organization of medical team in small city to give poliomyelitis patients the best possible care, and with the experience of this team in providing this care.

NEUROLOGY

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE

Psychopharmacology A symposium organized by the Section on Medical Sciences of the A A A S and the American Psychiatric Association and presented at the Berkeley meeting December 30, 1954 Edited by Nathan S Kline. Foreword by Winfred Overholser Washington, D C American Association for the Advancement of Science, 1956 165 p illus. 23 cm $3 50 3805

Contents Clinical observations with chlorpromazine, by L. H. Margolis and others. Clinical application of chlorpromazine, by V Kinross-Wright. Clinical applications of chlorpromazine in psychiatry by A. A. Sainz. Considerations on the cerebral action of reserpine, by A. A. Sainz. Psychiatric use of reserpine and chlorpromazine—results of double-blind studies, by L. E. Hollister and others. Clinical applications of reserpine, by N S. Kline. Clinical trial of reserpine in psychotic and psychoneurotic illnesses, by A. E. Bennett. Pharmacology of chlorpromazine, reserpine, and related drugs, by F H. Meyers. Studies on mescaline IV—Antagonism between mescaline and chlorpromazine, by H. C. B Denber and S. Merlis. Mechanism of action of lysergic acid diethylamide, serotonin, and related drugs, by M. E. Jarvik. Index.

Note Published in this volume are the papers and discussions of the first major conference held to share experience and views on the new drugs, particularly chlorpromazine and reserpine, for the treatment of mental illness. Most of the participants in the symposium were staff members of hospitals that treat mental diseases or members of the faculties of medical colleges in the United States of America, and most of the papers are based on actual experience in treating patients with these drugs. Although largely of historical interest now the volume is of interest for the portrayal it gives of experts' reaction to new and apparently revolutionary drugs.

AMERICAN PSYCHIATRIC ASSOCIATION

An evaluation of the newer psychopharmacologic agents and their role in current psychiatric practice Papers presented at a Regional Research Conference held under the joint auspices of the American Psychiatric Association, Galesburg State Research Hospital, and the University of Illinois College of Medicine, Galesburg Illinois, September 16 and 17 1955 Washington D C American Psychiatric Association 1956 129 p illus 23 cm. (American Psychiatric Association Psychiatric Research Reports 4 April 1956 Edited by members of the Committee on Research Jacques S Gottlieb chairman) $2 00 3806

Content Symposium The neurophysiology and neuropharmacology of the new drugs. The experimental electroencephalographic approach to psychopharmacology by F Rinaldi. The effects of hallucinogenic and tranquilizing drugs on the serotonin evoked uterine contractions, by E Costa. Discussion of papers on basic observations of new psychopharmacological agents, by H. E. Himwich. Discussion of symposium, P Bailey moderator Symposium, The relative place of drugs in the various psychiatric syndromes Improved behavior patterns in the hospitalized mentally ill with reserpine and methyl-phenidylacetate, by J T Ferguson. The effects of reserpine and methyl-phenidylacetate (Ritalin) in mental defectives, spastics, and epileptics, by C. H Carter Comparative effects of amobarbital, reserpine and chlorpromazine on moderately disturbed psychotic patients with long histories of hospitalization, by L. H. Rudy and others. Physiologic and neurologic responses to chlorpromazine—their clinical significance and their management, by F J Ayd, Jr Use of reserpine in chronic non-disturbed psychotics, by J Boudwin and N S. Kline Symposium, The significance and management of the complications resulting from new drugs. The major complications of treatment of psychotic states with chlorpromazine and reserpine and their management, by D. Goldman. Clinical trial of a new phenothiazine compound, NP-207, by V Kinross-Wright. Symposium, The role of drug therapies in current and future psychiatric practice In experimental investigation of factors influencing drug action, by J Masserman. Round-table discussion F Gerty moderator.

Note: The papers published in this volume represent a considerable range of experience with the recently introduced psychopharmacologic drugs such as reserpine and chlorpromazine. The discussions, which are reported fully rather than in excerpt, add considerably t the value of the volume. Literature references are included for most of the papers.

AMERICAN PSYCHIATRIC ASSOCIATION

Proceedings of the Round Table on Lysergic Acid Diethylamide and Mescaline in Experimental Psychiatry, held at the annual meeting of the American Psychiatric Association, Atlantic City, New Jersey, May 12, 1955 Edited by Louis Cholden. New York. Grune & Stratton, 1956 85 p 22 cm. $3.00. 3807

Contents Pharmacology of LSD-25 by E. Rothlin and A. Cerletti. Studies in routes of administration and counteracting drugs, by P H. Hoch. Biochemical reflections on the psychosis problem, by M. Rinkel. The effect of Frenquel on EEG changes produced by LSD and mescaline, by H. E. Himwich. The clinical uses of LSD by R. A. Sandison. The LSD psychosis as a transaction between the psychiatrist and patient, by C. Savage. Studies with niacin and LSD by A. Hoffer. Mescaline and the other world, by A. Huxley Some observations on normal volunteers and patients, by H. A. Abramson. Brain effects of LSD in animals, by E. Evarts. Preliminary studies on the metabolism of LSD, by E. S. Boyd. Summary and discussion, by H. Fabing. Index.

Note A collection of the papers presented and the discussion that took place at the round table mentioned in the book's title. The papers are short and somewhat informal. The papers and discussions together add up t an exchange of experience among psychiatrists who have used lysergic acid diethylamide (LSD) and mescaline in the experimental investigation of psychotic states. Several other psychopharmacologic drugs are also mentioned.

ASSOCIATION FOR RESEARCH IN NERVOUS AND MENTAL DISEASES

Multiple sclerosis and the demyelinating diseases. Proceedings of the association, December 10 and 11, 1948 New York. With 153 illustrations and 124 tables. Baltimore The Williams & Wilkins Company, 1950. 675 p. illus 23 cm (Association for Research in Nervous and Mental Diseases. Research publications. Volume XXVIII. Editorial board Henry W Woltman and others) $12.00. 3808

Contents Part Multiple sclerosis—historical retrospect, by W Thamm Part II, Ecology of multiple sclerosis The geographic distribution of multiple sclerosis and its estimated prevalence in the United States, by C. C. Limburg. Multiple sclerosis in rural community by A. R. MacLean. The social significance of multiple sclerosis, by L. C. Kolb. Part III, Etiology of the demyelinating diseases Critique of theories concerning the etiology of multiple sclerosis, by H. H. Reese Demyelination resulting from endogenous toxins, by A. B. Baker Demyelinating diseases of animals, by J. R. M. Innes. Experimental production of encephalomyelitis in rhesus plus, by E. C. Alvord, Jr and L. D. Stevenson. Experimental studies on acute disseminated encephalomyelitis in rhesus monkeys by E. A. Kabat and others. The effect of starvation on the myelin sheaths of the peripheral nerves of rats, by R. L. Swank and O A. Bessey Emotional stress in relation to attacks of multiple sclerosis, by R. M. Brickner and D J Simons. The familial occurrence of multiple sclerosis and its implications, by R. P Mackay Blood and plasma transfusions in multiple sclerosis, by L. Alexander and others. Part IV Blood flow in multiple sclerosis Cerebral blood flow in multiple sclerosis, by W M. Tucker and others. The significance of peripheral vascular changes in multiple sclerosis, by G. O. Gey and

COHN, ROBERT

Clinical electroencephalography New York McGraw Hill Book Company, Inc. 1949 639 p illus 23 cm $16 00 3812

Contents. General considerations. Within the range of normal variation. Intracranial space-taking lesions. Cerebral vascular lesions. Arterial hypertension. Encephalopathies. Head injury—recent—old. Epilepsy—petit mal—grand mal and epileptic equivalents. Migraine. Headaches. Normal sleep and disorders of sleep (narcolepsy) Alcoholism. Some important clinical-electric correlations. Disorders of behavior Recommended reference reading. Index.

Note Essentially this work is an atlas of 273 electroencephalograms in which the illustrative matter is preceded by some 20 pages of background information on brain wave phenomena and the electroencephalograph. The electroencephalograms are classified under the headings given in the above table of contents, and each one is accompanied by a specific discussion of the case, the diagnosis, and the features of the EEG. The author is Electroencephalographer and Director of Neurological Research in the U S. Naval Hospital, Bethesda, Maryland, and the book is based on recordings made over a 3-year period at this hospital.

CONGRESS OF NEUROLOGICAL SURGEONS

Clinical neurosurgery, proceedings of the Congress of Neurological Surgeons. Baltimore The Williams & Wilkins Company, 1955 2 v 24 cm o p. 3813

Contents Volume I Changing views on the integration of the brain by G. Jefferson. Trigeminal neuromas with some remarks on the malignant invasion of the Gasserian ganglion, by G. Jefferson. Further concerning compression of the optic pathways by intracranial aneurysms, by G. Jefferson. Panel discussion: The anatomy and physiology of the frontal lobe, by R. Heath and others. Panel discussion Psychosurgery—indications and sequelae, by A. E. Walker and others. Panel discussion The use of fluids and electrolytes in the management of the neurosurgical patient, by H. S. Mayerson and others. Index. Volume II Intracranial astrocytomas, by K. G. McKenzie. Acoustic neuroma, by K. G. McKenzie and E. Alexander jr Surgical treatment of spasmodic torticollis, by K. G McKenzie. Ménière' syndrome, by K. G. McKenzie. Trigeminal tractotomy by K. G. McKenzie. Symposium on cervical trauma, by E. Wheatt and others. Symposium on medico-legal aspects of head injury by W F Caveness and others. List of members. Index.

Note The first of these volumes contains papers and discussions held at the Congress of Neurological Surgeons in New Orleans, Louisiana, in 1953 and the second volume contains similar matter from the congress of the same body held at New York in 1954 Each of the volumes is organized on a similar pattern. Each honors an eminent neurosurgeon and contains several papers by him. These papers are followed by panel discussions participated in by neurologists in attendance at the congresses. The first congress (and the first volume of this set) was held in honor of the British neurosurgeon, Sir Jeffrey Jefferson, and the second honored Professor K. G. Kennedy of the University of Toronto. The other contributors are citizens of the United States of America, most of them being eminent neurologists, neurological surgeons or orthopedic surgeons. According to a note in the preface of the second volume, an error in recording destroyed the record of the panel discussion on cervical trauma hence, that particular discussion is not included. The contents of the two volumes are of potential interest to practicing neurologists and to research workers in neurology

COOPER, IRVING S

The neurosurgical alleviation of Parkinsonism Springfield Ill. Charles C Thomas, 1956 104 p illus 28 cm $8 50 3814

Contents The problem. A review of surgical approaches to the treatment of Parkinsonism. The globus pallidus. Surgical occlusion of the anterior choroidal artery Case reports of anterior choroidal artery occlusion. Chemopallidectomy Case reports of chemopallidectomy Summary Index.

Note. An authoritative survey of the contemporary status of surgical therapy for the alleviation of Parkinson's disease or Parkinsonism. It contains an 11-page chapter on the history of surgical approaches to the treatment of this disease, but it is devoted primarily to techniques developed by the author and his colleagues in the Department of Neurosurgery of St. Barnabas Hospital. Numerous case histories are described together with follow-up studies. Both the techniques of surgical occlusion of the anterior choroidal artery and "chemopallidectomy"—the injection of small amounts of procaine absolute alcohol into selected subcortical areas—are described and fully illustrated. Particularly valuable are the exact diagrams of anatomical landmarks and drawings showing the author's pallidotomy guide in use.

COURVILLE, CYRIL BRIAN

Effects of alcohol on the nervous system of man Los Angeles San Lucas Press, 1955. 102 p illus. 26 cm $4 50 3815

Contents Historical introduction. Alcohol as a medical problem. Mode of action of alcohol on nervous tissues. Cellular changes in the brain in acute alcoholic intoxication and delirium tremens. Hemorrhagic encephalopathy (Encephalitis hemorrhagica superior of Wernicke) Peripheral neuropathy Alcoholic atrophy of the cerebral cortex. Pathology of the chronic alcoholic psychoses (Korsakoff's psychosis, alcoholic pellagra chronic alcoholic deterioration) Postalcoholic commissural and central necrosis (Marchiafava-Bignami disease) Alcoholic cerebellar degeneration. Regressive changes in the spinal cord incident to chronic alcoholism (interfunicular degeneration posterolateral sclerosis) Alcohol and other lesions of the nervous system. An epitome. Bibliography Index.

Note. A series of 123 cases autopsied in the course of 18 months constitute the basis of this monograph on the pathological effects of alcohol on the nervous system. The author has also drawn cases and facts from the published literature as indicated by his nine-page bibliography The cases are not discussed individually and often it is not clear whether the author' conclusions are based on his own cases or on those reported by others. The 25 figures include illustrations of both gross and microscopic pathology The author is Director of the Ramon Cajal Laboratory of Los Angeles County Hospital.

COURVILLE, CYRIL BRIAN

Pathology of the central nervous system a study based upon a survey of lesions found in a series of forty thousand autopsies. Third edition. Los Angeles San Lucas Press, 1950. 473 p. illus. 26 cm. $9 75 3816

Contents Introduction—a survey of histologic alterations occurring in the nervous elements. Congenital malformations and anomalies of the central nervous system. Diseases of the intracranial and intraspinal blood vessels. Infectious diseases of the central nervous system and its envelopes. Effects of trauma on the central nervous system. Intoxications and deficiency diseases. Diseases of unknown etiology, degenerative diseases, abiotrophies. Tumors of the intracranial and intraspinal spaces. Appendices. Index.

Note A medical college textbook based on an extensive series of autopsies. The author has not attempted to describe all pathological conditions of the central nervous system, but the range of diseases covered is a wide one. Common diseases of the brain and spinal cord are all described, with special emphasis on the clinical aspects. Although not lavishly illustrated, the present edition contains more than 200 figures, a considerable number of which are reproductions of photographs of pathological specimens. The second edition was published in 1945 Although the third edition does not represent so extensive a revision as did the second edition, useful material has been added on many topics, and some sections have been rewritten in order to simplify them. Literature references are included.

DAVIDOFF, LEO MAX, AND BERNARD S EPSTEIN

The abnormal pneumoencephalogram. Second edition thoroughly revised with 696 illustrations on 291 figures. Philadelphia Lea & Febiger 1955 518 p. illus. 26 cm. $15 00 3817

Contents Part I, Tumors of the brain. Section I, Neoplasms Introduction. Pathology of brain tumors. Frontal lobe tumors. Temporal lobe tumors. Parietal lobe tumors. Occipital lobe tumors. Parasagittal tumors. Meningiomas of the olfactory groove, tuberculum sellae sphenoid wings and sylvian fissure Tumors of the optic nerves and chiasm. Pituitary adenomas. Craniopharyngiomas. Tumors of the third ventricle Tumors of the anterior portion of the third ventricle. Tumors of the basal ganglia and thalamus. Pineal tumors. Tumors of the corpus callosum. Lateral ventricle tumors. Tumors of the peduncles and pons. Tumors of the posterior cranial fossa. Metastatic tumors.

published in 1941 and was based on only 80 cases. For the present edition the authors drew on their experience in more than 1,000 cases, and on the advances made by other workers in this active field, including especially the methods and findings of the Columbia-Greystone Project, whose report edited by Mettler is described below.

FRIEDMAN ARNOLD P

Modern headache therapy St. Louis The C. V Mosby Company 1951 164 p. illus. 23 cm. $7.50. 3829

Contents: Diagnosis. Treatment. Mechanisms of pain. Headaches associated with intracranial disorders. *Headaches associated with* extracranial disorders. Headache due to systemic disorders. Migraine headache. Psychogenic headache. Posttraumatic headache. Index.

Note: A practical, clearly written summary of the current knowledge bearing on the causes, diagnosis, and treatment of chronic headache. It is addressed to general medical practitioners, and it is so organized that it can be used independently of the literature or as a guide to the important books and articles. The author is Physician-in-Charge of the Headache Clinic of Montefiore Hospital, New York City.

FULTON JOHN FARQUHAR

Frontal lobotomy and affective behavior a neurophysiological analysis. New York W W Norton & Company Inc. 1951 159 p. illus. (part col d) 21 cm. $5.00. 3830

Contents: Historical background—the psychobiological approach. The new functional anatomy of the cerebral cortex. Recent behavioral studies in animals. Lobotomy in man. References. Index

—— Functional localization in relation to frontal lobotomy By John F Fulton. Being the William Withering Memorial Lectures delivered at the Birmingham Medical School 1948. New York Oxford University Press, 1949 140 p. illus. 21 cm. $3.00. 3831

Contents: Introductory appreciation of William Withering. The frontal lobes—the precentral motor cortex. The frontal areas and the orbital surface—chimpanzee. The frontal areas and the orbital surface—man. The cerebellum reconsidered. Index.

Note. The second of these books, as well as the first, is based on a series of lectures. The occasion for the second book was the Thomas William Salmon Memorial Lectures of the New York Academy of Medicine in 1950. The two books complement one another. The earlier one is a skillful summary of the knowledge of the effects of frontal lobotomy to about the beginning of 1948. The second book in effect brings the account down to late 1950. The author is a leading investigator in this field, and he has included also the results of the investigations and experiences of other workers in the field. Substantial reference lists to the published literature are included in both books. There are 53 figures in the earlier book and 29 in the later one.

GIBBS, FREDERIC ANDREWS AND ERNA L. GIBBS

Atlas of electroencephalography Reading, Mass. Addison Wesley Publishing Company Inc., 1950–52 2 v illus. 27 cm. Vol. I $35.00 vol. II, $35.00 3832

Contents (abridged): Volume I, Methodology and controls, normal adults. History. The shape of the problem. Physics and chemistry. Physiology. Methodology. General characteristics of the electroencephalogram. Changes with age, awake. Changes with age, asleep. Other modifying factors. Appendices. Practical aspects of laboratory organization and operation. Minimal requirements of the American Medical Association for acceptable direct-recording electroencephalographs. Specifications for electroencephalographic apparatus recommended by the American Electroencephalographic Society. Instructions for making and applying external electrodes. Bibliography. Index. Volume II, Epilepsy. Perspectives. Neurophysiology. Pathogenesis. Clinical correlates of paroxysmal cerebral dysrhythmia. Diagnostic considerations and methods of classification. Infantile spasms. Petit mal variant. Petit mal. Myoclonic seizures. Grand mal. Psychomotor epilepsy. Jacksonian seizures and focal convulsions—foci in cortical areas other than the anterior temporal. Thalamic and hypothalamic epilepsy. Minimal seizure activity and rare patterns. Methods of activating seizure discharges. Medication. Neurosurgery. Bibliography. Index.

Note: The large-scale reproductions of electroencephalograms are the main feature of this work. Each of the plates is approximately 30 cm. by 20 cm., and there are 210 plates in Volume I and 398 in Volume II. Each plate is accompanied by an interpretative caption. In addition to the captions, each of the volumes contains several background chapters. The work is addressed to electroencephalographers, both those who are already engaged in the recording and interpretation of electroencephalograms and those who are preparing for work in this specialty. The first edition of Volume I was published in 1941. The set described here consists of the second edition of Volume I and the first edition of Volume II.

GRAHAM, JOHN R.

Treatment of migraine. Boston Little Brown and Company 1956 149 p illus. 19 cm. $4.00 3833

Contents: Introduction. Diagnosis. Concept of the dynamics of migraine. Therapy of the acute attack. Prevention. Surgical Relief. Migraine status. References. Index.

Note: The title not withstanding, this book is a compact survey of the entire migraine problem. Therapy is covered in some detail with emphasis on ergot therapy. Also surveyed is the still very incomplete knowledge of the etiology and dynamics of migraine. Many condensed case histories are included as illustrations of various aspects of diagnosis and management. The book is primarily of value to general practitioners of medicine. However such features as the bibliography, which is a guide to the significant modern literature on migraine, make it of value also to specialists, particularly neurologists, who wish an authoritative and up-to-date review of the subject that can be read quickly

GRANICH, LOUIS

Aphasia a guide to retraining. Appendix in collaboration with Sergeant George W Pangle. New York Grune & Stratton, 1947 108 p. 22 cm. $3.00. 3834

Contents: Aphasic defects and related specific issues: The typical speech disabilities. Receptive aphasia. Alexia and related disorders affecting reading. Agraphia and related disorders affecting writing. Arithmetic. The clinical examination. General principles in retraining. Techniques. General defects in brain injury. Appendix. References.

Note. A brief outline of techniques were employed in U. S. Army hospitals for the retraining and rehabilitation of individuals who have suffered impairment of the power to use or understand speech as a result of brain injury. The description of various types of defects and the discussion of basic retraining principles are supplemented by a detailed account of the retraining of eight selected cases.

GREEN JOHN R., AND HARRY F STEELMAN editors

Epileptic seizures A correlative study of historical, diagnostic, therapeutic, educational and employment aspects of epilepsy Based on proceedings of joint meetings of The Seventh Western Institute on Epilepsy the Western Society of Electroencephalography and the American Academy of General Practice (Arizona chapter) on November 10 11 12 1955 in Phoenix, Arizona. Baltimore The Williams & Wilkins Company 1956 165 p. illus. 23 cm. $5.00. 3835

Contents: Part I, Diagnosis of epileptic seizures: The clinical diagnosis of epileptic seizures, by W Penfield. Electroencephalographic diagnosis, by R. R. Aird. Cranial roentgenography—its role in the study of clinical epilepsy by J. J Riordan. Part II, Treatment of epileptic seizures: Medical treatment in epilepsy by M. H. Thomas. Psychomotor epilepsy and the role of emotions in the convulsive disorders—a review and [illegible] suggestion for treatment, by

DOSHAY, LEWIS J, editor

Parkinsonism and its treatment. Philadelphia J B Lippincott Company, 1954 152 p illus. (part col'd) 19 cm $3 00 3823

Contents Introduction, by H. H. Merritt. Anatomy by H. W Magoun. Etiology by D Denny-Brown. Pathology by A. Wolf. Symptomatology by L. J Doshay Drug therapy by L. J Doshay and A. Zier Physical therapy by W B Snow Psychotherapy by S. Brock. Surgical therapy by E. B. Schlesinger. Index.

Note A useful survey for general practitioners of medicine. It presents compactly and clearly the current knowledge on the causes, symptoms, and treatment of the symptom complex known as Parkinsonism. The unsatisfactory state of the basic knowledge is made clear but the physician-reader is given the best available guidance in diagnosis and therapy Medical therapy is especially well covered with exact descriptions of the available drugs, dosages, side reactions to be expected, etc. Selected literature references are included in most of the chapters.

DUBLIN, WILLIAM BROOKS

Fundamentals of neuropathology Springfield, Ill Charles C Thomas, 1954 685 p. illus (part col'd) 26 cm. $18 50 3824

Contents Methods. Elements of the nervous system normal and pathologic. Congenital abnormalities. Inflammations. Injuries. Tumors. Metabolic disturbances. Disorders of obscure nature. References. Index.

Note A textbook for use in medical colleges, in which the methods, concepts and terminology of general pathology are extended to the study of the pathology of the nervous system. The principal topic is pathology However there is some discussion of related physiology with considerable attention to correlation of symptoms and the lesions that cause them. The illustrations illustrate both gross pathology and micropathology and are of excellent quality The 323 figures in the book represent a somewhat higher number of illustrations since, in many instances, several illustrations are combined in one figure. The bibliography includes works referred to in the text and a selection of landmark and recent publications. The author is a member of the faculty of the School of Medicine of the University of Colorado and also Chief of the Laboratory Service of the Veterans Administration Hospital in Denver Colorado.

ECHLIN, FRANCIS ASBURY

Head injuries and their management. Philadelphia J B Lippincott Company, 1956 127 p illus 19 cm. $3 00 3825

Contents The mechanisms of head and brain injury Nonsurgical cases of head injury Surgical cases of head injury—intracranial hematomas. Surgical lesions of the scalp skull and brain. Other surgical complications following head injury Special aids in diagnosis. Some nonsurgical complications following head injury Rehabilitation. Bibliography Index.

Note. A small, very compact manual directed to resident doctors in hospitals and to general practitioners of medicine. It covers the diagnosis of head and brain injuries, and both non-surgical and surgical techniques of treatment. There is some emphasis on emergency measures, but the discussion is not limited to them. Diagnostic techniques requiring instruments, such as angiography and electroencephalography are described in outline form only A nine-page bibliography is included. The author is Professor of Clinical Neurosurgery on the staff of New York University Postgraduate Medical School.

FABER HAROLD K

The pathogenesis of poliomyelitis. Springfield Ill Charles C Thomas 1955 157 p illus 23 cm (American lecture series Publication no 257 A monograph in American lectures in pediatrics edited by John A. Anderson) $5 00 3826

Contents. Properties of the virus. Epidemiology—studies of initial exposure. Pathology Anatomical considerations. Primary invasion—portals of entry Excretion and reinvasion. Viremia. Invasion of the central nervous system. Centrifugal spread of virus in peripheral nerves. Pathogenesis of the clinical manifestations. Natural and artificially induced defenses—immunization. Recapitulation. Bibliography Index.

Note. As Director of the Poliomyelitis Research Department of Pediatrics of Stanford University School of Medicine, the author of this book and his associates in this department conducted for many years experimental investigations on the pathogenesis of poliomyelitis. The results of that work, together with the related work of other investigators, are analyzed and integrated in this monograph. The principal question was whether poliomyelitis is primarily a systemic or neural disease, and the experiments were designed to find an answer to this and related questions. The experimental results are presented and analyzed in this book and correlated with the work of other investigators. Finally the author draws certain conclusions in the chapter entitled Recapitulation. Among these conclusions are, "The initial invasion of the body tissues ordinarily occurs into the peripheral nerves of the mouth and pharynx, and "The primary site of viral multiplication and lesions is the peripheral ganglia. There is a bibliography of 214 references to the literature published through 1953. The book was going to press as the Francis report on the 1954 field trial of the Salk vaccine was issued. There is a footnote on the report, but no other references to literature published in 1954.

FORD, FRANK RODOLPH

Diseases of the nervous system in infancy, childhood and adolescence. Third edition. Springfield, Ill Charles C Thomas, 1952 1 181 p illus. 26 cm. $18 50 3827

Contents. The examination of the nervous system. Clinical aspects of the anatomy and physiology of the nervous system. Prenatal and developmental defects of the nervous system. Heredofamilial and degenerative diseases of the nervous system. Infections and parasitic invasions of the nervous system. Toxic and metabolic disorders involving the nervous system. Vascular lesions and circulatory disorders of the nervous system. Neoplasms and related conditions involving the nervous system. Injuries of the nervous system by physical agents. The epilepsies and paroxysmal disorders of the nervous system. Diseases of the autonomic system. Diseases of the muscles. Disorders of growth and development including dwarfism, sexual infantilism, sexual precocity gigantism, obesity and emaciation. Index.

Note. A comprehensive treatise in which all neurological diseases that occur in childhood are covered. It is addressed primarily to graduate neurologists and pediatricians and is organized for reference use as well as study Generally speaking, the discussion of each disease covers the following points, definition, pathological analysis, clinical features, diagnosis, prognosis, treatment, and literature references. Epidemiology is also covered for infectious diseases, such as epidemic encephalitis. The second edition was published in 1945 The work was widely revised and considerably expanded for the present edition. There are now 195 figures, some of which contain more than one illustration.

FREEMAN, WALTER, AND JAMES W WATTS

Psychosurgery in the treatment of mental disorders and intractable pain Second edition. Springfield, Ill. Charles C Thomas, 1950 598 p illus (part col d) 26 cm. $12.50 3828

Contents (abridged) Introduction. Part I, The frontal lobes. Part II, Surgical aspects of prefrontal lobotomy Operative technic—precision method. Preoperative and postoperative management. Choice of type of operation. Complications and sequels. Part III, Clinical observations Observations on the operating table. Postoperative observations. The patient comes home. Occupational adjustment. Reconditioning. Creative capacity Part IV, ... tional and spiritual adjustment, morale. Special studies Motor functions after lobotomy The pathology of prefrontal lobotomy Personality changes after psychosurgery ... ciated physical and psychosomatic disorders. Pain. Part ... Prefrontal lobotomy and mental disorder: The schizophrenic reaction type. ... fective reaction types. Obsessive-compulsive and ... Prefrontal lobotomy—tension states. Results of prefrontal lobotomy The functions of the frontal lobes. Indications and contraindications. Bibliography Index.

Note: An important treatise in this field. The authors performed in September 1936, the first prefrontal lobotomy in the United States of America and have had jointly an extensive experience in psychosurgery. There is some emphasis on these aspects ... of primary interest to neurologists and psychiatrists, but the techniques of operations are also clearly described. A special feature is the inclusion of the complete case histories of patients observed over a period of years following brain operations. The first edition ...

Contents: The cerebral circulation. General considerations. Diagnosis of intracranial aneurysms. Intact intracranial aneurysms. Ruptured intracranial aneurysms. Arterio-venous aneurysms. General remarks concerning intracranial vascular surgery. Bibliography. Author index. Subject index.

Note: The author, Professor of Neurological Surgery at the University of Buffalo School of Medicine, wrote this book with the aim to give the physician, and particularly the surgeon, a large collection of data on intracranial aneurysms. The information presented has been gathered in a wide search of the literature. Forty-eight case reports and numerous illustrations, many of these presenting excellent X-ray photographs, are incorporated in the text. The bibliography at the end of the volume is international in scope and gives full citations of 700 papers.

HAYMAKER, WEBB

Bing's local diagnosis in neurological diseases. Translated, revised, and enlarged from the fourteenth German edition. With 225 illustrations, including 9 in color. St. Louis, The C. V. Mosby Company, 1956. 478 p. illus. (part col'd) 26 cm. $16.75 3841

Contents: Tracts, cell groups and blood supply of the spinal cord. Spinal cord functions. The localization of spinal lesions in the transverse plane. Anatomical and functional aspects of spinal segments. Segmental localization of spinal lesions. Localization of lesions of the cervical and uppermost thoracic segments. The localization of lesions of lower segments of the spinal cord. X-ray localization of spinal tumors, by B. S. Epstein. The structure of the brain stem. General rules for the localization of lesions in the brain stem. The localization of lesions involving cranial nerves III through XII. The localization of lesions involving the facial nerve—acoustic nerve—trigeminal nerve—extraocular nerves. Disorders of cerebellar angle. The arterial supply of the brain stem and cerebellum, and syndromes of arterial occlusion. The cerebral cortex and its motor pathways. The localization of motor and sensory disturbances of cerebral origin. The localization of frontal lobe disorders. The localization of disturbances of gaze and pupillary reflexes. The localization of aphasia, apraxia and agnosia. The localization of extrapyramidal motor disorders. The localization of lesions of the thalamus. Anatomical and functional considerations, by P. I. Yakovlev. The clinical features of lesions of the hypothalamus, pituitary gland and upper midbrain. Arteries of the cerebrum and syndromes of their occlusion. Localization of aneurysms of cerebral arteries. Intracranial masses—Location, type, and X-ray localization of intracranial lesions, especially tumors, by B. S. Epstein. The use of electroencephalography in neurological diagnosis, by R. G. Barry. References. Index.

Note: The basis of this work is Robert Bing's *Kompendium der topischen Gehirn- und Rückenmarksdiagnostik*. However, it is more than a translation. The translator, who is Chief of the Neuropathology Section of the United States Armed Forces Institute of Pathology, has revised the original text somewhat, and has added sections based on American work. In addition, there are three signed chapters written by American specialists especially for this version in English. The result is an exceptionally thorough and detailed guide to neurological diagnosis on the basis of symptoms, signs, and related clinical features. It is compactly written, and the style is straightforward and precise. The bibliography is an extensive one of the international literature. This version in English supersedes the original translation into English, also by Haymaker, which was published in 1940.

HAYMAKER, WEBB, AND BARNES WOODHALL

Peripheral nerve injuries: principles of diagnosis. Second edition. 272 illustrations. Philadelphia, W. B. Saunders Company, 1953. 333 p. illus. 24 cm. $7.00. 3842

Contents: Section I. An analysis of the segmental and the peripheral nerve supply of skin, muscles and skeleton. General principles of the composition of segmental nerves, plexuses and peripheral nerves. The innervation of skin and muscles by spinal segments. The distribution of the peripheral nerves. Innervation of the skeleton, and the disorders of bones and joints resulting from nerve injuries. Section II. Examination of the peripheral nervous system. Manifestations of peripheral nerve injuries. An analysis of the movements tested in neurological examination. Section III. Classification, causes and symptomatology of peripheral nerve injuries. The various degrees of peripheral nerve injury and their clinical significance. Tests employed in the diagnosis or prognosis of nerve injuries. Section IV. Injuries of plexuses and peripheral nerves. Injuries of the cervical plexus. Injuries of the brachial plexus. Injuries of the peripheral nerves derived from the lumbar plexus. Injuries of the sacral plexus and its constituent nerves. Bibliography. Index.

Note: A practical manual written to assist army medical officers in the diagnosis of injuries sustained by military personnel to the nerves serving the neck, shoulders, pelvic girdle, and limbs. It is useful also in civilian medical practice in the diagnosis and treatment of persons injured in accidents. The manifestations and nature of the injuries are described and detailed instructions are given for carrying out examinations of patients. The book is well illustrated with drawings and photographs, the latter of which were obtained from the collection maintained by the Army Institute of Pathology. The first edition was published in 1945. In this second edition, the third section is new and revisions have been made in other sections and chapters. References to literature published since the first edition was written have been added to the bibliography. The number of illustrations has been substantially increased.

HORRAX, GILBERT

Neurosurgery: an historical sketch. Springfield, Ill., Charles C Thomas, 1952. 135 p. illus. 22 cm. (American lecture series. Publication no. 117. A monograph in American lectures in surgery, edited by Michael E. De Bakey and R. Glen Spurling. Neurosurgical Division, Barnes Woodhall, editor) $3.75 3843

Contents: Introduction. Prehistoric and Egyptian eras. The Greek or Hippocratic and Galenic period (500 B.C. to circa 500 A.D.). The medieval period (circa 500 to 1500 A.D.). The Renaissance (circa 1500 to 1700 A.D.). The pre-Listerian period (circa 1700 to 1846 A.D.). The pre-Horsley period (1846 to 1880 A.D.). The era of neurosurgery as a surgical specialty (circa 1890 A.D. and to the present day). Conclusion. Bibliography.

Note: This outline history can fairly be designated as a neurosurgeon's history of neurosurgery. The space is almost evenly divided between accounts of techniques and outstanding developments up to 1890 and the highlights of developments since that year. There are 40 figures divided among portraits of great neurosurgeons, pictures of surgical instruments, views of operating theaters, and diagrams of operative techniques. There are 141 references in the bibliography.

INGRAHAM, FRANC D., AND DONALD D. MATSON

Neurosurgery of infancy and childhood. Springfield, Ill., Charles C Thomas, 1954. 456 p. illus. 26 cm. $15.00. 3844

Contents: Part I. Congenital anomalies of the central nervous system and its coverings. Spina bifida and cranium bifidum. Dermal sinus. Congenital dermal sinus tracts. Craniosynostosis. Congenital defects of the scalp and skull. Platybasia. Part II. Hydrocephalus. Part III. Trauma. Closed head injuries. Fractures of the skull. Cranioplasty. Extradural hematoma. Subdural hematoma. Injuries to the spinal cord. Injuries to the peripheral nervous system. Part IV. Intracranial tumors. General considerations. Posterior fossa tumors. Gliomas of the cerebral hemispheres. Craniopharyngiomas. Tumors of the choroid plexus. Tumors of the skull and meninges. Tumors of the orbit. Part V. Intraspinal tumors. Part VI. Infection. Osteomyelitis. Brain abscess. Subdural effusion complicating meningitis. Part VII. Cardiovascular disorders. Angiography. Congenital malformations. Sturge-Weber syndrome. Part VIII. Epilepsy. Part IX. Lead encephalopathy. Part X. Pediatric neurosurgical anesthesia. Bibliography. Index.

Note: A book based on 20 years' experience of the neurosurgical service of The Children's Medical Center in Boston. It deals primarily with neurological disorders that are amenable to surgical therapy. Diagnosis, surgical treatment, and prognosis, and postoperative care of patients are the primary topics. The illustrations, of which there are 331, are a special feature and most of them have not been published elsewhere. Both of the authors are on the staff of The Children's Medical Center and are also members of the faculty of Harvard Medical School.

A. S. Rose. *Psychologic problems in epilepsy* by J L. Otto. The surgical treatment of focal epilepsy by H. F Steelman. Follow-up observation on the treatment of focal epilepsy by cortical excision, by W Penfield. Part III, *Educational problems of the epileptic patient* Community services *for the epileptic*, by E. E. Smith. Educational problems of epileptic children, by L. D. Gamong. A suggested approach to the problems of the brain-injured child with seizures, by L. D Schwartz. Social and *educational* problems of *crippled children*, by L. R. Larson. *Cerebral* palsy and seizures, by R. D Wetzel. Educational problems of college-age persons with seizures, by W Abraham. Part IV Employment and rehabilitation aspects *Trends in rehabilitation*, by R. R. *Nochta*. Exploring the work potential of the unemployed epileptic, by F Risch. Appendium. Hippocrates comes to symposium on epilepsy by W Penfield. Markham fellowships in epilepsy *Index*.

Note The typical paper in this book is a brief essay authored by a specialist, addressed to readers inside the author's specialty and including a selected bibliography of professional literature. The book as a whole is a broad account of the modern view of epilepsy It *is of interest to general practitioners of medicine*, educators and social workers concerned with the rehabilitation of epileptics.

GREENBLATT, MILTON, AND OTHERS, editor

Studies in *lobotomy* Milton Greenblatt, *Robert Arnot, and Harry C* Solomon, editors *New York* Grune & Stratton, Inc., 1950 495 p illus. 24 cm. $10 00 3836

Contents. Part I, Clinical considerations Introduction by H. C. Solomon. Psychosurgery—a review of recent literature, by M. Greenblatt *Evolution of psychosurgery technic, by D Falzman. Technic* and complications of the standard prefrontal lobotomy by J L. Poppen. Postoperative behavior by A. S. Rose. Nursing procedures and problems, by R. Bradford. *One to four year follow-up* of 205 cases of bilateral prefrontal lobotomy by R. Arnot and others. The lobotomized patient during the *first year* at home (social problems in 35 cases) by M. Bruffman. *Sexual* behavior after lobotomy by *J Levine and H. Albert. Problems in rehabilitation* of patients after lobotomy by R. W Hyde and others. The results of unilateral and bimedial lobotomy a pilot study by J S. Bockoven and M. Greenblatt. Illustrative cases of lobotomy *by M. Greenblatt* and J S Bockoven. *Part II, Special studies. Anatomical study* of lobotomy by P Yakovlev and others. Cerebrospinal fluid changes after bilateral prefrontal lobotomy by W J Borkowski and H. Musnick. Relation of the *frontal lobe to autonomic nervous system in man* by M. Rinkel and others. The effect *of* lobotomy and *of* electrical stimulation of the orbital surface of frontal lobes upon respiration and blood pressure in man by W P Chapman and others. Lobotomy and urinary bladder *by M. Rinkel and others. Skin temperature changes* after unilateral and *bilateral* prefrontal lobotomy by D Falzman and others. Measurement of motor withdrawal reaction in patients following frontal lobotomy by W P Chapman and others. Lobotomy for the relief *of intractable* pain, by J B. Dynes. Electroencephalographic and clinical effect *of* prefrontal lobotomy with consideration *of* postlobotomy convulsive seizures, by S. Levin and others. *Psychometric changes following* lobotomy by C. R. *Atwell*. Application of a sociometric technic to the study of lobotomized patients, by J S. Bockoven and R. W Hyde. Occupational therapy for lobotomy cases, by R. W Hyde and *A. C. Wood. Part III* Summary by M. Greenblatt and H. C Solomon. Index.

Note This book is a collection of special studies based on the experiences with lobotomy at the Boston Psychopathic Hospital *since the use of this procedure was initiated at this hospital* in 1945 All of the studies bear directly or indirectly on the results of lobotomy in specific cases. The techniques used in analyzing results are *carefully* described. Excerpts from numerous case histories are included. In the summary at the end of the book the over-all experience with 500 patients is discussed under the following subheadings immediate post-operative changes, autonomic nervous system, response to pain electroencephalogram studies, *psychological* studies, changes in work behavior clinical investigations, *indications, and* specific indications for lobotomy Literature references are supplied *for most of the chapters*.

GRINKER, ROY RICHARD, AND PAUL C BUCY

Neurology Fourth edition. Springfield Ill Charles C Thomas 1951 1 138 p illus. 26 cm $12 50 3837

Contents. Technic of neurological examination. The spinal roots and nerves. Tumors of the peripheral nervous system and spinal cord. The vegetative nervous *system. The brain stem* and the cranial nerves. The motor system. The cerebrum. Intracranial tumors. The cerebrospinal vascular system. *Inflammatory and infectious diseases* of the nervous system. Degenerative diseases. Developmental defects. Syphilis of the nervous system. Trauma of the central nervous system. *The epilepsies.* Exogenous toxins and noxious agents affecting the nervous system. The myopathies. *Headaches. Bibliography* Index.

Note. A widely used medical college textbook in which the *subject* is covered from the standpoint *of* clinical medicine. The third edition appeared in 1943 This is the first edition *with* its co-author Much reorganization and revision is evident in the text, illustrations, and bibliography The book is sufficiently comprehensive and documented to make it useful to graduate physicians who are not specialists in neurology but find themselves in need of a survey and reference book.

GURDJIAN, ELISHA STEPHENS, AND JOHN E WEBSTER

Operative neurosurgery, with emphasis on procedures in trauma. Baltimore The Williams & Wilkins Company, 1952 422 p. illus. 26 cm. $10 00 3838

Contents Head Craniotomy—historical. Preliminary considerations. Supratentorial and *vascular* lesions. Posterior fossa and cranial nerves. *Head injury Spine Historical notes on surgery of the spinal* cord. Certain points about the vertebral column and cricoid articulations. The spinal cord, Neurosurgical procedures. Autonomic nervous system Historical considerations. Anatomy and physiology Surgical management. *Neurosurgical* procedures. Peripheral nervous system Historical considerations. Anatomy physiology and pathology *Principles* in surgical technique. *Diagnosis of peripheral* nerve lesions. *Rehabilitation*, Neurosurgical procedures. Index.

Note. Throughout most of this volume, there is a plate of illustrations on a *right-hand page* while on the *facing left-hand page* there *is a description* and discussion of the techniques *illustrated*. *Altogether there are 129 plates*, and most of these contain several drawings. Only techniques which have won general acceptance are represented. Extensive bibliographies of papers and other literature pertaining not only to the techniques *illustrated but to others* are included. The book is suitable for use as a medical college text and also as a reference volume for surgeons who are not specialists in neurosurgery but occasionally perform neurological operations, especially in the *repair of wounds*.

HALSTEAD, WARD CAMPBELL

Brain and intelligence a quantitative study of the frontal lobes. Chicago The University of Chicago Press 1947 206 p. illus. 23 cm (The University of Chicago. Committee on Publications in Biology and Medicine) $7.00 3839
